6661. I do not think it necessary to pursue that; members of the Committee can draw their own inference?—I would merely say, if you please, that whatever are the inferences that the Committee, or any member of the Committee, chooses to draw from it, this Act was discussed by the Government of India; that it passed with the assent of the late Viceroy (Lord Mayo), Sir John Strachey, Sir Richard Temple, Mr. Ellis, Mr Stephen, the present Lieutenant Governor of the Punjaub, and Mr. Egerton, the chief revenue authority in the Punjaub. Of course everybody has a perfect right to his own opinion as to the propriety of passing such a measure, but it really comes to a question of opinion. I do not deny in the smallest degree Sir Charles Wingfield's authority on such matters, but I think that the names that I have mentioned are also to be received as respectable authorities.

6662. Of course against that array of names I could set an equally imposing array of members of the council, and the Secretary of State at their head. But there is another point; you were saying that the Madras Canals have shown very large returns of profit; but have not those returns been swelled by this circumstance, that owing to the peculiar land settlement in Madras, where you deal with each individual cultivator, land which before was unoccupied because it was not irrigated, a canal having been made and that land having been irrigated, was immediately let, and then the canal department credited itself with the full rental paid by the man who had taken it; is not that so, that they took credit for the full land revenue?—Well, there have been very extravagant claims made on behalf of the Madras works, but I am not referring to those; what I refer to is the conclusion that I came to myself, after having been there, and having examined the whole of the data, so far as I could obtain them; but I have got the actual figures here, if the Committee cares to hear what they are, as to the grounds on which I say that the returns of the Madras Irrigation Works are very large.

6663. *Chairman.*] Is this all explained in the "Report on Irrigation Works in India; more particularly having reference to the Mode of exhibiting their Financial Results. By Colonel R. Strachey, R.E., Inspector General of Irrigation Works," dated the 2nd September 1868?—Yes.

6664. The whole account is at page 46 of the Parliamentary Return, 389, of 1870?—Yes; I should say briefly, that, according to my estimate, which I believe is tolerably fair, I make out that the approximate return on the Godavery works at the present time is about 22 per cent. on the capital, and the Madras returns claim about double that. For Tanjore, I make out that the return may be about 20 or 25 per cent., and the official returns claim 200 per cent.; there is a great deal of difference there.

6665. Sir *C. Wingfield.*] How are those receipts derived, do you know; are they simply from the sale of water?—My calculation was based entirely on the profits of irrigation.

6666. Merely the water rate; are you sure the revenue rate has nothing to do with it?—No, nothing but the irrigation profits; the Madras rates, you know, are very high; the revenue rate upon dry land is about 2½ rupees or less per acre, and the revenue rate upon irrigated land is about 7; therefore it is very high, you see; equal to a water rate of 4½ to 5 rupees per acre.

6667. But is it not the case that the Orissa Canal have been lowering their rates; that they have brought their rates down very low?—Yes.

6668. Something like a rupee and a half, is it not?—I think they are as low as that now

6669. Mr. *Fawcett.*] You were going through the proposals which you recommended; what I understand is this, that you admit that if the accounts were carried out in the way in which you wish to see them carried out, it would introduce fallacious conclusions; you say to a small extent; but still it would introduce fallacious conclusions as to the remunerative character of these irrigation works?—I answer that in the negative, distinctly.

6670. One time you say it would, and another time you say it would not?—I think that it is unfair to put a question in that form.

6671. The point I want to put to you is this: supposing the accounts are carried out in the way you wish them to be carried out, the irrigation works should not only be credited with the water charge, but they should also be credited with the increase of revenue between dry land and irrigated land; that is what you wish, is it not?—What I have said is, that in the revenue account of the irrigation works, the income should be held to include all increase of land revenue actually obtained.

6672. In consequence of the land being irrigated?—Yes, I say actually obtained.

6673. Then suppose the land had before been irrigated by a work carried out by the people, by wells and tanks (this is the point I want to get at), at), if the accounts were carried out in the way in which you wish, would not they credit the irrigation work of the Government with part of the return which would have been yielded by works carried out by the people; I do not say whether they should or should not do so, but simply ask whether they would?—Not necessarily, certainly not; it would be a question with the Government whether it would be worth while to go into an elaborate calculation to ascertain what was the precise amount of revenue due to a particular well for instance, supposing that there was one well. It might be worth while, or it might not be worth while; of course if there was one acre of land that had been irrigated before in a million that had not been irrigated, in order to get the account rigorously correct, you ought to make a deduction on account of that one acre that had been irrigated before; I admit that perfectly; but if you ask me whether, on account of introducing the income that had been derived from the irrigation of that one acre, when I review the result of the irrigation of 1,000,000 acres, I produce a fallacious result, then I say that no fallacious result is introduced into the account. Therefore, what I say is this; it does not follow at all that an allowance may not be made for that single well; the question is, whether it is worth while doing it; also, I say that the responsibility or the power of deciding whether that sum shall be included or shall be excluded is not in the hands of the Public Works Department, or the department that renders these accounts; and it would also be, so to speak, the interest, or the duty, of the revenue authorities to see that there was no such confusion in the public accounts; that is to say, that they would say, "This revenue is, properly speaking, land revenue, and it has nothing to do with your irrigation works, and we will not allow it to be introduced into the irrigation accounts."

6674. It would be their duty to do it, but then is there any security that that would be done; are there at the present time any specific instructions that that should be done?—There are no instructions on the subject at all, because the arrangement that I have been speaking of has not been come to.

6675. Then what I understand you at the present time to say is, that the accounts hitherto of these irrigation works have not been kept in a sufficiently clear and intelligible form for us to arrive at any distinct results as to the amount of profit which they yield over and above the fixed irrigation rate?—The accounts are not sufficiently clear to admit of your obtaining a precise knowledge.

6676. And then without there being any guarantee that they will be made sufficiently clear, the Government of India has recommended in future years an expenditure of 40,000,000 *l* upon irrigation works?—I think not. I have no knowledge of the Government of India having recommended an expenditure of 40,000,000 *l.*

6677. Has not that been recommended?—Suggested; but that is a different thing from recommended.

6678. It was not only suggested but advised, was it not?—I think not.

6679. What form did the suggestion take?—The suggestion made by me, for I presume it is a suggestion of mine to which reference is made, was, that so far as I could judge, it might be advisable.

Major Gen.
R. Strachey,
R.E.

11 June
1872.

6680. Simply "might be;" "would be," was it not?—Well, I have no particular objection to "would be;" that it would be advisable, so far as my lights went (of course everything said in that manner is said with that qualification) to spend 30,000,000 *l.* or 40,000,000 *l.* sterling.

6681. Now with regard to the Eastern Jumna Canal, you said last time, in reply to a question that I put to you, that no work of importance had been carried out previous to our taking possession of that canal, that it was only a ditch, and that in consequence of its being a ditch, it cost us more to put that ditch in order than if we had constructed the work altogether; you stated that, did you not?—I said that that was my belief.

6682 What do you put down in your accounts the cost of the Eastern Jumna Canal to be; 180,000 *l*, do not you?—Up to date, 190,000 *l.*

6683. The length of the Eastern Jumna Canal, with its tributaries, is 750 miles, is it not?—It is possible, but the length of a canal does not necessarily indicate its value.

6684. But can you show any single instance of a canal with its tributaries of anything like the same length, being constructed in India at a cost of 190,000 *l.*?—As I said, the length of a canal does not indicate its irrigating capacity at all.

6685 If the work which was done in the Eastern Jumna Canal, previously to our taking possession of it, rather increased the cost of constructing it to us than diminished it, what special circumstances caused this canal to be carried out for an uprecedentedly small sum?—The physical circumstances under which it was constructed, were totally different from those of any of the great canals that we have been constructing since.

6686. Totally different from any of the smaller canals?—What canals?

6687. Any of the smaller canals put down in that return to which I was referring you on the last occasion?—There are some of these smaller works, but they are really hardly worth considering. However, the fact is, that generally speaking, the reason why the Ganges Canal has cost such a large sum of money is, first, that it is six or seven times as large as the Jumna Canal. The works on the Ganges Canal, in the next place, are necessarily of an extremely heavy character; the physical difficulties to be overcome, the engineering difficulties to be overcome, are vastly greater, and the necessary expense also is vastly greater.

6688. But then allowing for all that, the Ganges Canal cost 15 times as much as the Eastern Jumna?—I do not see myself, considering all things, that the difference is so very striking.

6689. I simply wanted to get at why this canal cost so little. Would you like to suggest some further recommendations with regard to the form of keeping these canal accounts?—The last thing on which there was a considerable discussion was, "That the income shall be held to include all increase of land revenue actually obtained on irrigated lands." Then the next proposal is, "That the increase of land revenue should be ascertained simply by deducting from the actual revenue on the irrigated lands from time to time, the former revenue received before the irrigation began, or before the improvements

Major Gen. *R. Strachey,* R.E.

——

11 June 1872.

charged to the capital account were brought into operation."

6690. "Before the irrigation began;" what do you mean, the Government irrigation, or the irrigation of the people themselves?—I mean the irrigation from the works to which this account refers, of course. The reason for that, and the necessity for it, is that in Madras, where there is no distinction between the land revenue and the water rate, it is extremely difficult, unless you make some arbitrary rule of that sort, to get any account at all.

6691. If that instruction of yours were carried out, it is at once obvious to you that you would credit these irrigation works with all increase of revenue from whatever source it arose. It must be obvious to you, for instance, that if the great depreciation in the value of money continues, the price of agricultural produce would proportionately rise, and if it rises, the land revenue would proportionately be able to be raised; but you would credit all that increase in the land revenue to the irrigation works?—That portion of it which is due to irrigation I should.

6692. *Chairman.*] *Pro ratâ* for the portion, not for the whole?—You have to ascertain what is due to irrigation.

6693. Mr. *Fawcett.*] How can you do that by simply carrying out literally your instructions. Will you read that instruction again?—"That the increase of land revenue should be ascertained, simply by deducting from the actual revenue on the irrigated lands from time to time, the former revenue received before the irrigation began, or before the improvements charged to the capital account were brought into operation."

6694. According to that, it is obvious to you that it would introduce the fallacy which my question points out?—That is perfectly true, and I have given a reason for saying that I recommended that. At the same time I should say that this has not been actually done; that these were only my recommendations.

6695 I do not wish to seem to imply whether these recommendations are good or bad; I simply point out to what result, as a matter of fact, they lead, and I think my conclusion is a just one and a true one, is it not? Have you put any qualification upon that in any subsequent paragraph?—I have explained why I proposed that. I say, at page 27, "If it be said that the increase of land revenue on irrigated lands which follows the introduction of irrigation, is not wholly to be attributed to the irrigation, but will partly depend on that natural increase of value in landed property which has nothing to do with the application of irrigation, the truth of the position may at once be ceded. But, in reply, it must be said that to distinguish this part of the increase of revenue from the other is quite impossible; moreover, that, if it could be done, it would not be worth while doing it. The object of the Government in drawing out financial returns of the sort under discussion is to enable it to arrive at a clear knowledge of the consequences of its outlay of capital on these works in relation to its income after the outlay has been made. The essential thing for the State, in a financial point of view, is, that there shall be in such cases an improvement of the revenue immediately consequent on the outlay which shall at least cover the interest on that outlay. If this improvement takes place, never mind by what causes, the financial safety of the operation that has been undertaken will be secured. In short, although the fallacy of the argument *post hoc ergo propter hoc* may in this case be admitted most fully, it must be added that the *post hoc* is here, in fact, all that is important, and that the precise amount of theoretical error introduced into our calculations of the true profits of our irrigation works will be absolutely small, and, for the purposes in view, quite unworthy of notice."

6696. I want now to put this to you; suppose there is a depreciation in the value of money 50 per cent.; prices rise proportionately, and that prices double; that is a very likely thing to occur in India; the revenue would double and entirely independent of irrigation works; and you would put down the whole of that increase to the results of irrigation, and justify the expenditure because it would show so large a return, would you not?—Of course, accounts kept in that form might be so used, and if they were so used they would be used foolishly.

6697. Then you say, do you not, that it is impossible to separate what increase in the value of land arises from irrigation and what arises from other causes independent of irrigation; you admit that?—I do not see any way of doing it. Where the charge for irrigation is not separate from the land revenue, it seems to me that there is no possible way of arriving at any conclusions.

6698. I will not argue the point with you; I understand you; but what you recommend is, that all increase of land revenue from whatever cause arising on irrigated land, should be put down to irrigation works, do not you?—That is what I did recommend; but there is a subsequent Paper to which I may refer after those original proposals of mine were made, there was a further discussion which took the form of the recommendations of a committee of the Secretary in the Financial Department, the Secretary in the Home Department, and myself on this very subject. Perhaps, I might just briefly say what that is.

6699. We need not go into that, I think. What is your next recommendation?—I think that it is proper for me to read this, "For the administrative accounts, we think," (that is the committee I spoke of) "that it cannot be doubted that so much of the land revenue as can be distinctly shown to be directly due to canal irrigation, should be shown as canal income. The facts, so far as they can be ascertained, should be accepted. Where the land revenue is fixed for a term of years, the canal share of that revenue would be the portion which at the commencement of the term was charged on account of the irrigation, and no addition to the canal share would be justified during the term, or until some actual revision of the land revenue had been made, and then only on the same principle."

6700. Is there any other recommendation that you made with regard to the forms of keeping the accounts?—The other had reference to the general account, "That in the general annual account of revenues and expenditure, the present head of land revenue be divided into two; land revenue ordinary, and land revenue irrigated, and that the entire land revenue of irrigated land, together with all direct revenue derived from irrigation works, be credited under the latter head, and that all the corresponding charges be

debited

Major Gen. *R. Strachey*, R.E.

11 June 1872.

debited in like manner." The meaning of that is, at present, the general accounts of the revenues of India show, under the head of Land Revenue, a very large portion of the revenue which is due to irrigation, and under the head of Public Works, there is a small portion of that shown, and my desire was, that the whole of the revenue which is due to irrigation should be shown together, which at present it is not.

6701. Is that all that you wish to say under that subject?—Yes.

6702. Mr. *Cave*.] I suppose a great portion of the land which is brought under irrigation by the canals would be absolutely unculturable without irrigation;—Well, it might be, but not as a rule.

6703. What portion is brought into cultivation by the irrigation works?—I think it is impossible to generalise upon that. In some parts of the country, for instance in Scinde, without artificial irrigation, cultivation is impossible, because there is no rain, but in other parts of India the irrigation merely supplements the natural fall of rain.

6704. In those places where it is not possible, there is no land revenue at all, before the irrigation?—No, you may say that the land revenue depends entirely upon the existence of the irrigation, which is the case in Scinde.

6705. In such cases the diminution in the value of money would have no effect whatever upon the revenue of land that is not cultivated at all?—Of course it would not, because there would be none.

Friday, 14*th June* 1872.

MEMBERS PRESENT:

Mr. Ayrton.
Mr. Birley.
Mr. Bourke.
Mr. Stephen Cave.
Mr. Cross.
Mr. Charles Dalrymple.
Mr. Grant Duff.
Mr. Eastwick.
Sir James Elphinstone.
Mr. Fawcett.
Mr. Hermon.
Mr. Lyttelton.
Mr. John Benjamin Smith.
Sir David Wedderburn.
Sir Charles Wingfield.

HE RIGHT HONOURABLE ACTON SMEE AYRTON, IN THE CHAIR

Major General RICHARD STRACHEY, R.E., recalled; and further Examined.

Major Gen. *R. Strachey*, R.E.

14 June 1872.

6706. Mr. *Fawcett.*] YOU stated, did you not, in your former evidence that no local tax could be imposed without the consent of the Governor General, and that the Act which imposed it was subject to the veto of the Secretary of State?—I do not think that I did give evidence to that effect, but I believe that what you say is quite true.

6707. Are you aware of the Punjaub Municipal Act?—Which Punjaub Municipal Act?

6708. The Punjaub Municipal Act of 1867; there was a proposal to renew it recently?—Yes, it has been renewed, from what I see in the newspapers, for a year, I think.

6709 A debate took place upon that in the Council at Calcutta on the 2nd of March in the present year?—I dare say that you are right.

6710. Are you aware that the 6th clause of that Act, in the most clear and distinct words possible, gives town committees, having obtained the consent of the lieutenant governor of the province, and not of the Governor General, power to levy taxes for various local purposes, that they can say what the amount shall be, and on what property the taxes shall be levied?—Not having the actual Act before me, I cannot speak as to that; but I think there is no reason to doubt that what you have said may be in the Act, and I do not think that that is at all at variance with the other position, because in the nature of the constitution of the Government of India, a lieutenant governor is bound to comply in every respect with the orders that he receives from the Governor General in Council.

6711. But then if the initiative comes from him, if he gives his consent, the tax is imposed and may for some time be levied?—But the Governor General in Council is always in a position to give general instructions, and, I believe, does give general instructions, to local authorities who have such powers under the Legislature, as to the general nature of the policy on which they should act.

6712. Is it not the case that under this clause (and I shall quote a high authority) which gives this power to town committees, an enormous amount of taxation has been levied in the Punjaub and in the North Western Provinces?—I think that the word "enormous" is not quite the right adjective, perhaps; but that a considerable amount has been, there is no doubt.

6713. Are you aware that Mr. F. S. Chapman, who is a high authority on the subject, a member of the Council at Calcutta, stated as a fact, that in some districts the local taxation which had been levied in this form, amounted to 50 per cent. of the land revenue?—I am not aware that he stated that, and if he did state it, I should think it was probably inaccurate.

6714. Why then was it not contradicted in the debate?—It may be accurate in one very restricted sense; if you take the actual geographical area which is comprised within the limits of a town, and ascertain what technically is the land revenue levied on that particular area, I think it is extremely probable that the local taxation will not only be 50 per cent., but 500 per cent. more than the land revenue.

6715. But his words carefully excluded that interpretation; he did not speak of towns, but he said districts, and no one contradicted it?—Not having been at the debate, and not knowing the circumstances under which the statement was made, I can give no opinion on it, but I totally disbelieve that there is any such condition of thing in any part of India.

6716. Should you be surprised if the military member of the Council, General Norman, speaking on the same subject, said that his experience went to the same effect, that the local taxation levied under this Act was increasing so much that it was producing amongst the people of India a much graver discontent than was produced by Imperial taxation?—It is possible he may have said so. I have no knowledge of the fact.

6717. As you doubt what Mr. Chapman says on the subject, I can give you his exact figures; he says that in the Presidency of Bombay, from the up-country people, excluding the people of

Scinde,

Major Gen *R. Strachey*, R.E.

14 June 1872.

Scinde, and the people of the Island and the town of Bombay, the amount of taxation levied in the manner which I have described amounted to more than half a million?—I think that that is a probable statement; but how it is possible that that can be 50 per cent. of the land revenue of Bombay, I cannot conceive.

6718. I did not say throughout Bombay, but in some districts?—My impression is, that if he did say such a thing it was poetical.

6719. In the same debate, speaking on the perfectly irresponsible power which was vested in the local authorities to levy objectionable forms of taxation, are you aware that Mr. Robinson, also a member of the Council, stated that at the present time in Madras, in the form of local taxation, they were reviving the old transit dues in their worst possible form, and this was causing a serious impediment to trade in India?—I think it possible that such a statement may have been made. If, by the questions that you are putting to me, you wish to establish that I support the grant of unlimited powers of taxation to local authorities without very strict control, you are entirely wrong. If, also, you think that I am prepared to support the propriety of a great deal of the existing local taxation, you would be equally wrong; I think that a great deal of it is intolerably bad.

6720. You and I agree on that point; I want to get at the facts on your authority; then under the scheme of decentralisation, of which you were the author, I think it is obvious that, onerous as local taxation is at the present time, it must necessarily increase?—I think not.

6721. Not to meet the increased expenditure on public works?—I am not aware that there is any necessary call for increased expenditure on public works.

6722. Not with all the schemes which, in your last evidence, you say that if you have not recommended, you have suggested?—Those schemes which I have suggested have nothing at all to do with the raising of money in the sort of way we are now talking of, that is to say, for provincial purposes. The schemes which I have recommended to the Government, are schemes to be carried out entirely by loan, on the security of the Imperial taxation, and they would not affect in the least the local taxation.

6723. But I understood from your evidence, that as yet the Government had not clearly and distinctly defined, in a way that I for one can understand, what works are to be considered works to be thrown on the Imperial revenues, and what works are to be carried out through provincial agency?—That is true; there has been no such definition. The Government of India, on every occasion on which a proposal has been made to take up a work to be paid for by borrowed money, has considered the character of the work, and the cogency of the reasons which have been made use of in supporting such a proposal, and have considered on the merits of each case whether the work was of such a character as to make it worthy of being carried out in that way.

6724. Then, if there has been no clear, intelligible, and precise definition laid down as to what public works should be carried out by borrowed money obtained on the security of the Imperial finances, and what public works should be carried out by provincial funds, what security have we that some portion, at any rate, of these large public works which you have suggested or recommended will not have to be defrayed by local taxation?—I do not know that you can say positively that there is anything in the nature of security given that public money will not be applied for public objects of any description, either out of local taxes, or out of Imperial taxes. I think in the nature of the case such security is impossible, that the only security that you have for the proper action of Government is the sense of responsibility that is put upon the Government, and the sort of preventive check that there is on irregular action by taking care that your Governors, and your persons entrusted with authority, are capable and honest men.

6725. Then the people of India being at the present time sorely burdened by local taxation, the only security that they can have that this local taxation will not increase in consequence of these public works, is the assurance which they can place, whether it be great or small, in the care with which the Government watch over these public works?—I think that last remark, as to the security against further taxation, is perfectly true, with this extension, that it not only applies to expenditure on public works, but to all expenditure; and I think it is invidious and erroneous to introduce the idea of public works as though the only expenditure that could be objectionable or wasteful was on public works.

6726. In examining other witnesses I shall show that my dread about waste and extravagance in India is not by any means confined to public works; I can easily satisfy you on that point, but then do you think that the people of India can rest very content with that assurance, considering your own admission that hitherto vast sums have been spent in the Public Works Department without any adequate or sufficient control?—Before I answer the question I should say that although I do not on every occasion correct expressions that are contained in the questions that are asked me, which I think call for correction in the way of extremely strong epithets and so forth, still I desire that it should not be understood that silence on such points at all implies that I assent to particular statements or sentiments which are contained in a question which is thus put to me. If you will allow me to go on, I will now answer your question, and say that when you talk about the people of India resting content, I do not think that at the present time there is anything in India which deserves the name of public opinion; not in the sort of sense in which "public opinion" is applied in a country like England, or in a country even in which progress has been very much less; at the same time I admit thoroughly, that although there is not such a public opinion, the position of the persons who administer the country should not on that account be considered to be one of less responsibility than if the country had arrived at such a state of advancement as to be able so to speak to take care of its own interests. Therefore I think that it is incumbent on the Government to do everything in its power to arrive at a satisfactory knowledge of what really are the particular and detailed wants, and even the wishes, of large portions of the community before taking up measures or determining to act upon them. And I carry my views on this subject to this extent, that I have all along thought, and I continue to think, that coincident with this establishment

of

Major Gen. *R. Strachey*, R.E.
——
14 June 1872.

of provincial financial administration, there should be created some local consultative body to which the financial schemes of each local government should be referred, bodies which should be in the position of discussing those schemes and proposals, of asking the Government and its officers any questions that they thought fit regarding every part of any proposed scheme for expenditure or any proposed scheme for new taxation; and I think that it would be perfectly right, or necessary even, that in such bodies should be included a considerable number of the most intelligent of the native inhabitants of the districts which would be affected by the measures of the Government.

6727. But admitting the value of that opinion, still, as a matter of fact, this decentralising scheme, which gives provincial bodies increased powers of imposing local taxation, has been carried into effect, and these consultative councils which would represent the feeling of the natives, and which you think necessary, exist only in the dim future, and the people of India have no security at all that they will ever get them?—I should not altogether assent to that; the local legislative councils in Bengal, in Madras, and Bombay, do, to a certain extent, give the means of the sort of discussion that I have spoken of, and in fact considerable discussion has taken place in those councils on such subjects as these. But it seems to me that in the very nature of progress it is impossible (and the remark is not at all a novel one, or one that I need take any credit for) to develope suddenly a great and perfect scheme of administration. The only way in which progress in administration can take place is by steps, and it obviously is the natural course to adopt in extending financial administration to local bodies, to begin by giving them the power under reasonable control, and then carefully to watch the operation of the new machinery, and to introduce from time to time any such additional supports or checks as experience shows to be necessary.

6728. With regard to a question which was put to you last time, is not this the fact, that at the present time a Punjaub Canal Act is in operation, and that Act, which is actually in operation at the present moment, gives you the power to levy compulsory irrigation rates upon people, whether they wish to use the water or not?—Under the circumstances that I mentioned before I began my examination to-day, that I had not expected to have been called, and that I have brought no papers with me, I would rather postpone answering that question, if you will allow me; I am otherwise perfectly ready to go into that matter most completely.

6729. I was simply going to ask you not on the policy, but as a matter of fact?—I object to answer a question of that sort without explaining precisely what are the conditions which are referred to in the part of the Act which refers to that subject.

6730. And also I should examine you in regard to that upon the compulsory labour which the Act sanctions, I believe, but I will pass to another part now; has not this been found in carrying out various irrigation works, speaking generally as a matter of fact, that the original estimate for their cost has been almost invariably exceeded, and that in many cases, on the other hand, you have not been able to levy as high irrigation rates as you supposed you would be able to levy?—As regards some of the works, that is no doubt true; as regards a great many others it is not.

6731. With regard to the Orissa Canal, is it not the case that the calculations that it would yield a large rate of interest were based on the supposition that you would be able to levy an irrigation rate, *Rs.* 2. 8, and that the irrigation rate has already been reduced to *Rs.* 1. 8?—The Orissa canals were not executed by the Government, and the designs were not made by officers of the Government, or under its authority, or, so to speak, with its knowledge. The estimates of revenue on which the shareholders of the company originally carried out those works, were not only not approved by the Government, but were distinctly discredited in the strongest way. Further, when the Government took over those works they did it, not in the expectation that there would be any immediate return of revenue from the works, but feeling that under the peculiar circumstances in which the company was placed at the particular time that the works were taken over, which immediately followed the great famine in Orissa, there was an obligation put upon them to continue to carry out the works in the best way that was possible, and to do all in their power to spread irrigation in those districts of Orissa which had suffered so cruelly by reason of the famine.

6732. But if the Government actually discredited the estimates of this particular canal company or irrigation company, and placed no confidence in them whatever, how came it that they bought the company at par, giving 400,000 *l.* more than the quoted market value of the shares, and in addition to that, a bonus of 50 per cent.?—I think that the reasons which led the Government to that are to be found in a despatch of the Government of India to the Secretary of State, which can be referred to. But in general terms the position was simply this, that the Government of India felt that it was essential to do something, and to do something at once. They had been for a year or two lending money to the company for the purpose of admitting the works being carried on, because the funds of the company had come to an end, and it was perfectly clear that the company could not raise any more money. If the Government had not offered to take over the works of the company on what may be generally called liberal terms, the necessary result must have been that a discussion would have been got up which probably would have extended over years, and meanwhile the works in Orissa would not have been carried on, and under the peculiar circumstances of that province the Government of India felt that it was impossible that any further delay should be permitted in giving all possible completeness to the system of irrigation works which the company had begun.

6733. In your last evidence you said that you would mention several instances of works which had proved financially disastrous, which had been guaranteed by the Government of India, and you mentioned one, the Mutlah Railway, on which we examined you; would you complete the list now?—I do not think, if you will allow me to say so, that I made use of such an expression as "disastrous." What I said was (and that was the sole intention of my remark at all), that I thought that there had been expenditure which

I personally considered objectionable and unnecessary.

6734. But still as to the Mutlah Railway, it is not a very strong word to use; for you used language as strong as calling it financially disastrous?—I am prepared to give you substantives to any extent, and anybody may attach any adjectives they please. I also wish to explain that in what I have said, and was perfectly ready to say, regarding the defects of the Public Works Department, or any other branch of the administration in India, I have not the least desire to throw stones at any one; I do not imply that persons who have made what I consider mistakes are a bit worse or less capable of managing the affairs of the State than I am; but I give my opinion, and I think I should be misconducting myself in the face of the Committee and the country if I did not point out defects, with the hope that some remedy might be found for them, and that similar causes of complaint would not occur in future.

6735. It is our object to ascertain these facts, and for that reason I asked you if you would mention analogous instances to the Mutlah Railway?—One that I would mention would be the Godavery Navigation Works.

6736. *Chairman.*] You might exhaust the railways first; there are two or three that are most disastrous?—I should not admit that. I mentioned the Godavery Navigation Works. Those works, in my opinion, supposing that they were completed, and that they could have been completed without any serious burden being thereby caused on the revenues of India, would I perfectly admit have opened up to the sea a large portion of the Central Provinces, and so far would have been extremely valuable; but I think myself that under the circumstances of those Provinces, and of the particular part of them that it was proposed to benefit, such an expenditure at the time it took place was not a thoughtful expenditure, and that there were many other objects on which public money might have been spent with much greater immediate utility.

6737. Can you give us, generally, the amount which has been spent on these Godavery works, and the return which they yield?—My impression is that the expenditure up to the present time is about three-quarters of a million, and the works at present are extremely imperfect; in fact, one may say that none of the objects for which they were originally designed have been actually effected.

6738. Mr. *Eastwick.*] You mean the Godavery navigation works, not the irrigation works?—No, nothing to do with the irrigation; the improvement of the river for navigation merely.

6739. Mr. *Fawcett.*] And you think that the expenditure will not ultimately prove useful, that it will involve a loss?—There is at present no return from them at all, and in the nature of the case there can be no return; what those works are proposed to do is to open up the Central Provinces by means of steamers and cargo boats to take the produce of the central provinces to the port of Coconada, and no such result has been attained.

6740. What is the next one to which you will direct our attention?—I think that the arrangements that were made with the irrigation companies in India were improvident and objectionable.

Major Gen. *R. Strachey*, R.E.

14 June 1872.

6741. Has any estimate been made of how much more money will be spent upon the Godavery navigation works?—Yes. At the commencement of last year a long despatch was sent by the Government of India to the Secretary of State on the subject, reviewing the whole position of the works, and giving the conclusions to which the Governor General in Council had arrived in regard to their prosecution or abandonment in the future; and I may add that the whole scope of the action of the Government of India in connection with those works, I believe almost from the day that they were instituted up to the date of that last despatch, has been to point out to the Secretary of State the danger and risk of continuing them.

6742. Were not the works originally sanctioned by the Governor General?—On the order of the Secretary of State; and to a very great extent the works have been carried out under the instructions of the Secretary of State from time to time, if not without estimates, with extremely imperfect estimates which the Government of India has in vain tried to get, and only has got quite lately.

6743. Does it occur to you that the Governor General ever wrote a despatch, after a good deal of discussion had taken place, in which he did recommend that the works should be commenced and carried out to a certain extent?—To a certain extent I have no doubt that may have occurred, but under the pressure from the Secretary of State When I say pressure, I mean that the Secretary of State had strongly expressed an opinion that some such works should be carried out, and he invited the Governor General to say what could be done.

6744. But am I to understand you that the Governor General ultimately adopted the views of the Secretary of State as his own, or that the works were carried out against the recorded opinion of the Governor General in Council, merely in compliance with the superior statutory authority of the Secretary of State?—I do not know that the discussion between the Government of India and the Secretary of State ever came to an open declaration of war, but that the whole tendency of the Government of India, from the earliest time up to the present, has been to object to the works, I have no hesitation in saying.

6745. Does it not amount to this, that if the Government of India accepts or adopts the opinion as its own ultimately, and the Secretary of State was left under that impression, the result is that each Government is only deluding the other, and that neither becomes responsible?—I do not think that the correspondence that passed between the Secretary of State and the Government of India could have left any such impression on the Secretary of State; at least, I should think not; and as by Act of Parliament the Secretary of State in Council has absolute power to give any instructions he likes to the Government of India, and to dispose at his pleasure of the revenues of India, it is the duty of the Government of India frankly and fairly, after discussion, to carry out the wishes of the Secretary of State when he has distinctly stated what his conclusion is. I believe that the Government of India has always been conducted on those principles, and that the particular views of the Government of India would be waived in the face of a continued and strongly expressed

Major Gen. *R. Strachey*, R.E.

14 June 1872.

declaration of the wishes of the Secretary of State.

6746. I want you to perceive the distinction between the Government of India recording its views, and distinctly declining to accept any of the responsibility of an act, and leaving it to the Secretary of State to exercise his statutory authority; and the Government of India itself adopting the views of the Secretary of State, and carrying them out as its own. I ask whether in the case of the Godavery works the latter was not the course taken by the Government of India?—I should say certainly not.

6747. Mr. *Fawcett*.] Who was Secretary of State at the time these Godavery navigation works were sanctioned?—I do not remember, but I know that a great deal of discussion went on during Lord Halifax's time.

6748. As you gave the name of the Secretary of State with regard to the Mutlah Railway, will you put the name in with regard to the Godavery works also?—I should say, in self-defence, that being a servant of the Secretary of State in Council at the present time, and having been so for a good many years past, I feel some delicacy in doing what may appear to be cavilling at or commenting on the acts of constituted authorities who had a perfect right to give such orders as they have given, and I hope therefore that the Committee will perfectly understand, as I explained just now, what is the real object and motive of anything that I do say upon these subjects.

6749. But simply as a matter of fact, do you not know the date when these Godavery navigation works were sanctioned?—They have been going on so long that I could not say, and the time during which Lord Derby (Lord Stanley, as he then was) was Secretary of State was, comparatively speaking, so short, and there has been so much of Whig rule and so little of the other, and the intervals have been so broken, that I really cannot take upon myself to remember. I may mention that the principal despatch on the subject was signed by Lord Halifax, then Sir Charles Wood.

6750. What is the exact amount which it has been estimated will be required to complete these works?—As I came here without any papers to-day I would rather not answer that now; but I have no doubt that the Public Works Department at the India Office will give you that last despatch to the Secretary of State, and any reply that there was to it.

6751. To get it in a precise form, will you put that in hereafter?—Yes.

6752. What is the next work to which you would like to direct our attention, of those which have proved unremunerative?—I think the irrigation companies, including both the Madras Company and the Orissa Company.

6753. The Orissa Company was the one which you previously referred to?—Yes.

6754. Government gave 1,050,000 *l.* to that work, and without entering into the reasons which induced them to buy it, what is the return which it is yielding now?—If you are talking of the Orissa works, it is something extremely small; the works have hardly come into operation yet.

6755. Has any estimate been made of the amount which, including the purchase money, has been spent upon them, and what the yield is likely to be?—I am not prepared to say off-hand that there has been any recent revised estimate of the returns.

6756. What has been the whole cost?—It is something over a million.

6757. Do receipts cover working expenses at the present time?—I could not positively say that, but I may say that the whole work is so completely immature, that whether they do cover the working expenses, or whether they do not is, in my judgment, not important. If they do cover the working expenses, it is only just as much as they do; that I can say.

6758. But has or has not an estimate been made of the future return of these works, and the amount of land which will be irrigated?—There is no doubt that there have been reports showing what amount of land can be irrigated by the volume of water which is available. All of those questions have been gone into; revised estimates have been submitted to the Government of India; and have been submitted, to the best of my recollection, to the Secretary of State, and the works now are going on under those revised estimates, the precise amount of which can be ascertained.

6759. Do they show a future loss to the revenues of India?—Certainly not.

6760. Then why have you placed these works in this category?—Excuse me, I said nothing of the works; I said the arrangement with the companies, which is a totally different thing.

6761. In fact, we paid too large a price for them?—First of all as regards the Madras Company, the Secretary of State gave an absolute guarantee on 1,000,000 *l.* sterling.

6762. Who was it that did that?—I rather think that was done in Lord Stanley's time; immediately after the Mutiny. Then after that company had spent its million and not completed its works, and found itself in the position of being unable to raise more money, they said to the Secretary of State, "We shall break down unless we get more money; will you lend us some?" virtually it came to that. First of all, they asked the Secretary of State to increase the guarantee; the Secretary of State said, "I will not increase the guarantee, but I will lend you some money," and he lent them 600,000 *l.*; that 600,000 *l.* is spent, and the works are just getting into operation.

6763. Mr. *Eastwick*.] Would you mention who lent the 600,000 *l.*?—I think that was done in Lord De Grey's time.

6764. Mr. *Fawcett*.] Then 600,000 *l.* was lent on very inadequate security?—On what is called the general security of the company, which is of course none; at least it is the security of the works alone.

6765. They will require more money, will they not?—Well, the works are more or less complete, and more or less in operation, and it remains to be seen what is going to happen. There is a discussion going on at the present time between the company and the Government as to what is to happen in the future, and as I am not connected with the department which manages this part of the public business at present, I do not know what the facts are regarding that.

6766. As they are only nearly completed, of course more money will be required?—I did not mean to imply that they were only what may be termed nearly completed, but rather that a certain part of them are complete and in operation; therefore it is a partial completion, because works

works of that description one may say are never what you call complete in an absolute sense.

6767. Like the capital accounts, always open?—It may be so; there may be extensions made for a long time, which would call for additional outlay.

6768. What is the next work to which you would direct our attention of that nature?—As regards the operations of the Orissa Company, what happened was this, that the Secretary of State, Sir Charles Wood, was pressed by that Company to assist them in some way in carrying out irrigation works in Orissa, and he positively declined to give them a guarantee; I do not positively know that they asked for it; it is possible that they did not; and anyhow they did not get it; but he said that he was prepared to make an arrangement with the company under which they should have the whole of the profits that arose from irrigation from any works that they constructed in Orissa, the Government giving them no assistance in a direct form. Then there were various other conditions imposed upon them, but chiefly as regards matters of detail. The Secretary of State having made that general arrangement with the company, the company endeavoured to put the arrangement into a specific form, and they drafted a contract which was propounded by them to the Secretary of State; the Secretary of State did not accept it and saw after some discussion (I think the discussion went on for two or three years) that he had made a promise that it would be extremely difficult to carry out; and the result was that the whole matter was remitted to the Government of India to dispose of, which they did in the best way that they could, and that best way was not in my judgment a very good way. The final arrangements were concluded when I was Secretary to the Government.

6769. What was the way?—Well, there was a very complicated contract entered into. I do not think that there would be any great use in going into the details, but the general form of it was this, that the whole of the profits from the irrigation works were to be credited to the company, that the company was to sell the whole of the water to the Government, and that the Government, in reality, through its officers, were to be the parties to distribute the water to the cultivating community, and therefore to be the managers of the irrigation. This obviously was an extremely complicated arrangement, and it never actually came into operation, because the contract came to an end by the Government taking over the whole concern; but I think that it would have been extremely difficult to work.

6770. Then we may fairly conclude from what you have just stated, that the Secretary of State entered into a complicated arrangement which he could not carry out, then remitted it to the Government of India, who entered into another complicated arrangement, and in the end, to get out of the difficulty, the Government bought the company at considerably above the market price of the shares?—I think that is about a fair account of it.

6771. What is the next concern to which you would direct our attention?—Another set of works on which I personally consider that more money than is satisfactory has been spent is the Kurrachee harbour. The sum that has been spent there has not been so large, as far as my recollection goes; it may be something under 400,000 *l.* at the present time.

Major Gen. *R. Strachey*, R.E.

14 June 1872.

6772. Does that finish the expenditure?—No, that expenditure is going on, and, as is perfectly well known regarding such works, it is extremely difficult to make an estimate that can be relied upon at all of what things will cost. I wish to guard myself on all of these things It will always be a matter of opinion as to whether expenditure for a certain object is justifiable or not, and as I have also said before, anybody else has just as good a right to form his opinion as I have to form mine; and the Government that has been responsible has formed its opinion in opposition to my opinion; but still I consider that the money that has been spent upon those works might better have been spent elsewhere. I do not say absolutely that the money has been wasted; there has been no doubt a good deal of useful work done at Kurrachee, but to say the least of it, I think it is premature. I think that an exaggerated idea was formed in the first instance of the importance, actual and prospective, of the trade of Kurrachee, and I think that what might possibly be very proper expenditure, 50 or 60 years hence, has been distinctly premature at the present time.

6773. Then this expenditure, I understand, does not belong to the same category that you have just been describing; it is a misdirected expenditure rather than a bad bargain made by the Government with a private company?—These works being carried out under the Government entirely are quite a different thing from the others And I should say that when I have been talking about misdirected expenditure I do not wish at all to imply that there is no misdirected expenditure that has not originated in India; but what I say is that I think that the worst specimens have arisen from interference from England.

6774. But your evidence with regard to these bad bargains that have been made with various companies tends to show this, that the people of India may be taxed in so many different ways; they may be taxed locally by local authorities, they may be taxed by the Governor General, and the Secretary of State may carry out a scheme even against the wishes of all the authorities of India, and although he may know nothing whatever about India, and may never have spent an hour in it, which may entail heavy financial burdens on the people of that country?—There is no doubt that that is the unfortunate result of having a despotic Government managed in the sort of way that the Government of India is, and for myself I do not exactly see that there is any remedy for it.

6775. But in a despotic government you do not have usually three spending departments at the same time; that is one of the advantages which is supposed to belong to despotism, that you have concentrated responsibility, is it not?—That is as it may be; you either have or have not.

6776. *Chairman.*] You gave us one railway as a specimen of a disastrous undertaking; do you consider that the Scinde, Punjaub and Delhi Railway, which has a net receipt of 86,000 *l.*, whilst the Government is called upon to pay annually 479,000 *l.* for the interest of the capital which has been expended on the undertaking, is successful or disastrous as an undertaking?—I think

Major Gen. *R. Strachey*, R.E.

14 June 1872.

think that viewing the results generally speaking of the guaranteed railways in India, they may be said, with one or two exceptions, to be financially distinctly failures; and amongst those that are financially the least satisfactory, there is no doubt that the Scinde, Punjaub and Delhi is one of the worst.

6777. Mr. *Fawcett.*] Speaking with regard to what the Secretary of State can do, has it not happened in the last year, certainly within the last two years, that the Secretary of State has given another guarantee to a company against the strong remonstrances of the authorities in India?—I think not.

6778. Mr. *Bourke.*] Or renewed an old one?—I should like to have my memory refreshed. If you would say specifically what you refer to I could answer the question. I can tell you, I believe, the guarantees that have been given lately. The Oude and Rohilkund Railway received a guarantee, but that was now some years ago. But the last undertakings that have been placed under guarantee have been some of the Madras lines, some extensions of the Great Southern of Madras, and the line of the new company that has lately been formed, called the Carnatic Company. My impression is that those are the only two important ones.

6779. *Chairman.*] Is that Carnatic Railway an extension of the company for which the Government have had to pay 43,500 *l.* interest to the proprietors, while the aggregate net profits on the working of the railway is only 2,600 *l.*?—I think it is possible.

6780. Mr. *Fawcett.*] Was not it done against the representations of the Government of India?—I think in that case, as in many others, the Government of India was not consulted. A large class of transactions of the Secretary of State in relation to guaranteed railways never come at all under the cognizance of the Government of India.

6781. The further we go the worse it appears; that throws a new light upon the subject. The Secretary of State who may never have spent, and generally never has spent, an hour in India, enters into financial arrangements which greatly affect the future financial position of the Indian people, and, according to your statement, does not take the trouble to consult the authorities in India as to the arrangement?—You make one serious omission. It is not the Secretary of State, but the Secretary of State in Council; and the 15 gentlemen who form the Council all have been in India the greater part of their lives.

6782. But you are aware that the Secretary of State can act independently of his Council?—Not in money matters; that is the only exception; he must have a majority of the Council in spending money.

6783. Sir *C. Wingfield.*] With regard to that question about the Oude and Rohilkund railway, is it not the fact that the Government of India did, for a long time, try to get that done without a guarantee by a company?—Yes, they did, very hard.

6784. Was the guarantee given on the recommendation of the Government of India, do you think, or was it done entirely in England?—I could not positively say that, but it was perfectly clear that the railway could not be carried out without a guarantee, unless the Government did it themselves, and it was perfectly evident that no money could be raised in England without a guarantee in some form, the Government either giving the interest absolutely, or a guarantee for the interest. The Government of India did not, and I think would not, have opposed the guarantee in this case, and may even have expressly approved it.

6785. Mr. *Fawcett.*] But with regard to the Secretary of State in Council, is it necessary for him to obtain the approval or consent of a majority of the Council, or simply a majority of those who happen to be present at any particular meeting?—I am afraid that I do not know sufficient of the rules under which the business of the Council is carried on to say that.

6786. Will you find that out, because at present your answer is ambiguous?—Yes.

6787. *Chairman.*] I think it is those present in the Council when the act is done; the words are, "present in Council," I think?—You must refer to the Act of Parliament for the words; but I think it is probable that that would be the way in which the business is conducted.

6788. Mr. *Fawcett.*] Are you aware that much of this large expenditure and want of economy and control which has taken place in the Public Works Department, and to which you have alluded, was predicted many years ago as the inevitable result of spending more money upon public works, and extending them. It was pointed out, for instance, even as long ago as 1864, by Sir Charles Trevelyan, that the public works had then been carried quite to that point at which they could be adequately controlled by any administrative machine that could possibly be devised?—I think that Sir Charles Trevelyan made use of some expressions which I should venture to call rather wild on the subject; I dare say he did say what you have referred to.

6789. Subsequent events have shown that his opinions were not wild, but that he spoke the truth; that he foresaw what was going to take place?—Well, I am not prepared to admit that, because a great many of the things that we have been referring to just now had actually occurred before 1864, or, if they had not occurred, the seeds had been sown, and otherwise I am not prepared to say that the general inference which is implied in your question is a correct one.

6790. I will not enter into an argument on the point, but the inference I draw from your evidence, after reading it very carefully, and your own admissions, is that it is the most striking corroboration possible of Sir Charles Trevelyan's forebodings; but that, of course, is a matter of opinion?—I admit that there has been irregularity, and that there has been wasteful expenditure, and I believe wherever money is spent there will be irregularity, and there will be waste; and I believe that the Public Works administration, like every other administration, is susceptible of improvement.

6791. Of course a considerable part of the expenditure for public works takes place virtually in England?—Yes.

6792. You buy your materials there?—Yes.

6793. Have you any opinions to offer on that point?—Yes, I have, and a very distinct opinion.

6794. *Chairman.*] Without going into the question now of the general profits and the cost of the State lines, with reference to a former answer that you gave, I should like to ask you

Major Gen. *R. Strachey*, R.E.

14 June 1872.

this question. I have directed your attention to the out-turn of the Scinde, Punjab, and Delhi line, and on a former occasion you stated that regard had been had to the results of the existing lines, to some extent, in selecting the new lines. It appears, from the report of Mr. Danvers, that 12,000,000 *l.* is the first estimate of expenditure on new lines, and out of that 12,000,000 *l.* 3,000,000 *l.* was to be spent in the Punjaub Northern, from Lahore to Peshawur, and 5,000,000 *l.* in the Indus Valley, from Moultan to Kotri, making 8,000,000 *l.* out of the whole 12,000,000 *l.*; that 8,000,000 *l.* would seem to be spent in a district which has hitherto proved extremely disastrous to railway profit; do you understand that that expenditure has originated, or that this proposed expenditure of 8,000,000 *l.*, has originated mainly with the Government of India, or with the Secretary of State; which of them would you consider, from your recollection of the course of transactions with reference to these lines, chiefly responsible for initiating this expenditure of 8,000,000 *l.*?—Well, I think there is no doubt that the initiative in this case has been taken by the Government of India. But I do not think that that gives at all a complete reply to the implications that are involved in the question.

6795. Perhaps you will give your explanation of any erroneous implication that would result from the figures that I have stated?—The fact is that it is rather difficult to explain the precise position of the Government of India in relation to the construction of new railways, unless the whole question of the policy under which it is acting is taken up and explained. It is very easy to pick out some particular defect in the administrative system of the Public Works Department, and draw attention to that, and the defect, whatever it may be, may be indefensible; but it does not at all follow that the system under which that defect exists, or the method in which that system is worked, is in any way bad or in any way unreasonable. The motives which have led the Government of India to undertake the railways which they are now constructing themselves have been extremely various; in fact, they are as various as the lines themselves. The obligation, so to speak, for undertaking the line from Lahore to Peshawur is purely and simply a military obligation, and whatever expenditure becomes necessary for maintaining such a line, for providing for the payment of the interest upon it, and so forth, is just as much a part of the expenditure devoted to the military defence of the country as though it had been spent on so many soldiers. That applies to the extension of the railway from Lahore to Peshawur. The line between Moultan and Kotri is very much in the same category, and the Government of India, in writing to the Secretary of State on the subject, say that they do not think that it is a heavy charge on the revenues of India to provide railway communication at an expense, as far as my memory serves me, of 30,000 *l.* or 40,000 *l.* a year, that is the net charge that will accrue after setting off the net profits against the interest. The principal motive, again, for carrying out that line at the present time (and I put a stress upon those words) has been one of a military nature. It has been felt that it is extremely important to have it, to unite by railway the parts of India in which military operations are at all events possible; and, as I say, that is one, if not the chief, motive that has led to the immediate commencement of the Indus Valley Line, and to the desire which has been felt, no less by the Government of India than by the Secretary of State and his Council, to see that line completed. The whole of the other lines that are going on stand upon a totally different footing. The first of the State lines that I should refer to is the line from Agra to Ajmere; in the vicinity of Ajmere is a salt lake, the salt made at which is the principal source of supply of salt for the North Western Provinces and Oude. The Government of India, having recently reviewed the condition of the salt revenue, and in connection with it, the condition of the supply of salt to the North Western Provinces and Oude, has come to the conclusion that the quantity of salt which is brought into the market is absolutely less than the country requires, and than the country should have. But there are great material difficulties, at the present time and under existing circumstances, in increasing that supply. They have believed that the most certain, and, in reality, a perfectly certain, way of accomplishing that most desirable end will be to make a railway from Agra, which is in the centre of the districts where the salt is consumed, to this lake, the Sambhur Lake, as it is called, where the salt is made; this railway will, at the same time, go through another salt-producing district in the vicinity of Bhurtpore, from which also a large quantity of salt is introduced into the North Western Provinces. Thus, the principal motive of the Government in undertaking this railway at the present time has been the feeling that until a very greatly improved means of transport has been provided between the salt-producing districts and the salt-consuming districts of that part of India, the population, generally speaking, will have to pay very much higher prices for salt than is desirable, and that the actual supply which they can receive will be very much less than is required for their convenience, or even for their health. That refers to the line of railway from Agra to Ajmere, with its bifurcation to Delhi, on which also there is salt. When I am talking of salt, I should also remark that the salt supply of the Punjaub and the extreme northern part of the North Western Provinces, comes from the hills on the north of the Jhelum, and that one of the sources of revenue on the Lahore and Peshawur line, it is hoped, will be the transport of that salt

6796. The scheme that you have just been describing is the scheme for the 369 miles of railway which is to cost 2½ millions, called the Rajpootana line?—Yes. A contract has now actually been let for the portion of the work between Agra and Sambhur, that is to say, the portion of the work which is to be done in India, and the engineers there are now satisfied that the cost of that line, including everything, including the bridge over the Jumna at Agra, and all the other necessary works, and a certain necessary amount of rolling stock, will not exceed 5,000 *l.* a mile.

6797. Mr. *Fawcett.*] I understand the drift of your evidence to be this, that State railways in India are to be divided into two classes, one of which you may describe as commercial railways, and the other as military railways, thought necessary for strategetical purposes; is not that the case?—I think it would rather be that you may divide the railways into two categories, those that

Major Gen. *R. Strachey*, R.E.

——

24 June 1872.

are chiefly desirable on military grounds, or would be chiefly undertaken on military grounds, and those that would be chiefly, if not entirely, undertaken on commercial grounds; because a railway, whatever it is made for, if it is made essentially and exclusively for military purposes, cannot help being of very great utility to commerce, and *vice versâ*.

6798. Then as regards a railway to be made chiefly on military grounds, of course it may be justifiable to incur the expenditure although it may yield no profit at all, it may be regarded as necessary military expenditure?—Quite so.

6799. If that is the case, if a railway is made chiefly for military purposes, and is to be looked upon as involving military expenditure, is it not a stretch of language to describe that as a reproductive work, which ought to be made out of borrowed money?—I think not; I think first of all that it is more or less reproductive; that it is impossible to predicate of any military line that it will not be reproductive, that it is the duty of the people who make it and work it to endeavour to make it reproductive. Further, that from the very nature of such undertakings it is absolutely impossible to construct them unless with borrowed money; and that on all these grounds the only way to deal with them is to deal with them as you deal with all other railways.

6800. My only object was to show that some works which are classed as reproductive are railways which are carried out chiefly for military purposes?—Quite so; and they are classed among other works of the same description, for convenience, though some of them are not remunerative, and only reproductive in a limited sense.

6801. Mr. *Hermon.*] What is about the length of that railway from Agra to Ajmere?—About 300 miles.

6802. And is that railway to be constructed at 5,000*l.* a mile?—Yes, including the bridge over the Jumna.

6803. Principally for the conveyance of salt?—I mentioned that as the immediate motive which induced the Government of India to take up that line in preference to others at that time. But it was also another important consideration that was before them when they determined to undertake the line, that it opened up a communication from the North Western Provinces into Rajpootana, which is the chief market of the agricultural produce of the North Western Provinces, and thence to Bombay.

6804. And this line contemplates carrying a considerable portion of that agricultural produce?—Yes; the fact is that the salt of Rajpootana is exported into the North Western Provinces and Oude, and the produce, sugar, grains, and different descriptions of English goods coming up the Ganges, are taken from the North Western Provinces in return into Rajpootana, and the trade is conducted on that basis.

6805. But this single line that you speak of is to be constructed at a much less cost than the other railways of India?—Yes; it is to be a narrow gauge line, and made on what we consider our improved principle.

6806. Sir *D. Wedderburn.*] And it is estimated that this line will pay commercially apart from other considerations?—Yes; I have no doubt that in a very few years, if not almost at once, on being opened, it will cover the interest.

6807. Mr. *Fawcett.*] You said that you have some very distinct opinions to offer to the Committee with regard to the expenditure for public works upon stores in England?—What I meant was this: I consider that the functions of the Secretary of State in Council may be divided into two very distinct categories; the one would comprise the duties which appertain to the control of the operations of the Government in India; and the other the duties which he performs of a directly administrative and executive nature. Under the arrangements that have been made for the carrying out of railways in India, whether through companies or directly under the State, and under any conceivable arrangements that can be made for working railways, it will be always necessary that a very considerable quantity of expenditure shall go on in England, and a considerable and important part of the establishments, that is to say, of the persons who are employed on the railways, must be recruited in England, and therefore a general direction of affairs of this description is required in England. In connection also with the operations of the Public Works Department under the Secretary of State are the telegraphs, he being connected more or less with the Overland telegraph lines; and he has in that capacity to exercise what I consider are distinctly executive functions. Besides the purchase of the stores which have to go out to India, there is the extremely onerous and complicated duty of shipping them, which is a great business in itself. Now, I consider with regard to the whole of these functions, which seem to me purely of an executive and administrative nature, and not at all in the nature of control, that the organisation under the Indian Council, under which that business is disposed of at present, is utterly unsuited for it. For the proper performance of such duties, to my judgment, it is absolutely essential that you should have a single authority; and I think that the Secretary of State to carry out duties of that sort should have under him some specific officer, probably under the designation of an Under Secretary of State, or a person something in that position, to be specifically responsible to him for the whole of the duties which arise in connection with the particular branch of business to which I am referring; that there should be an individual who should be responsible for everything that is done, or for everything that is not done in connection with the administration of that portion of the public business. And I would go further and say that my belief is that a similar sort of arrangement is desirable in relation to the management of the finances; that the control of the finances by the Secretary of State is very much more than a mere control of the Governments in India; it is to a very great extent a direct executive Government. For the reasons that I have before given, I consider that the same general considerations apply to the supervision of such business as to the public works business. As regards the mere control of what is done in India, the position is quite a different thing, and I am not prepared to say that the existing organisation may not be extremely well suitable; in fact I think that it would be very difficult to suggest anything that should be different, or different in substance, from that which does now exist.

6808. What I understand the important reform which you suggest to be is this, that you take away from the Secretary of State at the

present

Major Gen. *R. Strachey*, R.E.

14 June 1872.

present time his responsibility with regard to finance and also with regard to executive and administrative works which you have described, and you transfer the responsibility which now rests upon him to under secretaries?—No; the Under Secretary, of course, would act under the responsibility of the Secretary of State. The Secretary of State is at present entirely responsible, and would remain so responsible; but at present the agency which he has at hand is a committee diluted by the Council. The real serious objection which seems to me to attach to the present system for the disposal of what I call executive business, is that it is first brought before a committee, where there is no specific responsibility placed upon any particular person for any decision come to or proposed; and that after having been dealt with by the committee, where the responsibility is subdivided to a certain extent, it goes before the Council, where it is again still further subdivided; and that thus it is perfectly impossible for anyone to lay his hand upon any single person (except the Secretary of State, who is, of course, responsible to Parliament) who shall be wholly responsible, for instance, that the rails which I am now sending out for any one of the railways in India are properly sent out, at the proper time, and of the proper quality, and so forth.

6809. Then the existence of the Council, in your mind, leads to a want of concentration and responsibility, and you want to secure greater concentration?—Yes.

6810. Therefore your reform, if carried out, would, according to my individual opinion, lead to a very great result; it would lead to the abolition of the Council, would it not; what would there be left for them to do?—I guarded myself purposely against the confusing of those duties which are in the nature of control and criticism of the acts done by the Governments in India, and discussions as to any policy about to be undertaken; with the actual executive duties which have to be performed for certain purposes by the Secretary of State, which are of a totally different nature. As I remarked before, I would not say that, as regards duties of control, that the council is not sufficient, and I would not say for myself that I could suggest anything that would be better.

6811. But then it seems to me that if you rearrange the administration of the affairs in India in the way which you suggest, there would really be nothing left for the Council to do except verbal action; they would have no responsibility, and all that they would have to do would be to talk and criticise?—I think that you have misconceived my views there entirely; I have merely referred to certain branches of the administration which, according to my point of view, are essentially of an executive nature. I do not think that the duties which the Council has to perform in relation to the control of the Government in India are either small or light, or that it requires at all a mean capacity to perform those duties; quite the reverse.

6812. But do you propose to take away from their control all financial questions and executive questions?—You entirely mistake me, if you think I have suggested that; I spoke of the administrative, the executive management. I do not say that the Council should not still be consulted on measures of policy or measures of finance; but I do say that there should be an executive head, who should have a specific responsibility; at the present time there is no one who has that specific responsibility.

6813. What I want to get at is this; suppose that the reforms that you suggest were carried out, and suppose some bad arrangement, such as you have described, were in future years made, who would be responsible; the people who are now responsible are the Secretary of State and the majority of his Council who voted with him, and of course they may be under your new plan, who would then be responsible; would it be the Secretary of State and the Under Secretary whom you propose to create, or would it still be the Secretary of State and a majority of the Council?—I suppose still the Secretary of State and a majority of the Council. But the difference I see is this. In the one case the Council would be consulted on questions of policy, and on these their opinion would be binding; but as regards the putting of the policy into action it is a totally different thing; there the Secretary of State would be supported by a person whose specific duty it was to see that the general decisions that were come to on any question of policy in the particular department which I referred to were properly carried out, and also the Secretary of State and the Council would have the assistance of a person who should be specially responsible to them for putting every question of the sort referred to that came before them in a thoroughly complete and satisfactory manner; at the present time there is no such responsibility upon any person.

6814. Would you point out the evils which exist at the present time, or could you give us some specific instances of some of the disadvantages which result from this want of responsibility to which you have alluded?—I should say, generally speaking, the loose way in which the business connected with the guaranteed railway companies has been conducted, and the extremely unsatisfactory financial results that have arisen from the operations of those companies, which could not possibly have occurred if there had been some specific responsibility put upon an individual officer directly appointed for the special purpose of preventing such objectionable consequences.

6815. Of course that is a very tangible misfortune. Is there any other disadvantage which has resulted from this want of responsibility, so far as the purchase of stores is concerned, and the quality of stores which have been sent out, and the regularity or irregularity with which they have been sent out?—I do not know that I myself am altogether in a position to give an opinion upon that, and I think it is obvious that it is hardly to be expected that I should wish to give what after all will be merely my own opinions on points of detail, nor go beyond the broad and general outlines of such a question as this, which, to some extent, involves considerations of a personal nature which I think it is hardly fair that I should be pressed upon.

6816. I will not press you on any personal point; but since your acquaintance with the Public Works Department, has it not come to your knowledge when you were in India that remonstrances have been made, sometimes with regard to the stores sent out, the irregularity with which they were sent out, and the price at which they were purchased?—Yes; quite true.

6817. And owing to these causes many of the public

Major Gen. *R. Strachey*, R.E

14 June 1872.

public works in India have cost a considerable sum more than they otherwise would have cost; that there has been delay in their construction; and when they have been constructed they have not been so well constructed as they otherwise might have been?—Well, I would answer all that in the affirmative, to the extent that I believe that by improving the general organisation under which the operations of the department are carried out, you might get a generally improved system of administration. But I am not prepared to say, with regard to the operations of the Store Department, that it is fair to say in general terms that they have not been satisfactorily and well carried out.

6818. But still as a fact you have felt it your duty in India in the Public Works Department to make not unfrequently remonstrances with regard to the stores which have been sent from England?—Occasionally; but I have no doubt that similar remonstrances would be made regarding operations of which I myself had the control, and therefore I am not going to say that the sort of remonstrances and the sort of objections that arose on account of lapses in the department in England were not, at all events to some considerable extent, necessary consequences of the difficulties under which any department is put which has to carry out the wishes of a very distant authority, expressed not always in the very clearest way.

6819. I am not wishing to throw any blame on particular individuals; I am simply putting to you these questions as an illustration, to my mind, of the defects of the present system on which you yourself remarked; and, in your opinion, would not this take place if the administration was improved in the way that you suggest; it would not be necessary for the Public Works Department in India to make so many remonstrances, would it?—As I said, I think if you really had a more thoroughly efficient administration in England, the result would be that there would be fewer mistakes and fewer causes of complaint.

6820. If the expenditure, as repeatedly happens on any public work in India, exceeds the estimate, who is made responsible for that?—That would depend a great deal upon the circumstances under which the excess of expenditure took place; it may arise from various causes. Excess of expenditure may arise, in the first place, from a defective estimate; if so, then the person who made the estimate would be responsible, and the officer who checked the estimate would be, in the next place, responsible; if the work was carried out in a more expensive way than was contemplated, then the officer or officers who constructed the work or who controlled their operations would become responsible; therefore you cannot say in an absolute way that any particular person is necessarily responsible under such circumstances.

6821. What authority is there in India to supervise the Public Works Department; I mean who would this censure come from, supposing there had been a defective administration in the Public Works Department; suppose more money had been generally spent than ought to have been spent, who would be the person to inquire into the operations of the Public Works Department?—Ultimately, in anything of a serious nature, the report would come to the Government of India, and the Government of India would have to express its opinion on the subject, and I may say that a very large portion of the 12 or 14 years that I have been employed under the Government of India, has been devoted to that pleasant occupation of finding fault with defects in the administration. I think that the Committee will be left altogether under an erroneous impression if they think that the Government of India is at all lax in the performance of that part of its duties, and I may remark that an order which was referred to by Mr. Fawcett, a day or two ago, that was issued by Lord Mayo, censuring certain officers, is after all merely one of many orders, I do not say precisely of a similar scope, or having quite the same object, but one of many orders that have been issued by way of improving the tone and style in which the work of the Public Works Department is carried out, and thus far is not at all exceptional.

6822. You are referring to Lord Mayo's severe censure of the construction of barracks?—Yes.

6823. But this is the point, has anything been done except just a censure; have any improvements been introduced in the administration to prevent the recurrence of a similar state of things to that which Lord Mayo so severely censured?—I think so; I think that the greatest improvements have been made and continue to be made. The wants of a system of administration like that of the Public Works of India are constantly varying; the precise character of the work changes, the individuals change, and the systems alter, and there is a constant movement in the administration which requires constant attention; and my own belief is that as regards the mere technical administration within the department, both as regards the actual execution of the work, and as regards the keeping of the accounts, the Indian Public Works Department will show quite as well as any other body of a similar description in any part of the world.

6824. When was that censure published; two years ago, was it not?—I think so. And here I would ask permission to offer some words in explanation of an expression which has very commonly come from my mouth, and from the mouths of gentlemen in the room, "Public Works Department," which is used in such an elastic sense that it is very apt to cause confusion of ideas. When one talks in England of the War Office, one understands perfectly what that means; you talk of the War Office and you talk of the Army; you talk of the Board of Admiralty and you talk of the Navy; if anybody says that the Admiralty is badly conducted or is lax in its operations, one perfectly understands that that does not refer to the captains commanding Her Majesty's ships, and in like manner with the War Office; but unfortunately in India the expression Public Works Department not only includes the directing body under the Government of India, but it includes the whole of the organisation down to the very persons who are employed in breaking stones on the road; and, therefore, when you say that the Public Works Department is responsible for this or that which the Public Works Department has done, there may arise great confusion of ideas; for, as often happens from a want of precision in the use of words, there may follow a confusion of ideas, which is something much worse. That is the first remark I would make. And the next is this, that there is, I think, an idea prevalent among the Committee that the Public Works Department, under

Major Gen. *R. Strachey*, R.E.

14 June 1872.

der the Government of India, has a much more specific separate existence than in reality it has. There is an idea apparently that the Public Works Department is something as essentially different from the Financial Department as the War Office is from the Board of Admiralty. Now it is no such thing. The body that controls the operations of the Public Works Department is the Governor General in Council; the body that controls the operations of the Financial Department is the Governor General in Council. In any case, therefore, in which reference to the supreme authority is necessary, a question will be referred whether it goes up through the Financial Department, or whether it goes up through the Public Works Department, to the same set of men, the Governor General and his Council. In any mixed question, if it is of sufficiently serious importance, when the Governor General and his Council were discussing such a matter, the administrative heads of the Public Works Office and the Financial Office, would be called into the room and they would hear what was going on, and a general decision would be come to by the Governor General in Council, after having heard the whole of the arguments in one way or the other: and thus it is that it seems to me, that very wrong notions may be formed if the answers I have given to such questions as have been put to me, regarding the control of the Financial Department over the operations of the Public Works Department, are left unexplained. In reality the two departments are both of them ultimately the Government of India, the Governor General in Council. The Government in India has not taken that form, with specific and sharply defined branches of administration which the Executive Government has taken England. There is no departmental authority in India corresponding to a Secretary of State. I have felt that it has been necessary for me to make those explanations, because I think that there has been a vein of misconception running through a great many of the questions which have been put to me, which I should desire to remove.

6825. But does not the tenour of your explanation, rather show that there is a great want of that concentration of responsibility in the Government of India which you say is so important?—I think that is true, but all that I can say regarding it, is that the tendency to the concentration of responsibility is steadily going on; that in the year 1872 it is much more than it was in 1862; that in the year 1862 it was much more than it was in 1852, and so forth. As the business of the Government becomes heavier, and the responsibilities are heavier, that concentration of authority and responsibility has become more and more important, and its necessity more fully recognised.

6826. Mr. *Birley*.] You have told us that a large proportion of the expenditure for public works necessarily takes place in England, is not that so?—A sensible proportion.

6827. And that it would be very desirable to place that under some higher authority than at present exists; an Under Secretary of State for instance, you suggested?—I said something of that sort.

6828. I believe that that expenditure takes place entirely, or almost entirely, in consequence of instructions or indents from India, is not that so, and that it is not initiated by the India Office here?—It is almost entirely of that nature. When I say that, that refers to the particular branch of business which you more specifically mention, the direct expenditure, for there is a great deal of other business; but as regards the expenditure, you are quite right.

6829. For instance, if rails or locomotives or stores of any kind have to be sent out, the instruction, rather the orders, come from India to the India Office here?—Yes.

6830. Will you tell us, if you please, why you think that that would be better administered by a high officer, such as an Under Secretary of State, than by a well-qualified head of department?—I think, perhaps, you have a little misunderstood my suggestion. No doubt it was put in a very general way, and before it could be shown how it would be specifically applicable, I should have to explain a great many things in detail. But I will endeavour to give an illustration. The person on whom the duty at present devolves of superintending the purchase of rails or locomotives for the State railways is myself. An indent, as we call it, comes from India for certain things, then it is referred to me to make a suggestion as to what should be done, whether it should be carried out, and to what extent, and so forth; then on my recommendation, measures are taken for making the purchase. But I do not act singly in that; I am one of the authorities consulted, the other chief authority is the Store Department. Here at once there becomes a joint authority. Then occasionally a question will arise whether a particular thing that is referred to in an indent shall be ordered, or whether it will be desirable to order something else. Here comes another question of discretion. Under certain circumstances such matters would go to the Railway Committee for decision, and that is a third authority.

6831. The object is to order what is most efficient and economical, I suppose?—Yes.

6832. What would be the difficulty that you feel in the present system?—The difficulty that I have felt, and that I continue to feel is, that there is no general authority having the power to dispose of all questions that arise in connection with our business. If I seek for such an authority I cannot find him.

6833. In fact, if you wanted to buy so many thousand tons of rails before 12 o'clock, you could not do it?—No.

6834. You want to have some authority with whom you could instantly consult and decide?—Yes, that there shall be an authority in a position to settle every question that can arise in connection with that branch of business; but not only that, and not only an authority who can settle, but whose specific business it is to see that it is settled and that it is settled rightly, which is a most important part of the matter.

6835. In fact, that you have to transact mercantile business without having the immediate authority which such business requires to control it efficiently?—I think so.

6836. You told us also, in regard to the guaranteed railways, that a great paramount authority concentrated in a single person is desirable at the India Office?—Yes.

6837. Will you tell us for what reason?—Without the least difficulty I can assign a reason. Up to the present time, I believe that the accounts of not one single one of those companies

Major Gen. *R. Strachey*, R.E.

14 June 1872.

is in what I should consider a satisfactory condition. Up to the present time there has not been what I should consider a satisfactory control maintained over the expenditure or working operations of any one of those companies. I personally have been trying for years to do what I can to get these defects recognised and remedied, but without success; and I say, without any hesitation, that the reason why those defects still remain, and why there has been a difficulty in recognising their existence, is the want of such a responsible officer as I have spoken of.

6838. Some high paramount authority in London that could deal promptly with the railway?—Certainly; and I do think that the existence of such an authority would in the smallest degree of necessity interfere with a co-ordinate, or, if you please to call it, a paramount jurisdiction on the part of the Council. For instance, the general course of policy to be pursued might be very readily referred to the Council, also general estimates for the expenditure during the year might at the commencement of the year be passed by the Council, and then the carrying out of the details of all measures would be left to the executive authority in direct communication with the Secretary of State, and under the specific responsibility of the Secretary of State.

6839. Of course, all the important proceedings which he has carried out under his own discretion he would submit, as soon as conveniently might be, to the Secretary of State in Council?—Quite so; there would be no difficulty at all in making rules and regulations under which that sort of purview of his operations might be made.

6840. Now, as regards the public works in India, what, in your opinion, would be the best mode of action in regard to deciding upon important public works, works involving the expenditure of millions, perhaps?—I am not prepared to say that I should recommend anything in the shape of any considerable change of the existing system. I think that what is wanted, is to support and to reinforce it.

6841. I thought from what you said at the end of your examination by the Honourable Member for Brighton, that you would rather be of opinion that a separate department in India should have that duty?—I stated that I thought there should be a special Member of the Council of the Governor General charged with the duty of controlling the public works administration. Further, I would explain, that in reality, and up to a certain point, the position of the Secretary to the Government of India, in the Public Works Department, is that of a second-rate Member of Council; he has a great quantity of onerous duties to perform; but (and I speak from my own experience, having held that office for many years), I say without any hesitation at all, that the secretary in a department has not the necessary authority, he has not the power to get himself heard. Many things have been done that I have been perfectly satisfied ought not to have been done, or ought to have been done that were left undone, but as to which I was not in a position to get the Government to listen to what I said; and it was not to be expected that everybody would see with my eyes, and, so far, I have no cause to complain; but I do say that there has not been up to the present time in India a person having that power of expressing his opinion on public works questions, and of insisting upon attention being given to it, which is wanted.

6842. He has not that status in the Government of India which you think such a responsibility absolutely requires?—Quite so; and I further say that nothing can be more mischievous than to give any great authority to any individual officer under the cover of somebody else's name. I do not affect to shirk the responsibility which rests upon me personally for what I have done, or left undone in India, during the time that I have been connected with the Government; I have given a great deal of advice, and, to a considerable extent, the advice that I have given has been taken and acted upon; but what I say and feel is, that the fact that those measures which I have advised have been carried out under somebody else's name, who is apparently their author though not really so, is mischievous, not to the public service only, but to me; that it makes me a less useful servant.

6843. Under whose name have those measures been carried out?—The Governor General in Council.

6844. I am not sure whether you have told us, on a previous occasion, what is your opinion as to the best mode of carrying out great public works; whether by contract, or by the direct action of the Public Works Department?—I do not think that any general rule can be laid down upon that; it depends so very much upon the conditions under which labour is to be found, and upon the possibility of getting a decent contractor; you are occasionally able to find a contractor who will offer to do the work at a reasonable rate; but there is a very great difficulty in getting a substantial contractor in India. There are very great difficulties in dealing with the great contracting houses of England; they require enormous profits, obviously; it is unnecessary to explain why, but they do; and the contractors who really are the useful people to deal with, are the local contractors, men, with not very large capital, but still with enough to carry works on a moderate scale; unfortunately, we have only a few such houses in India, but whenever we see our way to making use of them, we do it, and do it with satisfaction.

6845. At any rate you object strongly to the system of guaranteeing companies a fixed rate of interest upon a large amount of capital?—Most unquestionably.

6846. Can you tell me whether such a system of accounts is kept in the offices that you can tell pretty well the degree of reproduction upon all these works, the actual returns?—I think I explained the last time I was here, that the forms in which such accounts should be kept have been more or less discussed and more or less settled, but that there are difficulties as regards certain classes of works in arriving at a satisfactory conclusion; that I believe that a conclusion is in the course of being arrived at; and as regards the irrigation works, I have got, since I was in the room last, the last returns which have come from India, which still, though they show in a rather more tangible form the results of those irrigation works than has been producible before, still are to my judgment very imperfect.

6847. Sir *D. Wedderburn*.] In speaking of the Public Works Department, and referring, I suppose, more especially to their engineering functions, I think you said that they were liable to be judged with peculiar severity, because their work was tested by the powers of Nature, judges

Major-Gen. R. Strachey, R.E.

14 June 1872.

judges that would never forgive them a mistake; I suppose you would admit that good and skilful work is equally recognised by the same judges?—Yes.

6848. So that if the failures bore a conspicuous proportion to the total number of undertakings, we should be justified in making an unfavourable estimate of that department?—Yes; and we should be quite ready to accept that test.

6849. When you said that nothing worthy of the name of public opinion existed in India, I understood you to mean that no adequate or organised means existed of bringing public opinion to bear upon Government?—I think more than that; I think, looking at the general condition of the population of India, that the proportion of the inhabitants who literally know nothing whatever either of the Government or of its proceedings, is so enormous, as compared with the part of the community that does know, that it is hardly fair to talk of public opinion in the sort of way in which it is talked of in a European country.

6850. But surely the Native press shows that there exist in that community, as in all others, public wants and wishes, and opinions as to the acts of Government?—I do not mean to say that there are not individual natives (for that is a very different thing) who thoroughly appreciate what is good and what is bad in our Government, and, what is more, are perfectly capable of expressing their opinions upon the subject

6851. But you would admit, would you not, that whether these opinions are wise or well founded or not, still they do exist among the natives of India, as to our action in local taxation on such matters?—Certainly; and I also admit that whatever expression of public opinion there is, is worthy of attention.

6852. And it would be very desirable if they had some direct means of bringing it to bear on the action of our Government?—I think so; I should think nobody could doubt that the very weakest part of our administration in India is the difficulty of getting public opinion to bear upon us and upon our work; I am sure that I have always felt it to be so.

6853. Mr. *J. B. Smith.*] I am anxious that you should define precisely what you mean by ordinary public works?—I think that it is first necessary to repeat what, I rather think, I have said before, that we do not classify works, but we classify expenditure; that when we talk, therefore, of ordinary public works we mean public works paid for out of the revenue of the year; that the terms ordinary and extraordinary are financial terms, and not terms of the Public Works Department.

6854. Of what nature are those ordinary public works that are paid for out of revenue?—They include, first of all, all charges under the head of repairs absolutely, and under the head of new works they would include all works which the Government has not determined are of a character to be carried out with borrowed money.

6855. How would you class barracks?—Barracks fall under the head of ordinary.

6856. But would you consider that it was a sound policy to borrow money for ordinary public works, for barracks, for instance?—When I say that the expenditure on barracks comes under the head of ordinary, I mean that it does now. For one or two years, I do not exactly recollect the length of time, the Government had come to the determination that it would borrow the money for completing the new barracks that were required in India, but after that period this decision was reconsidered, and it was determined that the whole of the expenditure on the barracks should be thrown under the head of ordinary, that is to say, should be met from the revenue of the year.

6857. And they have been so made?—They have since.

6858. Only partially so?—For the first year or two the money was borrowed, or spent in excess of the revenues; and when the original arrangements were made under which the general new barrack scheme was taken up, the idea was that the revenues could not support the charge, and that it would be necessary to borrow from 8,000,000 *l.* to 10,000,000 *l.* to complete them, and the Government of India accepted that position.

6859. Has there been any fund assigned for the payment of the interest and of the principal in those cases?—No, the interest merely appears under the general charge of interest in the published accounts of India; there is no subdivision of the interest charge; it all appears under the head of interest on debt.

6860. What do you define extraordinary public works to be?—Extraordinary public works are those public works the funds for carrying out which are supplied from borrowed money exclusively. I do not say that public works, to which borrowed money is applied, do not also receive grants from revenue; the exclusion is in the other direction.

6861. Then you suppose that all such extraordinary public works are expected to be reproductive works, that is, to yield an interest upon the outlay upon the works?—As a rule that would be their character, but not necessarily so.

6862. Then, after all, the revenues may be called upon to defray the interest upon the borrowed money for the extraordinary public works?—Yes, they may.

6863. What do you consider a sound principle in those cases where money is borrowed for the execution of public works; would you say that there ought to be a certain sum every year set aside for the payment of the interest, and for the extinction of the debt?—I would ask you, if you please, to let me postpone giving my opinions on this subject to another day, because there are papers which I should like to refer to in answering that part of the inquiry which I was quite prepared for, which I have not brought here to-day. It is a most important subject, and I should wish particularly to explain what has been done in that respect.

6864. Sir *C. Wingfield.*] Did not Sir Stafford Northcote lay down a very strong rule on that point; did he not say that no works should be constructed from loan, save such as could be considered remunerative; that is to say, would yield a return equal to the interest of the money borrowed?—It is quite possible that he may

6865 But you do not think that that has been very strictly acted up to?—No; but the disposition has been to refuse to allow money to be spent upon any work as to which either there was not reasonable expectation that it would be distinctly remunerative, that is to say, that the income of it eventually would pay the interest charge, or that it was in the position of one of those State railways which the Government undertakes as a matter of policy.

Major Gen. *R. Strachey*, R.E.

14 June 1872.

6866. But with that single exception of State railways, the rule laid down by Sir Stafford Northcote is observed?—We strive to observe it; it is our intention to observe it; the future, of course, will show to what extent it has been observed; but the archives of the Government of India are filled with discussions between their officers and the officers of the local Governments on the subject of the returns to be anticipated from works for which grants of borrowed money have been asked, and the Government of India has constantly, repeatedly, and resolutely refused to allow grants of borrowed money for certain works, because they have not been satisfied that they will be remunerative. And more than that, where, on the representations of any Government that a work would be remunerative, and when there was *primâ facie* evidence that it might be, and that the Government of India has provisionally allowed a grant, it has been careful to require such a Government to pay back the grant in some subsequent year, if eventually the Government of India has not been satisfied with the character of the work. There have been several occasions of that sort.

6867. Mr. *J. B. Smith.*] It appears from the reports on railways in India that the capital expended up to March 1870 amounts to 91,102,810 *l.*; that, in addition to that, there is 4,009,000 *l.* loss on exchange, the difference between 1 *s.* 10 *d.*, a rupee, and the absolute exchange; then, in addition to that, the railways have cost 7,000,000 *l.* for land; and in addition to that, there has been paid for interest upon the capital beyond the traffic receipts a sum amounting to 17,590,000 *l.*; making a total of 119,695,000 *l* Now we will take that in round numbers at 120,000,000 *l.*; the railways have cost the Government 120,000,000 *l.*; and I see by the returns that the net receipts amounted for the year 1870 to 2,846,000 *l.* If you take it in round numbers you have this; the interest on the railways amounts to 6,000,000 *l.*, and the receipts amount to 3,000,000 *l.*, so that there is a loss of 3,000,000 *l.* *per annum* upon the existing railways; and I have got the return now for 1871, and I see that the receipts are rather less than they were the previous year?—Well, the general state of things that you have described, no doubt, is correct. As to the particular figures, I think that there is something to be said about them, and that I could not accept them; but the general scope of your observations is correct.

6868. In the face of these facts, are the Government about to make new railways for the purposes of developing the resources of the country, or are they merely for political objects?—Both.

6869. Which are those which are for the development of the resources of the country?—The only two lines that are being carried out for political objects, are those in the Punjaub and Scinde, the Indus Valley Line and the line from Lahore towards Peshawur.

6870. Those are the largest lines and will involve the largest expenditure?—No, not altogether; one of them, the line from Lahore towards Peshawur is extremely expensive on account of the bridges.

6871. What would be the cost of that?—I am not prepared to say off-hand; it will cost about 10,000 *l.* a mile.

6872. The proposed expenditure on State lines is 12,000,000 *l.*?—I do not know anything about those figures.

6873 *Chairman.*] In the Report of the Government Director of Indian Railways in London for 1871, it is stated that the State railways at present sanctioned are estimated to cost 12,000,000 *l.* (*handing the report to the Witness*)?—Well, some of these figures are not correct. I do not know where Mr. Danvers got them from, but they are not correct.

6874. Mr. *J. B. Smith.*] Are they very far wrong?—Well it is a very difficult thing to carry the cost of long lines of railway in one's head. There is 3,000,000 *l.* put down here for the line from Lahore to Peshawur. Now the line from Lahore to Peshawur has not been sanctioned, to begin with. The line that has been sanctioned is from Lahore to Rawul Pindee; the Secretary of State has not sanctioned anything beyond; it has been talked of.

6875. Has it been sanctioned from Moultan to Kotri?—From Moultan to Kotri, in a general way, has been sanctioned. The Estimates have not been prepared, but approximately, instead of costing 5,000,000 *l.* sterling, as stated here, it will cost, to the best of my belief, about 3,000,000 *l.*

6876. Now, have you any expectation that these lines in Scinde, which you are projecting, will be more profitable than the existing lines in Scinde?—I think that I have answered that before, that the belief is that the line from Moultan to Kotri will lead to a charge on the revenues, after setting off the net revenue against the interest of 30,000 *l.* or 40,000 *l.* a year.

6877. You are aware that, according to the report here, the present expenditure on the Scinde railways amounts to 12,000,000 *l.*?—I daresay.

6878. And that the Government have paid upon this outlay, interest of about 3,100,000 *l.*?—Yes.

6879. So that the cost of the railway is 15,100,000 *l.*; now, are you aware that the income in the last year was only 86,402 *l.*, which amounts to 11 *s.* 6 *d.* per cent per annum upon the outlay?—The Scinde, Punjaub, and Delhi concerns, no doubt, are the worst of the whole lot that the Secretary of State has got; but I should say generally, that I do not accept the propriety of making a calculation in that fashion. I do not see (as I think I have explained before to the Committee) the propriety of adding the charge for interest to the cost for construction. I do not know that it is necessary to repeat what I have said about that, but that continues to be my impression.

6880. Supposing that the Government had not this interest to pay, supposing the traffic upon the railway had yielded the interest which the Government are bound to pay to the company, amounting to 3,000,000 *l.*, would not that 3,000,000 *l.*, which they have now to pay as interest, have gone to the reduction of the debt?—I think that most probably it would not.

6881. Might it not?—It might have done so, certainly; but I would say that it does not do to indulge in speculative finance; that it is impossible to argue that, because such and such sums of money would not have had to be spent under certain circumstances which have not happened, therefore certain other things would have happened which have not really happened.

6882. But

Major-Gen.
R. Strachey,
R.E.

14 June
1872.

6882. But do you think that the Government can go on in this way, unless they make up their minds to march to bankruptcy? — When the Government undertook these railways, it made up its mind to spend money upon them, and it made up its mind to spend money year by year out of the revenues of the country. When Lord Dalhousie proposed to make railways all over India, he did not expect to get the railways for nothing, and we have not got them for nothing. There was never any expectation that they would not cost the State money. It is a different question altogether whether it may not be conceivable that they might have been made at a less charge on the revenues.

6883. Mr. *Fawcett.*] But Lord Dalhousie thought they would pay? — His fundamental idea was not that he would make these railways because they would pay; he had a hope that they might pay either directly or indirectly, and personally I am not prepared to say that they have not paid; on the contrary, I believe that they have paid.

6884. Mr. *J. B. Smith.*] Is it not necessary for the Government, before they enter into new speculations of this kind, to look at what the past has been?—Most surely and certainly, and they have done so, and have done so with the greatest care, and in my belief with a perfect appreciation of the obligations which rest upon them in that direction. It was, I may say, the keen perception of the condition of things which had arisen in consequence of the great expenditure on the guaranteed railways that led the Government of India three years ago to come to the conclusion that it was impossible to go on spending money according to the old system on railways, and that a new plan must somehow or other be devised, or that the making of any more railways in India would be absolutely impossible

6885 Do you think that it is desirable, in the present state of the Indian finances, for the Government to engage in further outlay which is unproductive?—I think that it may be judicious. I do not think that it necessarily is injudicious. I think that all such expenditure requires great caution, and I believe that whatever expenditure has been sanctioned, has been sanctioned with suitable caution.

6886 But is there any prospect of the Government revenue increasing to such an extent as to enable them to meet new losses upon unproductive works?—I think there is. I have every reason to think it.

6887. Do you think that it is wise with a fluctuating revenue like that of the Indian Government, one year opium producing 6,000,000 *l.*, another year 8,000,000 *l.*, to enter into large engagements for unproductive works which may involve the borrowing of money?—I think it may not only be wise but necessary.

6888. How do you propose to meet the deficiency in the revenue? — By prudence and economy generally.

6889. If they be ever so prudent, supposing the opium revenue, for instance, which last year produced 8,000,000 *l.* should fall to 6,000,000 *l.*, what must the result be?—I am not aware that I have said that it is desirable to go on keeping up the public expenditure very close to a growing public income. I have not said that, on the contrary I think that to do so is extremely dangerous, not only in India, but everywhere else. I do not admit that the Indian revenue is extremely liable to great fluctuations, which cannot be foreseen. I do not admit that the fluctuations in the opium revenue have been of the nature that is commonly attributed to them; or that they have been due to the causes that have been commonly assigned to them. I believe that to a very great extent the fluctuations in the opium revenue have been the result of want of skill on the part of the people who have had to manage the transactions of the opium department

6890. You do not dispute the facts of these fluctuations in the revenue?—Not the least. At the same time I should say that it is not to be disputed that the opium revenue has steadily been increasing, and that for the last year or two, taking a reasonable average, it has been higher than it ever was; and also that, so far as I can see, there is nothing to indicate that it is likely to fall.

6891. I have in my hand the financial statement for 1872–73, in which the estimate is a surplus of 237,000 *l.*; do you think with such a surplus as that the Government are justified in entering into large engagements which involve borrowing money for unproductive works?—I do not see why they should not be. I am of course not prepared to defend the financial arrangements of the Government of India for the year 1872–73; I know nothing whatever about them, and I do not know that my opinion on their prudence would be worth very much if I gave it; but still I do not see that necessarily on an estimate of that sort it would be imprudent to go on with the construction of works from borrowed money in the way that the Government of India has been doing and is doing now.

6892. Sir *C. Wingfield.*] There is a passage in a minute written by Sir John Lawrence in 1859, which seems to lay down a view rather different from yours; he says, "Blindly to enter upon an indefinite scheme of railway extension without considering the financial results of so doing, merely trusting to the probable growth of the Indian revenues to make good all necessary charges for interest is a course which has been advocated, but which cannot be seriously discussed by those responsible for the finances of the country. To the full extent to which we are satisfied after due inquiry that it is from time to time safe for us to go, let us go. But no progress can be real or permanent which is not consistent with a healthy condition of the finances"?—I do not know that anything that you have read is in the smallest degree opposed to my own views.

6893. Mr *J. B. Smith.*] Do you know that there is great dissatisfaction in India at present on account of the income tax?—I do not know that, nor am I prepared to answer that question in the affirmative.

6894. You know the fact?—No; that is exactly what I do not know. I know that there is dissatisfaction among a certain class, and that it has been very loudly expressed; but that it is general I do not admit.

6895. Has not that dissatisfaction induced the Government to reduce the income tax?—That is possible; whether it has been reduced wisely is another thing.

6896. We will suppose that that dissatisfaction might induce the Government to abolish the income tax, but would it not be impossible to do so with a large increase of expenditure on account of

Major-Gen. *R. Strachey*, R.E.

14 June 1872.

borrowed money for public works, which will not pay?—Well, it is obvious that if the charge for debt goes on increasing without any corresponding increase of the revenues, it is impossible to abolish existing sources of revenue; that stands to reason.

6897. Would you feel yourself justified, if you were the minister of finance, in recommending outlays on public works under such circumstances?—Yes, certainly; I consider that the general conditions of the finances of India are extremely hopeful and satisfactory; I think that for a few years there was a considerable want of caution in spending money, but I believe that under Lord Mayo measures were taken which practically have finally put a stop to that sort of thing; and I think that if Lord Mayo had been able to carry out all the schemes for improving the administration of the finances of India which he had formed, he would not have left India until all the causes of complaint, which no doubt have arisen during the last years, had been completely and satisfactorily removed.

6898. But you are probably aware that these estimates are founded on the reforms which Lord Mayo introduced; I see the ordinary expenditure is estimated at 48,000,000 *l.*; it was two years ago 51,000,000 *l.*, therefore you cannot reduce again; there is not the same margin for reduction as there was, and, notwithstanding that, there is only a surplus of 237,000 *l.*?—You can fairly rely upon that natural steady growth of the revenue, which has gone on steadily, and which would have been quite sufficient to keep the finances of India in a thoroughly satisfactory condition if a steady growth of the administrative charges had not been going on at the same time. The arrangements which Lord Mayo has put into force will virtually prevent that growth of the administrative charges, that is to say, I believe that they will; and I believe more than that, that they will introduce into the local administration of the finances a totally new spirit; that they will introduce a spirit of economy which had no existence before, and that they will be productive in every way, both as regards the administration and as regards the finances, of effects which very few people at the present time appreciate.

6899. Mr. *Bourke*.] With reference to what has been called this decentralisation scheme, the main object of that was to induce the local governments to exercise as much economy as possible in the expenditure of public money?—Certainly.

6900. Now, it did not give them greater powers of taxation than they had before, did it?—Not at all; none.

6901. Now, applying your mind to the questions which have been asked you by the honourable Member for Brighton, with regard to the increased taxation which he seemed to think, and possibly justly, has taken place lately with regard to these local works, did the system that was introduced of local taxation give greater facilities than before existed to the local governments to tax the people?—It made no change whatever.

6902. With regard to the railways, do you think that the guarantees for economy on the part of the Government of India that now exist with regard to the guarantee system are sufficiently efficient?—No, I do not; the Government of India has done of late years a great deal, but a great deal still remains to be done.

6903. They have no power in fact of dismissal of the officers of the railways at all, have they?—They have no such power; but I should say that I do not think that, accepting the guarantee system, and admitting that we have to work under it, the exercise of a power of that sort would really become necessary, if there was what I should consider a really healthy accord as to the absolute necessity for effecting a much more rigid economy in the operations of those railway companies, I mean a more complete accord between the Government of India and the Secretary of State than exists. I do not think there is that accord without which it would be impossible to expect what I should consider to be thoroughly satisfactory results.

6904. How does that want of power affect the economy of working?—The power that the Government of India has of controlling the operations of the companies depends practically upon their officers obtaining a real complete insight into the whole of the details of the working of the railways. Now we have no such thorough and complete insight. We have been striving for many years to get it, and more or less we have been improving, and we know rather more than we did; but up to the present moment the accounts and the returns which we get from the railway companies are extremely defective. I may mention as a fact to illustrate what I say, that after the issue of the report of Lord Derby's commission on railways, which recommended a certain uniform system of account for the English railways, the Government of India, I believe on the advice of the Secretary of State, prepared a somewhat corresponding form (the conditions in India were not quite identical) for Indian railways; the Government of India drew out a form meeting the requirements of the case as well as they could; there was a good deal of discussion about it, and a good deal of opposition on the part of the railway companies, which was perhaps natural, and the Government of India gave in a little, and the railway companies gave in a little, and it ended by a form being generally accepted, not without a certain amount of grumbling, which has been prescribed for future use. I have seen within a week the accounts of one of the principal of these companies, the Great Indian Peninsular Railway Company, still drawn out in the old form in spite of the repeated orders of the Government of India to the officers of the companies in India, that the new form should be followed. Somehow or other these orders do not produce the result desired, and the old form is still adhered to. I do not know whether any of the other companies also use the old form, but I have seen the accounts of that particular one, and I know that they have not adopted the form prescribed, which, however, has been accepted for the East Indian line and the Madras line.

6905. Mr. *Cave*.] Is there any penalty in the Indian Act on companies for neglecting to send in accounts in that form?—No; that is one of the excellences of the guarantee system, that any penalty that does fall upon the railway company is paid by the Government out of its own pocket.

6906. *Chairman*.] That is to say, the ultimate penalty is to forfeit the contract, is it not?—If the case is so extreme as that.

6907. Then

Major Gen. *R. Strachey,* R.E.

14 June 1872.

6907. Then they are paid off at par?—It is a question whether that is a penalty or not.

6908. Mr. *Eastwick.*] You would have the most information respecting the matter of barracks, would you not?—Colonel Crommelin, I think, is still in England, or he is within reach of England, and he would know a great deal more about them than I do.

6909. Mr. *Bourke.*] With reference to the future contracts that may be made between the Indian Government and the railroad companies, do you think that the old contracts ought to be revised, and that with regard to new ones improvements ought to be introduced, so as to give the Government greater security than they have at present?—Well, I confess that my own conviction is, and long has been, that the only thing for the Government to do is to take the first opportunity of purchasing the railways; I do not think that anything short of that is practicable.

6910. Mr. *Cave.*] Can they do that by the original constitution of the railways; is any time fixed, as there was for the English railways, for purchase by the Government?—Yes; under the original contract there was a power to purchase after 25 years and after 50 years.

6911. Mr. *J. B. Smith.*] As to the gauge, I believe that your projected railways are upon a narrower gauge than the old ones?—Yes.

6912. Are you aware that in this country the two railways which had a different gauge from the other railways have been obliged to change them?—Yes.

6913. Are you aware that in America they are changing their gauge all over the country, and adopting one uniform gauge?—In certain parts of America they are going in very extensively for the construction of narrow gauge railways, 3 feet 6 inches.

6914. Those are feeders, I suppose?—No, new trunk lines, they are not in any sense feeders.

6915. You are quite satisfied about the policy of having a break of gauge?—Certainly

6916. I remember sitting on a Committee in which there was a contest between the Midland and the Great Western Railway Companies; the Midland wanted to get the traffic of the Welsh coal mines and minerals, and they projected a railway that should tap all these lines; the Welsh lines being on the narrow gauge, they succeeded. I remember that the Committee said to themselves immediately afterwards, "This will involve the necessity of the Great Western adopting the narrow gauge," and so it has I was talking on that subject to Sir Daniel Gooch, the chairman of the Great Western Railway, a day or two ago, and I told him that I thought that these Indian lines were chiefly for political objects, the conveyance of troops, and so forth; then, he said, it would involve the expense of keeping two sets of engines and carriages. If you have got a number of troops that you want to send to a certain place, if you had one unbroken gauge you could convey your troops from one end of the line to the other, but under this new system you must carry your troops to one point, and there discharge them into new carriages, and you must have a new set of engines and carriages to take them on the other gauge; he considers that it would be a very bad policy, and he says that the saving of expense is nothing compared with the inconvenience that you sustain; what is your view of that matter?—My view is simply this, that for England, and for the conditions of railway traffic in England, the idea of having anything but a single gauge is madness, and particularly in the year 1872; but that the conditions that exist in England are as utterly different from those that exist in India as is conceivable; that in no single respect are railways in England carried out in the same manner as they are in India. If there was no question of money, if by putting my hand into a Fortunatus's purse I could draw out as much money as I want for railways in India, I for one should never have dreamt of a narrow gauge; but unfortunately we have no such purse to go to. The question which the Government of India had to settle was, whether they would have cheap railways, or whether they would have none. It was not whether, in the abstract, a 5 foot 6 inch gauge railway is better or worse than a 3 foot 3 inch; not at all. The actual fact of the economy in first cost of narrow gauge lines is established. As I have mentioned to the Committee a little while ago, we have what I consider to be thoroughly satisfactory evidence at the present time that the line from Agra to the Sambhur Lake will be constructed, including a certain moderate supply of rolling stock, for about 5,000*l.* a mile. The last estimates that I have seen for the line from Moultan to Sukkur, along the Indus Valley, in which a very heavy drainage has to be provided for, and a large bridge over the Sutlej at Bhawulpoor, show that it will cost something over 6,000*l.* a mile, there is I think an increased land carriage, so that the charge for transport of materials is heavier on that line. Therefore comparing these sums with the cost of the old system of railways in the very cheapest form, which, under the circumstances in which these lines are being made that I refer to, could not have been less than from 10,000*l.* to 14,000*l.* a mile, I say that the enormous advantage is at once evident as regards the first cost, and that the advantage which the Government of India hoped to get has actually been realised.

6917. Mr. *Bourke.*] Considering the condition of the finances of India, it is a question between these narrow gauge railways and none at all?—Quite so.

Tuesday, 18*th June* 1872.

MEMBERS PRESENT:

Mr. Ayrton.
Sir Thomas Bazley.
Mr. Beach.
Mr. Birley.
Mr. Stephen Cave.
Mr. Charles Dalrymple.
Mr. Dickinson.
Mr. Grant Duff.
Mr. Eastwick.
Mr. Fawcett.
Lord Edmond Fitzmaurice
Mr. Robert Fowler.
Mr. Hermon.
Mr. Lyttelton.
Mr. M'Clure.
Mr. John Benjamin Smith.
Sir David Wedderburn.
Sir Charles Wingfield.

THE RIGHT HONOURABLE ACTON SMEE AYRTON, IN THE CHAIR.

Sir JOHN WILLIAM KAYE, K.C.S.I., called in; and Examined.

Sir *J. W. Kaye,* K.C.S.I.
——
18 June 1872.

6918. *Chairman.*] WILL you kindly state what office you hold?—I am what is called in the India Office, Secretary in the Political and Secret Department of the Secretary of State for India in Council. The office corresponds with that of the functionary who is called the Foreign Secretary in India. The business of the office is with the external relations of India, and with the native States within the circle of our Government.

6919. There is an item in the accounts of the revenue and expenditure of the Government of India, showing allowances and assignments out of the revenue, for the year ending 31st March 1871, amounting to 1,756,973 *l.*?—It is what we call in India about a crore and three-quarters, that is about a million and three-quarters. It is a payment made chiefly to the extinct dynasties of India.

6920. Will you be good enough to give some explanation of this expenditure in detail, beginning with the family of Tippoo Sultan?—I had better, perhaps, state generally the cause of these expenses. It is this, that as we by our wars and diplomacies have succeeded in extinguishing most of the native States of India, we have always taken a liberal view of those who have been extinguished by our arms or by our diplomacies, and therefore, with regard to those whom we have conquered, or to those who have ceded territories to us under negotiation, we have always made arrangements to provide for the families of those persons who have thus been deprived of territorial power, and sometimes of titular dignity. These extend now very nearly over the whole of India, and therefore it is a necessity that our pension list should be very large; and it has been said that one of the reasons why we can never make our expenditure and our receipts balance each other is, that whilst we have the whole expense of the administration and the military defence of India upon our hands, we have not the whole of the revenues of those countries, because we have to give so much out of the ceded or conquered territories to those who were the former possessors of them.

6921. Perhaps we had better go shortly through these arrangements, in some convenient order, so as to inform the Committee whether they are likely to be permanent. I see that in the accounts they are very much scattered about; but perhaps it would be more convenient if you were to give the account of them in some other order, in the historical order, for instance?—I think those that earliest came upon our pension establishment were some of the Mahommedan Princes, and it may, therefore, perhaps be best to begin with them, as separated from the Hindoos. In 1799, as the Committee are aware, we conquered that great country, which had been governed by Hyder Ali and Tippoo Sultan, and we entered into a treaty in 1799, which is now known in history as the Partition Treaty, and we did then covenant that, out of that part of the partitioned territory which came to the East India Company we should provide for the descendants of Tippoo Sultan and Hyder Ali. The words in the treaty are that "the East India Company should provide effectually out of the revenues of the said districts for the suitable maintenance of the whole of the families of the late Hyder Ali and Tippoo Sahib, and to apply to this purpose an annual sum of not less than two lacs of star pagodas," which would be equal to about 6½ lacs of rupees, or 65,000 *l.* a year. The whole of this amount was not expended from the beginning annually, but the remainder of it was carried to what in those days was called the Mysore Deposit Fund. For a very long time a strict account was kept of the unappropriated balances, and these went on accumulating and increasing, the family being very well provided for. But about the year 1859 or 1860 the head of the family, Prince Gholam Mahomed, who was the only remaining son of Tippoo Sultan, and the head of the Mysore family, a man of great respectability of character, came to England, accompanied by a son and a grandson. This was after the Queen had assumed the direct government of India, and he said that he came to pay his respects to the Queen upon that great event. But whilst he was here he thought that he might do something for the benefit of his family, and he represented that there was a very large accumulation of money in this Mysore Deposit Fund, and therefore he thought that we had not acted up to the exact terms of the original treaty, which was literally true. So he asked that the pensions of the grandsons and great grandsons of Tippoo (to do him justice he asked for nothing for himself) might be increased. Sir Charles Wood was then

Secretary

Sir J. W. Kaye, K.C.S.I.

18 June 1872.

Secretary of State for India, and he requested that I would negotiate the matter with Prince Gholam Mahomed. I had a great deal of discussion with him, the result of which was that the Secretary of State for India in Council directed that a large amount of these accumulations in what was called the Mysore Deposit Fund should be invested in capital stock, or rather that the Government of India should create new capital stock, for the purpose of increasing the stipends of the members of his family. The arrangement then made was that their old stipends should cease upon the decease of the several incumbents, and that the amount derived from the capital stock thus newly invested should be a perpetual endowment to the family; so that the result will be that when they die off one-half of their pensions will cease, and never be renewable by the Government, and the other which comes from this capital invested, or rather from the creation of this new capital stock will be a perpetual endowment for the family. Therefore, although there was a great outcry and clamour about it at Calcutta at the time, I never have been able to understand but that financially, as well as politically, this was really a very good movement.

6922. We understand that the endowment will be merged in the public debt of India as an ordinary investment?—Yes But it was said at the time in India that they had to take the amount that was required for the purpose out of the cash balances of India, whereas they had not to do so at all; but they created new promissory notes for the purpose, and, therefore, it was only the interest that they had to pay.

6923. The payments that appear under this heading of account will, when the present recipients die out, cease?—One-half of the amount will cease.

6924. Will you tell us which of the items in the printed account before us come under this head?—Here (*producing a Return*) is a Return which I was ordered to make to Parliament in 1864, which was just after this arrangement was made, which, I think, contains everything; it is dated the 23rd of February 1864, it is a Return in answer to an Address of the House of Commons; it is No. 82, and was ordered by the House to be printed the 25th of February 1864. All the arrangements with respect to the Mahomedan Mysore family are minutely described in that Paper.

6925. It would be convenient if you would keep your eye on page 32 of the Account before us; which are the items embraced under the arrangement that you have just described?—This states it very clearly, as far as it goes, for it says, "Stipends and extra allowances, &c., to his Highness Prince Golam Mahomed, son of the late Tippoo Sultan," 3,738 *l.*; that was for him himself. I must apologise to the Committee in one sense, for the political is the least financial department of our office, and I really do not know how the accounts are made out at all I have great difficulty in making them out; I can only state the circumstances which led to the result. That heading under Madras, "Stipends and Extra Allowances to the Families of the late Hyder Ally Khan and Tippoo Sultan, exclusive of Payments made in Bengal," represents merely payments made to some members or retainers of the family remaining behind at Madras.

6926. Which is the item in this account of the whole expenditure on account of the family of the Sultan, or perhaps you can tell us in some other way what the expenditure is under that head?—There is no such entry; the amount that we agreed to pay to them was about 65,000 *l.* a year; but we never have paid that, and this amount now keeps decreasing every year, so that it is hardly possible to say what it exactly is at any particular period. Affairs are constantly in a transition state. Some members have accepted the offers made to them, and some have declined them.

6927. We want to know, in any way you please, what was the expenditure under this arrangement for the year ending 31st March 1871?—That ought to be in these Papers. I have stated that one of the great problems to be solved with regard to making India "pay," as it is said, arises from our having all the expenses of the Government of India, and not receiving the whole of the revenues of India; and now with regard to the future, it is highly important, I think, that it should be ascertained how far these heavy burdens which we have upon the revenues of India are permanent, or to what extent they are likely not to last; and if these heavy burdens, which amount to a million and three-quarters upon the revenues of India, should cease in part, it will very greatly relieve the revenues of India. In that Report which was returned to Parliament, to which I have already alluded, the name of every single recipient is given. I think you will see that it is a most full and detailed account of the expenditure upon the Mysore family and others, showing what were terminable and what were continuing stipends I thought the putting in of that Return, which is within a comparatively small sum the existing state of things at the present day, would satisfy the Committee as to the way in which the family is provided for.

6928. But that has to be fitted in with the account that the India Office has laid before the Committee?—This account which you have put into my hands, I have never seen before. I am not responsible for the manner in which the returns are made. Mine is not a department of account.

6929. These accounts before us say "Stipends and Extra Allowances, &c., to his Highness Prince Golam Mahomed, son of the late Tippoo Sultan," 3,738 *l*; "Pensions exceeding 5,000 rupees per annum, but not exceeding 20,000 rupees per annum," 14,995 *l.*, "Pensions not exceeding 5,000 rupees per annum," 14,238 *l.* Now, for all we know, the items which you have mentioned, may be included in those last items of pensions?—I am sorry that the accounts are so made out. I gave the Committee the information that I have on the records of my department.

6930. What is the amount of the fund invested?—That is a point that I was endeavouring to ascertain up to the time that I left the office this morning. I know that some people in Calcutta cried out largely against the general arrangements, and said that it was more than a crore. But that was entirely a mistake. I was obtaining from our finance department, this morning, information about the capitalised sum, and they make it out to be only about half a crore; but the gross amount has not yet been ascertained, and for this reason, that some of the parties did not accept the offers made to them; and therefore these final arrangements are more or less in a state of transition, and

Sir J. W. Kaye, K.C.S.I.

18 June 1872.

and we are still receiving despatches as to what they will do and what they will not do about it. At all events, looking generally at the result of the changes ordered in Sir Charles Wood's despatch upon the financial condition of India, there is no doubt that this new arrangement will prospectively greatly relieve the finances.

6931. How much is charged under this account, at page 32, to carry out the arrangements which you have described; that was the question at which we stopped?—I think that is rather a question for the finance department than for me; I can only tell you the circumstances, but not the figures; I do not see the full amount paid to these people at all in these accounts. I stated, with regard to the item of 3,143 *l.* under Madras, that those were pensions merely paid to people who had not accompanied the bulk of the family to Calcutta, but were remaining in other parts of the country and receiving their pensions there; but I do not see in this return anything representing the stipends of the family in Bengal, except that of Prince Gholam Mahomed.

6932. If you are prepared to tell us that those two items for "Stipends, and Extra Allowances," are the only charge under this head to carry out the arrangements that had been made, and that all the rest is met by the interest on the special trust fund that has been created, that is a complete exhaustion of the subject?—I could not say that without saying what was untrue, because that is not the case.

6933. Then there is a residuum unaccounted for?—I beg to say that I have never seen this paper before; I have gone on an account that came from Calcutta, and the gross amount comes to 1,756,973 *l.*; but on looking over this account which you have handed to me, I certainly do not see that it represents the details of our political liabilities of India at all.

Major General RICHARD STRACHEY, R.E., re-called; and further Examined.

Major Gen. *R. Strachey,* R.E.

6934. Mr. *Grant Duff.*] You were for many years, I think, in the Public Works Department in India, were you not?—I was.

6935. And you have been some months at the India Office?—I have been there about a year now.

6936. Then you have been accustomed to look at England from an Indian standpoint for a much longer period than that during which you have been accustomed to look at India from an English standpoint?—So far as my official services are concerned, I have; but I am not at all prepared to say that I have not paid attention also to the considerations which should guide statesmen who are Englishmen, in relation to their operations in India.

6937. Of course I mean by my question, that *qua* an official, you have been accustomed to do so?—Yes.

6938. You have nothing now to do with the management of the guaranteed railways, have you?—Nothing at all.

6939. In short, you look at that from the outside?—Well, I look at it from the outside, so far.

6940. You now look at it from the outside?—Now, certainly.

6941. But, as at present advised, your view is that the control of the Secretary of State in Council over these bodies is not sufficiently strong, owing to that control being exercised through the Council, and not through a single executive officer?—Well, to a certain extent, that represents my views.

6942. The office that you fill is a new one?—It is.

6943. Created in consequence of the policy with regard to State railways, which was sanctioned by the Secretary of State in Council in 1869?—Quite so.

6944. When a new office is grafted on an old organisation, it is not unnatural, is it, that at first there should be some difficulties to be got over?—No, it is very natural; and also it is natural that in effecting the engrafting, the incompatability of the older organisation with the new work becomes prominent.

6945. There are two extreme views of Indian public works, are there not?—There are.

6946. One party says, "Raise a large sum of money by loan, and spend it as economically but as quickly as you can in developing the resources of the country;" the other says, "You have spent a great deal too much already on public works; a poor country like India cannot afford to pay for such railways and roads and canals; diminish your expenditure on public works, as on almost everything else; or India, and England into the bargain, will soon be ruined;" that represents the views of the two parties, does it not?—Yes.

6947. The Government of India and the Secretary of State in Council pursue a mid-course between these two views, do they not?—They do.

6948. They say, "Let us develop the country, and, at the same time, do not let us get too much into debt?"—Quite so.

6949. Now, what proportion does the whole debt of India, including the railway debt, bear to its revenues?—The whole is about four years' revenue.

6950. What proportion does the whole debt of England bear to its revenue?—The debt is ten or eleven times the revenue.

6951. And England has, as a State, no railway property in consideration for its debt?—None.

6952. That consideration sweeps away a large part of our 200,000,000 *l.*, provided that the existing relations of England and India continue?—In a certain sense I agree to that, but I should prefer putting it myself that it sweeps it away with reference to the financial position of India; because there are other very important considerations that arise from the fact that India is governed by England, and that a very large proportion of its debt is held by Englishmen.

6953. Forget for a moment all the advantages that India derives from British rule; think only of the expenditure of the other hundred millions, the non-railway hundred millions; as an ordinary capitalist would look at a loan, has it been badly invested from the capitalist's point of view; looking at the general position of our Indian debt in the money market, has the holder of that debt got anything to complain of?—Well, if you mean, Is the debt of the Indian Government looked upon as a satisfactory security in the English money market, all that I can say is that, as compared to the debt incurred by other Governments no doubt it is in a satisfactory position.

6954. Is

Major Gen. *R. Strachey*, R.E.

18 June 1872.

6954. Is not some 20,000,000 *l.* of that hundred millions held by natives? — A considerable amount; I would not say exactly what is the amount held in India.

6955. Now then think of what has been done with the hundred millions; think of what India was in 1757 and what it is now; do you think that a hundred millions was ever so beneficially invested since the world began?—I am not at all prepared to say that I think that the whole of that hundred millions has been well applied; but I am prepared to say this, that in the year 1872-3 the condition of India is incomparably better than it was in what has been called the pre-British period.

6956. Has the great expenditure on public works, that has gone on since the Mutiny, been coincident with a remarkable apparent increase in the prosperity of India?—Yes; I would call it not an apparent increase, but an absolutely and real and positive increase of a most wonderful description.

6957. And you would probably say that it had not only been coincident with, but the cause of, that real increase? — Most distinctly and most certainly.

6958. The Public Works Department dates from 1854?—Yes.

6959. All its vast organisation has been created since then?—Its great development has occurred since then.

6960 The Public Works Department had, I suppose, to buy its experience?—Yes, naturally.

6961. And being human, made many mistakes?—I am afraid so.

6962. Did you ever know of a landlord who, after spending many years in improving his property, did not think, when all was done, that it might have been done a great deal cheaper and better?—I have no doubt that every landlord has discovered that; but I have no doubt, equally, that not only every landlord, but every human being that has devoted himself to carrying out new projects, whatever they may be, has come to the same conclusion And I may, in illustration of this sentiment, repeat a circumstance that occurred to myself some 20 years ago now. I had been employed on some duty under that eminent Indian statesman, Mr. Thomason, who was at that time Lieutenant Governor of the North Western Provinces, and I made a proposal to him, that the time to which my employment had originally been limited should be extended, on the plea that having had one year's experience in what I was about, at the end of another year I should be able to accomplish the end in view very much more satisfactorily; and I remember distinctly his answer to me, which has remained in my mind ever since. It was very much in these words: "And thus it is at the end of every allotted task, that we see how very much better we might have done that which we have had to do. If it were not so, experience would cease to be an instructress."

6963. *Chairman.*] It is not a logical sequence?—I quote Mr. Thomason's words, whether it is logical or not.

6964. Experience would be an instructress if you did a thing well, and did it again in the same way?—I concur with Mr. Thomason; I think what he said is perfectly logical, and that it represents the truth perfectly. I think that the utility of experience is fully as much, to say the least of it, in pointing out our errors as in pointing out our successes; at least, I say that for myself; everybody may judge for himself.

6965. Mr. *Grant Duff.*] What department or departments were responsible for any failures that may have taken place in barrack works?—Well, if you mean the material failure of the walls, roofs, and so forth, of course it was the Public Works Department. If you refer to any failure in the utility of the building or in the applicability of the construction, generally speaking, to the wants of the soldier, it has been the military department.

6966. But no Secretary of State was in any way responsible for these failures?—Not in detail; merely so far as the Secretary of State supported the requirements of the persons who protested against the extremely unhealthy buildings in which European soldiers had been living in India for a great many years, and the extremely ill-designed and objectionable buildings that were employed for hospitals, and buildings of that description. The Secretary of State, and in my opinion most properly, supported the representations of the eminent persons who pointed out the absolute necessity for improving the whole class of buildings that I have spoken of; and to that extent he is responsible, and to no other extent.

6967. Now, turning to another point, you are sanguine, are you not, that the system of making State railways on which we have entered, will produce better results than those hitherto obtained?—I am.

6968 But it does not necessarily follow that our predecessors, for whose policy we, of course, are in no way responsible, were wrong when, under very different circumstances, they introduced the system of railway guarantees?—I have not the least doubt in the world that Lord Dalhousie and the Court of Directors who determined on the construction of railways, under the guarantee system, in 1851, or 1852, or 1853, most carefully considered the subject, and followed what, under the circumstances, appeared to them not only the best course, but the only course capable of producing the desired result.

6969. You are aware that accusations of corruption are often brought in India against the Public Works Department?—Yes.

6970. The point has not, I think, been mentioned before this Committee, but I want to ask you how far you have reason to believe that these accusations are well founded; because I want no one to have an opportunity of saying that the matter was overlooked by the Committee?—Well, I think that all that can be said of the Public Works Department, with respect to the manner in which it has managed the money business that it has to control, is that there have been a certain number of persons who have disgraced themselves by making away with or misapplying public money; but I am not aware that the department, as such, is more open to censure or blame in this respect than any other department which has the expenditure of large sums of money in detail on objects such as those which the Public Works Department has under its charge.

6971. Will you please to turn to Question 6295, and your answer to it. Now with reference to the "difficulties" to which you allude in that answer, I suppose that Lord Mayo was master in his own Council?—Well, he was master in the sense in which any Governor General is master in his Council.

Major Gen. *R. Strachey,* R.E.

18 June 1872.

6972. If Lord Mayo had fully and finally made up his mind upon that matter, and had determined to carry out your view, he could have overborne the difficulties to which you allude?—There is no doubt that constitutionally the Governor General has the power to override the decision of his Council; but the question had not taken any such form as that.

6973. I mean that he could constitutionally have done so if he had thoroughly made up his mind?—There is no question of that.

6974. Would you accept absolutely and unreservedly the account given of the Public Works Department by the officers of the Finance Department, supposing they were here in this room?—Indubitably not. Do not let us have a confusion of words, however; practically speaking, the figures in our accounts are the same, but their views regarding the Public Works administration, certainly I would not accept.

6975. And I suppose you will admit that they would hardly accept absolutely and unreservedly your version of their attitude towards the Public Works Department?—Certainly; and I never expected them to do so, or expressed dissatisfaction that they had not done so.

6976. Now would you turn to Questions 6595 and 6596. Will you have the goodness to take that Paper in your hand (*handing a Paper to the Witness*). That Paper is a Despatch from the Secretary of State, is it not?—It is.

6977. Would you have the kindness to read it?—It is dated 31st August 1869, from the Secretary of State to the Governor General: "It is of very great importance that accurate information should be obtainable in this office as to the remunerative character of expenditure in India on irrigation works; the information hitherto received from the several Governments in India on this subject is not sufficiently precise, and it is often difficult to ascertain, from the statements sent home, how much of the increase shown in your statements of land revenue is due to increase of the assessment on irrigated or partially irrigated lands, or to the bringing into cultivation of waste lands, and how much to new works of irrigation; I wish, therefore, that statements may be forwarded periodically from India, showing for each district the amount of the land revenue in the year 1856-57, the amount received in the year last completed, the expenditure on irrigation works (distinguishing that on new works from that on maintenance and repairs) since 1856-57, the additional acreage irrigated since 1856-57, the increase of revenue due to irrigation, and the increase due to other causes; I request, therefore, that statements affording the requisite information, in somewhat of the form annexed to this despatch, may be sent to me annually, as soon as possible after the termination of the official year in respect of each district under your Government; it is not necessary that the first returns should be complete as regards the whole area of the Presidency, or even of any one province; the returns should, however, be complete as regards the whole area affected by each separate new work of irrigation, and they should be carefully framed by the public works and revenue officers conjointly, so as to prevent any subsequent discussion between the departments as to the true origin of the increase;" and that is signed "*Argyll.*"

6978. And over the leaf there is a form, is there not?—Yes.

6979. That proves, does it not, that the Secretary of State was not indifferent, on the 31st of August 1869, to the importance of having accurate information as to the remunerative character of these irrigation works?—It proves that distinctly; but it also proves, at the same time, that he had not the information for which he asked.

6980. Now glance at these papers (*handing the same to the Witness*); these other despatches, which I place in your hands, show that the Secretary of State has been very persistent in his desire for information on this matter?—There is no doubt of that.

6981. By your answer to Question 6315, I gather that what you mean when you say that "interference from England" caused extravagant expenditure is, that extravagant expenditure was incurred in carrying out in India, under the Government of India, certain works which were suggested from England, and also that certain works proposed from England were not so well selected as they might have been?—That is so. Shall I read what I said?

6982. I merely want to know if I rightly gather your meaning?—I said, "My own idea, I confess is, that the present cases of what I should call extravagant expenditure, have arisen from interference from England; that, so far as the Government of India has been left to itself, it is less disposed to go into what I should consider inconsiderate expenditure, than it has actually been under the pressure that has been brought upon it from England."

6983. My question sufficiently expresses your meaning?—Yes, in general terms.

6984. Devise what machinery you may, do you believe that it will ever prevent the opinion held by active individuals in this country exercising a strong influence through Parliament in favour of expenditure in India upon the Secretary of State in Council?—No; nor should I say that that influence ought not to be exercised; and all that I meant to have said was, that if such an influence is exercised, it ought to be exercised with great caution, and the illustrations which I gave were intended to point the moral of what I had said.

6985. You have spoken of the Godavery Navigation Works, and of the Mutlah Railway, of both of which you disapprove; these works were in India; but do you know that for many years successive Secretaries of State have been plied with applications to survey a line for a railway quite outside the utmost limits of India, through the Shan States to the frontier of China, and do you know that one chamber of commerce has memorialised them after another in favour of that?—I do; and I would add that although I have for a specific purpose referred to cases in which I think that the influence of the Secretary of State has been exercised in an unfortunate direction, I do not for an instant mean to say that in many other cases his influence has not been exercised in a most beneficial way; and I cordially and thoroughly accept the position that, as a whole, in my judgment the action of the Secretary of State, in connection with the Government of India, has been most excellent and satisfactory.

6986. Do you think that this Committee could do anything more acceptable to the Indian Council, or to any imaginable Secretary of State, than to strengthen their hands against such pressure

Major Gen. *R. Strachey*, R.E.

18 June 1872.

sure as that to which I have last alluded, the pressure for a railway from the borders of Burmah to the borders of China?—Certainly not.

6987. There is one matter of minor importance about which I want to ask you; have the natives of India, in your judgment, ever shown any particular genius for engineering as distinguished from architecture?—No, certainly not.

6988. And there is no good reason to suppose that our Public Works Department will ever be very largely or powerfully recruited from the natives, at least not for some time to come, there is nothing as yet to show it?—Well, certainly, there is no reason based upon anything that they have done in the past; I am not going to express an opinion as to what they may be able to do in the future.

6989. Nothing has happened in the past to give one very sanguine hopes?—Nothing at all, certainly; but that there have been very large works executed there is no question at all. In former times as, I presume, everybody knows, when the whole of the revenues of India were, so to speak, the private property of the sovereign, he had the means of carrying out works on a gigantic scale, which have left their traces on the face of the country up to the present time; but as to saying that there is anything like what we should term engineering skill worth talking about, that is altogether a mistake. One of the chief works, constructed about the time of Akbar, the Shah Nahar, a canal which comes from the Jumna, and which goes towards Hissar, with a branch to Delhi, was originally designed to supply water to a hunting palace at Hissar; it was incidentally used for purposes of irrigation, but it very soon fell into disrepair, and when we took it in hand to restore it, it was a very insignificant sort of work, and comparatively speaking of very little value, and from an engineering point of view, extremely ill laid out.

6990. From conversation with you, I am inclined to think that you feel that it is desirable that an opportunity should be given you of expressing your opinion in a somewhat more connected form with respect to certain matters touched upon in your evidence, because you think that your evidence may have left a somewhat erroneous view of your opinion upon the merits of the Committee?—While I have been laying stress upon defects in the administration, I think that I have not entered into the positive and substantive value of the policy that has guided the Government of India; and I would ask to be allowed to say that I feel personally a very considerable responsibility put upon myself in connection with this inquiry, because, although I cannot say that I have been specifically responsible for the policy in any way, still I have been (I do not at all pretend to disguise it) one of the chief advisers, at all events, of the Government, whose acts in pursuance of that policy are here under discussion.

6991. Now, you would like to say something, would you not, upon the policy of the Government with respect to irrigation works?—I should, if you please. The Government, generally speaking, has been led to the conclusion that in the very nature of the case there are certain classes of works which it is impossible should be carried out by means of the revenues of the year, and that for the carrying out of works of that class it is absolutely essential that capital, accumulated wealth, should be employed. The only means that the Government of India has of applying accumulated capital to the construction of public works is by borrowing money, or by giving a guarantee of interest on capital, which is virtually borrowing money, there being no body of capitalists similar to that which exists in England and some other European countries, who are disposed to carry out such works at their own risk. The works of this description which the Government has had to deal with are practically of two classes, either irrigation works or railways; or perhaps I ought to express it rather, works of agricultural improvement, and works for improving the communications of the country. As regards the irrigation works, the obligations which have been put upon the Government to consider how they shall extend such works, are, I believe, pretty well known already. The principal consideration, undoubtedly, is the fact that India is a country which is liable to the most terrible visitations of drought, and consequent famine. The Government having seen the frightful results which have arisen from such calamities, has deliberately come to the conclusion that it is its bounden duty to do all that is possible to protect from the worst forms of famine those districts which, from their physical conditions and their climate, are liable to such visitations. In considering how this end could be best accomplished, the Government has come to the conclusion, that although such works may in many cases be very costly, still the probability is that, if not in all cases, at all events in most cases, they will be so far remunerative, as not only to cover the interest on the outlay which is necessary for them, but also that they will, in an important degree, add to the general resources of the country, though perhaps after the lapse of some considerable time. Experience has shown that there is always considerable delay in an agricultural community taking advantage of means of irrigation that are afforded to it. The actual process of agriculture, combined with irrigation, or supported by irrigation, is to a considerable extent different from the ordinary agriculture which is not aided by irrigation; and it is sufficiently notorious that all agricultural communities have a tendency to adopt changes slowly. The experience of India has proved that this applies in a marked way there, and the results of the operations of irrigation, in connection with the existing canals in Upper India, afford remarkable proof of this. I have said that the ultimate results of irrigation works will be, in the estimation of the Government, to a very great extent at all events, an increase of the revenues of the country. But I have stated that this is not the fundamental or principal consideration; the principal consideration is the obligation which the Government has to protect the country from those terrible calamities of which I spoke; and if the question is asked, if in any case a profit is not derived in money from such works, how the Government can justify the construction of those works, I say, without hesitation, that a sufficient reply is given if it is said that they will preserve, as I believe that they will preserve, the lives of millions of the Queen's subjects, and that they will protect from destruction in the very worst form districts many times larger than the United Kingdom. I confess that I do not see that

Major Gen. *R. Strachey*, R.E.

18 June 1872.

that the mere fact of there being, under these circumstances, no immediate money return from our expenditure, is in any sense less easily defensible than the fact that the expenditure which is necessarily year by year incurred for the support of the 800,000 or 900,000 paupers of England leads to no commercial profit. Since I was last in the room I have seen the latest returns of the irrigation works which have been sent from India to the Secretary of State to be put before this Committee, and I would refer specifically to some of those. Although, as I said before, I do not think that the accounts are rendered in a thoroughly satisfactory way, I think that some of the figures will show that the general opinion that I have advanced, as to the progressive character of the revenue of these works, is not without justification. I take the Ganges Canal, for instance, and here are the accounts from the year 1855-56 up to the present time. The increase of the total revenue from 1863-64 up to the present time is as follows: In 1863-64 it is 84,000*l.*; in 1870-71 it is 216,000*l.*; and making allowance for the charges, the net income has increased from 28,000*l.* to 128,000*l.* That is the Ganges Canal. That great increase is no doubt due to a considerable extent to the actual extension of the irrigation as the canal became more used. But here is a case of one of the old canals, in which the total quantity of water is pretty much the same now as it was then; and the results here prove the great care and attention that the Government and its officers have bestowed on the improvement of the revenues that are derived from these works. On the Eastern Jumna Canal in 1863-4 the revenue was 33,000*l.*, and in 1870-1 it is 72,000*l.*, the net being 22,000*l.* in the first year, and 53,000*l.* in the last. And similar results will be found from the other principal canals. The Western Jumna Canal gives an equally striking illustration of it; in 1863-4 the net revenue was 63,000*l.*, and in 1870-1 it is 121,000*l.* Now I say that if these results have been possible during these last seven or eight years, the Government, as regards that class of canals, in my judgment, is thoroughly justified in believing that the results of similarly constructed new canals will be no less favourable. The causes for the slowness of the development of the irrigation, and of the revenue of the Ganges Canal, are well known, and have been explained before. Those causes, to a very great extent, have been removed at the present time, and my firm conviction is, that the revenue returns of the newly constructed canals in Upper India will be found in every respect satisfactory, and that everything that the Government has ever looked forward to from them will be realised.

6992. Now, have you anything to say about the compulsory rating of the land for irrigation, and about the motives for that proposal?—Yes. This question was put to me at No. 6657: "Does not the making of such a provision as that indicate a conviction on the part of the Indian Government, that if the people are left free to take water or not, as they please, canals will not pay?" Now, I wish to explain, in consequence of that question, and the turn that the answer to it and the subsequent questions took, what really were the objects (I need not go very much into the nature of the clause) of the Government in proposing any such clauses in that Act, and in giving the general form to the Act that was given to it. It is perfectly evident that when the Government undertakes irrigation works on a large scale, it becomes most important to see that they shall be made if possible financially satisfactory; and it therefore becomes necessary to ascertain what is the most just way of charging for the use of the water, and for the benefits that will be derived from the irrigation. Now, the degrees of benefit which are produced by irrigation works are very various. There is no doubt that the person who constantly and directly uses the water is the person who is the most benefited; but I say that a man who has provided for him in times of difficulty a canal, which he is able at any time to use when a season of drought comes, say once in 10 or once in 15 years, is most distinctly, and in a most important degree, benefited by the existence of the canal, although for a series of years he does not make use of the water; it is a benefit in the nature of insurance. Again, not only does an irrigation canal benefit the individual cultivators who constantly or periodically use it, but it benefits the whole country in which the irrigation goes on. The mere fact of famine in its worst form being impossible in a district which was before liable to it, is in itself a very great advantage. And another of the very great contingent advantages of these irrigation works which have to be seriously considered in adjusting the payments that are to be made for them, is the fact that they prevent one of the first results of a drought, which is the destruction of the agricultural cattle. By having a permanent stream of water flowing through the country, and by providing a permanent and unfailing source of fodder for the cattle of the country from one end of it to the other, you practically are able, under the most unfavourable circumstances, to support cattle in the seasons in which the periodical rains fail. In these various ways the benefits of a canal extend far beyond those that are given to the actual cultivator who year by year irrigates his fields. Whether the Government, in the measures it actually adopted, took the best possible course or not is, of course, a matter which is thoroughly open to discussion, but their intention was to endeavour to put the charge for these new irrigation works as far as possible on the districts to which the works would be directly advantageous and profitable. And Lord Mayo expressed himself most plainly in this way when these clauses were discussed in the Legislative Council; he said, "It is perfectly unreasonable that the people of Madras or of Bombay should be made to pay for the benefits in the shape of irrigation which are given to the inhabitants of the North Western Provinces; so far as it is possible, let us apportion the burden among those people who obtain the benefits." It is perfectly open for discussion whether the particular measure that was proposed was the best possible for arriving at that end; but the intention of the Government of India was a thoroughly honest intention; and as the Secretary of State, who is supreme in these matters, has expressed his opinion that it is not desirable to maintain the plan, I think that the question has been closed, and that nothing more need be said by me on the subject.

6993. Have you anything more you want to say upon irrigation?—I think that is all I should care to say regarding the irrigation works.

6994. Mr. *J. B. Smith.*] You consider that this principle of making the owners of land

through

Major Gen. *R. Strachey,* R.E.

18 June 1872.

through which the irrigation river passes, pay a certain sum for it is a sort of insurance against famine?—I do, decidedly.

6995. Mr. *Grant Duff.*] With reference to railways, are you generally in favour of the scheme for the construction of a great net work of State railways?—Well, I am in favour decidedly of the gradual extension of railways in India, so far as the finances will admit of it.

6996. Now I want to ask you what are the considerations in your mind that make you in favour of the introduction of a net work of State railways, not as distinguished from other railways, but in addition to our existing railway system?—The general policy of the Government (and I would much rather endeavour to explain what has been the policy of the Government than my own views, because my own views after all are only personal to myself, and therefore are not a very important matter) has been this, that the Government found itself a year or two ago, with, say 6,000 miles of railway, made at a very large cost, which brings upon the revenues a permanent burden, or nearly permanent, so far as we can see at the present time, of a million and a half a year in the shape of interest, not covered by the net profits. The Government is thoroughly satisfied of the enormous advantage of these railways in every possible way, as regards the general political, social, and material condition of the country, the power of moving troops and keeping the peace, the advantages to commerce, and so forth; but they say the burden that has been produced is so tremendous that we cannot go on with it; let us cast about and see if we cannot find out something that is cheaper, and arrive at the same result in a different way. In estimating what are the actual results of the existing railways, and inquiring what is their value to the country, what has to be looked at is not merely the sum of money in excess of the earnings which has to be paid from the revenue, but what these railways are actually doing for the country at the present time. Now, as an illustration of what the railways are doing, see what the East Indian Railway alone does. The East Indian Railway during the last year carried what amounts to 300,000,000 tons one mile; that is the equivalent of something like 80,000 or 100,000 carts, each drawn by four bullocks (the largest sort of cart in common use in India) employed for the whole year along that line of railway; and it is equal to 80 or 100 carts for every mile of the railway, in addition to everything that existed before. Now, let us look at the thing in another way. The present average cost of carrying a ton for one mile by the railway may be taken at about 1½ *d.*; the cheapest at which it could be done by a cart is 3 *d.* or 4 *d.*; the consequence is that the persons who have to transport their produce in India, in the interior of the country, at once save something like one-half; in very many cases it will be more than one-half. Further I say, that under a thoroughly efficient and satisfactory system, there is no reason to doubt that that actual cost of 1½ *d.* might be reduced to ¾ *d.* We know from the actual facts of the working of the best managed lines, and those on which the working is cheapest (of which I take the East Indian as a type), that the actual cost of carrying one ton for one mile is ·43 of a penny. The consequence is, that if the whole of the working of the railways in India were reduced to that standard of the East Indian (and I really do not see why they should not be), the goods might on the whole be carried at an average charge to the public of ¾ *d.* a mile. At present the average cost of carrying on other lines outside the East Indian is as much as 1 *d.* a mile, or very nearly that. The enormous difference to the trade of the country which has been produced by the introduction of railways will, I think, be better understood if we consider what are the gross receipts, the total sum of money which is paid by the persons who make use of the railways, which is shown by the gross receipts. It is at the present time about 6,000,000 *l.* sterling. If, as I believe, one-half of the cost of transport is saved to the person who employs the railway, it would represent, in other words, a saving to the country generally speaking of about 6,000,000 *l.* a-year. Then, I would further add this, that India being essentially an agricultural country, and its wealth depending upon its power of selling its produce, which, for the most part, has to be taken away by sea, its power of selling with a profit depends upon the possibility of taking the produce to the sea at a cheap rate; and every reduction of cost therefore in the expense of this transport, not merely adds to the power that the Indian cultivator has of selling his produce profitably, but it adds materially to the stock of produce which is available for use in foreign countries, and this again reacts by enabling the people of India to purchase a larger quantity of imported goods, and in that way it again facilitates the operations of the railways by giving them a better return traffic than exists now. One of the great difficulties of the railways is to get the necessary return traffic.

6997. *Chairman.*] That is not an accumulation; the 6,000,000 *l.* and those benefits do not go together; but one is the representative of the other?—No, I think that is an accumulated benefit, so far as the trade is developed

6998. That is measured by the 6,000,000 *l.*?—The 6,000,000 *l* is, I think, the advantage to the producers. Then, if a larger stock of produce is forthcoming, the people in England and in Europe generally who have the means of obtaining the produce have their position improved; but, inasmuch as the population of India have received this advantage of the 6,000,000 *l.* they become richer, and are enabled to take more of the products of foreign countries in the shape of imports; those pass over the railways, and thereby admit of more favourable rates for transport being adopted for all goods, import as well as export. I think that, as regards the several lines of railway which have been proposed by the Government, I said on former days all that need be said, in my point of view at least.

6999. Mr. *Grant Duff.*] Have you anything to say with regard to the advantages of the railways in times of dearth?—I would most decidedly desire to draw attention to the very important effect of the combined operation of the irrigation works of the North Western Provinces and railways during the year 1869–70, when I feel assured that if there had not been those irrigation works, and if there had not been those railways, there would have been a most frightful calamity in the shape of a famine of the very worst description, in the North Western Provinces. By reason of the Ganges Canal, and the other canals which exist in the North Western

Major Gen. *R. Strachey*, R.E.

18 June 1872.

Provinces, and the districts in the immediate vicinity, a very large addition to the food of the country was made, and also, as I said before, provision was made for the feeding of the agricultural cattle, a matter which is of the very greatest importance in a purely agricultural country like India, while the railways brought up and distributed food from great distances which could not possibly otherwise have come into the market. I think it is right that I should further say that there is always a tendency in persons outside the Government to overlook the positive advantages which are obtained by any successful administration, or any successful action, and rather to dwell in what I should consider an undue way on mere defects of administration. The criticisms that were passed upon the public officers who were concerned in the management of the districts of Orissa at the time of the dreadful famine were most unmeasured; but I have never heard myself what I should consider any sufficient acknowledgment of the extremely good results that were produced by the energetic action of the Government, and by the operation of these most useful works, these railways and irrigation works, which prevented what otherwise would have been, as I said, a terrific calamity in the North Western Provinces in 1869. And I would add, that in my judgment there could be nothing that would be a greater misfortune to the country than stopping the further development of such works and improvements as these to which I have been alluding, which are in reality the only possible means that any Government has of preventing the recurrence of similar misfortunes in the future.

7000. Some questions were, I think, put to you with regard to the income tax, were there not? —There were.

7001. You are generally not unfavourable, I think, to the income tax?—I am not.

7002. And some questions were also put to you with regard to local taxation in India?—Quite so.

7003. And an opinion was expressed that India is on the whole overtaxed; is that so?—There have been such opinions freely expressed; I do not refer to this room, but I mean in public discussion.

7004. Now what is your opinion about that? —Well, I think that the only real test that any one can have of the effective weight of taxation, and the general result of the administration of a country, is the actual facts as they exist in the condition of the country; there will always be a great deal of rhetorical discussion in connection with such facts; one set of people will attach more weight to one matter, and another to another; but the real substantial basis on which we have got really to found a judgment is the facts as they are; and I think myself that the facts as indicated by the condition of the country, are such as to prove in the most satisfactory way, at all events, they do to my mind, not only that the finances have not been ill-managed, and that the country has not been ill-governed, but that the contrary of those propositions is most eminently true. As regards the results of the taxation, and particularly as regards the result of the expenditure on the great public works, that I have particularly been questioned about, I would point out what follows. In the year 1861-62 the total charge for the public debt of India was 5,191,000 *l.*, against which there was a set-off of 34,000 *l.* in the shape of receipts of interest, giving a net charge of 5,157,000 *l.*

7005. Mr. *Fawcett.*] Does that include the interest on guaranteed railways? — No; in 1872-3 the total charge for interest is estimated at 5,871,000 *l.*, against which has to be set off 466,000 *l.* in the shape of receipts of interest, to a considerable extent arising from its own securities held by the Government, and other elements of income of that description, giving a net charge of 5,405,000 *l.* Consequently the net increase of the charge for interest is 248,000 *l.*; now 248,000 *l.* capitalised at 4½ per cent. is equal to 5,500,000 *l.*, which may be considered to represent the effective addition to the weight of debt, so far as to the interest. Now then let us see what is the condition of the cash balances, the money at the disposal of the Government; at the commencement of 1861-62 it was 15,000,000 *l.*, at the end of 1872-73 it will be 19,500,000 *l.*; the consequence is that there will be an actual increase of assets to the extent of 4,500,000 *l.*; if you set off that 4,500,000 *l.* of actual increase of assets against the 5,500,000 *l.* of increase of weight of debt, we arrive at the result that there has been a virtual increase of no more than 1,000,000 *l.* of debt in that period of years. And what have we done during those years between 1861-62 and 1872-73? We shall have spent on the extraordinary class of works, these irrigation works, and railways and what not, 10,000,000 *l.*; and besides that we shall have spent 9,000,000 *l.* on barracks by the end of 1872-73. The total, therefore, of this unusual outlay is no less than 19,000,000 *l.* sterling, while the effective additional burden that will have accrued up to the end of 1872-73, is only equivalent to 1,000,000 *l.*; the consequence is that we have virtually saved the difference between that 19,000,000 *l.* and the 1,000,000 *l.* out of the revenues in that period; we have saved virtually the 18,000,000 *l.* Of course it is perfectly plain that the 18,000,000 *l.* has not been saved directly, but it is possible by other means also to save by good administration of the finances, for instance, by making reductions in the charge for debt, and that is just as much the duty of the financiers who manage the affairs of India as it is to look after the actual receipt and the expenditure of the public money. That such results have been produced is, as it seems to me, a most perfect and thorough reply to anyone who says that by reason of this great expenditure on public works any inconvenience or serious pressure has been put upon the country. But I would supplement what I have just said by pointing out what I consider a further real test of the condition of the country, namely, the condition of the imports and exports. The value of the imports in 1861-62 was a total of 37,272,000 *l.*, of which 22,320,000 *l.* was merchandise and 14,952,000 *l.* was treasure. In 1868-69, which was the last year the figures for which I had for reference, the total of the imports had risen to 51,146,000 *l.*, of which 35,990,000 *l.* is merchandise, and 15,150,000 *l.* is treasure; thus showing that the whole of the increase has taken place in the merchandise which the people of India have been able to pay for, and an increase amounting for a single year to no less than 13,500,000 *l.* sterling. Now if that is an indication of national decay, or of oppressive taxation, let it be so; to my judgment it is not. The exports again stand thus: total in 1861-2, 37,000,000 *l.*

Major Gen. *R. Strachey*, R.E.

18 June 1872.

37,000,000 *l.* sterling, of which 36,317,000 *l.* was merchandise, and 683,000 *l.* treasure. The value had increased in 1868–9, to no less than 54,457,000 *l.* as a total, of which 53,062,000 *l.* is merchandise, and 1,395,000 *l.* is treasure. The consequence is, that we have an increase of the exported value of merchandise of no less than 16,750,000 *l.*, and that sum represents the improved sales of the community of India for a single year. Now I inquire whether any man can allege for one moment that that is typical of bad administration or of a deteriorating condition of the community. I say, without any hesitation, that these results have been essentially produced by the generally excellent administration of the Government, and to a very great extent by the operation of these great public works to which we have been devoting so much of the resources of the country.

7006. Mr. *Grant Duff.*] In short, your general view I take to be this, that although many mistakes have been made, and are being made, and always will be made when an alien race attempts to govern a people thousands of miles away, the natives of India are nevertheless immensely richer and more prosperous in the year 1872 than they were in the year 1856?—There is no question of that whatever.

Friday, 21*st June* 1872.

MEMBERS PRESENT:

Mr. Ayrton.
Mr. Beach.
Mr. Birley.
Mr. Cross.
Mr. Charles Dalrymple.
Mr. Dickinson.
Mr. Grant Duff.
Mr. Eastwick.
Sir James Ephinstone.
Mr. Fawcett.
Lord Edmond Fitzmaurice.
Mr. Lyttleton.
Mr. M'Clure.
Sir Stafford Northcote.
Mr. John Benjamin Smith.
Sir David Wedderburn,
Sir Charles Wingfield.

THE RIGHT HONOURABLE ACTON SMEE AYRTON, IN THE CHAIR.

Major General RICHARD STRACHEY, R.E., re-called; and further Examined.

Major Gen. *R. Strachey*, R.E.

21 June 1872.

7007. Mr. *Eastwick*.] IN answer to Question 6985, in replying to Mr. Grant Duff, you said that you thought "that the influence of the Secretary of State had been exercised in an unfortunate direction; I do not for an instant mean to say that in many other cases his influence has not been exercised in a most beneficial way." Do you think that the interposition of the Secretary of State should be exercised simply in reviewing proposals of works or operations connected with the Public Works Department, sent from the Government of India, or do you think that in any case he might take the initiative and recommend works?—It seems to me that the Secretary of State is the head of the Executive Government of India in this country charged under a responsibility to Parliament for the entire administration of India; and I think that being his position, it is absolutely impossible to impose any limit upon his authority; subject always to his responsibility to Parliament.

7008. In cases of great calamity, such as for instance, the Orissa famine, is it not natural that the English public should look to the Secretary of State to take the initiative and to urge upon the Government of India, and even to direct the making of public works?—I think so, certainly. I think that the English nation, considering the fact that we have somehow or other become governors of India, has a perfect right, not only to suggest but to require that everything that it considers to be necessary for the good government of India should be done.

7009. And the Secretary of State would be in a position, notwithstanding that he himself might know very little of India, would he not, through the advice of his Council and through the advice of any eminent engineer or other person that he might call in in this country, to give really very valuable recommendations? — It is possible; at all events I admit perfectly the responsibility that exists upon an officer in the position of Secretary of State, to interpose in any way he thinks necessary to check the freedom of action of the governments in India, which are directly responsible for carrying on our Government there.

7010. But now, for instance, in the Council there is General Baker, who, I suppose, would be admitted to be a great authority as regards public works, and there are several gentlemen who have been Governors in India, and would be able also to assist the Secretary of State in such recommendations, would they not; moreover, he might send for you or for Sir Arthur Cotton, or for any eminent engineer in this country, and in that way be able to give valuable recommendations to the Government of India?—I could say nothing too strong as to my opinion of the character and the abilities of General Baker, and I have not the least doubt in the world that the advice that he gives to the Secretary of State on such matters is of great value; and of course, as you suggest, the Secretary of State is always in a position to obtain the opinions of anybody who has served in India, on any such subjects as you are alluding to. But I may be allowed, perhaps, to suggest that the tendency of the question that you are putting makes it a little difficult for me to deal with it. I do not say that I am not prepared to state what my opinion is on any subject on which the Committee thinks it right to question me, but there are certain points upon which I think it will be seen that I should have a difficulty in expressing an opinion, unless I was distinctly directed by the Committee to give it.

7011. I am not in the least trying to controvert your views, but merely to ascertain whether you think it or not desirable that the Secretary of State should, as it were, initiate works?—I do not at all mean to imply that you are wishing to argue these questions with me, but that there are certain questions which, from their tendency towards personal criticism, it would be difficult for me in my position to give an answer to, unless I am pressed, in fact, directed to give an answer

7012. I should like to have your view as to this particular point, whether the Secretary of State should, or should not, initiate, by recommendation, or by direction, the construction of public works in India?—I think that all I need say about that is what I have said before; that if he does it, it should be done with very great care, and after very anxious thought as to what he is doing; otherwise I should not at all desire to limit his power of action.

7013. Before I go to the particular examples that you have given, I should like also to ask you whether

Major Gen. *R. Strachey*, R.E.

21 June 1872.

whether you think it very desirable that English capital should be employed in the execution of public works in India; that private companies should be induced to raise capital and employ it in making those works?—I think that it is most desirable that English capital should be employed in the improvement of India. Also, I am distinctly of opinion that it is only by means of English capital that any striking or serious improvement of the means of production in India can be obtained. Further, I am distinctly of opinion that so far as English capitalists can be induced to apply their money in India on terms which are financially satisfactory, even if those terms involved some assistance from the public revenues, any effort in that direction may, with the greatest propriety, be made.

7014. And would you not think that it was some justification of the Government adopting very liberal terms with regard to private companies as with regard to the Orissa Irrigation Company, for instance, that if they did so it would be an encouragement to other companies to come forward and subscribe capital for public works?—That was the acknowledged and avowed origin of the arrangement that was made when the Madras Irrigation Company was first guaranteed. Anything which I have said on these subjects is only intended to imply that in coming to conclusions upon them, it is necessary to be extremely careful, and that unless the greatest attention is paid to the opinion of those persons who really know most about the matter in hand, and they naturally will be found in India, and connected with the Government in India, there is a great risk of unfortunate results occurring, even when the motives are most excellent.

7015. With regard to these two particular cases of the Mutlah Railway and the Port of Kurrachee, I want to ask a question or two. I find that in a despatch from Mr. Cockerell, Secretary to the Government of Bengal, dated the 5th April 1864, at page 37 of No. 200 of the Papers of 1865, he says this: "The success of the port of Mutlah is certainly of vital importance to the commerce of Bengal, and it is the only condition upon which the Government can hope to be in any degree reimbursed for the interest it has to pay on the guaranteed capital of the railway." Here we find the Secretary of the Government of Bengal distinctly stating that the success of the Port of Mutlah is of vital importance to the commerce of Bengal. Does not that seem to be a justification of the adoption of the scheme?—In any remarks that I made regarding what I called unfortunate expenditure, I distinctly stated that my remarks represented my own opinion, and that everybody else had a perfect right to his opinion, and I presume that that letter represents the personal opinion of the Lieutenant Governor of Bengal for the time being. As to the upshot of the late discussion (and it is a discussion that has gone on for a very long time, and covered an enormous quantity of paper), the result is that with the entire approval, I apprehend, of the last Lieutenant Governor of Bengal, Sir William Grey, and with the approval of the present Lieutenant Governor, Mr. Campbell, the Mutlah Port has been closed. I think that is the only reply that I need give to that despatch, which expresses a different view of the subject.

7016. It was stated, I find, in these papers, by the promoters of the railway, that the Government did not keep faith with them, that, had the Government kept faith, the condition of the Port of Mutlah would have been very different. It says here, in a letter from Messrs. Borradaile and Schiller to Sir Charles Wood, dated the 4th December 1863: "In 1856, when the rail was suggested by the Government of India, the site of the proposed town and port, lot 54, was a dense jungle, inhabited only by tigers, although cultivation had already commenced on the neighbouring grants. With the view of establishing the port, Lord Dalhousie purchased the lot, and placed it in the hands of the Government of Bengal. Within three years about 6,000 acres were reclaimed and let for cultivation on short leases, and enclosed by an embankment to prevent the inundation of the land which had been cleared." Then it says, "On Sir John Grant's assuming the government of Bengal, all the arrangements which were in progress for the establishment of the port were gradually discontinued. No roads were constructed. Of the large tanks which had been laid down on the map when the lots were sold, only a few were excavated, and no effort was made to drain the land efficiently," and so on; so that they have thrown the blame upon the Government. Are you of opinion that the promises of the Government were not kept as regards the draining?—No, I am not at all. I think that the Government did everything that reasonably could be expected of it, and I think that the only way in which I can reply to that letter is to refer the Committee to the reply which, I have no doubt, either the Secretary of State or the Government of India gave to those gentlemen. I have not the papers before me, and I am not in a position to say what they said, or specifically what they did; but I find from one of the documents which is annexed to the financial statements of this year, 1872-73, that there is a loan outstanding to the Port Canning Municipality from the Indian Treasury of 22,500 *l*, which represents either the whole of a loan or a portion of it (I am not certain which), a sum of money which the Government advanced to that municipality, in order to assist it in its difficulties, to supplement its resources. That, at all events, is a distinct evidence that the Government did recognise some obligation. The question, to what extent it recognised the whole of the requirements that were put upon it by the proprietors of the Mutlah, is another thing, and, in a general terms, one may say that they have not been recognised.

7017. Supposing the Government had really gone into the expense which the promoters called for, no matter what that expense was, supposing that they had thoroughly drained the land, and so on, do you think that in that case there would have been a migration of population to Mutlah, and that it would have been a valuable port Was the navigation sufficiently good to have attracted the commerce there in preference to the Hoogly?—I think that opens up the whole of the great discussion which has been going on for years, resulting, as I said before, in the Government determining to close the port.

7018. Supposing that they had done what I say, do you think then that the port would have become a valuable one?—No, certainly not; according to my point of view, it was in the nature of things that that port could not succeed.

7019. Why?—I should put it shortly in this

Major Gen.
R. Strachey,
R.E.

21 June
1872.

way, that if ships had to go to Mutlah it was absolutely necessary that there should be establishments at Mutlah for the repair of ships and for the warehousing of merchandise, both the exports and the imports. I do not think it is possible that trade can be carried on between countries situated as India and England are without those accessories. That Calcutta, as a fact, had the whole of these accessories provided of course by an enormous expenditure of capital; that to provide anything of the sort at Mutlah would have involved also an enormous expenditure of capital, which it was impossible to look for; that it was quite out of the question to suggest that the Government should provide all of these necessaries for the trade; and as they were not provided, the result was that ships gradually declined to go up to Mutlah. Let us take the case of a ship going to the Mutlah with cargo, and that something went wrong, she is a little leaky or something of that sort; it is necessary to go into dock; the nearest docks are at Calcutta; then the ship has to go out of the Mutlah and up the Hoogly, and whatever the disadvantages of the Hoogly are, all those disadvantages have to be met under the most unfavourable circumstances. An empty ship, as everybody knows, is a most difficult thing to navigate.

7020. *Chairman.*] It would have to be put into ballast?—Yes; but that involves the expenditure of money, and these and similar contingencies involve, in fact, such serious difficulties in the way of carrying on the trade, that whatever advantages at first sight there might be, they are in reality much more than counterbalanced by the necessary disadvantages.

7021. Mr. *Eastwick.*] The water communication was very far superior, was it not; and supposing that you had had all these appliances, in that case going to Mutlah would have been a great improvement?—I think, myself, that the disadvantages of the Hoogly have been greatly exaggerated. There is no doubt that the entrance to the Mutlah is very much easier than the entrance to the Hoogly, but it has rather been a fashion, I think, to cry up the dangers of the Hoogly. Very often a fashion of that sort does arise without one's being able to explain exactly how or why. I remember some years ago, when I was interested in the matter, actually taking the account of the losses of the shipping in coming up the Hoogly, and the conclusion that I came to was that it was something altogether insignificant; and in order to fortify my judgment on that point, I was at some trouble in ascertaining what was the difference between the insurance between an English port, for instance, take Liverpool or London, and Calcutta on the one side, and a port like Bombay on the other, and it was something very little. The total risk on the whole transaction from port to port, is so large when you compare it to the risk on the particular entrance into the port of Calcutta, that the dangers and the difficulties, which I admit do exist in that entrance, are not perceptible in the insurance.

7022. *Chairman.*] Do you think that the Government of India would have been justified in allowing a town of any kind to grow up at what is called Port Canning, without the whole surface of the land on which the town was to stand, and its surroundings, being raised, say, about 10 feet or more?—Yes, certainly it would. I could, if you please, compare it to Calcutta. The land at Calcutta slopes away from the banks of the Hoogly, and at high water spring tides, during the rainy season, when the river is highest, you may say that the whole of Calcutta is absolutely under the level of the river, but there is a considerable tide there, and at low water you get rid of the drainage, and in the same way you could get rid of it at low water at the Mutlah. But at the Mutlah the surface is in an infinitely more unfavourable condition than at Calcutta; it is much nearer the sea, and before any operations took place at Mutlah, the whole of the surface there was under water every spring tide.

7023. Are you aware of the relative difference of the level of the land at Mutlah as compared with the land on which Calcutta itself stands?—My impression is, as I implied, that the existence of Calcutta depends upon the embanked edges of the river. I could not say specifically, the difference of level; of course it depends not a little upon the nearness to the sea. You have the Hoogly running down with a certain declivity from Calcutta to the sea, which indicates a somewhat higher level at Calcutta than nearer the sea.

7024. Does it not also depend upon the relative depth of the surface of the land below the high-water mark?—My impression is that the land at Mutlah, before anything was done there, was about 3 feet below ordinary spring tides.

7025. Do you mean the ordinary level of the land?—Yes.

7026. Not more than that?—That is my impression.

7027. Do you know also the peculiar circumstances of the water in Port Canning?—Naturally if the land is 3 feet under water every spring tide, there can be no natural supply of fresh water.

7028. Are you aware whether the water tanks there are unfit for domestic purposes and cannot be used?—When they were first formed, there is no doubt that the water was brackish. It takes a considerable time to wash out the whole of the salt from the surface soil; it is an operation however in which you are successful eventually. Calcutta lived, until the new water supply was introduced, upon water stored in that way in tanks which were filled by the rain in the rainy season.

7029. Are you aware whether at Port Canning there is only a comparatively shallow crust of clay which holds very superficial water tanks, and that those alone are fresh water, and that when you break through that you get into a stratum of salt-water and sand?—I have no reason to suppose that the nature of the soil is very different from that of Calcutta.

7030. Is it the case at Calcutta that there is only a shallow superficial soil, and that if you go below that you get into a salt-water stratum of sand?—I have no reason to think that there is anything essentially different in the sub-stratum at the two places. There is no practical difficulty in making a tank water-tight; you only want a few inches of clay at the bottom, and clay is very readily got. All that is necessary for defence against the sea is a 3-feet embankment, or thereabout; there is no difficulty in making an embankment of 3 feet to keep out the spring tides, and then the rain that falls gradually washes the whole of the salt off the surface, and by opening sluices to let out the surface drainage, and

Major Gen. *R. Strachey*, R.E.

21 June 1872.

and by keeping out the salt water, you soon get the surface reasonably fresh.

7031. Do you know whether, at the time the railway was sanctioned, the Government of India gave its attention at all to the very peculiar circumstances of the land at the terminus of Port Canning, and the exigencies of the public health and the safety of the inhabitants which might render expenditure necessary before the place could be inhabited?—I think, to a certain extent, they did. I daresay they did not thoroughly appreciate everything which experience has shown ought to have been thought of.

7032. Would it occur to them that it was a reasonable necessity that at least half a million must be spent at Port Canning before the railway could be of any real use to the public?—I think that I stated before that the Governor General in Council had distinctly said, when the railway was first proposed, that he thought it would necessarily be an extremely unremunerative affair, and that he did not recommend it; and I presume that the difficulty to which you refer was one of the circumstances that weighed with Lord Canning and his Council when they wrote to the Secretary of State to say that they thought that the railway ought not to be made.

7033. Was it put before the Secretary of State that if it were made, it would be an inevitable consequence, that they must incur a further expenditure before the railway could be of any use?—I could not say positively, it is such a long time since, and I have not had the papers before me, but I should think it probable that that was one of the arguments used.

7034. Mr. *Eastwick.*] It has been stated by the engineer who made improvements in the Kurrachee Harbour, that the total sum expended has been 370,000 *l.*, and that he calculates 40,000 *l.* more will accomplish all that is desired. It has also been stated that the aggregate value of imports and exports is considerably above four millions sterling, and that the entrance to the harbour has been deepened in such a way that it may reasonably be expected that even these large Indian transports which draw 24 feet, will be able to enter when the whole works are finished. Now putting all that together, and considering that there is no good harbour from Bombay up to Scinde, and that Kurrachee Harbour will be at the end of a railway which will carry troops up to the Punjab, and into all the northern parts of India, do not you think that even a much larger sum might have been usefully expended?—You have in general terms stated the grounds which have led the Government to authorise that expenditure. I in general terms stated my opinion that that expenditure was, to say the least of it, premature. I do not think that any good can come of a discussion on the particular grounds on which my opinion is based, as compared with the particular grounds on which the opinions are based, which have prevailed in carrying out that work.

7035. But do you not think that it would be a very great advantage if troop ships of the largest draught can enter the port of Kurrachee, and even save the voyage to Bombay, during the monsoon?—All that I should reply to that is, that it would be a great misfortune, if, after an expenditure of nearly 400,000 *l.*, some great advantage has not been got. I do not deny the advantage that has been got. I do not deny the advantage of a great many things which I cannot get; but I do say, that in my judgment, considering the wants of India as a whole, these works are not the particular thing that I should have selected on which to spend 400,000 *l.*

7036. When you say that you are looking thoroughly at the great political advantages and strategical advantages that there will be?—Yes, my opinion has been formed on a general consideration of the whole subject.

7037. Would you also say that with regard to the railway from Lahore to Peshawur, and from Multan to Kurrachee, the expenditure for that would not be justified?—I think I said before that, in my judgment, the line from Lahore to Peshawur was probably a right thing for the Government to carry out, but that as regards the extension between Multan and Kotri, I doubted whether the time had come for it.

7038. With regard to the Godavery navigation works, considering that coal now has been found at Chanda, and that it has been stated that a very considerable portion of the traffic which now goes along the Great Indian Peninsula Railway, would go down the Godavery to Coconada, do you not think that, supposing that these canals at the different barriers could be made navigable, the expense would be justified then?—I think that there again my reply must be something similar to what it was with regard to the works at Kurrachee, only that, perhaps, I should be rather more strongly opposed to the Godavery operations than to those at Kurrachee, and for this reason I think that their eventual success, if they are completed, is extremely problematical. Supposing that the whole of those works were completed in the manner that their projectors thought that they could be, or that they should be, even then, I think it would be an extremely difficult thing to induce the exports of the Central Provinces to leave India through Cocanada. If there is one thing which experience proves more distinctly than another, it is that trade cannot summarily, by the action of any individuals or set of individuals, be diverted from its old-established channels into new channels which are artificially made for it. The evidence of the Mutlah has indicated that, to a certain extent, and I have not the smallest question myself that the trade which is concentrated at Bombay would continue to remain there in its concentrated form, in preference to going to Cocanada. There are very great conveniences in concentrating trade, and I think that the experience of England will show the disposition of commerce to concentrate itself; that is what I have always been led to believe, and I think that however advantageous it may be to have what one may call a subsidiary port at Cocanada, and to do everything that is reasonable to assist Cocanada, to improve the anchorage there and the approaches to it, all of which I have advocated, still we are not justified in expecting that the whole course of trade, merely because we open a communication by water from the Central Provinces to Cocanada, shall summarily alter its course, and instead of going to Bombay, where it has hitherto gone, shall go to Cocanada.

7039. When you say that you are taking into consideration the immense cheapness of water carriage with a stream flowing down, and the expense of a railway that distance from Nagpore to Bombay?—I am certainly. You talk of the great facilities of water carriage particularly with a river running down from the provinces to

Major Gen.
R. Strachey,
R.E.

21 June
1872.

the sea; but whatever those facilities may be in one direction, they become difficulties which you have to overcome in the back voyage. If I send my ships and boats down the river they have to go up again. But, further, supposing that the actual cost of the transport from the Central Provinces to the sea was diminished by these works, say, 10 *s.* a ton, it still is necessary to bear in mind that the additional necessary charge for freight on a ship going straight to and from Cocanada as compared with one going to and from Bombay or Calcutta, would probably be more than that 10 *s.* And I may mention some facts which I know relating to freights to India; we have recently been sending rails to Calcutta for as little as 8 *s.* a ton; 20 *s.*, or, say, 23 *s.* a ton is as much as we have recently paid to Calcutta; to Bombay it is a little more; but to Kurrachee, it is 50 *s.* Now, whatever your advantages of transport are to such a port, you never can overcome that; and what is the reason of it? Why, simply that ships which go to a port like Bombay or Calcutta, where there is a large export trade, are certain to get an export freight. If a ship goes to Kurrachee, on the other hand, it has to go down to Bombay to fill up.

7040. *Chairman.*] Will you state whether the rates you speak of are the rates when dead weight is required by the shipowner?—I am talking in general terms of the sort of freights that are paid. No doubt the very low freights from London, of which I spoke, are rates for dead weight, but they do not materially affect the results. I am not an adept at these things, but I give my impressions for what they are worth.

7041. I suspect it will be found that the companies very often have had to pay a great deal more than that?—Freight to Bombay, as I said, is higher; my impression is that the average rate to Bombay is 1 *l.* 10 *s.* as compared with 20 *s.* to Calcutta, and 2 *l.* and 2 *l.* 10 *s.* to Kurrachee; the differences in all cases being mainly dependent on the balance between the export and import trade. Here are the figures out of Mr. Danvers' Report for 1870-71, at page 14, which show the "rate of freight and insurance per ton for railway stores sent to India:" East Indian (Calcutta), 1 *l.* 8 *s.*; Great Indian Peninsula, 1 *l.* 13 *s* 10 *d.* (that is to Bombay); Madras, 1 *l.* 8 *s.* 9 *d.*; Bombay, Baroda, and Central India, 1 *l.* 13 *s.* 4 *d.* (which again is Bombay); Scinde, Punjaub and Delhi (which is Kurrachee), 2 *l.* 13 *s.*; Oude and Rohilcund (which is Calcutta), 1 *l.* 6 *s.*, and State Railways, 1 *l.* 6 *s.* 9 *d.* The above rates, excluding the State Railways, include insurance, which makes them a little higher. The Secretary of State does not insure.

7042. Mr. *Eastwick.*] But the great charge to Kurrachee is because, at the present time, there is no continuous line?—No, I think not; it is the freight of ships from London to the ports, and not the freights from the ports that I have been reading.

7043. But when this line of railway is made, no doubt there will be a greater exportation of goods, and freights will follow, because there will be a greater resort of shipping?—It depends entirely upon the fact of whether there is more trade.

7044. It is only reasonable to expect it?—That is another question, a question of expectation. My opinion is that it is extremely doubtful.

7045. You do not look forward, then, to a great increase of traffic upon that line?—No, I do not, and for this reason, that the producing districts to which the export traffic on the Scinde Railway must mainly look are the districts of the Punjaub, and the districts of the Punjaub are so far from the sea that they are almost beyond the limit at which it ceases to be profitable to export produce.

7046. But, at the same time, supposing that Afghanistan is ever to be in a pacific state, then we might look for a very great exportation of wool from Khorassan, might we not?—That is one of the possibilities.

7047. It has been stated by the engineer who constructed the works at Kurrachee, that the great expense was in measure owing to the Government stopping the works from time to time, and carrying them on in a half-and-half way, and I think the same thing occurred with regard to the Godavery Navigation Works; are you aware that that is the case?—That there has been a considerable difficulty in supplying the money there is no doubt at all. To what extent that may have produced an increase of expenditure I am not prepared to say. That there may have been some additional cost arising from it I do not deny.

7048. I should like to ask you a question with regard to some evidence that was given to us a long time ago by Mr. Geddes; he stated that the famine in Orissa was chiefly owing to the weight of the Government taxation in that province; do you consider that to be the case?—My opinion is that it totally and simply arose from the failure of rain.

7049. But he has stated that that famine arose from their being obliged to export their grain in order to pay the Government taxes?—That is his opinion; he has a right to it.

7050. You disagree with him totally?—Totally.

7051. He says that Orissa would be much benefited by the irrigation works, provided that the cost of the irrigation works was not defrayed by Orissa; I suppose you would admit that, but do you think that those irrigation works would be beneficial, notwithstanding the additional taxation which, of course, they must impose upon Orissa, as upon all India?—I think that there is every reason to suppose that those works will eventually be profitable; and, if I may be allowed to take the opportunity, *a propos* of that observation of Mr. Geddes, I will read a sentence from a speech that Lord Mayo made on the recent passing of the Canal Act; he said this: "It has occurred to me throughout the whole of this discussion, that a sort of anxiety is apparent that, in an expenditure which is incurred for the sole benefit of a particular class or district, some other class or distant province ought to partake in the liabilities, and should, under certain circumstances, be made to pay. This puts me in mind of the old saying of Sydney Smith, "Charity is common to mankind. A. sees B. in distress, and he is most anxious that C. should relieve him."

7052. It was stated by the same witness that famines have been on the increase under English rule. Have you thought of that at all. And is that a fact, in your opinion?—I have no knowledge of any such facts.

7053. Do you disagree with the statement?—Totally;

Major Gen.
R. Strachey,
R.E.

21 June
1872.

Totally; the course of nature is not dependent upon British rule, or any other rule.

7054. I find, under the item of Public Works, that in the Accounts Department there are seven officers, one of whom is lieutenant-colonel, and has the Victoria cross, who are employed simply in the accounts. Do you think that a desirable thing?—I do, most desirable. I myself hold the conviction (and nothing, I think, could justify me more fully in holding that opinion than the present inquiry before this Committee, and the manner in which I have been examined), that there is nothing in relation to the public works operations in India, that is more important than attention to the finance of the operations, and to the accounts. And I think myself that it is impossible to doubt that we should for those purposes get the very best officers that we can, to control the accounts and expenditure, and to assist the Government in all the operations connected with that branch of the administration; and I am happy to say that we have found some most excellent men. Colonel George Chesney, who, I believe, has been examined before this Committee, is an officer of great ability, having a special aptitude for such duties, and he was the person who organised our existing system of account. Colonel Innes, who is his successor, is a worthy successor, and is doing his work extremely well; and the other officers we have in the department, to the best of my belief, are for the most part thoroughly efficient. The result of our experience is, that in order to control efficiently expenditure, such as that on public works, the controlling officer must have a knowledge of the actual operations which are being performed, and for that reason we deliberately seek among the officers who have been employed on works, men who are competent for the duties of the account branch, and we transfer them from the executive branch to the account branch of the department, and we find the greatest advantage from such transfer; in course of time, after having become thoroughly impressed with the system of the Account Department, and its requirements, and its utility, they again are liable to go back to the executive branch; and I consider that the influence of such an interchange in the branches of the administration, so far as it is practicable, is most healthy and most useful.

7055. Is there no friction between the Public Works Department and the General Accounts Department?—The operations in detail are altogether distinct, and there is no ground for friction. Whatever little friction there is, is where the transactions coalesce, that is to say, between the Accountant General of the Public Works Department and the Financial Department.

7056. Are these accounts audited by some one outside the department?—No; the auditors are public works' officers.

7057. But do you think that desirable; do you not think it would be better for them to be audited in the Accountant General's office, or by some outsider?—I think not. The general question of audit is a very large one, and a very difficult one to deal with, and I am not prepared to say that the conditions under which the public expenditure in India is audited at the present time are satisfactory to my own mind. There is, of course, a very important distinction between the critical examination of the expenditure as it goes on, which I understand in England is called examination, which term has also been adopted in India to a certain extent, and the audit, which is the revision by a superior and outside authority of the whole of the expenditure, both with reference to the authorities and the general character of the outlay.

7058. *Chairman.*] Not the administrative character, but vouchers?—The regularity of the expenditure, viewing it in all its aspects, not its policy or expediency.

7059. Mr. *Eastwick.*] Strictly speaking, there is no audit with reference to these public works?—The auditor of the Public Works Department is the Accountant General, and the audit is of this sort. The examining officer is an officer who is called the Comptroller. He critically examines the whole of the outlay in detail, and from him the general results of this examination go up for scrutiny to the Accountant General; he prepares a yearly account, of which I have brought a specimen here, which is called the Annual Appropriation and Outlay Account, in which the Accountant General of the Public Works Department goes critically in detail through the whole of the expenditure of each province, and comments on the whole of it; in fact, he performs the functions belonging to an auditor, and he presents his report to the Governor General in Council, and the Governor General in Council thereon makes any remarks or gives any orders that appear to be required.

7060. *Chairman.*] His is not an audit of vouchers, but of account simply; the vouchers are not all sent to him, the pay-lists, I mean; it is like the audit going on of the army expenditure?—It is on that principle, I believe.

7061. Mr. *Eastwick.*] I can understand that it might be desirable that the officer in the chief control of the accounts in the Public Works Department should be an engineer, but is it necessary to have six assistants, one of them a major, and the rest captains?—I think it is, if you consider what is the magnitude of the transactions and the magnitude of the country; it is a country that is as large as the greater part of Europe. We are not talking of operations that are confined to a parish.

7062. These officers, then, supervise the accounts of the whole of the public works throughout India?—Yes, and they are locally distributed.

7063. Then you consider that no improvements can be made in this Accounts Department? I would not say that at all. There is no human institution with which I am acquainted which is not capable of being improved.

7064. What suggestion would you make for improvement in this matter?—I do not know that I have got any specific recommendations to make. And supposing I had any particular views of my own, I do not think that that is the way in which improvement is to be made. I think that where there are large general questions of policy which have to be recognised, I may usefully here say what my opinion is, upon such questions of policy, but as to the particular method of dealing with any special account, or any special part of a system of organisation, I think the only way to get improvement is to let the officers who are responsible find out the defects, and as they arise, find remedies for them. We are in a constant state of ferment and change, and I hope improvement.

7065. How long do these officers remain in the Accounts

Major Gen.
R. Strachey,
R.E.

——

21 June
1872.

Accounts Department?—Some of them are quite permanent.

7066. I thought you said that all of them interchanged and returned to the other department?—We aim at doing that so far as it is practicable. For instance, Colonel Innes has been employed in both branches, and not very long ago he did return to an executive appointment.

7067. Is there not a rule that after a man has served so many years, he must either give up the general service or return?—We have no such rule as regards the old Indian service.

7068. It does not exist with regard to this department at all?—No; and as regards the new system under which the Royal Engineers are beginning to serve in India, no very precise rules have been laid down.

7069. You do not think it would be desirable that a time should be fixed during which they might be in the Accounts Department, and that afterwards they should return to the executive?—I think the more elasticity left in matters of this sort, to the responsible administration, the better. At any rate, I am not prepared to make a specific suggestion in such a direction.

7070. The chief suggestion you have made I think is, that there should be a minister of public works?—That was one of the suggestions that I made.

7071. You have nothing to suggest with regard to the department in this country, have you?—Well, I think all that I had to say regarding that, I said the last time I was here.

7072. Could you sum up, in a few words, what it was?—The matter was raised by questions of Mr. Fawcett's, Nos. 6807 and 6808, and several others; and there were some important questions that were asked by Mr. Birley, too, on that point. My views will be found in the answers to those questions.

7073. Mr. *Grant Duff.*] I want to ask you this question: when you were speaking the other day about the affairs of the railway companies in this country, you did not at all mean, did you, to throw any blame upon the conduct of the Government business, so far as it is conducted by the Government Director of Railways?—Not the least in the world; and I think if what I said is read with the context, it will be seen that I was referring altogether to the general operations of the Government, and not at all to any specific acts of any particular officer, or the way in which those acts were carried out, or the way in which the railway boards managed their business.

7074. If the office accounts of the railway companies in India have been in a backward state, may it have been due to the failure of the supervising authority to appreciate, at first, the very great magnitude of the transactions?—I have no doubt of it. For want of some specific responsible officer to whom the whole of the matters that were connected with this important subject would go, that I believe had been lost sight of.

7075. Do you think that the authorities in this country could very well interfere with the examination and passing of accounts by the Government officers in India; do you, in fact, think that such a matter of detail as the examination and passing of the accounts of the railway companies by the Government officers in India could very well have been directed from this country; must it not have been left in the hands of the Government there?—To a certain extent you are perfectly right; but to a considerable extent allow me to say that the Government in this country has interfered, and that very interference is one of the serious objections I have to take to the system.

7076. In what way have they interfered?—They have interfered in setting aside decisions which have been come to by the Government in India.

7077. To make the supervision more stringent or less stringent?—Less stringent.

7078. *Chairman.*] Was not that because some of the directions which the Government of India had given in their operation became inconsistent with the engagement of the Government in their guarantee contracts?—That is the view which the Secretary of State would take of it, perhaps; but I do not admit that that is so.

7079. That is a question which arose?—That is one of the questions which may have arisen, but that is not what I referred to.

7080 Mr. *Grant Duff.*] All the half-yearly accounts between the Government and the railway companies are passed in India by the authorities there, are they not?—They are.

7081. Some remarks were made the other day about the extent to which the line of railway running towards Peshawur has been sanctioned. The Government Director, in his report which was laid before Parliament, has guarded himself from misconception as to the length to which that railway had been sanctioned; he had spoken to the whole amount being three millions, I think, if I recollect right, but at the same time had spoken of that as a loose estimate, knowing perfectly well that the railway had only been fully sanctioned as far as Rawul Pindee?—I believe what occurred was this, the Chairman referred to Mr. Danvers' report, and read out what appears at Question 6794, to the effect that a certain sum was to be spent on the Punjaub northern line, from Lahore to Peshawur, and 5,000,000 *l.* from Moultan to Kotri. My reply, which was simply based upon what was read to me, was to the effect that that was not a correct statement of the facts; I did not refer to Mr. Danvers' report; I had not it before me. Subsequently at Question 6873, the Chairman said, "In the report of the Government Director of Indian Railways in London for 1871, it is stated that the State railways at present sanctioned, are estimated to cost 12,000,000 *l.*" (*Handing the report to the Witness.*) I then took the report in my hand, but I did not read it; I merely looked at the figures. I said, "Well, these figures are not correct, simply, I do not know where Mr. Danvers got them from, but they are not correct." To Question 6874, I said, "There is 3,000,000 *l.* put down here for the line from Lahore to Peshawur. Now the line from Lahore to Peshawur has not been sanctioned to begin with; the line that has been sanctioned is from Lahore to Rawul Pindee."

7082. The Government Director had sufficiently guarded himself, had he not?—I had not the report before me.

7083. His words are, "The following figures will give an approximate idea of the money required for those which had been decided upon." Virtually the line to Peshawur has been decided upon?—I have no knowledge of that. My information goes to the Secretary of State having sanctioned it as far as Rawul Pindee.

7084. But there would be no sense in the line stopping at Rawul Pindee?—That is a matter of opinion. But I had not the least idea of implying that Mr. Danvers' figures were erroneous

Major Gen.
R. Strachey,
R.E.

21 June
1872.

erroneous in any objectionable way. The whole scope of the examination was to press me to admit that the expenditure which the Government of India actually had in hand, was extremely large, and what I desired to show was, that the expenditure that had actually been ordered was not so great as was alleged; it was nothing more than that.

7085. Mr. *Eastwick.*] You said, in answer to Question 6879, that you do not see the propriety of adding a charge for interest to the cost of construction. I would just refer to a Despatch from the Government of India, dated the 11th of March 1869, where it says, "An unsuccessful railway is therefore a public burden. Resources, which might otherwise be applied to the extension of material or administrative improvements are permanently diverted to provide for the payment of interest on capital which has been misapplied, and remains unproductive." You will find that at paragraph 10 of page 4 of this Despatch of the Government of India, dated the 11th of March 1869, No. 351, of the Parliamentary Paper of that year. There is a conflict of opinion there, is there not, with that which you have expressed?—I think none. I entirely agree with every word of what you have read there. If it is in a despatch of the Government of India, the chances are that I drafted it myself. I have explained, I think, more than once, in this room, that what I mean by saying that you should not add the charge for interest to the capital, is, that when you are dealing with the financial questions that arise with reference to such expenditure, the only amount that can properly be considered as capital, is that on which interest continues to be payable; and that so far as expenditure is met from the revenues of the year, and got rid of finally, once for all out of income, it is not a cause of prolonged burden to the state, and interest should not be charged upon it.

7086. These statements do not seem to me to agree very clearly, because it speaks of resources being "permanently diverted to provide for the payment of interest on capital which has been misapplied"; then, of course, there must be a charge in consequence?—That is a truism.

7087. *Chairman.*] If money is borrowed at interest to construct a railway, and that railway produces no revenue, the interest that is paid is an annual charge upon it, of course?—Yes. In the reply I have given to Question 6879, all I have said is that there is no reason to go on adding the annual charge for interest to the original charge arising from outlay of borrowed money, because you get rid of the annual charge by paying it.

7088. There is no reason to do so any more than if the Government built a barrack, or a Government house, and there was a deficit on the revenue, they ought to charge the interest upon that barrack or Government house to all eternity, and add it to the cost; that is your view of the position of the State railways?—That is my personal view, dealing with the finance of these operations.

7089. To go to another point, you recollect that in your evidence you stated that in some cases you considered that the Government of India had been pressed to undertake works which had not turned out well, by the Secretary of State in Council; and you cited the Godavery navigation, and finally referred to a despatch which had been sent from the Government of India at the beginning of last year, as containing a summary of that transaction. The Committee have received that despatch, dated Simla, 1st of June 1871, and I am anxious to call your attention to some of the statements in it, and to ask you to explain the points that arise in the despatch. It is stated that "the scheme was first mooted in a general way in 1851, by Major F. C Cotton. Various explorations and surveys were undertaken from time to time in the following years, under the authority of the Honourable Court of Directors of the East India Company, and up to 1861 a sum of about 20,000 *l.* had been spent in these and other preliminaries." Then the despatch goes on to narrate what had been done by the Government of Madras up to 1863, "when the project fairly came under the Government of India." Then it proceeds to state what had been done by the Government of India. And then it states, "These orders of the Government of India were reported in its despatch to Sir Charles Wood, No. 116, dated 13th of September 1865; which reviewed past proceedings, and expenditure in connection with the scheme, and gave the views of the Government of India as to the prospective measures to be adopted with reference to it. At that time the expenditure had risen to 286,000 *l.*, and the estimated cost of the works, including the third barrier, was then stated at 800,000 *l.*, or even 1,000,000 *l.*" Now, it would seem from the statement of this despatch, as far as I have gone, that with the exception of the 20,000 *l.*, which had been sanctioned by the Court of Directors for surveys, the whole of the expenditure had been carried on with the authority of the Government of Madras and the Government of India; do you concur in that view of this despatch?—Not at all; you must remember what the despatch is about, from whom it is written, and to whom; from the Government of India to the Secretary of State; I, so to speak, was the pen that wrote that despatch, and I may say that it was not considered either decent or necessary to refer in it in an offensive way to the action of the Secretary of State in connection with these works, which had, as I think, more or less been opposed to the wishes of the Government of India. The Government of India did not wish to write anything that should be disagreeable to the Secretary of State; there was no object in doing so, or in laying any stress upon those facts. Further, you must remember that there is no doubt that all expenditure that actually takes place in India takes place under the authority of the Government of India; nothing is done in India except what is done by the Governor General in Council, or with his sanction; and, consequently, if the Secretary of State gave specific orders that anything should be done, it still would appear as though the actual order in India was given by the Governor General in Council, and in that sense the whole of those orders were given by the Governor General in Council. Perhaps when I used the expression Secretary of State, I should have explained that he has inherited the burden of the acts of the Court of Directors; I drew no distinction there.

7090. I want to call your attention further to this: "The orders of the Home Government in reply to the Despatch above referred to, were communicated in Sir Charles Wood's Despatch, No.

Major Gen. *R. Strachey*, R.E.

——

21 June 1872.

No. 11, dated 8th February 1866." In that the Secretary of State gives a sanction to a certain amount of expenditure. Now I wish to call your attention to this paragraph in the despatch: "Previously to the receipt of this exposition of the views of her Majesty's Government;" and here it would seem that the Government of India was acting, therefore, entirely on its own motion and spontaneously ——?—Excuse me for stopping you there. If you wish to prove that my general impression is wrong, and that this expenditure was due to the spontaneous action of the Government of India, and not to the action of the Secretary of State, all I can say is, let the papers be produced; but I have not got them, and I have no control over them.

7091. I am asking you whether this is not a distinct statement of the spontaneous action of the Government of India in dealing with this question, whatever may have been its idea of other people's views?—Not at all.

7092. "Previously to the receipt of this exposition of the views of Her Majesty's Government, the Government of India;" then it goes on to say that they have taken certain steps, but it states this: "issued orders for the completion of the first barrier project, with a short canal, with full-sized locks for steamers, estimated to cost 170,000 *l.*; and also sanctioned an estimate amounting to 113,400 *l.* for the works at the second barrier, which were ordered to be pushed on with all practical expedition." It would seem from that, that so anxious was the Governor General of India to embark on this project, that without waiting for a reply to his own representations, he directed this expenditure to be made and pushed on with all expedition?—I can only reply on this point that what you have said is a very ingenious gloss upon the despatch, but that the despatch was not written with a view of fixing the shares of the responsibility for the expenditure between the Secretary of State and the Governor General in Council. All it was proposed to do was to indicate the actual steps that had been taken, and their results. As I said before, I repeat, the actual order to spend money in India necessarily comes from the Governor General in Council; but it does not at all follow that he was not instructed by the Secretary of State to see that these things were done. On the contrary, I say he was so instructed; and when the Governor General ordered certain things to be done, the particular orders given were for the carrying out and the proper carrying out of the general instructions received from the Secretary of State. It is not the business of the Governor General to fly in the face of every order he may receive from the Secretary of State, simply because the order does not fall in with his own views of propriety.

7093. All I wish is to call your attention to this despatch which you referred to as containing an accurate statement of the relations subsisting between the Governor General of India and the Secretary of State?—No, I beg your pardon. I said that that despatch would show the general course of events, and it refers to the facts, but not in the sense of attempting to fix any special responsibility as between the Governor General and the Secretary of State as to who was responsible for ordering the works to be carried out. If I appeared to say that it was written in that latter sense I did not intend it.

7094. The only paragraph in this despatch which would seem to show that any expenditure above the original 20,000 *l.* in surveys was not the spontaneous act of the Government of India is paragraph 13, to which I will call your attention. The 12th paragraph says, "These orders" (that is, the orders of the Government of India) "were reviewed in Sir Stafford Northcote's Despatch, No. 86, dated 14th of September 1867, in which various modifications of them were proposed," not ordered, but proposed. Then paragraph 13 says, "In the first place the Secretary of State expressed a preference for the long canal of 20 miles at the first barrier over the short one sanctioned;" sanctioned by the Government of India, it means "involving an increased prospective expenditure of some 150,000 *l*; and in the next place, he desired the immediate prosecution of the investigations connected with the extension of navigation to the utmost extent, including surveys with reference to the storage of water to increase the supply of the river in the dry season. In other respects, the orders of our Government were approved, and also the expenditure of 10,000 *l.* on a road"?—I do not think I need say anything more on the subject than this. It is a question of fact. Either the Government of India did it on its own motion or the Secretary of State did it on his own motion. If it is a question worth being discussed, there is no difficulty in ascertaining the facts. I have stated my impression; I adhere to my impression; and nothing that I have heard you read out of that despatch modifies that impression at all.

7095. Then it goes on to say, "The total expenditure on these works up to the present time, including that incurred under the Madras Government prior to 1863, is about 700,000 *l.*, and for this the works at the first barrier, including the short canal, have been opened for traffic, and some progress has been made on the works at the second barrier." Then, it says, "To complete the works of the second barrier according to the present design will cost about 120,000 *l.* in addition to the sum already spent, and this expenditure will consequently give some sort of communication from the sea to the foot of the third barrier for steamers and country boats." And finally, it ends by saying, "The history of this project should, we think, be a caution to every future Governor of India not to take up engineering projects until complete designs for the works and estimates of their cost have been carefully worked out." That seems to be exactly what the Secretary of State, Sir Stafford Northcote, was anxious should be done?—Quite so.

7096. And in the meantime, instead of doing it, the Government of India have been going on making an expenditure upon this work until they describe it thus: "The project has already swallowed up 700,000 *l.*, with no practical result, in obtaining a through communication; the work done cannot be utilized in any sensible degree until a total outlay of at least 900,000 *l.* has been incurred, and cannot be made complete for navigation under a total outlay of 1,200,000 *l.*" That would seem to be the position in which the question was placed, not by the orders of the Secretary of State, but by the neglect of the orders of the Secretary of State, to have surveys accurately made?—I have nothing to say on the general subject, or as to the conclusion that you have drawn, beyond what I have already repeated more than once; but I will say this, in the most distinct way, that whether your conclusion

conclusion be right, or whether mine be right, you are on the horns of a dilemma. If the Government of India has been acting under instructions from the Secretary of State, it is as I say. If the Government of India has not been acting in conformity with the instructions of the Secretary of State, if the Government of India has been carrying out these works of its own motion, and with such a result, then what has the Secretary of State been doing, and what is the nature of the organization or system which allows such expenditure to go on by the Government of India, without the Secretary of State being in a position to prevent it? My own conclusion is, that the Government of India was not wrong to the extent that you appear to imply, but, in one sense, I have no objection to the other conclusion; and, so far as my wish for improvement goes, really whichever alternative you accept, it is the same thing to me. I say that a great number of defects exist in the organization of our system, which I have pointed out, and that I desire to see these defects removed. To me it is a matter of comparatively little importance who is the person that may appear chiefly to blame under a bad system. What I desire to see is the bad system corrected. I do not wish to throw stones at anybody.

7097. You feel somehow or other that the work has gone on, and you unfortunately have been an instrument engaged in these proceedings, whether one way or the other, under the Government of India, or the Secretary of State?—In this particular case I do not greatly feel that I have been an unfortunate instrument, because my concern with it has not been great. In other cases I do admit that I have been an unfortunate instrument

7098. Sir *Stafford Northcote*.] What I understand you to say is, that these Godavery works were, in the first instance, commenced on the suggestion of the home authorities and the Board of Directors or the Secretary of State, as the case may be, against the judgment of the Government of India?—I do not think that I ever said that. I should like to refer to what I really did say.

7099. I only want to know what you mean. Do you mean to say that it is your belief that these works were in the first instance commenced on the suggestion of the home authorities?—No; I did not say so, to the best of my belief.

7100. At whose suggestion do you understand they were originally commenced?—They were commenced as stated in that despatch on the suggestion of Major Cotton, now Sir Arthur Cotton, communicating with the Madras Government, I presume.

7102. I want to know at what particular period the pressure of the Secretary of State was exercised, and I find from you that it was not exercised in the commencement of the work?—I must again say that the discussions have been going on, as that despatch will indicate, since 1851. I cannot undertake to remember in detail everything that has been going on for twenty years.

7102 I do not want to enter into any controversy, but to get at what it is that you do mean. You have told us that in some form or other, and at some period or other, you believe that pressure was exercised by the Secretary of State upon the Government of India with regard to these works. I want to know to what do you refer; you say not to the commencement of the works; do you refer to the continuation of them? My impression is that the time when the Secretary of State interfered, and expressed a strong opinion in favour of carrying out the works, was some where about 1861, as far as my recollection goes.

Major Gen.
R. Strachey,
R.E.

21 June
1872.

7103. I have no reason to doubt that you are right, but after the works had been carried to a certain extent, questions arose as to whether they should be prosecuted further, and to what extent, did they not?—That is quite correct.

7104. The result of that was that the Government of India sent a commissioner down to make certain inquiries, did they not?—Well, Sir Richard Temple went down, and there have been repeated inquiries made in one form or another.

7105. Then was it not the case that on the 8th of March 1867, the Government of India reported to the Secretary of State, submitting the report of Colonels Fife and Anderson, with Major Haigs' memoranda, and Mr. Temple's minutes, and discussing the whole question, and that that was the despatch in answer to which my despatch of September was subsequently written?—That is quite correct.

7106. In that despatch of the 8th of March the Government of India, after having given various opinions of those who had been reporting to them, conclude by saying, "While we have ordered the arrangement above reported to be carried out as being on the whole the most desirable course to pursue after the steps which have already been taken towards the execution of the works embraced in the Godavery navigation project, we are still not convinced that what has been done and ordered will on the whole prove to be profitable in a degree commensurate with the expense. We forward a Minute by our colleague, Sir Henry Durand, which tends to support this view." Do you remember that Minute?—Yes.

7107. Sir Henry Durand's view was in favour, I think, of abandoning the execution of further works?—It was.

7108. Are you of opinion that in consequence of that despatch the Secretary of State should have proceeded to reverse what had been previously done?—I think that an extremely difficult question for me to give an answer to. I cannot recall to mind at the present moment what my particular opinions were at that time, and without having the whole of the papers to refer to, I really should be sorry to say what my opinion was; but I am perfectly ready to say this, that I think the Secretary of State at that time was perfectly justified in the answer which he gave.

7109. I want to come to the question of pressure, if you please; you were not a member of Council at that time?—No.

7110. Were you confidentially consulted by Sir John Lawrence, as he was then, with regard to matters of this kind?—Well, I could not say that I was at that particular moment; I could not say positively; I was not Public Works' Secretary at all events.

7111. It would not be therefore within your knowledge what private communications might have passed between the Secretary of State and the Governor General upon such a subject as this?—Certainly not.

7112. Even though those private communications

Major Gen. *R. Strachey*, R.E.

21 June 1872.

tions were communicated to the Member of Council?—No, certainly not.

7113. I will read to you a portion of a letter which I wrote to Sir John Lawrence on the 9th of June, when this despatch was brought under my notice; I said, "I am far from satisfied about the Godavery works; we seem to be spending money with very little certainty of obtaining a return for it; and at this moment when there is so much to be done in the way of really remunerative works, it seems a great pity to be proceeding with a forlorn hope of this kind; I have not yet discussed the subject with our Public Works' Committee, but I am much inclined to put a direct question to your Government, which I hope you may answer in the sense of Sir H. Durant's able Minute. It would no doubt raise a great clamour if we were to suspend works of such importance; and it must not be done without very careful consideration; but if, upon such consideration, we should be satisfied that they are a mistake, we may face the responsibility, and, I think, should be able to justify ourselves. Now that we have entered upon a plan of executing public works on a great scale with borrowed money we ought to be severely critical and even sceptical in examining the projects which we should take up." By the same mail I wrote also to Lord Napier, who was then Governor of Madras, and I said, "I should be very glad to have your opinion upon the difficult question of the Godavery works. The inclination of my mind is towards the entire abandonment of the scheme as wholly unreliable; but it would be a serious step to take, and I am anxious for good advice, especially from Madras. Bear in mind that we are now entering upon a course of large expenditure of borrowed money on public works, on the understanding that they are to be remunerative. Some limit must be placed on this expenditure, and what is applied in one quarter must be spared in another. Do the Godavery works deserve a preference over others?" In reply to the first of those two letters, I received one from Sir John Lawrence, which I cannot read, because it is a private letter, but the substance of it is that he had consulted the Council regarding the Godavery works, that he thought the position was one of some delicacy, and that, upon the whole, his advice was that the works should not be given up; that having had some inquiries made, having had a commission, and having had a great deal of information, he thought that it would be better, his own idea on the whole was, to go on with what the Government of India had proposed, concentrating our energies mainly on the first and second barriers until they are completed, and by that time he says we should have practical evidence of what further might or might not be undertaken, and at what cost. He went on to say that if I should decide on closing all the works and accepting the waste of the money we had spent, he was sure no one in the Council would say a word in opposition. Lord Napier, in reply to my letter, stated to me that it was his opinion that we ought not to discontinue the works, but go on with them; and in consequence of those two letters the matter was fully discussed by the Council at home, and we decided finally upon proceeding with the works. I wrote, therefore, to Lord Lawrence, saying, "We have decided not to interrupt the Godavery works. Lord Napier says, and very properly, that they should be charged to income and not to capital; and that they must be regarded in the same light as we regard expenditure on roads, which open up the country, but do not prove directly remunerative." To which I received a reply from Sir John Lawrence, saying that he was glad we had so decided, and thought it, upon the whole, the best solution of the difficulty. Now having stated those facts to you, I wish to ask whether you were at all cognisant of any of those proceedings?—No, I was not.

7114. I would ask you, having taken from me the statement of what passed, whether you think now that there was any undue pressure exercised in the year 1867 upon the Government of India in this matter?—I do not, and I am not prepared to say that I ever thought so; and if you will allow me, I will add that I have just been looking over what I said on a former day; it begins at Question 6736 and goes down to Question 6749; but the particular answer that I refer to is that to Question 6743. I was asked, "Does it occur to you that the Governor General ever wrote a despatch, after a good deal of discussion had taken place, in which he did recommend that the works should be commenced and carried out to a certain extent?" and my answer was, "To a certain extent I have no doubt that may have occurred, but under the pressure from the Secretary of State. When I say pressure I mean that the Secretary of State had strongly expressed an opinion that some such work should be carried out, and he invited the Governor General to say what could be done." In the preceding Question 6742, I was asked, "Were not the works originally sanctioned by the Governor General?" I replied, "On the order of the Secretary of State; and to a very great extent the works have been carried out under the instructions of the Secretary of State from time to time, if not without estimates, with extremely imperfect estimates which the Government of India has in vain tried to get, and only has got quite lately." Now I say that there is nothing at all incompatible in those remarks with what you have read.

7115. You will understand that I am not in any way wishing to enter into a controversy with you; I only wish that it should stand clearly upon the evidence what you really do mean, what the facts really are, and that we should also be able, upon this matter, a little to sift the question of the respective responsibilities of the Secretary of State and the Government of India. Now, upon the official despatches alone, the despatch, that is to say, from the Government of India on the 8th of March, and the reply of the 14th of September 1867, it would appear that the Government of India, after having had a commission and examined the matter carefully, have made a certain recommendation to the Secretary of State, and that the Secretary of State, upon the whole, has approved that recommendation. You made an observation just now, that in these communications it would not be the wish of the Government of India to put matters in a manner that might be offensive to the Secretary of State. Do you think that there was any reason for the Government of India at that time abstaining from stating fully and freely its views upon this important matter?—I think that, for the purposes of this despatch of June 1871, everything was said that it was requisite to say. It was not necessary to go into a critical explanation of how the expenditure had arisen; what was wanted in

this

Major Gen. *R. Strachey*, R.E.

21 June 1872.

this despatch was, to show what was the present condition of things when it was written.

7116. I understand you to be of opinion that it is right that the ultimate responsibility in matters of this sort should rest with the Secretary of State?—Certainly.

7117. Has not the Secretary of State a right in return to have the most true and perfect representations of the views of the Government of India upon important matters?—Certainly.

7118. Do you think that in this case, if the Government of India were of opinion that the works ought to be stopped, the Secretary of State was fairly treated and fairly put in possession of their opinion to that effect?—I am not aware that I said what I understand to be suggested by your question, that the Government of India did not express their opinions fully to the Secretary of State on those matters.

7119. At the period of which we are speaking, it may have been a question whether the works should have been stopped or not; are you personally of opinion that it would have been wise to stop them?—At what period?

7120. In 1867, after the commission of Colonels Fife and Anderson, and Major Haig?—No; my opinion was that they should be gone on with, as I agree now with the conclusion in opposition to the Government of India, which has been sent by the Duke of Argyll in reply to this despatch of June 1871.

7121. As a matter of fact the Duke of Argyll has now stopped the works, has he not?—No.

7122. *Chairman.*] Will you tell us what the Duke of Argyll has done?—The Duke of Argyll reviews this despatch, and says that he generally coincides with all that is said in it; that it is not necessary to discuss it in detail, but on the whole his conclusion is so and so. He refers to a paragraph in this despatch in which there are alternative courses of action mentioned. There are three alternatives given in paragraph 27, and this is the one that the Duke of Argyll has accepted, to complete "the navigation works as far as the foot of the third barrier on the smallest possible scale, and make a road thence to Chanda, to join existing roads to Nagpoor and Kingunghât."

7123. And so bring the work on the Godavery to a conclusion?—Yes, and my personal opinion is that that is the correct conclusion to have arrived at under the circumstances.

7124. Sir *C. Wingfield.*] You said in your last evidence that the cost of the Rajpootana railway will not exceed 5,000 *l.* a mile; I wish to know whether by that answer you mean to imply that all State railways can be made at that rate; because I find from a Despatch of the Government of India, that the railway from Kundwah to Indore, which is 86 miles in length, is estimated to cost 750,000 *l.* exclusive of rolling stock, and so on; therefore the cost of the works and permanent way alone for this 86 miles is, as nearly as possible, 9,000 *l.* a mile?—The cost of any railway of course essentially depends upon the country that it traverses. The line from Agra to Sambhur goes over what is an easy country; the line from Kundwah to Indore goes over country as difficult as there is in any part of India; in one case the estimate, so far as it is made up to the present time, according to my information, amounts for the easy line to about 5,000 *l.* a mile, and the reports sent to the Secretary of State, say within 5,000 *l.* a mile; for the other I cannot say specifically what the precise amount is, because the contract is a scheduled contract on rates, and I have not seen the quantities; but I believe that the cost of that line will be somewhere between 9,000 *l.* and 10,000 *l.* a mile.

7125. It is not a general proposition then that the State lines will be made for 5,000 *l.* a mile?—Certainly not; and I can say farther, that the estimate for the Indus Valley line, the upper part of it, between Moultan and Sukkur is 6,200 *l.* a mile.

7126. In that railway correspondence containing those minutes which have been frequently referred to, the cost of State railways is estimated at from 8,000 *l.* to 10,000 *l.* a mile; but I apprehend that at that time the metre gauge had not been determined upon?—That is so; the estimate of 10,000 *l.* a mile referred to the broad gauge, constructed in the most economical way practicable.

7127. *Chairman.*] Could you give us an exposition of this fact, or an elucidation of it rather, that on the 27th of May 1872 this Committee received from the India Office papers which were to show the cost of the State railways and their probable returns (No. 12 of the Appendix), and I have been unable to discover from those papers the figures and views which you are now giving; how are we to arrive at those views?—The paper that you received from the India Office was not prepared for me; I know nothing about it.

7128. You have seen it, I presume?—I have seen it.

7129. Does not that paper bear out the report of Mr. Danvers, to which your attention was called, showing the cost of the State railways as estimated with the qualification that it is an approximate idea, and showing that the money required for what has been decided upon is 12,300,000 *l.*?—That is quite possible.

7130. Can you tell us how we are to get any authentic information as to the statement that you are now making respecting the cost of the State railways?—I suppose if you ask information from me you must take what I give you.

7131. We have now before us a document from the India Office of 27th May 1872, which does not seem to coincide with the information that you are giving?—I can quote from Despatches of the Government of India; I have nothing to do with the ordinary Railway Department in the India Office.

7132. But you are giving us information at variance with a document which was transmitted to us so late as May 1872?—I admit that it is my misfortune that I should appear in that light. All I can say is, that my figures are right; all that I have stated is taken from the official papers which I have got from India.

7133. Having received a set of official papers from the India Office very lately, we should be glad if you could refer us to the official papers which you are now quoting from?—There is a Despatch from the Government of India to the Secretary of State, dated the 15th December 1871, to which I may refer.

7134. I find, at page 46 of the Paper of May 27th: "For 84 miles of line, costing one million sterling, this amounts to 23,620 *l.*, or 2·36 per cent. upon the capital sunk." That is under the head of "Holkar State Railway." Indirectly, then, we are informed that it will cost a million sterling?—A contract has been made for the Indore State Railway, but, as I mentioned before, it

Major Gen. *R. Strachey*, R.E.

21 June 1872.

it is a scheduled contract, a contract of prices, and I have not got the quantities, and it is quite impossible for me to say, therefore, positively, what is the amount.

7135. Have you any document from which you could give an account of the expenditure as proposed?—Merely the rates; I have got them somewhere, but I have not been able to lay my hand upon that this morning. Approximately I think that the figures which you have before you are probably quite right.

7136. The Government of India sent the Committee a telegram the other day giving us an account of how much these railways were to produce in the way of profit, and they gave us the net result?—Here I have stumbled upon a report by Mr. Campbell, who is the engineer who laid out the Indore line, it is at page 48, paragraph 101, "the line has a total length of 85·80 miles, and costs 747,884 *l.*" That is the best information that I have got about it.

7137. Is it the final statement of this compilation of papers?—It is.

7138. But that is at the rate, with the addition of the other matters, of 10,000 *l.* a mile?—It is something under 9,000 *l.*

7139. In a Despatch, dated the 26th of February, from the Government of India Public Works Department to the Secretary of State for India, it states this: that including the Nerbudda Bridge, the engineers' estimate for the 86 miles of metre gauge line is 751,000 *l.*; and, adding 1,000 *l.* a mile for rolling stock, stations, machinery, and shops, its cost, as estimated by Mr. Campbell, may be taken at 840,000 *l.*, and including engineering establishments, 900,000 *l.*, which is 11,000 *l.* a mile?—I suppose that is all right, but I have not seen the Despatch.

7140. But that is not quite consistent with your 5,000 *l.*, is it?—That is a different line.

7141. But you do not accept the statement in the report of Mr. Danvers, which makes the 350 miles, or 360 miles, cost 2,500,000 *l.*?—I have here a Despatch from the Government of India to the Secretary of State, dated the 15th December 1871, which states that an actual contract has been made with a Bombay firm for the carrying out of the whole of the works on the line between Agra and Sambhur, inclusive of maintenance, for two years, and that the result of this will be as follows: "The estimates got out by Mr. Furnivall amount to about 4,000 *l.* a mile, and it is reckoned that, allowing for the variations in quantities due to certain revisions of the designs, and including rolling stock and establishment, the total cost of the line may be kept well within 5,000 *l.* a mile;" that is for 185 miles, and that includes also a bridge over the Jumna at Agra. That is the last information that I have regarding the Rajpootana railway. I can give you the authority, if you care to have it, for a portion of the Indus Valley; there is an estimate for that of about 6,000 *l.* a mile.

7142. Sir *C. Wingfield.*] Now I want to ask you something about the Eastern Jumna Canal. You said, I think, that our Government have spent as much upon that as would have made the canal *ab initio*, and that it was a mere ditch when we first took it in hand?—I said something of that sort.

7143. Now I want to know if you can tell me when expenditure on that canal began, because I was very intimately acquainted with that canal some 25 years ago, at least a considerable section of it, and I certainly say that 25 years ago or more it was as big as the New River midway between Ware and London; from the year 1844 to 1848, I speak of?—The figures here show that the capital outlay to the end of 1846-47 was 97,000 *l.*, call it 100,000 *l.*, and up to the year 1870-71 it is as much again.

7144. But I should have said that 96,000 *l.* would not have anything like made it such a canal as it was when I knew it?—But you must remember this, that the cost of labour was very much less in those days; also, that the canal had been in actual operation for a great many years; that it was gradually improved, and that there is no doubt at all that a great deal of the work of improvement was carried out under the head of expenditure for maintenance or repair, clearing the bed and things of that sort; and the capital outlay represents only the outlay upon specific new works, weirs, bridges, the falls put in to correct the levels, and so forth.

7145. You do not mean then that the width of the canal, as constructed by the native Government, was such as to make it proper to characterise it as a mere ditch?—That was figurative language rather, I do not deny. There are ditches and ditches; I do not mean to say that it was a ditch 2 feet wide.

7146. You would not disagree with my description of it, that it was as big as the New River?—When you knew it, it was a most useful work; but at the time that you speak of, it was producing an income of 10,000 *l.* or 12,000 *l.* a year.

7147. But you do not think, do you, that an expenditure of 100,000 *l.* could have produced that work without you had had the foundation of it laid by the native government *de novo*; you could not have produced the work for 95,000 *l.* in the condition which I described it as being in 1846?—That I would not say positively; but I would not hesitate to say that for an expenditure of 200,000 *l.* we should have got something much better.

7148. At this moment, do you mean?—What I meant to imply was that the original design was defective in many important ways, and that defects in the original laying out had led to the necessity for a good deal of expense.

7149. You mean that it intersected the drainage of the country?—Yes, and there was the fall in the bed, which is an all essential thing in a canal. It was taken nearly on a straight line through the country without any reference to the fall.

7150. I will call your attention to your reply to two questions put to you by Mr. Bourke, namely, 6900 and 6901, referring to the recent decentralisation scheme. You were asked, "Now it did not give them greater powers of taxation than it did before, did it?" and you said "Not at all; none." Then the second question is, "Did the system that was introduced, of local taxation, give greater facilities than before existed to the local Governments to tax the people?" and the answer was, "It made no change whatever." Now this, of course, is undoubtedly true; the increased powers of taxation could only, of course, be given by a legislative enactment, and this is a mere financial order, and the legislative councils have ample powers of taxation at present; but it appears to me that those questions and answers might lead to the impression that there is no connection between this decentralisation order and local taxation; and what I want to ask you is this, is

not

Major Gen. *R. Strachey*, R.E.

21 June 1872.

not the main object of this decentralisation order, as explicitly set forth in several paragraphs, to relieve the Imperial revenues by transferring charges heretofore borne by those revenues to local resources, to be provided by local taxation. I refer to Parliamentary Paper 29, " East India (Local Finance)," 16th February 1871; and I will here, if you please, read the passage to which I refer: " The matter" (of local taxation) " has been before this Goverment on several occasions since 1862, and the view now taken of it has already received, in general terms, the approval of the Secretary of State. It is only by a judicious system of local assessment and control that what is needed can be accomplished" (That refers to Public Works.) " This is not less true of some other departments of the administration. The Supreme Government is not in a position to understand fully local requirements, nor has it the knowledge necessary for the successful development of local resources. Each province has special wants of its own, and may have means for supplying them which could not be appropriated for Imperial purposes. A tax adapted to the circumstances of one part of the country may be distasteful or inapplicable elsewhere; and everywhere rates may be proper for provincial or local purposes which could not be taken for Imperial revenue. These principles are now generally recognised, and important steps have been already taken to develope provincial resources. The Government of Bombay has for some years raised a considerable revenue for local purposes. Important measures to the same intent are under the consideration of Legislative Council of Madras. The Government of Bengal is maturing a scheme in accordance with the decision of the Secretary of State, for the levy of a rate for local objects in the Lower Provinces of Bengal. In all the other Provinces of India provincial revenues have been raised, and measures for increasing them are now being devised." Now it appears to me that the increase of local taxation is in fact one of the chief objects aimed at in this decentralisation order?—There is no doubt that you have read the *ipsissima verba* of the Government; what you are talking of, the decentralisation, as it is called by some persons, was an important part of the financial policy of the Government of India; when that arrangement was made by the Government of India in 1871–72, one and a half million sterling of income tax was given up, and when that one and a half million sterling of taxation was given up, the local administrations were told that they would receive certain grants, aggregating something between 4,000,000 *l.* and 5,000,000 *l.*, as far as my recollection serves me, that that sum would be the equivalent of a certain portion of the public expenditure, less 331,000 *l.* Therefore, while on the one hand an obligation was put upon the local Governments to increase the local taxation by 331,000 *l.*, there was, so far as the country was concerned, an absolute diminution made in the Imperial taxation at the same time of one and a half million; and consequently the country might presume that it was better off to the extent of the difference between 300,000 *l.* and 1,500,000 *l.*, or 1,250,000 *l.* we will say. And what are the subsequent facts? The last information that we have on the subject is, that instead of the actual amount of new local taxation having been increased by 331,000 *l.*, in reality the total increase is not more than 267,000 *l.* That is the last information that I have, which is contained in a statement made by Sir John Strachey; and I suppose that if anybody knows the facts he is likely to know them; therefore, I repeat that the result of this measure has been an absolute reduction of expenditure of 1,250,000 *l.*

7151. But you forget that that 1,500,000 *l.* of income tax which was left off was the result of an excessively high rate of income tax imposed suddenly to meet a financial emergency, and it never was contemplated to keep up such a rate of income tax as that, neither was that remission equally distributed over the several governments, so that it could be said to bear any proportion to the local taxation?—If taxation of one sort is taken off, and taxation of another is put on, it does not follow that the individual incidence remains the same.

7152. But that amount of taxation was only put on just to meet that extraordinary financial emergency?—It seems to me that that has nothing to do with the question at issue; the fact was, that simultaneously with the necessity for the increase of the local taxation there was an actual reduction of 1,500,000 *l.* of the Imperial taxation. I must also add that it is altogether a mistake to talk of that additional taxation, that addition to the income tax, as being taxation necessary to meet an emergency; the emergency was only of this nature, that the expenditure had risen to such an amount that it was necessary to meet it somehow.

7153. But I recollect, perfectly, that the income tax, which, at the commencement of the year, was only one per cent., was raised suddenly to two, and then, before the end of the year, to three; and, it was stated by Lord Mayo, when he discovered the startling deficiency, that it was put on for the purpose of meeting that?—It was emergency in one sense, but not in another; it was emergency in the sense of its being urgently necessary to provide the means for meeting the expenditure of the year. When it was ascertained in the course of the year that the expenditure would be greatly in excess of income, so far there was an emergency; but there was no emergency in the sense of its being a means to be applied for a single year, or a single half year, and then dropped altogether; and nobody ever thought or admitted that it was.

7154. But most certainly Lord Mayo, on the opening of his council, said that it would not be maintained at this rate; that it was merely to meet this pressure; and that he would never dream of maintaining it?—For this reason, that he knew that it would be possible, by suitable arrangements, to be able to take it off soon; that he had in his own mind already the conception of this scheme of localisation, and that he was aware that, by suitable arrangements, it would not be necessary to maintain the increased rate of income tax, but that those arrangements could not be matured suddenly.

7155. The short of it is that it was an exceptionally high rate of taxation which nobody would think of maintaining; and therefore this reduction of income tax which would have taken place in any case cannot be pleaded as a set-off to increased local taxation?—It was exceptional to that extent, that whereas it was one it was made three. Whether any one can say that one, two, three, four, or five, is in the abstract high, I am not prepared to say; it may be.

7156. It is also said in the resolution, that this is the amount of grant to be permanently made; the word " permanently " is used?—There is the word " permanently " here.

7157. Then in paragraph 17 the Governor

Major Gen. *R. Strachey*, R.E.

21 June 1872.

General says that he hopes not to be under the necessity of reducing the assignments?—Quite so.

7158. Therefore it appears that while the contingency of a reduction is contemplated, that of an increase is ignored?—Well, I think not. I think that the intention no doubt was not to lead the local Governments to think that these grants were to be increased. In the very nature of the whole transaction the intention was to provide a limited sum out of the Imperial revenues, from which the local Governments were to be bound to meet certain classes of expenditure, adding to that limited sum, either specific economies in the sums allowed for the various branches of the administration, or such improved revenues as they could obtain. There is no question that that is the very pith of the whole thing.

7159. I think if you held this language to anybody, "I make you this permanent allowance, and I will not reduce it if I can help it," you would lead him to understand that it might be reduced, but that there was very little chance of its being increased?—No doubt that was the intention.

7160. Some allusions have been made in this investigation to a large expenditure in Bombay on a Government house at a place somewhere near Poonah, namely, Gunesh Khind; can you state the total expenditure up to date?—There is the account of the annual appropriation and outlay, in which the whole of the details of the actual expenditure are pointed out.

7161. What is the total expenditure on house and accessories, including outbuildings and gardens?—Up to the end of 1870–71 the actual expenditure was 131,274 *l.*, and there is a note attached to this, "exclusive of outlay of 2½ lacs on subsidiary buildings, such as quarters for band, &c.;" and I have got another year's account here in which there is a reference made to it which gives a little more detail. That would make the amount 156,000 *l.*

7162. Was not the former Governor's house at Poonah sold?—Yes.

7163. What did it realise?—The arrangement, so far as my memory goes, was this. In Sir Bartle Frere's time he thought that the old house near Poonah, at Dapooree, was disagreeable and feverish; and he sold it, and it was at the time that people were very rich in Bombay, and he got three lacs of rupees for it.

7164. Then that may be set off against the 156,000 *l.*?—Yes, and he informed the Government of India that he would be able with that three lacs of rupees to build himself a very nice house at Poonah. The expenditure went on, and the Government of India allowed, weakly allowed, the work to be begun before the estimate had been made. He said "I have no house, and it is absolutely essential that I should have one or I shall be left out in the cold or wet," and he was allowed to begin without a proper estimate. That proper estimate took several years to make, and when it came in it amounted to nine lacs of rupees, and the ultimate result is what you have heard. The first estimate that the Bombay Public Works officers gave was 90,000 *l.*

7165. This governor who represented himself in want of a house had already two, had he not, the Malabar Point and the Parell?—The Parell house is a reasonable sort of house. That at Malabar Point hardly deserves the name of a house.

7166. It is a group of very commodious bungalows, is it not?—That is true; in hot weather it is a pleasant place to be in.

7167. Deducting the price for which the old Dapooree house sold, 30,000 *l.*, there has been an outlay of 126,000 *l.* therefore?—Yes; and I am not prepared to say that those accounts show really the whole of expenditure that has arisen in consequence of the house. The house was put in a place which was barren ground originally, and of course it became necessary to make roads to it, and so forth. I am not in a position to say absolutely whether that expenditure is included here or not.

7168. Possibly some of that expenditure on roads may have gone into the Public Works Account for communications?—It is not impossible.

7169. Could that be ascertained?—I could not ascertain it; it would be extremely difficult. Recently, a Government House has been provided in the North Western Provinces for the Lieutenant Governor, at Allahabad, and he has been allowed to spend, after a good deal of solicitation, two lacs of rupees on his house, which is considered rather extravagant. It took a long time before the Government of India could be got to agree to that.

7170. They had had a caution, I suppose. Does that figure of 156,000 *l.* include the furniture?—No; the Public Works Department does not furnish.

7171. There would be a further charge for furniture, therefore, to your knowledge?—I have heard of it. The Public Works Department builds houses and hangs punkahs, but does not furnish.

7172. Now will you proceed to tell us something about a fund at Bombay known as the Special Fund, which has received advances from the Government of India?—Previous to 1860 or 1861 a discussion had been going on for some length of time regarding the old fortifications of Bombay. The town of Bombay had been originally fortified; there was an enceinte round it, a rampart and bastions, and a ditch which hemmed in the old town, but in a military point of view worthless; and after a time it was decided to knock down the ramparts and fill up the ditch, and to make the glacis and the area where the rampart stood available for building purposes; it was considered that the land that was thus made available would be sold in a remunerative way, and that a large fund would be created, out of which all needful improvements might be made; and it was proposed, on the strength of this operation, to lay out the space that became available, to construct roads, and to make a site for an extension of the town; and estimates for a large amount were made of the income, on the one hand, and the necessary outlay on the other. The operations began in a moderate form, the Bombay Government selling what land they could, and realising very handsome prices for it, and out of the proceeds of the sale beginning to spend money as it came in; but they very soon found that it was easier to spend money on the new work than to get money from the sale of the land; that people were not disposed to go very immediately into the purchase of land, and that at all events it was quite impossible to sell the land on a large scale; they therefore asked the Government of India to give them advances to enable them to carry out the projects, it being understood that those advances should be

repaid

Major Gen. *R. Strachey*, R.E.

21 June 1872.

repaid from the proceeds of the sale as soon as the land was sold.

7173. When were these advances commenced?—It must have been in 1863 or 1864.

7174. Could you give us the main items of this fund?—Yes, I can tell you what the general results are; it became apparent after the great collapse of trade in Bombay, after the commercial crisis there, that there was, at all events, no immediate prospect of selling the land, or of realising any considerable asset from such a source, and then the Government of India determined that it was necessary to bring to a close the whole business; and on reviewing the results, it turned out that the whole expenditure had been 2,432,000 *l.*; that the whole of the receipts were 764,000 *l.* from the sale of land, leaving an excess of expenditure of 1,668,000 *l.*

7175. Of which how much was advanced by the Government?—The adjustment, as it is technically called, of the 2,432,000 *l.* has been this: against ordinary, that is to say, against the revenues of the year, 1,298,000 *l.*; this to the extent of 764,000 *l.* has been met by the assets in the form of receipts from sales, and the residue, 534,000 *l* odd, has been charged against the revenues; the balance of the amount, about 1,133,000 *l.* has been met by borrowing, and appears under the new extraordinary account.

7176. There is still land to sell?—A great deal of land.

7177. All hope of repaying this money, I suppose, depends on the sale of these lands?—There is something still to be said; out of that 1,133,000 *l.* which has been borrowed, a sum of about 770,000 *l.* has been laid out on what are called in Bombay technical language reclamations, or in filling up portions of the sea contiguous to the foreshore. It is possible that that 770,000 *l.* may eventually be transferred to the newly created Port Trust; that they would take over the reclaimed land as an asset, and in course of time realise the amount. So far there is some prospect of that being done.

7178. Are there any regular receipts from ground-rents or rent of buildings?—I think not in connexion with this fund. I think that the land disposed of was absolutely sold.

7179. But did not the Government erect some buildings on it?—Merely public offices; there is a list here of the whole of the main heads.

7180. *Chairman.*] They are included in the expenditure that you have mentioned?—Yes.

7181. Sir *C. Wingfield.*] Would you give us an account of the Port Trust?—This trust hardly exists yet; but what has occurred is this: there was a company that was formed at Bombay in those days when companies grew up rather rapidly, called the Elphinstone Company, which proposed to reclaim a large portion of the foreshore of the Island of Bombay, with the intention of providing improved accommodation for the commerce of the place, and of making wharves and warehouses. The question has since been raised whether they should not make basins, and even docks; after the general collapse of credit at Bombay, this company found that it was extremely difficult to raise money, and that their works being incomplete, they came to the Government and asked to have money lent them; there was a good deal of discussion about it, and the Government of India and the Secretary of State were not disposed to lend money; for a transaction of that sort of considerable magnitude the approval of the Secretary of State would be thought necessary. There being this indisposition, at length it was suggested by the Bombay Government that the property should be bought by the Government if it could be done on favourable terms, and handed over to a public trust with the intention of taking the control of the harbour out of the hands of private individuals, and placing it in the hands of the commercial community of Bombay; and this proposal was favourably received by the Government of India, and a negociation was entered into with the Elphinstone Company, with the approval of the Secretary of State; certain terms having been named under which the transfer was to take place, and under which the Government of India was to authorise the payment of the amount.

7182. I think the shares were taken at par, were they not?—I think so, but I can give you the precise figures; it is a trifle over 2,000,000 *l.* for the whole amount; 2,012,000 *l.* is the last account.

7183. Then the Government bought them for 2,000,000 *l.*, and created a trust?—Yes. Immediately after the purchase, some difference of opinion arose as to the terms of the arrangement between the Government of Bombay and the Government of India, and the actual formation of the trust was postponed. Those discussions, I believe, are even still going on, or have not been thoroughly completed; and I think that if there is any prospect of this Committee meeting again next Session, it would be better to postpone any further inquiry into the actual facts as regards that trust till then, when the final result can be known, because I am not in a position at present to say really what the actual final results are.

7184. It does yield some return?—Yes, there is a considerable income from it.

7185. Is that from the rent of land?—Partly from the rents of land, partly from the sale of the land which is not required for the purpose of the Trust, but to a very considerable extent from the wharfage dues. Of course, the Elphinstone Company having provided the wharves and other accommodation at its own cost, it was but reasonable that the public which makes use of these conveniences should pay for them, and there is a regular scale of charge, which the company had been in the habit of levying before the property was transferred to the Government. Now the Government have appointed a provisional agency to take charge of that part of the business until the Port Trust is properly constituted. I believe that the principal difficulties have been got over, and that a trust will be formed at once which will virtually place the whole business in the hands of the merchants of Bombay in the same way as is the case with the Port Trust at Calcutta.

7186. The merchants have not found any of this money?—No. But in order to understand the transaction, you must have the whole of the facts before you; and therefore I say that I think it will be better to suspend any inquiry into this until you are in a position really to get the facts, which I do not think could be given now by anybody.

7187. As to this sum paid for the purchase of the Elphinstone Company, was that also put down to Extraordinary?—It has been borrowed, but it does not appear under the head of Public Works Extraordinary Expenditure. That is one of

Major Gen. *R. Strachey*, R.E.

21 June 1872.

of the items that I referred to when I said that these accounts are not now rendered in a satisfactory way; for a portion of the expenditure of the borrowed money does not appear under the head of Public Works Expenditure, while another portion does; one portion of the expenditure is technically called Public Works Expenditure, but another portion is not, and thus an amount of two millions which has been advanced on account of these Port Trust arrangements appears under the head of Advances Repayable, and not under the head of Public Works Expenditure. There are a great many other very large transactions of a like nature which you will also find in the statement annexed to the Budget; 500,000 *l.*, for instance, advanced to the Calcutta municipality for its water-works, and a large sum to the Bombay municipality.

7188. Was not the price paid the par value of the shares, or very nearly about that?—I think so.

7189. The par value of the shares was paid in a 4½ per cent. stock, was it not?—A four per cent. stock, I think, they got at 92 or 93, so far as my recollection goes.

7190. Mr. *Fawcett.*] At the time of this transaction with the Elphinstone scheme the quoted price of the shares was 50, and the Government bought them at 92?—No, there was no such difference as that.

7191. But before the rumours first began as to the purchase by the Government, shares were bought at 50?—That there was a period during the time of greatest depression at Bombay when the shares were at 50, may be true.

7192. I want to show the exact nature of the transaction, to see whether it is not a repetition of the Orissa transaction. Will you tell me, or give me, next time this information. At the time when the negociation first commenced with the Government, what was the price of the shares, and at what price did the Government buy them?—I think, as I said before, that the Committee will only be misled if it attempts to go into this question partially at the present time.

7193. But that question about the creation of the trust has nothing to do with the transaction; this is a matter of fact, which of course I can get myself by referring to a money market list; but can you tell me what the fact is?—I am not prepared to say that I can find out what it is.

7194. Will you state the names of the directors?—I have not been able to ascertain them.

7195 The money of this transaction was provided of course out of the general revenues of India?—Well, it never took the form of money; a stock was created specifically.

7196. That was virtually provided out of the revenues of India?—The charge on account of it was.

7197. It added so much to the debt of India, for which the people of India are responsible?—Doubtless.

7198. Therefore it is simply an illustration that what Lord Mayo objected to in that paragraph which you read about being charitable with other people's money, is exactly the policy which you were carrying out?—To a certain extent it was, so far as it eventually proves a burden; because, supposing that instead of proving a burden it had been extremely advantageous, the whole position of course would have been altered, and the whole pith of the thing therefore is, what is the nature of the burden.

7199. Still you know perfectly well that if the thing had been advantageous, these speculative gentlemen at Bombay would not have applied to the Government for money, and you advanced them money in order to prevent a certain amount of money what had been spent being absolutely wasted, and the money was got from the general body of the people of India to benefit Bombay and a certain number of speculators?—I am not prepared to say that the transaction, under certain circumstances, was not justifiable.

7200. I will not say whether the transaction was justifiable or not; I want only to get the exact character of the transaction; do not I correctly describe the transaction, so far as the people of India are concerned?—Well, I should say probably not.

7201. If the people of India did not provide the money for the benefit of Bombay, who did it?—The question is whether the people of India in reality will be sufferers. Supposing that there is any such loss on the transaction as to make it unjust for the people of India to provide for that loss, then no doubt what you say is quite correct; but that remains to be seen.

7202. Still, at any rate, they incurred the risk? Yes; there is a risk of course.

7203. You kindly said that you would give me information on two points on which you were not prepared to do so when last I examined you, namely, first the exact nature of these Punjaub Canal Acts. Do I not give a correct description when I say that one Act was passed when you were connected with the Government of India, and was afterwards disallowed by the Secretary of State, containing provisions that if the canal did not pay seven per cent. the people who did not use the water should be taxed for it or compelled to use it?—As I stated before to Sir Charles Wingfield, it is a mistake to talk about two Acts; there were not two, only one.

7204. Was not that a clause in the Act?—It was something of that sort.

7205. I am not going to condemn the Act, but simply to get at the facts, and I will draw my own conclusions?—That is what I wish to do too, and therefore I say as you have not represented the precise form of the Act I would like to show what it is: here is section 44 of the Act as it was passed.

7206. Are you referring to the Act that was disallowed by the Secretary of State?—No Act has been disallowed by the Secretary of State.

7207. I took it from your former evidence; you did not deny the existence of two Acts?—Sir Charles Wingfield tried to persuade me that there were two Acts, and I endeavoured to explain that there were not; and I said quite plainly that there was one Bill brought in, that a copy of the draft of that Bill was sent to the Secretary of State, that he objected to certain parts of it, that the discussion continued, and that eventually the Bill which had been brought in as a Bill to apply to the North Western Provinces, Oude, the Punjaub and the Central Provinces, was passed as applicable only to the Punjaub, and the Act which became law, and which is law in fact at the present time, is this Act which I have got here on that being sent to the Secretary of State, he said he continued to object to those parts which he had before objected to, but he said that it would be inconvenient to disallow an Act which had already come into operation on such a matter as this; and therefore he requested that the Government

Major Gen.
R. Strachey,
R.E.

21 June
1872.

vernment of India would repeal that portion of it which he mentioned.

7208. Then it comes to the same thing, that what took place is this; there was a Bill submitted to the Secretary of State, that Bill was altered by him, an important clause was left out, and the Bill as altered is now the Act in operation; that describes it correctly, does it not?—It describes it incorrectly; the Governor General in Council has the power of passing laws for India, and he passed a law, and this Act in my hands is the law at the present time unless it has been repealed since. The Secretary of State said that he would not disallow the law, which he has the power to do, but asked that the Government of India would repeal this part.

7209. A certain Act was passed by the Governor General in Council in India; that I should call Act No. 1; it was submitted to the Secretary of State; he did not disallow the Act, but suggested or recommended or ordered a certain clause to be repealed, and the Government of India acting upon that suggestion, that clause was repealed?—No, it has not been repealed to the best of my belief up to the present time; the Government of India has not had time to do it, but it will be repealed.

7210. Whether it has been repealed, or has not been repealed, there are two Acts which are different; one of them is the Act as it was passed by the Governor General; the other of them is the Act which will be what the Act would be as suggested to be altered by the Secretary of State?—I do not think that I can give any other answer.

7211. What was the Act originally passed by the Government of India on this point. Without troubling the Committee, you can describe it in general terms. I have looked at the Act, and I believe mine is a correct description?—I cannot undertake to give a general description of this part of the Act. I should be extremely sorry to have to describe in general terms to this Committee the substance of the Ballot Bill. I am particular in saying this, because I find that I have been misconceived when I have given answers such as I naturally give off-hand; I am not an orator, I am not practised in public speaking, and not able to put into a few words the substance of a document of this description without any warning or any preparation; I cannot do it, and the result will be if I attempt to do it short that I shall be misconceived.

7212. Will you read the paragraph, then?—"At any time not less than five years after the commencement of irrigation from any canal, the local government may order an inquiry to be made, by an officer appointed for that purpose, into the condition of such canal, and the irrigation therefrom. If, upon the report of such officer, the local government is satisfied that the owners or occupiers of lands irrigable by such canal have not made reasonable use of the canal for purposes of irrigation, the local government may, with the previous sanction of the Governor General in Council, issue a notification in the official gazette, declaring that the owners of such lands, within local limits to be specified in the notification, shall be charged with a special rate, according to the provisions hereinafter contained." That is section 44.

7213. Now, I ask you, is not a fair interpretation of that, that if the people do not make what the local government define as reasonable use of the water, they shall be compelled to use it, or to pay for it?—I think not; there is no reference whatever to compelling them to make use of the water.

7214. They are to pay for it?—That is a totally different thing.

7215. What is there to modify that interpretation; anything in the subsequent provisions?—"No such special rate shall exceed one rupee per half-year per acre of land in respect of which the rate is charged. No such special rate shall be charged in respect of any land, if during the year or half-year (as the case may be) in respect to which such yearly or half-yearly rate might otherwise be claimed, water sufficient for the irrigation of such land has not been supplied when required by the owner or occupier thereof. For the purposes of section 44, land shall be deemed irrigable by a canal when the following conditions are complied with in respect thereto: (*a*) That it is cultivated, and not irrigated; (*b*) That the nett annual value of the produce of the land, or the productive powers thereof, will be increased by the irrigation thereof by canal-water, after deducting all necessary charge in cultivating the same, conveying the water thereto, and paying all Government charges in respect of such irrigation; (*c*) That the divisional canal officer shall have tendered to the occupier or owner thereof a supply of canal-water sufficient for the irrigation thereof in the manner customary in the irrigation of land from a canal; (*d*) That the divisional canal officer shall have offered to the said occupier or owner to construct the works necessary for conveying the water to the said land, under section 16, or (if the said occupier or owner shall so prefer) to apply the provisions of sections 21, 22, and 23, for the construction or transfer of a water-course, or shall have tendered an advance of money sufficient to provide for the construction of the said works; such advance to be repayable in conformity with the rules for recovering advances made under the Act for the time being in force as to advances for improvements in land."

7216. None of those provisions alter the interpretation that I have placed on the Act?—That I suppose everybody has a right to judge for himself.

7217. Do you think they do yourself?—I am not prepared to say what your interpretation is. If you desire me to answer the question whether I could apply specifically to this part of the Act the words that you have applied to it, I should say, no.

7218. Does the Act distinctly contemplate under certain circumstances that if people do not use the water they shall be charged a rate?—Certainly.

7219. Was not a provision passed in this Act (I will try to be accurate), or was it not in this Act, that gave the Government the power of obtaining compulsory labour?—In this Act there is what, no doubt, you refer to. I can say further, that the Secretary of State with the advice of his Council has allowed that part of the Act to stand; and also that in writing to the Government of India, he has recommended that the Act, with the exception of the parts which I have read, sections 44 to 49, shall be made applicable to the North Western Provinces.

7220. So that the only point on which I was not correct, is, that this compulsory labour will

Major Gen. *R. Strachey*, R.E.

21 June 1872.

have a wider application than I had supposed?—But I should add that "compulsory labour," the expression you used, is a very vague term; and therefore, I had better read the part of the Act which refers to it, because while in one sense it is compulsory labour, in another sense it is not so. There is an obligation to labour, but it is only that, or what I should call a statutory obligation. The words of the Act are as follows: "For the purposes referred to in this part, the word 'labourer' includes persons who exercise any handicraft which shall be specified in rules to be made in that behalf by the local government. In any district in which a canal or drainage work is projected, constructed or maintained by Government, the local government may if it thinks fit direct the deputy commissioner to ascertain the proprietors, sub-proprietors or farmers, whose villages or estates are or will be, in the judgment of the deputy commissioner, benefited by such canal or drainage work, and to set down in a list having due regard to the circumstances of the district and of the several proprietors, sub-proprietors or farmers, the number of labourers which shall be furnished by any of the said persons, jointly or severally, from any such village or estate, for employment on any such canal or drainage work when required as hereinafter provided. The deputy commissioner may, from time to time, add to or alter such list or any part thereof. When it appears to a divisional canal officer duly authorised by the local government, that, unless some work is immediately executed, serious injury will happen to any canal or drainage work, whereby the proper operation of such canal or drainage work will be stopped, or so much interfered with as to prevent the established course of irrigation or drainage being continued, or to cause sudden and extensive public injury, and that the labourers necessary for the proper execution thereof cannot be obtained in the ordinary manner within the time that can be allowed for the execution of such work so as to avoid such consequences, the said officer may require any person named in such list to furnish so many labourers (not exceeding the number which according to the said list he is liable to supply), as to the said officer seems necessary for the immediate execution of such work. Every requisition so made shall be in writing, and shall state the nature and locality of the work to be done, the number of labourers to be supplied by the person upon whom the requisition is made, the approximate time for which, and the day on which the labourers will be required; and a copy thereof shall be immediatety sent to the superintending canal officer for the information of the local government. The rates to be paid to any such labourers, in excess of the highest rates paid in the neighbourhood for similar work, shall be fixed by the local government, and the payment shall extend to the whole period during which any such labourer is absent from his ordinary home. The local government may direct that the provisions of this part shall be applicable to any district, or part of a district, for the purpose of effecting necessary annual silt clearances. When any requisition has been made on any such person, every labourer ordinarily resident within the village or estate of such person shall be liable to supply, and to continue to supply, his labour, for the purposes aforesaid." And then, under the head of Offences and Penalties, there is this enactment: "Whoever, without proper authority, and voluntarily violates any rule made under this Act, for breach whereof a penalty may be incurred, shall be liable, on conviction before any magistrate, to a fine not exceeding 50 rupees, or to imprisonment not exceeding one month, or to both."

7221. You correctly describe that as under certain circumstances a statutory obligation to labour?—Yes, I think so.

7222. Now with reference to these accounts, which in future years will be made up if this Punjaub Act is in operation, a part of the receipts will be receipts for water which has been voluntary taken, and part of the receipts will be virtually a tax; I do not say whether properly or improperly, but virtually, a tax levied upon people who did not make use of the water. I want to know whether the receipts for water used and from this tax will be both lumped together; and be quoted, to show the net profits of the work?—As I have told you, that part of the Act is going to be repealed; and will not come into operation.

7223. The Government of India, however, wished it to be done as I have described it?—Of course, such receipts if realised would have appeared as canal revenue, certainly.

7224. A tax?—You may call it a tax if you like, I call it a rate; I do not know exactly what you mean by a tax.

7225. I mean a payment levied by the Government against person's wishes?—Is a water rate a tax?

7226. But they use the water?—But in many towns, if I am not misinformed, there are rates put upon people who do not use the water.

7227. A rate is another form of a tax?—If it is, then it is a tax in this case.

7228. You entered into some figures last time to show the small cost of the public works extraordinary; before I test those figures I want you to do what you said you would when you were examined on this day week; you said that you would give us clear and distinct definition of the difference between ordinary and extraordinary public works, or between ordinary expenditure on public works and extraordinary expenditure on public works; a thing I have never yet been able to find out?—I think that I can give it you, in my own words, in answer to a question of Mr. Smith's.

7229. Your evidence left this impression upon my mind, that if a public work was carried out partly by borrowed money and partly out of ordinary revenue, it was still classed as an extraordinary public work?—I think I had better read again what I said in my answer to Mr. Smith's Question 6853, "I think that it is first necessary to repeat what I rather think I have said before, that we do not classify works, but we classify expenditure; that when we talk therefore of ordinary public works, we mean public works paid for out of the revenue of the year; that the terms ordinary and extraordinary are financial terms, and not terms of the Public Works Department."

7230. This is the point that I want to come to; suppose a public work, for instance like any canal, has been partly made out of borrowed money and partly made out of money provided from ordinary revenues, how do you estimate the financial results from your borrowed money, because I understood you just now that you do not consider that money that is provided out of the ordinary revenue of the year to be added to the capital

Major Gen. *R. Strachey,* R.E.

21 June 1872.

capital account?—I have always said exactly the reverse; I say that money provided in the shape of outlay for maintenance, or for interest on capital, is not added to the capital account, all money in the shape of outlay for adding to the works, or for permanent improvements, which are what is understood commonly as capital outlay, is added to the capital account, and stands part of the capital account; and it has always been our custom to do that.

7231. When a public work has been carried out, in order to find out what the financial results are of the policy of borrowing money for it, do you in each public work keep an accurate statement of the amount of capital contributed from the ordinary revenues, and the amount contributed by borrowed money?—There is no difficulty in doing it.

7232. Have you done it hitherto?—No, there has been no such specific account; and that again has been one of the things as to which I have stated already, that I think an account to meet that sort of want is a necessary account, and that it should be provided.

7233. Then it is obvious to you, admitting the want, that in the absence of that specific account, it is impossible for you to form any accurate estimate of the financial result of borrowing money and spending it upon the public works?—Well, of course, there is a certain amount of truth in that; you may say that I cannot have an absolutely accurate knowledge until the whole of the accounts are kept in a form which will satisfy myself of their accuracy. I have repeated over and over again, that in no respect do the accounts at the present time meet that condition.

7234. You gave us just now a detailed description of a number of extremely efficient accountants, who are employed in the Public Works Department, and you told us of the great services which they render; I want to know if the Public Works Department in India contains so many able men, and so many able accountants, how it is that you are obliged constantly to admit these most serious and grave defects in the method of keeping the accounts; how is it that they are allowed to continue?—The question implies a serious misapprehension of the position of the Public Works Account Department, and the means it has of obtaining information. The Public Works Account Department deals, and exclusively deals, with the expenditure of public money, which goes on through the agency of the public works officers, but we of the Public Works Department have no control whatever over the land revenue; we have no means whatever of modifying the general accounts of the country; the revenue accounts and the general accounts of the country which are the sort of accounts that you are referring to, are entirely under the Financial Department; but so far as our specific accounts are concerned, I say that there is not a single rupee spent of which it is not possible to produce a perfectly detailed account; and I think that the way in which I have turned to these books here, and have answered your questions, shows you that I am able to give you the facts. I think therefore that the real reply to that question of yours is this: that the want to which you are alluding, and to which I have alluded, and which you see, and which I see, has not been admitted by the responsible department concerned, the Financial Department.

7235. *Chairman.*] That is to say, all the departments concerned in the administration have not concurred in a system different from that which exists?—Yes.

7236. And without their concurrence, no change can be made, whatever your opinion may be?—Just so.

7237. Mr. *Fawcett.*] You agree with me that, owing to this way of keeping the accounts, the Government have sanctioned a very large expenditure in future years from borrowed money for public works, and owing to the way in which the accounts have been kept, it is impossible to arrive at an accurate estimate of the result up to the present time. Therefore, to a certain extent, the Government are doing this in the dark?—To a certain extent. Let me explain that a little. The Government, when it comes to a decision as to whether any particular work should be carried out or not, consults the officers whose duty it is to advise the Government on the whole of the matters that are at issue; and if the officers whom the Government consults have the specific knowledge, and if they are able to satisfy the Government, in the absence of these accounts, that there is legitimate ground for the expenditure, I for one shall not say that the Government is not completely justified in going on with the expenditure, although the accounts are not in such a form as shall carry conviction to the mind of everybody else; and I say that that is really one of the principal things, one of the most important things which Lord Mayo (and in that I entirely agree with him) pointed out. He has pointed out in papers which I could show, that it is absolutely necessary to carry conviction to the public mind, that what we are doing is really reasonable and proper; we believe that it is, but that is not enough; we must carry the public with us, and we must so present the whole of our operations to the public that they shall bear the strictest criticism, and that there shall be no scope whatever for questions being put to the Government or its officers, such as have been put to me here.

7238. Referring to certain facts which have been mentioned this morning, you used the expression, with regard to the expenditure for a house for the Governor of Bombay, that the Government of India weakly consented to his solicitations to have this money spent. Who at that time was Governor of India; who was responsible for that?—I think it must have been in Lord Lawrence's time.

7239. Who else was responsible besides Lord Lawrence. I suppose it was a thing that was submitted to his Council?—It might, or might not be. I could not say.

7240. No money can be spent in India, can it, without obtaining the sanction of the Secretary of State?—Oh yes, the Secretary of State has the power of controlling all expenditure, but his previous sanction is not required for a large part of it.

7241. They could not spend money like this without the fact of its being spent being communicated to the Secretary of State, at least, it ought to be communicated to him, ought it not?—The whole of the proceedings of the Government of India are printed, and sent month by month to the Secretary of State. Whether there was any particular or specific report on the subject of this particular house, and the proceedings connected with it, I would not positively say; my impression is that there was such a report, but

Major Gen. *R. Strachey,* R.E.

—

21 June 1872.

memory is treacherous; if it is so you could find it. And here I think it right to say, that when you begin to ask about matters of this sort, very delicate questions arise, and those delicate questions refer to the relations that exist between the Government of India and the local governments. I have my own opinions about these matters; but the questions that arise on them are of a nature that one does not altogether like to express opinions about lightly.

7242. But when 160,000 *l* is spent upon the house of a local governor, you must admit, that although it does raise delicate questions between perhaps the Governor General and the local Governors, it raises far more distressing questions to the people of India, do not you think so?—I think you have a perfect right to ask any questions that occur to you on the subject. And so far you see that I think it is my business to answer.

7243. You are alluding to the delicacy; I am, therefore, justified in alluding to the distress to the people of India?—I have nothing to say against that. If any question is put by the desire of the Committee, I shall answer it; all I say is, that there are certain reserves and reticences which are decent, and when I am asked, therefore, to express what, after all, to a considerable extent, is a personal opinion, I think I ought not to be pressed too hard.

7244. In alluding to this particular transaction, you referred to the Public Works Department at Bombay, and you said that they estimated the cost to be 90,000 *l.* The cost at any rate has amounted to 156,000 *l.*, therefore their estimate was very greatly in error?—Yes.

7245. Was the estimate submitted to the Public Works Department at Calcutta?—Yes; but you must let me explain that it does not at all follow that when an estimate has passed, and authority is given under it to spend a certain sum of money, the actual expenditure which takes place under the authority of that estimate is in all respects guided by the estimate; and you will find that some of the worst causes of excess of charge over estimate arise from things being done which are not in the estimate.

7246. On whose authority?—That will depend. Occasionally the officer in charge of the works takes upon himself to make an alteration; occasionally somebody takes upon himself to order the officer to make the alteration.

7247. *Chairman.*] Probably there was no officer in Bombay who had had any experience of building a mansion of the value of 150,000 *l.*; he had never undertaken any such operation before, and therefore was not qualified to do it with precision?—When you come to discuss in detail how all of this arose, there is a great deal to be said in extenuation of it. There were very great difficulties in the way of the people who had to carry out these works; it would be unjust to overlook that, whatever may be said in the other direction. The price of labour at Bombay under the peculiar circumstances of the time rose very greatly, and it was extremely difficult to foresee, so to speak, from one month to another, really what the cost for labour or materials was to be.

7248. Mr. *Fawcett.*] As a matter of fact did the Government of India remonstrate at the large expenditure?—Very strongly, and very often.

7249. Then if they remonstrated, had they not the power to give some practical effect to their remonstrance?—Now you are rather putting me into a difficulty. If the Government of India remonstrates, and its orders are not obeyed, what can it do? If the Government of India gives instructions which are not carried out, what can it do? All that it can do is to refer to the Secretary of State, and then in the last resort the question of course is whether the Governor General shall resign, or whether he shall require a recalcitrant Government or local subordinate authority to be removed. I do not see myself that there is anything else to be done. And it does not follow that the circumstances, as they grow up from time to time, are of that grave nature to justify any such course; although when you have got to the end of your operations, after six or seven or eight years have run on, you find that something very astonishing has been the result of what has been going on.

7250. You entered into some very important calculations last time, to show that the amount of money borrowed for public works only entailed a charge upon the revenue of India of about 1,000,000 *l.*, I think, during the last 10 years?—I said something of that sort.

7251. And I understand your reasoning to be this, that the charge for debt 10 years ago was 2,100,000*l.*; the charge for debt is now 2,800,000*l.*, there is 450,000 *l.* to be deducted, and you simply take the difference and show that that is all that has been caused by borrowing money. That is the nature of your calculations, is it not?—Well, I do not know that I said quite that. I think that the scope of my remark was rather this, that, as a fact, the actual charge on account of debt has been increased so much, and that during the time to which I referred the actual charge for permanent works of utility of one sort and another has been so much, and then I say that we have somehow or other been able to get so much money spent for works of a certain utility, with such an addition to the permanent charge of the country. I do not say that the one is the immediate consequence of the other at all, but I say that viewing the financial administration of a great country, it is just to take the whole results on the one side, and contrast with them the whole results on the other.

7252. But it would give a fallacious idea of what the public works have cost. The fact of the matter is this, that in reference to the money that you have borrowed for public works, the interest on the debt has not increased more than it has, because there has been a reduction in the rate of interest?—Quite so; that is a most important cause for this excellent result which I speak of, and I specially guarded myself by referring to such causes. Among these I may specially refer now to the operation of the Currency Department, and to point out that the Government is able practically, by means of the paper currency, to get into circulation a large quantity of money which is represented by a less sum in deposit, and the difference, of course, is in reality a loan, but a loan without interest.

7253. Still, if it had not been for the public works, supposing that this money had not been borrowed for public works, the Government might from these currency or banking transactions, obtained the same amount of profit, and

used

Major Gen. *R. Strachey*, R.E.

21 June 1872.

used the income which they derived from that source to reduce taxation?—That is perfectly true; and that is not the only question which the Government has had to consider. The Government has had to consider what is the best use to make of its resources, is it better to pay off debt, is it better to reduce taxation, or is it better to carry out those works which will directly increase the practical productiveness of the country?

7254. *Chairman.*] Practically we cannot tell what the state of India would be at this day if no public works had been made?—No; all you can tell is, given the expenditure, the taxation, and the charges in consequence of the debt, what is the result?

7255 Mr. *Fawcett*] I simply want to arrive at the natural results of public works, and I want to exhibit the exact nature of public transactions; my question did not involve a question of policy, but of fact?—Your remark is perfectly true, but the same remark would apply to all the increases of expenditure, not merely the Public Works Expenditure; and I must again repeat that it is altogether a mistake, and gives an entirely wrong drift to the discussion, to pick out public works, and to say that the causes of any troubles, if any have arisen, have been the expenditure on the public works; why not select the administration of justice, and other items? I can show you the actual increase of the expenditure under every head of administrative charge. Why not take these and say, "Instead of having had an increase in the last 10 years of something like 6,000,000 *l.* on the civil administration, supposing you had had no such increase; supposing you had applied the whole of that to reduce taxation"? I deny that there is any difference, for the purposes of such a discussion as this, between the sort of expenditure that goes on for public works and the sort of expenditure that goes on for any other branch of the administration; within certain limits they are all necessary.

7256 I wish to be entirely fair; I think that there is extravagance in every department in India, and therefore, if you think it fairer to you, I will examine you on every one of the heads of expenditure; but we have got all those before us, and I simply confined my examination, because I understood that you wished to confine your remarks to Public Works expenditure?—I specifically desire to point out that the real cause of the difficulty in making the income cover the expenditure has not arisen from public works, and I say this in the most positive way, but only and exclusively from the increase of civil charge. I affirm that those facts, to the best of my belief, are not sufficiently appreciated, and that it is of the greatest importance that the truth shall be established.

7257. What has been the increase?—I desire, before going to the figures, to add that I pointed out these facts before I came away from India, but that they were not received with any particular attention. Perhaps they are not of any value. That is not my opinion. But here are the facts.

7258. What has been the increase?—I have taken for comparison the last year of which we got the actual figures, 1870-71; they are to be found in the last Budget Statement; I have purposely avoided taking an estimate, and I have taken the figures of 1870-71 because they represent the charges before the new provincial arrangement took effect. The facts which I am now speaking of are the justification of Lord Mayo's financial policy, and that great measure, as I call it, of placing financial responsibility on the local administrations. The total charge in 1861-62, under all heads, was 44,099,000 *l.*; in 1870-71 it was 49,931,000 *l.*, showing an increase of 5,832,000*l.* The Military Charge, under all heads, in 1861-62, is 16,222,000 *l*, and in 1870-71 it is 16,075,000 *l.*, showing an absolute diminution of 147,000 *l.* Public Works ordinary (which I need not explain again, I think), excluding the railway charges and interest, were 4,115,000 *l.*, against 3,946,000 *l.*, showing again an absolute reduction of 169,000 *l.* The railways, including interest, in 1861-62, were 2,065,000 *l.*, and in 1870-71 they were 2,100,000 *l*, showing an increase of 38,000 *l.* The interest on debt was 5,191,000 *l.* in the former year, and 5,310,000 *l.* in the latter, making an addition of 119,000 *l.* Then there are certain deductions from revenue in the way of allowances, under treaties, assignments, &c., which you have no right to call charge, and which in the former year are 2,232,000 *l.* and in the latter 2,113,000 *l.*, showing again a reduction of 119,000 *l.* Thus the aggregate of the whole of those is, in 1861-62, 29,825,000 *l*, against 29,547,000 *l* in 1870-71, showing a net diminution on the whole of those heads of 278,000 *l.* Now then, what remains is the total of the civil charges, and these are 14,274,000 *l.* in 1861-62, and 20,384,000 *l* in the last year, showing an increase of 6,110,000 *l.*

7259. Are you quite sure from those accounts that the accounts in 1861-62 and 1870-71 are made up in just the same way?—Of course you cannot say that positively; there are certain tendencies no doubt throughout to exhibit more and more completely all charge in the published accounts, and to do less and less in the way of deduction In the earlier periods there was a habit existing still of setting off charges, as was the custom here in England, and not showing all expenditure and all receipts in the gross, but we have been going on more and more in that direction. To a certain extent no doubt therefore the result of such a system would be to make the expenditure in the later years appear heavier than it is in the former, but my impression is, that this applies alike to all parts of the expenditure, and that, broadly speaking, and for the purposes of such a comparison as I am making, the want of precision will not be important.

7260. But now as you have received this enormous increase, which you say is owing to an increase of civil charges, you must have watched the growth of this increase and civil charges, do you think therefore that as affects the future financial position of India the increase is inevitable, and is likely to go on, or is it due to extravagance and mal-administration?—I should not answer the question in either way. What I should say is this, that according to my appreciation of the way in which public expenditure goes on, the only check on an increase of charge is the impossibility of getting the money. As long as there is a fund from which the expenditure can be met, every Government is perfectly certain to have demands made upon it which will immediately devour that fund.

7261. *Chairman.*]

Major Gen. *R. Strachey,* R.E.

——

21 June 1872.

7261. *Chairman.*] Is it not due to the greater activity of the Government in all its various functions, or in those things which it supposes to be its functions?—Yes, certainly; and although I talk about this 6,110,000 *l.* increase of charge, I believe that almost every pound of it spent has been followed by some valuable result in one form or another.

7262. Is it very much the practice of the officers in the public service in India to employ themselves in writing minutes, and papers, and letters to the Government, suggesting various schemes and plans in all departments, all of which lead more or less to expenditure?—Quite so, in that resolution of the Government of India which justified their adoption of what is called the provincial system of financial administration that is stated, and it is simply notorious.

7263. Do they not consider it necessary to do this, to bring themselves into notice, lest they should be forgotten?—Most distinctly not. I think that there is such a thing as honesty in the world

7264. That may be a stimulating motive to activity?—I think it is extremely unfair on public servants in India to talk of them in such a way, or suggest such a thing.

7265. Mr. *Fawcett.*] What I understand, then, is this, with regard to the future financial position of India, that these civil charges will go on increasing in the future as they have done in the past, if the Government of India can get any money?—Well, I think, as in all these things, the only way to answer a question of that sort, is to judge of the future according to the lights that are afforded by the past; that is my own way of judging, at all events; and I say that, however excellent have been the wishes of everybody connected with the Government (and I do affirm that they have been most excellent), practically the Government has been unable to resist the pressure that has been put upon it under the existing system to supply the means of carrying out the improvements which are represented by that increased expenditure of 6,000,000 *l.*; and that, according to my belief, there is only one way in which the necessary resistance to that pressure can be given, and that is to establish what I may call a constitutional rule, a constitutional law which the Government of India and the Secretary of State, backed up, I hope, by the House of Commons, should insist upon being carried out, that expenditure shall not increase until, somehow or another, the necessary funds are provided by an increase of revenue; then I say that in the future we may look forward to everything going on with complete satisfaction in India.

7266. *Chairman.*] Do not you think that there is another mode of considering it; that there is a mode of checking this tendency on the part of the officers of the Government to represent plans and schemes of expenditure, namely, that the governor should act with a proper sense of responsibility and firmness, and check them without any question of revenue?—I think that experience has shown that you cannot rely upon such a resistance.

7267. Mr. *Fawcett*] You think that the British Parliament should adopt the constitutional principle of using all its activities to prevent any more money being spent in India, or the expenditure increasing until a growth in the revenue is distinctly proved?—I think that Parliament may with great propriety express an opinion, that no charges of the description that I speak of, that is to say, recurring charges on account of administration, should be allowed to increase, except under the condition I stated. The charges which arise for the purpose of carrying out works of improvement, by which the productive power of the country and the real material prosperity of the country will be increased, I look upon as totally different. This is expenditure in the nature of capital, which India unfortunately can only get through the means of the Government.

7268. Has it never struck you (it is a point which seems to me more than anything else to affect the future financial position of India) that a part of that increased expenditure to which you have been referring, is due to an inevitable cause which is likely to continue, and over which the Government has no control whatever; I refer to the remarkable depreciation in the value of money which has gone on in India?—To some extent, no doubt, that is the case; but you must remember that anterior to the depreciation of money, there is going on an increase of prosperity.

7269. Not necessarily; I will not argue the point with you, but has this fact ever struck you, that owing to the peculiar circumstances of eastern trade, a large balance of specie is each year poured into India, and the result of that must be to depreciate the value of money, or in other words to increase general prices; and that owing to the peculiar circumstances of the revenue of India, a large part of it, namely, that which is derived from land, being for a considerable number of years fixed, any increase in prices must very much more increase expenditure than the increase in the revenue, and must therefore prejudicially affect the financial position of the Government?—To a certain extent those remarks of yours are most just, I do not deny.

7270. Mr. *J. B. Smith.*] May not the increased prices have arisen from the enormously increased demand for labour and the ability of people to consume products that they never consumed before?—All of these things, of course, operate.

7271. You cannot say that it is exclusively the depreciation in the currency?—It is a change in values not necessarily arising from the condition of trade that Mr. Fawcett has spoken of; but that that is one of the things which tend to aggravate it, I do not dispute; it must be admitted that it is so; but if you consider the general poverty of India (and nobody who has not been in India can really appreciate that), if you consider the total absence of anything like accumulated wealth in India, and if you consider to what an extent wealth may accumulate before the community in India, generally speaking, reaches the sort of position in which European communities are, I think you will be satisfied that a very enormous quantity of treasure and of coin might be thrown into India really without sensibly affecting the prices.

7272. Is it not the custom in India for the working classes and the poor, farmers and, in fact, all classes, to hoard their money and not circulate it?—To a very great extent they hoard.

7273. The effect of an influx of specie in India, therefore, is different from that in any other country. In this country it would find its way into

into banks, and through them into circulation; in India it would not?—To a greater extent that is the case.

7274. Therefore, as the money is hoarded when a large export of specie takes place to India, if the people hide it in the ground it might as well be in the mine for the effect which it produces?—Yes; supposing the whole of it were hoarded. As a fact, the whole of it is not hoarded, but as far as it is hoarded, undoubtedly what you say is true. So far as the people become more wealthy, and have more wants, they require more money, and an effect somewhat analogous to hoarding is produced, and this I believe operates largely in India.

Major Gen. *R. Strachey*, R.E.

Lord Edmond Fitzmaurice.
Mr. Robert Fowler.
Mr. Hermon.
Mr. M'Clure.
Mr John Benjamin Smith.
Sir David Wedderburn.
Sir Charles Wingfield.

RIGHT HONOURABLE ACTON SMEE AYRTON, IN THE CHAIR.

SIR JOHN WILLIAM KAYE, K.C.S.I., re-called; and further Examined.

Sir
J. W. Kaye,
K.C.S.I.
25 June
1872.

7275. *Chairman.*] WILL you be good enough to state what sums are now payable under the arrangements that you have described to the Mysore family, consequent upon the acquisition of Tippo Saib's country?—When the arrangement was completed of which I was speaking before, as I have now ascertained, a sum of 420,000 *l.* was capitalised for the families and the descendants of the families of Hyder Ally and Tippoo Sultan, which was to be a permanent allowance for them, and there was besides an allowance which was to die out with the life of each one of them. There were, at that time, 21 grandsons who had 600 *l.* a year which was to die out with them, and who had also a capitalised annuity of 600 *l.* a year besides. There were also 14 great-grandsons who had life-pensions of 240 *l.* a year, and permanent pensions of the same amount from capital stock. I make out, although I cannot find it in any accounts before the Committee, for the sums are lumped up in the most extraordinary manner, by having calculations made, that the annuities received by them when capitalised would amount to a certain stock, but that I have only been able to make out by calculation.

7276. What is the additional sum which you estimate these various annuities at when capitalised?—One sum of 12,600 *l.* added to another sum of 3,360 *l.*; altogether it would make 16,800 *l.*

7277. That will be the annual charge?—That will be the whole annual charge when the present recipients of the stipends die out, because the arrangement was with regard to these parties, that one-half of their salary should be a dying-out salary, and another half of that salary should be a permanent salary received from capital stock in Government promissory notes. And that will be against a sum originally granted of about 6½ lacs, so that there will be a vast saving. There was a great outcry at the time, because there was a present increase. There is a Despatch of Lord Canning's, in which he states, after receiving Sir Charles Wood's Despatch: "The pensions of 36 members of the family are to be increased at once to two-thirds, or by one-half, as the case may be, causing an immediate annual charge upon the Government of 11,820 *l.* The same number of persons are to receive immediately, for the payment of debts, sums to the amount of 38,500 *l.* They are to receive a like sum of 38,500 *l.* to help them to change their residences, if they desired to do so. They are also to receive, if they desire it, market value of their present residences. The amount of this is uncertain, but 20,000 *l.* would not cover it." That 20,000 *l.*, added to the rest, makes 108,000 *l.*, but a great number of them did not accept the offer, and if they had accepted it, their houses would have been, to the credit of the Government, which we could have sold again, for they were in the outskirts of Calcutta, where house property is very valuable. All that the Government offered was to buy the houses.

7278. Can you point out to us in the Finance and Revenue Accounts before us, at page 32, what are the items that represent the present expenditure on account of the Mysore family?—With all deference, I must say that it is wholly impossible that I should do so; for the only statement I can find under the Bengal head is, "Stipends and extra allowances, &c., to his Highness Prince Gholam Mahomed, son of the late Tippoo Sultan," 3,738 *l.* The salary of Prince Gholam Mahomed is the only one that I can see any indication of in this return.

7279. You have not been able to discover whether these various annuities of 600 *l.* and 240 *l.* are included in the two items of 14,995 *l.* and 14,238 *l.*, which are given at page 32 of the Accounts before us?—I have only, speaking generaly, been able to discover that they must be, as they are not returned elsewhere; what the exact amount is might be made a matter of calculation.

7280. Have you discovered the fact that they are included in those items?—Yes, I have no doubt of it. But I should wish to explain to the Committee the manner in which our information is

Sir J. W. Kaye, K.C.S.I.

25 June 1872.

is derived in the Political Department, which is from a large number of despatches laying down certain arrangements and ordering certain things to be done. But we do not see the financial results, and if they are lumped up in this sort of way it is quite impossible to explain them. I have no doubt that they must be included under these heads, as they are not specified under any other.

7281. Can you explain that item, "Stipends and extra allowances, &c. to his Highness Prince Gholam Mahomed, son of the Tippoo Sultan, 3,738 *l.*," and at page 34, "Stipends and extra allowances to the families of the late Hyder Ally Khan and Tippoo Sultan, exclusive of payments made in Bengal, 3,143 *l.*; what do those items refer to?—As every other recipient of the pension has less than 20,000 rupees a year, his name is not specifically entered in this return, but as Prince Gholam Mahomed himself has more than 20,000 rupees, his name is specially entered, and this 3,738 *l.* is his personal allowance, and the other small sum mentioned elsewhere is for some members or dependants of the family who did not leave Madras at all; and, who are, therefore, put down under the Madras head.

7282. Mr *Eastwick*.] The allowance of the Shah Sawar Khan, son of Umratull Umra, was stopped in 1804, and then it was given again some time afterwards, but for a number of years it was stopped, and the arrears are now petitioned for. Is there any chance of that being given, because if they were given that would be an increase of 9,000 *l.* which you would have to pay at some future year; have you heard anything about that?—No, I am not aware that the subject is before the India Office at the present time.

7283. Are there any claims besides this one to which I have alluded for any descendants, for women connected with the family, for arrears, or for debts?—I am not aware of any. To the best of my knowledge, the family are perfectly satisfied. Gholam Mahomed, who represents the family, has not written any complaints; he has been in continual correspondence with members of the India Office, and he has not brought any subject of the kind before our notice, so that I do not think that there are any complaints.

7284. Then with Gholam Mahomed a considerable sum dies?—When Gholam Mahomed dies his personal stipend of 3,738 *l.* will fall in, and there have been great fallings-in since Sir Charles Wood's scheme was carried out. I stated here perfectly correctly that when this scheme was sanctioned, there were 21 grandsons; and when I consulted with Mr. Harrison the other day, who brought me a book showing the names of each one of the grandsons, he made out that there were only 10 of them alive at the present time, or in the last official returns that he had; so 11 out of the 21 have died off since 1864, and that would be a saving to the Government of 6,600 *l.* in that time.

7285. Have no application from the widows or families of those who have died off been made?—There could be no applications, because every branch of the family whose 600 *l.* had been lost to them by the expiring stipend would have had 600 *l.* besides from the capitalised stock, so that there would be ample provision for the family.

7286. Would it be possible to draw out a statement of what the family consisted of now, and the actual allowances paid to them?—Most certainly it would; and I think that one good result of this inquiry will be, that we at the India Office shall insist on getting a return every year of the precise amount of all our political liabilities, representing each family, representing the amount of each stipend, and representing the lapses in the preceding year, and so on. I think it is a return which ought to be made to us, but no such return has been made since 1864, on the motion of Mr. Adam, and, I cannot express my opinion too strongly, that such a return should be made every year; I think that it would greatly facilitate any inquiry that might be made.

7287. Lord *Edmund Fitzmaurice*.] What is meant by an "extra allowance" to Prince Gholam Mahomed?—On account of age and meritorious services, and continued good conduct, his salary was increased. I do not exactly know what is meant by extra allowances any more than that his stipend has been increased at different times.

7288. *Chairman*.] Do you think that it means beyond the obligations incurred?—They were not beyond the obligations of the treaty, because as far as the obligations of the treaty go, we have fallen considerably short of them; although it was understood that the British Government was to be competent to diminish these amounts at different times.

7289. Lord *Edmund Fitzmaurice*.] Taking the payment stated at page 34, of 3,143 *l.*, what is the difference between that payment and payments included under Bengal, do they depend on different treaties?—They are all paid under the same treaty; the only difference is that whereas the bulk of the family were removed to Calcutta, and have since resided there; some of the dependants of the family were permitted to remain; and, therefore, their pensions were paid from the Madras treasury. I should like to state that one of the great difficulties I have to contend with is that the names of the same persons are put down under different heads. They are entered under the heads of the particular treasuries which disburse that amount, and that necessarily caused very great confusion in understanding this return. I find things put down under the head of Bengal or Madras, which have nothing to do with Bengal or Madras. These particular stipends put down under the head of Madras were, as I have said before, for some members of the family who remained behind, and were paid out of that treasury.

7290. I suppose it would be convenient to have them all put into one schedule together?—Yes; and in any return from the Political Department they would be always put together, and there would be a column with the information, "Paid from this Treasury," or, "Paid from that Treasury." Now you have a stipendiary who belongs to one part of the country turning up under another part of the country, in these accounts. It is sometimes not convenient that a man should be allowed to remain in the part of the country where he has lived, because he might stir up intrigues, and then he is sent to another part of the country and is paid from some other treasury; but these returns before the Committee do not in most instances, state what the stipendiary is, or whence he comes.

7291. *Chairman*.] We will go now to the Delhi arrangements. Will you be good enough to explain what was the nature of the arrangements

Sir J. W. Kaye, K.C.S.I.

——

25 June 1872.

composing a charge in respect of the cessation of the kingdom of Delhi?—The King of Delhi, previously to 1857, had for the support of his family 120,000 *l.* a year. He had also about 30,000 *l.* from Crown lands and rents in the city, so that we may say that he had about 150,000 *l.* a year. The Committee are well aware that the King of Delhi was mixed up with the events of 1857, and he was removed from Delhi and carried off to Rangoon as a State prisoner, with one or two of the members of his family. The returns from Rangoon state that the cost of the maintenance of those members of the family was about 700 *l*, a year; that is to say, 6,831 rupees. The king died on the 7th of November, 1862, and there are still his wife and her son living there, and one or two other members of the family; but there were a large number of members of the family of whom the British Government took a very charitable and lenient view; and very rightly too, I think, for I do not believe that they were mixed up with these affairs. There were about 1,600 small pensioners who got very small sums, I believe about 12 rupees each; but at all events the gross amount, as far as I can calculate it, turns out to be 9,348 *l.* This was sanctioned in Sir Charles Wood's political Despatch of 25th, March 1863. Then some subsequent additions were made, which, I think, swelled the whole pension list for the Delhi Family up to between 11,000 *l.* and 12,000. There was one loyal member of the family whom you will see mentioned especially in these returns, Elahee Bux. He is placed under the Punjab head, because Delhi, which was under the Government of the North Western Provinces formerly, is now included in the Lieutenant-Governorship of the Punjab; so that he who before would have been paid from the North Western Provinces is now paid from the Punjab. The stipend which he has for himself and dependants is about 3,000 *l.*; so that the gross amount now payable would be about 15,000 *l.*

7292. Elahee Bux is only put down at 955 *l.*?—Yes, but he is put down in another place, too; he has got a jagheer which is hereditary, as is also some part of his allowance (5,000 rupees). As far as I can make out in round numbers, his present allowances would come to 3,000 *l.*, and therefore that the gross stipends of the Delhi family at the present time would amount to between 14,000 *l.* and 15,000 *l.*, as against the 150,000 *l.* which I mentioned; so that has been a great gain to us.

7293. Are these pensions all for life?—Most of them are life stipends. There is in the case of Elahee Bux as already stated a continuation of a portion of it on account of his loyalty, but the generality of them are simply life stipends.

7294. With regard to the charge appearing under the head of Carnatic, 87,000 *l.*, does the Government consider that that is a permanent charge, or that it will be reduced in future time?—I will make a short statement as regards the circumstances. Up to the year 1855, when Mahomed Ghous Khan died, there was a fixed sum paid by treaty from the revenues. It was agreed that although the whole of the administration was to be taken into the hands of the East India Company, the titular dignity of the Newab of the Carnatic should be maintained, and that he should have one-fifth of the revenues of the country, and he received, as far as I can make out in round numbers, about 116,000 *l.* from that; but upon his death in 1855, the titular sovereignty was declared extinct by Lord Dalhousie. The next heir was the uncle of the defunct prince by name Azeem Jah, and he would have been the next successor to all the titles and privileges of the former sovereign; but Lord Dalhousie determined to extinguish all these titular dignities and privileges, and he offered a pension of 15,000 *l.* a year to the next heir, the uncle. This was very much disputed and contested for a number of years, and, at last, the Government taking it into consideration, determined to double the stipend which Azim Jah received, so that he has now 30,000 *l.* per annum. One-half of this is to be continued to the son or other heir who succeeds to his title. The Queen was kindly disposed to him and gave him a title, with a patent from the Lord Chancellor, of Prince of Arcot, which he is now called. He now has 30,000 *l.* a year. But over and above that, he happened to be very largely in debt at the time, and we advanced 150,000 *l.*, the interest of which was 6,000 *l.*, for the payment of these debts. I think myself that when we advanced sums of money in that way, we should have put that 6,000 *l.* against the charges here, that it should have appeared part of our payments under engagements, because if we pay a large lump sum and we want to make it appear clearly how much these extinct dynasties cost us, I think the interest of sums expended in this way ought to be placed in the accounts. I should say, therefore, that this account does not represent the whole, because it does not represent the interest on advances.

7295. Those are capital sums that have been paid in former years?—Yes.

7296. With regard to the 54,000 *l.* for "pensions, &c., to the families and dependents of the late Newabs, and to the Carnatic family and dependents, &c.," are those continuing payments, or will they fall in?—Most of them will expire. I find that in 1867 the whole of the Carnatic stipendiaries cost us 107,700 *l.* I mention these figures to show how the stipends are continually decreasing, which I think is very important for the Committee to consider. In 1869-70 the amount was 93,000 *l.*, and by the last Budget Estimate it was 87,000 *l.* Therefore you see that these stipends are continually diminishing.

7297. Now let us go back to the first item, at page 32. "Pensions of Wajed Ally Shah, ex-king of Oude." 120,000 *l.*; is that a pension for his life?—It is a pension only granted for his life, to be re-considered upon his death; but it has been stated in a Despatch that we shall make very liberal provision for his family. On the annexation of Oude, in 1856, a treaty was offered to the king of Oude for the cession of the territory, offering him 12 lacs of rupees per annum. He did not accept the treaty, and for two or three years the money was not paid to him because he would not accept it; but since that time he has accepted it. Besides these, there are a large number of other payments that are made to the family.

7298. That is consequent upon the annexation of Oude?—Yes.

7299. Can you, in general terms, refer to those in this account?—They are to be found under these "Territorial and political pensions," except those which are lumped under "Political pensions not exceeding 20,000 rupees," and "Pensions not exceeding 5,000 rupees." I conclude that those must be a number of pensions which were

were formerly payable, after certain sums of trust-money, as it were, had been placed in the hands of the British Government for the payment of certain pensions; they were not originally placed in their hands for that purpose; they were originally placed in their hands under exceptional and extraordinary circumstances. They were loans made by the Oude Government or bequests from members of the Oude family, the interest of which was to go to the payment of pensions.

7300. Will this item of 75,785 *l.*, for "Territorial and political pensions" diminish as the parties die off?—Some will, but some will not. I think it should be stated, firstly, that I do not very clearly know what is included in these two items of 27,425 *l.* and 34,715 *l.*, to which I have just alluded.

7301. Are these pensions of 75,000 *l.* to be regarded as a permanent charge?—I think, with regard to all that come from investments, in the shape, either of money borrowed by us from the old Oude Government, or else as what is known as the bequest of the Begum, all those should be permanent.

7302. Is that the view which the Government take of these pensions, that some of them are temporary, and some of them are permanent?—In general terms, it might be said that some are for life, and some are the subject of special arrangements.

7303. We will go now to the "Proportion of Pension of Maharajah Dulleep Sing," 1,200*l.* what is that?—The majority of the payments made to him, as the Committee are aware, are made in England. These small payments are made to some dependents of his who still remain in India.

7304. These are paid on his account, out of his whole pension?—Yes; I believe that he pays for them. I do not think that they are additional to his stipend, but I speak under correction on that point as I do not see the names. There are some other payments to members of Runjit Singh's Family (as for instance Shah. Deo Singh), but they are not deducted from Duleep Singh's stipend.

7305. The next item in the "Pension to Ally Bahadoor, ex-Newab of Banda, including allowance to the family of the late Zoolficar Ally," 3,600 *l.*?—The ex-Newab of Banda is officially said to have gone into rebellion in 1857. He had a hereditary pension of 40,000 *l.* a year, and some land at Banda, where there was a palatial sort of residence, which people, who have read so much about the Banda and Kirwee prize money, may have heard about. In consequence of his believed disloyalty and infidelity, this was resumed, and on his surrender to Government they allowed him for maintenance, a sum of 36,000 rupees for life, or 3,600 *l.* It is simply a life pension. The item states, "including allowances made to the family of the late Zoolficar Ally." Zoolficar Ally was his father, and the "family" mentioned are therefore relatives of the ex-Newab.

7306. Then the next item is, "Pensions to the family of the ex-Rajah of Coorg," 867 *l.* Is that for life or in perpetuity?—It is only part of the pensions. I think that there must be some others mentioned under the name of North Western Provinces. You will find another item at page 33; and this arises from the fact that pensions are paid at different places.

Sir *J. W. Kaye*, K.C.S.I.

25 June 1872.

7307. There is an item, "Family of the ex-Rajah of Coorg," 2,190 *l.*, appearing under the head of North Western Provinces?—Yes; they make on the whole 3,057 *l.*

7308. Are those payable to his relatives for life?—For life. Probably, however, at their death some of their dependents would be provided for. The Committee know that the ex-rajah was deposed. (I want to show how the pensions diminish.) He was deposed in 1834, and a pension fixed upon him of 6,000 *l.*, and now this is diminished to nearly one-half. These are the pensions paid in India, which amount to 3,057 *l.* I dare say it may be remembered that a daughter of the ex-Rajah of Coorg was in England with him, and that she was Christianised and baptised, and the Queen became her godmother. Then a special pension was fixed upon her of 1,000 *l.* a year, But she died, and her daughter now has a pension of 250 *l.* There was a charge upon the home establishment of 1,000 *l.* a year, which is now reduced to 250 *l.*

7309. The next item then is this "Compensation," 2,948 *l.*; what is the meaning of that?—That is a very vague term, I cannot explain who that is compensation to; it does not state in the slightest degree, and I have no possible means of knowing.

7310. The next item is "Pagoda and Mosque Allowances," 1,388 *l.*, what does that refer to?—When we have assumed certain territories which were receiving church grants, or whatever the proper name may be, the English Government always consider it a duty to keep up those payments made to the priests for the support of their mosques, and temples.

7311. These represent charges of that kind?—Yes.

7312. The next two items relate to pensions not exceeding 20,000 rupees per annum, pensions not exceeding 5,000 rupees per annum, what are those in general terms; are they pensions for life?—I believe that a great number of the Mysore princes are included in that, and therefore they will not be for life, over and above the interest of the capital stock, which I conclude is not mentioned here.

7313 What are the others; do you know in general; pensions for life, or permanent pensions?—I suppose they are small terminable pensions.

7314. Then we will go to the Central Provinces; what is the charge of Sustanic Gund Rajah, 10,684 *l.*?—This is the man who was, in former days, known as Ghond Rajah; he held a certain amount of territory bordering on Nagpore, and the Bhoonslah family of Nagpore took that territory into their own hands, and they agreed to pay him this amount of stipend on his making cession of that to the Bhoonslah family. When we steped in and took Nagpore into our own hands the Government determined that we ought to pay the allowance, that indeed the engagements of the former rulers should be "religiously observed"

7315. Is that considered by the Government a permanent grant, or is it one for his life?—I think from their having said that it should be religiously observed, they considered that it was a permanent obligation.

7316. Then the next item is "Janoojee Rao Bhonslah Rajah Bahadoor and the widows of the late ruler," 9,000 *l.*?—When the British Government declared the State of Nagpore to have lapsed

Sir
J. W. Kaye,
K.C.S.I.
——
25 June
1872.

altogether it was found that the old Rajah of Nagpore had no male heirs, and he had not adopted a son; he put it off; he was often persuaded to do so, but would not do it; he thought he might get an heir; at all events he died without having adopted an heir; but the elder of his widows, upon his death, adopted this boy Janoojee Bhonslah, and according to the Maharatta law of succession, a child adopted by the widow would stand in the same position as one adopted by the late rajah.

7317. As regards their private affairs?—Yes; but at all events this boy, whose name is Janoojhee, and who was a member of the family, was taken into the arms at the proper time of the senior widow, and all the ceremony of adoption was gone through; so the Government afterwards took a favourable view of his case and granted him this sum of money, and allowed him to take the name of Bhonslah; so he is now Janoojee Bhonslah, and he has this pension.

7318. Is this granted him for life?—I should think it was not merely for life, judging by the terms on which it was granted. The pensions are not given in perpetuity. The claims to continuation will be considered, in each case, as they arise, but it is very difficult to determine in each case.

7319. Mr. *Fawcett.*] Do you mean difficult from the way in which it was granted?—Yes, because some part of it is in land which is hereditary, whilst the money-payments are not.

7320. *Chairman.*] You mean that the language of the grant is not sufficiently explicit to enable you to form an opinion upon the subject?—From the terms of the grant I should think some portion of the money-payments would be continued after his death.

7321. There are several other payments here under the Central Provinces, and also I see mentioned pensions not exceeding 5,000 rupees per annum, making a total of 30,000 *l.*?—These other intervening people are the widows of the late rajah; Durreea Baee Sahiba and Trimbuckjee Nana Aeeher Rao, Annunda Baee Sahiba.

7322. Would these be pensions for life?—Those would be life pensions strictly. I think that Janoojee's is the only one not for life.

7323. With regard to these numerous pensions exceeding 5,000 rupees, and not exceeding 5,000 rupees, making together a total of 38,000 *l.* a year are those all, or for the most part, pensions for life?—Yes.

7324. Those were all granted upon the change of government in Nagpoor, I suppose?—Those included in this statement were all granted in consideration of our having taken over to ourselves the whole of the revenues of Nagpore and also a good part of the personal property of the rajah.

7325. Now we will proceed to Bengal. There is this item of 170,000 *l.* for "Stipends and Allowances of the Nizamut." Has the Government decided whether this is a permanent charge or whether it is a charge merely for the lives of individuals?—I have a very clear knowledge of all the despatches that have gone out to India, but I am not quite clear as to the extent to which they have been returned to Parliament, so that if I have to give my evidence only as to what is already before the Committee it will be one thing, but if I have to express my own knowledge of the circumstances it will be another thing.

7326. Were the views of the Government with regard to those payments explained in a Despatch of Sir Charles Wood laid before Parliament?—Yes.

7327. In a few words will you give us an explanation of what are the views of the Government, as expressed in that despatch, with reference to this report?—The views of the Government are these; that inasmuch as the Newab Nazim of Bengal had guaranteed to himself and his family, during his personal life, the sum of 16 lacs of rupees, the sum, as before, of 7 lacs of rupees should be granted to him as his personal allowance, that the other members of his family should be well provided for also, according to the scale that at present existed; and that the remainder, which was not so applied, should accumulate according to circumstances; that in one year there might be extraordinary charges for the building of a palace, or for the endowment of daughters who were going to be married; and in another year less; but there would always be a surplus, but that of this accumulated surplus the Newab Nazim himself was not to have the whole control; but it was suggested in that despatch that he might properly be consulted upon points by the agent of Moorshedabad. It was laid down in this despatch that these accumulations could on no account be diverted from the uses of the family of the Newab Nazim, and the purposes of that great establishment there which went by the name, improperly perhaps, of the Nizamut. It was suggested afterwards in that despatch, that the accumulations of that deposit fund might go very properly to form a sinking fund, as it has been described, for the benefit of the family. We could not tell what the amount of that fund would be, because it would all depend upon the tenure of life of the Newab Nazim. If he lived 20 or 30 years longer the amount to the credit of the Nizamut family would of course be much larger than it is now. At all events, in any case the whole of this money was to be devoted to the purposes of the family, and at the death of the Newab Nazim, it was thought that the accumulations might make a provision for his son and the whole of his family.

7328. With regard to the fund which you have just mentioned, the Nizamut fund, will you explain what is the amount of that fund?—Yes; there is a sum of 20 lacs and 85,000 rupees, which has been invested, and out of the interest of the sum thus invested, our own British establishment, which we call the Agency, is paid. Then there is another sum of between 10 and 11 lacs of rupees, which is kept in hand to meet extraordinary unforeseen claims (according to the statement here it is 10 lacs and 73,508 rupees). These extraordinary expenses are the marriages of daughters, repairs to public buildings, travelling expenses, and other contingencies. Then it goes on to say: "the other sum of 55 lacs and 33,261 rupees, referred to in the India Office despatch as accumulations, has, in reality, never been paid into any separate fund.

7329. Mr. *Fawcett.*] When you speak of the Nizamut fund, 850,000 *l.*, what you mean is, that there is a fund that ought to exist to this amount, but that 555,000 *l.* of that has been spent; and, therefore, instead of being a fund, so far as this amount is concerned, it is simply a liability?—It is simply a liability. The Government of India described it in past days as a "book debt."

7330. But

Sir *J. W. Kaye*, K.C.S.I.

25 June 1872.

7330. But then, how can you create a sinking fund out of a debt?—Because when the time comes that the stipends of the family are to be capitalised, the Government must produce the money, which it holds in trust for the family.

7331. But to look at the future financial position of India, India is 555,000 *l.* worse off, and will be worse off, of course, than it would appear from the statement that this 850,000 *l.* is a fund?—Most certainly, the Government of India owes that amount to the Nizamut family.

7332. *Chairman.*] The Government of India does not consider itself under any obligation to account for that 550,000 *l.*?—The Government of India do not consider themselves under any obligation to pay interest on that fund, but they do consider, for it is is laid down most distinctly in Sir Charles Wood's despatch, that Government must devote the whole of that money, in some form or other, to the benefit of the family.

7333. I understood that Sir Charles Wood's despatch was a suggestion, not an order?—I beg your pardon; it was in the most emphatic terms laid down in Sir Charles Wood's despatch that the whole of that money was the property of the Nizamut family, but it was suggested that the accumulations in that fund might be made a permanent provision for the family.

7334. Then there are other pensions under the head of Bengal, amounting to 40,171 *l.*; do you know the nature of those pensions; are they permanent?—They are most of them charges that will cease. The compensation to the Bhooteeahs will be paid, I suppose, as long as we are at peace with them. It was granted to them after the Bhootan war. When we took the Dooars away from them, it was thought that it would weaken them so much in point of revenue, that it would be sound policy to pay them a certain sum, so that they might not be so very weak as to have temptation to run across the frontier, and carry off men and cattle. So we granted them the amounts named.

7335. As to the other pensions making up the 40,000 *l.*; are they life pensions, or permanent?—I think that they are mainly life pensions; but probably some small sums may be given to their descendants.

7336. With regard to the sum of 44,600 *l.* charge of "Compensation payable under convention with the French Government in lieu of salt formerly supplied to them;" what is that?—There was a convention entered into between Great Britain and France, signed by Lord Buckinghamshire for us, 7th March 1815, in which the British Government engaged to farm the salt manufactory of the French possessions in India, exclusive of such quantity as was required for the home consumption within the French territories in India. This stipulated amount was 4 lacs of sicca rupees, or Company's rupees; 4 lacs, 26,000 rupees, that is, 42,600 *l.* "In consideration of the stipulations expressed in the preceding articles, His Britannic Majesty engages that the sum of 4 lacs of sicca rupees shall be paid annually to the agents of the King of France." This was because we did not wish the manufacture of salt in the French territories in India to interfere with our own.

7337. That is a perpetual payment so long as we carry on the monopoly of the salt manufacture?—Yes, provided that the French continue to occupy their present possessions in India.

7338. The next is an item of "Sayer Compensations," 4,251 *l.*; what are those?—Those Sayer Compensations are compensations given, I believe, to parties who had previously received certain gunge or market dues in the old time. I suppose that they had grown up by prescriptive usage without any rights whatever; our Government, when they got the land in their possession, gave compensation

7339. Does the Government consider these permanent?—I suppose they do. I dare say that several families derive all that they have from them. But I do not remember that the subject, which seems to be rather a revenue than a political question, has ever come officially before me.

7340. Then we go to the North Western Provinces; we find, "Territorial and Political Pensions," amounting to 52,613 *l.* Do you know whether those are permanent or temporary?—Taking first the pension of the Rajah of Benares, his is a permanent pension. Some of the smaller ones will cease; and with regard to the family of the ex-Rajah of Coorg, probably some of those will be wiped off.

7341. Then there are, "Pensions and Charitable Allowances" in the North Western Provinces amounting to 11,326 *l.*?—Some, probably will fade away, and some of those will be continued.

7342. And "Sayer Compensation," amounting to 4,366 *l.*, is that permanent?—The first item, "Rajah Mohender Sing," 2,410 *l.*, must be permanent; that is in lieu of something taken from him.

7343. In the Punjab there are, "Territorial and Political Pensions," amounting to 51,949 *l.*, in the account. Do you understand whether those are permanent?—Some of them are, but many of them are not. A great number of these are personal. I may explain that of these that are put under the head of the Punjab, some have nothing whatever to do with the Punjab, but that owing to the Punjab Government, now including a considerable part of what was formerly under the North Western Provinces, a number of these have come in. For instance, Rajah Bukht Bulli, is the ex-Rajah of Shah-Gurh, who went into rebellion; his pension is a pension which will cease with his life. Then there is Murdan Sing, who is the ex-Rajah of Banpore; his pension will cease. Then the others, Rajah Fyztullub Khan, and Rajah Ali Bahadoor, son of Rajah Fyztullub Khan, are Punjab chiefs, and I suppose the case with regard to them is, that their pensions would fall under the ordinary system, which in most cases is one of gradual diminution.

7344. The Government did not engage to pay them in perpetuity?—No. Then the next one I see in the list is Mohun Loll, who is well known as Sir Alexander Burnes' moonshee, that is purely personal. Then Yar Mahomed Khan, as far as I can make out, was connected with Moultan, and his is a purely personal pension. Then we have a name which has come before us on a previous occasion, a member of the Delhi family, Mirza Ellahee Bux. Then Dhurn Kaour Sirdarni, is a Punjabee; Ajoodiah was the widow of a Sikh chief.

7345. Now, we come to the item of "Pensions under 5,000 rupees per annum, granted on the resumption of Maafee tenures," 25,271 *l.* Do you understand whether those are permanent grants?—Yes; because those have been granted

Sir
J. W. *Kaye*,
K.C.S.I.

25 June
1872.

for certain value received. These Maafee tenures were often hereditary and transferrable.

7346. Then there are "Political Pensions under 5,000 rupees per annum," amounting to 15,687 *l.* Are those political pensions for life or permanent?—I should think that the greater number of them will be terminable.

7347. Now, will you proceed to "Pensions and Charitable Allowances" in the Punjab, amounting to 29,833 *l.*?—Here we have Ellahee Bux down; his is a life pension; but some portion of it will be continued. The widow of the late Rajah Bullub Ghur has a life pension.

7348. Then there is "Sayer Compensation" again in the Punjaub, amounting to 2,553 *l.* Are those permanent?—Those, most likely, would be permanent, if for value received.

7349. Then there is "Commutation of Pensions," 9,483 *l.*?—If it is commutation, I conclude that it is only a charge for that year.

7350. Then we proceed to Madras, and we find, under the head of Tanjore, the charge of 31,397 *l.* What is that?—Those are payments made to the widows, the daughter, and the son-in-law, and other members of the family of the late Rajah of Tanjore, who formerly belonged to that country. We treated them formerly very much the same as the Newabs of the Carnatic, that is to say, we took the whole administration into our hands, and we paid to the Rajah of Tanjore one-fifth of the revenues of the country; and he was receiving that up to the time of his death, when Lord Dalhousie declared the titular dignity to be extinct, and we assumed the whole of the revenues of the country, and gave the family an allowance. I fancy that these statements (I have been able to verify them pretty accurately) are all correct.

7351. But have they been granted for life?—Yes, they are all for life. The whole of the money will not be wiped off, because it is always customary to take a compassionate view of the circumstances of those left behind who derived their subsistence from the leading members of the family. Under the old arrangements, before the death of the last Rajah of Tanjore, they had, under treaty, about 118,000 *l.* a year, and the pensions, I find, in 1867 amounted to 39,297 *l.*, and they are now stated at 31,397 *l.* so that we have gained 7,000 *l.* or more in four or five years. In former days Tanjore used to pay a large tribute to us.

7352. "Masulipatam: Stipends to the family of the late Nawab of Masulipatam," 3,393 *l.* Are those life stipends?—That is an item that I have not been able satisfactorily to account for as to whether it is or not for life. I took some pains to inquire into it. I should say that, as this was on account of cession of territory, it was a permanent obligation; but not, perhaps, to the full extent.

7353. There is an item under Madras of "Compensations, Pensions, and Charitable Allowances," 145,164 *l*, which includes pagoda and mosque allowances, and compensations in lieu of resumed lands, offices, and privileges, including salt compensations," 111,853 *l.* Is that item, do you consider, permanent or temporary?—I should consider that a permanent allowance most certainly; unless the country were Christianised. It involves a very difficult question which has been the subject of much discussion. Hitherto, the policy of the Government has been to maintain these grants, to support the native religious endowments. Distinct pledges to this effect have been given in past years.

7354. Then there are "Pensions and Charitable Allowances," which make 27,876 *l.*, and "Allowances to Zemindars, Jageerdars, and Enambars, &c.," 55,435 *l.*; are they also permanent, or will any of them cease?—Some may cease on death of present incumbents and some may be gradually terminable. We have got very elaborate regulations with regard to the manner in which these different inams are to be treated, and in different parts of the country there are different rules relating to them. It is rather a subject which comes under the revenue authorities than under the political, but we have laid down very distinct rules and regulations with regard to them, and the upshot of it is, that from generation to generation they are generally diminishable. There are some which are maintained in their integrity, but the great number of these rent-free grants, were granted in consideration of service to be rendered in the way of affording a certain quota of horse or other military assistanse in case of war, and the consequence is that in those cases when the horse or the military service is no longer given, then of course, the amount is reduced.

7355. Then under the head of "Kurnal" there is an item of 9,063 *l.* for "Stipends to the family and dependants of the late Newab of Kurnal"?—It is called Kurnal here, but I conclude that being put under the Madras head, it means Kurnoul. The Newab of Kurnoul conceived the absurd idea of endeavouring to make war against us, and the consequence was that the country was conquered, and it was taken away from him, and he himself afterwards killed, if I remember rightly, by a Mahomedan fanatic. But the claims of his son were favourably considered, and we granted him this pension. I conclude that it will be reduced at his death.

7356. Then we go to Bombay and Sind; we have an expenditure amounting to 724,000 *l.*, the first item being, "Pensions to the family and dependants of the late Newab of Surat," 10,000 *l.* Are those permanent or for life?—They will die out in time.

7357. Is the present grant for the life of the parties?—No; the present grant is for three lives. It was granted to the son-in-law and two grand-daughters of the late Newab of Surat. The man himself, Jaffier Ally, who married one of these grand-daughters, is dead, he died in 1863, and the two grand-daughters survive. When these two die this pension of 10,000 *l.* will cease altogether off our books.

7358. Then the next is the "Newab Mahomed Ally Khan Bahadoor," 1,468 *l.*; is that also for his life or in perpetuity?—I believe it is a life pension.

7359. Who is the Newab?—That I was endeavouring to ascertain from the Bombay authorities in the India Office this morning, and I have not been able correctly to ascertain it. We have the same name in the account under another head, but he is the Banda man. Sugoona Baeesaheb, who is next in the list, is a Sattarah Begum.

7360. What is the claim of the Sugoona Baeesaheb Maharajah to 6,000 *l.*?—She was the widow of the late Rajah of Sattara.

7361. Is that for her life?—Yes.

7362. Who is Pertal Rao Goojub; what is his claim to a pension of 1,200 *l.*?—He was one

Sir *J. W. Kaye*, K.C.S.I.

25 June 1872.

one of the Sattara family, but I do no not know exactly the relation which he bore to the late rajah.

7363. Then there are "Various pensions and allowances above 5,000 rupees and under 20,000 rupees per annum," 8,353 *l.* Do you know whether these represent life pensions or permanent charges?—I should think the greater number of them are terminable or reducible, perhaps mostly terminable on the death of the parties.

7364. Then there are "Pensions not exceeding 5,000 rupees per annum, including commutations," 41,620 *l.*?—They are, I suppose, different members of the Sattara family, and other families, whose pensions are paid from the Bombay Treasury.

7365. Then there are "Enamdars and Surrunjamdars," 443,416 *l.*?—Those are an immense number of people, who have held different kinds of rent-free tenures, at different times, which we have guaranteed, and have continued to pay. The circumstances under which they have been granted are various, but we have endeavoured, as far as possible, to lay down rules under which they have been granted, and the general rule, as regards the Deccan Surinfams, I have got here, but it would take a long time to explain them.

7366. Are these payments for the lives of the parties, or during the continuance of the families?—They are mostly to be continued during the lives of the present incumbents, with the knowledge, on the part of their descendants, that, at the death of the present incumbents, they will be reduced.

7367. Then do you expect that those items will ever be altogether extinguished?—They will not be extinguished altogether for a very long time. We found the effects of attempting to extinguish them very inconvenient a few years ago.

7368. Has it been reduced within the last few years?—Yes, the amount has been decidedly reduced.

7369. Can you give the rate of reduction?—I have not that, because most of these cases are questions of revenue rather than of politics.

7370. Then, with regard to the "Sayer and miscellaneous compensations," 11,817 *l.*, is that a permanent charge?—I should say that most of these Sayer compensations, as compensations for some value received on our part, as a general rule, would have to be continued.

7371. Then there is an item of "Sultan Fudil Mahsin, of Lahej," 1,412 *l.*, what is that?—The Sookan of Lahej is the old territorial chief of Aden. We agreed to give 541 German crowns a month, in consideration of his foregoing certain transit dues which he had levied, or rather, reducing them within certain bounds.

7372. Is that permanent?—Yes; it will be a permanent grant unless we make some new arrangement. I see that according to the treaty the amount was 541 German crowns a month; the amount in English money being 1,412 *l.* a year. The Government at the present time have under consideration a proposal to make him a grant in a compensation, namely, 800 dollars per month for the abolition of the dues, so that if we pay him this money the dues will be abolished altogether.

7373. Do you know whether the Sultan of Lahej resides at Aden still?—Yes, and he is still in communication with our Government; he is a man of very good character and position.

7374. The next item is "Allowances, &c. to the ex-ameers of Sind, and others," 23,289 *l.* Are those permanent or temporary charges?—They are terminable; I suppose upon the death of each of them there will be some provision made for their descendants, but we are not pledged or guaranteed to give them the whole amount of their pensions; I have no doubt that a liberal provision will be made for such descendants as they leave behind, as we have taken their country. The amount is very much reduced. I saw in referring to some papers, that in 1864, the amount was 29,475 *l.*, and I find that now in 1871, it is 23,289 *l.*, so that in seven years it has been diminished by 6,200 *l.*, which I think is satisfactory. Very few of them have died off, but they must be at the present time getting old men; so that I should think that the pension list will be very much diminished, even if a liberal view were taken of the claims of their descendants.

7375 There is an item of "Cristna Rao Wittul," 2,202 *l.*, what is that?—He is a member of the Guicowa family. A pension was granted to him in 1845 of 24,000 rupees per annum, which I fancy will tally with the entry here.

7376. Will that terminate with his death?—Yes, it will terminate with his death. I dare say some provision will be made for his descendants.

7377. Then there is a large item of "Dewasthan and Wurshasum Allowances," 172,213 *l.* What are those?—These are matters rather difficult to explain; but the Dewasthan allowances are the amount of revenues applied to the support of temples and other holy buildings; in fact we may call them, I think, church revenues.

7378. Do you consider those a permanent charge upon the revenues?—I conclude it to be a permanent charge as long as the religions of the country last. The other name which is Wurshasun represents charges of a totally different kind, their assignments are annual allowances made for various purposes to individuals apart from the religious element. These have not the religious element in them.

7379. Are they hereditary?—It is a sum which is variously applied, and according to local circumstances, but I believe that in the Bombay territory they are in some way or other connected with the support of the police. So I was told this morning; at all events, there is no religious element in the Wurshasun charges, but the Dewasthan are entirely allowances for religious purposes; church revenues you may call them. There is another item for the "Redemption of huckdars' bonds, &c.," 942 *l.* They are merely certain bonds which have been given to holders of certain alienations of the revenues. I suppose that we gave bonds for the purpose, and they redeemed these bonds and paid so much money. But these are revenue not political questions.

7380. With regard to the amount appearing at page 21 of the Receipts, under the head of "Tributes and Contributions from Native States," amounting to 719,421 *l.*, do you know whether the items constituting this total are of a permanent nature, or whether they are likely to increase or diminish?—As long as our treaties with these native states exist these payments will continue. If any of these chiefs should go into hostility against the British Government, instead of their paying to us we should probably

Sir *J. W. Kaye*, K.C.S.I.

25 June 1872.

pay to them as pensioners, and we should have all their country. But I wish to state at the same time that these payments do not really represent what we receive from the native princes and chiefs, for undertaking the whole military defence of the country, because great part of the payments consist in assignments of territory to us, and therefore we must consider these as only the absolute cash payments to us, whereas, in almost every important case, as in the case of Hyderabad and Scindiah's dominions, they have made very large assignments of territory to us out of the revenues of which we are to pay ourselves for the maintenance of those armies which are to protect their dominions. Therefore these statements merely contain the actual sums in the way of tribute that they pay.

7381. Mr. *Fawcett.*] What you wish to say is, that in addition to that 700,000 *l.*, a considerable revenue, we receive from them a considerable revenue in the shape of land, which is put down under the head of Land Revenue?—Yes, it is all laid down by treaty. I have here the treaties with regard to one or two of the most important items; for instance, in the case of the Hyderabad assigned districts.

7382. *Chairman.*] Are those districts in the charge of the British Government?—Yes, administratively.

7383. Then the revenue from those is treated as part of the land revenue?—Yes, up to the point at which the Nizam had covenanted to pay us for the support of our troops, but we have covenanted to give him the balance, and we do give him the balance.

7384. Sir *C. Wingfield.*] These assigned districts are for the support of the contingent?—Yes, or in other words, for the military defence of the country. The British Government having reduced the military power of all the native princes and chiefs of India, having surrounded them in every way and relieved them of the necessity of keeping up armies of their own, having declared that they shall not go to war with each other, having defended them against all the neighbouring states, think it very fair and right in every way that the native states whom we thus protect should pay certain amounts for the support of our army, and they do pay these certain amounts for the support of our army, only the general result has been in almost every case like what happened in Oude at the beginning of the present century in Lord Wellesley's time. The king of Oude, who had made a contract of the same kind with us, found that he could not pay the money: upon which we took a large part of his territories into our own hands and we paid ourselves, and we have gone on doing that from time to time. We have done it in the Hyderabad case, and we have done it in Scindiah's case. And it is often said, extremely unjustly with regard to our relations with the Native States, that whilst we are protecting them they are paying a very inadequate remuneration; but we have to bear in mind the amount of territory which they have ceded to afford revenue to us, out of which these armies are paid.

7385. Mr. *Fawcett.*] Do the amount that they cede and the amount of tribute which they pay more than cover the cost of the contingent?—It is very difficult to calculate that; I do not know anything more difficult. For instance, in the case of Scindiah we have got a great question now on with him as to where the army is to be posted, and probably the army being posted in a locality which might be equally advantageous to Scindiah and to ourselves, that army would be serviceable, in the event of an outbreak, to ourselves, at the same time that it would be ready to protect Scindiah against an outbreak in his country; so that it is very difficult to say at any one time that an army kept up in a certain part of the country is kept up entirely for the defence of the ally who pays this subsidy, or whether it may not be kept up partly for our own purposes. So it is nearly impossible to apportion the amount of charges.

7386. Could you state generally what is the annual value of the land which was ceded by the native princes to us?—I have no statement of the gross amount. The revenue derived from a certain area of land would depend upon circumstances. In some instances a fixed amount has been named as our share. In others, we have taken what we could get out of the land.

7387. About our payments to these princes, do you know at what rate they have increased or decreased during the last 10 years?—I think that there has been a very large decrease; I have already before the Committee stated in detail some of the decreases that have been made, I have also said that I proposed, with the consent of the Duke of Argyll, to call upon the Foreign Department of India to send annually a statement to us showing the exact amount of each political pension and the circumstances of each pensioner, together with a statement of all lapses during the preceding year; that I think it would be extremely advisable to do. We have had no return since that made in 1864 on a motion by Mr. Adam; and looking into the Finance Accounts, as I have done since I was last before the Committee, I find that, although during the time of the East India Company the condition and circumstances of every political pension were very clearly stated, those reports, which were so valuable, were discontinued in 1859; that is to say, they ceased with the East India Company; and the explanation is that extreme rapidity of report is called for in these days, which is not compatible with extreme accuracy of report, that the two things cannot tally, and that they are obliged to make out a report, putting down a man's name for a pension without stating who he is, or under what circumstances he got it. That may be the case with regard to the Financial Department, who are called upon to furnish reports, but I think that they might in the Foreign Department of India annually return, if not a totally correct, yet an approximation to a correct return; and I think that it would be extremely advisable to make it every year. I have often had to hunt out the case of a single man's name through a dozen or so books of this kind and character (*producing a bulky folio*), and it has been exceedingly difficult to do it.

Major-General RICHARD STRACHEY, R.E., re-called; and further Examined.

Major-Gen. *R. Strachey*, R.E.

7388. Mr. *Fawcett.*] YOU expressed an opinion that the income tax had produced very little discontent in India; of course, you are aware that that opinion is in direct antagonism to the opinions of many officials who have been directly concerned in the collection of the tax, are you not?—I do not think I have made any such statement.

Major-Ge
R. Strache
R.E.

25 June
1872.

7389. What was the exact nature of your statement; I understood it to be that; that you wished to convey the idea to the Committee that the income tax only produced discontent amongst the comparatively very few who actually paid it?—That is my idea; I do not think I said it; but that is my idea, that the people who do not pay it do not care about it.

7390. Are you not aware that officials concerned in collecting the tax say that where one person pays the tax, at least 20 are worried, annoyed, and injured by unjust assessments and vexatious demands upon them?—That there has been a great deal of abuse in collecting that tax is not to be disputed.

7391. But you have not been concerned directly in collecting the tax?—Not at all.

7392. And you are aware that I am referring to the opinion of people like Mr. Campbell and Mr. Inglis, and others who have been concerned in it, and who, therefore, speak from practical experience?—Yes.

7393. You expressed an opinion that the taxation in India at the present time has not produced much discontent. Are you aware that that opinion is in direct antagonism to the opinions expressed by Lord Napier of Magdala, and Lord Mayo?—No, I cannot say that I am. I do not carry in my head what Lord Napier of Magdala said; but I do not think that the opinion I expressed is opposed to what Lord Mayo said.

7394. Are you aware that Lord Napier recently said that there was probably no time in the history of British India when we had such a small hold upon the people of India?—He may have said so, it does not follow that I should agree with him.

7395. Are you not aware that Lord Mayo, not long before his death, expressed his opinion that the constant increase of taxation which for years had been going on, and was going on at that time, had produced a wide-spread feeling of discontent and dissatisfaction?—I am not aware that he said so.

7396. Those are his exact words. Are you not also aware of this, that Lord Mayo went on to make this very significant remark, that reducing the army would be a peril, but that he considered the discontent produced by increased taxation was a so much greater peril, that rather than incur the greater peril which would arise from increasing taxation, he would incur the smaller peril of reducing the army?—That Lord Mayo said that there is no doubt, but I understand the signification of Lord Mayo's utterances on that subject to be this, that it was notoriously very difficult to raise fresh money by new taxation in India, and that great danger might arise from the Government attempting to force an increase of income in that manner; that he thought it was not impossible that there would be so great danger in fact in attempting to do this that, if he was pushed, he might think it preferable to reduce the charge even for the army.

7397. You admit that there will be a great danger in increasing the number of small taxes which would come home to the people. Are you not aware that that is what is going on every year by the increase of local taxation in India?—Well, I should not answer the first part of your question in the affirmative; neither should I answer the second part in the affirmative.

7398. That was Lord Mayo's opinion about the danger of increasing small taxes, which come home to the people; but I thought you were expressing that as your own also?—I expressed my opinion as to the difficulty and danger of attempting to force an increase of income by new taxation beyond a certain point; but that is a totally different thing from asking me to agree, as I understood you to do, that there had been of late years a great increase of a number of additional small taxes.

7399. I do not say a great increase, but local taxation has increased; and local taxation assumes the form of a great number of small taxes?—I think that is an erroneous idea.

7400. Take the case of Bombay. You are probably aware that they are going to have a local income tax there levied upon incomes of 5 *l.*?—That there have been proposals for local taxation, which I myself consider bad, I am perfectly prepared to admit; but that that is either the general, or the necessary result of local taxation, I deny.

7401. I am simply dealing with facts; some of these taxes, such as the Chokeedaree tax, have actually been levied, and others have been proposed; and if they are proposed by responsible people it creates great alarm?—You refer to the Chokeedaree tax as if it were a new one; it is one of the oldest taxes of India.

7402. It has been levied in a loose and lax way, has it not?—There is nothing novel in that.

7403. The proposal to levy an income tax of 5 *l.* is one that may excite alarm, is it not?—First of all what you speak of is not an income tax in any sense; and in the next place a tax of that description is not new, and is not unusual. A tax of that description, for instance, has been levied, to the best of my belief, in the city of Bombay itself for some years past for municipal purposes, but in the nature of what is better called a license, a tax upon trades and professions; I think that is what they call it. Something of the same sort is levied in various parts of India under various names. They have the same thing in Calcutta; they have had it for a considerable length of time. As to the precise limit to which it extends, and as to the precise way in which it is levied, the circumstances differ, and they will vary from one place to another. And here I would like to observe that you have been talking as though there had been as a fact a great increase of taxation in India of late years. Now allow me to say that I most distinctly deny that. I say that, as a fact, it is not the case, and I am prepared to prove it. I will give you the actual figures.

7404. You admitted last time that the accounts are differently made out now from what they were 10 years ago. You are aware that in 1862 many things were put down as revenue receipts simply as net receipts, which are now put as gross receipts?—I admit that so far as it goes, but as I said before when I mentioned it, my belief is that the effect of that alteration is not important. I wish to take from among the heads of revenue any one that you admit distinctly to be taxation, and I will compare the figures under it in 1870–71, with what they were in 1861–62. But I affirm that a very large proportion of the revenues of India are not in the nature of taxation, that they are in the nature of income, that the Government is in the position of a proprietor, who has certain property of various descriptions from which he receives income, and which in no sense is taxation.

Major-Gen.
R. Strachey,
R.E.

25 June
1872.

ation. The land revenue, for instance, I say, is not taxation. To begin with, then, we have for the total increase of income of the Government of India, as shown by the accounts between 1870–71 and 1861–62, a sum of 7,366,000 *l.*

7405. But now I want to know can you state to me in every item of revenue receipts, distinctly whether they were gross or net receipts in 1860–61, and the same with 1870–71 or 1871–72?—I am prepared to admit that, within certain limits, the figures do not represent identical facts.

7406. If we have a long examination upon this point, and you start by saying, that within certain limits they do not represent it, the whole point then turns on an argument what those certain limits are?—It appears to me, that the position you take is this: You make an assertion which I attempt to controvert; you say that you have certain facts on which you rely, and when I say I have certain facts on which I rely, you will not accept them; but you say that only yours are to be accepted.

7407. No, can you, in showing that gross sum, state the amount of error that is produced owing to the circumstance which I have stated?—I cannot.

7408.. You cannot state positively whether it is 1,000,000 *l.* or 5,000,000 *l.* You could find it out if you examined the accounts?—I admit that I cannot state, in a positive way, whether it is 1,000,000 *l.* or 5,000,000 *l.*; that if a sufficient inquiry were made the figures might be ascertained I do not dispute; but I do say, that I have just as much right to argue upon the figures as they appear in the public accounts, that there has been an increase of income, as distinguished from taxation, as you have to say that there has been a great increase of taxation.

7409. I am asking your opinion; if I were being examined as a witness, I would give the Committee exactly what I consider to be the correction, that is, to be introduced, owing to the different ways that the accounts are made up, and I believe I know it, you have just the same means of getting at it. I want to know whether you have done the same, because, if not, it throws an air of doubt and uncertainty over the whole of your evidence?—I admit that there is a certain element of doubt, and, as I should say, a necessary element of doubt, in dealing with such figures as are to be got from the public accounts; but it seems to me that I have a perfect right to say this, that though the facts (because they are facts as far as they go), may not have any value in your eyes, and you may consider that the element of doubt is so great as to make the whole argument worthless, it does not follow that will be the result to my mind, or that every other Member of the Committee will think the same as you do.

7410. You admit that owing to your not examining these accounts in the way in which they might be examined, there is an element of doubt thrown over the whole of your evidence in this case?—I admit that in a certain sense. There is doubt as to the precise amount of real increase, but no doubt as to there being some increase, and that such increase is not due to increased taxation.

7411. The revenue has increased in these 10 years 7,000,000 *l.*, you say?—Yes, 7,366,000 *l.*

7412. Has that arisen from increased taxation, or from any other cause?—You shall judge for yourself. The income under head of Military is nothing more than refunds; under Public Works, it is income and not taxation, income from irrigation works; under the head of Interest, it is income not taxation. Under those three heads, Military, Public Works, and Interest, there has been an increase in income of 629,000 *l.*, which is not taxation.

7413. If your General Public Works only pay 2 per cent., the more you receive under that head the more it shows the burden on the people of India?—It appears to me that it is quite certain that there is an absolute sum of 629,000 *l.* received under those three heads, not in pounds, of course, but in rupees.

7414. Not a net receipt?—Yes, an absolute receipt, coin. At the present time, we have disposed of the additional charges, and I am talking about the income, and what I desire to do is, under the heads of income, to eliminate that which is not taxation; and I say distinctly, that those three items that I have referred to, cannot, under any circumstances, be called taxation.

7415. What is the next?—The two next are minor ones; the first is Marine and the next is Education; the receipts under Education are school fees, and under Marine charges for pilotage, that is not taxation, the result is 197,000 *l.* for the two.

7416. But the receipt for Education in 1861-62 was nothing was it not?—£. 42,000 *l*; and in 1870-71 it was 62,000 *l.*

7417. That shows that we are spending more money on education?—As I said before we have nothing to do at the present moment with charge, my argument has nothing whatever to do with charge; I admit that we have an increase of outlay as you point out of 6,000,000 *l.* or 7,000,000 *l.*; there is no dispute about that; I am explaining how the increase of income has taken place by which that increase of charge has been met; and I say that to a very great extent that increase of income has not been increase of taxation but increase of other sources of income.

7418. What are the other items?—The next is Judicial; I may class that together with Police. The receipts under Police, as I admit, are virtually contributions by municipalities to the Imperial treasury on account of the local police; practically that shows an increase of taxation. Then under the head of Judicial, there are court fees; you may call that taxation or not; I do not know exactly how it should be classed; you may say what you please about that; I am not particular; if, however, it be taxation, it is of a peculiar sort and falls on a peculiar class.

7419. Mr. *R. Fowler*.] Is that owing to litigation being much increased?—To a great extent, I suppose. The total increase under those two heads is 514,300 *l.*, namely 339,000 *l.* under Judicial and 175,000 *l.* under Police. Then come the revenues proper. The first is Land Revenue, on which there is an increase of 692,000 *l.* Now if we had been increasing the share which the Government took in the produce of the land, of course you would have a right to say that that is an increased burden on the country; but that is not the case. So far as there has been a change, the change has been quite in the other direction, and the burdens have been made lighter, not heavier. Then, under Forests, there has been an increase of

201,000 *l.*

Major-Gen. *R. Strachey*, R.E.

25 June 1872.

201,000 *l.*, which is either the result of the sale of the produce of the forests to the community, or the result of sales of timber to the Public Works Department, and therefore that again, is nothing in the shape of taxation. Then comes Excise, the taxation upon liquor, and on the retail sale of opium, which is used in some parts of India; that gives an increase of 572,000 *l.* Now, although you may call that taxation in one sense, still, it again is a very peculiar sort of taxation, and falls upon a peculiar class; and there are many people who would like to see the increase of this sort of taxation carried to such an extent as to check consumption, even though the revenue were thereby diminished.

7420. That charge for opium is upon the Chinese, is it not? — This is revenue derived from the retail sale of opium to the inhabitants of India, who themselves use it to a certain extent, and in some provinces largely. Then the next is Income Tax; there was an increse on this of 20,000 *l.* Then comes Customs; on Customs there is a diminution of receipts of 294,000 *l.*; there is no increase of taxation there. Then comes Salt, here I admit is increase of taxation amounting to 1,541,000 *l.*; but although I thoroughly admit that that is increase of taxation, remember that this increase of taxation falls (according to my point of view) upon a community increasing both in numbers and in wealth, and therefore that it by no means follows that the actual incidence of that taxation forms any additional burden upon the community. At the same time I admit that, so far as it goes, that 1,540,000 *l.* is real increase of taxation. Then comes opium, 1,638,000 *l.* That again is not taxation because the chief part of it is trade profit, and the other part is an export duty on opium grown out of our own territory.

7421. A transit duty?—Yes. Then the next is Stamps, showing an increase of 796,000 *l.* That, of course, within certain limits, is also taxation, but taxation of a peculiar sort. Then comes, under the head of Mint, an increase of charge, that is to say, a reduction of revenue instead of an increase; therefore that disappears. Under the head of Post Office, there is an increase of 493,000 *l.*, a good deal of which is nominal, as being official postage, perhaps half of it.

7422. Mr. *Fawcett*.] What was it in 1861–62?—£. 402,000, and now it is 805,000 *l.* A great deal of that increase is actual and real, I think that cannot be disputed at all. Then comes Telegraph, 75,000 *l.* against 247,000 *l.*; the increase is 151,000 *l.* Under the head of Miscellaneous there is an increase of 551,000 *l.*, but neither is that in the nature of taxation. A good deal of that increase, under the head of Miscellaneous, has arisen from the abolition of the service funds, and the payments which are made by the officers in the army and the various services, which now appear as receipts of the Secretary of State, instead of being credited to separate funds. Therefore I say that, on the whole, out of this increase of income of 7,366,000 *l.*, taking the very largest estimate, the increase of taxation will not be more than two millions sterling, and that the bulk of it is, as I said before, growth of resources.

7423. Mr. *J. B. Smith*.] Is not the cost of carriage upon the salt a very large addition to the taxation; is it not an impost?—Of course it is a very great addition to the cost.

7424. Has not that charge been very much diminished by cheaper conveyances, railways and other means?—Yes, very greatly.

7425. Do you think that the consumers of salt pay more money for their salt now, deducting the advantage which they have derived from the cheap carriage, than they did before the late salt duties were imposed?—I should think they paid more on the whole, but there is no doubt whatever that a very important set-off arises from that circumstance which you refer to.

7426. There is no possibility, I suppose, of making an estimate of how much that is?—It is extremely difficult.

7427. But there has been that effect produced by cheap carriage?—There is no question of that in many parts of India. In some parts, where the salt is produced locally, the full amount of increased taxation falls upon the consumer at once.

7428. We have had cases where salt has had to be carried 200 miles on the backs of bullocks, and although the duty on salt had been increased, the consumption had increased, and that had arisen solely from the advantages which they got in having the salt at a cheaper rate of carriage?—That is perfectly true.

7429. Mr *Fawcett*.] You have not made a similar comparison between the present time and the time before the East India Company was abolished, have you?—No.

7430. Your comparison is between the present time and a year when India was recovering from the mutiny?—The reason for my selecting these years was to bring to the test of fact, so far as was possible, the financial result of the operations in the shape of new public works, which have been commenced and carried out with more than common vigour between 1861-62 and 1870-71. I have been taking what may be called a public works point of view, and I am trying to explain to the Committee the general position under which the Government of India has considered that it has been justified in going into that expenditure.

7431. Are you aware of the increase of local taxation?—Yes, I think I mentioned the last time I was here what it was.

Friday, 28*th June* 1872.

MEMBERS PRESENT:

Mr. Ayrton.
Sir Thomas Bazley.
Mr. Beach.
Mr. Bourke.
Mr. Cross.
Mr. Charles Dalrymple.
Mr. Beckett Denison.
Mr. Dickinson.
Mr. Grant Duff.
Mr. Eastwick.
Mr. Fawcett.
Lord Edmond Fitzmaurice.
Mr. Robert Fowler.
Mr. Hermon.
Mr. Lyttelton.
Mr. M'Clure.
Sir Stafford Northcote.
Mr. John Benjamin Smith.
Sir David Wedderburn.
Sir Charles Wingfield.

THE RIGHT HON. ACTON SMEE AYRTON, IN THE CHAIR.

Mr. SAMUEL LAING, called in; and Examined.

Mr. *S. Laing.*

28 June 1872.

7432. *Chairman.*] THE Committee having requested your attendance, will you be good enough to state the period during which you held the Office of Member of Council for the Finance Department in India?—I was Member of the Council of India for about two years, commencing in the end of 1860.

7433 And during that time you had charge of the finance and the revenue, and a certain control over the expenditure?—Yes; I went out very suddenly, on the intelligence of the lamented death of Mr. Wilson, to take his place as Finance Minister of India.

7434. Perhaps you would explain to the Committee what you consider the extent of the duty and the responsibility of what is called the Finance Minister in India, with reference to the revenue and to the expenditure?—I should say that it is very much the same as the Finance Minister of any European country, or as the Chancellor of the Exchequer in this country, only that perhaps the Finance Minister in India has more control, from the fact of the Viceroy, who may be considered the chief of the Cabinet, not having such acquaintance with the details of financial matters as the First Lord of the Treasury often has in this country; in other words, that the Finance Minister is almost alone there in the matter of finance, while in this country he generally has many colleagues in the administration who are more or less conversant with the subject.

7435. Was it your duty to propose in the first instance any change in the revenue, either by increase or diminution of taxation, or any alteration of taxation?—Yes, certainly the responsibility devolved upon me of preparing a Budget for the year, in which the object was to extinguish a very large deficit and create an equilibrium.

7436. Before that Budget was acted upon was it submitted for the consideration and approval of the Governor General?—Yes.

7437. In the preparation of the Budget was it carried on entirely upon your responsibility or in constant communication with the Governor General?—Upon all the larger and more important questions I was in constant communication with the Governor General.

7438. Then with regard to the expenditure, had you any opportunities of examining and controlling the expenditure proposed for the Budget year?—Certainly, it rested with the Finance Minister in preparing his Budget to propose the estimates of expenditure as well as of revenue; that brought me in communication with the Governor General, and with the other members of the council upon all important questions involving expenditure.

7439. Was it part of your duty then to suggest any diminution of expenditure under any of the different heads of administration?—Certainly; I should say that that was the main duty under the circumstances of the finances of India when I went out.

7440. And in the same way in examining the various heads of expenditure, did you arrive at a conclusion first, or was any suggestion for change or improvement made by you in concert from time to time with the Governor General in the preparation of the estimates of expenditure?—I should say that the suggestions were made by myself, mainly in consultation with the heads of the departments and the head of the Military Finance Commission; they were then suggested to the Governor General, finally debated and decided upon in council.

7441. That is to say separately, *seriatim*, before the whole Budget was arrived at?—Yes.

7442. The distinction that I wish to call your attention to is whether the Budget was made by you *en bloc*, as it were, and then submitted for consideration, or whether it was prepared by you in concert with the Governor General, and then revised as a whole?—Before a final Budget could be prepared, of course all the important questions of policy had to be decided with the Governor General; for instance, there was then a deficit of upwards of 5,000,000 *l.*; the question was how that was to be met, whether by increase of taxation or by diminution of expenditure. Practically, it

Mr. S. Laing.

28 June 1872.

it was met almost entirely by diminution of expenditure. That involved very sweeping reductions in army and navy, and other establishments, which, of course, involved important military considerations, and had to be determined by the Governor General in Council before I could make a final Budget.

7443. Will you describe to the Committee the view you took of Indian finance when it came under your charge?—When it first came under my charge things looked very gloomy. The result of the Mutiny had been an enormous increase of expenditure, and for two or three years after the termination of the Mutiny, there had been enormous deficits, ranging from 15,000,000 *l.* a year down to about 5,000,000 *l.*, and when I first went out the deficit was still upwards of 5,000,000 *l.*, and there was a very desponding feeling about it; but then we set to work vigorously with reductions, and we were able in a very short time, in the coure of six months or so, to establish a practical equilibrium; and since then I have taken rather a hopeful view than otherwise of Indian finance.

7444. Mr. *J. B. Smith.*] What year was that?—1861-'62.

7445. Mr. *Bourke.*] You went out in October of 1861, did you not?—I went out in the end of October 1860, so that I may say that I took charge about January 1861, and the first budget was produced, I think, in the end of May or beginning of June 1861.

7446. *Chairman.*] What were the steps taken by you to improve, or which you deemed desirable to improve the condition of the finances so as bring the expenditure within the revenue?—The great measures consisted of reduction of expenditure, the largest reduction being due to the diminution of the military establishments, especially of the native army; that was the largest head of reduction. There were other very important reductions as in the Indian navy, and marine, and several of the civil establishments; but the result on the whole was that an economy of about 5,000,000 *l.* was introduced in the Budget of that year.

7447. Did that bring the deficit of 1861 ultimately to an equilibrium, or rather the expenditure to an equilibrium, or was there still a deficit?—I think that practically there was an equilibrium.

7448. Perhaps you can state what was the gross expenditure and deficit or surplus during the years immediately connected with your administration?—In the year 1860-61 the gross revenue was 42,903,234 *l.*, the total expenditure 48,154,087 *l.*, and the deficit 5,250,853 *l.* In 1861-62 the gross revenue was 43,829,472 *l.*, the gross expenditure 44,870,232 *l.*, and the deficit 1,040,760 *l.* In 1862-63 the gross revenue was 45,143,752 *l.*, the gross expenditure 44,053,122 *l.*, and the surplus 1,090,630 *l.*

7449. Before going into any subsequent views of finance, would you like to offer any further observations to the Committee on the finance of those three years particularly?—I think that they showed the possibility at that time in India of meeting a very heavy deficit indeed by vigorous reductions of expenditure, and of establishing what is substantially an equilibrium; for in those two years there is a deficit of a million in one year, and a surplus of a million in the other.

7450. Have you directed your attention to the state of Indian finances since you came back from India?—I have, of course, always kept up a general interest in the subject of Indian finance; but having many other things to do, and not being responsible, I cannot say that I have the details or exact figures well up; but the general views of Indian finance I have always kept up.

7451. Can you state generally what view you entertain now of the position of Indian finance since the period of 1863?—My opinion has always been that there has been a disposition in this country to take a somewhat too gloomy view of Indian finance, and to be too much alarmed at a moderate deficit in any one particular year. I think that the finances of India, as a whole, since that period, for the last 12 years, as compared with those of almost any other country I know, have been in a particularly healthy and sound condition.

7452. If you could make out that view somewhat in detail, we should be glad?—For the last 12 years, it seems to me that the position of India as regards indebtedness has remained practically about stationary; they have not been accumulating debt, although they have been doing a great deal of work out of revenue upon extraordinary public works, and paying interest on unproductive capital, which in almost any other country would have been charged to capital. I was looking at the return in the last estimate of Sir Richard Temple just come home, and comparing it with the charges during my period, in 1862. The national indebtedness of a country is, I think, fairly measured by the annual charge for interest which it has to pay in respect of debts. I find that, in 1862-63, the net amount of interest for all debt and charges of every description on the Indian Government, both in India and England, was 5,484,000 *l.* In 1870-71 (this is the figure of the actual return), the same charge was 5,499,000 *l.* So that I may say practically the annual charge for interest on the Indian Empire had not increased from 1862 to 1870.

7453 Mr. *Fawcett.*] That does not include, does it, the loss entailed by the guaranteed railways and other companies?—No, but as regards the interest on the guaranteed railways the loss from the guaranteed interest on railways was 1,500,000 *l.* in 1862, and it is estimated at 1,800,000 *l.* in 1870-71. During that period the capital expenditure on those railways increased in round numbers from 60,000,000 *l.* to 90,000,000 *l.*; so that the last 30,000,000 *l.* spent upon railways have only cost India as yet 300,000 *l.* a year additional, or 1 *l.* per cent.; and I consider that the loss for the guaranteed interest on railways is certain to diminish and finally disappear with time; and I should observe another item in the calculation, that the cash balances in the Treasury which in 1862 amounted to 17,650,000 *l.*, in March 1872 were 21,500,000 *l.*; so that the practical result of 10 years' working I may say is, that the charge for interest remains the same, and the cash in the Treasury was 4,000,000 *l.* more; that is what I call practically having been in a state of equilibrium, taking one year with another.

7454. *Chairman.*] You have stated your view that the annual charge for the interest on debts represents the burden that the people bear. Are you in a position to state what the relative capitals were in the two periods that you have mentioned?—No; I have not the figures of the capitals. I must tell the Committee that I am not prepared with precise figures upon a great

Mr. *S. Laing.*

28 June 1872.

many of these points, not knowing exactly what the line of examination was to be. I take this as my principle, right or wrong; I measure the charge of a debt by the amount of annual taxation required to meet it.

7455. When you say that the guaranteed railway interest will disappear, has your attention been directed to the growing charge in consequence of the new railway works that the Government have undertaken?—Of course it must depend in some measure upon the rate of extension of railways. If Government were going to lay out a large sum of additional capital in making lines for military or political purposes not likely to be reproductive, then my answer must be modified; but if they only go on as they have been going on for the last 10 or 15 years, making a comparatively moderate amount of lines, and making the branches or subsidiary lines at a cheap rate, then I certainly think before 20 years, or a less period has elapsed, you will find that the charge for loss on guaranteed railway interest will have entirely disappeared.

7456. With regard to the cash balances, do I rightly understand that some figures you have given for the last period are the cash balance, inclusive or exclusive of the cash represented by notes in circulation?—Exclusive of the notes in circulation. The notes in circulation are based upon Government security, to a great extent, and are quite a separate department.

7457. I only want to call your attention to the fact, because I am not quite clear on the subject that the Treasury balance, exclusive of the notes, is as much as you stated. Have you any other reasons for suggesting the hopeful view of the finances that you have stated?—I say that this state of practical equilibrium for the last 10 years has been attained, although there has been a large expenditure during that interval upon extraordinary public works and other matters, which has only partly been met by loans, and to a considerable extent has been charged to revenue, whereas certainly any other country in Europe that I am acquainted with, any growing and progressive country which requires to make a large extra expenditure, would have had an extraordinary budget, and have charged these things to capital.

7458. When you speak of charging to capital, do you mean that they would have raised a loan to meet that expenditure as representing a capital over and above the current receipts and expenditure of the year?—Yes; I am not giving that as a matter of opinion on the question what is the right course, but that is a matter of a fact, that all other countries, except England, which I know anything of, and pretty nearly all railway companies, do charge such matters to capital as in India have frequently been charged to revenue.

7459. Do you know whether foreign governments, generally, in raising such loans raise them on the principle of amortisation, on the principle of limiting them to a period of years?—Generally on the principle of amortisation, more or less long, but that principle is by no means uniform. For instance, France has spent a great deal of money on those works to which you allude, which has been raised in the first instance on treasury bonds and then consolidated into perpetual rentes.

7460. On the Continent is the practice by amortisation, to raise the capital, as in this country it has been done, by terminable annuities?—Yes, the practice with foreign countries whose credit is perhaps not quite so strong as that of England, is, generally, to borrow with amortisation; 2 per cent. or thereabout is a very common rate of amortisation, so as to extinguish the debt, if it be a 5 or 6 per cent. debt, in 30 years, or thereabouts.

7461. In the same way that all the debts contracted by municipal bodies in this country are allowed to be raised so that they be extinguished within a definite period?—Yes, certainly. I merely refer to these things in the case of India, as showing a healthy state of finance, because I think that an equilibrium has been maintained, though you have been spending a great deal of money which, in other countries, would be raised by loans, either with or without amortisation.

7462. Do you think, under the circumstances, that it is better to carry on the finance as it has been carried on since 1862, and continue the income-tax to meet these demands, or to carry it on in the way you suggest, and to abolish the income-tax altogether?—I think that the question of abolishing the income-tax in any particular year must be a great deal a question of the circumstances in which you find yourselves at the time. I do not mean to say that I should counsel abolishing an income-tax producing a large sum of money in the face of a large deficit; but I do say, without hesitation, that if I had been responsible for the finances of India in the last Budget for 1872–73, produced by Sir Richard Temple, I should have counselled the abolition of the income-tax.

7463. Is your opinion in favour of the income-tax as a system of raising revenue in India generally?—No, I think it is about as bad and obnoxious a mode of raising revenue as it is possible to imagine in a country like India.

7464. Did you consider when you were in India the various views that arose for and against the income-tax, much in detail?—Of course I did. At that time the income-tax was the great subject of agitation throughout India, having been proposed by Mr. Wilson, and carried in the face of a celebrated opposition by Sir Charles Trevelyan; and, in fact, being a great subject of discussion throughout the empire. My own experience of India being so very short, of course I went mainly by the opinions I could collect from those whom I thought most competent to judge.

7465. What were those opinions generally on the subject?—They certainly left on my mind a very strong impression adverse to the income tax. I think that for an oriental country, and with the eastern habit of mind, any tax which implies inquisition into individual means is attended with innumerable evils, which are comparatively little felt in a country like England. The oriental mind is peculiarly jealous and timid upon all those questions. The tendency to evasion, and even perjury, is perhaps the greatest evil. In the state of the country you have no means of getting accurately at the incomes of any, except the limited class of fund holders and European officers, and so on; for all the others, for the mass of the native population, you have no accurate means of getting at them, and you are obliged to employ a large army of native subordinate officers, who in a case like that are almost certain to abuse their trust, and for every rupee that comes into the Treasury to extort two rupees out of the population that have to pay it.

7466. Have you considered this subject in connection with the alternative which was suggested, I think, by Sir Charles Trevelyan of a license tax?—Yes, I also had to consider the question of a license tax. That was one of the measures proposed. The measure had been prepared and actually passed during the autumn of 1861, when I was at home from illness; and when I went out again, finding that it was possible by reductions of expenditure to establish an equilibrium without the license tax. To Lord Canning's very great delight I was able to propose to him that we should in fact remove the license tax, and do without it, so it never came into operation.

7467. But taking them as two comparative modes of taxation, which did you consider the least objectionable, the income tax or the license tax?—It is very much a choice of evils; if you take a license tax, you to a very considerable extent get rid of that evil of the inquisition and evasion; but then to make a small license tax productive you must spread it over a very wide area, and in doing so you greatly increase the evil; if you go to a license tax of one or two rupees you at once bring in millions of the population within its scope, and you do a great deal of mischief; I do not like either the one or the other; I do not like any form of direct taxation that you can possibly avoid for a country like India.

7468. Do you recollect the result of any inquiries as to the universality of a system of license tax in India before modern reforms of the revenue system in India?—There are very different systems prevailing in the different native states; I think what was very common indeed, was upon extraordinary occasions, such as a marriage in the royal family, or something of that sort, or some political misfortune: for instance, an unsuccessful war requiring a ransom, to assess roughly a sum once for all from all those who were thought rich enough to be able to pay it.

7469. But did you ascertain to what extent the system prevailed in India before the more recent reforms of our administration, of regularly licensing all trades and shopkeepers in all towns and villages throughout India?—I think it had prevailed to a considerable extent in some of the native states, but not under British rule for a great many years.

7470. Did it prevail under British rule until a very recent period of time, 30 or 40 years ago?—At that distance of time I can hardly say; my impression is that there had been nothing like a general universal license tax for a generation at any rate, under British rule.

7471. Do you recollect whether any systematic inquiry was made into that subject as to the nature of the license tax as it previously existed when the question was raised by you in India?—Yes, I think there had been very general and systematic inquiries made as to what would be the probable working and results of a license tax if imposed.

7472. I mean as to what had been the former system?—To the best of my recollection those inquiries to the Governors and Chief Commissioners of the different provinces would bring out the practice in the past as well as the probable results in the future.

7473. Did Sir Charles Trevelyan, as regards Madras, raise the question that it would be better to maintain the ancient license tax instead of substituting a new tax?—Yes, I think he did; I may say that, for my part, I have always thought that it was a misfortune that Mr. Wilson had not decided at that time, immediately after the crisis of the mutiny, when great measures could be carried out which might be difficult in more quiet times; to introduce some form of taxation of tobacco, probably by a Government monopoly of the article, instead of resorting to an income tax. That is mere matter of opinion; but I certainly am of opinion that some form of tobacco tax which might have been a permanent and very productive tax, might have been introduced at that period if Mr. Wilson had adopted it instead of the income tax. But at present, and for the reasons which I have stated, I do not consider that any one of the three alternatives, either income tax, license tax, or tobacco tax is necessary.

7474. Can you state, generally, whether Lord Canning, as Governor General, concurred in the views that you have adopted, and that you have now expressed; or what were his views on the subject?—I know that Lord Canning's view was very strongly against direct taxation for India, and that he only sanctioned the proposal for an income tax very reluctantly from the extreme financial necessity of the time. I know that when I was able to show to him that we were in a position to repeal the income tax upon the lower class of incomes, which we did in 1862, and to abstain from imposing the license tax, he was perfectly delighted, and received the announcement with the greatest possible pleasure, one expression I recollect his using to me, which made a very great impression on my mind when he was referring to the evil of unpopular taxation in India, he said, "Danger for danger; I would rather risk governing India with an army of only 40,000 Europeans than I would risk having to impose unpopular taxation"

7475. In that view have you considered, as a choice of taxation, and it may be said also as a choice of some inconveniences, what the effect would be of increasing the import duties levied in India?—I look on the question of import duties only in this way, as supplying an argument perhaps why we should be tender in this country in forcing unpopular systems of direct taxation upon India, because, no doubt, there is now a rapidly growing public opinion in India, which demands that in financial matters India should be treated with reference to her own interests, and as if she were an independent country. Now, if India were an independent country, there cannot, I think, be a moments doubt in the mind of anyone acquainted with the circumstances, that in preference to imposing an income tax she would increase her import duties.

7476. But do you think that the import duties put upon articles of consumption could be largely increased, without at the same time imposing corresponding excise duties?—I do not say largely; but I have no doubt that India could, perhaps, double her present revenue from customs or import duties by what still would be a comparatively moderate rate of taxation, without going so high, for instance, as France or the United States, or many other countries. I should think, if India had import duties averaging 15 or 20 per cent. *ad valorem* (which would not be an excessive rate, having regard to a great many other countries), she could get the additional one to two millions which might be required from the income tax.

7477. In speaking of this per-centage, are you speaking of import duties upon what are always spoken

Mr. *S. Laing.*

28 June 1872.

spoken of as manufactured goods, such as textile fabrics and the metal manufactures, or are you speaking of articles of consumption, such as spirituous drinks and other matters that are highly taxed when imported into this country?—I should think that if India were an independent country, and were driven on by any great financial necessity, she would probably increase her import duties upon manufactures as well as upon articles of consumption. I should like it to be understood that I am not at all advocating this measure myself; on the contrary, I think the sort of tacit bargain is a very good one, and a very advantageous one for both sides, "If you let British manufactures in almost free, you shall have the advantage of the British connection, and especially that of raising money at four or 4¼ per cent. instead of paying six or seven per cent. for it." Therefore I do not advocate the measure; I only point out that, with a native public opinion growing up, it is a reason why you should be tender in enforcing unpopular taxation by mandates from home adverse to Indian public opinion; that they have the retort against you, "If you leave us to ourselves, and act on Indian interests, we can get the money that you want by taxing Manchester manufactures."

7478. When you say that the people of India ought to have the benefit of raising loans at 4¼ per cent., do you in that mean to express that there should be any special facilities given for their raising loans, or that in fact they get that benefit by their connection with England, and by their ability to raise loans in this market?—That is what I mean; that from their connection with England they are practically getting the benefit of raising money at about 4½ per cent; when if independent they would have to pay a very much higher figure; and, therefore, I do not consider it at all a grievance to India that she is precluded from putting heavy import duties upon British manufactures, I think it is a mutually advantageous arrangement. I merely point that out as a reason to my mind why we ought to be tender in England in pressing unpopular taxation on India, when that is the retort which in native public opinion is apt to arise.

7479. I want to know whether you considered when in India, or have considered since, that a charge of 15 per cent additional upon textile fabrics and other manufactures of an analogous character would operate as in any way a protective duty to foster manufactures in India, or whether it would be in the nature of a mere enhancement of price, not having that operation?—Of course all import duties must have a protective effect where there are native manufactures of the same article; all I say is that if it were a mere question of 10 per cent. or thereabouts, I think it is very probable, if India were an independent country, India would do it rather than submit to income tax.

7480. Have you considered the import duties with reference to articles of consumption, which we do not look on so much as manufactured goods, like wine and spirits and other luxuries of that kind; narcotic commodities?—Yes; the objection to very high duties there is perhaps that the consumption is limited, and that it would affect mainly the class of Europeans who, from the great rise in the price of living in India, with stationary salaries for the most part are not quite in a position to bear it.

7481. Have you considered how far the revenue of India may rely upon the opium branch of it as a permanent source of revenue?—Yes; I had occasion to give that subject a great deal of consideration when I was out in India in 1862, because the cry was very much then as now, that your revenue from opium is very precarious, and that you should not base your financial system upon it; and that was used to a great extent as a justification for imposing direct taxation; in recommending Lord Canning, therefore, to dispense with the license tax I had to consider to the best of my ability what the prospect was of permanence in the opium revenue; and I came to a very clear and decided opinion, on looking back to statistics of that opium revenue for a great many years, that although it was a source of income subject to considerable variations from year to year, yet taking a series of years it was a steadily progressive revenue likely to increase, and no more precarious than any other duties which are founded on the taste of an immense population for artificial stimulants, as for instance, spirits in England. I may say that I ventured then to hazard a prediction that the opium revenue would be found, if you take a series of years, a progressive and not a declining one; that prediction has been fully confirmed, for in the two years 1861 and 1862 the average net receipt from opium in India was 4,941,000 *l.*, and the average net receipts for the two years 1871 and 1872 was 6,921,000 *l.*, or in other words the net revenue from opium in the last 10 years had increased from 5,000,000 *l.* to 7,000,000 *l.* a year.

7482. Have you any suggestions to offer to the Committee respecting the present state of Indian finances, and their treatment with a view of improving their condition, either in income or expenditure?—No. The only practical suggestion that I have to make is, that the authorities at home should be a little more liberal in their view of Indian finance, that they should be guided a little more by public opinion in India, and that therefore, in a budget where an income tax is not clearly required to maintain an equilibrium, they should not insist upon an income tax, or any obnoxious form of direct taxation, being maintained without a clear and manifest necessity. I do not think that I carry it further than that. And also that, of course, strict economy should be maintained in all branches of the expenditure; because, if by economy you can keep your equilibrium without imposing new taxes of any sort or description, that, of course, is the best alternative.

7483. Have you, since you have left India, sufficiently kept under view the details of Indian expenditure to be able to point out any special economy that could be effected in that expenditure?—No; I have always had a feeling that if you have once been in an official position, and are no longer responsible, it is hardly fair to those who are responsible for the figures to express an opinion adverse to them. I can only express generally my belief that with a tight hand presiding over the expenditure, it might be found possible to keep down, at any rate, the 500,000 *l.* a year, which is all you are now proposing to get from the income tax.

7484. Mr. *Fawcett.*] £. 750,000, is it not?—£. 500,000 net, I think; there are the expenses of collection.

7485. *Chairman.*] Did you consider, when you were in India, whether the Secretary of State for India in Council could render much assistance

Mr. *S. Laing.*

28 June 1872.

assistance to the Government in holding vigorous control over the expenditure?—No doubt the Secretary of State in Council in England is the supreme authority; and the greater rapidity of communication, and the telegraph, have of course made a very great difference in that respect, and made his authority much more sensible at all points, and extended it much more widely over details than it used to be, even in my time.

7486. But do you think that the exercise of that authority was carried out so as to materially assist in controlling expenditure, or did it become a mere formal acquiescence in the proceedings of the Government of India?—I should say by no means a formal acquiescence in the proceedings. I should say that at that time the necessity of establishing an equilibrium was felt quite as strongly at home as in India, and every mail brought out from Lord Halifax, who was then the Secretary of State, the most urgent injunctions and entreaties to Lord Canning to do all that he possibly could to diminish expenditure.

7487. Did you find that the large body in London, consisting of the Secretary of State and all the members of the Council, gave that detailed attention to the expenditure, and that minute inquiry into its nature and character, that they were enabled materially to keep in check the expenditure?—I must confine my answer strictly to my own experience while I was in office, and then I should say no, certainly not. I do not mean to say so from any deficiency on the part of the members of the Council here; but we had not the telegraph in those days, the correspondence took longer with Calcutta, the railway was not completed across to Bombay, and the course of events therefore left us to a very great extent masters of all details in India; and I think most of the practical suggestions of economy were made and carried out in India, and not at home.

7488. You did not rely upon the Council sitting in the India Office to take up and examine in minute detail the expenditure with a view of suggesting any diminution of it?—No, certainly not. I do not think that it made the slightest difference to us whether there was a Council or whether there was not one.

7489. What we may understand is, that the communications were in the nature of general reflections and suggestions in favour of economy?—I should say somewhat farther than that, because the large questions of military reduction, which were the largest of all, were questions which could not be decided unless by concert, to a very considerable extent, between the Governor General and the Secretary of State at home, especially questions as to the establishment of a European force to be kept up in India. With reference to that question, I would only observe, generally, that I find the total figure for home military charges which in 1862 was 2,256,000 *l.* had grown in 1871 to 3,525,000 *l.*, and that although the number of European forces in India had largely diminished. I merely make that as a general remark as confirming the impression on my mind, that by rigid economy some saving might be effected; but I am not in a position at all to go into details, or to say that any particular item of that expenditure is undue or extravagant.

7490. Mr. *Bourke.*] Before Mr. Wilson went to India there were large import duties imposed upon almost all textile fabrics, were there not?—No, I think not. The scale of import duties in British manufactures had been, if I recollect right, 5 *l.* per cent., it was raised to 10 *l.* per cent. by Mr. Wilson under the financial emergency of the time, and in the next year Lord Canning and I reduced it to 5 per cent.

7491. But were there not, within some very few years before Mr. Wilson went to India, duties amounting to something like 25 or 20 per cent.?—Not that I recollect.

7492. You cannot tell what the financial result was of duties of that kind being imposed upon British manufactures?—No.

7493. You do not recollect any period that can give you a practical illustration of what the result to the trade of India would be of duties of that kind being imposed?—No. I find, generally, that the customs duties in India have remained very stationary for the last 10 or 12 years, while most other branches of revenue have largely increased; and I have very little doubt, from my general financial experience in other countries, that if it were absolutely necessary to get some increase of revenue, by increasing import duties, it could be done. I do not say that it would be a good thing, but that it would be a possible thing.

7494. You do not recollect whether it was tried in India in modern times?—Not in recent times.

7495. You rather inclined to a tobacco tax, I think you said?—I merely threw that out as a general observation There are great difficulties in the way, from the fact of its being grown in almost every garden in India, and consumed by the peasants I merely say that I think, if at the time after the Mutiny, when there was a great financial crisis, and the country was prepared to submit to anything, Mr. Wilson had adopted a tobacco tax instead of the income tax as a means of restoring the finances, and had introduced a Government monopoly of the article, it is very probable indeed that a large and permanent source of revenue might have been established which, after the country got used to it would not have been very much felt. That is a mere matter of opinion; I do not at all advocate introducing it now.

7496. It is a tax that has been spoken of in India during the last few years, has it not?—Yes, it has often been spoken of. I think now, when there is no pressing necessity for a general tax like a tobacco tax, if it is to be introduced it should be introduced locally and cautiously, perhaps as part of those local budgets which the different Governments are now authorised to make on their own account.

7497. It is a tax that would affect the lower classes of the people as much as the salt-tax, I suppose?—Yes, much the same.

7498. Why do you think that a license-tax is in any way superior to an income-tax?—Simply in this way, that you would have less inquisition into individual incomes Once you had classed a man either as a petty tradesman or a wholesale merchant, or whatever it was in his class to pay so much, there he would probably remain; he would have no doubt in his own mind what he had to pay, and there would be no doubt what you had to levy from him; and although there would be a great deal of vexation and difficulty at first in classing him, and a great deal of extortion by the subordinate native agents in deciding which class he was to go into, yet once in that class there would be an end of it; he would have to pay his money.

7499. But practically the scope for extortion on

Mr. *S. Laing.*

28 June 1872.

on behalf of the natives would be the same as in the case of income-tax, would it not?—Not exactly the same, because in the case of the income-tax, the inquiry might come every year as to what a man's income was, while in the other case they would not be likely to vary the rate. If a man were once classed in the one-rupee class, or in the ten-rupee class, he would probably remain there. But I do not say that there is much difference between the two. I think that all direct taxation is very bad, and a license tax is perhaps only one degree better than an income-tax.

7500. Do you know any municipalities in India that have trust for the purposes of local taxation license duties, that is taxes upon particular trades?—I cannot say that I know the details of any. I have known cases where a locality has formed a committee of a few wealthy inhabitants, and compounded for the income-tax at a certain sum, and then raised it in their own way among their own people.

7501. I have one or two questions to ask you about opium. You say that practically there has not been that variation in the aggregate of the income derived from opium that people suppose?—Yes. There has been variation, but steady progression. I mean if you take it 10 years by 10 years, or five years by five years, the revenue from opium has been very much in India what the revenue from gin has been in this country.

7502. The fluctuation in the price per chest of opium has been very great, has it not?—Yes.

7503. The reason why the fluctuations in the aggregate have not been very great has been, has it not, that Government have taken precautions so as to produce an equal aggregate sum every year?—The Government cannot always take precautions, because it depends upon the accidents of the season very much.

7504. That has been their object?—I have always considered that the true policy (looking at it as a mere financial question) in India in that respect is to get your revenue by producing a large quantity at a moderate price. In that case you are independent of any native-grown Chinese or other foreign opium, and your revenue is securer than if you produce a small quantity at a high price

7505. Have you ever considered the policy when you have a good opium year of putting by the surplus receipt from that good opium year, and laying it up for a year when you have a bad opium year?—I would meet it, I think, very much in this way, I would not so much mind a small deficit in one year if it arose manifestly from a deficiency of opium, because I should feel confident that the next year, or the year after, it would be made up by a surplus. It is a mere question of account, whether you do it by keeping large cash balances, and disregarding a million deficit this year, because it will be met by a surplus next year, or put the million bodily in a reserve fund, and draw against it.

7506. You would meet it by an arrangement of cash balances?—Yes; that is one reason why you should keep large cash balances in India, because the opium revenue is a fluctuating one.

7507. You were asked one or two questions about the financial control exercised by the Secretary of State and the Council here. For practical purposes, in a financial point of view, has the Secretary of State in Council here much to do with the financial policy that is carried out in India?—I cannot speak of what may be the case now, but certainly they have a great deal. Even in my time, when communication was so much more protracted and difficult, one of our most important reductions could not have been made without the consent, or almost the initiative, of the Secretary of State in England. Take, for instance, reductions of the European force in India; we could not send home a regiment under pressure of financial difficulties; if we thought that we could spare 5,000 European troops in India, we could not send them home without the leave of the Secretary of State.

7508. Taking questions with regard to new taxes, or the abolition of old ones, are those questions at all upon which, from your experience, you have received any assistance from the Secretary of State or the Council in England?—I can only speak of impressions, but certainly my impression is that there has been a tendency from home to press on the Government in India the imposition or the maintenance of some of these unpopular direct taxes, like the income tax. If the Government of India had been left a freer hand, under the action of public opinion surrounding them in India, both European and native, my belief is that some of these taxes would not have been maintained; and that they have been maintained in consequence of some pressure from home.

7509. Lord *E. Fitzmaurice.*] In what way would you propose that the tobacco tax, of which you were speaking just now, should be levied?—I have only very vague ideas on the subject, because I have never had occasion to consider it practically. The best solution is not to require either a license tax, an income tax, or a tobacco tax; but my general notion, from what I heard in India, was that it would be in some form of a Government monopoly, as they have in France and on the Continent.

7510. Something like what they have in Bengal in the case of opium?—Dealing with it very much as you do with opium in Bengal, buying it up at a fixed price from cultivators, and then selling it to persons licensed to sell it in towns and villages.

7511. There are two different systems with regard to opium, one in Bengal and the other in Bombay and Madras. Have you given attention to the question which is the best of them?—I think that each is best, probably, under its own peculiar circumstances. The Bombay opium is grown in native states where, therefore, an interference by our Government in detail to buy it up from the cultivators and limit its cultivation, would be more difficult; it can only be exported by land carriage through our territories, and therefore the opportunities for smuggling it out are next to nothing, and by an export duty we attain the result which we want of a large revenue. In Bengal those conditions are a good deal reversed; it is in our own territory and we can buy it up on the monopoly system; on the other hand it is nearer to Calcutta and there is more water carriage, and the difficulties of an export duty would be greater.

7512. A great demand has been made by some people for the Bombay and Madras system to be introduced into Bengal, has there not?—The only demand of which I have heard much, has been from philanthropists, shall I call them, in this country, who upon moral grounds think that if you can get your revenue by an export duty on

Mr. *S. Laing.*

28 June 1872.

on the opium, instead of buying it as a monopoly, you can wash your hands of it and say that as a Government you are not responsible. I do not see much difference between the two, myself, in that respect.

7513. Do you consider that financially there would not be a loss if that system was adopted?—Perhaps by the Bengal system, on the whole, you make rather more; but then you could not enforce it in the Malwa States, and therefore I think the export duty is the best for that side of India.

7514. You stated just now that in arranging the annual Budget you specially consulted the Chairman of the Military Finance Commission, I suppose that is because the military expenditure in India is one of the chief items on which the Budget depends?—Yes; at that time it was specially so. We had, as I stated, a deficit of 5,000,000 *l.* to deal with, and the only chance of producing an equilibrium was by very extensive military reductions: those were all questions of detail on which I had therefore to be coached up (if I may use the expression) by the head of the Military Finance Commission, before proposing anything to Lord Canning, and debating it with him and the Commander in Chief, and the Military Secretary.

7515. That being the case, I suppose, you found that the interference of the Secretary of State in England, to which you just now alluded, is an additional source of difficulty, because the Chairman of the Military Finance Commission in India might see his way to reductions which could not be carried out immediately, or which might even be finally altogether forbidden in England?—Of course if the Secretary of State at home in England were to set his face against reductions it would become difficult or impossible to carry them out.

7516. But is not the action of the Military Commission hampered, in that way, considerably?—I should think you would find that the authorities at home, with regard to military expenditure in India and especially on the native army, would always be favourable to reductions, as far as the Governor General and the authorities in India were willing to take the responsibility of saying they were safe.

7517. Did I not rightly understand you to say just now that it had been found, in practice, that difficulties rather arose from the action of the Secretary of State in England in the matter of reductions and economies?—Yes; I think, no doubt in my experience, difficulties did arise. I think, in some instances, if Lord Canning and the Government there could have had their own way, more especially in regard to the manner in which the fusion of the Indian-European Army with the Queen's Army was carried out, and some other matters, we should have done it in the long run more economically. That is a matter of history now, and a matter of opinion; but I referred rather to the action of the authorities at home, not so much in preventing reductions of expenditure as in preventing the authorities in India, sometimes, from paying that regard to the Indian public opinion which they otherwise would do, in regard to maintaining unpopular taxation. I think that if the authorities in India had been left to themselves they would probably have repealed the income tax before now, and if there had been a slight deficit in consequence (I am very doubtful that there would have been any), they, probably, would have met it by charging some more of the extraordinary public works to capital, and meeting that by a small addition to the loans.

7518. Do you consider that, owing to the action of the authorities at home, it has ever happened that expenditure which ought, in fairness, to have been charged on the English Budget has been thrown on the Indian Budget, because that has been stated in a petition to the House of Commons?—I think that has been done in past times to a very considerable extent. No doubt, in several of the Chinese wars, a very undue and unfair expenditure was thrown on India. I should not like to say that that has been done of late years or under the present administration, because I really know nothing about it in detail.

7519. With regard rather to the Abyssinian Expedition, a considerable share of that expense was thrown upon India, was it not, and that is comparatively recent?—Yes; of course that is a debatable affair.

7520. Do you think that that has caused any discontent in India?—I think that there is a growing feeling in India among the native population, as you may expect where the community are advancing so rapidly in wealth and intelligence, which prompts them to scrutinise very closely and very jealously details of expenditure; and I certainly have heard from people in India that there has been a good deal of feeling occasioned now and then by trifling sums, perhaps, rather than by others of larger moment; for instance, the ball given to the Sultan at the new India Office at the expense of India excited a great deal of comment in India; I do not say whether it was right or wrong; but in little things like that the Government ought to be careful here to do nothing to provoke that feeling.

7521. I suppose that that entertainment, to which you have just now alluded, was considered a very extreme case; though the amount was not all, the principle was important?—Yes; I think it was a thing that gave public opinion in India a text to preach against us.

7522. Do you consider that any portion of the annual military expenditure which is charged upon the Indian Budget ought to be charged upon the English Budget, because that is one of the subjects of complaint in the petition to which I just now alluded?—Not having examined in detail, or being in any way responsible for these charges, I am not in a position to pronounce any positive opinion on that point; I merely adverted generally to the fact just now, that the home charges on the army had increased very largely indeed in the last 10 years; and I think that that circumstance is a matter of a great deal of comment in India; but it may be a perfectly necessary and inevitable and proper charge for ought I know to the contrary.

7523. I suppose that a reduction in military charges would make almost a greater difference in the Indian Budget than anything else; that and the public works are the two main items that would bear reduction, are they not?—The army charge, in respect of that portion of the army which is in India itself, has remained pretty stationary a little over 12 millions, but the home charges have increased, as I mentioned, from 2½ millions to 3½ millions in round numbers in the last 10 years. But I by no means wish to say that

Mr. S. Laing.

28 June 1872.

that that is an improper charge. I have had no opportunity of examining the details; it may be perfectly right and reasonable, and it may arise to some extent from a transfer of charges.

7524. Is there any information or criticism which you would wish to lay before the Committee with reference to the public works in India, that being a subject which has attracted a good deal of attention?—I do not know that there is any special remark that I should wish to make. I think each work must be judged of very much by its own circumstances. I lay down as a general principle that a liberal expenditure on reproductive public works, especially roads and irrigation works is desirable, subject to the conditions of your being tolerably secure that you can carry the work out for the estimates that are given, and that it is a work that is likely to pay in itself. I think your great difficulty is not so much in finding the money as in seeing that you have a sufficient staff of engineers and contractors to carry out those works efficiently and economically if you press them on too rapidly.

7525. But is not that precisely where the public works system in India may be said to a great extent to have been broken down, that there has been no sufficient check on the expenditure, and that public works have been carried at very great expense, and under the name of reproductive works have turned out practically to be unproductive works?—No doubt that has been the case very often; with a limited staff to work, with limited means of carrying out these things, the difficulties owing to the nature of the ground and the climate are excessive, especially in almost all waterworks, and therefore it is a question which deserves great consideration in each case, whether you can rely upon the work being carried out according to the estimates given in of it; still I say that even what has been done has been a great deal better than doing nothing and standing still; and provided that you proceed with caution, as regards the engineering part of the works, I do not think that there are financial difficulties to prevent your finding the money.

7526. You think, on the whole, that if the works were carried out in a proper way, there would be a sufficient appreciation of them in India to make them pay. Take the case of railways; do you think that they would then be popular with the natives, and would be so used as to make them pay?—The railways are, I think, perhaps the greatest reason of all others why India has made such astonishing progress as it has done in the last 10 years.

7527. Still the main results of the railways according to your showing must be indirect results; so far as the figures go they would lead you to think that they do not pay; your view would be that the indirect benefits compensate for any loss sustained from them?—I should say that the country and the Government, as regards its finances, are in a much better position for having laid out some 90 millions at the cost of 2 per cent. now, or 1,800,000 *l.*, a year than if they had held their hands, and done nothing whatever.

7528. Do you, on the whole, think that the system of the Government making its own railways is better than that of the guarantee, or *vice versâ*?—There is a great deal to be said on both sides; in the first place it depends upon whether the Government has got the requisite machinery, and engineering staff, for the work. The failure of many other public works in India, canals, and irrigation, and so on, has arisen from not having a sufficient number of Government engineers; and if you throw on them a great deal of the work of railways, you might only increase that embarrassment. The guarantee system has this great advantage, that if you form a company and get a call of 20 or 25 per cent. paid up on the shares, you may go on and make calls as you want them to complete the work, whether times are good or bad; no matter what political crisis or deficiency there may be in your general Budget, you get your money and carry out the railways; whereas, if they were made by the Government, there would be great danger that in some political or financial crisis you would suspend your works. I think that was felt to a great extent during the period of the Mutiny and the years immediately succeeding it; and the benefit from that was so great that I am not prepared to say that it did not outweigh any superior advantages from the system of making the lines by the Government.

7529. The guarantee system is now practically being abandoned in favour of the Government making its own railways, is it not?—Yes.

7530. Mr. *J. B. Smith.*] I understand you to take a more favourable view of Indian finances than generally exists, and you give as a proof of your opinion that in 1862–63 the interest on the debt and charges amounted to 5,484,000 *l.*, whilst in 1870–71 it had only increased to 5,499,000 *l.*; now does that charge include the whole of the interest upon the debts of India?—Yes, that is the whole net charge, putting on the debtor side all the interest that you pay upon all the debts of India, both in India and in England, and on the service funds and deposits in the hands of the Government, and putting on the credit side some 340,000 *l.* which you have received as interest from balances in hand and otherwise.

7531. Then besides that there are the claims upon the Indian Government for guaranteed rail ways, and for different works of irrigation for which they have borrowed money; that is not included?—That is not included.

7532. Now I think you object to the system of keeping the accounts, and of paying the charges upon the debt and new works which the Government have guaranteed partly out of the revenue and partly out of loans?—I do not say that I object to it, except in this way: I say, if it becomes an alternative of maintaining very unpopular and obnoxious taxes in India for a small amount of money, or charging some of those matters to revenue which are ordinarily considered charges on capital, I would not maintain the taxes for the sake of doing so; I would do without those taxes; I would charge those matters to capital, and in case of need make loans to cover them.

7533. But you do not define precisely what particular branches of expenditure should be taken out of the revenue, and what should be taken from loans; for instance, all ordinary public works, such as the repairs of public works and public buildings, are a class which ought to be taken out of revenue entirely, and not done on loans; is that your opinion?—Yes; I think the line would be drawn very much as a well-conducted railway company would do in apportioning charges between capital and revenue.

7534. Then if the Government undertake public works which are supposed to be of a reproductive

Mr. S. Laing.

28 June 1872.

ductive character, they are justified in making those works out of loans?—I think so.

7535. And would it not be proper under those circumstances to keep those accounts separate, not to mix them with the other accounts?—Yes; I am speaking not so much with regard to the question of accounts, though of course they ought to be kept separate, as with regard to the question of policy. That is a question of degree. I say that I would be a little more liberal in making loans, if the alternative were maintaining a very unpopular taxation. I would not say that you were to make loans to cover palpable deficits of large amounts between current income and current expenditure.

7536. We come now to the state of the revenue of the current year. I do not know whether you have seen the statement of the Finance Minister, but he makes it out that there will be a surplus of about a quarter of a million sterling. Then he says that the accounts have been brought to this condition by what he calls a happy windfall in the opium revenue; and had it not been for that happy windfall, there would have been a great deficiency. I think the windfall amounts to nearly two millions in the opium; I am referring to the year 1871–72; the gain in the opium revenue in that year was 1,845,000 *l.* beyond what was estimated?—In 1871–72 the surplus, excluding extraordinary public works provided for by loan, is 2,700,000 *l.* I say, therefore, that in that year, in which it is attributed to a windfall in opium, the surplus is a very large one, upwards of 2,700,000 *l.*

7537. In that year that you are speaking of, 1871–72, the gain in opium formed three-fourths of the surplus, and amounted to 1,845,000 *l.* Now the year before that, in 1870–71, 1,000,000 *l.*, or two-thirds of the surplus, arose from an unlooked-for increase in our opium revenue. So that he has had two years in which there has been a great windfall in opium; do you think that a Finance Minister is justified in taking for granted that that surplus will continue?—Not to the same extent as in the year 1871–72. No doubt there were accidental causes then which increased the opium revenue beyond what might have been reasonably anticipated; but to a great extent I think he might. I think that the opium revenue, irrespective of what you call the windfall, or the accidental circumstance, has increased and is likely to increase.

7538. But still is it not subject to great fluctuations; in one year, for instance, it was 6,000,000 *l.*, and in another year it was 8,000,000 *l.*?—That is so; but for the last 20 years it has steadily progressed from an average net income of less than 4,000,000 *l.* to an average net income of nearly 7,000,000 *l.*

7539. But the expenditure has kept pace with that increase during all that time, has it not?—Yes; but I am referring specially to the opium.

7540. Now the state of the case is this; with a surplus revenue, according to this estimate, of a quarter of a million, the Government have undertaken very extensive liabilities in what they call State railways. These State railways are said to be made for political objects, and are not expected to make much return. In your opinion is it judicious to borrow money for the purpose of creating these State railways?—Yes, in principle; but if you mention any particular railway, I could give a more confident opinion. If you mean the one up to Peshawur, to connect the north-western frontier at Peshawur by railway with the rest of India, I should say decidedly yes.

7541. Take the Punjaub northern railway from Lahore to Peshawur (that is one of the lines which is contemplated) that line is not expected to pay one farthing?—I do not know on what grounds.

7542. There is not likely to be much traffic on it?—I should doubt that very much. I do not mean to say that it will be a good-paying commercial line, but I should very much doubt there not being a considerable traffic on it.

7543. But on what grounds would you advocate that line?—I think it is a line of first-rate political and military necessity, which may save us millions in army estimates.

7544. But that being so, the question is whe you should make it; should it be made by borrowed money with a revenue such as we have?—Yes, I think so. Railways must all be made out of capital, in other words, borrowed money.

7545. But would you go on making unproductive railways out of borrowed money with a state of revenue such as you have in India?—Each railway, I think, must be judged by itself, by its own circumstances. If you will mention any particular line of railway, I will give an opinion whether I think it is worth doing or not.

7546. The question is whether it will be a productive or an unproductive railway. Is it wise to borrow money on unproductive railways, the interest of which ought to be paid out of revenue, when you have no revenue to pay it out of?—I say, in my judgment, yes, if the line is of first-rate political and military importance, and the amount to be borrowed is not excessive, having regard to the circumstances of the country.

7547. Then there is another railway called the Scinde and Punjaub Railway; there is about 12,000,000 *l.* proposed to be laid out in these railways and they are none of them expected to be productive. As regards the Scinde and Punjaub Railway the result of the expenditure of 15,000,000 *l.* is a return of 11 *s.* 6 *d.* per cent. per annum upon the capital, and it is proposed to lay out many millions there in the same district; and I see by an account in "The Times" of the day before yesterday that the half-yearly report of the Scinde and Punjaub Railway to 31st December 1871, shows that out of an expenditure of thirteen and a-half millions, the net receipts for the half-year are 20,934 *l.* or a return of 3 *s.* per cent. upon the outlay. Now do you think it wise to lay out many millions more out of borrowed money, out of loans, in the same district, with a prospect of the same results?—Yes, I think it wise, whether you get a return for the money or whether you do not, and I am inclined to think that you will get a return on a considerable part of your capital from traffic, but even if you did not get a penny of it, I still say I think it would be wise for the Government of India to extend the line of railway communication from Delhi up through Lahore to the extreme frontier at Peshawur.

7548. And then from Moultan down to Kotri?—Well that is another question. I do not know that I have considered that very closely, that is a question of the cost again, and the circumstances of the time. Probably, I should say yes to that question also.

7549. But are you of opinion that it is a sound principle to go on, without any surplus revenue to increase your expenses?—Yes I do, under the

Mr. *S. Laing.*

28 June 1872.

circumstances of India; I think it is sound policy to make some of those railways of first necessity by loans or guaranteed capital, which comes to the same thing, even although you may anticipate that they will not pay for a number of years.

7550. I think you expressed an opinion that it was desirable to abolish the income tax?—Yes.

7551. Now is it possible that you can abolish the income tax and at the same time increase your expenditure by having to pay the interest upon loans for unprofitable railways?—The income tax is only producing, in this Budget, some half a million a year net, and your charge for the guaranteed interest on railways has only increased in the last 12 years, from 1,500,000 *l.* to 1,800,000 *l.*; and although, looking at the future, that charge will be augmented upon some of these lines, which will not be productive; it will be constantly diminishing by the increase of traffic upon the main trunk lines, which will carry the bulk of the commerce of the country; and therefore I should anticipate that if you go on and lay out another 20,000,000 *l.* or 30,000,000 *l.* in railways, by the end of the time you may not find your charge for guaranteed interest much larger, if so large as at present.

7552. Then you would run the risk of deficient revenue rather than not make those railways?—Yes, I would.

7553. In regard to these railways, you seem to be very sanguine that these railways will ultimately pay. How long do you think we must look forward to before a railway begins to be remunerative?—It depends upon what lines they are.

7554. Take the East Indian Line, that is finished: and there is the Great Indian Peninsula; those are two leading lines?—Well, I should certainly expect that those great arteries of the commerce of the country will pay or even yield a surplus in a very few years.

7555. If there be any railways in India that will ever pay, those are the most likely, because they lead from a port of shipment into the interior of the country, do they not?—Yes.

7556. The other railways, some of them, for instance the Baroda Railway, run alongside the sea, and almost have to compete with the sea: I believe that about one third of all the traffic from Baroda and that district to Bombay is carried by sea, is it not?—I do not know the particulars of that line. I do not mean to say that every railroad that has been made in India has been made wisely or well, but I say that the result of making railways in India, on the whole, has been beneficial to the country, and has given an immense stimulus to production, wealth, and civilisation in every possible way.

7557. There is no doubt, I suppose, that India itself has very much profited by the introduction of railways or any means of communication, such as roads or canals; and that therefore it is desirable to extend those. The only question is whether it is desirable to proceed with those unproductive works until the state of your revenue is such as to afford it?—That is a question, of course, of discretion in each case. I appeal to experience and to results, and I say, without hesitation, that India is very much better off now, more wealthy, prosperous, contented, and with a larger revenue, and in every respect better off for having expended some 90,000,000 *l.* sterling in making these railways, even though there is a deficit on them of 1,800,000 *l.* a year, than she would have been if she had gone on the opposite policy and spent nothing. Countries which have carried out that principle so strictly that they will spend no money, and will not make any loans for purposes essential for progress and civilisation. Countries, for instance, like Persia, shall I say, do not seem to me to be the most happy and progressive communities. On the contrary, many of those countries like Italy, Russia, Hungary, and other countries, where a great deal of money has been raised, more perhaps than many might think was prudent, but which have raised money largely, and laid out the money on railways and other appliances of civilisation, are countries in a state of rapid progress; and, I believe, that the future of those countries is much more hopeful than the future of a country like Persia, which has a certain sum of money, I believe, lodged in the treasury, and no national debt.

7558. There can be no question of the desirability of extending public works in India, especially reproductive works; but the question is whether it is wise, with a deficient revenue, to proceed with unproductive public works until your revenue is in a better condition; you seem to think that it is worth the risk to do so?—I say that it is all a question of the particular work. You cannot very well give an abstract opinion. The only one to which I have directed my mind particularly, and on which I do give an opinion is that Peshawur railway; I certainly think that that is worth making.

7559. It is said that this railway is a very difficult railway, and has to cross a great many rivers; it is a railway, I believe, that is made entirely for political objects; now is that a very secure railway, supposing that any mutiny or anything of that sort were to break out in India, where your bridges might be destroyed, and your whole communications cut off?—No, but it is a great deal better than no railway at all; and that line is a most material element in the security of India, not only against mutiny, but against those vague political alarms of what Russia may be doing on the other side of the Himalayas, which, if you do not take reasonable precautions, may involve you in very heavy expenditure some day or other.

7560. Mr. *Dalrymple.*] With reference to the opium traffic I wish to ask a question suggested by some evidence given last Session; do you consider from your observation that there is any reason for saying that there is the native mind in India any amount of disapproval of our interest in the opium trade?—I never even heard it suggested.

7561. Mr. *J. B. Smith.*] I will just read you one paragraph of the speech of the Finance Minister of India upon this late Budget; he says, "The State income fails to evince that elasticity and that tendency to rapid growth which we might desire to see, and which would be looked for if the requirements of progress in the expenditure are to be met." Would you still retain your views, would they remain unaltered after hearing this quotation from the Finance Minister's speech?—Of course I have read that paragraph in his speech; I know from the figures what the progress of Indian finance has been, I can only say I do not agree with him.

7562. Mr. *Beckett Denison.*] In your view of the progressive increase of the revenues of India, have you taken the trouble to analyse the details of the increase at all so as to form a decision in

Mr. S. Laing.

28 June 1872.

your own mind whether that rate of increase is likely to be continuous or not?—Yes, I have generally.

7563. With reference to the net revenue of India, do you place any limit to the amount to which you think that it would be prudent or desirable to incur an annual deficiency to be covered by loan rather than impose obnoxious taxes of small yield; taking the revenues of India at 48,000,000 *l.*, or whatever the amount is, is there any limit to which you think it would be prudent to take that course?—I think you must deal with the circumstances of each case, and of each year by themselves, as to the extent to which you would go in raising loans, for instance, as regards that railway which I mentioned to Pershawur, I would certainly raise the money by loan to carry through that work with reasonable dispatch, whether in a particular year your surplus or deficit were a little more or a little less, but I do not mean to say that I would go on in every year raising 5,000,000 *l.* or 10,000,000 *l.* in the face of a chronic deficit.

7564. Five million pounds or 10,000,000 *l.* is a very large amount to raise?—Still I would raise 5,000,000 *l*; I would raise 10,000,000 *l.* by loan in any one year; I would raise it to-morrow if you could show me works of primary importance in a political or military point of view, or almost certain to be reproductive, which are simply waiting for that amount of money to be laid out; because whether you spend it in this year or spread it over the next 10, if you have to spend it, and you can raise the money at a moderate rate of interest now, you may as well do it at once.

7565. You give precedence in these public works, I suppose, to railways and tramways rather than to irrigation works of doubtful importance?—Certainly, if they are of a doubtful character as to the return.

7566 You know the character of irrigation works in India?—There have been some very beneficial irrigation works; I think that Great Ganges Canal in the North Western Provinces save those provinces from a great calamity in the time of famine when I was out there, I must repeat that I think every work must be judged of on its own merits and from its own circumstances, you cannot give an abstract opinion as to what you ought to carry out.

7567. Have you paid any attention of late to the details of working expenses in the management of Indian railways?—I cannot say that I have closely.

7568. With reference to your opinion that the amount of revenue recouped from railways would be larger each year, do not you think that the enhanced price of materials and of coal, and of everything which goes to make up the working expenses of railways in India, will have a prejudicial effect upon that return?—That may affect it for a short period, but I certainly do not look upon the enormously enhanced price of coal just now as a thing likely to be permanent; you may have it just the other way; probably after a period of prosperity in speculation you will have a crisis, panic, and collapse, and then for two or three years you will have prices as much below the average as you now have them above.

7569. But it is the fact at the present day that the western railways of India are fed by coal from Europe, is it not?—To a great extent.

7570. Have you any opinion to offer to the Committee as to the manner and the economy of drawing bills upon India for the services of the Home Government?—No, I do not think I have.

7571. Have you any opinion to offer as to whether the present mode is economical or extravagant?—You mean by offering a certain number of bills for tender?

7572. Yes; fixed amounts?—No, I have no decided opinion; I do not know that my attention has ever been especially called to it.

7573. When you were in India, had you ever reason to complain of the large amount of money kept here in London, in balance?—No, I think not.

7574. You know, as a matter of fact, that the amount is very large?—Yes, there is a large balance at present, I think.

7575. There is a question just now exciting a good deal of attention, and that is the connection of the Government of India with the Presidency banks of India. Have you any opinion to offer to the Committee on that subject, as to the expediency of the continuance of the connection, or the reverse?—I think in my time the advantages of that connection rather preponderated, for we had to introduce a system of paper currency, we had to abolish the old cumbrous system of escorting treasure about the country, and I should say that then the advantages of the connection preponderated over the disadvantages. Whether the circumstances have changed materially now, or whether there is that multiplication of banks that without any direct connection of the Government with any one of them you could get all your objects attained, I am not quite prepared to say, but my own impression is, that where you issue a paper currency through the agency of the bank, some sort of connection like that between the Government here and the Bank of England is, on the whole, desirable.

7576 Not only desirable, but almost absolutely necessary, is it not; how is the work of a great Government to be carried on without some sort of connection like that of the Bank of England here with the Government?—I suppose it would be possible to get other banks to undertake it now, but I do not think it would be desirable.

7577. With that feeling of security which you think now attaches to the operations of the Bank of Bengal you would not think such a change desirable?—I think it would be undesirable to make a change; it would cause a shock and would unsettle people's minds for a time, and it is always a great pity to do that in a country like India without a great object to be gained.

7578. In what manner would it be possible to manage the issue department of the notes in circulation of the Government of India, except through the medium of a bank?—It would be very difficult and inconvenient to do it without using the agency of a bank; but I suppose it is possible to do it, to dissolve all connections with the Bank of Bengal, and advertise for tenders; and then the Bank of Bengal might get it in their private capacity, or the Oriental Bank, or some other bank might undertake to do it, and make arrangements, but I do not see any advantage to result from that which would at all counterbalance the disadvantage, as I say, of unsettling people's minds. I think that the fewer changes you make the more conservative you are in a country like India, unless for some clear and important object the better.

7579. You are aware of course that the circumstances connected with the Bombay bank have

Mr. *S. Laing.*
28 June 1872.

led Parliament to the expression of an opinion that the continuance of the connection of the Government with the local banks is undesirable?—Yes.

7580. Do you share that opinion?—No; I think that the advantages of the connection with the banks, on the whole, outweigh the disadvantage; and with proper precautions and after the warning afforded by the case of the Bank of Bombay, I do not see how the Government are likely to sustain any great inconvenience.

7581. Mr. *Eastwick.*] I suppose you would not be of opinion that the connection of the Government with the banks should go so far as to have Government directors or that the Government should hold a large portion of the shares in them?—No; that is a different question; I do not know that there is any necessity or advantage in their holding shares or having more connection than you have between the Government and the Bank of England here.

7582. With regard to the railways something was said about the price of coal rising, and the western railways being dependent on coal from England; but is it not likely that the coal which has been discovered in the Central Provinces and elsewhere, may be made available for these railways?—Well, I should hope so; I should think there is a fair chance of it from the reports I have read, but I do not know anything of that beyond what I gather from reports.

7583. We have had some discussion about the opening of the Central Provinces to the sea by the Godavery River and the canals there; do you look upon that as a valuable undertaking?—Yes; I think it is a question there mainly of the reliance you can place upon the engineering estimates. Can you be quite sure you will attain the object, and if so, at what cost. If you are sure that you can attain the object, and attain it at a moderate cost, I should think it would be a great benefit to the country.

7584. Have you considered at all what is the reason of the sudden stop in the receipts of the railways in India, which seem rather to have gone down?—No, I am not aware of any very special reason; to a certain extent, on the East Indian Peninsula line leading down to Bombay, the diminution in the quantity of cotton going down might account for it.

7585. It has been stated by one witness as his opinion that it would be very desirable that the Government should purchase the railways as opportunity offers; do you concur in that view?—That involves the very large question whether, in a country like India, it would be worth while trying the experiment of greatly reduced rates for the benefit of the country, even at a certain loss. I am not at all prepared to say that it is an experiment that I should recommend to be carried out; I think, from what I have heard, that the means of carrying the traffic would have to be considerably enlarged before you could hope, if you resorted to very low rates, especially for goods transport, that you would be able to carry the bulk that would be offered for transport, and, of course, unless you could carry the bulk of the goods offered for transport, the reduction of rates would result in a great loss to yourself, without any great benefit to the community; but it is a very open question; I think there is a good deal to be said on both sides.

7586. You would consider, would you not, that there are some classes in India that it is impossible to reach in the way of taxation at all; the rich Banyans, for instance?—Yes, no doubt that is so; it is one misfortune in the circumstances of India, that you cannot so readily reach the rich people by an income tax as you can in this country.

7587. You have considered, I suppose, the question as to how these classes could be reached; have you thought, for instance, of a tax on marriages?—No, I have never had occasion to consider any of these alternatives very closely, because, at the time when I was responsible for the finances of India, we met the difficulty by economy without the necessity of fresh taxes; and I think that India is now in a position in which the necessity is not sufficiently urgent to call on the Government to devise fresh taxes.

7588. Do you think, then, that if the revenue is to be placed and kept in a satisfactory condition, it is rather to be done by economy than by imposition of fresh taxes?—As I told the Committee, in my opinion there has been a practical equilibrium for the last 10 years. The annual charge of the debt has not increased; the last year of which we have completed accounts there was a large surplus; the year of which we have got the Budget, I think there might be a surplus even without the income tax, if the opium had been taken at a moderately reasonable estimate; and in that condition of things I do think it would be a pity to unsettle the native mind, and create jealousy and suspicion, by devising any taxes without a much more clear and apparent necessity than I see at present.

7589. You do not consider that there is any great danger, with regard to the opium revenue, from Persia; of course you are aware that opium is produced in Persia of a good quality, and that they are exporting it to a certain extent, and that in ancient times there was a considerably greater production of opium in some of the provinces of Persia?—I have heard that a certain quantity of opium has come from there for the last 20 years, certainly; a little came in my time, more than 10 years ago, but the quantity was small. I find there has been a steady progressive increase in the consumption of Indian opium in China going on for the last 30 years; and I know no reason to doubt that that progressive increase will continue.

7590. Supposing that there was a prospect of a very large increase of opium cultivation in Persia, that you think would be dangerous, I suppose, to our opium revenue?—Yes; but I think the case is very remote and hypothetical; and then I think that by going on the policy which I have always advocated, of a large production of opium in India at a moderate price, we might defy competition, or at any rate we could keep our own.

7591. Do you think it desirable that our paper currency should be considerably extended in India, compared with what it is now?—I think it should be left to the natural operation of supply and demand; I would not do anything to force it.

7592. Do you think it is desirable that there should be an attempt made to bring, or that the Government should determine on bringing, the coin into identity with that of England: for instance, the rupee into identity with the two-shilling piece, and introducing the sovereign?—That is a very large and difficult question. The inclination of opinion in my own mind, as I said

just

Mr.
S. Laing.
28 June
1872.

just now, is to be very conservative as regards India, and make no changes, while it is in this transition state, which might excite suspicion, or alarm without a very clear advantage, or rather necessity for doing so.

7593. Sir *D. Wedderburn*.] I think you said that you did not consider that the Indian opium revenue was more precarious than that derived from any other monopoly depending upon the popular taste for some article of general consumption?—Yes.

7594. But surely this revenue has the peculiarity of being derived from a monopoly enjoyed at the expense of a foreign nation over whom we have no legitimate control?—That is so; but the demand for opium in China is a demand as constant and irresistible as the demand for gin in this country; it has existed and gone on increasing regularly for the last 30 or 40 years.

7595. I have no doubt of the steadiness of the demand; but what should we do, supposing the Chinese, by a regulation of their own, were to resolve to exclude our opium, or to develop the growth of opium within their own territory?—The consumption of Indian opium in China came into existence and developed itself to a very large quantity under that state of things when the import of opium was prohibited in China. Now that prohibition is at an end, and I do not apprehend any chance of its being renewed.

7596. I think we enforced the termination of that prohibition, but I doubt whether we should attempt to do so again, supposing that the Chinese Government were to prohibit its importation?—I believe that nearly the same quantity would be smuggled in to-morrow if the Chinese Government were to prohibit it again as is now imported under free trade; the consumer would pay more, but I think that India would get nearly the same money.

7597. On the other hand, supposing that there is a development of the growth of Chinese opium (as I believe it is rapidly developing), would not that very seriously diminish our income from opium?—There has been home-grown opium in China for a great many years. There was plenty of it in my time, 12 years ago; but if we go on the policy of keeping the supply of Indian opium pretty large and the price moderate, I do not see any likelihood that the Chinese native-grown opium would gain ground upon ours. We have not found it to be so by experience. Opium is a product of very peculiar quality; they tell me it is almost like the Bordeaux wines, that opium grown on a particular soil has a particular quality, that the Indian opium is very much adapted for the taste of the Chinese consumers, that even in the same open market they may be getting a thousand or twelve hundred rupees a chest for Indian opium when native opium is not worth more than 400 or 500 rupees a chest.

7598. That is due, is it not, to the careful supervision of the manufacture of opium, and to the fact that we allow no adulteration of it?—Yes, partly that, but it applies also to the Malwa opium on which we levy an export duty and which is not manufactured under our supervision.

7599. You have said that if India were an independent nation and had to raise a sum to meet a deficit, that sum would undoubtedly be raised, not by an income tax but by an import duty. You also added that you considered the benefit derived by India from the connection with this country, in the way of borrowing money at a cheap rate of interest, compensated India for being obliged to admit our goods at a very low rate of import duty. Did you intend that to apply to the Government merely, or to the Indian people generally?—I intended it to apply to the whole population generally.

7600. Then do you consider that the people of India benefit in any marked degree by being able to borrow money cheaply to invest in works which do not bring in any return, and the interest on which has to be paid for out of general taxation?—Yes, I think that the people of India benefit greatly by being able to raise, for instance, the 100,000,000 *l.* which has been expended on railways in India at 5 per cent, instead of paying, as Turkey and other countries have had to do, 10 per cent.

7601. But should we ever have borrowed that immense sum for India, had it not been for the cheap rate at which we were able to borrow; would it not have prevented a great deal of the extravagant expenditure upon unremunerative works, had we been obliged to pay a higher rate of interest?—Yes; but it would probably have prevented still more the wise expenditure on productive works.

7602. Again, would not a moderate import duty upon British goods tend to restore and to develop native manufactures, which have been nearly extinguished under the present system?—I do not believe much in a protectionist policy myself: at the same time, there is no doubt that if India were governed by a native Parliament, you would have a certain amount of protectionist argument for that, and it might make that view more popular.

7603. You also stated, I think, that a vigorous native public opinion was springing up in India; have you any practical suggestions to offer as to how the Government might benefit by that public opinion, as to the amount and character of the taxation necessary to be laid on to meet present difficulties?—I think that by far the most urgent demand of that native public opinion just now, is to relieve them of the income tax; and as I have said, if I were responsible for the finances of India, I would meet that public opinion by relieving them of that tax.

7604. And would you be prepared to consult that public opinion in any official manner, supposing it were practicable, as to the imposition of import duties?—No; because I do not think myself that there is any sufficient necessity for imposing import duties. I do not think public opinion in India requires import duties unless you force it on them as an alternative for the income tax. I think it would be very unwise to do so, and I would rather meet it by abolishing the income tax at a time when it seems to me that you do not require it, and when you could balance your Budget without it.

7605. And that the money now obtained by the income tax could be saved by economical administration?—It is only a question of about half a million, and certainly my belief is that if the estimates of revenue, especially opium, had not been made purposely low to justify the maintenance of the income tax, you could have met that half million without it. I believe that the actual result of the year of which we now have the estimates will show a surplus of quite the half million which is provided for by the income tax.

Mr. *S. Laing.*

28 June 1872.

7606. Mr. *Beach.*] I believe that there is a prejudice entertained in India against any new tax, is there not?—Yes.

7607. And that is less entertained against a tax, such as the land revenue which has existed for a long period?—No; that is taken as a matter of course, very much as the payment of rent in this country.

7608. Have you had the question brought before you of the redemption of the land revenue?—Yes, I have heard it considered generally; I have not had much to do with it.

7609. You do not consider it an advantageous process to redeem the land revenue of the country, do you?—No; for the Government with a view to raising revenue in future, I suppose that on the whole the best system is that of long settlements, but subject to a revision after a period such as 30 years. That is the system which has been very generally carried out there.

7610. And then generally, if the country is prosperous, there is a rise at the period of the new assessment?—Yes; you give a man a long enough settlement to make him feel like an owner, and encourage him to improve his property, but you have a break after a long period, such as 30 years, when the State may benefit by an increased rental.

7611. Where the land revenue has been redeemed, that should properly have been carried to capital, should it not, and not brought into the year's expenditure?—Yes; that would be so if it were redeemed on anything like a large scale.

7612. There has been some redeemed, which has been brought from time to time into the annual expenditure of the country in former years, has there not?—Yes, I should think it probable that there has, but the amounts have been small.

7613. There has been no authoritative expression of opinion to prevent the redemption of the land tax up to the present time, has there?—I may perhaps be excused answering; I have not had occasion to look very minutely into the existing aspect of the land question.

7614. Is there much pressure upon the Central Government for money to be advanced for works in each separate presidency?—Yes; no doubt each separate presidency wants to get as much money as it can to spend on works of improvement, which has been met to a great extent now by assigning them certain sums, and letting them make their own local budget, and spend their money in their own way.

7615. It is necessary to keep up a considerable staff in each locality to execute these works, is it not?—Yes.

7616. Does the existence of that staff, do you think, render them more ready to spend money; that is to say, does it render them anxious to employ the staff which is kept up, and make them therefore spend more money than they would do otherwise?—No, I should doubt that; I think, hitherto, perhaps, the difficulty has been the other way, that the staff have been limited, even to carry out the works which have been undertaken; therefore there has been no want of employment for the officials, especially the higher officials who might have influence, and they have had no motive to multiply work in order to find employment for them. I think it is much more the natural desire of improvement in the country; that every Chief Commissioner in his own district naturally wants to see it go a-head and prosper; wants roads and improvements made, and therefore wants to get as much money as he can to make them.

7617. Do you approve of the system of keeping a different head of expenditure under the head of extraordinary works?—Yes.

7618. Does it not form rather a plausible excuse for borrowing?—Yes, but I advocate borrowing for extraordinary works, so that it be to a moderate extent, and for works of really national importance.

7619. But, under the head of extraordinary works, there is rather a tendency, is there not, to exclude those from the expenditure of the year, because it would be easy to borrow money to provide for them?—Wherever you have what you may call an open capital account, there always will be a tendency to carry charges from revenue to capital account; it is the business of the men at the head of affairs to see that the line is drawn judicially, neither too far on one side nor too far on the other.

7620. Is it the duty of the Finance Minister of India to supervise that, and guard carefully against an undue amount of money being carried to the capital account?—I should say that it is the duty in the first place of the Finance Minister for the time being in India; it is the duty of the Governor General in Council to supervise him, and it is the duty of the Secretary of State here, I suppose, to supervise them all, and see that there is nothing glaringly and obviously wrong, while at the same time he does not interfere much with details.

7621. Mr. *R. Fowler.*] May I ask for how many years the Chinese have cultivated opium?—Well, I only know this, that when I was in India 12 years ago, our people were just returning from the expedition to China, that during the war some of them had been in the country, and that above Hankow they saw large fields of poppy growing, and that on inquiries which I made then of persons who had been practically connected with the opium trade, they told me that there had been a very considerable native growth of opium in the upper provinces of China as long as they had known anything of the trade.

7622. And it is your opinion that the Chinese never can grow enough opium for their own consumption?—Not I think of the best quality, not of the quality that they want, and for the supply of that extensive population in the coast provinces where they grow none at all.

7623. But the superiority of the Indian opium is owing to the great care taken in preparation. Would it not be possible for the Chinese to prepare it in a similar way, and have it as good as the Indian?—I believe myself that soil and climate have a great deal to do with it, climate especially; that the poppy is a sort of garden plant, and you must have settled fine weather at the time when it is coming out in flower, and then in collecting the juice. There are only comparatively few provinces even in India itself, where you could grow the poppy to any great advantage. You must have a good deal of cheap labour also in order to collect the juice in minute quantities day by day from the plant; and on the whole my impression is that India has a natural advantage over all the rest of the world.

7624. Then you think that there are no provinces in China which could produce opium in the same way as Behar or Malwa?—I doubt there being extensive provinces.

7625. The climate and the soil are not so favourable

Mr.
S. Laing.

28 June
1872.

favourable as Indian opium producing provinces you think?—I should fancy not from all I have heard, and more especially the climate; and in fact, I have heard that it is only grown in a few parts of China. In the great valley plain above Hankow there is a great deal grown, but not in the more rocky and mountainous parts of China, or in the coarser alluvial soil towards the sea, and where the monsoons are not so regular and you are more exposed to gales of wind or rain during the flowering time of the poppy; there it is not grown.

7626. I understand your opinion to be, that owing to the great superiority of the climate and soil of India for producing opium, that is a revenue which we may safely reckon that it may increase, but that it is not likely to diminish?—Yes; I find that it has been going on steadily progressing for 30 years, and it is progressing at this day; it is theoretically possible that the Chinese might give up opium, just as it is theoretically possible that the English will give up gin; I believe that we shall see the one as soon as we see the other.

7627. Is it not the fact that the Indian Government do everything in their power to discourage the use of opium among our own subjects in India?—No, on the contrary, there are some excise establishments through which it is sold; they may view it with a certain amount of moral disapprobation, and prefer that they did not take it; beyond that they do not attempt to interfere; on the contrary, there is a large native consumption in many parts of India.

7628. But we do not push the consumption on our subjects as we do on the Chinese?—I do not know that we push it in any case, beyond producing the supply for meeting the demand; if a large demand came for opium for internal consumption in India to-morrow, it would be met; it is met through our excise or abkari establishment now; we do derive a revenue of, I suppose, 200,000 *l.* or 300,000 *l.* a year at least, from opium sold in India itself.

7629. I suppose a century ago the Chinese did without opium?—I do not know what it is, but there seems to be something in the Chinese organisation that gives them a peculiar taste for opium; in the same town like Penang or Singapore, where you have a collection of different nationalities, you will find the Malays sticking to the betel nut for their nervous stimulant, you will find the Lascars and British sailors taking arrack or rum, and you will find the whole Chinese population in the place taking opium.

7630. But it is a taste which has grown up among the Chinese in the last century, has it not?—My impression is that there has been some native cultivation of opium even for a longer date than that.

7631. I believe in Warren Hastings' time we only exported 200 chests to China?—It was little in amount, but my impression is that the use of the native drug must have existed in China for a very long time.

7632. Still in the last century it has enormously increased?—Yes.

7633. Mr. *Fawcett.*] You have quoted certain figures to show that there is not a very great increase of liability because the charge for interest on debt has not increased; you are aware, of course, that the capital of the debt has very greatly increased during the last 10 years?—I do not call it greatly increased; of course, I am aware that the capital has increased somewhat, but I look upon the indebtedness of the country as measured by the annual charge for interest.

7634. We will not quarrel about the word "greatly," but can you tell me what the debt was in 1861–62, and what it is at the present time?—In 1861 the total in India was 101,877,081 *l.*; in 1869, which is the last year given in the book before me, it is 102,866,189 *l.*, it is increased one per cent, or one million pounds in 10 years.

7635. What was it in India and what in England?—In 1861 the total in India was 71,901,000 *l.*, and in 1869 it was 71,168,000 *l.*, a small decrease; in England in 1861 it was 29,926,000 *l.*, and in 1869 it was 31,697,000 *l.*

7636. Your argument would go to show that there has been a considerable reduction in the rate of interest?—There have been reductions in the rate of interest.

7637. Of course you are aware that an Act has been passed allowing trust-money to be invested in Indian securities?—Yes.

7638. When was that Act passed?—I do not recollect.

7639. About 10 years ago was it not?—I should think so.

7640. Do not you think that that has had something to do with reducing the rate of interest?—No doubt it has.

7641. And do not you think that it has created a feeling amongst the English people and also amongst the European inhabitants of India that it to a certain degree renders England if not legally, in some way morally responsible for the debt?—Where there is no legal obligation it is always difficult to say what might be the amount of moral obligation; of course it is a very hypothetical question what we should do in the extreme case of anything happening to our Indian Empire.

7642. But if the most authoritative statement was made which possibly could be made that England considered herself in no way whatever responsible, in spite of that Act which was passed, that if we lose India to-morrow, we should not consider ourselves responsible to pay a farthing of the debt, do not you think that that would produce a great impression on the English mind, and that that statement ought to be made in the most authoritative manner possible?—No; I do not think it would. I think that the English public have invested in Indian securities because they have faith in the duration of our Indian Empire, and think that we never shall lose it, unless things are so bad here than probably Consols would not be much better.

7643. You will admit that if we are responsible for the payment of debt to the English fundholders, supposing that we lost India, the best thing would be at once to raise money upon the security of English revenue, and in that way save a considerable amount to the Indian people?—I do not think that we are responsible for that debt, certainly not legally; and whether we should be morally or not, is a question that I think could not be answered till the time came when it was put. I should doubt the advantage of what you suggest.

7644. Do not you think that one evil result of that Act being sanctioned by Parliament is to give an idea, as it were, that if not directly responsible, we are in some way indirectly responsible; and that, in consequence of that Act, it would be very much more difficult to resist the claims of the English holders of Indian debt, in

the

Mr. *S. Laing.*

28 June 1872.

the event of our losing India?—No; I do not believe that it would make much difference. The state of circumstances under which the default would be made on that Indian debt must be one so totally different from any now existing, that I think it impossible to say beforehand what would occur.

7645. During the year that you were Finance Minister in India can you tell me how much was raised in loans for public works; that was before the classification of public works ordinary and public works extraordinary, was it not?—During the time that I was Finance Minister there was no money raised by loans for public works; all the public works, with the exception of railways under guaranteed interest, were made out of revenue; there was a very great financial pressure then, and we were doing no more than was absolutely indispensable.

7646. In fact you stopped the public works for a time, as far as you could?—We limited them as far as we could without great damage.

7647. Are you aware that in the years in which we have borrowed money for public works, it is utterly impossible to prove from the Indian accounts that the money which has been so borrowed has been spent as capital?—No; I am not aware that it is so.

7648. Are you aware that none of the accounts in India are kept in such a way as to show precisely and accurately what is the return upon any public work?—No; I am not aware of that.

7649. You would admit, with your great commercial experience, that if you were borrowing money for public works or for purposes of capital, unless you can show that that borrowed money has been elevated to capital and not to the purposes of ordinary income, unless the accounts show that, they are absolutely worthless?—The accounts ought to show of course the fact how the money has been expended. I do not see any difficulty in the accounts being kept so as to show that.

7650. But the accounts of India do not show that; and I want to obtain your opinion, as a commercial man, whether, for instance, it is not the first thing, that you look into in examining railway accounts, and unless you could discover it from the accounts you would say that no reliance could be placed on them. If you were called upon to investigate the accounts of any railway company, if they had been borrowing year after year, one year a million, another year two millions, another year three millions, and so on, you would say, would you not, "Unless the accounts show what has been done with the borrowed money, it may happen that some portion of that money has been devoted to purposes of income, and that you have been paying dividend out of borrowed money; unless you can prove that the money so borrowed has been devoted to purposes of capital, no reliance can be placed on your accounts"?—Of course the accounts ought to show distinctly what has been charged to capital and what has been expended on capital; but as regards India, what I say is, that whatever you have done with this money, the accounts show that your debt has not increased, and, therefore, I say that for the last 10 years you have not been getting behindhand.

Tuesday, *2nd July* 1872.

MEMBERS PRESENT:

Mr. Ayrton.	Mr. Fawcett.
Mr. Beach.	Lord Edmond Fitzmaurice.
Mr. Bourke.	Mr. Robert Fowler.
Mr. Stephen Cave.	Mr. Hermon.
Mr. Charles Dalrymple.	Mr. Lyttelton.
Mr. Beckett Denison.	Mr. M'Clure.
Mr. Grant Duff.	Mr. John Benjamin Smith.
Mr. Eastwick.	Sir David Wedderburn.
Sir James Elphinstone.	Sir Charles Wingfield.

THE RIGHT HON. ACTON SMEE AYRTON, IN THE CHAIR.

Mr. SAMUEL LAING, re-called; and further Examined.

Mr. *S. Laing.*

2 July 1872.

7651. Mr. *Fawcett.*] I UNDERSTOOD from your evidence last time, that your figures show that the interest of the debt had only increased by 100,000 *l.* in the 10 years between 1861 and 1870, and at the same time you stated that the capital of the debt had increased in a still smaller proportion, only by about a million. How do you account for that, considering that there has been a decline in the rate of interest in India?—I think I stated that the net amount of interest payable in India had not increased at all, or only by some 20,000 *l.*, during the 10 years, not by 100,000 *l.*

7652. But the whole interest on the debt has increased by that amount, has it not?—No, I think not.

7653 Has not the interest payable in India and England?—No, I think not.

7654. Have you the figures?—The net amount of interests of all sorts and descriptions payable by India in 1870-71 is 5,499,000 *l.*; in 1862-63, it was 5,484,000 *l.*; so that there is only an increase of 15,000 *l.* a year.

7655. Then there was borrowing in some of those years between 1861 and 1870, was there not?—Yes, certain amounts were borrowed, and certain amounts were repaid, resulting in a small increase of the capital of the debt; but, owing to the reductions of interest and other causes, the net amount of interest had remained practically the same.

7656. I daresay your attention has been directed to the fact, that in India the value of the exports always greatly exceeds the value of the imports?—That is so.

7657. That may be regarded as representing the permanent position of trade between India and England?—Yes; it is the permanent position of trade, the balance being adjusted in different ways, partly by the necessity of making large payments on Government account in India, and partly through the operations of transactions between India, England, and China.

7658. At the present time the exports of India are about 52,000,000 *l.*, and they consist chiefly in useful commodities, such as cotton, jute, and other articles?—Yes.

7659. The imports into India do not exceed about 28,000,000 *l.*, and that consists partly of specie, to a very great extent of material which is purchased by the Government, of commodities which are consumed largely by the European population, and to, comparatively speaking, a very small extent of commodities consumed by the general body of the Indian people; is not that the case?—Yes, if you exclude bullion; with regard to commodities which enter into the consumption of the Indian people that is so, except piece goods and salt; those are two articles which enter largely into the consumption of the Indian people, and are largely imported.

7660. Would it not be correct to state that the difference between the value of the exports from India and the imports into India, which now amounts, I think, to the sum of about 20,000,000 *l.*, represents the tribute which India annually pays to England?—No, I think not; I should not call it a tribute where there is a balance of trade of that sort between two countries. There are many other countries which are in the same condition of exporting considerably more than they import from one particular country, and the balance of trade is adjusted either by other payments which have to be made, or by transactions through third countries, or finally by remittances of bullion.

7661. But is it not one of the best ascertained financial or economic principles, that the exports of a country must equal its imports plus its liabilities?—Of course, in the long run, a nation cannot go on exporting more than it imports and discharging its foreign liabilities without the remittances to meet the difference being made in bullion. That, in course of time, causes an accumulation of bullion in the country, which tends to enhance the price of commodities in the country, and by so doing to limit its exports and increase its imports, and so the thing comes to a condition of equilibrium.

7662. But does not this 20,000,000 *l.*, or the difference by which the value of the exports exceeds the imports, represent a certain amount of useful commodities which India is obliged to send to England in order to discharge her liabilities to that country; those liabilities consisting in part of the pensions, salaries, interest on debt, and the general cost of administering India in England. Does not that, with some accuracy, represent the price which India has to pay, either for the advantage or the disadvantage, whichever it may be considered, of English rule?—I should say that

Mr. *S. Laing.*
——
2 July 1872.

that India, by those large exports, pays for a great many things which are exceedingly useful and necessary to India; for instance the interest on the capital for making her railways; again, the expense of the European army for preserving order, instead of being paid entirely in India, is a considerable part of it paid in England. So I should say India has value received for the payments made in England.

7663. *Chairman.*] Will you allow me to read to you the figures which I have before me in the Statistical Abstract from 1861 to 1870. In 1867, the imports were 42,275,000 *l.* and the exports were 44,291,000 *l.*; in 1868, the imports were 47,128,000 *l.* and the exports were 51,527,000 *l.*; in 1869, the imports were 50,943,000 *l.* and the exports were 53,706,000 *l.*, and in 1870 the imports were 46,880,000 *l.* and the exports 53,513,000 *l.* You will see that instead of 20,000,000 *l.* it is nearer 2,000,000 *l.* or 3,000,000 *l.*, which is the sum payable in the way of interest on loans and other charges in this country?—The 20,000,000 *l.* was the figure given by the honourable Member for Brighton which I understood to be the balance of exports and imports of one particular year exclusive of bullion.

7664. In 1860 the imports, including bullion, 40,600,000 *l.* and the exports were 28,800,000 *l.*; in the next year there was an exact equality, 34,000,000 *l.* one way and 34,000,000 *l.* the other?—Yes. All that I meant to say was that I thought the normal state of trade in India was that there would be an excess of exports over imports, taken merely as commodities; but that had to be balanced, partly by the payment of liabilities in other countries and partly by an import of bullion; that the tendency, perhaps, formerly had been more towards a drain of bullion to the East; there were great apprehensions about that some years ago; but that now things have settled down more to the condition where that drain of bullion is reduced to very moderate proportions, the balance being adjusted by the payment of liabilities in England.

7665. Mr. *Fawcett.*] Still these figures would show that there is a very steady import of bullion into India, would they not?—Very large.

7666. *Chairman.*] For the last three years the figures are these: the imports of treasure for 1867 was 13,236,000 *l.*; for 1868 it was 11,730,000 *l.*; for 1869 it was 15,149,000 *l.*, and for 1870 it was 13,954,000 *l.*?—Yes.

7667. In 1866 it was 26,500,000 *l.*; it was 22,962,000 *l.* in 1864, and it was 20,508,000 *l.* in 1863?—Yes.

7668. Mr. *Fawcett.*] Of course it is owing to this large import of bullion that there has taken place a depreciation in the value of the precious metals in India?—It is one cause, of course, why things generally have risen so much in price throughout India.

7669. Have you made any estimate of the rise in prices that has taken place in India during the last twenty years?—I have only made, very roughly in my own mind, an estimate that, taking a population of 150,000,000 in British India, probably the rate of wages, taking them all round, may have risen, on the average, something like 25 or 30 per cent., and the price of living and of most commodities in the same proportion. I think that there is no instance that I know of, of a country on that enormous scale which has been so rapidly enriched and has made such immense improvement in material condition as India has done since the Mutiny.

7670. Have you considered at all the subject of local taxation?—Yes. At the time when I was in India and responsible for the finances, I believe that I originated, I may say, that idea of throwing part of the expenditure and giving part of the receipts to local governments, so that they might have a local budget for local objects.

7671. You suggested the idea which has been lately carried out, as to this decentralisation scheme of public works?—Yes; I think, in my speeches, in introducing the Budget at that time in India, you will find that idea laid down and recommended.

7672. Do you think that the new local taxes that are imposed under this scheme will be brought so much under public notice as the Imperial taxes which are imposed?—Possibly not in this country, but in the localities in which they are levied I should think they would.

7673. But not in this country, you think?—No; I mean it is hardly a question of large enough importance to attract attention in this country, whether a chief commissioner in some particular district levies a cess for making roads, in one way or another; it is not like a large question of income tax or taxation on imports; but in the locality itself, I take it it will attract as much attention.

7674. You probably remember two letters which you wrote, about two years since, to "The Times" on the subject of Indian Finance, in which you expressed yourself very strongly as opposed to the income tax as a tax entirely unsuited to the Indian people?—Yes.

7675. Did you not in one of those letters go so far as to say that the intuitive dislike of the Hindoos to have any inquiry into their incomes made, led some of them to commit or threaten suicide?—It made a great impression on me. I recollect that some reports were made to Lord Canning's Government at the time when I was there, and when we were considering the propriety of repealing the license duties and the income tax on small incomes below 500 rupees; there certainly were some reports which mentioned cases of suicide, which were attributed by the local authorities to excessive dislike of the income tax, or rather of the inquiries occasioned by the income tax.

7676. In those letters you made some very distinct and definite proposals as to the manner in which the financial interests of India were sacrificed to the influence of the Home Government, and you employed the significant expression (I looked and got the exact words): "The finances of India are constantly being sacrificed to the wishes of the Horse Guards, and to the exigencies of English estimates." Are you still of that opinion?—I think that they have been in past times.

7677. Then the conclusion which I draw from that expression of opinion is this, that if the finances of India are sacrificed to the exigencies of English estimates when the head of some department in England is hard pressed for money, he throws some charge on India which ought more properly to belong to England?—I think many instances of that may be found in the past. I am not prepared to say that in the Budget of the present year it is so.

7678. But still, at the time when those letters were written, you expressed that opinion as suggesting a remedy to improve the financial position of India; and therefore you supposed that up to that time the finances of India had been more or less

less frequently sacrificed to the wishes of the Horse Guards and the exigencies of the English estimates. Could you give me any instances of this sacrifice?—Of course that was notoriously the case to a very large extent in some of the Chinese wars. Whether it was so in the Abyssinian war, I am not prepared to say, for I have not looked closely into the accounts; but if anything was charged to India for the Abyssinian war, I should say that that was another instance of it. Again, of course it is a matter of opinion of mine, but I think that the amalgamation of the local European army with the Queen's army was forced on India, against the opinion of the majority of the local authorities connected with India. I think it was a measure forced from England on India, and I am inclined to think that it was a cause of increased expense. But these are matters of history now, and they are matters of opinion on my part.

7679. But still I suppose we have introduced no change of system, or anything which will prevent the occurrence in the future of that which has happened in the past, with regard to the finances of India being sacrificed in this way to the exigencies of English estimates?—I think so. I think that the growth of public opinion in India has been a very efficient check upon anything of the sort being done.

7680. But what you want to check that is, is it not, the growth of a healthy public opinion in England towards India?—Of course, if you have a healthy public opinion in both countries, so much the better; but I think from the proximity of India to England now, and the close relations into which so many people are thrown by the multiplication of railways and the increase of trade, you are much more likely to have a healthy public opinion on that subject in England. I think it would be much more difficult, for instance, to have charged half the cost of the Abyssinian war to India, than it was to charge half the cost of some of the Chinese wars to India.

7681. Do you recollect one instance of this sacrifice of India to England; do you recollect the transactions connected with the Alexandria and Malta Telegraph?—Yes, I think I do; I recollect a guarantee being given for that telegraph, a guarantee jointly, I think, by India and England.

7682. But the result of that was, that India was made to bear a portion of the expense of this undertaking against the remonstrance of those who represented her?—I think so, but I have rather a vague recollection of the particular circumstances just now.

7683. But is there not a danger that India will be always thus unfairly treated, considering the little interest that is taken in India in England, and that the person who represents the interests of India, and who has to fight for her interests is only one of a Cabinet of 15 or 16, the remaining members of the Cabinet, of course, being axious to do that which will make them popular in England. Is not that the real danger?—I do not feel much afraid of that now, because I think that there is a very extensive and healthy public opinion on the subject. If India has any just cause of complaint, the English press discusses it fast enough. These discussions on the Indian income-tax have occupied a great many columns in all our leading English newspapers, and I think, on the whole, the tendency of public opinion of late years in England, is much more to do what is just and right towards its dependencies, and not to take any advantage of them.

7684. But that is hardly a case in point, is it; the discussion on the income-tax is simply a question of theoretical taxation on which England has no interest; but the point that I have to put to you is this; at the present time, if the interests of India and England are in conflict, if, for instance, it is a question whether India shall pay a certain charge, or whether England shall pay a certain charge, have we any greater security than we had two years since, that the interests of India will not be sacrificed to the exigencies of English estimates?—Yes, I think that you have much greater security than you had formerly, because, as I say, you have an intelligent public in England now who know enough about the matter to form a public opinion to influence the Government. I mention that case of the income-tax which formerly nobody knew or cared very much about; newspapers cannot write leading articles on subjects that nobody cares about; but now you will find that there is a sufficient amount of interest in what India considers a grievance, and agitates about, to attract attention in England.

7685. Sir *C. Wingfield.*] I wish to call your attention to your reply to Question No. 7488; the question was, "You did not rely upon the Council sitting in the India Office to take up and examine in minute detail the expenditure, with a view of suggesting any diminution of it?" and your answer was, "No, certainly not. I do not think that it made the slightest difference to us whether there was a Council or whether there was not one." The question I wish to put is this: I presume that the Government of India would know nothing of the proceedings or views of the members of the Secretary of State's Council, unless those members should chance to dissent from a measure ordered by the Secretary of State, and their dissent should be published?—That would be so; and my answer is intended to have reference only to the particular state of things when I was in India, that was a state of great pressure and emergency; the correspondence was by no means so close or intimate as it is now; and, as a matter of fact, I do not think that in those reductions any action of the Council made any difference to us.

7686. Your answer, I presume, is not at all intended to imply that there is no use in a Council, but merely that you could not distinguish between the Secretary of State and the Councillors in their communications with you?—Certainly, very far from that; on the contrary, I should say that the action of the Secretary of State, which is an important one, is to a certain extent guided and enlightened by his Council, and, therefore, if he comes to a right decision he is all the better for having had a Council.

7687. As far as the Government of India can judge, there may be complete accord between the Secretary of State and his Council?—Yes; I merely mean that in making a budget, in details of expenditure, and so on, especially where it is a matter of pressure and urgency for a time, I doubt whether you could find that the Council here could interfere much with details and suggest minute measures without doing mischief if they attempted it.

7688. Before you went to India, you no doubt had full and intimate communication with Lord Halifax, and when you arrived in India you were looked upon by the Government as the exponent

Mr. S. Laing.

2 July 1872.

of his views on all financial measures, were you not?—Yes, to a great extent.

7689. This, of course, gave even additional weight to your representations?—No doubt.

7690. And also, when you went to India, there was great scope for military reductions, because the military establishments were still, not entirely, but partially on the high mutiny scale?—Yes, no doubt it was so; consequently the military reductions carried out then were on a much larger scale than anything that would be possible now.

7691. You have not, I suppose, now considered minutely how far further reductions are possible?—No.

7692. You were mentioning just now, in reply to Mr. Fawcett, that in the matter of the amalgamation of the armies, if Lord Canning and the Government of India had had their way, the amalgamation would have been carried out more economically?—I think, in the first place, it would not have been carried out at all; and in the second place, admitting the necessity of its being carried out, I think it could have been carried out more economically.

7693. I think that in that case a large number of members of the Council of India recorded minutes which were strongly in accordance with the views of Lord Canning, and in favour of a local European army?—Yes.

7694 With regard to an income tax, supposing that a very high rate of incomes liable be fixed, so that it would affect only a class who at present contribute very little, the wealthy mercantile class, your objection, of course, would be very much less to such an income tax as that?—Of course the higher you make the limit, the less is the objection, because you limit the number of persons affected by it very greatly.

7695. And it would be very desirable to bring under taxation those wealthy traders who, unless they own land, really contribute scarcely anything to the public burdens?—But then the question is, if you so limit it, will you get a sufficient sum of money to make it worth while incurring the unpopularity of the tax with those who are the most influential classes.

7696. You mean that you must go low to make it draw?—Yes; as we see, for instance, in Sir Richard Temple's last Budget, where he exempts incomes below 1,000 rupees a year; the net produce of the tax is then reduced to about half-a-million.

7697. There has been a very sensible reduction of the income tax, as you have just observed, and a large number of persons have been relieved of it; but concurrently with this reduction of the income tax, local taxes have been imposed by the local governments; for instance, the education cess in Bengal, one-half of which has to be paid by the cultivator; rates on land in the North Western Provinces, Oude, and the Punjab, which will fall on all proprietors; a tax on the incomes of the non-agricultural rural classes of the Bombay Presidency, when those incomes amount to 50 rupees; so that thousands are really brought now under taxation who never paid income tax, I might say hundreds of thousands?—Yes; that may be the case.

7698. Therefore a reduction of income tax, so far from being a relief to the many, has rather been the signal for imposing new burdens upon them?—But then in the local taxation, I should think, as a general rule, they get full value for their money in local benefits.

7699. But do you think that it makes a tax more palatable to the people that it is imposed by a local instead of the Imperial Government; and do you think that the people at present sufficiently appreciate the objects on which these taxes are expended to induce them to contribute cheerfully?—I should say so; for some objects, and in some localities, certainly they do. I have known a great many instances where I have been told of the natives voluntarily acquiescing in local taxation for the object of roads or tanks for irrigation. As regards education, I am not so sure about that; I think it is very probable there that the Government may be ahead of native opinion.

7700. And is there not also this danger in local taxation, that measures affecting a particular province such as Oude or the Punjab, or the North West Provinces, where there is little or no independent European or native opinion, are much less likely to attract attention and publicity than similar measures of taxation which affect all classes of the empire?—Yes, that may be so; but my impression is that as a general rule the local taxation would only be imposed for very useful objects, and where the persons in authority, and immediately responsible for the tranquillity of their provinces have reason to believe that they would not be extremely unpopular.

7701. On the other hand, has there not been always a great desire on the part of provincial governors to signalise their administration by some great works?—By improvements, certainly; I have no doubt that is one of the incidents of our British rule in India; it is administered by a number of superior men in the different provinces, each of whom is wishing to distinguish his administration by giving an impulse to improvement and civilisation; in doing that his rule is perhaps not always so acceptable to the natives as if he were to sit still and let them go to sleep and do nothing.

7702. But is there not this danger also that in his desire to make these improvements he may be led into imposing unpopular taxes?—No doubt; and therefore each case must be judged by itself, and weighed on its own merits; you want a man of tact and discretion who knows how to draw the line between the stagnation which perhaps the natives themselves might desire, and pushing on too fast.

7703. There is a danger, is there not, that such measures of taxation are more likely to be carried through in a high-handed manner in spite of their unpopularity by a local government than would be possible in the case of measures brought to bear on the whole Empire, and in face of an enlightened public opinion in the Presidency towns?—Of course there is always some danger where you give power to local authorities of its being abused; but if in order to guard against the remote and possible danger of that power being abused you attempt to centralise everything at head-quarters in Calcutta, I believe you will run into a very much greater danger.

7704. You said in your former evidence, "If the Government of India had been left a freer hand, under the action of public opinion surrounding them in India, both European and native, my belief is (I do not know whether it is right or wrong) that some of these taxes would not have been maintained, and that they have been maintained in consequence of some pressure from home;" now I wish to ask, is it not the case that the local taxes have latterly been imposed in in the face of very strongly expressed opposition from

Mr.
S. Laing.

2 July 1872.

from public opinion, both European and native, and that their discontent has found vent in numerous petitions addressed to the Secretary of State against the proceedings of the Government?—I am not aware that the local taxation has produced anything like general discontent. I am aware that questions have been raised in Bengal especially, under the perpetual settlement as to how far the zemindars will object to local taxation or not; but with that exception I am not aware of anything like general complaint.

7705. Are you not aware that petitions have been addressed to the Secretary of State from Calcutta, Allahabad, Bombay, and Madras against recent measures of local taxation?—Yes; but now-a-days I do not attach so much weight to petitions of that sort, because India is brought so very near to Downing-street, and there have been so many instances of reversals of decisions taken in India, that it seems to me the most natural thing in the world that anybody dissatisfied with decisions taken in India should take his chance of appealing to Downing-street.

7706. Have you not heard that Lord Mayo said, in a Minute written about a year before his death, that it was impossible to exaggerate the danger of the discontent produced by our incessant measures of taxation of late years?—I understood that to have reference more to the income tax. My own impression, right or wrong, is that the income tax in itself has caused ten times more discontent throughout India than all the local taxes put together.

7707. But the great increase of local taxation that I have referred to has only taken place within the last two years or so?—Yes; I still am of opinion, from all that I have seen of the expression of Indian public opinion, that the income tax has been by far the most unpopular, and it is the one to which most opposition is directed; and I would observe, as regards these local taxes, that if any particular tax is very unpopular in a district, many of these districts now have their own legislative councils, and their means of expressing an opinion; and that influence brought to bear upon the local government and the Governor General will, I have no doubt, secure redress for anything that is really wrong or oppressive.

7708. For instance, a tax on the incomes of the non-agricultural rural classes of 50 rupees; that goes considerably lower than an income tax ever did before?—Yes.

7709. And therefore must be felt to be still more oppressive than the income tax?—Well, I believe the circumstances of India are so extremely different in different parts that that is the great argument in favour of local taxation. Many things, which if you apply them universally throughout all India would be unsuited for a great many places, and produce much discontent, may on the other hand be very well suited for other places, and be carried out without discontent; and I think you may try a number of very useful and interesting experiments in the way of taxation on a small scale; and if you have made a mistake, you may easily remedy it, and that on the whole it will excite an amount of public opinion and agitation on these questions which, though it may be rather inconvenient to us as a governing nation, is, on the whole, very useful as a means of educating a great nation like the Indian people.

7710. Do you concur in the opinion expressed by Lord Lawrence in a Minute that the people of India are very impatient of taxation, except of the peculiar kind to which they have been accustomed?—Yes, I think so.

7711 I wish to ask you some questions on the subject of borrowing money. I observe from the Calcutta money market that the 4 per cent. loans of the Government of India are quoted at 101; might one not infer from this that money might be borrowed in India in the same way that it used formerly to be borrowed, by inviting small subscriptions to a loan at as low a rate as it now is obtained at in England?—No, I should doubt your getting any considerable amount while the rate of interest is so very low as 4 per cent.

7712. But if the 4 per cent. loan commands a premium in the Calcutta market would not that lead to the conclusion that people will lend their money at 4 per cent. or a little over?—Not necessarily; because the price in Calcutta is regulated entirely by the price in London; they know by telegraph, the same day, the quoted value of any India stock in London.

7713 You assume that it is a European market then rather than a native market?—Yes, I think so.

7714. But it would be, would it not, politically very advantageous if we could get some of our loans taken up in India, and thereby give the people an interest in the stability of our Government?—Yes; but I do not see how you are to attain the object unless by raising the rate of interest very much higher than you need otherwise. You must wait till wealth accumulates and the rate of interest has come down in other securities.

7715. Would there be any objection to try and open a loan in India as we used to do in former years, when we got money in the way of which I have spoken?—I do not know that there would be any objection, except that I do not believe you would get much money; and a financial operation which fails is always rather adverse to the credit of the Government.

7716. Mr. *Cave.*] The income tax is unpopular on account of its novelty as well as for other reasons, is it not?—I do not know that it is the novelty alone, because they have had the income tax now, since Mr. Wilson's time, for more than 10 years; at least during the greater part of that period they have had the income tax. I think it is more from the character of the orientals, who are very suspicious of anything like inquiry, and extremely jealous of any idea of ascertaining what a man's income is. That is one great reason. The other is the difficulty of working it through native officials, who are very much inclined to extort money and to work on the fears of the population.

7717. It has been stated that if, instead of being levied on individuals it was levied on communities or towns, it would involve less discontent and be more easily collected; what is your opinion on that?—Then you must leave the collection to some native committee formed in the district itself, and you have no security in that case. If the men who form the committee are good men, and liberal minded men, they may perhaps assess it better than the Government officers would do. If, on the other hand, they are disposed to favouritism, to spare themselves and their own class and relations, and have no pity for the poorer classes, it may work much more oppressively.

7718. You think that they would have too much power in their hands for good or for bad under

Mr. *S. Laing.*

——

2 July 1872.

under such a system?—I should be afraid of that considerably.

7719. You were talking about local cesses just now. Is it your opinion that local cesses ought to be levied for the various objects enumerated, education, roads, and so on, in those places where there has been a permanent settlement?—Yes, I think so.

7720. You think that it is something quite beyond the objects for which the permanent settlement was made?—Yes; I think that if the man who holds under a permanent settlement is in the position of an English landlord that is as good a position as he can fairly expect to be in; or an English landlord, say, with his land tax redeemed. You have no right to increase that specific assessment, but I think that he may be fairly subjected to such local rates as the landowners in England and other countries are for purely local objects from which he derives a benefit in his own locality.

7721. Especially if it is a manifest benefit to him among others in the locality?—Yes. There are many of those local objects of which it is difficult to trace the benefit home to the man; I mean it need not be for a road to his own estate, but it is enough if you make a road through the district, or if you establish a good local police and local schools; in fact very much the same class of objects as are carried out in England by local taxation.

7722. And as a matter of fact such improvements have increased the value of property, have they not in India?—I should say so, immensely.

7723. And therefore those who pay these local cesses, in addition to what is paid under the permanent settlement, are better able to pay both than they were formerly able to pay one?—Yes. It is, of course, a matter of discretion in each case; you must not carry that principle so far as to make it apparent that you are throwing on him what is purely Imperial taxation; pretty much as in this country there are certain expenses which are evidently local and paid out of local rates; and there are others which are Imperial. As long as you can draw the line pretty much as you do in this country, I think you have the right to levy that local taxation.

7724. You may, of course, levy so much that a man's daily life may be made much more intolerable, for the sake of future benefit; that you would not recommend?—You must be careful not to go too far, because the Indian public are impatient of taxation; probably, if you were to consult their wishes, they would rather stand still than pay this local taxation; therefore you must not hurry them too fast and impose this local taxation on them too rapidly, even for useful objects.

7725. That impatience of local taxation for local objects is not confined to India, is it?—No; still I fancy it is stronger in India than it is in this country.

7726. You perhaps know that in this country those local authorities are subject to the greatest unpopularity, who are the most improving in the way of drainage and other purposes, which the locality often very much requires?—These things are all questions of degree; still I think you may assume that most Indian communities would be satisfied with a less amount of those improvements than an English community would, rather than pay for them; but where an English community would rather pay and have the water or the schools, the Indian communities would rather not pay, and go without them.

7727. Now, is it the fact that the road cess falls entirely upon the ryot, half indirectly and half directly?—Of course it is always a question, where part of a tax is imposed on the landlord, how far he recoups himself in the rent.

7728. In such a case, as it is very often done in England, it is settled in the rent?—Yes; I suppose that, probably, in the long run the laws of supply and demand bring the rent up to the point that people can afford to pay, and therefore, in the long run, it falls on the tenant in paying higher rent.

7729. *Chairman.*] If he can afford it?—Yes. In Scotland, where local rates have generally been paid by the landlord, the landlord has been, I should say, a good deal more than recouped by the higher scale of rents.

7730. Mr. *Cave.*] Would you say that the expenditure, generally, throughout India has had the effect of very much increasing the prosperity of the country and the rate of wages paid for labour?—Enormously; both the scale of wages, on that immense population, and the value of property of all sorts and conditions, have risen immensely since the Mutiny.

7731. You would say that in all cases of expenditure for such purposes, whether wise or unwise, the question is one rather of degree than principle?—Yes, I think so. I think that the Government of India is very much more a question of tact and ability on the part of the men who administer it than one of the application of broad general principles.

7732. You may go so far with your improvements as to be a bankrupt before you reap any return from those improvements?—I should hardly say bankrupt financially, but you may make yourselves very unpopular in India if you go on too fast.

7733. Therefore you would say that all that is required is great care in each individual instance, so as not to go so far and so fast as to be oppressive and unpopular with the people?—Yes; I should say that we have gone on extremely well in India for the last 10 years, and that our object should be to go on pretty much as we have been going on, exercising tact and discretion, and not doing things that will be unpopular without a clear necessity for them.

7734. *Chairman.*] Do you think that the distinction, with regard to local expenditure, between India and this country consists in this, that in England the people from long habit look to the local authorities and to local opinion as responsible for what is done in their district, and for any inconvenience or taxation that they suffer; whereas in India the people hold the Government responsible for everything that happens, whether done by local authorities or not, and decline to recognise any other responsibility or authority but what they call the Government?—I should rather doubt that being the case; I think in India the tendency was rather the other way, to look to the man in authority in the district as the great man and supreme ruler; no doubt that may be diminished somewhat by the facility of intercourse by railroads with Calcutta; but even now I should think that a man in the Madras Presidency, where it is a question of local taxation, looks to the chief commissioner of his district and then to the Madras Government, quite as much as he does to the supreme Government at Calcutta.

7735. I did not use the phrase the government as representing any particular action of government;

Mr.
S. Laing.

2 July 1872.

ment; but the view of the natives is to consider everyone engaged in the government as part of one great whole; they do not enter into the question as to whether it is a collector or a council or the Government of India, but to their mind it is the government, and they hold that government responsible; is that your view of the subject?—Of course they have not the same faculty for self-government and self-reliance as we have in England, and therefore they look more to the man at the head of affairs; I merely meant to say that they look to the local authority very much, and that a great man in the position of Lieutenant Governor or Chief Commissioner by personal intercourse with leading natives, and so on, very often induces them to accept cheerfully what might have been unpopular if forced on them in an arbitrary manner without explanation.

7736. I meant that the people in this country entirely discriminate between what are called local authorities and what is called Her Majesty's Government as regards responsibility for what is done in a district?—Yes.

7737. Mr. *Grant Duff*.] You are not under the impression, are you, that the re-imposition of the income tax by Lord Mayo's Government, or its maintenance, all this time, was in any way caused by orders from home, because something in your evidence made me think a little that you were?—I go a little upon the passage that I find in Sir Richard Temple's speech where he lays great emphasis upon the fact of the course which he takes about the income tax having the approval of the Secretary of State.

7738. Supported from home; but the initiative in all cases came from Lord Mayo's Government?—Well, I suppose so.

7739. Mr. *Beckett Denison*.] In Parliament, last year, in the discussion in the House of Lords, you are aware that the present Secretary of State for India, as well as one or two ex-Secretaries of State, did give their opinion that it was politic to keep the income tax at a low figure in times of peace, with a view to its expansion in days of necessity?—Yes, that is so.

7740. Do you share that opinion yourself?—No; I have stated that I do not. I think that there has been a tendency at home, on the whole, to take rather too desponding a view of Indian finance, and to look too much, perhaps, at applying principles which would be perfectly good at home. I do not carry it any further than that. I think that has had some weight upon the minds of men who were responsible in India for finance; and I think that all these discussions, and this public opinion, may very likely have one good result, which is that of leaving men in India free to act more on Indian opinion, in which case I do not believe the income tax would be found advisable or necessary.

7741. Do you know any other tax that could be imposed that would equally catch the European population and the wealthy capitalists among the natives?—No; I do not know any tax which you could depend upon as catching the wealthy natives. It is so very difficult, in native society, to know whether a man is wealthy or not. It is not, as it is in this country, where you know from a man's position and standing, and establishment, pretty well whether he is rich or poor. In India, you have not that clue to it.

7742. Do not you think it is of importance, when you are imposing taxation, that the European population should not be exempted from taxation?—Certainly they should not be exempted. On the other hand, I do not think it is desirable that your European community should have a feeling of soreness, as knowing that they pay the income tax correctly, while many natives who may have ten times their wealth are not paying so much as they are.

7743. *Chairman*.] Do you ascribe any political advantage to showing to the natives of India the sense of justice of the British Government in imposing a tax upon British-born subjects in India?—Yes, I think it is of the greatest importance to show that sense of justice in our rule; it should be made apparent; it is the corner stone of our whole system in India.

7744. Do you think in that point of view that the income tax, if it did not touch persons of small incomes in India, might be regarded as politic?—No; I think as long as you have an income tax it would be extremely impolitic to exempt any class of Europeans who would come under it; but I do not carry that so far as to say that you must impose a tax which is unpopular with all alike merely in order to show that Europeans bear their share of the burden.

7745. But supposing that, instead of its reaching so low as it does now in India, we had the same principle as is adopted in this country, and drew the line at the same point as we do in this country, do you think that would be a reasonable proceeding?—It would diminish the objection; but still I think a great objection would remain, because you would be getting a very minute sum indeed by a measure which, at the best, would cause a great deal of unpopularity. You still would have an inquisition into the incomes of the natives, which are very difficult to get at, and which would be unpopular, especially with the wealthy, and therefore the more influential class, and you would have a feeling of soreness and injustice on the part of your European officers, that they were made to pay fully while so many of the wealthy natives escaped with impunity. I would not do it without necessity, and I do not see the necessity.

7746. Assuming that the line were drawn as in this country at a sum which exempts all the working population and persons of small incomes, would there be any difficulty in collecting it, or in seeing that the persons of larger incomes did pay the tax; do you think that there would be any opportunity for them to escape payment?—Yes, I think it is exceedingly difficult in a country like India to know who among the natives have large incomes and who have not. In this country, as I said just now, men who have got large incomes, either have them in investments which you can reach at the fountain head, or they live in a certain style from which the assessors of the tax can conjecture more or less their income. That hardly applies to India, I have been shown men in the street in India whom I could hardly distinguish from beggars, and have been told that they were worth millions of rupees.

7747. Mr. *Hermon*.] In collecting the income-tax in India, is it done in the same manner as it is done here; that is to say, are the natives called upon to make a return of their incomes in the first instance?—That was so in the first instance when it was first imposed, and then it was found so excessively difficult and unpopular that in my time the original assessment was adhered to.

7748. Have you any idea what per-centage, so to speak, of surcharge, was made by the assessors on those returns so made by the natives?—I think

Mr.
S. Laing.

2 July 1872.

think it was a very random proceeding. I have talked with the Commissioners in Calcutta, who were charged with levying the income-tax there where you might suppose it was easier than in the more remote country localities, and they have told me that they really had no clue at all, that it was a most haphazard proceeding.

7749. But would the assessors look upon one return out of ten as being authentic or correct?—No, I do not suppose they would.

7750. Mr. *Beach.*] We had one recommendation last year in favour of a succession duty. In your opinion, would that be a duty feasible to be levied in India?—I have never had occasion to consider a succession duty very closely. It is a question which must be decided by the authority of people who have had a very long experience of Indian manners and habits. What I say is, that as matters stand now in the finances, I do not see the necessity for any of these taxes. I think they would have a most prejudicial effect. If you are to continue any of them, I am inclined to think that the income tax as you have got it, and limited to high incomes, might be better than trying experiments; but I am very much averse to having any of them.

7751. Mr. *J. B. Smith.*] You were asked a question about the imports and exports; now the imports of a country should include specie imported as well as merchandise?—Yes.

7752. And the merchandise and specie added together make up the total amount of the import, do they not?—Yes.

7753. In the same way, the merchandise and the treasure exported make up the total amount of the exports?—Yes.

7754. Now, do you consider the difference between these two sums as a tribute paid by India to this country?—No; I said, in reply to the honourable Member for Brighton, decidedly not.

7755. Is it not the fact that England pays for everything that she receives from India in one shape or another; for instance, England supplies her with an army and navy for defence; the payment for that cannot be called a tribute, can it?—No; I think India gets value received in things which are useful and necessary for her in return for every pound of export which she sends to this country.

7756 If India was not protected by England, she would be obliged to incur a great expense in armaments for her own protection, would she not?—No doubt.

7757. And do you think that, under any circumstances, the people of India would receive a like amount of security for person and property under any other rule than under the English rule?—No; I think no country has probably ever made such rapid progress on such an enormous scale as India has done under British rule in the last 10 years.

7758. Has not that progress arisen from the safety of person and property?—Yes; the enormous increase in the value of property is owing mainly to British rule, which gives security for life and property.

7759. Then it is not just to say that because India exports a larger quantity of produce than she imports the balance is a tribute paid to the English people?—I think distinctly not; I think there is the broadest line of distinction between a balance of trade in that way and tribute, such as Holland, for instance, levied on Java.

7760. Mr. *Fawcett*] Is not the difference between a tribute and money paid in the ordinary transactions of commerce this, that if India, for instance, buys Manchester goods, it is entirely within her discretion whether she buys them or not; she buys them because she wants them; whereas a great portion of the money that she sends to England is to pay for things, whether they are for her good or not, about which she has never been consulted, and the payment is compulsory; is there not a difference between those two cases?—That must always be the case where the government of a country is not constitutional. In every government which is essentially an absolute government there must be a large expenditure for useful and necessary purposes which has not been directly sanctioned by any vote of the representatives of the people.

7761. But still the distinction that I want to draw is this: the imports, which consist of useful commodities which India imports, are goods which she purchases; they are entirely voluntary transactions on her part; the money which she sends to England to pay the expenses, for instance, of the India Office, to pay the salaries of all the clerks, to pay the interest for the guaranteed railways, all those sums are not voluntary payment; but they are payments to discharge an expenditure about which, from the circumstances of the case, she has never been consulted, and about which you do not know whether she would wish that expenditure to be incurred or not. Does not that indicate a very important difference between the two transactions?—Well, I should say that perhaps the most useful import into India is the soldier in a red coat, who keeps order and peace.

7762. That may be, but after all that is a matter of opinion; but there is this difference, the one payment is voluntary on the part of the people, and the other payment, whether for their good or not, is not a voluntary payment, but they are obliged to pay it whether they wish or not?—Yes; it amounts to this, that the Government of India is not a constitutional government administered by a House of Representatives chosen by the people; that, no doubt, is the case.

7763. Would you kindly explain what the cash balances consist of?—The cash balances consist of the aggregate of the amounts of cash in the different treasuries of India and in England; for instance, at Calcutta there will always be a large balance to the credit of the Indian Government in the bank composed mainly of remittances of taxes; at each one of the local treasuries there will generally be a certain amount in hand; taxes will have been received, but the whole will not have been remitted down to Calcutta; some will have been kept to meet local payments; in other words, you have hundreds of banks, I may say, all over the country, at each one of which you are keeping a credit balance; and the aggregate constitutes the cash balances.

7764. *Chairman*] Every collectorate has a local treasury with a local balance?—Yes.

7765. Mr. *Fawcett.*] When we see that there are 17,000,000 *l.* or 18,000,000 *l.* of cash balances, may we always be certain that all that amount exists in cash, or does it not in part consist of book entries on credit?—It used all to exist in solid rupees, and to a great extent it does so still; but as far as possible you have superseded that cumbrous and expensive process of keeping actual rupees and marching them about the country under an escort of sepoys, and you have substituted the agency of branches of the banks.

7766. But there are certain funds in India, for instance, like the Mysore Pension Fund, the

Mizamut

Mr. *S. Laing.*

2 July 1872.

Mizamut Fund, and the Bengal Annuity Fund; those are funds in possession of the Government; where do they exist; do they exist among the cash balances?—No.

7767. Where do they exist?—They exist as part of the national debt or liability of the Government

7768. *Chairman.*] That is, you mean, as book debt, or debtor and creditor debt, in which the Government is either a debtor or a creditor?—Yes.

7769. Mr. *Fawcett.*] When you say that the capital of the debt of India for any particular year is a certain amount, say 101,000,000 *l.*, that does not include these funds, and which represent liabilities?—The figures which I gave you for interest include the interest upon all those funds in the hands of the Government as well as the National Debt proper.

7770. But I want to know whether I can find in the accounts of India where these amounts are, because they ought to be put down in some form or another as floating debt?—I cannot be quite sure where you will find them.

7771. When these funds came into the possession of the Government, as far as I understand, they really represented borrowed money, and they were spent as an ordinary source of the income, and put down as miscellaneous receipts, were they not?—The Government of India is very much in the position of an insurance company. As long as the service goes on, there are contributions coming in and fresh members entering and making payments on the one hand, while you are paying out your pensions and allowances on the other; so that the one about balances the other. But, of course, if the Government of India were to come to an absolute liquidation, there would be that money to find.

7772. Would it not represent the financial position of India more accurately, and be more prudent, if the funds which so came into the possession of the Government had, instead of being spent, been invested as representing property and not income?—No; they are a charge on the State; they are part of the national indebtedness, and whether they exist in the form of a book-debt, or whether you create so much National Debt and lock it up in a box against them does not make very much difference.

7773. Then you have the interest in that case?—You charge the interest in either case.

7774. Did I rightly understand you to say that wages had risen about 25 or 30 per cent. during the last 20 years in India, and that general prices had risen in the same proportion?—Yes; that is a vague estimate, but it is the estimate which I have made.

7775. If wages rise 25 per cent. and general prices rise in exactly the same proportion, it is manifest, is it not, that the labourers are in exactly the same position as they were before; they have 25 per cent. more money, and they have to pay 25 per cent. more for everything that they buy?—It does not follow that all the articles on which the labourer spends his money have risen the 25 per cent. I say that property and many commodities, saleable produce, have risen in that proportion; agricultural produce, for instance, having risen, and the great bulk of the peasantry of India being ryots, cultivators, and having produce to sell, it tells in their favour.

7776. But you did not wish to convey the idea then that the price of everything had risen 25 per cent.?—No; not of everything. I think that they are very much better off on the whole.

7777. Mr. *Cave.*] The price of imported goods, I suppose, has fallen, has it not?—Of many goods, clothing and many of the articles of consumption. The only thing that affects them much perhaps, is this, that there may be a rise in the average of years in the price of rice, but not much in the other articles of their consumption.

7778. As to tribute, would you not define tribute to be money exacted by one country from another, and spent by the country which receives it for its own purposes, without regard to the country from which it comes?—Yes; no equivalent being given. That is the distinction I should draw, the money being sent without any equivalent given In the case of India, I say that for every pound of money an equivalent is given in some form or another.

7779. You would say that there is nothing analogous to that definition in the money paid by India to England?—I should say nothing.

7780 Mr *Eastwick.*] Although no tribute is paid from India to England there is an immense revenue derived by England from India, is there not, in various ways. For instance, we support 70,000 of our soldiers there, an immense sum is brought home by people who come with large fortunes, and there are great private remittances every year which, I suppose, do not come into this account, from officers, and soldiers, and civilians, and merchants also, sending home money for their families All that should be taken in, should it not?—Yes; I do not mean to say that England does not benefit by the connection with India, as well as India herself; but that is really similar to what takes place with China and other countries; we equally have private individuals there making money and having remittances sent home.

7781. Not to the same extent?—No, not quite to the same extent,

7782. We have not a great army supported in, China?—You have not many large fortunes made in India, in our days, by Europeans.

7783. But you had formerly?—Yes, by a limited number.

7784. Mr. *Cave.*] I suppose you would say that there is value received for everything that is sent to England?—I think so, as shown in the prosperity of the country.

7785. *Chairman*] Is not India, practically, in the position relative to England, of any country which has borrowed large capital in this country, on which she has, annually, to pay a very considerable sum for interest?—Yes; in that sense there is hardly a nation in the world that does not pay tribute to us in interest for money borrowed here.

Major General Richard Strachey, R.E., re-called; and further Examined.

Major Gen. *R. Strachey,* R.E.

7786. *Chairman.*] Do you desire to offer any further explanation with reference to the orders of the Secretary of State regarding the Godavery works?—I wish to make an addition to what I said before. As far as it went what I said was quite correct, from my point of view; and the orders which the Secretary of State gave in reply to that Despatch of the Government of India that

Major Gen. *R. Strachey*, R.E.

——

2 July 1872.

was read before the Committee, were correctly stated by me; but I have since ascertained that subsequently, on a further representation made from India by the late Lord Mayo, the Secretary of State directed that the whole of the works should be absolutely stopped.

7787. Mr. *J. B. Smith.*] I wish to call your attention to the mode in which the accounts of the public works are kept in India. There appears to have been no precise classification in the expenditure of public works in the past. Is there any definite plan on which those accounts are kept at present?—I think that you have a little misunderstood what I have said regarding the system of keeping the accounts of the Public Works Department. The whole of the expenditure, as it occurs, is classified in detail, in such a way as to show precisely what is the nature of each work on which it takes place. It may be perfectly true that this classification does not altogether meet the requirements that you think should be met; and so far I should agree with you; but I have already explained the general nature of my own opinions on that subject; and I am prepared to explain more fully, if desired, the sort of account which, I think, should be kept of the extraordinary expenditure, that is, of the expenditure of the money which is specially raised by loan for public works. That I gather was what you intended to ask.

7788 Do I rightly understand you to say that you would approve of this, that the public works accounts, embracing repairs of works, or new unproductive works or buildings, should be paid for exclusively out of revenue?—That is the system at present; they are so paid for.

7789. Then there is another class of works; how would you class public works which ought to be paid for out of revenue, but for which it is necessary to borrow for the purpose of immediate completion, such as barracks?—First, I should say that the Government of India, in its last phase, does not admit the propriety of borrowing for such purposes; I mean since 1865 or 1866. In 1864 or 1865 (I think I mentioned this before), when it was determined to reconstruct the barracks for the European troops it was thought that the expenditure would be so heavy that it would be impossible to meet it from the revenues, and then the Government determined that it would be reasonable, in the same way that a large sum was borrowed for fortifications in England, to borrow for barracks in India. On those terms the expenditure went on, I think, for two years; but during that time the objections to such a system were discussed, and strongly pointed out, and it ended by Sir Stafford Northcote determining that it should be dropped, and that money should not be borrowed for these purposes. The Government of India, on further consideration, entirely agreed with Sir Stafford Northcote as to the propriety of his decision, and they declared that they were ready to limit the expenditure on barracks to the sum that could be provided from the revenue of the year; and that has been done ever since.

7790. And that has been paid for out of the public revenue?—Yes.

7791. Then as regards reproductive works, I understood you to say that you quite approved of the principle that they should be made out of loans, out of borrowed money?—Yes, certainly.

7792. And that they should be provided for in a similar way to public works in England. Take the docks at Liverpool, for instance; those have been made entirely out of borrowed money, and the Dock Board have from time to time borrowed money to pay the interest upon their loans, as well as money to complete the works; and when the works were completed, then the revenues arising from those docks were first appropriated to the payment of interest, and after that to the extinction of the debt. Is that the plan you are going upon in India?—Within certain limits, I think it is. But if you compare the position of a company or a corporation, and that of a government, particularly a government situated like that of India, there is a great deal of difference between them. I entirely admit not only the propriety, but the necessity, of carrying out great public works with borrowed money. As I said before, you require capital to be laid out upon those works; and capital means accumulated income. You cannot get what is necessary from the income of the year for certain classes of works, the thing is physically impossible, and therefore it is necessary for this class of works of improvement to borrow money, if they are to be constructed at all But when you refer to borrowing money to pay interest, I think that there the position of the government becomes somewhat different from that of a trust for carrying out some special object. There is always great danger in the transactions of a government, on account of their being so extremely multifarious, that from some want of precision, or accuracy, or care, or whatever you please to term it, the funds which were originally intended to be applied wholly to works of permanent improvement may get applied to something else which is not such a work; and hence it is necessary to guard much more strictly the operations of a government in borrowing money for such purposes than it would be to guard the operations of a trust, or a body specially formed to carry out some single special object. Therefore the policy that the Government of India has adopted (and so far as I can see it is a prudent and wise policy) is this: they have said we will always so arrange our borrowing transactions that the interest upon our debt shall be met from the revenues of the year. That will, to a certain extent at all events, lead to a natural check upon the growth of the debt.

7793. Do not you think that there should be a separate account kept of every work which is called a reproductive work, and that this account should from time to time be debited with the interest, and that the returns from those works should be appropriated to the payment of the interest upon the capital?—That I entirely concur in, and I think I have intimated before that such was my opinion. In that opinion the late Lord Mayo quite concurred; and I believe he would have tried to establish such a system, under which the whole of the returns of new works should be devoted exclusively, first to paying the interest on the borrowed capital, and then to discharging that capital.

7794. And would not the keeping of such an account prevent the mistakes that you speak of, of applying loans to objects improperly?—Yes, and not only would it prevent accidents of that description, but it would give the public confidence in the operations of the Government, which I look upon as equally important. The Government cannot continue to go to the public for money for public works, if it expects to maintain its credit at all events, unless it can show in a thoroughly satisfactory way what has become of the money formerly borrowed.

Major Gen. *R. Strachey*, R.E.

2 July 1872.

7795. *Chairman.*] Can you say, from your own knowledge of the Department of Works, whether separate ledger accounts are kept in that department for each specific undertaking, which is of magnitude enough to have a distinctive name, and not to pass under the name of Miscellaneous?—Yes, separate accounts are kept, though not yet in a satisfactory form everywhere; I would explain that the Government of India has for many years past insisted upon the necessity for such accounts; but it has been extremely difficult to get them actually drawn out; in the case of those works which are more specifically under the Government of India, and over the management of which the Government of India has really an efficient control, I refer particularly to the canals in the North Western Provinces and Punjab, we have these accounts; but when we turn to the irrigation works in Madras, which are managed under the Madras Government, and which are not directly under the influence of the Government of India, it is not the case; and all that the Government of India can do is to write letters to the Madras Government, and point out what they want; up to the present time they have not succeeded in getting what they wanted.

7796. So that if you write they cannot give you a transcript merely of their ledger account, showing the whole receipt of revenue and the expenditure?—No, they cannot. One of the things that I was most earnestly striving for during the last four or five years that I was in India was to get these matters put on a proper footing.

7797. You had not succeeded in that when you left?—No; and the last reports received by the Secretary of State, in reply to the call made by this Committee last year, will show that the Government is not in a position to give the accounts; the accounts are given in a tolerably satisfactory shape for the North West Provinces and Punjab, but they are not given for Madras and Bombay.

7798. Mr. *J. B. Smith.*] Should not the Government of India insist on the accounts being kept in all the provinces in this way?—Certainly, it should, and, as I have said, it does insist, and goes on insisting.

7799. Has it no power to enforce that?—I am afraid that all I can say about the power of the Government of India is what I said before, if its orders are not obeyed, what can it do? I do not know.

7800. It appears that the public works in India are more costly, perhaps, than in any other country, and this arises from too many works being on hand at the same time; is not that the case?—No, I do not think that this can be said with any truth, I think that so far as work is more costly in India than it is in England, it is merely that certain classes of materials are more costly; for instance, taking our railways, the whole of the iron, before it is put in the railways, costs about double what it does here.

7801. I speak not of railways, but of other public works, is it not the case with reference to them?—Other public works are much cheaper, not dearer.

7802. Does it not add much to the cost of a public work when it is 30 years in the course of construction and the work may be done in three years?—It may or may not; it depends on the nature of the work; for instance, if we have an irrigation canal, and we could instantly create it by some wonderful power which we might possess, and if we also had at the same moment to pay for it the full amount of its cost, the whole of the capital, or the greater part of that capital would necessarily remain unproductive until the people who had to make use of this work had learned how to do so had prepared their land for making use of it, and so forth; and, therefore, experience in India tends to this, that it is not advisable to force on works of that sort too rapidly; that it is much better to take any scheme up by degrees, and to carry it out, and to extend it by degrees, so that as the more intelligent part of the community find the advantage of what has been provided, have ascertained what the advantages are, and have begun to use them, you gradually complete or extend and increase the power, so to speak, of your work, and expend more money, and so you keep up with the demand for the useful object, whatever it is, as that demand increases.

7803. Has it not been the case that a number of works have been undertaken by the Government of various kinds, and that there is every year an appropriation to certain works, and that appropriation depends upon the state of the revenue?—Yes, as regards the works provided for from revenue.

7804. Then the consequence is that if the revenue is deficient some of these works have to wait till the revenue is sufficient to go on with them?—Quite so.

7805. Is not that a great evil; does it not render the works very costly when they are suspended for a time and begun again?—I think not; it is not that the work is suspended absolutely; take for instance a road, if you are making a road between Calcutta and Peshawur, the whole distance may be 2,000 miles; you begin and make 200 miles first, and then 100 more, and then 100 more, but every mile of that road as it is completed is useful so far as it goes; if you were to begin working on the whole 2,000 miles of road, and had it all useless until the whole was completed, what you say would be true, but that is not the case.

7806 I know a case in which a grant was made by the Government for a certain work, and that grant was suddenly withdrawn, and the men were dismissed that were engaged in it; and very shortly afterwards the Government renewed the grant, and the men had to be re-engaged, with an advance of 20 per cent of wages; does not that support the view which I put to you?—That circumstances of that sort have occurred, I do not deny, but I think that they are the exception and not at all the rule

7807. Is it not desirable that when a work is decided on, it should be completed with as little delay as possible, for the sake of economy?—Yes, certainly

7808. And therefore it is not wise on the part of the Government to engage in a great number of works at the same time?—Certainly; that is perfectly true; and that view I mentioned myself, that what you speak of was one of the defects of the system under which work has been carried out in India, and a defect of which the Government was thoroughly sensible, and which they have tried to remedy as far as they could.

7809. Now, I wish to call your attention to the returns of railway traffic; I see by the return of the railways for the years 1869-70, the gross passenger traffic of all the railways amounted to 1,924,000 *l.*, and of the goods to 4,149,000 *l.* Now we will take the passengers to have paid themselves; the traffic has paid for the passengers,

Major Gen. *R. Strachey*, R.E.

——

2 July 1872.

has it not?—In many cases they have much more than paid for themselves; we have the actual figures, and we know that there is a large profit got from the passenger traffic; that is to say, on some of the railways; on some of them it is extremely small.

7810. I am speaking of the total which I have got from the books?—But you will mark, if you please, that I do not pin my faith to the books. One of the things which I have mentioned already in this room is that the system under which the returns of these railways are published is extremely defective, and that they do not show in a satisfactory and intelligible form the results of of the working of the railways.

7811. Then how are we to form any opinion if these reports are not to be depended on?—I do not say that the figures that are found in the books as exhibiting the receipts from the traffic are not correct, but that the comparisons between the actual receipts and the cost of working, are not put forward in such a way as to admit of any one (I mean unless they take up the question in a totally different way from what nine people out of ten would) ascertaining from these figures what the real effective operation of the railways is.

7812. Taking the goods to have produced 4,149,000 *l.* gross, and the expenditure to be 54 per cent., there is a net profit of 1,909,000 *l.*; I am assuming that the passengers paid for themselves?—But you must not merely assume that.

7813. Will you tell me what the profit on the passengers is?—On the East India Railway the average number of passengers in a train is 205; the receipt from them is 6 *s.* 6½ *d.* per mile, and the cost of working 3 *s.* 8½ *d.* per mile, showing a profit per mile of 2 *s.* 10 *d.* on 205 passengers; this gives a profit of 0·165 *d.* per passenger per mile; the average receipt per passenger per mile being 0·382 *d.*; on the Madras Railway the average profit is 0·202 *d.* per passenger per mile. The figures, as I repeat in any of the published returns, are not presented to the public in such a way as really to show the actual results of the working; but they can be obtained.

7814. *Chairman.*] After a fashion, that is to say?—No, based upon the actual results. I do not like to do it from memory, because it is unsafe, but we can do as follows: I can ascertain what is the average number of passengers that travel in a train on every railway in India; what is the average weight of the goods that is carried in a train; and what is the sum received from an average train on the one hand, and the sum spent on moving it on the other.

7815. Mr. *J. B. Smith.*] We have that all in the returns before us, have we not?—No, I think not. You will not find those results; you will find the total quantity of goods paid for, but the total quantity of goods paid for does not properly show what is the actual work done by the railway. In those figures you will see that the goods traffic amounts to so many million tons; but the question arises, is that so many million tons carried one mile, or so million tons carried a thousand miles; and in the same way if you see so many million passengers, does that mean so many million passengers carried one mile, or a thousand miles; you can predicate nothing from the mere fact that so many tons, or so many passengers, have been paid for. It is absolutely essential, and whoever knows anything about railway traffic will assent to the truth of this assertion, to have before us the ton mileage and the passenger mileage.

7816. It states here the average per ton per mile, does it not?—That is the number of tons per mile of railway opened; but that is a totally different thing from the number of tons carried one mile upon the railway. The expense of the working depends upon the number of trains and the distances that the trains run.

7817. *Chairman.*] Our railway accounts are not like the French, reduced to that mathematical precision that they will show the number of tons conveyed one mile, and the number conveyed a hundred miles?—They are now. That is one of the things which has at last been accomplished after infinite perseverance and worrying; they are not in the book, but I have got them, and by the assistance of those figures I can give you the facts, which are of a surprising nature.

7818. I will put it thus to you; supposing you had got all that, the distribution charge relatively to passengers and goods does not in any come to more than a hypothetical distribution; you cannot separate the cost of a station and the cost of the establishment at that station accurately between goods and passengers; it is all arguing in a circle?—There is a certain amount of assumption so far; but you can satisfactorily compare the working of one railway against another.

7819. You can compare any two railways if you take the same standard, but if you take any railway and argue in a circle, and make the stations and porterage part of the whole charge, and then allocate it, and then go round in a circle, you cannot allocate the use of the station and the porters and the clerks between goods and passengers, except by taking a per-centage, and saying, that passengers at that station have earned 1,000 *l.*, and goods 3,000 *l.*, and therefore 25 per cent. belongs to passengers, and 75 per cent belongs to goods. You cannot enter into a calculation whether four porters at a station would exist if there were no goods, or how many hours a clerk or a porter is used for one purpose or another, because it is all mixed up with the question, that if there were only one passenger perhaps the whole establishment would be required?—There is no doubt that all such calculations are within certain limits hypothetical; but after all, the object of these comparisons is to obtain a standard of comparison, by aid of which to endeavour to work up to the best worked line, and where you have therefore a number of railways in operation, you pick out the one which shows the best results, and you compare all the others with this best one, and bring them into competition one with another, and you say, if this railway can work so cheaply, why cannot you do it also?

7820. That is what the Royal Commission on Railways recommended, that the elements of all calculations should be prescribed in identical terms, and that the comparisons should be just, which they were not in any railway, because we found that the elements of calculations were assumed and taken to be on a different basis in every railway in the country?—But as I before said, for the Indian railways we have at last got the accounts into that form in which all the elements of charge are classified in an identical way for every railway, so that the system of classification of the results is the same for all. I do not mean to assert that, when we say that it has cost so much to carry a ton of goods a mile we are precisely

Major Gen.
R. Strachey,
R.E.

2 July 1872.

precisely and critically correct, but we are very fairly correct, and when comparing one railway with another, there is no reason for an increase of cost appearing in one over the other, from any difference of system in recording the receipts and charges.

7821. Is not it the case, that in some railways all the haulage done by the railway is taken into account for the revenue, and in other railways not?—Yes; but by the new system we have after much trouble and opposition, got the accounts into a uniform shape.

7822. In the same way as regards shunting, is it not the case that by some railway companies the number of hours which the engine is so employed, is reduced into mileage, as representing a certain mileage work, and that in other cases it is not taken at all into account; while in others it is taken into account upon a different basis?—Yes; but we in India have prescribed exact rules for the whole of those things now. The miles run by trains are put down; the miles run by engines assisting the shunting are put down as so many hours of shunting, and so forth. The whole of these things have been carefully gone into in detail, and precise rules have been laid down.

7823. Mr. *J. B. Smith.*] This is the Report on Railways in India for 1870-71; it says, "The merchandise carried amounted to 2,633,687 tons, exclusive of coal, coke, and minerals, of which there were 801,582 tons. According to the returns furnished from India, by the several companies, the average distance run by each train with goods would be 144, with minerals, 51 miles. The average amount paid for each ton of merchandise would be 1 *l.* 5 *s.*, and of minerals, 6 *s.* 7 *d.* Thus the average amount paid for each ton of merchandise per mile would be 2·08 *d.*, and for each ton of minerals, 1·5 *d.*?—I suppose that is right.

7824. *Chairman.*] That would include the terminal charges?—Everything; the actual charge to the user of the railway.

7825. That is converting terminal charges into a mileage rate, is it not, really?—No, I think not.

7826. Supposing you carry goods along the railway, and you spend whatever it may be, 3 *s.* or 4 *s.* a ton in unloading them, and carting them to their destination, and collecting the money for them; you then, by this process, add this 3 *s.* or 4 *s.*, spread it over the 50 or 500 miles the goods are carried, and add it to the mileage rate?—What we are talking of now is, the cost to the customer, not the cost to the railway company; the cost to the customer, is what he pays.

7827. He pays the mileage rate plus the terminal charge; they are two different facts?—Yes.

7828. If he undertakes the whole of the terminal charges himself, the mileage rate will be so much less?—Yes; but other things being the same, the result of introducing that element into the calculation is similar on similar lines. I do not see that that necessarily leads to any misconception as to the results of the working.

7829. Mr. *J. B. Smith.*] It seems that there was paid, for carrying goods, 1,109,000 *l.*, and that is at the charge of 2 *d.* per mile to the senders of the goods?—Yes.

7830. But after all that has been paid, there is a deficiency in the year of 1,809,000 *l.*, which the Government have to pay for interest?—Yes, subject to the deductions on account of gain by exchange, which make the net charge about 1,700,000 *l.*

7831. Therefore, although the 2 *d.* a ton a mile was paid by the parties sending the goods, the Government have to pay another 2 *d.* a mile as a subsidy, to pay the interest of the railway?—Approximately that is quite true.

7832. So that the goods cost, in fact, 4 *d.* a mile, of which the Government pay 2 *d.* as a subsidy; is that so?—Well, it is true that some such sum was paid for them.

7833. Now, do you think that, if these railways were to pay their own expenses, it would be necessary to charge 4 *d.* a mile per ton for the carriage of produce?—No, obviously not, nor do I think that it would, to anything like the same extent, if the railways were properly managed.

7834. But we are taking them as they are managed at present?—I admit that, perfectly; but what I have said all along is, that the system of management is by no means perfect.

7835. The Government have to pay 2 *d.* a ton per mile, and pay as much for the carriage of the produce as the owners of the produce themselves?—The East Indian Railway covers the interest.

7836. *Chairman.*] On the whole year?—On the whole year, very nearly. You will see that your way of looking at the results of this railway traffic is different from mine. I say that mine is the right way, if you will excuse me. Under the arrangement which was made between the Government and the railway companies the Government receives an absolute profit of 2 *d.* at the present time (or very nearly 2 *d.*) on every rupee on the exchange, in accounting to the railway companies for the net receipts; and at the present time the gain by exchange on the Indian lines amounts to nearly 300,000 *l.* a year.

7837. Mr. *J. B. Smith.*] But is it not the fact, that the Government have lost that years ago?—No; but the loss by the exchange that arose in former years has been spent. They have lost that once for all, I perfectly admit, but the exchange now operates as a gain. There is no question of that at all; and it is the one financially satisfactory thing in those contracts. Under the original arrangement, for every rupee that was spent on construction the Government had to pay 2 *d.* towards the construction, for every 1 *s.* 10 *d.*, so to speak, that the companies produced and laid down in the road the Government put 2 *d.* down. Now, out of every rupee that is earned the companies get 1 *s.* 10 *d.*, and the Government gets 2 *d.*

7838. Are you aware that it was given in evidence before this Committee that the losses of the Government upon the exchange amounted to more than three millions of money, and upon that three millions of money they are losing 150,000 *l.* a year every year?—Supposing that it was borrowed they would be; but it was not borrowed, and has been a charge against the revenues year by year.

7839. They have lost 150,000 *l.* a year; they are losing 150,000 *l.* a year until that is repaid?—Not so, for there is no question of re-payment of the charge any more than there is of any of the other items of past expenditure of India. The whole of these charges that have arisen on account of the railway system, have been provided year by year from the revenues; there has been no debt created on account of them.

7840. But there has been a loss created all those years which the Government has paid out of the revenues?—Yes.

Major Gen. *R. Strachey* R.E.

2 July 1872.

7841. If that money had not been lost, it might have been appropriated to other public works?—That is true, it might have been; but that seems to me, as I said before to be speculative finance. It does not follow that if the money had not been spent upon railways, it would not have been spent upon something much less valuable. May I, before going on, give my own view of the general result of the charge on account of railways, comparing 1861-62 with 1872-73. It appears that if you merely take the charge for the interest under the guarantee in the year 1861-62, after having set off the net receipts against the gross interest that was paid by the Secretary of State, the net interest charge was 1,425,000 *l.* In 1872-73, the corresponding result will be 1,800,000 *l.*; showing an increase of charge of nearly 400,000 *l.* But those are not the only liabilities connected with the Government railway system. In the year 1861-62, adding all the other charges which were involved, the total charge on account of railways was 2,066,000 *l*; in 1872-73, the total charge, after having set off the gain by exchange, is only 1,666,000 *l.*; showing an improvement of very nearly 400,000 *l.* From the way in which the accounts are kept, and from the way in which the accounts are shown in the general statements of the Indian revenues and charges, these facts do not appear; you do not make the necessary allowance, and that, I say, produces an erroneous impression as to the real result of the railway policy. As a fact, at the present time in the year 1872-73, the total charge on the revenues of India in consequence of the railways, is 400,000 *l.* less than it was in 1861-62. The loss by exchange alone in 1861-62 was 420,000 *l.*, and there was 99,000 *l.* which had to be paid for land, and 121,000 *l.* had to be paid for supervision in various forms; that makes a very large sum, the whole of these amounts together being 640,000 *l.* in that year; in the year 1872-73 the corresponding amount is only 140,000 *l.*

7842. *Chairman.*] So that you must put all this altogether to ascertain the actual charge upon the Government for the two different years?—You must take it as a whole; it is not fair to pick out a little bit, and say, there is an increase here. Also it must be remarked, that at the present time there is still a considerable quantity of expenditure which represents railways in progress on which the income has not begun to come in. There is a good deal of expenditure, for instance, on parts of the Oude and Rohilcund Railway, on which no income has begun; there were only 40 miles of that line in actual operation when this last return was made out, and we have not got the benefit of the rest of the railway; and the same applies more or less to some of the expenditure on other lines.

7843. We ought to correct the account of the Scinde, Punjab, and Delhi, then in that way?—No, that has probably come up to what it will be for some years to come.

7844. Mr. *J. B. Smith.*] I want to call your attention to the Scinde, Punjab, and Delhi Railway again. You were recommending a large outlay in that country; and at our last sitting I called your attention to the last report of the Railway Department, showing that that railway had only produced 11 *s.* 6 *d.* per cent. per annum. Now, a few days ago, I saw in "The Times" a report of that railway to the 31st of December last, in which it appears that the net receipts for the half year were 20,934 *l.*, and that upon the capital pays less than the previous year; the previous year it was 11 *s.* 6 *d.* per cent., and now it is 3 *s.* per cent. for the half year. In addition to that, it states that there were damages by floods, estimated at 200,000 *l.* for the half year. Now, what I want to ask you is, whether you retain the same opinion after this experience, that it is advisable to proceed to make these railways in the Valley of the Indus, which are likely to be attended with such a loss, and also to be attended with such risks from these floods?—The line to which you have referred, which is called the Scinde, Punjab, and Delhi, consists of three parts, the line from Kurrachee to Kotri, from Moultan to Lahore, and from Lahore to Delhi. I mentioned before in my evidence, that upon the part of the line between Kurrachee and Kotri, from the peculiarities of the line, and owing to the great expense that had attended its construction (not according to my judgment at all necessary expense, but actual expense) the net return is very small, although the gross receipts are satisfactory. As I also said before, in reckoning the profits derived from a railway, you have to consider first the gross receipts; from the gross receipts you have to take the working charges, and a residue is left; then you have to compare that residue with the interest on the capital. The gross receipts I say are satisfactory; the working charges are very heavy, and the net result is almost nothing, and has to meet the interest of a very large capital outlay.

7845. What we are to look at is the net result?—But I was explaining that the conditions of the different portions of the line which goes by that name, are extremely different. Between Moultan and Lahore the country is very nearly a desert, and there is a very little population.

7846. What traffic do you expect from that desert?—I never expected any good results from that line that I am aware of, and we never had any; the line was not made on my recommendation. Between Lahore and Delhi, which is another part of the line, and under totally different circumstances, the country that is traversed is reasonably fertile and well cultivated and peopled; but unfortunately, it passes through an extremely difficult country, being traversed by the drainage from the mountains on the north.

7847. *Chairman.*] Will you allow me to call your attention to this fact, when you say you consider the gross receipts satisfactory, that the gross receipts on the Bombay and Baroda line, which is 391 miles in length, were for 1870, 493,000 *l.*, and the gross receipts for the Scinde, Punjaub, and Delhi Railway, which is 674 miles long, were 419,000 *l.*; therefore, taking it in the rough, the latter were not more than half those of the Bombay and Baroda Railway, which still does not yield anything like its guaranteed interest?—No; but I began by saying that the conditions of the various parts of the line are so totally different (they are totally different railways in reality), that it is necessary to make a distinction between them, when speaking of the returns.

7848. You mean the gross receipts of that particular section?—Yes. The income on the line between Lahore and Delhi is also satisfactory; but, as I said before, from its being crossed by the whole of this tremendous drainage from the mountains, the difficulties of construction were very considerable, the necessary first cost was considerable, and in this last year, during the rainy season of which the floods were heavier than they ever

ever have been known to be in Northern India in the memory of man, there has been a great deal of mischief done; several of the bridges were made impassable; one of them was very seriously damaged; and the result was, not merely that there is a great deal of money to pay for restoring the line, but also that the traffic was absolutely interrupted for a considerable length of time, and that while you have a very heavy bill to pay for restoration, you also at the same time, as is unfortunately natural, have a considerable diminution of the income. But I go on, further reply to the question that Mr. Smith put to me, to say that there is a great difference between these railways and the lines of railway that I support; and that I continue to think it reasonable and proper to go on with the construction of railways which we anticipate will not cost more than 6,000 *l.* a mile. The Scinde, Punjaub, and Delhi Railways, on an average, probably cost 14,000 *l.*, 15,000 *l.*, 16,000 *l.*, and some parts of them as much as 17,000 *l.* a mile; and here is the whole difference. If I were asked, do I recommend the construction of any more miles of railway to cost 16,000 *l.* or 17,000 *l.*, I say without hesitation, not an inch of such a railway; but if I can have a railway for 6,000 *l.* or less than 6,000 *l.* a mile, and through a decently peopled and decently rich country, I say certainly make it. I can undertake that a railway of that sort will pay; it will cover its expenses.

7849. Mr. *J. B. Smith.*] The difference would be this, that 16,000 *l.* a mile for a railway might not be an extravagant price, and it might pay a profit if it ran through a rich district, but 16,000 *l.* a mile for a railway through a desert would be extravagant?—It has to be considered, as was said before, that these railways were not made for the purpose of commercial profit, these railways, which were first sketched out by Lord Dalhousie, were made fully as much for military and political purposes as with any idea of their being remunerative directly. It was said, and I think with truth, it will add enormously to our power, both physical and administrative, in every way, if we can establish railways all over India; it will make whatever military force we have in the country very much more easily available; and the probability is that by having this increased facility for locomotion we shall be able to reduce the actual amount of the army. I am not prepared to say that that was not a perfectly correct view of things. Nobody who knew what India was before the railways existed, and what India is now, can hesitate for a moment in saying that the advantage which India has obtained from those railways is enormous. The way in which the whole life of the country has been stimulated, and all the energies of the country have been developed, is quite astonishing; and people sitting in London, who have never been in India, and merely look at these returns, can form no conception whatever of the real actual result railways have produced in the country.

7850. Then you would say that nothing but imperious necessity could justify such an expenditure as this upon this part of the Scinde and Punjaub Railway?—Certainly I, for one, would not recommend any similar expenditure in the future.

7851. How do you propose to provide for the payment of these railways, would you borrow money to make railways which are certain to prove unproductive?—That is the only way to make a railway; it is quite impossible to make them out of revenue.

Major Gen. *R. Strachey*, R.E.

2 July 1872.

7852. Where is the money to come from; are you aware of the state of the revenue?—Quite. It has been stated in a letter, of the Government of India to the Secretary of State, which has, I think, been read, that the Government of India estimates the permanent charge that will probably arise on account of the construction of the line between Moultan and Kotri at about 40,000 *l* a year; and I have said, over and over again, that, so far as my personal opinion goes, I should not have advocated the immediate or early construction of that railway. Reverting again to the reduction of charge on account of railways which has taken place between 1861–62, and 1872–73, a reduction of which I said amounted to 400,000 *l.* I wish to point out that it has taken place while an expenditure on railways has taken place of no less than 55,000,000 *l.* sterling; the consequence is that, coincident with that diminution of charge, we have got the advantages, whatever they are, of 55,000,000 *l.* sterling worth of railways, and I think if you omit that fact you omit what is an essential part of the whole discussion. Whether the Government of India has not been going a little too fast is another matter; but still there is the fact, that we have got additional railways to the value of 55,000,000 *l.* sterling to show, and have notwithstanding reduced the charge on the revenues by 400,000 *l.* a year.

7853. But, assuming that it is advisable to go on opening out the country by new railways, is it prudent, in the present state of the finances, to increase our liabilities; what the Finance Minister says in his report is to the effect that the revenue has, for the last two years, depended upon windfalls, and those windfalls have been three-and-a-half millions in opium which cannot be depended upon; the surplus revenue is about a quarter of a million; but he says, in a warning voice, that the revenue does not show any elasticity, and it would be unwise to look forward to an expenditure founded on such a state of finances as now exists; what is your opinion about that?—Well, I cannot be expected to explain Sir Richard Temple's financial statement in detail, but, in a general way, I think I can understand the reasons which led him to make remarks to that effect, and they probably were simply these: that it is necessary for him so to make his estimates that the result shall, at all events, be no worse than what he has estimated, therefore his disposition is to estimate the expenditure somewhat in excess of, and the income somewhat less than the amount which in reality it is likely to be; and that when he talks of this small surplus, what he means is, that under no circumstances is there likely to be a smaller surplus than that, but that if things go on in a satisfactory way he may reasonably expect a larger one. Then, as regards his depreciation of the elasticity of the revenues, what he had to do was to defend his general scheme for the ways and means of the year; these amongst other things, included the income tax, and there was a very great opposition made to the income tax. There was a very strong party who wanted to get rid of it altogether; and he probably thought (and I should say, reasonably) that it was a fair thing for him to say that among the reasons which induced him not to give up any taxation, was what has been mentioned, the possibility, amongst other things, of the falling off in opium, and the

Major Gen. R. *Strachey*, R.E.

———

2 July 1872.

comparative uncertainty of the gradual growth of the revenue in other respects. My own opinion, formed upon the actual results of the last 10 years is, that quite irrespective of additional taxation, there is a gradual growth of the revenues year by year, amounting to very little under 500,000 *l.* a year; and that, from the manner in which the expenditure has been allowed to increase for the last 10 years. that increase of resources has been eaten up year by year as it accrued. What the Government of India has aimed at by its last re-adjustment of the financial system of India, has been to put a stop to that growth of charge. Whether it will succeed or not remains to be seen.

7854. But do you think that the revenue is in so safe a state as to lead the Government to a large expenditure, which must be paid out of revenues, for railways, which is unproductive expenditure, seeing that this last year the opium revenue realised 9,000,000 *l.*, and that two years ago it only realised 6,000,000 *l.*, and may fall down to 6,000,000 *l.* again?—Of course I do not pretend to say what might happen with a falling off of a revenue like that derived from opium, which is, in reality, trade profit; it is very difficult to predict with any certainty what the result might be; and all that I can affirm, which I do most positively, is, that there has been a steady and regular increase of the opium revenue for the last 15 or 20 years, and if you judge of it, not merely taking the ups and downs of any particular single year, but taking the average, that increase has been very steady and satisfactory; and, so far as I can see there is no reason at all why we should not, under proper arrangements. maintain the opium revenue at 8,000,000 *l.* or 9,000,000 *l.*

7855. Then you would go on making unproductive railways, and take the chance of the revenue being sufficient to support it?—Certainly not. I have distinctly stated that I strongly object to making unproductive railways. You must separate me, if you please, from the actual policy which the Government of India has adopted I have said decidedly as regards that particular Indus line, what the reasons are which induced the Government to accept it, and that those reasons have not prevailed with me; but that my principle is, and that it is also the principle of the Government of India, though there may be exceptions admitted, that unproductive railways ought not to be made.

7856. Can you account for the fact that the railway traffic continues so small, do you know, for instance, whether the railways took credit as revenue for the transport of all the stores and materials for construction?—Yes, it is the custom in all railways, that the capital is charged with the cost of the transport of stores used for the purposes of capital.

7857. Then the railways themselves have been the best customers for the railways?—No, that is not an accurate statement; I do not mean to say that the actual amount paid in this way has not been considerable; but of late years it has not, and on the East Indian Railway, at the present time this source of income, so far as its own stores are concerned, hardly exists.

7858. Of course it is not now so large as it has been, because the railway being nearly completed, they carry very few materials?—Yes.

7859. Is that one reason of the traffic falling off?—The traffic is not falling off; what has happened is that the increase of traffic does not continue as it was. The net receipts, in 1861-62 were 391,000 *l.*; in 1869-70 they were 2,629,000 *l.*; in 1870-71 they were 2,557,000 *l.*; and in 1872-73 they are estimated at 2,924,000 *l.* Now there is a small falling off as between 1870-71 and 1869-70; but there is a reason for that, in the peculiar condition of Upper India after the great dearth of 1869-70. In 1869-70 there was a very great stimulus given to the grain traffic, and a great movement of grain. In 1870-71 there was considerable general commercial depression and at the same time the harvests were better, stocks were replenishing themselves, and the whole tendency was for grain to accumulate, and remain where it was; and therefore there was a sensible diminution in the grain traffic in Upper India.

7860. Do you think that agricultural produce can afford to bear a charge of 2 *d.* a ton a mile for long distances?—No, certainly not.

7861. Those are the charges at present?—The average rate, as far as my recollection goes, on goods of every description, including coal, is something less than 1½ *d.* On some of the lines is rather less than 1½ *d.*, and on others a little more.

7862. I take the railway return, which says 2·08 *d.*?—That is excluding the coals; but taking the agricultural produce proper, I mean the bulky produce, such as grain and certain things of that sort, they are carried, as far as my impression goes, at something like 1 *d.*, a trifle over, 1¼ *d.* perhaps.

7863. You will quite agree with me that it is of the highest importance to India, as an agricultural country, to possess cheap carriage?—Certainly, it is essential.

7864. It is of especial importance to have cheap carriage in the article of cotton, because India produces only about 40 pounds to 80 pounds clean cotton per acre, and she has to compete with America, which produces 300 to 400 per acre, does it not follow, therefore, that if India has to pay a larger carriage than America, she has to compete at a disadvantage?—Yes.

7865. Now, in America, the carriages of cotton 1,000 miles down the Mississippi costs an eighth of a penny a pound, which comes to 10 *s.* 5 *d.*, whilst in India, if it is carried over 500 miles at 1½ *d.* a mile, it comes to 62 *s.* 6 *d.* Then, there is another disadvantage which India labours under, and that is this: the sea freight from India to England is double that of the freight from America to England. Now, do you not think that if any means of conveying cotton at a cheaper rate could be found in India, it would be very desirable to adopt them?—There is no question of it at all.

7866. Have you ever turned your attention to the River Godavery?—Yes.

7867. That river rises in Berar, and passes 100 miles through the richest cotton districts in India?—I should not altogether accept that as a statement that ought to be allowed to pass without explanation. The Godavery, no doubt if you take it from its source, where it is a little brook as wide as this table, down to the sea, would pass through or near some of the best parts of the cotton districts; but for a great portion of its course it does not; I mean, particularly, where it becomes a river which one can talk of as giving a means of navigation.

7868. *Chairman.*] You are speaking now of where it may be regarded as a perennial river compared with a great mountain flood river?—The implication in Mr. Smith's questions is, that we

Major Gen.
R. Strachey,
R.E.

2 July 1872.

we may convert it into a line of navigation like the Mississippi, for instance.

7869. Mr. *J. B. Smith.*] Lord Dalhousie was very strongly impressed with the importance of cheap carriage; I do not know whether you are aware of it, but he was the man who was the first to press upon the Government the importance of opening out the Godavery; were you aware of that?—I do not bear it in mind at the present moment.

7870. He stated, in his last Minute, when he was about to leave the Government of India, a curious fact, which I will read to you presently. It is the custom of the Manchester Chamber of Commerce, as the representative of the great cotton manufacturing interests of England, to send a deputation to every Governor General previous to his departure for India. Such a deputation waited upon Lord Dalhousie, and they appear to have made a great impression upon him; their object was to show to his Lordship the dangerous position in which the great cotton manufacture existed; that it was dependent on one source of supply, namely, America, and that source of supply was dependent upon slave labour; whilst we had in India one of the largest cotton growing countries in the world, a country which had grown cotton thousands of years before America was known; and they naturally said, "We wish you to turn your attention to the improved growth of cotton in India, which would be a benefit not only to India but to England;" and their representations appear to have made a great impression upon his mind, for in his last Minute he says, "The essential interest of England requires that the territory of Nagpore should pass under the British Government; for the possession of Nagpore will materially aid in supplying a want, upon the secure supply of which much of the manufacturing prosperity of England depends." That is the article of cotton, the importance of which, he says, was urged on him personally by the Chamber of Commerce at Manchester. Were you aware of that fact?—I think I was aware of that.

7871. Lord Dalhousie seeing the importance of obtaining increased supplies of cotton from India, turned his attention to Berar, which is the finest cotton growing country in India; and the next point of importance was to bring this cotton at a cheap rate to market, and inasmuch as a river ran through the whole district there, he recommended to the East India Company to open out the Godavery river; are you aware of that fact?—Yes, you have noticed it just now.

7872. What is your opinion on that question, and how is it that that river has never been opened?—I think an outline of the history of the Godavery works was read out by the Chairman to the Committee a day or two ago from a Despatch of the Government of India; but I may repeat that the general position, as I understand, is something of this sort: that it had been represented that the rendering of the Godavery navigable from the cotton districts down to the sea would cost, say, 200,000 *l.*, that in the light of that assertion the scheme seemed to be a very excellent idea, and it was accepted by a great many people; and supposing that the assertion had been true, I think that the justification of the scheme would have been complete; but unfortunately, as a fact, we have spent 750,000 *l.* or thereabouts, and we have not completed the scheme, and to produce even an approximately satisfactory result in a tangible shape, it now appears that we must spend at least a million altogether. Then the question arose, which has recently been discussed between the Government of India and the Secretary of State, whether under these circumstances it was expedient to go on with this scheme, and the conclusion that they have come to is, that they will not go on with it, and it has been stopped.

7873. Now we will suppose that the opening out of the Godavery, on the whole, will cost a million of money, it would give 500 miles of navigation, would it not?—That sum will complete the works at the second barrier, and will provide a road to Chanda, which is in the southern part of the Nagpore district. The land near Chanda is to a great extent unreclaimed jungle; the cultivated portion of Nagpore hardly comes down to Chanda; one may say that the cotton district is entirely north of that place.

7874. We will suppose that it cost 2,500 *l.* a mile, would it not be more desirable to try to make that river navigable, which would enable you to bring traffic at a very small cost, rather than to make a railway through a desert which produces nothing?—Well, although I am not a very strong advocate for making railways through deserts, still I may reply to your question by saying that the particular line to which, no doubt, you are referring, that between Moultan and Kotri, does not traverse altogether a desert, and that it is not undertaken on commercial grounds, but avowedly on military and political grounds.

7875. *Chairman.*] There is another line besides that, namely, the line all along the edge of the desert through Rajpootana?—You may say that England is on the edge of the sea, and in that sense it is on the edge of a desert, in a similar sense Rajpootana is on the edge of a desert, but notwithstanding the country is fertile and reasonably well peopled, and there are large cities in it.

7876. Mr. *J. B. Smith.*] But supposing that the opening of the river were to cost 2,500 *l.* a mile, which would be reckoning it to cost more than a million of money, would there not be great advantages derived from getting produce of all kinds from a rich district such as Berar at a cheaper rate?—Supposing that by expending 2,500 *l.* a mile it was possible to give a means of conveyance, similar to what is given by a railway, along the line of the Godavery, I for one should say that probably it would be a very excellent thing to do it, but I do not see my way to say that any such result could be produced, I do not think it is possible.

7877. Why?—Because after you have removed the obstructions in the river you have not created the means of carrying the goods. A railway is a totally different thing in its very nature and its appliances from a line of navigation, and the whole system of transport is totally different.

7878. You can have steamboats on rivers in the same way as you have steam engines on railway lines, can you not?—No question you can, but you have to pay for them; and the estimates which you talk of have been estimates for the works; there have been no estimates whatever for the working of the boats and the steamers.

7879. If the public find it profitable they will find steamers to carry the produce, will they not?—Supposing that you could run the steamers; but for the sum of this million you will not be able to run steamers. You certainly will not be able to run steamers; you will be able to run steamers for a part of the year, on a certain portion of the way, but not the whole way.

Major Gen.
R. Strachey,
R.E.

2 July 1872.

7880. The estimates are that you will be able to run steamers the whole length?—By going to a certain expenditure, but not for the sum I have mentioned.

7881. But if you open out a river, and people want to convey produce at a cheap rate, they will find the steamers themselves, will they not?—I do not think so.

7882. They have done so on all other rivers?—Not in India.

7883. Are there no steamers on the Ganges?—A few; but they were introduced originally by the Government; the Government alone ran steamers for many years, and it was only when the Government had run steamers for 15, 20, or perhaps 30 years, that private companies took them up.

7884. You find steamers running on all the rivers in America, do you not?—But America is not India unfortunately, which makes all the difference

7885. But do not you think that a profit will attract steamers?—No.

7886 You do not think that a profit will do it?—No; not the sort of profit that is to be got under these peculiar circumstances. Consider, in illustration of this point, the history of the steamers on the Indus. I should say, without the smallest hesitation, that the traffic that comes down and goes up the Indus would be decidedly much more than would come down and go up the Godavery. A very large quantity of cotton comes down the Indus, but the steamers do not pay. There was a private company which broke down; the company, which now exists as the Indus Flotilla Company, is part of the Scinde Railway concern, and is under a guarantee; it just manages to pay its way, and that is all; but as a financial concern it is most unsatisfactory.

7887. You say that it runs through a country which is a desert and produces nothing, and therefore there is no traffic for the steamers?—The Godavery is quite as bad as the part of the Indus on which the steamers run, or worse.

7888. *Chairman.*] You are speaking now of particular parts, because the upper part of the Godavery is very fertile, but the lower part is all jungle?—On the whole of the Godavery there are not, I should suppose, 50,000 acres of cultivated land; I mean on the navigable part of the Godavery. From Chanda to the head of the Delta there is no cultivation worth speaking of, and there is no population worth speaking of; therefore, when comparing it to Scinde, the conditions are not unreasonably unlike.

7889. Mr. *J. B. Smith.*] There is a population higher up the river, is there not, of six millions or seven millions in Nagpore?—Yes.

7890. And is not Nagpore a very fertile district?—But the districts along the Indus are reasonably well cultivated in parts.

7891. But we are speaking now of the Godavery?—Berar and the Nagpore district.

7892. They are a fertile district, which produces a good deal of produce?—Yes.

7893. If that produce can be carried at a cheap rate by the opening of the River Godavery, would not that be better than having a railway?—I am not prepared to say that it necessarily would; and the result of the consideration given to that question is what I have already stated. It was carefully gone into; there was no desire on the part of the Government of India to say, the navigation is certainly bad and the railways certainly good, and we will not have the navigation simply because it is navigation; the desire of Lord Mayo and the Government was to come to a reasonable conclusion; and, having looked at what they considered the probabilities of the expense, and of the traffic that they considered could use that navigation, the conclusion they came to was that it was not desirable to go on with it.

7894. The question is whether it is a wise conclusion if you have to pay 2 *d.* a ton a mile on railways for carrying cotton, and you can get it carried on the river at a halfpenny?—Everything hangs on the "if;" if Manchester would guarantee the Secretary of State that everything that was carried down the Godavery after it had been made navigable should be carried for ½ *d.* a ton a mile, and that there should be a sufficient quantity of cargo to pay for the capital required for the works, the Government of India would immediately, with the greatest satisfaction, lay out that capital; but we cannot get a guarantee of that sort unfortunately.

7895. What is your objection to their opening out the navigation; you say that there is not much population?—We have already got satisfactory navigation in the Delta where the population is.

7896. Might not the same objection have been urged against the Mississippi which 70 years ago was unnavigable, it was filled with sand-banks and snags, and the country was a desert, now that it is open there is the largest traffic on the Missisippi of any river in the world?—I am aware of that; but the Government of India is in a very peculiar position; on the one hand, with extreme difficulty it gets the revenue which it collects: on the other, there are a vast number of objects to which this revenue has to be applied; and it has to consider in what way its available funds shall be spent; it has not been very fortunate in pleasing everybody; the fact is, as far as I can see, that it pleases nobody, but it has tried to do its best, though without any very great success. At the bottom of its difficulties lies the fact that it has not command of money; if the capitalists of the country would combine to carry out works of this sort, there is not the least doubt in the world that it would be the very best thing that could happen to have them so carried out; but there is no possibility of such a result being obtained. The only question is, can the Government do it? There is one set of gentlemen, including those at Manchester, who urge the Government to carry on these works of improvement on the Godavery; but we have an equally pressing set who say, "For heaven's sake do not spend your money in that way, it can never bring back anything to the country; it is merely what, in common language, is called waste."

7897. I think you said one day that we ought to judge of the future according to the lights of the past; now the lights of the past show that railways have hitherto been very unproductive, and here you propose to spend 12 millions more on unproductive railways which you acknowledge will return next to nothing, and yet you see great difficulties and dangers in laying out half a million to render a river navigable which is 500 miles long; is there any consistency in that?—But I do not think that you have put my views at all correctly; in the first place, I have not recommended that 12 millions sterling, nor has the Government of India recommended that 12 millions sterling should be laid out on unproductive railways.

Major Gen. *R. Strachey,* R.E.

2 July 1872.

7898. But it is so stated in this Report on Railways in India for 1870–71?—I have nothing to do with that book, my information is different; I say that there is no proposal to spend money upon those railways otherwise than for the objects which have been specified. The Government has said that it is worth while for military purposes to spend, say, 40,000 *l.* a year to get a railway along the Indus; this may be right or wrong, but the commercial interests of the country are not the moving power. The Government further say, "that on the whole they can afford this outlay." I do not say that they are correct in the conclusion they have come to, but they have a right, at all events, to form an opinion on the subject.

7899. But the practicability of rendering navigable the Godavery river is beyond a doubt; the first barrier is already passed, the second is almost reached, and there remains the third; the whole is practicable in an engineering point of view, it is only a question of expense, is it not?—I suppose within certain limits one may say that everything is a mere question of expense; it is like making a tunnel under the Channel between England and France; if you spend money enough you can have it done.

7900. Would it not be desirable on the part of the Government to have the rivers re-surveyed, and have estimates formed to see whether it is practicable to open the river?—The Government is in possession of such estimates, at least partially; it is in possession of estimates sufficient to enable it, as I consider, to form a fair and just idea of what the results of the works would be if they were completed.

7901. Are you aware that after the opening of the first barrier of this river in that desert country which you describe, there was a traffic the first year of 20,000 tons from that district?—I believe almost the whole of that was food for the people employed on the works; there was extremely little in the shape of merchandise; I cannot say what the exact amount was, but I know that what I have said gives a correct general statement of the facts. Personally, I have taken just as much interest in that work as I have in any other. I have never had any motive for decrying the Godavery; the whole of my disposition would have been, if possible, to have seen good in it. A great deal of money has been spent upon it; and if I could have seen a way of justifying the expenditure, I should only have been too glad. I can only say that the impression left on my mind is that it cannot be justified by the result.

7902. With a population of six or seven millions, and a fertile country through which it runs, is it not worth while to spend half a million to open out a navigable river?—That is the whole question, whether it will have that result.

7903. *Chairman.*] From your experience in the department, you say that you do not think that 500,000 *l.* would make the Godavery up to Nagpore, or the neighbourhood of Nagpore, commercially navigable?—You may judge of the extreme difficulty of getting at a tolerable basis of fact in this discussion; when I repeat what I have said before that the Government and the Secretary of State have been trying to get proper estimates ever since the year 1861, and that it was not till the year 1872 that Lord Mayo got what was a reasonable sort of estimate. But if you look at the Despatch that has been so often spoken of you will see that the estimates for the works in the upper part of the river are said to be only approximate and that although the Government of India believed that Colonel Haig's figures are based upon reasonable calculations, still after all, they are very rough and not founded on actual estimates or designs; the fact is that the difficulties of working out a scheme of that sort are enormous.

7904. Is it not also correct to say that the difficulties increase enormously with every attempt to get a foot more water through a river such as the Godavery?—Most certainly. When we talk of 350,000 *l.* spent, as having opened the first barrier, and 250,000 *l.* being required to open the second barrier, that means navigation with the natural supply of water in the river which will give you a tolerable quantity for three or four months in the year.

7905. And the three or four months during which the navigation would prevail would not extend into the season when the cotton would have been not merely picked but ginned and prepared for market?—That is one of the questions which arises; for unless there is a satisfactory synchronism between the readiness of the cotton and the readiness of the river, people will want to send their cotton to market, and they will certainly send it by railway in preference.

7906. There is no reservoir at the sources of Godavery, like there is at the sources of the Ganges, to keep it flowing during the rest of the year after the rains are over, is there?—Nothing at all. Then there is another consideration which it was necessary to attend to in coming to a decision which is that the railway exists, whatever part of the Nagpore export traffic goes down the Godavery is taken off the railway.

7907. You think that the conditions of the problem are changed by the railway being there; it is no longer a question between two probable schemes, but it is a question of one thing actually in existence, and another thing which is to be proposed and carried out in supersession of that which is already at work?—Yes; and you must remember that the revenues of India are already charged with the burden which arises from that railway, if you take away the grist from that mill the country has to pay, it might be made to appear that cotton gets down to Coconada cheaper, but in reality India as a whole might have to pay for that.

7908. Is there not also another question which must be considered, namely, that when it gets to the mouth of the Godavery that mouth is not easily accessible to large ships, and there is no port fit to carry on the business?—Yes; in my former examination I referred to that, and also to what I believe is the necessary inconvenience of shifting the centres of trade. It is an infinitely more convenient thing for persons who want to sell cotton to send it down to a place like Bombay, where the whole trade of Indian cotton is concentrated, than to send it down to Coconada; they would have a much greater chance of getting good sales at the larger market.

7909. They have bankers there, and so on?—The whole organisation of commerce exists there on a very large scale, and there is no doubt, I think, that the general convenience would be much greater.

7910. Perhaps the question of the navigation of the Godavery is something like the Mutlah over again; the railway company found that they could not transport Calcutta to the banks of the Mutlah?—That is pretty much what I have suggested before.

7911. Mr. *J. B. Smith.*] You said that this opening

Major Gen. *R. Strachey*, R.E.

——

8 July 1872.

opening of the Godavery would be a diminution of the receipts of the Bombay Railway?—Yes.

7912. But if the Bombay Railway cannot carry it at a cheap rate it will not be able to carry it at all?—They do carry cotton very largely from these districts.

7913. But if such a state of things arises as that which existed before they will not be able to get the cotton at all. I waited upon Lord Elgin with a deputation from the Manchester Chamber of Commerce, previous to his going out to India; that was during the cotton famine, and the day before I waited upon him I received a letter from Liverpool informing me that a new kind of cotton, cotton of a very superior quality which was equal to the common American cotton, had arrived at Liverpool from India, and this cotton was called Hingunghat cotton. I showed the letter to Lord Elgin, and I said, "Perhaps your Lordship may ask how it is that this cotton has never made its appearance before; and the reason is this, that under ordinary circumstances this cotton is worth 3 *d.*, or 4 *d.* a pound, but that at that rate it would not afford to pay the carriage of 500 miles on the backs of bullocks to Bombay, and therefore it never made its appearance;" but at that time we were in the midst of the cotton famine, and the price had risen from 3 *d.* or 4 *d* to 1 *s.*, and then, when the price rose to a shilling, they were enabled to pay an exorbitant carriage to take it to Bombay. Now the price of cotton is likely to go back again to its normal prices, and in that case the cotton from Hingunghat cannot afford to pay high rates, and therefore your Bombay Railway would lose the traffic altogether, and they may as well lose the traffic by the taking of it at a cheap rate by the Godavery river. How would you meet those difficulties, arising out of the fact that they cannot afford to pay 1⅓ *d.* a ton a mile?—I perfectly admit that there is a price below which, if cotton falls, it cannot be exported from any part of India. I suppose that there is no question about that I do not think, however, that such a condition of things is likely to arise. My general impression is, from what I have heard, that at the present time if Indian cotton were to go down, sensibly, below 5 *d.* a pound it would stop the greater part of the Indian export. I do not know whether I am right or wrong in that; but, of course, under circumstances of that sort, if they should occur, every penny that we could save upon the pound of cotton to the exporter would be a thing of the very greatest importance; and the same argument, of course, is of general application; we all appreciate that thoroughly, and what we endeavour to do, therefore, is to give to the country the cheapest modes of communication that are available to us.

7914. But you are aware that cotton is not the only article; oil, seeds, and flax, and timber, and many valuable articles might be brought down the river?—My remark applies to all exports.

7915. You are aware that coal has been discovered at Chanda?—There is a great deal of coal in the vicinity of Chanda, and it has lately been found also lower down the river.

7916. Is it true that you are going to make a railway to carry this coal, instead of making the river navigable?—Yes; to the Great Indian Peninsula Railway.

7917. And is this railway to be a single line of railway?—Yes, I think so.

7918. And what is to be the expense per mile?—It is a broad gauge line, and it is about 7,000 *l.*

7919. If you can open out the river for 2,500 *l.* a mile, would it not be better to do that than to go to the expense of a single line of railway?—I do not think that it necessarily would; and the conclusion which we have arrived at is that we could not substitute the water communication for the railway with advantage. The question was discussed whether it would be better to try and create water communication between the Chanda coal and the Great Indian Peninsula Railway, or to have a railway; and after having gone into the question as far as we could, the conclusion which we arrived at was, that the railway was likely to be decidedly more convenient and economical.

7920. *Chairman.*] In speaking of mileage charges as to rivers, is not that rather a source of error in consequence of the very circuitous course of the rivers as compared with the course of a railway?—Yes; the cost of the navigation would not have been 2,500 *l.* on 45 miles only. But at the bottom of the whole of this question of navigation lies the question of the supply of water.

7921. Mr. *Fawcett.*] If you thought it could be done, would you think it advisable to open out the Godavery?—It cannot be done with what I consider financial propriety.

7922. *Chairman.*] You have never had reason to be satisfied that the work could be carried out with reasonable economy to produce what may be called commercial navigation?—No; but, on the contrary, having had the whole of these matters put before us by a very strong advocate, Colonel Haig, the conclusion that we came to was that he did not establish his case.

7923. Mr. *J. B. Smith.*] Then it must be founded on your having no confidence in the report of the engineer?—Very often there may be a justifiable difference of opinion as to whether a scheme shall be accepted in its totality or not, although you would not exactly go the length of saying that you had no confidence in the engineer.

7924. Under those circumstances, would it not be desirable to ask the opinion of other engineers?—But we consider that we have been discussing this question of the Godavery for the last 10 or 12 years, and that we are never really likely to know more about it than we do now.

7925. Is there not a great advantage in a canal over a railway in this respect, that you may carry an illimitable quantity by the water, which you cannot do by the railway?—There are advantages in that no doubt; but, on the other hand, there are disadvantages in water communication, and the question of the unlimited power of a canal navigation really does not arise, supposing that the quantity of goods which actually has to be carried is small, and such that it can be carried perfectly well by railway.

7926. *Chairman.*] I understand your evidence amounts to this, that having had this before you in connection with the government of India for the last 15 years, you have never been able to discover sufficient data that would justify you in reporting to the Government that the experiment was likely to be successful?—Yes, or rather for 12 years.

7927. Mr. *Fawcett.*] Looking upon this question of the Godavery purely as a financial question, and not an engineering question, do you not think that Lord Dalhousie, when he received this deputation from the Manchester Chamber of Commerce, and Lord Elgin, when he received a deputation from the Manchester Chamber of Commerce, would both of them have acted

Major Gen. *R. Strachey*, R.E.

2 July 1872.

acted very wisely if they had made some such reply as the following: "You gentlemen of Manchester have great wealth and great enterprise; you do not mind investing your money in any quarter of the world; you believe that this navigation would be a great advantage to you in getting cheap cotton; and therefore, as the Government, we will afford you every facility in investing your own money in carrying out navigation works"?—I think that it would have been a most excellent answer.

7928. And do not you think that at the present time, supposing pressure is brought to bear on the Secretary of State, he would be acting wisely if he said, "You believe that these works would be of great importance, and that they are practicable; we doubt it, we cannot run the risk of spending so much money; but if you like to spend money in doing the works, we will afford you every facility for doing so, as long as you do it at your own risk, and we shall be very glad if in the end you derive profit from it"?—That would be a most proper answer.

7929. Mr. *R. Fowler.*] I think I understood you to say that the Government had spent three-quarters of a million over the navigation of the Godavery, and that it was necessary to spend a quarter of a million more to make it navigable, which they did not see their way to do; were they satisfied that a quarter of a million would have put it into a satisfactory state?—An additional expenditure of a quarter of a million would have opened the navigation in the most economical way; 200,000 *l.* was the sum of money supposed to be wanted for the works at the second barrier, and 50,000 *l.* for work in the river and a road to Chanda; but the result would merely have made a possible communication; that it would give a satisfactory communication nobody ever pretended.

7930. Then the whole thing was so unsatisfactory, that you preferred to sacrifice the three-quarters of a million, rather than to spend another quarter of a million; you threw the three-quarters of a million into the sea, so to speak?—That was pretty much the case. The conclusion that the Government of India came to was this: after we have spent the least additional sum of money able to give any result, a quarter of a million, the prospect of any satisfactory result is so small that we think on the whole we had better abandon the three-quarters of a million.

7931. It was a parallel case to what the House of Commons did about Alderney Harbour the other day?—Financially, it is analogous to that.

7932. Lord *E. Fitzmaurice.*] Could you state to the Committee if it often happens, in your opinion, that pressure is brought to bear from England, from various commercial quarters, upon the Government of India, to carry out works?—Well, I think that whenever that sort of influence has been used, it has been used upon the Secretary of State; and that all I have to state upon that subject I have said already. I should add, if you please, that I do not for an instant mean to imply by any remarks I before made that I think that the people of England, whether they are commercial or anything else, have not a perfect right to express their opinion, and if they hold opinions strongly, to apply what you and I have called pressure to get attention paid to those opinions.

7933. I wish also to ask you a question about traffic on the railways; what traffic, first, second, or third class (assuming that you have a third class in India), is found, on the whole, to be most productive?—The third class is the really profitable passenger traffic, and if the first and second class were entirely wiped out it would not affect the return in an important way; so far as my recollection goes, the third-class traffic is 90 per cent. of the whole passenger receipts.

7934. Does not that point to this conclusion, that a great increase of the number of third-class trains would be a reproductive thing?—Yes, if combined with reduced fares; that is what I and the party to which I belong in India have constantly said.

7935. And do you not consider that the number of fast trains is very much in excess?—I do; I think that the whole of the question of traffic management in India requires very careful reconsideration, and I think that the figures that I before referred to, which I could give the Committee, will show that. One of the facts that come out from those figures is worth special notice. The cost of working a train mile on the East Indian line is 3 *s.* 8½ *d.*, while on the Bombay and Baroda Railway it is 6 *s.* 11 *d.* The average number of passengers in a train on the East Indian line is 206 and in a Bombay and Baroda train 268. The average quantity of goods carried in a Bombay and Baroda train is 78 tons; in an East Indian train it is 109 tons; thus the cost is very near double on the Bombay and Baroda line, while the goods carried on the East Indian are nearly 50 per cent. more, and the East Indian passengers only 25 per cent. less. The cost of working a train mile on the Great Indian Peninsula line is 5 *s.* 7 *d.*, the average loads being 157 passengers and 69 tons. The Scinde, Punjab, and Delhi line carries average loads of 117 passengers, and 29 tons of goods, and costs per train mile 3 *s.* 4 *d.*; thus costing almost as much as the East Indian, though it carries but little more than half the number of passengers, and one-third of the weight of goods. The whole of these facts indicate that the system under which the traffic is worked in India requires careful reconsideration.

7936. In fact, the general conclusion would be this, that a considerable increase in slow trains is wanted, instead of a comparatively large number of fast trains?—I would not go so far as that, what is wanted, I think, on most of the lines, is an absolute reduction of the number of trains, and the adoption of mixed traffic. On the Madras Railway now, for instance, the average load carried by a goods train is 50 tons; now 50 tons as a train load is nothing. On the East Indian, which is the best of all the Indian railways, the average load is 109 tons. Now, if you have a difference of that sort, it shows at once that the Madras Railway is running too many trains.

7937. Mr *J. B. Smith.*] Is it true that the Madras Railway, instead of being made for the convenience of the large towns through which it passes, is made to avoid all the large towns?—Well, not exactly that; that is rather an exaggerated way of putting it; but the line, I think, was not very cleverly laid out; the two principal towns to which you refer are Vellore and Arcot; the railway goes about seven or eight miles from those places.

7938. Those are large towns, are they not?—They are rather large towns.

7939. Is anything like that to be found in all the world?—I think something of the sort has occurred. I think that in England, when railways were first made, a number of large towns tried to keep the railways away from the neigh-

Major Gen. *R. Strachey*, R.E.

2 July 1872.

bourhood. I understand that the Great Western, for instance, was kept out of Oxford.

7940. Mr. *Fawcett.*] That is not a parallel case, is it; that was not a question of engineering?—I do not think that it is fair to say that the Madras line was laid out merely on engineering grounds.

7941. But in the case that you referred to at O[illegible]rd, was not the Great Western driven away fr[illegible] Oxford by the prejudices of the people?—Th[illegible] quite true.

7[illegible] But this line that Mr. Smith is referring to was [illegible] iven away from the large towns of Madr[illegible] the prejudices of the people?—It was ig[illegible]ce on the part of the persons who had the power to direct the course of the railway.

7943. Those were the engineers?—It was not a question merely of fixing the line for the railway in an engineering point of view; it was fixed on a general consideration of all arguments by the Government.

7944. In the case of the Great Western it is the prejudice of the people that is responsible for this result?—I think rather it is the ignorance of the House of Commons that is responsible in the Oxford case [illegible] was at the instigation of the Oxford people [illegible] the House of Commons fixed the line. The Committee of the House of Commons represent the Government in India in the comparison.

7945. The House of Commons was not carrying out a railway with public money. You admit that this line is badly laid out, and you say that it was through the ignorance of the people who laid it out, who were the Government officials?—A Government official no doubt advised it, but the final result is much the same as that of the English lines.

7946. It was submitted to the Public Works Department, was it not?—No, because in those times the railway work was all done by the Government of Madras, I think.

7947. The Public Works Department there?—Yes.

7948. You said in reply to Mr. Smith, in speaking of the Punjab and Scinde Railway, that a great amount of expense had been incurred, and then you added "unnecessary expense." Who is responsible for that, the Public Works Department?—Well, if you please to term it the Public Works Department, you are at liberty to do so.

7949. I mean to ask who is responsible?—I cannot give you any other reply, except that it is the system under which the guaranteed railways were carried out.

7950. Some one is responsible for that system; it only transfers the responsibility one step; who is responsible for the system?—I suppose the persons responsible for the system were the persons who invented it.

7951. But the system is administered by the persons in the Public Works Department, is it not?—Yes; but if you have a machine which is absolutely unworkable, you have no right to find fault with the mechanic in charge, because he cannot turn out work satisfactorily.

7952. Who invented the machine; the Government of India or the Secretary of State, or who?—The Court of Directors, I believe.

7953. I believe it was stated on the authority of Mr. George Campbell that the establishment expenses for an expenditure of some years of only 3,000,000 *l.* on Public Works was 1,000,000 *l.*; is that correct?—No; I think not so much as that.

7954. Can you state what they are?—From the Appropriation Accounts, which contain a review of the Public Works Expenditure. I see under the head, Harbour Works, Kurrachee, that the per-centage of establishment is 15 per cent.; for Bombay Defences, 7 per cent.

7955. *Chairman.*] Have you got the total of the whole expenditure for the establishments for the money that the department spends for the whole of India?—I can give it you on the estimate for 1872-73, which is probably near enough; it is 297,000 *l.* on 1,147,000 *l.*

7956. For what presidency is that?—That is the grant under Imperial, for the whole of India; since the provincial grants have been made the provincial establishment has carried out the provincial works; then under Extraordinary the cost of establishment is 312,000 *l.*, against, say, 900,000 *l.*; but that does not give a fair statement, because the work is so little advanced in many cases that a great part of these establishment charges are merely upon surveys; it is, I think, better to take as a guide, 297,000 *l.* against 1,150,000 *l.* in round numbers.

7957. Mr. *Fawcett.*] With regard to the establishment charges is there not this great disadvantage associated with them, that supposing the revenues of India should in future years be in such a condition that you cannot go on spending so much upon public works, you will have this great establishment representing a machinery of ordinary Government officials, they must be employed somehow or other, and will not it give them an interest in persuading the Government to continue public works; will it not act as a stimulus in that way?—I do not know that it would have that effect.

7958. Mr. *M'Clure.*] About the charge for engineering for guaranteed railways, I presume that the railway companies provide their own engineers; the charge paid by the Government seems to amount on these railways to 44,000 *l.* a year?—Those are the charges on account of the Government supervision, exclusively; they have nothing to do with the engineering of the line.

7959. Is not that a heavy charge for Government supervision?—You must remember that the Government not only has to supervise the work, but also has to keep the accounts; the charge includes, I apprehend, something for that.

7960. Mr. *Fawcett.*] You had a desire, before you concluded, to give some information, I believe, with regard to the figures of exports and imports which you gave the other day?—A doubt was expressed as to whether the increase of value of exports and of imports, between the years 1861-62 and 1868-69, was not considerably due to increase of price rather than to increase of quantity. Now I have got the actual figures from the returns here, as far as they go, which show that the increase in the quantities is quite as substantial as the increase in values, for almost the whole of the articles. I can just run through some of the most important of them. First, the exports. Coffee, 21,505,000 lbs. in 1861-62, increasing to 48,528,000 lbs.; cotton wool, 395,000,000 lbs., increasing to 697,630,000 lbs; indigo, 8,850,000 lbs., increasing to 11,111,000 lbs. Then rice, 4,576,000 quarters, against 4,111,000 quarters; showing a small falling off; other sorts of grain, 350,000 quarters, against 182,000, also a small falling off; on both of these items of export there are export duties; jute and manufactures of jute, 1,230,000 cwts., increasing to to 3,366,000 cwts.; opium, 65,400 chests, against 74,900 chests; oils, in gallons, 2,492,000, against 2,587,000; saltpetre, 631,000 cwts as compared with 397,000 cwts.; this is an export killed by an export duty; seeds of all sorts, that is, oil seeds, 582,000 quarters to 710,000; silk, raw, 1,101,000 lbs. to 2,463,000 lbs.; spices, of all kinds, 11,500,000 lbs. to 17,334,000 lbs.; sugar, 708,000 cwts. reduced to 450,000; there is a large import of sugar which nearly balances the export; tea, 2 318,000 lbs. increased to something over 12,000,000 lbs.; wool, 17,760,000 lbs., increased to 20,390,000 lbs. Those are the principal exports.

7961. What are the imports?—Cotton twist, 19,500,000 lbs., increased to 29,040,000 lbs Of piece goods the quantities are not given for the former year; in the latter year it is 958,000,000 yards nearly. Salt, 2,776,000 cwts., increased to 5,331,000 cwts. Raw silk, 1,500,000 lbs. increased to 1,959,000 lbs. Malt liquor, 2,671,000 gallons, reduced to 1,716,000 gallons. I do not know what the cause of that is. 618,000 gallons of spirits, increased to 805,000, 308,000 gallons of wine, increased to 685,000. I think those are the only quantities that are given. The quantities of the other things are hardly susceptible of being estimated. For instance, such things as machinery; of metals, again, it is difficult to estimate the quantities.

7962. Those figures would show that the imports consisted to a very small extent, except twist goods and cotton piece goods, of any thing consumed by the general body of the people; the rest of the imports consisted of materials supplied to the Government in the form of stores for troops and things like that, and of specie, which specie does not provide the people directly with food, clothing, or drink?—That is true as far as it goes; I think you should, however, include among the things consumed by the people generally, 3,800,000 *l.* worth of metals.

Major Gen. *R. Strachey,* R.E.

2 July 1872.

7963. A great part of that is for railways?—No, that is a separate head.

7964. It would include, for instance, metals for public works, would it not?—To a certain extent it would. These are the heads under which they come. Machinery is in the last year, 794,000 *l.*, raw metals 2,700,000 *l.*, manufactured metals, 1,139,000 *l.*, railway stores 1,591,000 *l.* The three first of these items are, to a very great extent at all events, for the general purposes of the country and not for the Government. I would add that I have a return before me of the total value of Government stores that have been sent out during the last 10 years, which shows that, comparing 1861–62 to 1868–69, there was in the later year for such stores, the increase of value did not amount to more than 500,000 *l.* Comparing the aggregate of the imports that may be considered as mainly consumed by the people generally, in 1861–62 with the values in 1868–69, I find the results to be about 13,800,000 *l.* in the earlier year, and 24,700,000 *l.* in the later, giving an increase of about 11 millions sterling, the whole increase having been about 13½ millions. I have also been able to procure the figures showing the values of the exports and imports up to 1871–72, which are of considerable interest. They are as follows:—

——	Merchandise		Treasure	
	Imports	Exports.	Imports	Exports.
	£.	£	£	£.
1681–62 -	22,320,432	36,317,042	14,951,985	683,355
1868–69 -	35,793,767	53,062,165	15,149,424	1,395,000
1869–70 -	32,927,520	52,471,375	13,954,807	1,042,353
1870–71 -	33,413,906	53,551,681	5,444,823	2,220,765
1871–72 -	31,083,747	61,697,225	11,573,813	1,476,093

They seem to support the opinion I before gave, that the prosperity and general productive power of the country had greatly increased of late years.

Friday, 5th July 1872.

Mr. Robert Fowler.
Mr. Lyttelton.
Sir Stafford Northcote.
Mr. John Benjamin Smith.
Sir David Wedderburn.
Sir Charles Wingfield.

THE RIGHT HON. ACTON SMEE AYRTON, IN THE CHAIR.

Mr. JOHN DACOSTA, called in; and Examined.

Mr.
J. Dacosta.
——
5 July 1872.

7965. *Chairman.*] WILL you be good enough to state what connection you have had with India?—I have been a Merchant for the last 30 years, residing in Bengal.

7966. In connection with what firm?—Ashburner & Company is the name of my firm.

7967 Are they general merchants?—Yes.

7968. Are they also indigo planters, to a certain extent?—They make advances to indigo planters; they are not owners of factories.

7969. They have not been engaged in the cultivation themselves, but act as agents?—They act as agents, and occasionally in some years when indigo factories from their bad results lapsed into our hands, we had to manage them on our own account until we resold them.

7970. Mr *Fawcett.*] You have paid very particular attention to Indian Finance, have you not?—Well, certain branches of it have forced themselves on my attention.

7971. The points on which I understand you would like to give evidence are the income tax, the increase of various forms of local taxation, and various kinds of retrenchment which you think can be effected; especially in the Public Works Department and Military Expenditure?—Yes.

7972. Would you give the Committee your views as to the effect produced upon the people by the income tax?—The income tax has been collected mostly from the classes that it was not intended to touch. It has not been oppressive to the Europeans, because they could resist over-taxation or over-assessment; but among the natives, the higher classes and the middle classes are supposed to have escaped, to a very great extent, the amount that would be due from them.

7973. In what way have they escaped it?—Because their incomes could not be ascertained with any exactitude.

7974. Then on whom has the tax fallen with the greatest force?—It has fallen with the greatest severity upon the poorer classes, chiefly in the country, who are the more ignorant part of the population.

7975. Has not this pressure upon the poor been obviated by the fact, that the tax is only imposed upon, comparatively speaking, large incomes?—No, and I will explain why. When the minimum income was 50 *l.*, large numbers were assessed who afterwards were found not to possess more than 5 *l.* or 6 *l.* of income, and therefore, the raising of the minimum of the income tax to 100 *l.*, is not likely to prevent men with smaller incomes from being taxed.

7976. Then what you wish to convey to the Committee is, that for every person who is legally responsible for the tax, a very great number are assessed to it?—Exactly.

7977. Can you give us any facts to prove that assertion?—One broad fact shows it at once, and that is the large number that were unable to pay the tax, and whose goods had to be sold; the officers had no option but to fine them; and as they were unable to pay the fine as well, their goods were sold, and the proceeds fell short of even the income tax, and greatly short of the whole demand made upon them.

7978. Can you refer to any official paper in which that is stated?—There are the last reports of the administration of the income tax in the Lower Provinces, and in the North Western Provinces, and I think I have got them here, and I could refer to them.

7979. Would you refer to them and read an extract?—I will refer to the report of Mr. C. H. Campbell, Commissioner of the Presidency division.

7980. He is brother of the Lieutenant Governor of Bengal, is he not?—Yes, I believe so; the report is dated the 22nd of December 1870. The Lieutenant Governor, Mr. George Campbell, in his Minute of 8th August 1871, says, "I am therefore not surprised to find that in the Board's Report of 18th July 1870, it is stated that the income tax falls with greatest severity on the class of ryots and agriculturists; that it is among this class that the greatest discontent is felt in connection with this mode of taxation; that among them more than others, a strong and bitter feeling has been excited by the tax, and that instances have been brought to the notice of a member of the Board in which cultivators threatened to emigrate to Nepaul, where there is no income tax."

7981. *Chairman.*] Do you recollect to what

Mr. *J. Dacosta.*

5 July 1872.

rate of income tax that remark has reference?—This has reference to the last tax; this remark is dated in August 1871.

7982. How low did it go; to what scale of incomes?—£. 75 a year; I mentioned that under that tax they assessed men who were not assessable by law. The assessments are done in this way; the numbers are too large for the European officers to draw up the list; native underlings are charged with the duty, and they put down every man in a village, even those who have only 5 *l.* or 6 *l.* a year, those who fee them have their names struck off the list; those who do not, remain on; and any complete revision of that list by the European officers is impossible.

7983. Mr. *Fawcett.*] That statement of Mr. George Campbell shows, that it is not correct, as has been generally represented in this country, to say that the agitation against the income tax is solely confined to the wealthy natives, but that it is a tax which according to his opinion, falls with very great severity upon, and even causes great vexation to extremely poor agriculturists?—Exactly, and Europeans have been the mouthpiece, because they, especially the indigo planters, have witnessed the sufferings of the poor in the agricultural districts, and saw that the men on whom they depended for their work were ruined by the tax.

7984. Are you aware of the very strong statement made by Mr. Inglis, afterwards confirmed by Sir William Muir; they mentioned, did they not, that the tax affected 20 people for one from whom it was properly levied?—Yes. Mr. Inglis, the official member of the Legislative Council for the North Western Provinces, stated, at the debate on the Income Tax Bill in March 1871: "It may be true that only one in 300 of the people pays income tax to Government, but it is equally true that of the 299 remaining, at least one-half are subject to the most vexatious oppression, inquisition, and extortion when the preliminary lists are being drawn up, and that a very large number of these men have to pay in order to keep their names out of the lists." Again, he said, "It is, I believe, no exaggeration to say that for every man who pays income tax to Government 20 pay to get off, and that for every rupee that is paid into the Treasury another is paid to the subordinate native officials; that is, that the natives of India paid last year upwards of two millions sterling as income tax to Government, and upwards of two millions more as bribes. Everywhere throughout the country the people are being demoralised by the tax; everywhere false returns are sent in; everywhere the trading classes are beginning to keep two sets of books, one set showing accurately the real transactions, the other containing a carefully-prepared garbled account to be shown to the income-tax assessors." This statement was challenged by the Government of India, and referred to the Lieutenant Governor of the North Western Provinces for a report.

7985. Who was he; Sir William Muir?—Sir. Sir William Muir. The secretary of Sir William Muir said: "The sentiments of Mr. Inglis are shared more or less by probably three-fourths of the officers in these provinces who have had opportunities of forming an opinion; and his Honour has found, with hardly an exception, that those officers possessed of the most experience and judgment coincide to a large extent in the views and impressions of Mr. Inglis." In the same report, referring to the cases of corruption and bribery, he said: "The cases which have actually come to notice are few, and have transpired by accident; and they are mentioned as showing what may occur when the superior officers are corrupt or negligent, though they hardly touch the class of corruption on the part of underlings, to which his Honour conceives Mr. Inglis chiefly alluded, and which, being characterised by collusion on both sides, could rarely come to light."

7986. So that that would show that in the opinion of Sir William Muir, the cases which came to light could, from the nature of the case, not be taken in any way as a measure of the amount of extortion and corruption which resulted from this taxation?—Exactly.

7987. Referring to the opinion expressed by Mr. George Campbell, the Lieutenant Governor of Bengal, he refers to people actually threatening to leave their own country and go to Nepaul, in order to escape this tax so obnoxious to them; I suppose it must be an infinitely stronger inducement to induce the Bengalee to leave his country to escape a tax than to induce a European to do so?—Very greatly.

7988. They have almost a religious sentiment against doing so?—They have.

7989. Mr. *Lyttelton.*] Did they go as a matter of fact?—It would not be known if they had gone, because they would go in small numbers; but the probability is that they did.

7990. *Chairman.*] You understand that this applies to people who really have not an income of 75 *l.*?—Yes.

7991. Do you suppose that any person who really had 75 *l.*, would have gone to Nepaul to escape the payment of 7½ rupees?—It is difficult to answer that question, evidently the feeling of the majority in those districts bordering on Nepaul was to emigrate.

7992. What is your view of the feeling of a person in India having an income of 75 *l.* a year?—That he is a man not possessed of sufficient education to know whether he has been legally or illegally taxed.

7993. But, considering the expenditure that such a man would make upon a birth, or betrothal, or marriage, or death, or any other occasion commonly called joyful or mournful, do you think that he would throw up his home and his family connections for the sake of the 7½ rupees?—Yes, he might do so, because he would be ruined by the tax.

7994. How could a person of 75 *l.* a year be ruined by paying 7½ rupees a year?—Because he would have to pay a great deal more to the underlings, they would probably assess a man of 75 *l.* as possessing 400 *l.* or 500 *l.* for the sake of obtaining bribes.

7995. I was asking you if he were assessed properly on an income of 75 *l.*, how could the result be what you have stated?—If he were assessed properly, my opinion is that it would require a very great inducement for him to leave the country; but my opinion is, that it is impossible to assess properly in that class, because the establishment employed for the purpose is uncontrollable and unreliable.

7996. That is another proposition altogether; I only wanted to know whether that amount of taxation, 7½ rupees a year on a person who had an income of 75 *l.*, was so oppressive that he would be induced to take any serious notice of it and leave his home and country to escape it?—If the

Mr. J. Dacosta.

5 July 1872.

tax could be assessed exactly as it is laid down in the law, without any collateral oppression and demands, I do not think it would be oppressive.

7997. Mr. *Fawcett.*] Your contention is that the tax in itself, assuming that it could be accurately assessed and only levied on those persons who are legally bound to pay it, would not be a bad tax; but that from the circumstances of India and the manner in which it has to be assessed, it leads to such a very great amount of corruption and oppression that it becomes obnoxious?—Yes; and I consider it impossible to assess the tax properly amongst that class according to law; you have not the means.

7998. Before we leave the subject of the income tax, is there anything on this subject which you would like to add?—In addition to the figures given by Mr. C. H. Campbell, he has said in the same report, "The more I see of the actual working of income tax Acts, the more I am convinced of the utter unsuitableness in every respect of the tax for this country;" and later he says, "Since the British connection with India began, no measure has ever been introduced which caused such deep dislike to our rule, to use a mild term, and this I can safely say is the opinion of all classes, official as well as non-official, in this division."

7999. Is there anything else that you would like to say on the subject of the income tax?—Only to allude to the general fact that a great many cases of oppression have come to light. A missionary, a Mr. George Kerry, was instrumental in exposing a number of cases that occurred within four miles of the Government House at Calcutta, but while a few were let off the tax, no compensation was made to the men whose goods had been sold beyond giving them the small proceeds of their goods, which of course did not enable them to set up again.

8000. Passing to the subject of local taxation, I believe that you have devoted a great deal of attention to the growth of local taxation in India, have you not?—Well, it forced itself in the same way on our attention, inasmuch as our servants and dependants were oppressed by it, and came to us for advice.

8001. *Chairman.*] When you speak of local taxation, do you refer to the local taxation that exists in some towns and places of India on houses, horses, and carriages, or to what class of local taxation do you refer?—I mean the new taxes imposed on the poorer classes.

8002. Will you just enumerate those if you can shortly?—Some of these taxes have been abolished, but their number quite confuses the people, and the changes in their rates equally so.

8003. Will you specify what are, in your mind, which you call the direct local taxes?—The income tax, the certificate tax, the license tax, the chokeedaree tax.

8004. What do mean by the chokeedaree tax, the police rate?—No; it is an additional tax imposed for the first time to the best of my knowledge, in December 1870, but under an Act which was passed in 1855-56, the operation of which appears to have been stayed on the petition of some Native associations.

8005. But what is it?—It is a tax levied at the option of the assessor on the rental, or on the general circumstances of the man.

8006. For the payment of what?—For the payment of chokeedars, who are watchmen.

8007. Then it is a police rate?—Yes, but it is in addition to what is called the police rate, and is a new tax; and it is very inquisitorial from the fact that when a man pays a small rent, they look into his circumstances, and try to find whether he has got any income which they can reach; therefore it is another shape of income tax.

8008. You were going to enumerate some other taxes as the local taxes to which you refer?—The increased house tax, the road cess, and the education cess.

8009. Mr. *Fawcett.*] Then in addition to these taxes which you have enumerated, the people have been kept in a constant state of uneasiness, I believe, in consequence of various other taxes being from time to time proposed. A short time since there was a tax proposed upon feasts, was there not?—There was.

8010. And another tax upon marriages?—Yes, and upon tobacco.

8011. So that when you estimate the amount of public discontent that has been created, you must take not only the taxes that have been imposed, but also the imposts that have been threatened?—Yes, but their anxiety was greatly increased by the circulation of false rumours, emanating it is believed, in fact it is known, from the police and underlings of the magistrates courts, for the purpose of extorting bribes.

8012. What you mean by that, is that owing to these constant proposals of various kinds of local or provincial taxes, officials tell the people that taxes have been imposed, when they actually have not been, and in that way they extort money from them?—Yes, in some instances it has been said that a tax has been imposed, and money extorted on that pretence; in other instances it was said that the tax was about to be imposed, and money was extorted from persons on the plea that their names would be kept out of the list of those who would be taxed.

8013. In addition to those taxes that you have enumerated, you have mentioned the income tax as a direct tax; but you mean by that not the Imperial tax, but in some parts of India, for instance, in Bombay, a local income tax has been imposed, has there not?—There was a tax imposed in Bombay which reached incomes of 5 *l.*, and which therefore could be realised only through underlings on very small salaries, and exposed to all the temptations of receiving bribes.

8014. Taking the chokeedaree, you know the manner in which that has been levied, because I presume you have paid that tax, have you not?—I have; it was levied in my case on the rent of my house, and I never referred to the Act until I was asked what were the circumstances of some native clerks employed in my office, and I then found that it was optional to assess them according to their general circumstances.

8015. So that from your own experience you know that the system of assessment of this particular tax was so vague that it would give great room for oppression and extortion?—Exactly, and for corruption and misstatements.

8016. Have you any further remarks to make, from your experience, or from official documents, as to the effect that this local taxation produces upon the people?—No, not beyond what I have said, without repeating what others have said on the subject.

8017. I mean, have you with you the opinions of any official persons to strengthen your own testimony on the point?—With regard to the

Mr.
J. Dacosta.

5 July 1872.

the road cess it has been the opinion of most of the officers who were consulted on the subject in 1870, that the portion payable by the proprietors of land would ultimately fall on the ryots or cultivators, as the zemindars would compel them to make it good to them.

8018. That is the opinion which was generally shared in by officials, was it not?—It was.

8019. Having lived in India for 30 years, and taken great interest in the people and country, which I believe you have, have you noticed any change in their attitude towards the British Government?—It is very difficult to give an opinion on that point, because the natives of India are very reserved in any manifestations of that sort, and no indications were given, to show that the Mutiny of 1857 was at hand.

8020. But what is your opinion as to the effect on the public mind, produced by this increase of taxation. Has it produced discontent?—What we could well see was, that it created a great deal of discontent and despondency, and in some parts a great degree of irritation.

8021. But do you think that the people are more despondent, less hopeful than they were?—Well, I will quote the words of some of the people that came to us. When the income tax was doubled in the middle of the year 1870, the cultivators in Purneah, where our indigo factories lie, had already paid a tax which they thought exempted them from further taxation for that year. They came in great numbers to the factory, saying, "Why does the sircar" (that is the name by which they designate the Government) "not tell us what money is required? We have been told that the Government is in debt. If they will say what amount is wanted to clear the debt, and will collect it through the heads of our villages, they will collect it from the men, and take it to the collector. We shall sell our cattle and ploughs, if necessary, and wait till we can buy others; but this year we have commenced our cultivation, and in the midst of it our cattle and our implements are taken away from us, to pay this addition to the income tax." They came in large numbers with such a tale.

8022. Does it at all reconcile the people to this local taxation, of which you have been speaking, that it is said to be spent for local objects in which they are interested?—It cannot reconcile them, because they do not understand it, nor has it been so spent; and as a proof of that, the chokeedaree tax levied in the district where I reside has not evidently added a single chokeedar to the establishment which existed before.

8023. Then what has been done with the money?—It probably went to pay some deficit in the fund, as most of the municipalities are in debt.

8024. A deficit in Imperial funds, or local funds?—Probably local funds.

8025. Then the people have no security, or do not feel any certainty that money raised for any particular object will be spent for that object?—None.

8026. Have you at all considered the decentralisation scheme which has been explained to us by General Strachey?—I have; and it has impressed me only as a means of increasing taxation by throwing on the local governments the burden of that increased taxation.

8027. *Chairman.*] Is it not rather a shifting of responsibility and administration?—Worse than that, it is a mode of rendering further taxation absolutely necessary.

1028. Mr. *Fawcett.*] Do you mean it will have this effect that it will lead to an increase in the aggregate amount of local taxation, because these local taxes are not brought so much under public opinion; not known so much and therefore local taxation may be increased with greater impunity than Imperial taxation?—That might be one of the objects.

8029. Do you think that will be one of the results?—It must be, because the local taxes are not brought before the public in the same prominent way as the Imperial taxes are.

8030. From your evidence you evidently think that it is essential that this increase of taxation, or rather this constant imposition of new taxes should be checked; but if it is checked in what way would you propose to provide the money?—Well, the increase of taxation has been so great during the last 10 years that the difficulty ought to be met by a retrenchment in the expenditure.

8031. When you speak of the increase of taxation, you, I suppose, under that word include not simply Imperial taxation, but local and provincial?—Exactly; I mean the whole sum taken from the country, which in the last year of the East India Company amounted to some 33 millions, and which amounted last year, including the local taxation to something over 53 millions, showing an increase of 20 millions in the taxation during those 14 or 16 years.

8032. Then if you were going to compare the increase of taxation, you think it would be fairer to compare the taxation at the time when the East India Company gave up India and now, than to compare the taxation between 1861 and 1871, as has generally been done?—Exactly, it would not be fair to compare the present taxation with that of the East India Company's time, because it has been considered necessary to increase the army, and that has required an increased expenditure, but there are other items on which the expenditure has been useless; public works may be said to be one of them.

8033. You say that retrenchment is necessary. Have you any practical suggestions to offer us as to how retrenchment is to be effected; in what branches of expenditure?—There is Sir William Mansfield's (now Lord Sandhurst) opinion expressed in a minute, that one commander in chief for the whole army of India would secure strength and economy. Then it has been shown that the transport of troops to and from India has been unduly expensive.

8034. *Chairman.*] Are you giving us your view or his view?—I am giving, in a few words, the pith of what Sir William Mansfield said in his minute

8035. Will you give the date of that minute?—It was dated on the eve of his departure from India, and the following passage was quoted by one of the Members in the Legislative Council: "In the course of my remarks I have adverted to the new military strength accorded to us in these days, as compared with former times, in the power for immediate combination and concentration; this reflection leads us at once to another point, namely, that in the combination of the military departments of the several presidencies into one War Department under the Government of India, with a corresponding change in the system of command in chief, may be found a measure giving at once improvement in economy and increase of strength. There should be but one War Department, which would at once in-

Mr. J. Dacosta.

5 July 1872.

volve the consequence of one Ordnance Department; in short, the concentration of the army in the largest sense in the hand of the Government of India. This need by no means interfere with the local character of the Native forces of the other Residencies, a character which, I believe a sound policy bids us carefully to maintain."

8036. You were going on to the question of transport; did you wish there to express Lord Sandhurst's view, or your own? — Merely my own, derived from the general opinion entertained amongst the mercantile community in Calcutta, that considerable economy might be effected in the transport of troops.

8037. Mr. *Fawcett.*] What is the next point to which you would refer?—There has been a good deal of waste by the system of indenting for stores through the Secretary of State.

8038. Will you explain in what way the waste has arisen?—There have been delay and errors in the execution of the indents, and in some instances where the public had the opportunity of judging, the cost of the stores was much in excess of what it would have been had the stores been procured through the ordinary channel of trade.

8039. Can you give any instances to substantiate that opinion? — I see that the only instance where the public had figures to judge by, namely, the appointment of the Calcutta Port Fund Committee, has already been brought before the Committee, in which case vessels were chartered at 59 *s.* 6 *d.* per ton during a period when the rates ranged in London for vessels to Calcutta, from 20 *s.* to 30 *s.*

8040. Mr. *Candlish.*] What date was that?—It was in 1868, between April and August.

8041. For the Abyssinian Expedition?—No, for stores required for the port of Calcutta.

8042. Mr *Fawcett.*] A defence has been made of this, has it not?—I was told that it was alleged that the vessels had to go to Sunderland: but as vessels may be had to go from London to Dundee at 10 *s.* a ton, their going to Sunderland could not cause an increase of 29 *s.* to 39 *s.*

8043. Mr. *Candlish.*] Was the 59 *s.* a time charge per month?—No, per ton of goods conveyed to Calcutta.

8044. Mr. *Fawcett.*] You say those are the only instances in which you have been able to get the figures?—Yes.

8045. Then, if you object to the present plan, what plan would you propose; that stores should be bought direct by the Government of India?—Tenders might be invited, and contracts made publicly, which would ensure the lowest price that competition could produce

8046. What other suggestions have you for retrenchment; do you not wish to offer some suggestions to the Committee as to the cost involved, and other disadvantages in the Governor General in Council going to Simla?—Well, that would involve the whole question; otherwise the expense I was told was about 40,000 *l.* But the greatest evil is the separation of the Government from the people, which deprives it of the opportunity of learning their feelings, their wants, and their opinions.

8047. I believe you have gone for 30 years into Calcutta every day. Living at Barrackpore; at least, you have resided a long time in Calcutta; but judging from your experience of the climate, do you think this peregrination is necessary for health? — The Judges of the High Court, the lawyers, the barristers, and the merchants, remain in Calcutta, and taken as a class they are as healthy as any other class.

8048. You have remained in Calcutta and have had good health?—I have.

8049. Then judging from the effect the climate has upon merchants and barristers, and other Europeans who live in Calcutta, you do not think that this peregrination is necessary for health, but simply a luxury?—A trip to the hills has been found necessary to invigorate the body, but that is generally taken during a leave of absence.

8050. But not these annual visits? — These annual absences last for seven months, and they are objectionable in other respects; for example, the public records have to be moved 1,500 miles each time, and they become inaccessible for one month on each occasion; but the greatest evil is the removing the Government from the influence of public opinion, and this is shown in the measures that have been passed since the custom of going to Simla has been adopted; Acts have been passed showing such utter ignorance of the wants and feelings of the people, that they had to be rescinded; other substituted Acts have in their turn had to be amended or repealed; for example, last year when the Council met in Calcutta one of the first matters of business brought before it was an Act introduced for repealing another Act 29 of 1871, which had been passed scarcely a month before at Simla, and for reviving some of the regulations repealed by it.

8051. Sir *Stafford Northcote.*] What was that Act? — It was an Act referring to Bengal. I did not look into the Act; but the circumstance struck me as shewing the hurried way in which the first Act must have been passed. But an Act which attracted more of my notice, was a Marriage Act intended to legalise the marriage of a certain sect of Hindoo dissenters Four years ago it was proposed to pass that Act; two Bills in succession were framed, amended, and rejected; a third Bill was proposed and forced through the Council in January last.

8052. *Chairman.*] At Simla?—No, after their arrival at Calcutta. Its immediate passing was opposed, and 30 days, to the best of my recollection, was given for any opinions to be expressed upon it. I believe the Act has subsequently been passed; but doubts are still entertained as to its propriety. This illustrates the difficulty that the Government have, isolated as they are, in really knowing the wants which they attempt to satisfy.

8053. Mr. *Candlish.*] If it were four years under consideration, would not that be adequate to reveal to the Government the wants and wishes of the people of India on that particular question? —It is not so much the wish that I refer to, as the fact that the two Bills which were framed, touched upon other vital points, and would have created a great deal of mischief. The want was clear enough, but not knowing the condition of the people, they could not satisfy it.

8054. Mr. *Fawcett.*] This plan of migrating to Simla, has grown up since you were in India?—It has.

8055. You wish to give some evidence as to retrenchments which you think could be effected in the Public Works Department, do you not? —Yes. Millions are spent upon works which are said to be reproductive, but which appear likely never to yield any return, coming up to the interest

Mr.
J. Dacosta.

5 July 1872.

interest payable on the money borrowed for their construction.

8056. Beginning with the works which have been represented as most favourable in their returns, can you illustrate what you have just said, by referring to various irrigation works, and show, by quoting figures, what is the real nature that those yield, taking them in whatever order you like?—The largest work constructed by the British Government in India, is the Ganges Canal. That work was commenced about the year 1842, and opened by Lord Dalhousie in 1855, it was estimated to cost one million sterling, and had cost about two millions when it was opened. In the last report that I have seen, its cost has been increased to 2,400,000 *l.* up to the 1st of April 1871. That amount did not include the interest that had been paid on the cost of construction, nor the expenses which had been incurred for working the canal since its opening, to the extent that the earnings fell short of them. On a rough calculation I should say that the capital would now be about four millions sterling, if it included all these items. The net earnings of the canal in the year 1869–70, amounted to 95,600 *l.*, or less than 2½ per cent. on the capital. In 1870–71 the net earnings must have been smaller because the area irrigated was smaller by about 38,000 acres, but I have not seen the account relating to the latter year.

8057. You are probably aware that the figures which you have just quoted, are said not to give an adequate idea of the profit really yielded by this canal, because they simply include as earnings the amount which is levied as a direct irrigation rate, but they do not include the additional amount which is given to the land revenue, from the fact of the land being irrigated, and therefore the returns would be larger than you have represented them to be; have you any remarks to offer upon that?—The Government are in the habit of charging an increased land tax upon lands that are irrigated; but the lands irrigated by the Ganges Canal, were previously irrigated by wells, and therefore, in respect of them, there was no such collateral advantage gained.

8058. *Chairman.*] Do you know the relative cost of irrigating a given quantity of land by a pair of bullocks from a well at any given depth, as compared with the cost of irrigating the same space by a flow of water from a canal?—The canal is generally so low at the time when water is most wanted, that the water has to be lifted up also when you come to applying it to the very fields that want it.

8059. But do you know what the relative expense is of lifting water for the purpose of irrigation as between three or four feet from a canal, and 30 or 40 from a well?—I cannot say; but I am led to the conclusion that they still find it cheaper generally to irrigate by wells, as the canal water is used to a comparatively small extent.

8060. Mr. *Fawcett.*] Has it not been alleged that some disadvantage arises from this Ganges Canal by its absorbing the salt deposit that is spread over the lands?—Yes; there are tracts through which the canal passes, which are almost worthless, being covered with saline efflorescence, and during certain seasons, this is drained by surface drainage into the canal, and afterwards conveyed by the process of irrigation on other lands destroying in a measure their fertility; but there is another evil, and that is, that it has drained most of the wells that were dug in the vicinity, and the cultivator has been compelled to buy canal water after having incurred the expense of digging wells.

8061. *Chairman.*] Can you explain that physical fact; how is it that the well which is below the level of the canal, can be drained by the canal getting water into it?—The wells are not always below the surface of the canal, not in the rainy season, and that supply is drained off very fast.

8062. Mr. *Fawcett.*] You mean the surface supply?—No; the level of canal water falls faster than that of the wells; and these are drained consequently by percolation.

8063. *Chairman.*] Do you think that the level of water in a canal is below the level of water in the wells after the rains?—The canal water, owing to the great velocity of the canal, is drained off after the rains towards the month of November, and its level falls below that of the wells which have been filled by the rains.

8064. Mr. *Fawcett.*] Then what you wish to convey to us is this, as I understand you; the natives say that they have been put to the expense of digging their wells and the water is drained off from them, and they have to pay for the water which they have lost?—Yes, they might say that.

8065. You alluded to the swiftness of the water in the Ganges Canal; do you think that it has been faultily constructed, and that that has been one cause of the expense?—I have heard it universally said, that the too great slope and consequent velocity of the canal by causing a great accumulation of silt in its lower divisions, rendered a large expenditure necessary for repairs, and also compelled the closing of the canal and the consequent interruption in the work of irrigation periodically.

8066. Would you give us, as briefly as you can, the figures of some other canals, your figures are taken, I presume, from official returns?—Yes.

8067. Can you give the figures of some others, to show what you consider their rate of profit to be?—In the Punjab, the canals are reported in the Government "Gazette" to have returned in 1869–70, 107,000 *l.*, said to be 7 per cent. net on the outlay. But of that sum of 107,000 *l.*, 87,000 *l.* were earned by the Western Jumna Canal alone, a work constructed antecedent to British rule. The other canals therefore earned only about 20,000 *l.* which would be equal to only about 1½ per cent. on the outlay alluded to in the "Gazette;" but that outlay does not include interest and excess of charges over revenue in past years. Then the Orissa Canals which were commenced by a company and taken over by Government, were opened partly in 1866, and further portions have subsequently been opened. Their cost it is estimated will be 2,775,000 *l.*, when completed, and 445,000 *l.* was the sum expected as the net revenue when the completion was sanctioned by the Secretary of State on the 27th of July last. From irrigation alone 400,000 *l.* were expected, 1,600,000 acres having been assumed at 5 *s.* an acre; but this rate was found to be too high to induce the cultivators to buy the water, and it has since been reduced to one rupee or 2 *s.* an acre; so that the estimate has turned out too large by 240,000 *l.* At the reduced rate the largest area irrigated was about 150,000 acres, which at 2 *s.* would give 15,000 *l.*, and as nearly half the estimated cost of the works has now been expended,

Mr. J. Dacosta.

5 July 1872.

expended, 40,000 *l.* would be a reasonable figure to expect from the irrigation when the works are completed, instead of 400,000 *l.* the estimated figure upon which the works were sanctioned.

8068. Have you any other cases to refer to? —The works in the Madras Presidency are said to be yielding a very large profit; but the rent of the adjacent land appears to have been assumed as representing the profit from the works, and the fact that irrigation had been largely resorted to by the inhabitants, by means of tanks and other works previous to the construction of the canals, seems not to have been taken into account.

8069. Have you any figures to give with regard to any of these Madras works; is there not one Madras water supply association?—Well, it is difficult to give any figures, and the Government even, it is believed, are not in possession of figures. The Government of India issued instructions lately to have a clear and reliable record of capital, revenue, and loan operations; but it has been found that the actual cost of many of the works cannot now be ascertained.

8070. So that we never shall be able to know what they really return?—Figures may be given which will in some instances be quite arbitrary.

8071. Has not the Government, with regard to one Madras work, the one to which I have referred, expressed some opinion?—Yes, the Madras Water Supply Scheme, with regard to which the Government of India addressed to the Government of Madras a Despatch, in which the following words are used: "The Government regrets to find that the estimates have proved so unreliable that the cost of the project is now double what was originally expected, while the income expected from it is reduced to scarcely more than half of what was at first calculated on."

8072. Is that at all typical of the fact that the actual cost bears little relation to the estimates? —It is, and for this reason, that the revenue of these works is calculated upon information obtained through unreliable channels. The police and the underlings of the magistrates and collectors' courts were employed in collecting this information, and the amounts have proved unreliable

8073. You are aware that it is proposed, or has been suggested, to spend a very large additional sum in irrigation works, something like 40,000,000 *l*, has it not?—Yes; and one of the main objects of canals has been said to be the prevention of famine, but the Ganges Canal was opened in 1855, and did not prevent the dreadful famine, reported by Colonel Baird Smith, which occurred in 1860, nor the famine which occurred in 1869, and compelled the breaking up of the camp that was being formed for the Duke of Edinburgh's visit, where his Royal Highness was to have held a durbar.

8074. Do you, then, think that further expenditure on these canals of borrowed money is an imprudent expenditure?—Very.

8075. What should you say about the expenditure which has been proposed of 30,000,000 *l.*, I believe, on State railways, of borrowed money?—That it must create a necessity of further taxation when ordinary taxation has been pushed to a dangerous extent.

8076. Have you looked into the subject of railways at all Is there any evidence that you would like to give as to these State railways?—I can only refer to a fact already admitted, that is, that the railways through Rajpootana and in the Indus Valley are likely to lead to a greater loss than the railways now existing, because the country to be traversed by them is very thinly populated and comparatively very unproductive.

8077. Then you think, as the best lines of country have been already occupied, further expenditure on State railways must lead to a greater direct loss than the loss involved on the railways which have already been constructed? —Yes. Besides, if the Indus Valley Railway has been sanctioned in a military point of view, it must necessitate expenses on the Kurrachee Harbour before the present transports can get there; there is not water enough for them at present.

8078. Mr. *Beckett Denison.*] What transports are you alluding to; the large steamers which were built for the Bombay harbour?—Yes.

8079. Mr. *Fawcett.*] Have you ever looked into the accounts of the Public Works Department at all as a man of business, and have you any opinions to express with regard to their intelligibility or clearness?—In the form in which they come before the public, they cannot be criticised closely; as they are not entirely unintelligible to us, and until General Strachey explained, the other day, the difference between ordinary and extraordinary works, the impression was that the distinction was rather in the class of works than in the mode of finding the money.

8080. Then, what you mean is this, that although you take an interest in the accounts, the accounts are not presented in such a form that you can adequately understand them?—They are decidedly not.

8081. Do you think that there has been much waste and mismanagement in the Public Works Department?—There has been a great deal of waste.

8082. What would you instance as waste in barracks?—Buildings have been erected without proper supervision, and the material was bad.

8083. Can you give any instances?—The barracks at Allahabad, at Nusserabad, at Jubbulpore, and at Saugor.

8084. To what extent; were they absolutely useless?—They have been mostly reported as absolutely, or almost absolutely, useless.

8085. It was through faulty construction?—Yes. Through faulty construction. The superintending engineers have so much office work to attend to that that is believed to be the cause of their not looking more after the works themselves; and it was suggested that these works should be constructed by contractors invited publicly to tender. A similar system was inaugurated last year by tenders having been invited for the construction of the Rajpootana Railway; but the notification gave only 30 days for submitting tenders for a railway from 185 miles to 200 miles long, including a bridge over the Jumna, a very dangerous river; and the public naturally could not believe that the system of public tenders had been adopted in reality; in fact, they thought that it was a blind, and that information must have previously been given to certain parties, who were thus able to tender with more certainty.

8086. Is there any other point on which you would like to remark with regard to public works? —There is a minute of Lord Mayo, of November 1870,

Mr. *J. Dacosta.*

5 July 1872.

1870, in which he recapitulates the mistakes made with regard to the barracks at Allahabad, and severely censures certain officers in the department, but I believe that the paper has been laid on the table of the House of Commons.

8087. Those barracks after being erected at very great cost, tumbled down, did they not, or were pronounced to be unsafe?—Allusion is made principally to a building that came down in the course of construction, when a number of the workmen were killed in consequence.

8088. And Lord Mayo censures the engineers, you say?—Very severely, and awarded them punishment.

8089. You wish to express your opinion, do not you, on two Acts on the Punjab Canal Act, and on the Land Improvement Act. Would you tell the Committee what you wish to say about them, if you please?—The Punjaub Canal Act enables the Government to impress labour; in fact it reduces a large section of the population to serfdom, and seeks justification in this respect in the fact that in certain parts of the Punjaub the population were already subjected to something of the sort. This Act, however, extends it from the chers, who were a sort of serfs and used to be impressed, to the whole class described as persons exercising any handicraft; I forget the exact words, but it would include the whole industrial class, and the action of the Act was extended over the whole surface of the Punjaub. The Act was intended at first to extend also to the North Western Provinces, to the Central Provinces, and to Oude; it has the effect of introducing and legalising serfdom, while the tendency of the British Legislation has hitherto been to annihilate all traces of slavery in India.

8090. Do you think it would be likely to lead to great abuse from men being impressed with a view of their bribing the men who impressed them?—It is certain to lead to great abuse, because these men would have to be impressed through the underlings in the Canal Department, and through the police, and we know from past experience what will be the process. When 100 men are required, double the number will be impressed in order to compel a number of them to purchase their release by means of bribes

8091. What do you wish to say with reference to the Land Improvement Act; when was that Act passed?—It was an Act passed in September or October of last year at Simla. It provided for money to be borrowed by the Government, and lent on the security of land for the purpose of draining, clearing, inclosing, and irrigating, and was thought necessary because a very high rate of interest has to be paid for loans on the security of land in the open market; but the cause of the high rates ruling in India is, in a great measure, a certain Act or Regulation passed in 1806 (Regulation 16), which is supposed to nullify any power of sale that is contained in a mortgage deed.

8092. Then what is the exact nature of your objection to the Act?—That it unduly restricts the applications of capital to loans on the security of land. Under that Regulation, if a man lends money for three years, and it is not repaid at the end of that time, he cannot sell the land that is mortgaged to him and thus recover his money, whether such power of sale be agreed upon or not, but he must give a notice of non-payment to the court, and the judge has to communicate this notice to the borrower, and intimate to him that if he does not repay the money within one year after such intimation, the mortgage will be foreclosed. The term may easily be prolonged through chicanery or bribe, by preventing the process of the court being served; so that eventually a man who lends money, relying on having it back at a certain period, has no certainty of receiving it at the stipulated period. Moreover, the land mortgaged is often neglected, and sometimes exhausted during the litigation, and if it ultimately falls into the hands of the lender, it is much depreciated. This circumstance has greatly restricted the application of capital to loans on the security of land; and landed property, which is considered the best security in all civilised countries, is considered in India the very worst. My object is to show that if that old Regulation were removed, capital would flow in the country for agricultural purposes, and the rate of interest for loans on the security of land would diminish, rendering this new Act perfectly unnecessary.

8093. So that your object would be to repeal the old Act, with the view of getting as much capital supplied by private enterprise, and not by Government, spent on the land?—Yes. The old Regulation would appear to be entirely a mistake. Its preamble sets forth that it is intended to prevent improvident sales; and instead of helping a man who wants to borrow, it aggravates his position by increasing the rate of interest.

8094. *Chairman.*] Exactly what is done by the law of this country. If a poor man wants to borrow money on anything, the law requires him to have 12 months to redeem it Is not that the law in this country?—I do not know.

8095. Mr. *Fawcett.*] Is the interest in India on landed security higher than the interest on personal security?—Much higher. It varies from 12 to 25 per cent., while, on personal security, you can get money in Calcutta and in all the larger cities at rates varying from 6 to 10 per cent.

8096. Are there any other points that you would like to mention on which I have not examined you?—I would remark that there is a large expenditure on the police of the country exceeding 2,000,000 *l.* sterling. The expenditure has increased of late years while the efficiency of the police has been lessened.

8097. In what way has the efficiency been diminished?—From want of proper control over the police. To explain my meaning further, I will just give an illustration of the way in which the police act, which will show not only that they are inefficient, corrupt, and oppressive, which they notoriously are, but why men prefer generally putting up with loss and robbery, rather than apply to the authorities for relief from fear of oppression and extortion at the hands of the police. When a crime is committed in a village it is a common practice of the police to arrest as witnesses as many persons as they can, intimating to them that they will have to go to the magistrate to depose. The magistrate's court may be five miles, or 25 miles distant; it is in vain for them to protest that they do not know anything about the case; all the answer they get is, "We shall see that at the trial," and witnesses are detained at the magistrate's court, weeks and even months, and are generally treated as prisoners, on the plea that they might not be found at the time when the case is brought on for hearing. Meanwhile their fields and flocks and their shops are neglected,

Mr.
J. Dacosta.
——
5 July 1872.

glected, and their families left without protection, and sometimes without subsistence. The threat, therefore, to take them to the magistrate's court, is quite sufficient to bring forth a very rich harvest of bribes, and this is the common practice.

8098. Do you think that it would be wise, instead of spending so much money in trying to increase the property of India, to spend a little more to make what there is more secure?—No doubt; millions have been spent to enrich the people while they are not protected in the preservation of what they already possess. But as the expenditure on the police has been already much increased, and as the people are still without sufficient protection, I would like to make a suggestion which, while it would entail no burden on the Exchequer, might be found to answer, as the system has already been tried to a limited extent, and found to succeed; I mean the appointment of a larger number of honorary magistrates selected from Native and European residents of respectability. The great advantage would be that you would have men who would be living among the people and would know them, and who could discern between false evidence and truth to a great extent; while the stipendiary magistrates are so few that they are scarcely accessible to the people, and as they are frequently moved from station to station under the present practice, they have no opportunity of knowing the people that surround them.

8099. Have you anything more to add?—As I have made this statement with regard to the police, would you allow me to put in an extract from the last police reports?

8100. Will you read it if you please?—It is a review of the North Western Provinces police in 1870 published last year. Before reading it I had better make a few remarks, which will at once show the pith of the passage that I refer to. With a view of checking the practice of arresting men as criminals, without sufficient evidence of their guilt, a standard was fixed according to which the police were expected on an average to prove the guilt of four out of every five men arrested by them. Of 37 districts which compose the North Western Provinces, only eight were found to conform to this standard in the review that I am going to quote. The adoption of a standard of this sort will, however, not show the number of innocent persons arrested who had purchased their release before they were sent for trial; nor does it provide for the protection of another very numerous class, namely, the witnesses arbitrarily taken into custody in the manner I have mentioned before. The same review also discloses the fact that one out of every seven persons that were convicted during that year, 1870, would not have been brought to trial at all, but for extraneous pressure exercised upon the police. These are the words used in that review: "If the police claim to escape the discredit of the acquittal of persons not arrested by themselves" (that refers to the first standard) "they must accept the perhaps greater discredit of not having arrested the persons who have been convicted." The document shows altogether an appreciation of the very inefficient state of the police and of its corrupt condition. By having a great number of honorary magistrates justice could be brought nearer to the doors of the people, and the magistrates would know personally most of the men who would appear before them, an advantage of great importance in a country where the rulers are of a foreign race, and hold no social intercourse with the people.

8101. Mr. *Beach.*] Did I rightly understand you to say that you considered it an economical system to irrigate by means of wells?—To the Government decidedly, because their irrigation works have not earned the interest on the money borrowed for their construction. And to the people we must suppose it must be so also, because they have used the canal water, notwithstanding all the pressure and the inducements exercised, to a very small extent, and have disappointed us altogether as to the extent of the usage.

8102. It was one of the great complaints made against the Government, was it not, formerly that they had taken no means to provide water sufficient for the wants of the people?—I believe that must have been from people ignorant of India, or interested in the construction of works; for the Ganges Canal was constructed in a country which was already irrigated by wells.

8103. But do you consider wells sufficient by themselves to irrigate a country?—It has been sufficient to develop the productiveness of the country wherever the Land Tax has not been oppressive; wells and tanks.

8104. With regard to railways, would it not be absolutely necessary to complete a railway in order to make a complete chain of communication?—Yes; and I understand that the chain has been completed now, the scheme that was put forth in Lord Dalhousie's time; but the railroads that are now being proposed and about to be constructed are outside of that scheme, and as the railroads already constructed are leaving a very heavy loss annually, I think that before constructing new railroads it might be better to improve the working of the present lines and make them earn at least as much as the people have to pay for them in the way of guaranteed interest.

8105. It is your opinion at all events that the general expenditure in India is too large?—I cannot object to works which are reasonably expected to yield sufficient profit to cover the interest payable on their outlay; but the canals that have been constructed by the British Government in India have failed to fulfil that condition almost without an exception.

8106. That is only with regard to remunerative works?—Yes.

8107. Sir *David Wedderburn.*] With regard to what you said about the Punjaub Canal Act, will you explain exactly in whose hands that power of oppression to which you have referred lies?—The initiative is in the hands of the canal officers, but the execution lies in the hands of the underlings of that department or the police.

8108. And who are the canal officers?—Europeans taken either from the Army or from the Civil Engineers.

8109. I suppose you could not give any special cases of oppression under that Act; merely that you generally suppose that oppression would arise?—I only speak from analogy. The Act is a very recent one, and I have not heard of any action having as yet been taken under the clause in question. But there is a thing which, although illegal, is resorted to in India, and that is the impressment of carts and boats frequently for the movement of troops. In those instances the general practice with the underlings charged with impressing the carts is to impress a much larger number than is wanted, and to extort money from a number of the carters before releasing them.

8110. Upon what grounds were these powers of impressment conferred on the canal officers?—That sufficient labour could not be procured within a limited time

8111. Then with regard to the exaction and corruption of the police, do you think that those proceed in any degree from the police being insufficiently paid?—No, I think they proceed from want of controlling power.

8112. Controlling power on the part of the European officers?—Yes.

8113. You said just now that money could be obtained much more cheaply on personal than on landed security. I should like you to explain, if you please, what you mean exactly by personal security?—I mean the known or supposed solvency of a man.

8114. Mr *Bazley*.] In regard to the proposed expenditure upon these railways you said that it was proposed to lay out 30,000,000 *l.* upon railways?—£28,000,000 was the figure mentioned, I believe, in Lord Mayo's speech of the 31st March 1871.

8115. Has any system been framed and published, do you know; is anything known to the public of what those lines are to be?—They are supposed to be the lines through Rajpootana and through the Indus valley.

8116. And are they planned on the same system as those already existing?—They are to be on a smaller gauge, but there seems to be great doubt whether the economy from adopting a smaller gauge will be as great as it is expected to be.

8117. Are you aware whether proper estimates have been made of the probable receipts and working expenses of the new lines?—I only heard General Strachey state that they were likely to entail a loss of only 30,000 *l.* or 40,000 *l* per annum on the Government, and I considered that estimate much too small.

8118. Do you think that that is a general estimate, or one made after detailed inquiry?—General Strachey gave no figures.

8119. You are aware, I suppose, that some time ago a proposal was made to introduce a system of cheap railways, tramways in connection with the leading lines. Has anything been done to carry out that idea, as far as you are aware?—A line was proposed last year to connect the Eastern Bengal Railway with the East Indian Railway, by bringing it as far as the river side, opposite the Howrah terminus; but, the great want is that of a bridge connecting the two railways. Such a bridge would also put the metropolis in uninterrupted communication with Western and Northern India. At present a line of 1,500 miles from Mooltan and one of 1,400 miles from Bombay converge at Allahabad, and bring their joint traffic to Howrah, opposite Calcutta There the traffic is stopped by 600 yards of water which separate the great terminus from the metropolis, and it is now carried on partly in a small steam-ferry, which cannot supply a hundredth part of the wants, and the rest in small crafts, over a river which is notoriously dangerous.

8120. That is a great engineering question of itself; but I wish to ask you whether you are of opinion that a cheap system of tram-railways would be successful in India, in supplement to the great lines of railway now existing?—No doubt they would if judiciously applied, but the people must be consulted on the subject.

Mr.
J. Dacosta.

5 July 1872.

8121. I understand you to mean by that that it would be a great question whether the expenses would be covered by the receipts, that that would be very doubtful?—Exactly.

8122. Mr. *Beckett Denison.*] You told the Committee about these large barracks which have been described either as useless or as great sun traps. Were they not constructed in consequence of the reports and the recommendations of an army commission, presided over by Mr. Strachey, a member of Council?—I believe they were.

8123. Speaking of irrigation, have you personally a local knowledge of any system of canal irrigation?—I have looked at the Ganges Canal with some interest.

8124. But you have not resided in a district in which there has been a canal system at work?—No.

8125 What do you conceive to be the radical vice of the canal works; are they too costly in their conception, or is it some defect in their working?—Both.

8126 Do you think that a system of canals of the same conception as those that are known by the name of the Western Jumna Canals, would be preferable to the costly works which we know under the name of the Ganges Canal?—We can judge of that point only by the results, and there is no doubt that the Eastern and Western Jumna Canals, which were constructed by the natives before our rule, have done their works well, and they are reported to be very remunerative, but it must be remembered that the sum expended in restoring them has been looked upon as the capital outlay, and that they could not have been constructed for that sum, although they cost us nothing beyond.

8127. Is the objection of the agricultural classes to take the water wholly founded upon the expense, or is it owing to the necessity of being compelled to take a larger quantity than is required for their purpose?—I believe it is purely owing to the cost to them; it is a matter of calculation with them what the cost of irrigation will be

8128. Not at all founded upon the fact that their fields are kept for a longer time under flood or irrigation than is really requisite for agricultural purposes?—I could not speak to that point; but there is another objection, namely, that it brings them under the authority of the canal officers, the underlings of which department are oppressive.

8129. Is the canal rent collected separately from the land rent, or is it now collected by one and the same set of officers?—I could not answer that question.

8130. In the district of which you have personal knowledge, was the system of honorary magistrates tried?—It was.

8131. What is that district?—Purneah.

8132. What number of honorary magistrates may there be in that district?—I do not know exactly the number, but I have been frequently told by judges of the High Court of Calcutta who received reports on the administration of these magistrates, that the reports were satisfactory; and one of them, being a friend of mine, I had an opportunity of knowing what an advantage it was to the people to be able to apply to a person who was known to them, and who was close at hand, while they would have had to travel 20 or 25 miles to reach the stipendiary magistrate.

8133. Are these gentlemen who are honorary magistrates,

Mr. *J. Dacosta.*

5 July 1872.

magistrates, partly Natives and partly European planters?—They were mostly Europeans, but I think that Native gentlemen might also be employed with advantage.

8134. Were they gentlemen connnected with the agriculture of the district?—Yes.

8135. Has there not hitherto been a difficulty in making European gentlemen honorary magistrates, owing to their being large employers of labour, and connected by agricultural contracts with the cultivating classes?—Well, if the person is objectionable on any account, it can easily be found out, and those persons ought to be avoided; but I know that an indigo planter in Purmeah was selected, and the results have been most favourable.

8136. There is generally a better feeling existing now, is there not, between these honorary magistrates, the European planters, and the agricultural classes, than there was some years ago?—Well, the experiment is a recent one, and I do not know that there is much scope for comparison.

8137. Do you think that things are pretty much now what they were a dozen or twenty years ago?—I believe that the system of honorary magistrates was introduced subsequently to the Mutiny.

8138. Yes, I am well aware of that, but my question was more general than that I asked you whether it is not the case that there is now a better feeling between the agricultural classes of Bengal and the European planters than there was some years ago?—No, I do not think there is much change in that respect.

8139. But you still think that the system of honorary magistracy might be widely extended with great benefit to the country?—I do, certainly.

8140. Does not a great deal of the evil of the police system proceed from the character of the people, which induces them in all the violent and heinous crimes to remain passive, or work against the police?—No, I believe it arises from the inability of the people to obtain redress from the oppression of the police, who are thereby led to exercise that oppression for the sake of extorting money.

8141. Do you think that oppression would be possible unless the population itself was quiescent or weak spirited?—I certainly do, because whenever complaint has been lodged against the police, it has failed, owing to the power which the police have of disproving the statements made against them, by means of false witnesses and by preventing the witnesses of the complainants from appearing.

8142. Do you know of any civilised country where there is not some oppression on the part of those to whom you refer?—I never heard of a country where the oppression was worse than it is in India.

8143. Do you know anything of China?—Very little.

8144. Did I rightly understand you to give the opinion that the railways now projected by the Government, and being constructed under Government superintendence were commercially certain to be failures?—Yes.

8145. Mr. *Bourke.*] Which railroads?—The Indus valley and the Rajpootana lines.

8146. Mr. *Beckett Denison.*] Then they are lines which must be regarded entirely from their military and political point of view?—Exactly; but I do not know that the burden that they will create has been accurately or carefully estimated.

8147. Mr. *Bourke.*] About the Rajpootana line; what estimates have you seen?—I have not seen any estimates. I have seen the advertisement calling for tenders.

8148. I thought you said that the estimates you had seen or heard of led you to suppose that the line would be unremunerative?—No; I went upon the general result obtained from the railways already constructed, and I considered that the reduction of the gauge would not constitute a sufficient economy to counterbalance the other disadvantages.

8149. How much is the Rajpootana line to cost per mile?—I could not answer the question.

8150. But does it not entirely depend upon that whether it would be unremunerative or not?—In Rajpootana fuel and labour are scarce, and railways are not likely to cost much less there than in any other part of India.

8151. Do you know whether the maharajah of Jeypoor is of the same opinion?—I do not.

8152. Do not you think that he would be a good judge on that question?—Well, I should say not, as he has had no experience in the matter.

8153. Why?—Because he has never undertaken the construction of a railway.

8154. Does he not know what the requirements of his country are?—He may, and yet not be able to compute the ultimate cost of a railway.

8155. Do you know whether the maharajahs of Jepore and Bhurtpore, and the other rajahs who will be benefited by this railroad, are in favour of it or not?—I believe they are. They might have accepted the estimate made of the probable cost; but as the estimates in every case have been exceeded, I should say that they will be exposed to disappointment if they expect that, in this instance, the estimates will turn out correct.

8156. But you are not prepared to dispute the estimates that have been made with regard to this Rajpootana line?—I have not seen them.

8157. You spoke about cheap railroads, and said you thought they might be beneficially introduced into India; what, per mile, do you call a cheap railroad?—I believe the gentleman who asked me that question referred more to tramroads worked by horses.

8158. And you would rather have a tramroad worked by horses than a cheap railroad?—No. I merely answered that question with reference to a tramroad projected from the terminus of the Eastern Bengal Railroad to the river side, the opposite terminus of the East Indian Railroad.

8159. But there is to be a bridge is there not across the river there?—A bridge has been much wanted for the last 20 years.

8160. And do you think that a tramroad would be better than a railroad?—I could not express an opinion upon that; I merely answered the question whether a tramroad is likely to pay, and I said yes, but perhaps the railroad might be better; I have not looked into the question, and therefore could not answer that.

8161. You thought that a tramroad would be a beneficial work?—I thought it would in that case, and wherever it was judiciously applied.

Mr. *J. Dacosta.*

5 July 1872.

8162. Do you know how much a mile it would take to make a tramroad in such a district near Calcutta?—I have seen some calculations, but could not speak from memory.

8163. You do not know at all?—No.

8164. Mr. *Lyttelton.*] What redress does the law give to a man who has been over assessed, or who has been assessed, although his income falls below the limit?—When the assessment has been proved to be too much, it is reduced or cancelled as the case may be, but there is no other redress although the man may have been put to great loss and great suffering by having to attend the office.

8165. What is the machinery of appeal in that case?—The appeal has to be made to the commissioner of the district.

8166. He holds courts where appeals from assessments are heard, I presume you mean?—Yes.

8167. Are they held frequently, and is the process a cheap one?—No; they have to pay a stamp on the paper on which they appeal, and moreover, it is very expensive to the people themselves, because, not knowing the provisions of the Act, they are obliged to employ professional men.

8168. The people of Bengal are extremely litigious, I believe?—That has sometimes been the opinion expressed, but I believe that litigiousness is engendered wherever there is, as in India, an extraordinary degree of uncertainty in the administration of the law, as it encourages men to resort to law as a means of making money, as they would in a manner resort to gambling.

8169. But in this particular instance we rightly understand that this process of appeal is so distasteful, that rather than have resort to it they will leave the country or suffer in silence from these burdens?—Exactly, that has been the case; in the whole of the lower provinces, I believe, there were only 57 cases of appeal, and the authorities expressed their conviction that the appeals were not greater because the people had not the means of appealing, neither the pecuniary means nor the time.

8170. Do not you consider that a very grave reflection upon our system of administration of law and justice?—It is, indeed, a very grave reflection; and in the last report on the income tax in the lower provinces will be found passages confirming what I have stated.

8171. Can you tell me what the amount of the stamp tax in such cases would be?—I believe it is eight annas, or one shilling, which is, after all, the tenth part of a poor labourer's earnings for a whole month.

8172. It is a fixed duty, and not *ad valorem?*—Not *ad valorem.*

8173. I think I heard you say that a tax on tobacco has been locally raised. Can you tell where?—I mentioned only that it was one of the taxes which it was proposed to raise.

8174. It has not been imposed?—No.

8175. Lord *E. Fitzmaurice.*] A tobacco tax would be very unpopular, would it not?—It would, and oppressive, inasmuch as labourers and boatmen resort to tobacco instead of food for several hours of the day.

8176. Sir *Stafford Northcote.*] I understood you to say just now that you objected to the expense incurred in the migration of the Government to Simla from year to year, not only on the ground of its being costly, but on the ground that Government, when at Simla, was removed from the influence of public opinion. Is that your view?—It is.

8177. Would you state in what way the Government of India, when it is at Simla, is less under the influence of public opinion than when it is at Calcutta?—Because the members of the Council, while at Simla, have no opportunities of learning from the people their sentiments on the subjects that are submitted for their consideration.

8178. What do you mean by public opinion; the public opinion of India generally, or the public opinion of the community of Calcutta in particular?—The public opinion of India generally finds its expression through the upper classes to the Government, and in Calcutta where people congregate from all parts of India, public opinion is expressed more clearly.

8179. Do you think therefore that the Government have a better chance of obtaining the public opinion of the people in the Punjaub, for instance, or in Rajpootana, or in Mysore, at Calcutta, than they have at Simla?—They have a better opportunity at Calcutta, because at Simla the information can be obtained only through subordinate officials who have generally, in such cases, proved unreliable.

8180. Do you think it would be safe for the Government, sitting at Calcutta, to rely for the opinion of the Punjaub, for instance, upon the people whom it might meet in society or in business in Calcutta?—Perhaps not as regards matters special to the Punjaub.

8181. Similarly with regard to matters special to the Central Provinces; do you suppose that it would be so?—Well, the Central Provinces are, I believe, better represented at Bombay and in Calcutta than they are on the spot.

8182. But at Calcutta there is a considerable amount of what may be called English commercial public opinion, is there not?—There is.

8183. That kind of public opinion may be collected with greater advantage there than at Simla?—It may, certainly.

8184. And I suppose it would be the case that the Government, if it were permanently located at Calcutta, would be more under the influence of English commercial opinion than if it migrates to Simla?—Such opinion would carry with the Government only the weight to which it would be legitimately entitled; seeing the class from which it emanated it would represent the interests of the commercial classes.

8185. But now with regard to the public opinion of the Punjab, or of any distant portions of India, Burmah, or anywhere else, would not the Government sitting at Simla have nearly the same advantage in the way of receiving communications from the local governments, in the way of perceiving what the tone of the public press was, and otherwise of collecting opinions there as it would have at Calcutta?—I do not think so, from this fact that, the opinions reflected by the officials in the Punjab, or in Burmah, are generally gathered through subordinate and irresponsible native officers, and it has been found that they fail to represent the real feelings of the people, while in Calcutta there are wealthy and educated persons from the Punjab and from Burmah, and others who are acquainted with and interested in the welfare of those countries.

8186. But do you think that at Calcutta you would get any better representation of the real feelings of the people of the Punjab, or of Burmah?

Mr. *J. Dacosta.*

5 July 1872.

Burmah?—There is this better chance, that there is more discussion of public matters in these populated centres.

8187. But that discussion is carried on mainly either by Bengalese, or by the English commercial community, is it not?—By the natives not only of Bengal, but from all parts of India, congregated in Calcutta, and by Europeans.

8188. Now with regard to such a question as the advantages of carrying a railway through Rajpootana: for instance, do you think that you would have better means of getting at the feelings of the people of Rajpootana at Calcutta, than you would have at Simla?—Well, I do not consider that that matter has anything to do with the feelings of the people. I look upon it entirely in a financial point of view.

8189. Do you think that the people of Calcutta know much more upon that point than the Government could collect at Simla?—On the point of the cost of this railway?

8190. No; as to the general advantages of the line, both as to its directly remunerative character, and as to its prospective advantages in opening up the country?—The people in Calcutta generally believe that the information collected by the Government on such points has been incorrect, judging partly from results, and partly from the unreliable channels through which the information is obtained.

8191. The commercial community in Calcutta are very much occupied in attending to their own business, naturally, are they not?—They are

8192. Do you suppose that they have as good general information upon questions of the administration of India, and especially of the more distant parts as are at the command of Government?—Not on technical points; but with reference to the feelings of the people, and the effect which the administration has on the people, I think they have better information.

8193 And you think, therefore, that it would be safer to rely upon the opinion that is to be found floating about amongst the commercial community of Calcutta than upon the information collected by the Government through the means that it at present uses?—If a comparison were made, I should find it difficult to decide; but I think that the best way of arriving at the real feelings of the people would be to consult them in as direct a manner as possible.

8194. Then you would not, for instance, take the opinions of the people of India generally upon the income tax through the medium of the Calcutta public, but through some machiney for getting at the opinions of the people in each different province?—Exactly; but I think that that opinion has been so clearly expressed that there can no longer be any doubt about it. The Calcutta public have only confirmed it.

8195. I am not asking you with reference to that particular tax, but with reference to the means that you would propose for getting at those feelings. Now, it is the general opinion amongst the community with whom you are conversant, that several of the taxes that are now imposed, and particularly the income tax, are very objectionable?—It is.

8196. And that they should therefore be repealed?—Exactly.

8197. Are there any taxes that you would suggest that should be imposed in lieu of these?—No; I think that it ought to be met by retrenchment in the expenditure.

8198. And that is the general opinion of the community in Calcutta?—It is the general opinion of the community, not only in Calcutta, but wherever I have conversed on the subject with men who had any opinion on it.

8199. With regard to these taxes, besides the income tax, you object to the various local taxes?—I do.

8200. And are there any other taxes that you object to?—What I object to is not only to the amount, but to the variety and to the uncertainty in the incidence of the taxes, whereby the establishment employed for the collection is enabled to extort money on its own account by misrepresentations and threats.

8201. Then is it to the tax, or to the mode of raising the tax, that you object?—I object to the tax, because from its own form you cannot collect it otherwise than it has been collected.

8202. Therefore you would say, do away with the income tax, and do away with these local cesses?—Yes.

8203. With regard to other sources of revenue, are you of opinion that the opium revenue is one that can safely be relied upon?—Fears have been expressed of our being shut out of the markets in China; and I should say that the only means of guarding against such a contingency would be to produce opium in as large a quantity as possible, and undersell the Chinese producers.

8204. But you think that even so we must feel that the opium revenue is a somewhat critical one?—Well, it has been comparatively so steady that no real anxiety as to its being materially diminished need be entertained, I think.

8205. Do you think that much more is to be expected from the customs revenue than has been received?—I think not.

8206. Do you think that much more is to be made out of the salt revenue than is now made?—I think that the salt duty is already too high, and that a reduction would be financially beneficial by increasing the consumption.

8207. With regard to stamps, do you think that much more is to be raised in that way?—I do not.

8208. You can point to no other branch of revenue from which we may expect any material increase?—No; I think that the increase has been already too rapid of late.

8209. Then we come to this conclusion, which, indeed, you have expressed already, that a very considerable reduction of expenditure is necessary?—Exactly.

8210. And I understand you to say that it is the belief of yourself and of others that there are the means of making that sufficient reduction?—Yes.

8211. I suppose you do not advocate the policy of increasing debt, do you?—Not for ordinary expenditure.

8212. Do you advocate the policy of raising debt for any particular purposes?—The debt might legitimately, I think, be increased, if the application of the money was to be in channels in which it was reasonable to expect that the whole of the country would be benefited, and no charge would fall on the State; that is to say, that the works would produce sufficient to pay the interest on the loans.

8213. And not only the interest, but a sinking fund?—And a sinking fund, of course.

8214. Do you suppose that there are works of

Mr.
J. Dacosta.

5 July 1872.

of that kind to be undertaken?—Well, they have not been found by the Government.

8215. Are you aware that it was the principle advocated with regard to the irrigation works, which were to be paid out of borrowed money, that they should be constructed on that principle, and the accounts kept on that principle?—I am aware of that, but experience has failed to show that it is possible.

8216. If it cannot be done for irrigation works, is it likely that it can be done on any large scale for other classes of works?—I scarcely think it can.

8217. Then we must not reckon on any considerable amount of work to be done on that principle?—No, it might be done by private capital.

8218. Now even as matters stand at present, with these various taxes in force, we find it very difficult to keep the balance of income and expenditure, do we not?—Yes, there have been years of deficit.

8219. And what are the points upon which you think that the expenditure may be so largely reduced as to enable us to dispense with these taxes, you spoke of the consolidation of the armies, and the reduction of the transport of troops?—Yes; and a better control over the commissariat expenses, which are very great

8220. And you have a general impression that some reductions may be made in that direction which will materially affect the expenditure?—Yes, and the construction of public works, such as those which are designated as reproductive, but which have turned out to be a source of loss were stopped, an increase of taxation would in a great measure be avoided.

8221. Of those measures that you speak of, the stoppage of the public works would be by far the largest, would it not?—It would form a large item, but I think that considerable sums might also be saved under other heads. There is not sufficient control exercised over the expense. An investigation made last year into the printing department of the Bengal Secretariat disclosed many irregularities.

8222. Is it not the case that somewhat exaggerated opinions are prevalent at Calcutta and elsewhere, with regard to the amount of economy that might be effected in these various ways; for instance, with regard to the transport of troops, have you ever heard the opinion expressed that it would be cheaper to take the troops as first-class passengers by Peninsular and Oriental steamers than to bring them by the present system?—I have heard that opinion expressed.

8223. And that, whether it be taken literally or not, expresses an opinion on the part of the public that the transport system is enormously extravagant?—Yes.

8224. Do you think that that opinion is founded upon sufficient knowledge of the real facts of the case?—I believe that there is enough to ground it upon to warrant a close investigation into the question.

8225. I suppose under any system of Government close investigation ought to be frequently exercised as to the expenditure that takes place?—Certainly, as a general rule; but this would appear to be a case calling more especially for close investigation.

8226. You think that this is one of the particular points to which attention ought to be directed?—Yes.

8227. With regard to irrigation works, I should like to know whether you are of opinion, supposing that there was no difficulty about finding the funds, that they are or are not of great value to India?—I believe that the works that have been constructed by the British Government, so far, are not; and I judge from the unwillingness of the people to buy the water at a price that will at all cover the charge created by those works.

8228. Should you be content as an European resident in India to see irrigation schemes entirely put aside?—By the Government, decidedly.

8229. And you would leave them to private enterprise?—Exactly

8230. Do you suppose that any money would be forthcoming on private account?—I believe there would, and my ground for believing it is that there was once a scheme which emanated from Manchester capitalists to buy the Ganges Canal from the Government, and to improve it and make it pay

8231. With a Government guarantee or without one?—With their own funds.

8232. But would they expect any guarantee upon those funds?—No.

8233. Was that scheme ever brought to any practical bearing?—I believe not; but I heard of it from the engineer who constructed the Eastern Bengal Railway, and who happened to be a fellow passenger of mine at the same time as Sir George Edmondstone, Lieutenant Governor of the North Western Provinces.

8234. Do you know how long ago that was?—It was in the early part of 1863.

8235. Now, do you think that the knowledge that certain persons had ten years or nine years ago projected the purchase of the Ganges Canal, and have never brought their project to bear, is a sufficient ground for thinking that private capital would be introduced into India to make works of irrigation without a Government guarantee?—In that case Sir George Edmondstone said distinctly that the Government would never consent to sell the Ganges Canal. It indicated, however, that English capitalists were willing to embark their capital in works in India, if they thought that such works were likely to prove remunerative.

8236. Have you heard of any case in which private capital has been invested in Indian works without a Government guarantee?—Large private undertakings.

8237. But I am speaking of works of the character of the great irrigation works?—Of any irrigation works, I have not heard.

8238. Did you ever hear of the Orissa Company?—Yes, but I understood that there was a guarantee in that case.

8239. Are you not aware that it was originally started without any Government guarantee?—No, I was not aware of it.

8240. But when you speak upon what can and cannot be done with regard to works of this character in India, are we to understand that you have paid attention to the subject, and that you are acquainted practically with what has been attempted, and with what the results of those attempts have been?—With regard to public works, I have not heard of any besides the Orissa Canal undertaken by private capital.

8241. But you had not heard of that it seems?—I had heard of it, but was mistaken in supposing that a Goverrment guarantee had been obtained.

Mr.
J. Dacosta.
——
5 July 1872.

8242. You were not aware that it was originally established on the principle of private enterprise without a Government guarantee?—I had not; and I am at a loss, therefore, now to know why Government took it over at all.

8243. In fact you have not studied the history of that undertaking?—Not very completely.

8244. But it was an undertaking on a large scale, was it not?—It was.

8245. And one which ought to be suggestive to the student of the history of these undertakings?—Yes; I think it should.

8246. You spoke just now of the expenditure upon the Indus Valley Railway, and you referred to the necessity which it would entail of a large expenditure at Kurrachee; would you explain what you mean by that?—I understand that there is not water enough in the Kurrachee Harbour for the Government transports now existing.

8247. And that it would therefore be necessary to undertake works at Kurrachee to introduce them?—Exactly.

8248. But are there not works now going on at Kurrachee?—I believe there are if they have not been interrupted.

8249. Are you aware that by far the greater part of the expense that would be necessary to convert Kurrachee into a harbour capable of receiving troop ships has already been incurred?—I have heard opinions different from that, and to the effect that the expense yet to be incurred would be much larger than what has already been incurred.

8250. Should you be very much surprised to hear that about a quarter of a million has been expended, and that I think, speaking roughly, only about 40,000*l.* remains to be expended to complete the works?—Well I was not aware of those figures.

8251. Sir *C. Wingfield.*] When you said that there was an absence of public opinion at Simla; is it not the case that when the council meets at Simla the independent members, the commercial members as they are called, are not present?—They are not present.

8252. Therefore their absence would diminish, in your opinion, the amount of public opinion under which the council would act at Simla?—They are supposed to have been appointed for the purpose of enabling the Government to ascertain through them something of public opinion; but I do not know that they can be taken as representatives of public opinion in general.

8253. Do you know whether the reason why they do not attend at Simla is that they are not summoned, or is it that they do not care to go?—Their avocations would be in the way.

8254. But are they summoned?—I believe that there would be no objection to their being admitted there, but it is an impossibilty; men are selected who are known not to be able to leave Calcutta.

8255. Would they be paid their expenses if they went to Simla?—I cannot say as I never heard of any demand for such expenses having been made.

8256. I believe too that the members from the other presidencies are not always summoned to the Council at Simla, are they?—They are not; and at the discussion on the Punjaub Act the members for the North Western Provinces and Madras were not present.

8257. So that in fact at these councils held at Simla, only a limited body of councillors are present?—Yes, as compared to the whole body.

8258. Mr. *Bourke.*] When you have said that those gentlemen were selected for the council who could not leave Calcutta, you alluded to the European members, I suppose?—Exactly. Of the native members some have been able to attend.

8259. Mr. *R. Fowler.*] You spoke of the police oppressing the people to extort money; is it a common thing in India?—It is almost a universal practice.

8260. In every part of India?—In every part of India.

8261. That is the native police, of course?—It is the native police, and the cause of it is want of sufficient control over the native police.

8262. Of course, the attention of the Government has been called to that?—Over and over again, and it is well aware of the evil.

8263. What means has it adopted to check it?—Means very insufficient, because more theoretical than practical: and changes have been made too in the last ten years, the result of which, it is believed generally, has been to make the police almost worse by diminishing the control that formerly existed over it.

8264. The police are paid by the Government?—They are.

8265. Mr. *Dickinson.*] How many native members of council are there?—Three, two of whom, the rajahs of Puthiala and Jeypore are not British subjects.

8266. What arrangement is made for their going to Simla?—In one or two instances they have attended, and I believe they have attended at their own expense.

8267. Simla would not be selected for their convenience?—Decidedly not.

8268. Nor for the convenience of any but the official members?—Exactly so.

8269. Does not the same vice exist at Bombay of the council going away, or the Government going away?—If you mean the local council of the Bombay Government leaving for the hills, I did not know that the council was held away from Bombay.

8270. Mr. *Beckett Denison.*] You have an intimate knowledge of the native population, of course?—I have conversed with them frequently.

8271. I mean you have lived among them?—Yes.

8272. What do you take to be the minimum expense at which a man can go into any court, police, or revenue court, to make any plaint whatsoever, taking first the cost of his plaint, then the cost of the attorney, and the cost of his expenses. We know that the amount varies, but what will the minimum be?—Men are taxed in such cases according to their means, and as a rule you might say that a man would have to spend at least a month's eanings before he could get a hearing.

8273. There is the plaint at eight annas, is there not?—Yes.

8274. Then the attorney would be two rupees?—Yes, or more, if he thought that the man could pay it.

8275. Then added to that there would be diet money?—Yes.

8276. And the expense of a witness or two?—Yes, also the expense of a witness or two.

8277. And any amount of illicit fees to the underlings according to his power of payment?—Yes, they would be extorted from the man.

8278. Therefore

Mr.
J. Dacosta.

5 July 1872.

8278. Therefore it would be safe to assume that the very lowest sum that any man could go near a court for would be 5 or 6 rupees?—Exactly.

8279. Then if a man happened to be assessed for income-tax, say, at the sum of 4 rupees, he would rather pay that tax than he would go near the court to get it reversed?—No doubt.

8280. And that is one of the reasons no doubt that will account for the paucity of appeals throughout the country?—That has been one of the reasons supposed.

8281. And it is only in the event of a tax being in the nature of a permanent impost that a poor man would think it worth his while to go and resist it.

8282. Lord *E. Fitzmaurice.*] Do you not think that the mere fact that there have been existing in India for a considerable period a large number of companies under Government guarantee, would alone be a very great drawback to private capital flowing to India without a Government guarantee?—I believe not.

8283. I mean do you not think that a company preferring naturally the position of having a guarantee to not having a guarantee, would say to itself, Well, after all, we will wait and see whether by a little judicious pressure we cannot get it?—Yes, while the hope of obtaining a Government guarantee could reasonably be entertained, it would naturally prevent private capital from flowing into India, whenever such guarantee could not be had.

8284. That the existence of the guaranteed companies, and the principle of guarantee has been one of the causes which has prevented capital flowing to India?—Yes, in all cases where such guarantee could not be obtained.

8285. But on the other hand that capital which otherwise would have gone to India without a guarantee has not gone because the company has said to itself, "By the exercise of a little judicious pressure, or by the Government of India pursuing the line of policy that it has hitherto pursued, we shall get a guarantee on our shares"?—Exactly; I believe that the tendency of the system of guarantee has been to create an impression that unless Government guarantees were obtained it would be imprudent to embark on enterprise in India.

8286. You are aware that English capital flows in a time of prosperity to almost every portion of the world, that a vast amount of English capital has been embarked in extraordinary South American enterprises, and that it is at this moment being embarked in very insecure enterprises there; do you not consider that a stable government like that of India ought to attract capital with much greater facility than the rotten governments in South America?—There is no doubt that it ought, and that the system of Government guarantee has checked the introduction of private capital.

Lieutenant General Sir ARTHUR THOMAS COTTON, K.C.S.I., called in, and Examined.

Lieut. Gen.
Sir
A. T. Cotton,
K.C.S.I.

8287. *Chairman.*] WILL you be good enough to state what offices you have held in India latterly?—I have been almost all the time that I have been in India employed in civil works (except two years that I was in the field) in the Public Works Department.

8288. Were you in the Engineers?—In the Madras Engineers.

8289. How long is it since you left India?—It is six years since I was last in India.

8290. Since you gave up active service in India?—Yes, I am still on the strength of the army.

8291. Will you be good enough to state with what public works you have been chiefly connected?—My first principal work was the irrigation of Tanjore.

8292. At what time was that?—In the year 1828.

8293. And after that in what works were you employed?—After that I was employed in various charges which I had, but the principal works that I had were the Godavery Delta Works.

8294. When did they come under your charge or observation?—In 1845.

8295. Were you the first officer in the Public Works Department who directed his attention to that subject of the Godavery?—I projected the work; the district was in a state of great disorder; a special Commissioner was sent down, Sir Henry Montgomery, and he recommended that the irrigation should be put in order, and that I should be appointed to report upon it.

8296. When you are speaking of the irrigation do you mean the irrigation of the Delta of the Godavery?—Yes.

8297. What was the length of that part of the river which was then the subject of the irrigation of the Delta?—The head of the Delta is 40 miles from the sea.

8298. Were any works carried out there respecting the Delta for the improvement of irrigation?—Yes.

8299. Could you state shortly what they were?—We constructed a weir across the river at the head of the Delta, and led off from it three main canals with various branches which conducted water to the whole of the Delta, and distributed it over about half the Delta

8300. Was it a high level surface of water?—Yes, entirely.

8301. So that it flowed by gravitation over the land?—Yes.

8302. Can you state how many acres were brought under irrigation by those works?—The works commanded a million acres; they have actually been distributed to about 500,000 *l.*

8303. Do you know what those works cost?—Under 500,000 *l*; the last statement that I have is 420,000 *l.*; there has been something spent since.

8304. Would that cost exclude what is called the interest on money during construction?—There was no interest on money during construction included in that.

8305. And what was the revenue derived from those works according to your last acccount?—The average revenue of the district from 1836 to 1846 was 196,000 *l.* The average annual revenue from 1867 to 1871 was 476,000 *l.* The average from the beginning to the year 1871 was 343,000 *l.* Taking the former average, 196,000 *l.*, there was an increase of 147,000 *l.* The total increase in the 25 years was 3,670,000 *l.* (I am speaking now merely of the actual increase of the revenue of the district. How much of that is applicable

Lieut. Gen. Sir *A. T. Cotton*, K.C.S.I.

——

5 July 1872.

to the water is a separate question). Deducting 3 per cent. on the capital for 25 years, namely, 370,000 *l.* for repairs, it leaves a total net increase of 3,300,000 *l.*

8306. Is that 3 per cent. an estimated sum or an actual expenditure?—That is about the actual cost; I think it is rather under.

8307. Was there any water rate charged for the water?—The water rate charged is four rupees for an acre of rice.

8308. Is that four rupees an acre included in the income that you have spoken of?—Yes, it is all in there.

8309. Have you got the amount of the water-rate separate from the general increase of revenue?—No; but it is about 200,000 *l.*, because the acreage is about 500,000 acres.

8310. That is the rest of the increase of income that you have spoken of, derived from the increase of land revenue in addition to the water-rate?—It is from the general improvement of the district.

8311. Can you explain why the other half million of acres have not availed themselves of the water supply?—Because if 10,000,000 *l.* was wanted for railways which would not pay, nobody made a difficulty; but if 50,000 *l.* was wanted for these works yielding 50 per cent. it could not be got.

8312. That is a consequential view; but what is the immediate and proximate cause why the other 500,000 acres have not availed themselves of the water supply; is it because the water supply proved insufficient?—That the money for the execution of the works could not be obtained.

8313. You mean that works of distribution were wanted and the money could not be obtained for them?—Yes; I had continual correspondence with former Secretaries of State and Lord Halifax, and it was always said that the money could not be found.

8314. Do we rightly understand it, then, that there was water enough to irrigate half a million of acres more, that at a moderate expenditure of 50,000 *l.* works of distribution could have been made but were not made, and that therefore the water was not distributed?—Yes. May I add that now they have ordered 100,000 *l.* towards the completion of the works.

8315. Have you anything further to add with regard to the Delta?—To show what portion of that total may fairly be considered due to the works, I have the two districts, Godavery and Kistna as they are now called, they were formerly called by other names.

8316. That is the delta of the Kistna you mean?—The delta of the Kistna and of the Godavery; the works are exactly similar. The revenue in 1843-44 was 440,000 *l.*, the revenue in 1870-71 was 1,040,000 *l.* The increase was 600,000 *l.*, or 136 per cent. upon the revenue, not upon the works.

8317. Do you attribute that to works of irrigation carried on at the delta of the Kistna?—To show that, I compare it with the other districts of the same Presidency.

8318. You have not told us yet whether they were works of irrigation carried on in the delta of the Kistna?—They were exactly similar works.

8319. Do we rightly understand that the income is calculated in the same way that you calculated it for the Godavery Delta?—Yes, the total revenue.

8320. That the water-rate was the same also?—Yes, the same water-rate. For six districts with less extensive irrigation and no railways, the revenue in 1843-44 was 1,280,000 *l.*, in 1870-71 it was 2,080,000 *l.* an increase of 800,000 *l.* (these figures are all taken from papers obtained from the Statistical Department in the India Office); an increase of 62 per cent.

8321. Were those districts of a similar character, that is to say, delta districts?—Some of them were delta districts and some were not.

8322. But were those that were not Delta districts flat alluvial districts, capable of natural irrigation?—They are all capable of irrigation, and all are partially irrigated.

8323. Capable of irrigation by very simple means like the flat alluvial lands of the delta?—Almost all the cultivated lands in the Madras Presidency can be irrigated, but the upper districts at a greater cost.

8324. What I understand is, that you have given us the whole increase of the revenue of the district, and that you have given us separately the actual sum earned by the water rate of the district?—No; I have not given the sum earned by the water rate, merely the difference of total revenue.

8325. But, as regards the Godavery Delta, you gave us the sum received from water rates?—Yes, in a rough way; but these are actual statements.

8326. Do I rightly understand you, that you consider the difference between the actual receipt from the water rate, and the whole increase of the revenue, as representing what may be called the general improvement of the district, in consequence of irrigation?—Yes. I am comparing it now with the other districts, to show how much is owing to that cause.

8327. Will you be good enough to explain to the Committee, with regard to the districts that you have last described, whether you can state the sum which has been received for water rates in those districts?—No.

8328. Then you cannot separate what is the direct return from the irrigation, from the general improvement of the district, since the irrigation?—No; what I am doing now is comparing the progress of the highly irrigated districts with the more moderately irrigated, and with those that have the least irrigation.

8329. Will you go on with your comparison, if you please?—Taking the remaining districts, seven districts, the revenue in 1843-44 was 1,620,000 *l.*, and in 1870-71 it was 2,060,000 *l.*, the increase of 440,000 *l.*, or 27 per cent. From that I judge of how far the increase in those districts has been dependent upon improved irrigation. I must add this, that in those districts which have increased only 27 per cent. against 136 per cent., at least half of that increase is owing to improved irrigation, because there has been great progress in the irrigation in every district.

8330. Have you got the account of these various districts of the expenditure in the annual maintenance of works of irrigation?—No, I have not that here, but they are quite small compared with the great districts.

8331. You do not know how far they have increased during the periods which we are speaking of?—No, but it is very moderate compared with the others. But what I wished to add was, in these seven districts an average of nearly 2,000,000 *l.* has been spent on railway works, where there was an increase of only 27 per cent.; that is, on the comparatively unirrigated districts, while

Lieut. Gen.
Sir
A. T. Cotton,
K.C.S.I.

5 July 1872.

while on the irrigated districts, in which there have been no railways, there has been an increase of 136 per cent.

8332. Have the railways passed through the unirrigated districts or opened up in any way the irrigated districts?—No, not in the case of those districts that I am speaking of. There is one irrigated district, Tanjore, which has one railway through it, but that is not in this list, because there it was complicated by the presence of the two things, irrigation and railways.

8333. Now can you pass from the Delta of the Godavery up to the first barrier, or beyond it; did you examine the Godavery for the purpose of ascertaining whether its navigation might be improved, and its powers of irrigation might be improved also?—I have been many times up and down the Godavery, and I first proposed that the navigation should be opened up.

8334. Did you professionally design the works for opening up the river?—No, I neither projected the works, nor executed them; it was my successor that did that.

8335. Did you make any general reports on the subject?—I only gave a general suggestion of it, I did not even make a rough estimate, for I had no materials to do so.

8336. You are not in a position to give a precise professional view of the utilisation of the Godavery for navigation or irrigation?—Yes; I have been over it repeatedly.

8337. Can you give an accurate professional view, or only a general view?—I can give a particular professional view, it has been the subject of my attention for 20 years.

8338. Have you been able to estimate the cost and the return?—Most particularly.

8339. Will you state your view of the cost and the return of the first and second barriers?—I should like first to state facts, and give my opinion afterwards. The works have cost 700,000 *l.*; there are 230 miles of the river opened, a great part of that is navigated every month in the year, some part only about six or seven months; a large sum has been spent on the second barrier works which have not yet been completed, included in that 700,000 *l.*; but, including everything, it has cost 2,500 *l.* a mile up to this time, the part actually now in use. To complete the second barrier works there is about 100,000 *l.* wanted, and they are well advanced; and when the 800,000 *l.* has been spent there will be 400 miles of navigation at a cost of 2,000 *l.* a mile.

8340. Do you know what direct distance that represents from one point to the other?—It is very straight; it includes two branches at the upper end, the Wurdah and the main Godavery.

8341. When you speak of its being navigable, do you know what is the depth of water that the vessels would have to draw to navigate the river?—It varies extremely. The river gets quite shallow before the end of the dry weather, and some part of it is quite unnavigable for four or five months in the year.

8342. Would that part of the river, between the first, second, and third barrier, supply any irrigation?—Yes; there could be irrigation works connected with both these barrier works.

8343. Do you know what is the condition of the country along the banks of the river in that part?—It is a very thinly populated country.

8344. Is it a hilly country?—It is a forest country, extremely fertile where it is open, but very thinly populated. Speaking of the population I might add this; it is surely a very noteworthy fact that the most palpable and striking result of our government of the country has been a steady emigration of a section of the population, constituting 40 per cent. of the whole, and the gradual depopulation of the district under our rule.

8345. Can you explain how, whilst the population has been increasing largely in other valleys, the population has diminished in this particular district, or not increased?—There has been some extraordinary local mismanagement, no doubt of it.

8346. But is there much flat alluvial land along the river?—Plenty, and the richest land.

8347. Can you estimate the number of acres which could be brought under irrigation, along the banks of the river, in the district which we are now speaking of?—I saw one plan that was given in for 60,000 acres in one place; but to what extent altogether, I do not know at all; it would be very large indeed.

8348. Then at present there would be no people to cultivate the land?—There is a very thin population in our district. On the Nizam's side there is more. May I just make one more remark with respect to the completion of the second barrier? The second barrier terminates the thinly populated country; above that there is a very flourishing and intelligent population, indeed inhabiting almost entirely the Nizam's country.

8349. Do you mean between the second and third barriers, or after the third barrier?—From the second up the main Godavery chiefly.

8350. Mr. *B. Denison.*] Where is the second barrier?—The second barrier is just below the junction of the Wurdah and the Godavery. Therefore the whole point was to get above the second barrier and to get into the population.

8351. *Chairman.*] Is it your opinion that it would be profitable or desirable to increase the works on the Godavery?—I am as certain of it as that I am in existence, that it would be one of the most valuable works that could be executed in India.

8352. Do you know what the extent of the work required would be to make an effective commercial navigation on that part of the Godavery?—£. 100,000 to complete the second barrier works, and that would make a navigation for about seven or eight months in the year.

8353. But do you know what sum would be required to make it effective all the year round, and for boats of considerable draft, say, four or five feet?—It would not require a very large sum, say, 200,000*l.*, to store water for the completion of the navigation for the whole year.

8354. Would that keep water enough in the river to allow mercantile vessels of draft to go up and down the river?—Of effective draft; not of deep draft, but quite effective.

8355. What do you call effective?—Two or three feet; they are working now powerful steamers of 17 inches on the Godavery with complete success.

8356. Do you mean that vessels drawing 17 inches are able to carry merchandise?—They are actually carrying it at a very low rate at this moment.

8357. Who is the owner of those vessels?—They are Government steamers.

8358. Have you seen any account of their expenses and returns?—Yes; I have all the papers relating to them.

Lieut. Gen. Sir *A. T. Cotton*, K.C.S.I.

5 July 1872.

8359. What is the result of the operation in the year?—I think that they have been working (I cannot recollect exactly at this moment) at about a penny a ton a mile, as matters are now while the river is in this imperfect state.

8360. Do you know what their earnings have been relative to their expenses?—They have carried so much Government stores, and it has cost so much per ton per mile. They were chiefly employed in carrying Government stores; their earnings from merchandise were, I think, small.

8361. What are the total earnings as compared with the total expenditure, in the year?—I could not tell without referring to some reports; there are three or four steamers.

8362. Sir *Stafford Northcote.*] Have they introduced on this river the system of the American flat-bottomed boats which ply on the Missouri, do you know?—The steamers that are now in use there were constructed under the Secretary of State's authority here, upon Colonel Haig's plan.

8363. Is that the stern-wheel system; the American system?—Yes.

8364. Are you of opinion that it would be possible to separate the returns of irrigation works in such a manner as to keep accurate accounts, showing the reproductive character of each work, as repaying the money that was expended upon it?—Most easily.

8365. How would you separate the returns from the irrigation work from the general revenue of the country?—In the first place there is the water rate.

8366. The system of charging differs in different parts of India, does it not?—Yes.

8367. What is the system in Madras?—The old system in Tanjore was to levy so much per acre.

8368. So much on dry land, and so much on wet land?—Yes, not distinguishing the land tax from the water rate; but in the newly-irrigated districts we levy a regular water rate.

8369. That is, you charge the wet land with the same amount of land revenue as if it were dry land, and then charge over and above that a water rate?—Yes.

8370. Then is that water rate carried to the general profit of the treasury, or kept as a separate account?—It is paid into the treasury of the district, not kept distinct in any way.

8371. Now this system of irrigation has been productive of very great benefit in certain districts; but do you think that it is equally applicable to other portions of India as it is to the deltas of great rivers?—To every district in India; but not with equal benefit, because some districts would be more expensive to irrigate than others; but it is equally applicable.

8372. Do you believe that it could always be made self-supporting in those parts of India where famines occasionally occur?—Much more than self-supporting.

8373. Are you aware that it has sometimes been found necessary, in order to induce the cultivators to take the water, to promise them that they should have no water-rate and no addition made to the land revenue?—A very curious thing has come out in the course of all these discussions; the Bengal people speak continually of the difficulty of getting the water to be used; that was a difficulty which we never thought of in Madras; the natives were much more eager to get the water than we were to give it to them; they were continually urging us to cut canals both for navigation and for irrigation.

8374. They have been more accustomed to the irrigation system in Madras?—But in districts where they have had hardly any irrigation at all, that has been the case.

8375. But, as a rule, Madras is a presidency in which the people are much more familiar with the advantages of irrigation than they are in many other parts of India, is it not?—Yes.

8376. Are you aware that in Orissa it was exceedingly difficult to get the people to take the water?—Yes.

8377. How do you account for that?—What Colonel Rundel writes to me on that subject is, that the amazing difference of the race he had to deal with there, their great inferiority to our races in Madras, had thrown him out of all his expectations; that he could not have believed they would have been so stupid and backward to use the water as compared with what he had been accustomed to in Madras.

8378. Does that shake your faith in the universal applicability of the irrigation system?—Not in the least. I am quite certain that that difficulty can be overcome by active intelligent men, laying themselves out for it.

3879. Do you happen to know that the Orissa, at a time when it was thought very desirable to get the people to use the water, an official gave what was construed into a promise that the land revenue should not be increased to those who took the water; do you remember that particular case?—This was one of the difficulties; the people could not trust the Government; they were afraid that if they charged them 2½ rupees for water rates they would then increase the land tax besides; and what they wanted was a clear, downright, unquestionable assurance that it would not be done, and that was not given, and that was the difficulty.

8380. Now do you believe that the real remedy for drought and failures of crops in India is to be found in the extension of irrigation works all over the country, rather than in the improvement of communications to enable the surplus of one part of the country to be brought to another part where it is wanted?—Not rather than, but combined with improvement of communications.

8381. No doubt it would be extremely valuable, if you had money enough to carry out both these systems; but supposing that your funds are not sufficient to do both, which do you think the more important?—I am speaking of combining navigation and irrigation, and you cannot have the one without having the other.

8382. But I am comparing the extension of railways, and roads, and other modes of communication, so as to enable you to bring the surplus of one part of India to the part which may happen to be deficient, with a system which is to provide locally for the wants of every district, so as to ensure it against the effects of a casual drought?—What we want is a complete system of water communication, from one end of India to the other.

8383. Rather than railway communication?—Certainly; the railways have totally failed in every essential particular, and the water carriage has completely succeeded in every essential particular.

8384. But would you say that you could supersede a line like the East Indian Railway by a system of canals?—Entirely, and totally supersede it. May I be allowed to give an explanation

Lieut-Gen.
Sir
A. T. Cotton,
K.C.S.I.

5 July 1872.

tion of that? I can cut a canal from Delhi to Calcutta for 3,000 *l.* a mile against 20,000 *l* which the railways cost; when it is done it will carry millions of tons at one-tenth of a penny a mile against 100,000 or 200,000 tons carried at 2 *d.* a ton a mile by the railway; and the canal will carry that traffic at any speed that you want to work it. Where is the advantage of the railway? That is my view of the matter.

8385. Now going back to the comparison of Madras with other parts of India, how frequently do the people require in those districts in Madras, to use the water; do they require it every year?—Yes, certainly.

8386. There is not a sufficient rain-fall to enable them to carry on their cultivation properly without the use of artificial irrigation?—Not a want of sufficient rainfall, that is not the point, it is a want of sufficiently regular rainfall. In the great famine of Orissa, there was a fall of 60 inches of rain that year; there may be 40 inches of rain in Rajahmundry, and the whole harvest be lost without irrigation.

8387. What I am anxious to know is whether there are not some parts of India in which you may make the irrigation profitable, because the people will regularly rely upon it knowing that taking year with year they will always require to use the water, whereas there are other parts in which perhaps five years out of six, or nine out of ten, they do not require artificial water; the rainfall being adequate and not more than adequate; but in perhaps the sixth year or the tenth year they require it?—There are no such districts in India.

8388. But now taking Orissa, for instance, is it not recorded in the evidence taken before the Famine Commissioners, that in a great many years artificial irrigation was not required there?—There never was a year in which water was not required in Orissa, I am perfectly sure of that. At some part of the season, there is as I say 50 or 60 inches of rain; but that is not the point; the point is whether there is such a long interval as that the crops may be either seriously injured or totally lost.

8389. Mr. *Fawcett.*] All the irrigation works even in Madras, have not produced these satisfactory financial results to which you have alluded, have they?—Everyone that has been carried out at all.

8390. But should you say that the financial results and the financial prospects of the Madras Irrigation Company's schemes were encouraging?—Fully so; perfectly satisfactory.

8391. Can you give the returns at the present time?—They are not in operation.

8392. But are they ever likely to be in operation?—There is nothing to prevent. They were used to a certain extent last year; there is nothing to prevent their being extensively used this year.

8393. You are aware that competent engineers have expressed an opposite opinion?—I have never heard that.

8394. You never heard an opinion expressed that the canal will not hold the water?—What can I say to an opinion of that sort when it was actually flowing all last year and held water perfectly well.

8395. If it was flowing all last year and held water perfectly well, how do you account for the canal yielding nothing at all?—It was used to a certain extent, last year, and there is every prospect of its yielding a large revenue this year;

8396. There have been particular papers going to show that the prospects of this irrigation scheme are as glowing as they can be; can you give any specific facts to contradict that?—The works are in effective operation; they began to be used last year; the people are willing to use the water, and it is an absolute certainty that it will be extensively used this year.

8397. Mr. *Lyttelton.*] Was the canal full last year?—No, but they could have filled it.

8398. Mr. *Fawcett.*] You are aware that the canal has cost greatly more than the estimate?—Yes; some 50 per cent. more than it was originally estimated to cost.

8399. Are you aware that its prospects were looked upon by the general commercial world as so gloomy that the company could not raise the requisite money to complete it, but that the Government were obliged to advance 600,000 *l.* on what they considered most inadequate security?—I have had 50 years' experience in these matters, and know perfectly well that the gloomy opinions were without foundation.

8400. How is it, then, that, with all the intercourse you must have had with them, you have never been able to produce the slightest impression upon the large capitalists in England, and never got them to invest one shilling in these brilliant works, but always have been obliged to sing the same song, "Government, Government, Government"?—I have done neither the one nor the other; I have nothing to do with commercial men.

8401. How do you account for it that in Madras, the golden land of irrigation, a million was spent; they wanted 600,000 *l.* more to complete it, and no capitalist was willing to come forward with the money; how is it that English capitalists are less ready to invest their money in these brilliant concerns than they are in any other works throughout the world?—I have nothing to do with the mercantile part of the business; all I know is that they misjudge the matter.

8402. But you must admit that the estimates as to the cost of these Madras irrigation works are altogether fallacious?—They have cost more than they were originally estimated to cost; and, in the first place, it is impossible for works taking 10 years to execute not to increase in cost.

8403. You say that you made repeated applications to Secretaries of State, to finish the works to which you first alluded, in the delta of the Godavery?—Yes.

8404. Of course we have a right to assume, that Secretaries of State have no particular reason for preferring railways to irrigation works; they must have given you some reason why they thought it was undesirable to advance this additional sum of money?—They never gave me any reason at all.

8405. Did they never publish any reason?—Never. There are the facts; the railways are universally a failure in point of return; here are the irrigation works, everyone completed is making a good return. Those are actual facts; nobody can mistake them.

8406. Those you have mentioned are; but I think if we were to go through the irrigation works throughout India, we should find that some of them did not yield more satisfactory results, or as satisfactory results as some of the railways?—There is no such thing as a railway which has returned anything like what the worst of the navigation works has.

Lieut. Gen.
Sir
A. T. Cotton,
K.C.S.I.

5 July 1872.

8407. I am not in favour of railways; but the East Indian Railway nearly pays 5 per cent., does it not?—According to the way in which they make out the accounts, the actual returns last year were 4½ per cent., and there is a debt upon it of 17,000,000 *l.*

8408. We may suppose that the railway would have no inducement to understate its accounts, considering that it is a guaranteed line; some years it would appear that the Government had had to pay nothing whatever, that the company made no demand on the Government to make up the guarantee; is not that the case with regard to this particular railway?—They did not pay interest in one-half year or two-half years. Not paying interest on the debt, and not paying interest on the cost of the land, there was an insignificant surplus above the 5 per cent.

8409. But now, contrast that with the Ganges Canal; can you go through the figures and prove to me that the Ganges Canal has ever paid 5 per cent.?—It is paying now at last ——

8410. How much?—Five per cent. including the debt.

8411. How can you prove that?—There are the actual returns.

8412. I should like to go through those actual returns; I have been through them, and made out 2½ per cent.?—Here are the returns, and I have no alternative but to take them from the Blue Books.

8413. But you are aware that those returns are given with no allowance for all the years in which money has been spent, and yielded no return?—But here I have added the debt to it.

8414. How does it stand?—It gives 5 per cent. including the debt.

8415. How do they include the debt?—It is stated at so much in the book.

8416. I want to know of what elements this debt is composed; I think I can prove to you that, if those accounts were properly stated, the Ganges Canal does not pay as good an interest as the East Indian Railway. I simply quote that to correct your general statement, that all irrigation works must pay well; have you ever taken the trouble in making this comparison, to find out what is included under the word "debt" there?—No, I have merely taken it as I have the railway accounts, from the Blue Books; but if you will allow me to speak of the Ganges Canal, I should like very much to say what the history of that work was; that work was falsely projected; that is the essential thing; it cost 2,300,000 *l.*, because they chose to go up into the hills to fetch the water at a level where they did not want it, and it cost them a million to bring it into the plain; whereas if they had brought it from below the hills, they could have brought it for 100,000 *l.*

8417. What your statement about the general profitableness of irrigation works means is this, that if all the irrigation works in India had been properly constructed with due economy, and there had been no mismanagement, they would all have yielded a very satisfactory return?—No, I say that all those in extensive operation at this moment are yielding a fair, or a very large interest.

8418. But you say the Ganges Canal was badly constructed, and cost a great amount of money?—That is why it has not returned 20 or 30 per cent., instead of 5 per cent.

8419. But do not you think that the same remark applies to a great extent to the railways, that if money had not been wasted, if they had been properly made, the result would have been more satisfactory in their case also?—There has been a great deal of money wasted on the railways certainly.

Tuesday, 9th July 1872.

MEMBERS PRESENT:

Mr. Ayrton.
Sir Thomas Bazley.
Mr. Beach.
Mr. Birley.
Mr. Bourke.
Mr. Stephen Cave.
Mr. Cross.
Mr. Charles Dalrymple.
Mr. Beckett Denison.
Mr. Dickinson.
Mr. Grant Duff.
Mr. Robert Fowler.
Mr. Hermon.
Mr. Lyttelton.
Mr. M'Clure.
Mr. John Benjamin Smith.
Sir David Wedderburn.
Sir Charles Wingfield.

THE RIGHT HONOURABLE ACTON SMEE AYRTON, IN THE CHAIR.

Lieutenant-General Sir ARTHUR THOMAS COTTON, K.C.S.I., re-called; and further Examined.

Lieut. Gen.
Sir
A. T. Cotton,
K.C.S.I.

9 July 1872.

8420. *Chairman.*] Do you wish to add any observations respecting the revenue of the three irrigated districts as compared with the others?—The average revenue of Tanjore, Kistna, and Godavery is 600,000 *l.* a-year; the revenue of all the other districts is 32,000,000 *l.*; the number of districts, exclusive of some small ones, is about 150. The average of the unirrigated, or partially irrigated districts, is 210,000 *l.* The total population is about four and a-half millions in the three irrigated districts, giving four rupees per head revenue. The population of the other districts is about 150 millions, giving two and a-half rupees per head as the average of the revenue.

8421. Mr. *Dickinson.*] Have you the acreage?—No. What I wanted specially to point out is that I consider it the great financial fact of all India, that here are three districts yielding 600,000 *l.* a-year, while the average of the other districts is 210,000 *l.*, the sole cause being that those districts have been intelligently managed, and that the others have not.

8422. *Chairman.*] Do you ascribe any value to the circumstance, if it exists, that these irrigated districts are very fine alluvial lands, as compared with the general lands of India?—Yes, they are fine districts, small districts with a great extent of alluvial land, but I do not think that they are much superior to the other districts as to the total quantity of good available land.

8423. Has it been brought under your notice whether the difference of the revenue goes to this extent, that the alluvial fields and small tracts that are irrigated by a natural flow, pay a revenue as much as 50 and 60 rupees an acre, as compared with districts that are not so used, which pay only perhaps a quarter of a rupee an acre?—I never heard of any tracts that paid 50 rupees an acre.

8424. Did you never hear of what are called natural wet lands, upon which sugar crops are grown?—Yes, but never paying anything like 50 rupees an acre.

8425. Will you proceed, if you please, with your exposition?—Now, in all the financial papers that I have seen not one has alluded to this most striking fact of this enormous revenue raised from three particular districts.

8426. Mr. *Dickinson.*] Not even the reports of the Commissioners of those districts?—Never, in any general financial statements that I have seen. And so with respect to the revenue per head, four rupees per head in those districts, and two and a-half in the rest of India. The other point which I wish to be questioned on was this: I gave the facts respecting the Upper Godavery works. The Chairman began by asking me what my opinion was; I said that I should like to give the facts first, and afterwards my opinion, which I did not give.

8427. *Chairman.*] Will you add any further explanation that you have to offer with respect to the Upper Godavery works?—The point is this, that we have now positive proof that 400 miles of the river will be opened for 800,000 *l.*, that is, 2,000 *l.* a mile. It is true that a part of it will be only opened for seven or eight months in the year; but first it will carry certainly at a halfpenny a ton a mile, and any quantity, millions of tons. Now, the question which I ask is this, how can it be wise to make railways at 20,000 *l.* a mile to carry at 2*d.* a ton a mile, and the country to be burdened by a taxation of 3,000,000 *l.* a year, and to carry only 100,000 or 200,000 tons, and yet unwise to open a river at 2,000 *l.* a mile to carry at a halfpenny a ton any number of millions of tons, and no burden at all to the country? Or if the whole interest was paid by the country it would only be 100 *l.* a mile. There is one other point which I wished to add with respect to the months that it is not navigable. That could be filled up certainly for 500 *l.* a mile, that is to say, 200,000 *l.* for the 400 miles would give water to make it navigable through the remaining months of the year; so that even then it would only cost 2,500 *l.* a mile, one-eighth of what a railway costs, and this water worth ten times its cost for the irrigation of the Delta in the dry season.

8428. Mr. *Dickinson.*] The system of river and

Lieut. Gen. Sir *A. T. Cotton,*

9 July 1872.

canal irrigation and transit is only applicable to the valleys down which the rivers flow?—Yes.

8429. You could not adapt the canal navigation to carry across from valley to valley, across the line of rivers?—On every important line of country in India you can carry a canal, that is to say, on every line where there is great population.

8430. Take the flow of rivers beginning at the north, the great rivers flowing east and west; take the Ganges Valley, there you would accommodate the whole of the Ganges Valley by canals?—Certainly.

8431. Coming south from that could you make a water navigation?—The whole of the way, all along near the coast from Calcutta, by Cape Comorin up to Goa, is all perfectly easy for navigation.

8432. From the Deccan southward the rivers flow east?—Yes.

8433. Your traffic would all be to the Coromandel coast?—Not the whole, because I would make cross canals across the Peninsula.

8434. Would you take the waters which now flow east, westwards through the ghats?—I would make the canals across; some of the water in the canals would flow east and some west; I would supply them at their highest level, of course.

8435. Taking the country from the Deccan southwards, you have a range of ghats on the west very much higher; the slope of the whole country is eastward; and therefore all your traffic would be eastward to the Coromandel coast?—There is one line from the west coast at Ponany to Madras, for instance, through the opening in the ghats there which is perfectly practicable.

8436. Between Travancore and Mysore, you mean?—South of Mysore.

8437. Now along the whole Coromandel coast you have no harbour, have you?—There is a perfectly good harbour at Coconada.

8438. Is it not a roadstead?—A perfectly safe harbour; never was a vessel lost there yet.

8439. How many vessels go there?—There is a trade of a million now in exports.

8440. And, in your opinion, would canal navigation meet the whole transit wants of India, of its commerce, and its people?—Perfectly and entirely, without any one defect whatever.

8441. What would be your communication, for instance, from Madras to Bombay; how would you get from Madras to Bombay?—I do not mean to say that every line in India can be transversed by a canal, but every line on which it is of great importance that there should be transit. There may be minor tracts like some part of the line between Bombay and Madras which might be better for railways.

8442. From Bombay, whatever you have, you have got the ghats in your way to get to the interior of India?—Yes.

8443. Must not Bombay, in your opinion, be the great port for the commerce of the west?—It certainly will not be eventually; the great outlet must be at Ponany, opposite the opening in the ghats, eventually; it ought to be now.

8444. I do not see how that will accommodate the flow of traffic all down the Deccan eastward; following the lines of the Kistna and the Godavery and the other rivers; how is it to get down to Ponany?—I mentioned that there is nothing to prevent a canal across the Peninsula from Madras to Ponany.

8445. Do I understand you rightly that the traffic would flow first eastward down the coast, accumulate at Madras, and then go to Ponany as the port of communication with Europe?—Part of it.

8446. The bulk of it?—No, part of it; because I have not finished what I had to say, that there is another line perfectly practicable by Dharwar, from the east coast to the west, at the port of Carwar; there is nothing to prevent that being a water communication.

8447. Is that something of the line of the proposed railroad?—Well, they are talking of railroads everywhere; there is another line again from Coconada right across the Peninsula, following the line of the Godavery, the Wurdah, and the Taptee, also perfectly practicable for a complete navigation.

8448. And that scheme would unite the waters of the Godavery or the Wurda, flowing east, with those of the Taptee, flowing west?—Yes; a complete line from Bombay up the valley of the Indus, down the valley of the Ganges, along the east coast, to Cape Comerin, up the west coast to Goa; and across from Madras to Ponany, from Madras to Carwar, and from Coconada to the mouth of the Taptee would form a complete scheme of navigation for all India.

8449. The mouth of the Taptee at Surat?—Yes.

8450. In your long investigation of the adaptation of canals to India, I suppose you have considered the matter as a scheme for the whole country?—Yes.

8451. Have you done anything of the same kind as regards other channels of communication besides water?—No. May I give the reason? Because nothing else can possibly answer the purpose; there is no other conveyance that will carry goods at a tenth or a twentieth of a penny a ton a mile, and no country can thrive till it has got cheap transit.

8452. And you consider that there is water enough in India to feed all these canals?—There is water enough in India for every conceivable purpose ten times over; there is no want of water.

8453. Have you any scheme for connecting the upper waters of the Jumna with the Indus, or the Ganges with the Indus across the deserts?—They are cutting it now, the Sirhind Canal.

8454. That is the bed of an old canal, is it not?—No; the main canal is one entire new line; there are some remains of old canals in that part of the country.

8455. What is that new canal to join?—The Sutlej with the Jumna.

8456. Now, in the course of the evidence, we have heard something about the interference with the old system of wells by the introduction of canal water as being somewhat oppressive to the owners of wells. What do you say to that?—There are two points in the comparison of canal irrigation with well irrigation. The first is that it costs from one-tenth to one-fiftieth part of the money to water from canals; the other is that the river water is so entirely renovating that the lands watered by it yield crops for hundreds of years without any manure; whereas, well water is filtered, and does not manure at all, or except in a very small degree.

8457. We

Lieut. Gen.
Sir
A. T. Cotton,
K.C.S.I.

9 July 1872.

8457. We have been told that the water coming down the Ganges, for instance, is full of granite and other detritus, which, instead of being beneficial, is injurious to the land. Is that so?—The only answer which I can give to that myself, for I have not gone into it minutely, is that at this moment the cultivation under the Ganges Canal is increasing enormously every year; it has gone on now for 20 years, and there are now about a million acres irrigated by it.

8458. You stated just now that the water from the canals will not only water but manure for 100 years?—There is the proof of it that this enormous irrigation is going on under the Ganges Canal.

8459. We have also been told that in some districts the effect of the canals is, in the dry season, to reduce the water in the wells, is that so?—The wells all along the line of the Ganges Canal are supplied by the water from the canal.

8460. We were also told that in some districts the canal water passing through somewhat saline land becomes impregnated with saline matter, and in that way injurious to the irrigated land; what do you say to that?—I am not acquainted with that subject. There has been some considerable extent of land injured in that way since the irrigation, and I do not know the real explanation of it.

8461. As regards the three objections to which I have adverted, that of the water from the river being injurious, the canals reducing the amount of water in the wells and occasionally affecting the land by the salt which it gathers in its course, the two first objections are not, in your opinion, tenable, only the last?—The objection about the wells is simply impossible to my mind.

8462. As regards passenger traffic, I presume the canal would not be a very rapid mode of transit?—I know of no limit whatever to the navigation of canals, and I am sure there is none.

8463. As regards speed?—In speed I was in a small boat, 50 feet long, only the other day, on the Thames, running at 20 miles an hour.

8464. Drawing how much water?—About a foot and a-half.

8465. *Chairman.*] Do you know how long the boat would keep up that speed?—I do not think that she could keep it up permanently. I do not know exactly, but not much short of it; but I am quite sure that a boat can be navigated at any speed you choose to give it on a canal.

8466. With any quantity of coal, that is to say?—Within practicable cost and everything: in a practicable way, I mean.

8467. Mr. *Dickinson.*] Of course the speed of railroads is only obtained by the consumption of coal?—The speed on the railways in India at this moment is only, I believe, 20 miles an hour, on some lines 25.

8468. And as regards accommodation for passengers, do you consider that the canal would offer as good accommodation or better than the railways?—Far superior in every way, for instance, there would be no vibration.

8469. I mean accommodation for different classes of passengers, and so on?—One of the great points in the canal would be equally applicable to passengers and to goods traffic that everything could travel at its own speed, that is to say, that poor people could travel cheap and slow, while the rich people travelled at a high speed; that they cannot do on the railway; you are in a great measure limited in that respect on the railway.

8470. Is there any passenger traffic now on the Ganges Canal?—I do not know, I have not particular returns, but I made out by the last partial returns I saw that there is about 100,000 tons of goods traversing it now; but our canals on the Godavery are crowded with passengers; the whole travelling of the district is by the canal.

8471. Do you consider that the East Indian line of railway is in a sense competing with the Ganges Canal, that as a line of communication it competes with the Ganges Canal?—So far as I have returns, I fully expect that the goods traffic on the Ganges Canal is greater than on the railway that runs by the side of it.

8472. That they are seeking for the traffic of the same line of country, and therefore, in competition with each other?—Yes.

8473. And do you consider in that sense that it would have been better to have a railway where there is no water competition, than to have it over a line of country where the rivers furnish water communication?—Certainly, if you are to have a railway, have it where there is no water carriage.

8474. But you seem to go as far as to say, that water carriage will meet all the requirements of India?—Every requirement of speed, cost, quantity, and everything.

8475. And the cross traffic of the country?—Everything; I do not mean to say that there are not particular lines on which railways might be made, supplemental lines, but those are quite secondary, very inferior cases.

8476. *Chairman.*] Can you explain to the Committee why the people use the East India Railway to such an extent as to give it a 5 per cent. dividend, when they are perfectly free to use the Ganges?—Because the Ganges river has such a very imperfect navigation, and because the railway is backed up by 700,000 *l.* a year paid out of the revenue.

8477. Mr *Dickinson.*] That 700,000 *l.* does not give it the traffic?—That is what enables them to carry cheap; if that 700,000 *l.* was divided over the traffic it would bring it down directly.

8478. But the question put to you was, did the traffic on the East Indian Railway return an income of nearly 5 per cent?—The return last year, without allowing for the price of land, was 4½ per cent., and, including the price of land, 4¼ per cent, leaving a debt of 8,500,000 *l*, the interest of which is paid out of taxes.

8479. When you talk of the cost of land, do you mean the cost of land as sold in the market, or the value of that land as still continuing to earn revenue to the Government?—I take the cost of it in the Blue Book; I have no other authority, I omitted to say that there are about six essential mistakes which have been made in the navigation of the Ganges Canal; I will not go into the particulars, but to give you an idea of the extraordinary mistakes that there were I will give you one: not one of the bridges would allow a fully-loaded boat to go under it; they are at this moment raising 50 bridges to allow the traffic to pass under; that is only one out of six essential mistakes in the navigation, and in spite of that this traffic of 100,000 tons has sprung up.

8480. They are now raising the bridges to meet the traffic, as I understand you?—They have

Lieut. Gen.
Sir
A. T. Cotton,
K.C.S.I.
——
9 July 1872.

raised about half of them, and they are raising the others.

8481. Was that the fault of those who made the canals, or those who made the roads, insisting on low gradients?—I think the mistake was in the projection of the canals.

8482. Mr. *Cross.*] I think you said that the speed in a canal was 20 miles an hour?—They could do more than that.

8483. The only limit being, I suppose, the injury to the banks?—There is no such thing as injury to the banks, it is entirely imaginery; they talk of little canals here, not made for steam, 30 or 40 feet broad, without one foot of land to spare; we have no such thing in the great canals in India, which are fitted for steam; if you talked of an objection to railways because horse railways would not bear locomotives, it would be a similar case; I am talking of canals made for steam.

8484. What widths do you speak of?—The great irrigation canals are from 30 to 100 yards broad

8485. Mr. *J. B. Smith.*] Whilst you are speaking of the Ganges let me ask you this: is not one reason why the canal is not usable for navigation that the water has been taken from a high level, in consequence of which the fall is too great?—Yes; that is one of the essential mistakes that was made; so great a fall was given that the current was so strong as to cut the banks and bed of the canal.

8486. In consequence of which it rendered it almost unnavigable?—It injured the navigation.

8487. Are they not about to remedy that mistake?—They have been at work at it for two or three years.

8488. And when that is completed, do you consider that the traffic in passengers will be very much increased?—I suppose it will.

8489. Now, General Strachey said this in his examination respecting the Godavery; this question was put to him at 7867: "That river (that is the Godavery) rises in Berar and passes 100 miles through the richest cotton districts in India;" and he says, in reply to that, "I should not altogether accept that as a fact that ought to be allowed to pass without explanation; the Godavery, no doubt, if you take it from its source, where it is a little brook as wide as this table, to the sea, would more or less pass through some of the best parts of the cotton districts; but for a great portion of its course it does not; I mean when it becomes a river, which one can talk of as a means of giving navigation;" now, have you passed along the Godavery and the Wurda into Berar?—Yes; I have passed them at various points from near the source of the Godavery and the Wurda from where the railway crosses it all the way down.

8490. What is the width of the Wurda about where the railway passes over it?—It may be 150 or 200 yards; two or three times the width of the Thames above tide water; something quite beyond all question about navigation.

8491. There is no doubt about the navigation, is there?—Not the slightest.

8492. Now, General Strachey says that the Government have abandoned the completion of the Godavery to any further extent than it is opened at present, that is up to the second barrier, I believe?—To the foot of the second barrier.

8493. Supposing you take that as abandoned, as lost?—Then the country below that is so thinly populated, that the whole traffic now is only 20,000 tons.

8494. But, supposing the Godavery were opened out the whole extent from the second barrier up to the railway on the Wurda, that would make a navigation of upwards of 400 miles?—It would make a navigation of 500 in one direct line, and 100 besides on the main direct Godavery, 600 altogether.

8495. Then if that can be completed for a million of money, you would have a navigation at 2,000 *l.* a mile, or under?—All that could not be completed for a million, including what is spent.

8496. I am supposing that has been spent is sunk; if the Government abandon it, it is as if it had never been spent at all; then would a million of money make the remainder of the river navigable, and supply reservoirs for making it navigable all the year?—Certainly, somewhere thereabouts; a million or a million and a quarter; that sort of price.

8497. That would supply a navigation of that length for 2,000 *l* a mile?—Yes, not reckoning what has already been spent; the main point of it all is, that it is a question of 2,000 *l.* or 3,000 *l.* a mile. They say, "We want accurate estimates, we want to be sure what it will cost." It is a question of 2,000 *l.* or 3,000 *l.* a mile, not as it is with the railways, whether they are to cost 15,000 *l.* or 20,000 *l.* a mile.

8498. Now the river is opened up to the second barrier, and the traffic, I think you stated, was 20,000 tons the first year. General Strachey states that he believes almost the whole of that traffic was food for the people employed on the works; have you any account of what that traffic consisted of; is it possible that there can have been 20,000 people employed on that work, and that they could consume, each of them, a ton of food in that period?—Here is the report of the navigation for the year 1869-70, which is the last that I have got; the total traffic was 20,500 tons, and of that the Government stores were 1,500, leaving 19,000 tons for general merchandise. I cannot understand how General Strachey, who is so very accurate in general, could have made a mistake of that sort.

8499. One of General Strachey's objections to the opening of the Godavery is, that it would take off the railway a portion of the existing traffic, and also the further traffic that it was likely to receive; what have you to say to that?—I have two things to say to that: one is this, because we have made a railway, are we therefore to compel the people to carry by an expensive mode when they could carry by a cheap one? The other is, that we have nothing to do with the railway line at all in considering the question. There is the question of whether we shall make a line of communication through an important tract of 500 miles, or have none at all on that 500 miles.

8500. At what cost do you expect you could take traffic?—A halfpenny a ton at the outside for the carriage on the river.

8501. Does that include the tolls that you levy upon it?—What I say about that is this, that the interest is so exceedingly small on 2,000 *l.*, namely, only 100 *l.* a year, that the toll would only be a farthing, for instance, to make 5 per cent. on 100,000 tons, and that if the traffic was carried on at a halfpenny or three farthings it would very soon

far

Lieut. Gen.
Sir
A. T. Cotton,
K.C.S.I.

9 July 1872.

far exceed 100,000 tons; it would be several hundred thousand tons at that price. The mistake that is constantly made by people in arguing about the transit is, that they do not consider that it is the cheapness that makes the traffic, and they talk as if a railway carrying at 2 *d.* a ton would carry the same quantity as the river or the canal carrying at a tenth of a penny.

8502. But is not that a serious consideration when Government are guaranteeing a very large sum on the capital of the Great Indian Peninsula; and I see by the last return for the half-year ending December, the return is something less than 1 per cent. for the half-year?—Yes, and that without allowing for the cost of land, and without charging the interest of the debt.

8503. Now, it is objected that Coconada is not easily accessible to large ships; what have you to say to that?—It is perfectly accessible. It has a defect, that the ships have to lie two miles off the mouth of the river because it is so shallow, but there is no difficulty of access.

8504. But then there is lighterage; they are obliged to employ lighters to take the traffic up?—Yes; that is the defect of the port.

8505. Is not that a great expense?—No, not very serious. It is the only port in India in which no vessel has ever been lost.

8506. Are you aware that the Government are about to make a railway from the existing line of railway that passes over the Wurda down to Chanda, about 45 miles, I believe, in length, and which will cost 7,000 *l.* a mile?—Yes.

8507. What do you think the river could be made navigable for, at all seasons, from that point down to Chanda?—About 2,000 *l.* a mile from the mouth of the coal-pit to the railway, and it would carry at one-twentieth of the cost that the railway would carry at.

8508. But there would be this advantage besides, would there not, that you could carry an illimitable quantity?—Yes.

8509. But on a single line of railway the quantity that you can carry must necessarily be limited?—Yes. May I add a most important point connected with that, that the Government are actually cutting a canal by the side of the railway from Calcutta to the coal fields in Burdwan; after spending 25,000 *l* a mile upon a double railway, they are actually cutting a canal at 3,000 *l.* a mile for 100 miles, parallel to it, to carry the coals; and at the very same time that they are doing that, they are ordering a railway to be made by the side of a river in this other part of the country, that river capable of being made navigable for 2,000 *l.* a mile, and the railway costing 7,000 *l.* The Governor General's remark upon this Damooda Canal is this: "Moreover, the possible effect of the discovery of coal at Midnapoor has also to be considered. Should it result in a coal-field equal to that at Raneegunge being found at that place, one of the principal objects to be gained by the formation of the proposed canal would no longer exist, since the Midnapoor Canal could furnish a much shorter route for the conveyance of coal to Calcutta."

8510. *Chairman.*] Do you recollect whether the Damooda river runs to the delta of the Hoogly from the coal field?—Yes.

8511. Do we rightly understand that the Government are not proposing to make the Damooda navigable, but that they are cutting a canal from some place to the coal field?—Yes, from Burdwan to Calcutta; from Raneegunge, where the collieries are, to Calcutta.

8512. From Raneegunge direct to the Hoogly, opposite Calcutta?—Yes; and the sole question here in the Governor General's own Despatch is, whether one canal is to be cut, or another for the coals, not a word about the railways.

8513. Mr. *J. B. Smith.*] Is not that a strong argument in favour of the opening of the Godavery?—I like to judge of men by what they do, and not by what they say. While the theory laid down is, that railways are to do everything, they are actually cutting a canal by the side of a railway, because it has totally failed. Why do they cut the canal by the side of it if it has not?

8514. Why has the railway failed?—It cannot carry cheap enough, or the quantity that is wanted, the points that I always insisted upon. When you have got the railway it is utterly and essentially a failure, because it cannot carry at anything like the price that you must have goods carried at if the country is to flourish.

8515. Do you know anything about the navigation of the Indus?—Not much.

8516. You are aware, probably, that there is a steam flotilla on the Indus which has a considerable traffic?—Yes.

8517. General Strachey states, in answer to Question 7886, "I know this about the steamers on the Indus; whatever there is in the shape of traffic down the river, I should say, without the smallest hesitation, that the traffic that comes down the Indus would be decidedly much more than would come down the Godavery," is that your opinion?—No; certainly not.

8518. He says, "A very large quantity of cotton comes down the Indus, but the steamers do not pay. It was a private company which was broken down; the company which now exists as the Indus Flotilla Company, which is part of this Scinde Railway concern, is under a guarantee; it just manages to pay its way, and that is all;" what is your opinion as to that?—I believe that there is a good profit on the steam navigation of the Indus, certainly a much greater profit than on the railway.

8519. There ought to be a profit if it is well managed?—Certainly.

8520. Do you know whether it is well managed?—I think it has been very indifferently managed.

8521. Probably that may be one reason why it does not pay?—I think if they had the boats that were planned by Colonel Haig for the Godavery working on the Indus, they would work at half the cost that the present boats do.

8522. I happened to turn to the Report on Indian Railways for 1870-71, since General Strachey's evidence, and I found that at page 19, it states that the Scinde, Punjab, and Delhi Railway Company purchased the steamers and barges of the Indus Company for the sum of 378,000 *l.*?—Yes, the Scinde, Punjab, and Delhi purchased them.

8523. And for warehouses and workshops 45,000 *l*, making a total of 413,805 *l.*, which was the cost of the steamers?—Yes.

8524. General Strachey says that they barely pay their expenses, but according to the same report it appears that in the year 1869 there was a net profit, after paying all expenses, of 20,370 *l.*, which is a profit of nearly 5 per cent. upon the capital, and in 1870 there was a profit of 37,388 *l.*

Lieut. Gen.
Sir
A. T. Cotton,
K.C.S.I.

9 July 1872.

being nearly 9 per cent. upon the capital?—I have not these returns separate from the general returns of the company.

8525. General Strachey says that he believes that the Godavery would not yield a larger traffic than the Indus; but if the Godavery yields a profit of that sort, you would consider that satisfactory, would you not?—Yes.

8526. Now this same Scinde Railway, whilst the navigation of the Indus has paid from 5 to 9 per cent., a railway with a capital of 14 millions has only paid, in 1869, 9 *s.* per cent.; in 1870 it paid 13 *s.* per cent.; and for the half-year ending 31st of December last, it paid 3 *s.* per cent.; are you aware of those facts?—Yes, that is a correct statement of the case, but that is exclusive of their debt and of the interest on the land. The land has cost about a million and a half, and the debt is about 3¼ millions; so there is, besides, the interest on nearly 5 millions of capital.

8527. So that the steamboats for 1870 paid nearly double the profit which the whole of the Scinde Railway paid for the last half-year?—And to that I wish to add that the Indus is quite the worst of the Indian rivers; the navigation of the Godavery would be far superior to the present navigation of the Indus.

8528. General Strachey it is evident, I think, must have been mistaken on all those points, but it is very important that a mistake like that should be corrected, is it not?—Yes

8529. Now, General Strachey further says that on the whole navigable part of the Godavery there are not 50,000 acres of cultivable land; is that consistent with your notion?—I cannot tell what he can possibly mean by that.

8530. He says, that from Chanda to the head of the Delta there is no cultivation whatever and no population whatever?—I can make nothing of that.

8531. *Chairman.*] He means, I think, not that the place is absolutely without population, but that it is very slight indeed?—The population is very thin up to the second barrier; it is far greater above that, but still on the Wurdha line, on our side of the Wurdha line, it is a thinly populated country up to Chanda.

8532. Mr. *J. B. Smith.*] I have before me a plan of the Godavery river, and we have already had in evidence that up to the second barrier there was the first year a traffic of 20,000 tons, but this map shows that after you pass the second barrier there is a population of 200,000 inhabitants between the second and the third barriers; are you aware of that?—That is in our district alone; it would affect at least two millions of people in all if the navigation is opened to the foot of the third barrier.

8533. Because we should take the Nizam's population?—Yes, the main Godavery above the Wurdha, which is navigable, passes through the Nizam's country on both sides with a highly flourishing and populous country, and a highly intelligent and energetic race.

8534. Then it is quite clear from these statements that General Strachey has made a great mistake in his statement that there is no cultivation nor population whatever from Chanda to the head of the Delta?—Those statements convey a totally false impression of the case; but what I say is this; the question is not what the population is between Chanda and the sea, any more than with respect to the Suez Canal what the population on the Red Sea is; the question is, what districts it will join; we do not cut the Suez Canal because of the Red Sea, but because of India and England; we do not make the navigation up the Godavery for the sake of the thinly populated districts, but to connect an immense, populous, fertile country with the ocean, and so with all the rest of the world; and to speak of the population on the line itself is to speak of that which has nothing to do with the matter.

8535. You are aware that the Government propose to lay out a large sum in making a railway in the Indus Valley?—Yes.

8536. Five millions is to be laid out on the Indus Valley; would not that compete with the River Indus?—It could not carry so cheap as the Indus could carry; it would not pay its working expenses, or only barely do so.

8537. If it is argued that if you open the Godavery it will compete with the Great Indian Peninsula, if you make a railway parallel to the Indus, will not that compete with the River Indus in the same way?—Yes; but it seems that there is no objection to make a railway to compete with the river, though there is great objection to open a river to compete with a railway.

8538. This district is described as a desert, as producing nothing for want of rain. Now would it not be more desirable, therefore, instead of making a railway through that district, to make a canal?—There is at this moment a project completed for a magnificent canal down the whole line of the valley to Hyderabad, which will both irrigate the country and produce a population, and carry the whole traffic in a perfectly effective way. That project is now completed. I do not know whether they have actually begun it, but it is all ready to begin.

8539. But it is said that this line is made for political reasons. Supposing you had a canal with steamboats on it, would not that get rid of the necessity for making these railways?—I am no statesman, only a drawer of water; I do not enter into the question whether a certain line of railway is necessary for military and political purposes; but with respect to the comparison of a railway and canal for those purposes, there can be no question. Anybody can judge of that; a railway is the most helpless thing in the world in war; it can be destroyed in a moment, because you cannot guard it; but a canal, though it may be destroyed, is far more capable of defence than a railway, because you can keep armed steamers running upon it at all times, day and night, independent of the traffic, which you cannot on the railway; and another great thing in India is that an irrigation canal in use would have the whole population on the side of it, and it would be a very dangerous experiment for people to try and destroy a canal; the people would be inclined to protect it; whereas they would not care about a railway being destroyed.

8540. Sir *C. Wingfield.*] Would it not be as easy to cut the canal banks as to tear up the rails of a railway?—Yes; but you can run your steamers, independently of the traffic on the canal, while on the railway you are obliged to keep the line open for traffic. The canal is far more defensible; that is the difference.

8541. Mr. *J. B. Smith.*] The railway projected from Lahore to Peshawur, I believe, is distinguished for the great number of streams which it passes?—Yes.

8542. And consequently the great number of bridges that would be necessary?—Yes.

8543. Now,

Lieut. Gen. Sir *A. T. Cotton*, K.C.S.I.

9 July 1872

8543. Now, in a military point of view, would not that line of railway be easily destroyed?—Yes; it would be destroyed immediately if there was any disturbance within hundreds of miles of it.

8544. Sir *D. Wedderburn.*] Do you see any essential obstacle upon those Punjaub-rivers against the American system of ferrying trains across the river, without making bridges?—No.

8545. They have a system there of running the train on to a very large steamer and ferrying it across and landing it on the other side, where the rivers are so wide or so difficult to bridge, that it does not pay to make a permanent bridge. Do you think that it could be done on the Punjaub rivers?—It could be done but there is a great objection to it, which is that the rivers rise and fall so prodigiously that there is so large an extent of the bed covered with water at one time of the year and not at another.

8546. But does not that objection tell with equal force against bridges, as making them both very expensive and also insecure?—They can be easily secured; there is no difficulty about that; but they would be expensive.

8547. Very often bridges on the Indian railways have been carried away by this sudden rise of the rivers?—There are, I suppose, 100,000 bridges, at least tens of thousands, built in India, that have never been injured.

8548. Taking those great bridges over the Nerbudda in particular, and over other rivers in that part of India; if they have not been actually carried away, they have been repeatedly made unserviceable owing to the damage done by floods, have they not?—It cannot be denied that most dreadful mistakes have been made with railway bridges, and there are numbers which have either fallen down, or had to be taken down.

8549 You do not consider that the ferries meet the difficulty?—In very few places in India, on account of the great rise and fall of the rivers.

8550. *Chairman.*] Did you forward a memorandum to the Secretary of State, on the subject of water communication?—Yes.

8551. And has it been brought under the notice of any other person?—The Secretary of State sent me a reply to that for my answer, which I have forwarded. These three papers are included in this pamphlet, which I beg to leave with the Committee.

8552. Mr. *J. B. Smith.*] Have you ever been along the line of the Madras Railway?—I know the whole country; I have not been on the railway itself.

8553. You know very well therefore, that that railway is made to avoid all the towns, is it not?—Yes, for 400 miles it does not touch a single town.

8554. Could you name any of the large towns which it avoids, and state the population?—Poonumallee, with probably 15,000; the Mount, about the same; Palaveram, Conjeveram, perhaps 10,000; Wallejabad; Wallajahnugger, 100,000; Arcot, I suppose, 30,000 or 40,000; Vellore the same population perhaps; Salim and Coimbatore, I suppose 30,000 or 40,000, or perhaps more.

8555. And what distance is the railway from the largest town?—From Wallajahnugger, I think, it is about 12 miles.

8556. So that the passengers are set down, if they want to go to the city, at that distance from it?—Yes.

8557. And what means of conveyance have they to the town?—They have one branch railway from the main railway to Conjeveram.

8558. They have made a branch?—They have made a branch which cost 100,000 *l.*, and the Government guaranteed 3 per cent., and they took that over from the company, paying them 60,000 *l* for it; so that the shareholders lost 40,000 *l.* and the Government have lost the 60 000 *l*, for it makes no return worth mentioning.

8559. Ought not that railway to have been made so as not to miss the towns?—Yes, the line of the railway should be exactly along the line of the towns I have mentioned; all the agricultural population lies on that line also.

8560. Sir *D. Wedderburn.*] There is a station at Salem, is there not?—Near Salem, I forget the exact distance. My great point is this: that what India wants is water carriage; that the railways have completely failed, they cannot carry at the price required; they cannot carry the quantities, and they cost the country 3,000,000 *l.* a year, and increasing, to support them: that steamboat canals would not have cost more than one-eighth that of the railways; would carry any quantities at nominal prices, and at any speed; would require no support from the Treasury, and would be combined with irrigation; and that this water carriage is now absolutely necessary, as if no railways existed, to enable the country to prosper, and to contend with America, for instance, where they have water carriage.

Mr. James Hutton, called in; and Examined.

Mr. *J. Hutton*

8561. *Chairman.*] Do you reside in India?—I have resided there several years.

8562. Are you connected with the British Indian Association of Calcutta?—Yes, I am their representative in London.

8563. Were you present when the evidence of Mr. Dacosta was being given?—Yes.

8564. We do not want you to go over his evidence again, in so far as you agree with it, but do you wish to give the Committee some further evidence respecting the opinion that is entertained in Calcutta of the annual migration of the Government of India to Simla?—Yes. There are one or two points that I am afraid I must allude to, which Mr. Dacosta mentioned, but which I should like to strengthen, if possible. First of all, the cost to the State is about 40,000 *l.* a year, that is for the Viceroy alone; irrespective of a large allowance for establishment and clerks; which represents the interest of 1,000,000 *l.* sterling at 4 per cent. Then I would observe, that until the Viceroyalty of Sir John Lawrence no Governor General found it necessary to go up to the hills for a lengthened period. Sir John's predecessors went away for two or three months, either on a tour through India or to Burmah, but it was thought quite possible to remain in Calcutta through the whole season, either wet or hot. The Governor General has a summer house at Barrackpore, about 16 miles from Calcutta, situated in a park, and accessible by road, by railway, and by the river.

8565. What are the dimensions of the park, do you know?—I do not know, but it is a very large park. The complaint in Calcutta, among the natives more especially, is, that during seven

Mr. *J. Hutton.*

9 July 1872.

months of the year the Viceroy and the Executive Council, of whom generally one at least is absent on leave, are isolated from British India generally—and from the independent states of India also—with the exception of the Punjaub. They say that the non-official members of the Council, as well as the native members, never accompany his Excellency to Simla. The members for Madras and Bombay are also usually absent. The next point is, that advantage is taken of this comparative leisure to pass many enactments which would probably encounter some opposition if discussed in Calcutta. For instance, by law it is necessary to give 30 days' notice of every new Bill submitted to the Council; but when the Council is up country the provisions of the Bill have to travel down; three or four days are lost in coming down; three or four days the objections take to go up country; consequently, at least one-fourth of this interval is lost Then a further time is taken up in translating the objects of the Bill into the vernacular languages; and I think practically about one-half of the time is actually lost to the native community. They do not know what the objects of the different Bills may be. As an illustration, I may mention that the Land Improvements Act was introduced at Simla, apparently for Northern India only; but on the last day Mr. Strachey mentioned that it was to be extended to the whole of India. Nothing was known of this Bill. It is a Bill that has since been much canvassed both in Madras and Bengal, but it was not known that the Bill was to be extended before it was passed. There was another Bill, called the European British Subjects Bill. There was some correspondence on that. The Landholders' and Commercial Association in Calcutta addressed a letter to the Government of India in the Home Department, complaining of it. It is a letter addressed to Mr. E. C. Bayley, Secretary to the Government of India, Home Department: "Sir,—I am directed by the Committee of the Association respectfully to beg that you will represent to His Excellency the Governor General in Council the surprise and dissatisfaction felt by them to learn that a Bill had been introduced into His Excellency's Council at Simla to alter certain laws affecting European British subjects, and that the same had received the assent of the Governor General before any opportunity had been afforded them, or the non-official European community generally, of discussing this new Confirmatory Bill, or of ascertaining its real bearing as affecting the rights and liberties of European British subjects. The Bill was introduced into Council by the Honourable Mr. Stephen, at their meeting on the 19th July, 1870, who explained the necessity of introducing some measure to confirm certain Acts passed by the local Legislature of the three Presidencies, respecting which doubts had been raised as to their application to European British subjects. The Council thereupon adjourned to the 2nd August, on which occasion the 'European British Subjects Bill,' which the Committee presume to be a new heading for the 'Local Acts Confirmation Bill,' mentioned above, was referred to a Select Committee of the Council to report in a fortnight; and on the 30th August their Report was considered and agreed to, with the addition of several important amendments, proposed by Mr. Stephen. On the same date the Bill received the assent of His Excellency the Governor General, but was not published as Act XXII. of 1870 till the 20th September, the first and only intimation that the general community throughout India had had of the nature of the measure brought forward and matured in the Council at Simla, in the absence of the non-official members, without discussion, and without publishing for general information either the Draft Bill or the Report of the Select Committee upon it The committee views with grave alarm the introduction in the Act of a section of the nature of Section 2, which, so far as the committee can understand its meaning, may at any time be so construed as to seriously affect the liberty of all European British subjects in this country, notwithstanding the opinion given by the Honourable Mr. Stephen, that 'the only effect of the Bill was to make the law as to European British subjects that which till lately every one had supposed it to be,' an opinion which I am desired respectfully to state, was never entertained by this Association. The committee very respectfully but strongly remonstrate against the haste and reticence that has characterised the proceedings of the Council with respect to this Bill, and would urge upon His Excellency the hardship of the introduction of any measure affecting Europeans, for the consideration of the Council of the Governor General, unless when holding its sittings in Calcutta, where alone the non-official members can have the opportunity of taking part in the discussion of measures which may prove to be of vital importance to all European British subjects of Her Majesty resident in India—I have the honour to be, Sir, your most obedient servant (signed), *A. Wilson*, Secretary." The answer to that is in a very few lines, from Whitley Stokes, Esq., Secretary to the Government of India, Legislative Department, to A. Wilson, Esq., Secretary, Landholders' and Commercial Association, dated Fort William, the 10th March 1871: "Sir,—I am directed to acknowledge the receipt of your letter, dated the 15th February last, to the address of the Secretary to the Government of India, Home Department, and in reply, to acquaint you that Her Majesty's Secretary of State for India has informed the Government of India that Act XXII. of 1870 (to confirm certain laws affecting European British subjects) has been considered by him in Council, and that it will be left to its operation. Under these circumstances it seems useless to enter into any discussion as to the policy of the measure, or the manner in which it was passed.—I have the honour to be, Sir, your most obedient servant (signed), *Whitley Stokes*, Secretary to the Government of India, Legislative Department." European British subjects complain here of what may be called a hole-and-corner legislation, that a measure which concerned them very seriously was passed without any reference to them whatever.

8566. Have you anything further to add in reference to the course pursued in going to Simla?—The Legislative Council contains at present three native Members, the Maharajahs of Jeypore, Pattiala, and Vizianagram, of whom the two first named are not British subjects themselves, and not amenable to our laws in any way; the Maharajah of Jeypore during the whole of 1870 was the sole native member, and he speaks English very imperfectly, and understands it very slightly; then there are two non-official members, chosen

Mr.
J. Hutton.

9 July 1872.

chosen by the Viceroy from the mercantile community, and generally in connection with the Bank of Bengal; but it is complained that no barrister, civil engineer, or any other professional person, has ever been appointed to this council; non-official members have always been chosen from among the merchants, and the merchants themselves say, that these gentlemen do not represent them because they are not chosen by themselves; they are simply the nominees of the Viceroy, and naturally anxious to keep on good social terms with Government House. Bombay and Madras are altogether left out in the cold.

8567. We have to confine ourselves to Indian finance; have you anything to add in that view of the case?—I will only add that Simla is to be abandoned eventually; it is unhealthy. In the year 1870 a grant of 50,000 *l.* was allowed to establish a new sanatorium at Raneekhet. That expense is still going on, I do not know at what rate every year, but of course it is adding to the general expenditure; then, according to the opinions of very many persons, it is doubtful whether it will answer after all, and it is open to the same objection as Simla; Runeekhet, like Simla, being deficient in wood and water; and means of access must be provided.

8568. Will you proceed to the income-tax; do you wish to add anything to the evidence given by Mr. Dacosta about the income-tax?—Yes; one thing he passed over with regard to the incidence of the tax upon the poorest class of cultivators. Mr. George Campbell, the present Lieutenant Governor of Bengal, in his report on the income-tax for 1869–70, said that, "As distinguished from 25,483 proprietors and sub-proprietors, and 13,463 tenants, it appears that so many as 34,375 mere cultivators have been assessed to a tax on incomes of not less than 500 rupees (50*l.*) per annum, thus beating the traders (exclusive of bankers and merchants), who number 33,308." His Honour further stated that he had expected that "in this country of very small holdings cultivators would have been almost entirely free of income-tax, instead of being the most numerous class assessed," and he was consequently driven to the conclusion that the cultivators in the Lower Provinces were "over-assessed as compared to other classes." The tax at that time was levied on incomes of 50 *l.*, at the rate of 2 per cent. In that year, 1869–70, in the Lower Provinces, out of a population of about 40 millions, 171,461 persons, or 43 out of every 100,000, were assessed to the 1 per cent. tax on incomes of 50 *l.* and upwards. The gross collections amounted to 336,618 *l.*, the charges to 38,568 *l.*, the net receipts to 298,049 *l.*, and the per-centage of charge on collections to 11·4. The number of objections preferred during the year were 64,407, of which 36,849 were declared to be valid. In the following year, 1870–71, when the tax had been raised to 3⅛th per cent. on the same minimum rate of income, 50 *l.* per annum, the proceeds of the tax were only 693,004 *l.* It had been expected that the proceeds would be 840,737 *l.* The number of assessees was 60,000 less, and the cultivators were reduced from 34,375 to 18,079. The number of objections filed was 90,784, of which 48,128 were allowed to be valid. Mr. Alonzo Money, the member of the Board of Revenue specially charged with the Income Tax Department, illustrates somewhat in this way the difficulty attendant on the correction of a wrong assessment: he says, "Take a common case: a poor man, whose income is much under 500 rupees (50 *l.*) has had a notice to pay part or the whole of 19½ rupees (1 *l.* 19 *s.*) within a fortnight. He is away from his village when the notice is brought; on his return a week later he goes to look for the assessor to object, but the assessor has moved on, and the man's labour is required in his fields; he returns and, afraid of what may happen, sells his cow to realise a part of the demand, borrows the rest, and pays what he does not owe. Or, the man wrongly assessed finds the assessor and lodges his objection; but he has no proofs, he keeps no accounts; the word 'income' even conveys an idea which has never entered into his head, his mere denial is disbelieved, for the assessor assessed him after an inquiry in the village, and upon information given by neighbours; his objection thrown out, he finds he has not the money to appeal, and so he goes home, and waits to see what will come next, what comes next is a summons to appear before the magistrate, who under the law cannot listen to his plea of non-liability and the matter closes with the sale of all his moveable property, which realises a quarter of the demand against him;" and the magistrate's court before which he has to appear is very often 30 or 40 miles distant, two or three days' journey. The book which I hold in my hand is a report of the administration of the income-tax, under Act 16, of 1870; there are some 20 or 30 reports from collectors and deputy collectors, stating the feelings of the natives with regard to the income-tax; some of them are rather long, but there is a short one given by Mr. Lyall, officiating collector, Dacca, dated 28th July 1871, and it gives generally what was the opinion of the natives. He says, "The original rate of 1869–70 was, as a rule, not objected to. The tax has never been a popular one, but no great discontent was caused, or would ever have been caused, by the original rate of 1869–70 The raising the tax in the middle of the year was looked on as a piece of bad faith; for many who would have objected against a tax of nine rupees did not do so against one of six rupees, on account chiefly of the expense of appealing. Unfortunately, too, officials connected with the tax, one and all, assured the people that it was an increase to meet a pressing and temporary emergency. The tax of 1870–71 at 3⅛ was thus looked on as a double piece of bad faith, and there has been a good deal of grumbling." The same thing happened in the North Western Provinces. Mr. C. A. Elliott, Officiating Secretary to the Government of the North Western Provinces, in his letter to the Secretary to the Government of India, Financial Department, dated 3rd July 1871, gives an instance of the sort of oppression that took place there. He says, "The tehseeldar of Bhowgoan, in the Mynpoory district, had in a previous year assessed a number of persons under the Act. Then came the Act of 1869: he called a lot of these men up, and asked whether they would prefer to pay him two rupees each or to pay Government six rupees. Of course, every man relied on the chance of getting off on appeal, and all refused to pay the tehseeldar. The tehseeldar then went to work very craftily; he picked out a few who he knew, or thought, would appeal, and he assessed them at six rupees; these ap-

Mr. *J. Hutton.*

9 July 1872.

pealed, but to no purpose; how could it be otherwise? A collector cannot possibly inquire into each case, and he must rely on such well-paid officials as tehseeldars. Well, when the result of the appeals was made known, the tehseeldar sent for the rest of the men whom he had originally spoken to, and pointed out what had happened, and then asked whether they would not change their minds, and pay him the smaller sum, instead of paying the larger one to Government; they all agreed, and escaped taxation. Shortly afterwards the tehseeldar got involved in other malpractices, and was dismissed; and then, but not till then, did the whole matter come to light." Mr. F O. Mayne, who is officiating junior member of the Board of Revenue for the North Western Provinces, gave an instance which came under his own knowledge. "In the city of Bareilly the proportion of the lists was entrusted to certain native subordinates, the city being divided off between them. Not a single complaint was lodged regarding the preparation of this list; but on the revising officer, Mr. Kaye, locally revising the list, going from house to house, it was discovered and admitted by the peshkar, that the preparation of the list in his case had been entrusted by him to a chuprassee on four rupees per mensem, and this man had entered whom he pleased and left out whom he liked. Further inquiry proved the assessment to be utterly false, and yet no one complained. If this can happen under the very nose of the collector, how much more will it not be the case in the interior of districts where personal attestation and scrutiny by European officers is out of the question." That is all that I wish to say upon the income-tax.

8569. Would you wish to say anything on the subject of local taxation, especially as regards the Bengal cesses for roads and education?—Yes; I believe it has been already explained, that the Supreme Government, being unable to meet the constantly increasing demands made upon them by the provincial governments for certain things, such as education, printing, police, gaols, and so on, drew a hard-and-fast line; and threw all these things upon the provincial governments, but they gave them, not the amount that they had hitherto expended themselves, but 350,000 *l.* a year less, and told them that they must make up by local taxation whatever was required for the deficit, if any. The opinion in India is, that this system must lead to a great increase of taxation, because it will certainly excite a sort of emulation and rivalry among different Lieutenant Governors. If, for instance, the Lieutenant Governor of the Punjab sends down a flourishing report about his schools or gaols, next year some other Lieutenant Governor will seek to surpass him, and he can only do it by spending more money, and he can get the money only by imposing fresh taxes. In Bengal they complain more especially of the two cesses, one for roads and one for education. They say, first of all, that these are not wanted, and, secondly, that they will not produce so much as is now obtained by voluntary exertions on the part of the natives themselves. These cesses were imposed by the Supreme Government in direct opposition to the Bengal Government, and they were sanctioned at home against the dissents of Mr. Elliot Macnaghten, Sir Erskine Perry, Sir Frederick Currie, Mr. Ross Connelly Mangles, Mr. H. Toby Prinsep, Sir H. C. Montgomery, and Sir F. J. Halliday; all men of experience, and most of them personally acquainted with Bengal. It was said by the natives themselves, that this cess was in direct infringement of the permanent settlement, and that was so far allowed that, in order to prevent the appearance of this violation, the ryots are assessed as well as the zemindars, and not only assessed, but three-fourths of the rate falls upon the ryots, and of course the zemindars will make them pay the remaining one-fourth one way or another. It is an income-tax actually of more than two per cent. upon profits derived from land; and that is the main point taken by the zemindars; they say that it does fall upon land, because profits derived from land in a direct way are actually the same as if they were derived by rent. In Bombay, the deficiency is about 100,000 *l.* a year that has to be made up by taxation. The gaols especially there are found to want a great deal of outlay. Sir Seymour Fitzgerald stated that a more disgraceful thing than the gaol at Karwar he never witnessed in any part of the world. Prisoners under severe sentences are chained to a ring attached to a bar which runs up and down their room, "so as to make it impossible for any unfortunate man to turn round and lie on his side without the infliction of considerable pain". He says the lunatic asylum at Poonah is "a scandal to a civilised nation." He further complains of this: it was required at Bombay to build a new court for the High Court of Judicature; there was a fund called the Native Judges' Fund, and the accumulations from it had amounted to about 100,000 *l.*; but the Supreme Government came down upon this money and seized it, and the new High Court of Judicature had to be paid before out of the local fund; and the same thing happened with regard to the Small Cause Court. A similar case occurred at Calcutta. The money that was accumulating in these funds was appropriated by the Supreme Government, and the local government was left to erect the buildings at its own expense.

8570. Have you anything further to add with reference to local taxation?—With regard to the road cess, the objection is that these roads are for the benefit of all, for the benefit of the consumers as well as the mere producers; they benefit the people in towns, and so on. The towns are exempt, the municipalities are exempt from that cess, and it falls entirely upon the rural population. These object that the roads are not made for them only; a new road enables them to send produce to market, but the consumer receives that produce at a cheaper rate than he otherwise would do, and therefore ought to pay his share.

8571. Sir *C. Wingfield.*] Did not the Duke of Argyll say that house property in towns should be made assessable to that tax?—He says all property accessible to the rate should be made to pay, but all towns that have municipalities of their own are exempted.

8572. Because they impose other taxes?—Yes, but their funds do not go towards the roads in any way. At present the road cess falls entirely on the agricultural population. A great majority of the zemindars have let their lands out to sub-tenants; these have all to pay, and the landlord also; there is no advantage to the landlord, his lands are let permanently; he can get nothing more because the under-tenant is profited. And besides that, they said that these roads are not

Mr. *J. Hutton.*

9 July 1872.

not wanted; in the Lower Provinces the water communication suffices. And another thing is that through a great part of the season roads are not passable. No less potent an objection applies to education. Mr Campbell has checked what they there call high education, that is the schools in which English is chiefly taught, and devoted a great deal of that money to the smaller schools, the primary and elementary schools But the natives object that this money was not required to be so appropriated, because they themselves maintained some 30,000 primary schools at their own expense. One zemindar in particular (Babu Joykissen Mookerjee) has an income of about 10,000 *l* a year, and he spends of this 1,200 *l.* a year on schools on his own estates; but with this new cess coming in he means to stop his voluntary payments and pay merely what will be required, 2,000 rupees instead of 12,000; and the same with others; so that less will be obtained hereafter than is obtained in the ordinary way by benefactions. Another complaint which the natives of India make is against the Cooper's Hill Engineering College, on the ground that it is not required. It was said, I think, both by General Strachey and by Colonel Chesney, that the natives would never make good civil engineers, at all events that they had not made good civil engineers up to the present time. It was admitted, I think, that there were large tanks in the Mysore district and large canals in the North Western Provinces; but it was said, on the other hand, that these did not show real civil engineering skill, because a great deal more power had been expended on their construction than was necessary, and that they were much larger and heavier than the occasion required. But these works were made two or three centuries ago, at which time in this country we could not have done any better ourselves. But besides that they say, supposing it were still necessary to get engineers from England, you would get them by increasing, as has been found necessary to do, the minimum rate of salary. I think it was formerly 300 rupees a month, it is now 400 rupees; but notwithstanding those 400 rupees the Government have established the Engineering College at Cooper's Hill, showing that if they did not get the Civil Engineers that they wanted, they were aware it was because they offered them too little. But Colonel Tyrrell, who had great experience in India in civil engineering, he was executive engineer for 15 years in the Madras and Bombay Presidencies, in the Nizam's assigned provinces, in Berar, in the Central Provinces and in Oudh; and he says, "We have excellent stuff among the natives for engineers, great intelligence, a singular aptitude for figures; the patient eye and hand for drawing; above all, the faculty and habit of minute attention to details that elude our observation. It may be years before any natives are trained with sufficient grasp of knowledge and sufficiently broad views to project or devise any original or extensive plan; say, for the irrigation of an unimproved tract, or other great work, but to carry out the plans of a competent superior, there could be no better executive agency;" and I will add, that they have never had a fair chance since the conquest of British India. The British have taken into their own hands all the engineering; they have not given the natives an opportunity of studying the subject, except at Roorkee, and there merely in a very subordinate position. There are many other things of which they complain. for example, the expenditure with regard to the expenses of Government House. The salary of the Viceroy, 25,000 *l.* a year, they do not object to, but the staff and household cost 16,000 *l.* a-year more; the personal staff over 7,000 *l* a-year more; the State yacht 652 *l*, and the body guard nearly 9,000 *l.* a-year; and that body guard for seven months of the year is doing nothing at all but amusing itself when the Viceroy is away. These are all small things, but I think that they gall the natives more than the larger expenditure; just as about the Sultan's Ball, constantly a Hindoo will ask why 120,000,000 of Hindoos should be made to contribute to a ball to the head of a religion and a race that conquered and despoiled them The same with the Persian Mission, the Chinese Consulates, and the payments for International Exhibitions They say that they have to send home samples, and so on; that the Manchester gentlemen may learn what they want, and send out their manufactures, and supplant them. There was another small thing in itself. The natives complained that the expense of the Panthay Mission was debited to the Indian Treasury; that the Panthays, that is, the Mahomedan inhabitants of Western China, were sent from Calcutta at the expense of the Indian Government to this country, where they are maintained at the expense of the India Office; they are in rebellion against the Emperor of China, our ally, and they have come to this country to ask the assistance of the British Government against their sovereign, with whom we are bound by treaty. The amount may not be much, but all these little things give ground for complaint.

8573. Mr. *J. B. Smith.*] As regards the Manchester manufacturers supplanting the Indians, have the Manchester manufacturers any advantage over the Indians in the way of duties?—No, but by machinery and superior skill, of course, they can supplant the native weaver; they have done so, the native weaver has almost ceased to exist in the land. It is quite natural that the Manchester manufacturers should do so; but it is equally natural that the natives should decline to pay the expenses to enable the Manchester manufacturer to supplant them

8574. In what way do they pay the expenses?—India is charged with the expense of whatever is sent to exhibitions here, and these things are sent home to show what sort of manufactures will suit the people of India; it enables the manufacturers in England to compete with them, and generally at a cheaper rate.

8575. But if the English manufacturers have no advantages beyond those enjoyed by the Indians, have they any just cause to complain?—No doubt it is a small sum; but that sum comes out of their pockets they do not immediately benefit by it in any shape or way.

8576. Mr. *Dickinson.*] Cheap articles come to the consumer in India, and benefit him in that way, do they not?—I have no doubt that the consumer benefits by it in the long run. I quite think so; but he does not see that now, he only feels the present pinch of the shoe.

8577. It is the Indian producer who complains, and the Indian consumer who will benefit, I suppose?—I am speaking of the Indian community generally.

The Right Honourable WILLIAM NATHANIEL MASSEY, called in; and Examined.

Right Hon. *W. N. Massey.* —— July 1872.

8578 *Chairman.*] WILL you be good enough to state during what period you were in India? —I went to India in the spring of 1865, and remained there till the spring of 1868.

8579. Holding the office of Financial Member of Council?— Financial Member of Council.

8580. The Committee have invited you to attend here to afford them any information which you can give in regard to the state of the finances in India, and I should be glad if you could give us your views with reference to the income tax?—When I first came to India my attention was, of course, directed to the state of the revenues, and I found that the expenditure pressed very hard upon the revenue; and it seemed to me, upon the best estimate which I could form that an addition of about 1,000,000 *l.* sterling a year was required to place the revenues of India in a normal state.

8581. When you say a normal state, you mean to meet the then established expenditure?—To meet the then established expenditure and the ordinary demands upon the Government of India. Casting about for ways and means, I found that the field was very contracted, and that, in fact, the option which a financier had in selecting new sources of revenue was exceedingly limited. The expediency of restoring the income tax, which had just expired, or was on the point of expiring, when I entered upon office, was pressed upon me from various quarters; but, in the first place, I thought that, whatever might be done hereafter, it was not desirable just when the income tax had expired by efflux of time, to renew that tax, which had been imposed solely for the purpose of meeting a particular exigency. In the imperfect state of my information at that time I did not then venture to pronounce the opinion which I subsequently formed as to the policy of an income tax, but not being prepared to propose any important reduction of expenditure, it was desirable to provide additional ways and means, and I did so in the second year of my office, I think. The first year I was content to let things remain pretty well as they were, but in my second year of office I decided upon recommending additional taxation from three sources. In the first place, I appointed a commission to inquire into the practicability of increasing what are called the institution fees, that is to say, the taxes upon legal proceedings; and considering that the natives of India were exceedingly fond of law, and very lavish in their expenditure upon that luxury, I thought it not unfair to consider whether the Government might not benefit by this propensity. The result was that, after a very laborious inquiry, conducted by Mr. Justice Jackson and Sir Charles Hobhouse, we came to the conclusion that the scale of fees upon the institution of legal proceedings might be revised, and that some addition to the revenue might be derived from that source. The scale proposed by the Commissioners gave, upon a very rough and general estimate, an addition of between 600,000 *l.* and 700,000 *l.* I reduced that in my Budget estimate to 500,000 *l.*, and I believe it realised between 400,000 *l.* and 500,000 *l.* The second source of revenue to which I applied was a tax upon the export of grain. This of course was immediately criticised most severely by all the advocates of free trade; but I found, so far back as the year 1859, a small tax of, I think, half an anna a maund had been imposed upon the export of grain without producing any perceptible mischief to the trade; that tax had subsequently been increased to two annas a maund, and the result was that, instead of any diminution of exports, there was a large increase. I therefore felt very little hesitation on the score of the free trade theory in recommending a small addition of one anna per maund to the existing tax. The result of that was, that the trade still continued unabated, and I think a small addition was made to the revenue of something under 200,000 *l.* I thus obtained about 200,000 *l.*, and I had to obtain from 300,000 *l.* to 500,000 *l.* more. Now I must observe that, soon after I came to India, I was convinced that it was not only impracticable, but unjust, and indeed almost absurd, to maintain one central system of finance through the whole of that heterogeneous empire. I obtained the permission of the Viceroy to issue a circular to all the local governments, asking them their opinion as to the expediency and practicability of instituting a limited system of local finance, of course, for local objects, and whether they could furnish from their own governments any resources in aid of that object. The answers which I obtained were, upon the whole, favourable to the principle of the scheme, with the exception, of Madras, which was entirely opposed to it. They all said that the principle was right, that it was perfectly practicable, and that local resources could be found. I may say that I was very soon satisfied there were odds and ends of finance that might be fairly utilised without doing harm to anybody, but which were not fit subjects for an Imperial system of finance; and the only way in which those sources could be utilised was by conferring upon the local governments some power of taxation with reference to their local wants. Having in view the policy which I have sketched, I determined that it would be desirable to frame a tax for the present uses of the Imperial service, which might be subsequently available to the local governments in the event of the scheme which I proposed being carried into effect; and I selected a license tax upon trades and professions. It was a very moderate tax; it was a rough and arbitrary assessment upon trades and professions, including the civil and military services; and I felt the less disinclination to impose a tax of that kind, because trades and professions contributed nothing directly to the revenues of India; and therefore, following not merely the English practice, but following what was a practice fairly established in the municipal taxation of India, I thought a rough license tax would be a very useful instrument of taxation to arm the local government with, by way of inaugurating a system of local finance. That license tax was calculated to yield about 500,000 *l.* a year; it did ultimately yield about 650,000 *l.* And thus I had from 1,200,000 *l.* to 1,400,000 *l.* a year added to my Ways and Means.

8582. Will you tell the Committee what was your view in preferring a license-tax to an income-tax?—The reason which determined me in preferring a license tax to an income tax was one which

Right Hon. *W. N. Massey.*

9 July 1872.

which I have already named, namely, that a license tax would apply to persons who contributed nothing to the resources of India. Trades and professions were not taxed in any way save as they were subject to the Customs and Excise; in no other way did they pay a tax not shared in by the rest of the community of India; but when I came to consider the alternative of an income tax, I found myself met with the difficulty of renewing the income tax upon scientific principles. It would be hardly possible to establish an income tax throughout the whole of India upon the rough and arbitrary system which was adopted in the license tax; and I was very early satisfied, from my experience of Indian affairs, that any attempt at the inquisitorial process of the English income tax would be fraught with very great difficulties, and even with danger. I looked at the income tax not merely in a financial point of view, but as a very great and serious question of public policy, and I also considered the income tax to be a great reserve of taxation to be resorted to under circumstances of pressure and exigency; *that it was the only* tax to which we could conveniently resort when, from any circumstance whatever, from a famine or from a war, or from any other unforeseen or temporary pressure, it was necessary to recruit the revenues of India. That was very much Mr. Wilson's view when he went out. Mr. Wilson, I need hardly say, was perfectly justified in imposing the income tax under the circumstances in which he found India, devastated by the Mutiny, and disorganised in the financial, and in every other department. But Mr. Wilson felt the danger and difficulty of the ground upon which he trod, and it was with very cautious footsteps that he traversed that ground. He was most emphatic in his intimations that the income tax was only imposed for a particular exigency, which demanded additional resources. I think the deficit of India was then something enormous, 8,000,000 *l.* or 10,000,000 *l.*, and it was absolutely necessary that most vigorous and prompt measures should be taken to repair such a state of things; therefore Mr. Wilson was perfectly justified in resorting to an income tax. But what I object to is the establishment of an income tax as an ordinary part of the fiscal system of India. It ought to be considered as a great financial reserve. Used in that way, occasionally resorted to, it would be accepted, I believe, by the people of India without murmuring. They have been accustomed, under centuries of native rule, to occasional severe exactions, but those exactions were always consequent upon some exigency which they understood and of which they admitted the validity; but they never have been subjected to any regular system of taxation such as that which an income tax implies; and there is a repugnance which you cannot remove in the native mind to submit their pecuniary or private affairs to the inquiry of the State. It is my opinion, that they connect the idea of the income tax (for they are very suspicious, like all conquered people) with some prospective plan of confiscation, and they regard with dread and horror, and with a repugnance which I can hardly exaggerate, the erection of a machinery which will enable the Government to administer such a tax. Therefore it is that I must repeat, at the risk of being considered tautologous, that the plan of maintaining the machinery of an income tax, even although you use it to an almost inappreciable extent for the purpose of applying it suddenly upon any emergency which may arise, is quite as objectionable as creating an income tax with a very onerous burden. In my opinion, when you want extraordinary means, you are justified in resorting to an income tax; but when the exigency ceases let your income tax go and let your machinery be broken up; your machinery you can always revive whenever the occasion ocurs, but do not keep it as a standing menace to the people of India. I have no doubt that these views may sound strange to gentlemen who are conversant only with English finance, but they are views which are founded on the peculiar character of the people of India. I entertain them so strongly, that nothing on earth should induce me to hold office in India as the Financial Minister if the condition imposed upon me by the Secretary of of State was the maintainance of an income tax as an ordinary source of revenue.

8583. Will you be good enough now, if you please, to proceed to give the Committee some information as to the best mode which might be adopted, or whether any mode you think could be adopted of adjusting the expenditure to the income, instead of raising the income to meet the expenditure?—The principle of English finance is, adjust your income to your expenditure. In my opinion the contrary principle should be adopted in Indian finance. The truth is, that your resources are so limited, that if you should outrun the constable a little you are at once landed in a deficit. You cannot expand any of your taxation; you cannot create new taxation, with the exception of the income tax. I wish to say that in round terms, for there is no new source of taxation, as far as I am aware, that it is possible for you to invent. Therefore it is that I would most earnestly impress upon all Indian financiers the expediency of accommodating their expenditure to their income. They were the last words that I used when I left India, "Live within your ample income; you have an income now of some 50,000,000 *l.* a year, and you might, if you chose to be lavish, and to give rein to the local governments, spend 100,000,000 *l.* a year" But you have to consider the services which it is absolutely necessary to maintain; of course, the great military service is indispensable. I will not pretend to go into the question as to the exact adjustment of the military force which is necessary to hold India, but I will assume that the military strength now existing in India is necessary for the purpose. If that is the case you have a military expenditure equal to that of this country; I think it varies from 14,000,000 *l.* to 16,000,000 *l.* sterling a year now. Upon that point I should wish to make an observation with reference to retrenchment. The military expenditure of India comprises, of course, an enormous mass of detail which is to be found in a Blue book compiled by officials (I do not wish to say this disrespectfully) of a subordinate character, and, as far as I am aware, not under the direction or control of any superior member of the Government of India. The Military Member of Council has nothing to do with it; the Commander in Chief, although a Member of Council, has nothing to do with the financial administration of the army; the preparation of these details is entirely left to the local governments, and is under the general superintendence

Right Hon.
W. N. Massey.
——
9 July 1872.

tendence of the Comptroller of Military Accounts. The late General Broome, than whom a more laborious or able officer could not be, did, I am sure, everything that he possibly could within the scope of his power to keep those accounts within due limits. But, for my part, I knew nothing whatever about them; they were placed before me perhaps a few days before I had to make up my Budget, and I was told that this was the amount required for the military service. It would have been quite impossible for the Financial Member of Council, whose time is fully occupied, to enter upon the details of a vast system of expenditure which are quite sufficient to occupy the time of a first-class official. I have heard it roundly conjectured by men in India, gentlemen of high station conversant with military matters, that the extreme probability was that a more systematic revision of the estimates would result in the saving of a million a year upon that head alone.

8584. Your view is that there should be as complete a supervision over the military expenditure, with the same sense of responsibility, by an independent Member of the Council, as there was with reference to the finances generally by the Finance Minister?—I think that that is so, and that a Member of Council should be charged with the especial duty, as the War Minister is here, of superintending this vast outlay; and that he should be in constant correspondence with the Financial Member of Council sitting in Council with him, on an equal footing. That idea has been the frequent subject of communication between Lord Sandhurst and myself when he was Commander in Chief in India. Lord Sandhurst's well-known project, which he has frequently submitted to the Government, is the abolition of the office of Commander in Chief, and the conversion of that office into a War Ministry.

8585. I may mention that we have not yet gone into any question of detail of military expenditure, and therefore, perhaps, you had better confine your evidence to this question of supervision, which seems of very great importance; do you consider that it would be necessary, in order to enable a member of Council to discharge the duties which you propose that he should from day to day and throughout the year, be engaged in the examination and investigation of all the details of military expenditure, with a view to economic arrangement?—Yes, I think he should charged solely with that duty; and I believe the very fact of a high officer, like a member of the Council of the Governor General of India, being charged with that duty, would itself have a tendency to restrain waste and peculation.

8586 Then with regard to the civil expenditure, did you consider that you were a controller of that expenditure in all its details, and had you the means of exercising that control?—Far from it; the arm of the Central Government is not long enough to reach the numerous powerful, and I may say, semi-independent governments of India. I may remind you that the Presidencies of Madra and Bombay are in direct communication with the Secretary of State, and they are disposed to resent the interference of the Government of India, and to regard the Government of India more as an equal than as a superior. We found that, I may say, specially with regard to the Presidency of Bombay, that our power of financial control over the expenditure of Bombay was baffled and defeated almost at every point. These great governments had nothing to do, but to aggrandise the importance of their administration, by making out expensive estimates, and by maintaining the absolute necessity of all those estimates when they were criticised by the Central Goverment. It was a very serious responsibilty for the Central Government to take upon itself to say that this and that expenditure, at a distance of thousands of miles under a semi-independent administration, were unnecessary. Of course you might arbitrarily strike your pen through a certain item of expenditure, and say, "It shall not be allowed;" but that was a responsibility which the Government of India were exceedingly loth to assume.

8587. But do we rightly understand that the Budgets from Madras and Bombay, and all the other Governments, came up to you *en bloc*, so to speak, that is complete in all their details, leaving you to find fault with them as far as you could?—Yes, there is a series of Budgets. There is a Blue Book, which has been, I daresay before the Committee, containing I think eight Budgets of the eight separate Administrations. Every one of those is sent up to the Government of India for adoption. If the Government of India puts its finger on one item, and says "It is excessive," they say "It is not; it is exceedingly economical, and you cannot diminish it without starving the service." If you say that such and such an expenditure can be altogether dispensed with, there is a chorus of remonstrance from the whole banded officials of that Government which overbears the Government of India: and probably an appeal to the Secretary of State, which results in a Despatch requiring the expenditure to be allowed. So that the control which the Central Government exercises over the expenditure of India is of the weakest possible description.

8588. You are of opinion that, really to control expenditure, you must begin with it, and follow it at its very root in the minute details, out of which it arises, and that there is no system by which you can take expenditure at the end in the shape of a Budget, but that you must examine it as it goes on in detail?—There is no other mode of retrenching expenditure that I am aware of; and I am quite satisfied that the Central Government is wholly incapable of exercising that mode of supervision; and that was one strong motive which led me to find my way, if possible, to some system of local finance, so that a portion of the Imperial revenue should be allotted to the several governments for their domestic expenditure, and that they should be allowed a license of taxation within certain limits.

8589. We have not yet received the information from the Secretary of State as to the extent to which the system of local taxation has gone, and, therefore, we are unable now to speak from any knowledge that we possess, of the nature and extent of that local taxation; but what I wished to direct your attention to is this, that as far as the system has been explained to us, although there was a limit of charge imposed upon the Imperial revenue, under the new system there is no limit of expenditure, because the local government are allowed to supplement their

Right Hon.
W. N. Massey.

9 July 1872.

their expenditure, as far as we can make out, indefinitely, by local taxation, that is to say, as far as they can get people to pay taxes; therefore, we have not seen how the new system would tend to keep down expenditure; on the contrary, it seems to increase it?—I think that if a system of local finance was established, the result might be that more public money would be spent throughout the length and breadth of India; but I do not attach much importance to that. What I consider to be the great evil of the Imperial system of finance is this, that you cannot tell how much money you will want. Demands are made for roads, for gaols, for tanks, and for various things which are of local necessity, and we find that the revenues of India are pressed too close upon their margin in order to meet them. My impression is that the present system of finance wholly fails in one most important safeguard of finance; that is, in imposing a principle of economy, or a motive for economy, upon the spenders of public money. The local governments have nothing to do but to draw upon the Imperial treasury, and, of course, they think that the more they draw the more it will redound to the honour of their administration. Again, I would ask the Committee to look at this feature of a central system of finance over a vast country such as is represented by that map before us. Is it not strange that the people of Burmah or the people of Madras should be taxed to make roads, or wells, or buildings, in Bombay or in the Punjaub? But that is the case under the present system. If you bring the whole of the resources of India into hotch-pot as we do, one district gets more than another, and another does not get its proper due. Well, it seems to me that, as you have established several systems of local administration throughout India, and as those administrations are capable of conducting the ordinary business of Government, there is no reason why you should not add to their duties the financial branch of administration, and I think it would be most conducive to the economical administration of those several governments, and would be a great relief to the Government of India from a peril which constantly encompasses it.

8590. I was anxious to make it clear how the system works as a check on expenditure by the local governments, unless the Supreme Government will accept the responsibility of putting an absolute limit to the income which the local governments are to expend; if you leave the door open, so that the local governments may add to their income by local taxation, is it not rather a shifting of responsibility from the Governor General to the local governments than a check upon local expenditure, if the local governments were to carry out your system; is it not, therefore, necessary that the local government should have an absolute limit to their income, and then, as you say, be compelled to live within it?—I think that they should not have an absolute license to tax the people of their province to any extent that they might think fit. I always had it in contemplation that either the Government of India or the Secretary of State should exercise a veto upon local taxation. But my belief is, that if a certain allotment from the Imperial revenue was assigned to each of the local governments, and they were told that any expenditure in excess of that must be provided by them from local sources, they, feeling, as everyone engaged in Indian administration must feel, the danger and difficulty in creating new sources of charge, would have the strongest motives for avoiding the discontent which would unquestionably ensue from anything like a stringent system of taxation. But I would not leave it entirely to the discretion of the local administrator; I would exercise a control either by the Central Government or by the Secretary of State, over any new source of revenue which the local government proposed to create.

8591. You are not then prepared to recommend that the Supreme Government should grant, if I may use the phrase, a credit to the local government for the expenditure, with an absolute injunction that it must administer its affairs within the limit of that credit?—No, certainly not; I would not impose any such hard and fast line upon the local administrator as that; he would, no doubt, receive injunctions from the Secretary of State to practise economy, and avoid undue expenditure, and he would have a motive which he has not now to exercise that economy. With regard to this system of local finance. I should desire that it should be entirely gradual and tentative; it is a very great experiment. In the opinion of some Indian statesmen of the highest authority, it is a dangerous experiment, and one which might involve the credit of India. I do not concur in that alarm at all, but at the same time I should be the last to recommend at once the adoption of a system which should be one of gradual development, and which I hope to see ultimately attained, and I believe it can only be attained by a gradual and tentative process.

8592. Are we not proceeding, one may say, in a circle; in point of fact, for you may perhaps recollect that before 1834 the whole taxation of the several presidencies was carried on, on the responsibility of the Governor in Council of each presidency, and there was no authority on the part of the Governor General to impose any taxes at all or charges upon the several presidencies. That system it was considered a master-stroke of policy to abolish, and make the Governor General and his Council responsible; we are now merely recurring to that which existed before 1834; but what I wish to ask you is, whether we are not recurring to it under infinitely worse conditions than then existed, because at that time were not local governments kept under a most stringent supervision in all their details by the Court of Directors, and are they not now acting with very much less control, and with a much less sense of responsibility?—Yes; I think that since the transference of the Government of India to the Queen, the local governments have been greatly aggrandised, and that they are not under that subordination to the Supreme Government which they were when they were under the rule of the Company; their ideas are higher, and more Imperial than those of the Company's servants, and to that extent I think that unless some restraint was imposed upon the governors of provinces, it is very possible that this system might be subject to abuse; therefore it is that I would only adopt it gradually. I understand that it has been inaugurated in a very moderate way, and I would expand it as circumstances dictated; I would keep a strict hand over the local governments in resorting to

Right Hon.
W. N.
Massey.

9 July 1872.

new sources of revenue; but at the same time I would not lay down a rule that you shall expend so much and no more.

8593. Do you think that the sense of responsibility of the governor of a presidency is now very much less than it was some years before 1834, inasmuch as then the governor had no one to fall back upon to share his responsibility, except the few members of his council, who were personally equally responsible with himself unless they actually dissented; whereas now the governor of a presidency can avoid all responsibility, by putting himself under the control of a Council composed of persons who really occupy no responsible position in India or anywhere else?—I have no doubt that under the former rule of the company, when communication was much less frequent between this country and India, the governors exercised a very wide discretion. In fact, history discloses some particulars of the mode in which administration was conducted, and especially the mode in which money was extorted from the people. Those days have gone by, and the tendency of modern circumstances is to divest the Governors of India of responsibility; even the Governor General now, by means of the electric telegraph, relieves himself from the difficulty of deciding an important question, by referring it to the Secretary of State That is an unavoidable incident of the increased means of communication. It is, I think, a misfortune; but it is one that cannot be helped.

8594. But do not you think that if you allow to the local governors now the power of taxation they will exercise that power with their responsibility very much diminished by the fact you refer to of the rapid communication with the Governor General and the Secretary of State for India; but above all by their being able to shield themselves under their own council composed of gentlemen taken from the inhabitants of the presidency towns, but who have no real responsibility at all for anything that they say or do?—I think that the governor or the principal administrator of every province in India should be held by the Secretary of State to be responsible for the government of his province, and that he should not be permitted to shield himself under the advice of a council. The functions of an Indian council ought to be consultative, and not executive. The Governor General of India, whose council is generally composed of men picked from the various services of India, men of the highest quality, has the power, if he thinks fit, to overrule the decision of the council, and to act upon his own responsibility. I do not think that under the present conditions he is very likely often to exercise that power, unless he is a man of very resolute will indeed.

8595. Do you think that the economy of administration has been in any degree weakened by what is generally called the separation of the Government of India from the financial administration of India, and that the Governor General now, instead of being responsible for the financial administration of India, has morally, and in public opinion, relieved himself of that responsibility?—In my time Lord Lawrence, than whom no man was more conversant with his duties, or more resolute in maintaining his rights, always maintained, and most justly, that he was responsible for the administration of the finances of India; and that, in fact, I was merely his adviser and assistant, which was precisely the position which I occupied. Probably an ordinary Governor General would depend very much upon, and be guided by the advice of his financial minister, pretty much as a limited monarch is guided by the advice of the minister of the day; but at the same time the position of the financial member of council is very different from that of the Chancellor of the Exchequer; for instance, if the Governor General overrules the policy of the financial minister he cannot throw up his office and appeal to what is called public opinion, and justify himself; he is bound in honour to remain at his post.

8596. Bound in law, is he not?—Bound in law. His mode of relieving himself from responsibility must be a postponed and tardy remedy.

8597. All his duty, prescribed by law, is to enter his opinion on the Minutes of Council?—He can enter his opinion on record if he chooses, and it will be recorded in the transactions of the Government of India.

8598. I mean that is the duty prescribed to him by law?—Yes.

8599. And therefore that is his duty in point of morals and honour?—He has discharged himself when he has exercised that duty.

8600. Then do you think that the only mode of enforcing economy in the expenditure, is really to hold the Governor General in his case, and the governors themselves, individually responsible for administering their governments within the finances?—Certainly.

8601. And that they ought not to be allowed to escape any of that responsibility by endeavouring to put it off on the councils or other persons by whom they are surrounded, or with whom they are connected, in the administration?—Certainly; the Secretary of State ought not to receive it as any answer from the Governor General of India that he was guided by the opinion of Mr. Massey, or Sir Richard Temple, or whoever might be the financial member of the council of the day. It is his duty to be responsible for the administration of the finances of India as for every other department of the administration.

8602. Have you directed your attention at all to the singular position of the Government of India and of the local Government in being shareholders in private joint stock companies' banks?—Yes. The Government of India keeps its cash balances at the Presidency Banks at Bengal, Madras, and Bombay, and is a shareholder to a very large extent in those institutions which are joint stock companies. My attention was very soon directed to this anomalous state of things by the difficulties in which the Bank of Bombay was involved. Very soon after I arrived in India a telegram arrived from Bombay, saying, that unless the Government gave assistance to the bank it must close its doors. Well, I of course looked to the cash balances, which were very considerable, and a council was summoned, and it was determined to support, in consideration of the large stake which the Government had in it, besides the cash balances. We, therefore, telegraphed to the Governor of Bombay that he might use his discretion. The result was, that the bank shares, which had fallen to a heavy discount, rose in two days to 60 premium. The Bank of Bombay had, at that time, lost half its capital. A fictitious

value

Right Hon. *W. N. Massey.*

9 July 1872.

value was thus given to the shares of the Bank of Bombay by the connection of the Government with that bank as a shareholder. From that state of things arose a demand on the part of the ordinary shareholders for indemnity. It is not my province to make any remark upon that, because it has been the subject of debate in the House of Commons.

8603. I should like to ask you whether your attention was directed in consequence of this occurrence to the fact, that for some 30 years the Court of Directors originally and the Home Government had persistently adhered to the principle that it was impracticable to trust the inhabitants of the presidency towns with the power of unlimited banking, and that they had insisted upon a system of limited credits, and that a change had very shortly before the failure taken place by which the Governor in Council at Bombay had in fact swept away that system and converted the Bank at Bombay into a system of unlimited credit in lieu of the limited and qualified credit, which for so many years had been considered essential for the monetary welfare of the presidencies?—Yes; there was that peculiar peril in the mode in which the business of the Bank of Bombay was carried on; and an alteration was made in the Act. Originally the Act restrained the Bank of Bombay from lending money on the securities of joint stock companies, which restriction was removed without the knowledge of the Secretary of State or of the Government of India, by an Act of the local government; and it was in consequence of the removal of that safeguard that all these disasters took place.

8604. Do you know whether it became difficult really to ascertain who was responsible for that very important change in the constitution of the bank; and do you think it is evidence of the growing sense of irresponsibility on the part of the local governments in administering the Government of India in matters of finance?—Yes. It was in vain that the Government of India used all their efforts to trace the history of this alteration to the source which was responsible for it, and, to this moment, neither I, nor anybody else I believe, knows how that clause got smuggled in. But, in completing my answer to the question, I wish to state that after the exposure of the affairs of the Bank of Bombay, I called the attention of the Government of India seriously to their position as shareholders in these banks, and I recorded a Minute protesting in the strongest way, and arguing to the best of my ability, against the expediency of any such connection. But I was alone in my opinion; the whole of the Government were against me; the Secretary of State, however, took the same view that I did, and sent out a Despatch in which he desired that this connection should cease; but in consequence of a strong remonstrance from the Government of Bombay, who said that there would be no chance of reconstituting the bank unless that connection was continued, the intention of the Secretary of State of effecting this severance was for the time postponed. I understand that the subject is again under consideration, and I earnestly hope that the Government of India will be compelled to effect this separation at the earliest possible period. It is not only a most inconvenient, but a perilous and an unseemly connection.

8605. You have no doubt in your own mind that it ought to be put an end to?—Most certainly it ought.

8606. It would seem from the statement of facts before us, that it would be very difficult to make anybody responsible for the state of things now going on?—Yes. The pretended security which is given to the Government is the presence upon the Boards of these banks of certain gentlemen called Government directors who are *ex-officio* directors; who never go near the place, never look into a bank-book, and know nothing whatever about the loans, the credits, the securities, or ordinary transactions of the banks. I think that this fictitious direction should be entirely withdrawn. But if the cash balances are still kept in the presidency banks, it will be necessary for the Government to exercise supervision; and such supervision should be exercised in the shape of inspection.

8607. You mean by a stipendiary officer made to understand that he is performing a responsible duty, and not by a Government director who holds a public office, and is paid nothing?—Certainly; he should be an officer independent of the Bank, and whose duty is solely to the Government of India, an officer of the first class.

8608. And who thoroughly understands the operations of banking and mercantile transactions?—Yes; the whole of the books and accounts of the bank should be exhibited to this officer periodically to report upon.

8609. Mr. *Dickinson.*] What are the cash balances at the bank usually?—The general balance at the Bank of Bengal would run from 700,000 *l.* to a million.

8610. Mr. *R. Fowler.*] What was the date when you were anxious about the state of the Bank of Bombay?—In the years 1866 and 1867.

8611. *Chairman.*] Do you think it is desirable or practicable that the Budget for the year should be so framed as to anticipate a considerable surplus, so as to not merely meet the expenditure, but deal with the amount of debt owing from the Government?—No, I think it is not desirable to have a very large surplus, because under the present system of financial administration, if the finances of India are known to be flourishing, you will find all the local governments beginning to enlarge their expenditure, and you will have your surplus spent half-a dozen times over. And there is another reason why it is less necessary to have a large surplus in Indian finance, namely, that the cash balances are so very large.

8612. Probably you may recollect, that when the change was going to be made in 1834 in the tea duties, the Court of Directors of the East India Company laid it down as a proposition, that they could not govern India so as to make the expenditure keep within the income; and therefore they must keep up the monopoly of tea to cover the deficit, and the Duke of Wellington in reply, said that they must reduce their expenditure within their income?—I wish the spirit of the Duke of Wellington's reply was made applicable to the present administration throughout the whole of India.

8613. Sir *C. Wingfield.*] You found Bombay, I suppose, the most extravagant Government, did you not?—Yes.

8614. I think you say that you do not think that there is danger that the local governments will impose additional taxation to such an extent

Right Hon. W. N. Massey.

9 July 1872.

as to be dangerous, and that you would give a veto to the Supreme Government, so that the Supreme Government should check a tendency of that kind. But it seems that latterly it has been the Supreme Government rather that has been urging these local governments to impose additional taxes?—I am not aware of it; that was since I left India.

8615. Lord Mayo, in that decentralisation order, says that it is a necessary part and complement of the system that local governments should impose taxes to meet the deficiency; and he mentions in that order that the different governments of Bengal, the North Western Provinces, Oude, Punjaub, and all, have imposed additional taxes; they are going to add further to those taxes; what I am afraid of is, that the influence of the Supreme Government will not be used to check the disposition to raise more money; what is your opinion on that point?—In my time there was a very great jealousy on the part of the Supreme Government of yielding to the suggestions of the local governments for the imposition of any local taxation. I think that that jealousy was, perhaps, a little excessive.

8616. But now the Supreme Government, having relieved itself to the extent of 350,000 *l.* a year from contributions to the local governments, and having thrown on the local governments those particular public services, which are sure to demand some increase of expenditure, as, for instance, education and roads, that is a direct inducement now to encourage the local governments to find the additional funds that will be required?—Yes; I do not know the scale upon which assignments have been made to the local governments. If that scale is not sufficient, of course they must complement it by local taxation.

8617. By this scheme the Supreme Government relieves itself immediately to the extent of 350,000 *l.*, and from all prospective liability to increased charges?—Yes, that is quite right if the system is to be adopted at all.

8618. How do you think it would be if all the different governments of India were called upon to contribute rateably to what are called Imperial charges, taking as Imperial charges such things as Army, Debt, Diplomacy, Home Charges, Post Office, and Telegraphs, which are common in fact to all India, and will continue, cannot be apportioned among the different governments; to call upon them rateably to meet all the Imperial charges, and then let them spend their surplus or a proportion of their surplus, after defraying the cost of the civil administration, reserving a margin for Imperial purposes?—I would not have the Imperial Government part with certain sources of revenue In the first place, the credit of the Imperial Government must be maintained. Loans will be advanced to the Government of India on the credit of the Central Government, not on the credit of the local governments; I should therefore think it highly impolitic for the Central Government to relinquish its complete control over certain sources of revenue.

8619. I do not think that you quite apprehend me; I do not propose that any power of borrowing should be given to the local governments; but all I mean is that the Supreme Government, having fixed its expenditure for the year, might call upon the local governments to rateably defray that expenditure, and say, "Whatever is left you may have for your own local expenditure; that is to say, the purely civil expenditure, or the expenditure that is really due to that particular province only?—Well, I should rather hesitate to give an opinion upon that point; it is involved in the future development of the system. If the tendency of the system was found to be favourable to the particular mode of supplying the Government of India which you suggest, I should not object to it; but as at present advised, I would tot make it at all a part of the system of local finance that the Central Government should in any degree depend for its resources upon the contributions of the local governments.

8620. It has been thought that this plan would give the local governments a more direct inducement to economy, inasmuch as whatever retrenchments they can make in their administration, the larger surplus would remain to them to spend in useful purposes?—Yes; that would be a very important stride indeed, which you might not be able to retrace if you did not find it answer. I would much rather go by steps, make an assignment to them from certain sources now at the command of the Central Government, and then require them to supplement those grants from their own resources. It might be in the course of the development of the system desirable to change that plan, and partially to surrender to the local governments certain sources of revenue now maintained as the property of the Central Government; but at present I should not recommend any other proceeding than that of an assignment of a certain sum of money from the Imperial Government, with an intimation that that assignment would not be exceeded, and that any local taxation which the local government required for the purpose of supplementing that assignment should be subject to the consent of the Secretary of State or of the Government of India. At present, as the honourable Member for Gravesend is aware, no local government can pass an Act in its Legislative Council which acquires validity until it has been approved by the Governor General; that system I would continue.

8621. At present the income of the different local governments is not very fairly estimated. that is to say, local governments now get credit for an income which is really contributed partially by other provinces; for instance, the Bengal Government gets credit for all the salt that is imported into the port of Calcutta, whereas a very large proportion of it is consumed in the Upper Provinces; similarly it gets credit for all the opium grown in the North Western Provinces and Oudh; the Central Provinces again get credit for a great deal of the salt that is taken into the North Western Provinces and Oudh, simply because the customs line runs through it; Bombay again gets credited as revenue with the duty on opium grown entirely in a foreign state. Therefore, the expenditure as compared with the income of a province gives a very unfair idea of the financial position of a province?—Yes.

8622. Would it not be right to apportion properly the true income to each province?—I think that when the system became more matured there are certain branches of revenue which might be entirely surrendered to the local governments; for instance, abkari or excise; I would retain the

port

port duties and the land revenue entirely in the hands of the Central Government; but there are certain sources of revenue which might fairly, in connection with this system, be surrendered to the local governments, when the system became more matured and was found to answer; but under the tentative process I would not surrender any portion of the revenues now collected by the Central Government.

8623. It has also been suggested that the Imperial Government might, for Imperial expenditure, take the salt customs, and opium revenues, and defray the Imperial expenditure from them; then it would draw on the remaining revenue of each province for such balance as may be required, and leave the rest to pay the expenses of the civil administration of each province; what do you say to that idea?—The 18 or 20 millions that we get from the land revenue is the backbone of the revenue.

8624. But that those sources of revenue which I have mentioned might first of all go to meet Imperial expenditure?—With regard to the excise and salt duties, there is a great deal to be said for surrendering them for the purpose of carrying out this scheme, but not at present; let us first see whether it answers.

8625. Something has been said about the expenditure in Bombay and Madras. By law the supreme Government has the same powers of control over Bombay and Madras as it has over the North West Provinces, or the Punjaub, I believe?—Yes.

8626. Then is it the faculty which they have of direct correspondence with the Secretary of State that gives them this exaggerated sense of their independence?—It makes all the difference.

8627. Then you would take away that?—I do not wish to give an opinion about that; it is a little wide of my province.

8628. Mr. *R. Fowler.*] What is your view as regards the maintenance of the opium revenue?—I see no reason to doubt its permanency. There have been alarms from time to time of a failure of the opium revenue, and rumours of the plant being successfully cultivated in China. No doubt it is cultivated to a very large extent in China; but the particular samples which are grown in Bombay and Bengal still maintain a high price in the Chinese market through all the vicissitudes of demand and through all the alarms that have been created. Not a year passed while I was in India, and not a year has passed since, but I have heard that the opium revenue is going to fail, and that they have discovered the mode of growing as good opium in China as they grow in Bombay or Bengal; but all that turns out to be unfounded at present. Of course it is a precarious revenue; but at present I see no reason to apprehend so great a calamity as the failure of the opium revenue.

8629. You do not think that it is likely that, by improved cultivation in China, and the improved means of preparing the drug, the opium revenue might entirely cease in India?—Of course it is possible, but our means of knowing what is going on in China are exceedingly limited. The whole proceedings of that vast empire are so inscrutable that all our efforts to obtain any reliable information as to the growth of opium in China have substantially come to nothing, and we are just as wise as we were. After sending out commissioners and corresponding with merchants and obtaining information from every probable source, we could arrive at no conclusion whatever.

Right Hon. *W. N. Massey.*

9 July 1872.

8630. Then I understand you as saying that we are so destitute of information about what goes on in China, that any opinion that you or anyone else can form as to the permanence of the revenue, must be open to very great doubt?—No doubt that is the case.

8631. Mr. *Beach.*] With regard to the opium revenue, there would be nearly the same probability of India superseding the tea of China, as of China superseding the opium of India, would there not?—It would seem to be so.

8632. Bombay expenditure has been referred to; is not the price of everything at Bombay much dearer than everything at Madras or Calcutta?—Dearer than at Madras, but when I first went to India the prices in Bombay were inflated by the great and abounding prosperity which the province had enjoyed in consequence of the American War and the demand for cotton; but that time has gone by now.

8633. But is not the price of an article now, at the present time, if it is three rupees at Madras, and five at Calcutta, six rupees at Bombay?—I cannot say whether that proportion is correct, but I doubt very much whether prices have not subsided to their ordinary level, or nearly so.

8634. At all events, the increase of intercommunication in India would have a tendency to lower prices?—Yes; but not to the same extent as in European countries.

8635. Was the question of the redemption of the land revenue brought to your notice at all?—You mean, as I understand, by payment of capital sum; that question never assumed any important proportion in my time

8636. There is, however, I believe, a Despatch or instructions from the Secretary of State, which have never been countermanded, to the effect that the redemption of the land revenue may be proceeded with?—I am not aware that any material step has been taken in that direction.

8637. At all events, you would not consider it judicious?—I would not presume to say that anything is injudicious which has been sanctioned by the Secretary of State, but I would rather let things remain as they were.

8638. If any redemption of the land revenue did take place, would you not say that the purchase money should be carried to capital, and not included in the ordinary expenditure of the year?—Clearly.

8639. With regard to the expenditure on works in the different provinces it is necessary to keep up a large staff in each province to carry out these works; is it your belief that any increased expenditure occurs in consequence of this staff being employed, because there is a large staff which it is necessary to employ, to find work for; does the existence of this large staff, in fact, render the authorities of the province more anxious to spend money on public works, than they would be if this large staff did not exist?—No, I think not; I am not aware that that has any perceptible influence upon the views of the local Governments with regard to the expenditure of money in public works.

8640. Mr. *Dickinson.*] With reference to the land revenue, I should like to ask your opinion, if you have formed one, as to the propriety, or otherwise,

Right Hon.
W. N.
Massey.
——
9 July 1872.

otherwise, of levying cess on the zemindars where the permanent settlement exists?—Certainly not, for imperial purposes; I think it would be a breach of the compact; the only mode in which you can levy cesses on the zemindars is by local taxation, for local objects, and in that way, I think such rates would be legitimate; but it would be in my opinion a clear breach of the compact of Lord Cornwallis's settlement to levy a cess upon the zemindars, the landowners, for Imperial purposes.

8641. And do you think so, as regards a cess for education, for instance?—Any cess, unless it was imposed by the local government and went into the local treasury.

8642. If it is assessed by the local authority you think it is legal, but not if it is assessed by the Imperial authority?—Not for imperial purposes. You could not levy a cess upon a zemindar in Bengal to promote education in Bombay or the Punjaub.

8643. With reference to the question of local taxation, is the view that you are suggesting meant to be confined to financial administration, or does it apply to the general administration of the Government?—Every department of domestic administration is now in the hands of the local governments, with the exception of finance, and I wish to add finance.

8644. When we talk of local taxation in this country, we do not apply it to the power of taxing, but merely to levying taxation; when you speak of local taxation in India, you mean to imply the power of creating the taxes as well as the power of spending the money?—Yes; the power of taxation I would give to the local governments for local purposes, subject to the control of the Central Government or the Secretary of State, or both.

8645. Would you retain the same eight local administrations?—That is a question of policy; but I think the eight local administrations, so far as the administration of finance is concerned, might be retained. I do not know that anything could be substituted for them that would be more convenient.

8646. Take Scinde and Bombay, for instance, are they very closely related?—Scinde and Bombay are virtually governed under separate administrations now. The Chief Commissioner of Scinde governs that province under a nominal dependence upon the Government of Bombay, but really, I believe, it is virtually a separate administration.

8647. Would it not be desirable, before establishing a system of that kind, to reconsider the different provinces into which India is now separated?—I would take the provinces as they exist and make them the centres of administration, for the limited purposes of finance.

8648. But you would still retain Bombay and Scinde as one?—I do not know; that is a matter of detail upon which I should wish to speak with reserve.

8649. Do not you think that it is very important, with reference to the future progress of such a system, to start with a good division of the country into local administrations?—Yes; but I do not think that for so limited a purpose as the partial administration of the finance, it would be justifiable to readjust the provincial limits into which India is divided.

8650. If there were any system of this kind, would you retain one general service for the civil service of India?—Yes.

8651. And how would you arrange the payment of that service divided into provinces?—The higher branches of the civil service of India would be in the Imperial service; they would be the commissioners and deputy commissioners and judges.

8652. Those are the heads; I was taking the whole service through the whole grades of the service. Talking just now of the control that the Finance Minister has over the Budget, I understood you that there was a difficulty, because the local governments insisted upon a number of servants for this or that work; I should imagine that according to your scheme, if the officers they employed were in the Imperial service it must be managed under one head?—The inferior civil servants of each province would be paid out of the resources of the province, that is the resources under the decentralisation system.

8653. Who would regulate their number, and their pay?—They would be regulated by the government of the province, subject to the approval of the Secretary of State.

8654. But I presume that they would not be confined in their service to one government; it would be a gradation of service all over India?—The general character of the present civil service would be maintained, no doubt; there would be no difficulty in that; they would have to draw their servants from the general civil service of India; that is a huge staff which is educated in a particular way, and no person but members of that civil service would be eligible to any office which is now held by the covenanted service of India.

8655. Take the Civil Service Estimates that would comprise all that class of servants; ought they not to be under the control, in truth, of the one financial minister in India?—I think not. The financial member of Council, or rather the Government of India (for that is the mode of designating it), knows nothing at all about the subordinate officers of the local governments. The scale of pay of those officers would properly be adjusted by the Central Government; but the appointments of those officers, and their pay, would be made and provided by the head of the local government.

8656. To give an illustration of how the scheme which you seem to anticipate would eventually work, would it be in the form of something like the States of America, being separate under one general central authority, or would it be one government with deputed officers in different parts?—The whole civil administration of the local governments would remain entirely untouched by this system, except with regard to the payment of their salaries; they would be paid their salaries by the local government. I do not mean to say that at present that would be the case. In the future development of the system when it was completed by the light of experience, every person employed in the local administration would be paid out of the local funds.

8657. It is with regard to the future development of such a system that it strikes me that it is very important to start with some clear idea how that future development should be carried out; is it to be a future development of self-government in the province, or simply a system of local organisation entirely under the Central Government

Right Hon. *W. N. Massey.*

9 July 1872.

Government?—No, the whole; every portion of the domestic administration of each of the presidential governments, at all events, and almost to an equal extent of the lieutenant governments would be a matter of local administration entirely, the Central Government never interfering except when any misconduct is reported to them, or any demand made for money.

8658. You alluded to the injustice of taxing Burmah to make a road in Bombay; your system would only limit the locality within an eighth of India instead of the whole of India?—Yes.

8659. Is that your idea of the administration of local taxation?—When I used the term "local administration," I took the existing divisions of the administration of India.

8660. In what respects, for instance, would Scinde be fairly taxed for a tank in Poonah?—Scinde is a sort of sub-province of Bombay; and without giving any positive opinion as to the particular limits of financial administration throughout India other than the limits prescribed already by the Government, I should say that it would be proper for the Chief Commissioner of Scinde to be entrusted with the power of local administration just as the Governor of Bombay is.

8661. My idea of local taxation and local administration is one of localities as in this country; that Poonah might be taxed for Poonah works; that there should be the power of spending money contributed by the local revenues, but no power of local taxation; it is not in that sense that you used the term "local taxation"?—No, the system of local taxation which I propose, is commensurate with the territorial divisions of the existing administrations.

8662. In other words, it is making eight centres of Government instead of one?—There are eight centres of Government now.

8663. Eight centres of administration, I will say?—Well, you may call them centres of administration.

8664. You are proposing to give the power of taxation to the localities, as I understand you; at present we have only three centres of legislative power; there is no power of taxation except in those, is there?—Bombay, Madras, Bengal, and the Central Government are the present centres of legislative power.

Tuesday, 16th July 1872.

MEMBERS PRESENT:

Sir Thomas Bazley.
Mr. Birley.
Mr. Bourke.
Mr. Stephen Cave.
Mr. Dickinson.
Mr. Grant Duff.
Mr. Eastwick.
Lord Edmond Fitzmaurice.
Mr. Robert Fowler.
Mr. Hermon.
Mr. Lyttelton.
Mr. M'Clure.
Mr. John Benjamin Smith.
Sir David Wedderburn.

JOHN BENJAMIN SMITH, Esq., IN THE CHAIR.

The Right Honourable WILLIAM NATHANIAL MASSEY, re-called; and further Examined.

Right Hon. *W. N. Massey.*
16 July 1872.

8665. Mr. *Dickinson.*] WOULD your suggestion with reference to local finance involve a separation of the revenue into Imperial and local?—Yes, it would. Certain branches of revenue would be retained in the hands of the Imperial Government, and all branches of revenue which properly could be classed under the denomination of local would be relinquished, according to my view, exclusively to the local administration.

8666. Taking the present heads of revenue, which would you look upon as Imperial in contradistinction from local; take land revenue, which would that be?—That would be Imperial.

8667. Assessed taxes?—Assessed taxes would be Imperial, that is assessed taxes with the exception of those that were levied by the local administration.

8668. Take the Abkari?—That I would retain for the present as a portion of the Imperial revenue with a view, when the system of local financial administration was matured, of relinquishing it wholly or in part to the local governments.

8669. Is there any other item of the assessed taxes which you think ought to be Imperial?—If you have any assessed taxes at all, but I should be disposed to avoid any assessed taxes on the part of the Imperial Government.

8670. Customs?—Customs I would retain as part of the Imperial revenue.

8671. Salt?—Salt I would retain as part of the Imperial revenue.

8672. Opium?—Opium, certainly, I would retain as Imperial revenue.

8673. Stamps?—Stamps I would perhaps relinquish to the local governments. The development of the scheme would involve the separation of certain branches of revenue now collected for Imperial purposes from the Government of India.

8674. The Mint?—The Mint is Imperial of necessity.

8675. The Post Office?—The Post Office would be Imperial, I think.

8676. The telegraph the same?—That also would be Imperial; that is more a charge at present.

8677. Law and justice?—Law and justice would be Imperial; it must remain so, I think.

8678. Police?—That is essentially local.

8679. Marine?—Marine is Imperial.

8680. Education?—Education is local.

8681. Public works?—Public works are local.

8682. Now, will you take the items of expenditure, without going through the cost of collection, of course?—The items of expenditure would follow the items of receipts.

8683. "Administration;" I think it is chiefly the administration of all the Government departments, and so on?—Administration of public departments would be partly Imperial and partly local. "Salaries of the Governor General and Members of Council" is of course Imperial. "The Governor General's Household," the Secretariat, the Public Offices, the Paper Currency Department, the allowances to the Presidency Banks, and the four charges of the Governor General, are charges connected with the Government of India as a Government.

8684. When you come to local governments, Oude is the first given at page 36 of the Accounts before us?—The Chief Commissioner, the Financial Commissioner, and the Commissioners are Imperial charges. The term "administration" comprises only the more important offices of the administration.

8685. It involves a very important question in your scheme, whether the administration of the local governments should be an Imperial or local charge?—The salaries of the Chief Commissioner, of the Financial Commissioner, and of the commissioners of districts would be an Imperial charge, I should suppose.

8686. You would make the form of the local government dependent entirely upon the Imperial; therefore the administration would be, according to your view, all Imperial?—The staff of the local governments would be an Imperial charge.

8687. Law and justice would again be Imperial?—Yes.

8688. Police would be local?—Yes.

8689. Marine would be Imperial?—Yes.

8690. Education

8690. Education would be local?—Yes.

8691. Ecclesiastical?—That would be Imperial.

8692. Medical?—That would be local.

8693. Stationery and printing would be local?—Yes.

8694. Political agencies?—Those would be Imperial.

8695. Superannuation and retired allowances would be Imperial?—Yes; and the army exclusively Imperial.

8696. Public Works would be local?—Yes.

8697. Interest would be Imperial?—Yes.

8698. Now, taking the class of public works which you say you would make local, would you have no distinction in works whether they were of a local or of an Imperial character?—Public works might comprise a great trunk line of railway through the district; that would be a homogeneous work which would originate with the Imperial Government, and the interest on the money borrowed for its construction would be an Imperial charge.

8699. Then your public works would involve the further division of Imperial and local works?—Yes, necessarily. Barracks, for instance, would be a military charge; that would be comprised in the military vote, and would be a public work connected with the great service, and therefore would be exclusively an Imperial charge.

8700. Now with regard to roads or railways, the feeding lines, the smaller lines of communication, would be local?—They would be local.

8701. Would not that system, carried out in that form, involve a double superintendence, an Imperial officer looking after the main lines, and a local officer after the local lines?—There must necessarily be a considerable staff employed in proportion to the length of the line which is under construction; and whether one portion of that staff is employed under the orders of the local government, or under the orders of the Imperial Government, does not appear to me to be very material as regards charge.

8702. Take another class of charge, port improvements; take for instance, the improvement of the port of Bombay; do you look upon that as a local or an Imperial charge?—Well, that is a question of some difficulty. The great ports, whether commercial or whether military, or whether partaking of both, undoubtedly are to a great extent a matter of Imperial concern. But take for example the proposal that was made while I was a member of the Government of India for extensive works at Kurrachee involving a very large expenditure indeed; those works were partly a matter of Imperial concern, and I consider that an exceptional treatment should be applied to those classes of works, and that they should be undertaken partly at Imperial charge and partly at local charge, that is to say, that if a portion of the advantage to be derived from those works clearly redounded to the benefit of the locality, in so much should the locality be charged to contribute to the expense; but I should be exceedingly loth to impose upon the local government any charge in respect of works which originated with the Imperial Government. I can conceive that any such imposition placed by the Imperial Government upon the local governments might derange the whole system of local finance. At the same time I foresee a very great difficulty in laying down a positive rule upon the subject to be adhered to under all circumstances, and I think that if a port partly Imperial and partly commercial was opened in any part of India, it would be a subject for consideration whether a portion of that charge should not be borne by the local government, but I would not permit the Government of India absolutely to impose such a charge upon the local government without its consent.

Right Hon. *W. N. Massey.*

16 July 1872.

8703. Take the case of docks in Bombay?—Docks in Bombay would be for the benefit of commercial shipping.

8704. But you have taken the customs into the Imperial revenue; would not then the charge for docks be fairly a charge upon the customs?—I do not know that it would. If docks were required for commercial purposes, they might be so constructed as to be self-supporting. If so great a work as a dock in so great a port as Bombay was to be constructed, it would always be a subject for consideration whether a contribution should not be made from Imperial funds to such a work, because the plan of local finance which I have wished to see established does not at all exclude the occasional assistance of the Imperial Government to particular works and to particular charges.

8705. I can quite understand why the fixing of customs should be an Imperial right, but I do not quite see why the revenue derived from customs being essentially local in its receipt should belong to the Imperial revenue?—It is very possible that the appropriation of the customs duties by the Imperial Government may be open to the observation of the Honourable Member; but what was in my mind when I recommended that the customs duty should be maintained was that care should be taken that the Imperial Government was placed in ample funds.

8706. Would it not lead probably to discontent if any one of the eight centres of Government could say, "The revenue which belongs to us was taken from us to benefit others who are poorer"?—Well, they may say that now with a great deal of reason.

8707. I would rather not discuss the present state of things. I would rather confine our attention to the scheme that you are suggesting?—Assuming that a well established system of local finance was established, I understand that I am asked whether the appropriation of any funds derived in any degree from other administrations, and applied to the benefit of a separate administration, would not be a cause of grievance. Well, I think that would be refining, to a degree that would be impracticable; for instance, if a dock was opened, the object of which was to facilitate the commerce of the whole continent of India, many administrations might be enabled to send their produce to a port of discharge if there were facilities provided by docks, although they might be at a very great distance from those administrations.

8708. Would there not be legitimate cause of complaint as between Bombay and Scinde, we will say, in this respect, that the revenues of Bombay would be ample for its wants, and leave a surplus for local improvements, whereas the revenues of Scinde would not be sufficient for its local wants, and the surplus of Bombay would be applied to make up the deficit of Scinde; the Bombay people might fairly complain, might they not say, "Instead of having our improvements out of the money which fairly belongs to us, you have

Right Hon. W. N. Massey.

16 July 1872.

put us in partnership with a losing partner, and taken away from us the benefits of our own fund"?—That is assuming that Scinde forms a portion of the Government of Bombay as it does at present. I think I was asked when I was here the last time whether I would continue that connection between Bombay and Scinde; I was not prepared to give a definite answer to that question, but it seems that Scinde occupies rather an anomalous position; it is a sort of sub-lieutenancy under the Government of Bombay, and might, in any scheme of financial administration, perhaps be separated from it, so as to get rid of that question altogether.

8709. I would put the question in another form; whether Bombay and such of the eight provinces as had a surplus local revenue which would be applicable to their own improvement, might be required to make up for the deficiencies of those governments which had not local revenues to meet their local wants?—I said that I would take the existing administrations as a convenient basis for the application of this system of local finance; but as regards the separation of Scinde for the purposes of finances or for the purposes of administration generally, I do not know that there would be any serious objection to that; it is a question on which I do not desire to express a confident opinion, but the relations of Scinde and Bombay are peculiar; they rather differ from the relations of any other two administrations, and the province of Scinde is under a separate commissionership, and is virtually, I believe, ruled under a separate administration, although it is a sub-administration to Bombay.

8710. Your scheme in no sense tends to develope a system of local government, as we understand it, that is to say, of government in the locality?—No, I do not aim at that at all; I simply add the administration of finances, the management of all accounts, and the dispensation of funds to the local government, in addition to the other duties with which it is charged.

8711. I should like to ask you whether it would not be better to carry the principle of local government further, and leave to the locality, as we understand it in this country, or I may call it the municipality, to raise local taxes for local purposes?—The great municipalities of India, of course within their boundaries, do at present exercise large powers of taxation. For instance, take the municipalities of Bombay, Calcutta, and Madras; for municipal purposes they raise money and have taxes, *octrois*, license taxes, and so on.

8712. Would it not be desirable to extend that much further into the Mofussil?—There is no organisation in the Mofussil, independent of the governments, that would be capable of assuming those duties with safety.

8713. Would not the class of village officers be available for such purposes?—I doubt whether they could be trusted with such responsibility. It is a very serious responsibility that of spending money, and I should like to know in whose hands it was placed before I gave the power.

8714. Then all the details with regard to law and justice would you leave to the Imperial, or to the local government, such things, for instance, as the number and character of the courts?—Of the small courts, yes.

8715. All the courts?—Not of the High Courts. The High Court, for instance, of the Punjaub would be exclusively a matter of Imperial concern.

8716. You know that at present the system of the High Courts in the three Presidencies is different from what it is in the other provinces?—Yes, I am aware of that.

8717. You would leave that arrangement still to Imperial decision?—Yes, anything connected with the supreme administration of justice; the highest courts in India should always be under the control of Imperial Government.

8718. Financially, do you consider that the system that you have suggested would be economical in the administration, in so far as the salaries, and the number of persons to be employed, are concerned?—Yes, I think that the tendency of that system would be to encourage economy in the public service; that there would be a motive and inducement to the local government to save its funds, and not to employ more people than were absolutely necessary. There is no such inducement now.

8719. But would there not then be a system of Imperial officers working over the same line traversed by local officers?—I do not think that collision would be unavoidable. The duties of each, under a properly regulated system, would be clearly defined, and there would be no collision between the two.

8720. Take the great services connected with the collection of the land revenue as being part of the Imperial revenue; would that be managed directly from Calcutta, or still locally through the local administration?—The Imperial Government at Calcutta must have control over all officers engaged in the collection of the land revenue, but that could be organised under the superintendence of officers of different gradations.

8721. Would the correspondence, for instance, or the control as between the Imperial Government and the Collectors of the land revenue, be immediate, or through the local governments?—I do not think that it would be at all necessary for the purposes of this system to exclude the local governments from all concern in the collection of the land revenue. The local governments have common interest with the Imperial Government in maintaining the revenues of India, and, therefore, I should see no objection to entrusting the local governments with the collection, wholly or partially, of the land revenue, as at present; but, without giving a positive opinion upon the subject, I should rather prefer that every officer who is connected with the collection of any branch of the Imperial revenue should be immediately responsible to the Imperial Government.

8722. The same as regards customs?—Yes, the customs house at the different ports should consist of officers appointed by the Imperial Government.

8723. Would not that involve a possible collision between the officers of conflicting governments acting within local limits?—I think not; I do not see why it should.

8724. Do you see any advantage financially, or do you see no objection to it, in placing the various items of revenue under one authority, supposing that they are Imperial?—No, I see no objection to that. The customs duties, for instance, being exclusively the property of the Imperial Government, would be collected at the different ports by officers who are servants of the Imperial Government, and have nothing to do with the local government.

8725. Not

Right Hon.
W. N. Massey.

16 July 1872.

8725. Not at present?—No, not at present; but, under this system, the inclination of my opinion is favourable to retaining the service for the collection of the Imperial revenue under Imperial control; but I do not say that it is absolutely necessary.

8726. And, carrying out the same principle, I think I have rightly understood you to say, that you would recommend that the army should be under one control?—Yes.

8727. And the navy, so far as the service exists?—Yes, so far as there is a navy.

8728. And the same principle applies, I presume, to the whole judicial system?—Yes, to the higher judicial offices. I have limited my answer to the question as regards the administration of justice to the higher judicial offices. The lower offices of justice analogous to the county courts in this country, would be under the control of the local governments.

8729. Then that would involve the patronage, the right of appointment to all the offices connected with the Imperial revenue?—Yes, all the offices which are paid out of the Imperial funds.

8730 That is to say, that the customs officers for Bombay would be appointed at Calcutta?—Yes, if it was decided that the customs should be collected as Imperial customs.

8731. Such a system would seem to involve the assimilating of the provincial governments, or seem to suggest their assimilation to a simpler form, would it not?—Yes, I see no harm in that.

8732. What I allude to especially, is the abolition of the Councils of Bombay, Madras, and Bengal?—The Executive Councils of Bombay, Madras, and Bengal, you mean. I do not know that it would involve the necessity for abolishing them. The Executive Councils, although called executive, have no executive powers whatever that I am aware of; the whole of the executive powers are in the hands of the Governor General and the governors of the two provinces.

8733. I ask whether the system does not suggest the necessity of their abolition?—No, I do not see that it would suggest any such necessity.

8734. Or expediency?—Nor expediency.

8735. The police you would propose to make a branch of local administration?—Yes.

8736. Does not that involve a conflict of jurisdiction?—No, I think not. It seems to me that where anything like a local government is constituted, one of its first duties is to organise a system of police, and that the organisation and management of the police is exclusively a matter of local concern.

8737. But that involves this, does it not, that the policemen of one province have no authority in the adjoining province?—As much authority as the policemen of Bedfordshire has in Cambridgeshire.

8738. Exactly, but that is none?—That is none; but we have a system in this country of backing warrants. I am not sufficiently conversant with the mode in which justice is administered in India to give any opinion as to whether that would constitute a difficulty or not; it does not strike me as such.

8739. You are aware that India is in advance of England in regard to the code of penal justice?—I think it is.

8740. In your opinion, would the powers and the responsibilities of the local governments be increased or diminished by this proposed change?—They would be increased upon the whole most materially, I think.

8741. They would be relieved from the most important items, from all connection with the land revenue, all connected with the customs, and all connected with the courts of law?—They might or might not. I do not give a final opinion as to whether it is desirable that the collection of these great sources of revenue should be exclusively transacted by Imperial officers, or whether they should be left, as at present, to the local administration, but the inclination of my opinion is to take them away from the local governments.

8742. You would largely add to the powers and to the work of the Central Government, then, would you not?—I think that the extent to which the Central Government would be relieved by the establishment of a well-defined system of local finance would be an ample compensation for any additional trouble that might be thrown upon it.

8743. But the merit of your plan seems to me to be that you relieve the local governments of a large amount of work that they do now, and can fairly put it upon the central Government, by relieving the central Government of an amount of supervision which is not of much use; and therefore it seems to me that your system involves a simpler form of local government than the present system?—Yes, it does; because in the first place it saves an enormous amount of fruitless correspondence, and not only fruitless, but most unsatisfactory, from the unfriendly relations which it engenders between the Imperial Government and the local administrations

8744. That is a saving to both?—Yes, a most important saving.

8745. Then the balance remains of saving to the local governments, but which is added to the Imperial Government?—Yes.

8746. Then it comes back to what I say, that the local governments are relieved by this plan, although they have more power?—They are relieved of a great amount of troublesome reference to the Imperial Government; having funds at their own disposal they need not ask the Government whether they approve of this or that being done; they can do it themselves, but I do not see why any additional trouble is thrown upon the Imperial Government by that state of things.

8747. But the Imperial Government would have the trouble connected with those branches of revenue which are now transacted by the local governments?—Yes, if it was determined, as I am rather disposed to think is desirable, that the Imperial Government should take these matters into their own hands.

8748. Then it comes back to this, that under that state of things the Imperial Government would have more work than it has now, but would be relieved of that work which comes to it through the local governments, and the local governments would have less work, because they have all the work now of initiation, and the work of initiation would become a work of decision on the part of the Central Government?—I think that that arrangement would result in great advantages to both governments.

8749. Would not the result of it be a simpli-

Right Hon.
W. N. Massey.

16 July 1872.

fication in the local governments; you would not require then the paraphernalia of power which they now have?—No doubt it would immensely simplify the administration of the local governments. Almost every branch of the Government involves expenditure, and they cannot move now without reference to the Imperial Government; the whole wheels of the local governments are clogged by the financial control which is maintained by the Imperial Government over the expenditure.

8750. Then, to come back to a point which I put to you before, do you see any reason why the same form of local government applicable to the Punjab or the Central Provinces should not be equally applicable to the older and quieter districts of Bombay and Madras?—I see no reason why it should not. If the Honourable Member is pointing to the executive councils again, I can only say that I do not see that they are essential to the administration of the great Governments of Bombay and Madras.

8751. As a branch of financial administration, have you at all thought of the arrangement of the higher judicial Courts of Appeal?—No, I have not addressed myself to that question in such a way as to render any answer that I might give of any value to the Committee. That is the function of the law member of the council; it is exclusively his duty to advise upon those matters, and he, as is well known, is generally a gentleman of the highest attainments.

8752. But on a question of re-organising law courts, I for one should prefer the opinion of a civilian to that of a lawyer; if you have not formed an opinion perhaps I ought not to ask you the question, but it is with regard to the existing difference of our superior courts in the three Presidencies, and in the other parts of India, that I ask the question?—I have not considered that question.

8753. Do you think generally that a reconsideration of the system might lead to economy?—I think it is highly probable that it would.

8754. I should like to ask you one or two questions connected with the transit duties; do you consider that European manufactures, going into India through whatever port paying customs' duties, ought to pass to their destination without any further payment?—Yes; that is so with regard to all the administrations under the Government of India; but the difficulty we have had to encounter is when the goods pass through native territories.

8755. Is it the case that goods are taxed on entrance into native territories within our circle?—Yes, it is so. The Government of India has made various efforts to get rid of that power of taxation which is exercised by the native princes, we get a great many fair words and a great many promises which are not performed, and the question when I left India was in a very unsatisfactory state.

8756. Could you state the principle on which you think that question ought to be solved as between ourselves and the independent princes?—Yes; I think it is an act of power on the part of the British Government to insist upon the independent princes or the protected states allowing all goods shipped at one of our ports to pass free through their dominions. They derive considerable revenues from inland duties, and it would be simply an act of power arbitrarily to deprive them of these sources of revenue, which although according to our more enlightened system of trade, are injurious, are nevertheless in their eyes, and were in our eyes until a very recent period, considered legitimate sources of revenue; and I see no mode of arranging the question but equitable treaties with these governments, by which certain compensations shall be allowed them in consideration of their allowing goods shipped at British ports to pass free through their territories.

8757. Would those compensations be arranged on the footing of the revenue heretofore derived at those ports?—To some extent they should be based on the revenue derived by the native governments. I do not mean to say that that should be taken as conclusive. It is very difficult to find out what amount of these duties really finds its way to the treasuries of these native governments; a probable proportion of the collections sticks to the hands of those who collect them.

8758. *Chairman.*] When the native states make a charge upon the goods passing from our states, do we retaliate by making a charge upon their goods coming to us?—No.

8759. Mr. *Cave.*] It was owing to a fault in the original treaties, was it not, especially in the case of Cashmere?—Yes, we have had a great deal of trouble with the Maharajah of Cashmere.

8760. Mr. *Dickinson.*] Is not the correct equitable arrangement rather to be found in this, that the whole of India should form a Zollverein, and that the customs should be divided?—I do not know whether that would work so well. All these native princes of the protected states are extremely jealous of each other, and it would be a matter of extreme difficulty to get a treaty which would bind them to us and with each other.

8761. The difficulty would be one which would have to be overcome; I presume the question is what is the proper system for India as a whole?—If you could accomplish it, the system which you suggest would be by far the most scientific and the most satisfactory.

8762. Take a branch of that, the revenue from Malwa opium; we take the whole of that revenue, and yet the opium is all grown in Malwa; how do you reconcile that with equitable arrangements between native states and ourselves?—We take that as a pass duty at the port of discharge.

8763. Malwa cannot export opium except by passing through our territory; we take the opportunity of saying that it shall not go except by paying us 300 or 400 rupees a chest; is that at all distinguishable from the system which you condemn of Malwa charging British manufactures entering Malwa; is it not exactly the reverse of the same proposition?—We have imposed this monopoly by an act of power; there is no doubt that that is what it comes to; it is very difficult to defend it.

8764. But if we are to ask the native states to be equitable to us as regards duties on their frontier on English goods paying customs' duties, is not the first step to be equitable, and let them have their share of custom duties on goods coming to us?—There is a great deal to be said for that, no doubt.

Right Hon.
W. N. Massey.

16 July 1872.

8765. That brings me to another point of political importance; is it not desirable to inaugurate a system under which the native states should consult with ourselves on questions of universal importance, such as transit duties?—No doubt it would be most desirable.

8766. Has any attempt ever been made at any such united action?—No, I think not; the only action that has been taken, so far as I am aware, is by detached treaties and correspondence, and negotiations with detached states.

8767. Treating each state by itself, you mean?—Treating each state by itself, and not in connection with any other.

8768. To carry that a little further, is not a system of police, applicable to all India, most desirable?—A general system of police throughout India.

8769. Throughout India, European and native?—No doubt it would be very desirable; but I do not see how a general system of police could be accomplished without an undue interference with the independence, if you can use such a word, of the native governments.

8770. But that undue interference would not exist if the native governments themselves cooperated with us?—If the native governments could be induced to co-operate with us in a system of police, it would, of course, be an enormous stride towards a civilised government, which is only partially effected in India, owing to the distinction between our own governments and the governments of the protected states.

8771. Would not the first step towards that be calling together a diet of the native states and ourselves?—It might be an experiment worth trying, because the tendency of such an arrangement would be to be productive of enormous advantage, no doubt, even if it were only partially successful.

8772. The present system is one of isolating the states from each other?—It is treating them on the assumption that they are semi-barbarous powers, and taking care that they do not commit any outrage on humanity, or that they do not interfere with our power; that is about the extent of the interest that we take in the protected states.

8773. This point is of great importance on the general question of intercommunication throughout the country, is it not?—Certainly, you cannot exaggerate the importance of it. And it would be mixed up, too, with that other question of transit duties which you referred to.

8774. And also with the military organisation of the whole country?—Yes. We interfere now, you know, not exacty in the military organisation, but in the military force of the protected states,

8775. As regards your system of local government, it is to some extent founded upon the idea of such a system dovetailing in with the cooperation of the native states; something in the form of Germany?—Yes.

8776. In that form the local governments would be to a certain extent like independent states?—Yes.

8777. Is that a constitution of India that you would think it desirable to work towards?—I certainly do not desire to see anything like an absolute division of our empire in India into independent states. I would not extend with the exception of the financial administration, the action of independence further than it exists at present. To all intents and purposes the existing demarcations of administration are independent governments, but they have a common interest with the Imperial Government; they are under English rulers, and they are animated with all those feelings which guide English administrators in a conquered country.

8778. Do you think that Ceylon should form part of India?—No, I see no reason why it should. We have territory enough, I think, under the Government of India. Ceylon is entirely detached from the continent of India, and its interests and the habits of its people are not such as to render it a desirable matter for the purposes of uniformity to include it in the Indian dominion.

8779. As an economical administration of government, would it be desirable?—No, I think not. Ceylon is a rich country; it is quite rich enough, its resources are ample, to enable it to form an independent administration and to support an independent government. The tendency, in fact, of opinion in this country has been of late years, as you are aware, to diminish the territories of India. For instance, the Straits Settlements have been taken away from us; and instead of getting Mysore, as we fully expected in India we should, it pleased Government to say that Mysore should be restored to native rule, I should have thought it extremely desirable that Mysore should have formed part of the English system.

8780. With reference to the naval demands of India, have you at all considered whether a charge can fairly be made upon India for what is called naval protection?—No, I think not. I think that the protection of the shores of India forms a part of the great naval policy of this country. It is a great question for this country to consider whether they will not extend the protection of the seas to the whole of the dominions of the British Empire at the charge of the British Empire.

8781. Supposing India were a friendly, independent country, would England be able to keep up its commercial and other relations with India at a less expenditure of naval power than it does now?—I should say clearly not. The naval expenditure of England in India is very small indeed.

8782. That is another reason why England ought not to charge India with the maintenance of her naval power there?—I think so. The possession of India by a foreign power would be an enormous blow to the prestige of England, and would seriously disturb the balance of power in Europe, and I know no Imperial question of greater magnitude which this country has to entertain than that of maintaining intact its dominions in India; it is a great English question more than an Indian one.

8783. We might as well ask the Emperor of China to pay the naval charge for our maintenance of our interests on the China seas?—Yes, I think so.

8784. Do you consider the charge made upon India, for our embassy to Persia, of 12,000 *l.* a year, a fair one?—That also is an Imperial question.

8785. I suppose you think that if Indian interests

Right Hon. *W. N. Massey.*

16 July 1872.

terests are concerned, India ought to appoint as well as pay?—I think so.

8786. Sir *D. Wedderburn.*] With regard to those transit duties of which we were speaking, is it not the case that there is a transit duty on sugar passing from upper India into Rajpootana; I mean that we impose one?—We impose no transit duties whatever, that I am aware of.

8787. As regards the salt line that passes along from the north west to the south east, would it not be a very great advantage if that could be done away with?—There were various proposals when I was in India, for altering the salt line; and if I had known that I was to be examined on that point, I should have looked up my papers, which were prepared at the time with some care with regard to that question. The result of our inquiries is, that the salt line could be readjusted upon a much more convenient and economical basis than it is at present.

8788. Do not you think it would be very desirable to dispense with it altogether?—Well, it is attended with enormous cost, as you are aware, and I think it is extremely doubtful whether the advantages which we derive from it are a sufficient compensation for the cost which it involves.

8789. Is there not reason to suppose that our taxation of salt has pretty well reached the limit or even past the limit at which it is thoroughly remunerative?—I think it has certainly attained, both in Madras and in Bengal, and in the upper provinces, the limit where it can be remunerative, and where it is just; I am exceedingly opposed to any increase of the salt duties; I think it a most oppressive tax upon a class of people who have no means of defending themselves; and who contribute quite as much in proportion to the revenues of India as any other class, or even more.

8790. It is the case, I believe, that for an increase of something like 20 per cent. of taxation, only something like 2½ per cent. of profit has been realised lately?—Yes; you find in most countries that when you have increased taxation, the results are not in proportion to the increase; and that is most eminently the case in India; the more stringent your taxation, the less productive does it become.

8791. And that applies especially to salt, does it not?—I think especially, I think as a matter of policy, it is not expedient to increase the salt duties; and certainly, not as a matter of justice and humanity.

8792. Do you think that our recent fiscal policy has shown a tendency to abandon the most profitable source of revenue, namely, that on the land, and to increase greatly the number and the amount of novel and vexatious taxes?—I think that our land revenue ought to be considered the great mainstay of our finance, and I should be exceedingly opposed to tampering with that great source of revenue; I am very much opposed to ingenious devices for imposing fresh burdens upon the people of India. It is extremely difficult to invent any which would be productive, or any which would be otherwise than repugnant to the habits and feelings of the people, and I believe that such devices are wholly uncalled for; that our existing revenues are ample for all purposes of Government.

8793. Has not the low assessment of districts that have lately been resettled, tended to reduce the only source of revenue which is paid by the people of India without any sense of grievance?—The reassessment of the land revenue has been conducted, I believe, with very great care and by experienced officers under the vigilant superintendence not only of the Government of India, but also of the Secretary of State, who has on various occasions issued despatches prescribing the mode in which the operations are to be conducted. There are various opinions in India as to the rate of assessment which has been adopted. Some consider, as the Honourable Member, I understand, does, that the rates have been too low. On the other hand, it has been thought desirable to lighten this burden as much as possible; for my part, looking at these rates generally, I should say that they are lenient.

8794. Will not the effect of our lowering now the assessment, be not merely to reduce our present income, but greatly to compromise our future income, because these assessments are easily lowered, and almost impossible to raise again?—The assessments are mostly for limited periods, and the principle upon which they are adjusted is, that they shall from time to time be subject to revision. But undoubtedly, if the assessments are pitched too low, there would be very considerable difficulty, the same difficulty which attends every operation of the taxation of India, at a future period, when the leases expired, of increasing the charge; I do not mean to say that it might not be done; but I should be disposed, if I erred at all, to err on the side of exacting a good rent in the first instance.

8795. These low rents probably in India, as elsewhere, have a tendency to produce careless farming and extravagance among the cultivators, such extravagance, that is to say, as they are capable of?—It may be so; I cannot speak from knowledge upon that point.

8796. I find, in a report upon the revenue settlement that took place in 1869 in the Surat Collectorate, it is stated that villages in Guzerat are now paying an average rate of 26 rupees the acre, while it is recorded in their memoirs or records that they paid a rate equivalent to 160 rupees the acre in 1823, at a time when the price of produce was only about half what it is now?—In that same report it states that adjoining villages belonging to the Guicowar are still paying the old assessment of 160 rupees an acre without the ryots showing any desire to abandon their cultivation, or to emigrate into British territory. I am quoting from the revenue settlement of the Soopah villages of the Surat Collectorate. What should you consider to be the rent or the surplus produce of garden land in the fertile districts of British India?—I should be sorry to commit myself to an opinion upon that point.

8797. It is very considerable, is it not?—Yes, very considerable, no doubt, in the case of irrigated land.

8798. You think, then, that in a re-settlement, which, of course, takes place from time to time in every part of India, except Bengal, and which will take place, I believe, in Bombay very soon, this should be distinctly kept in view, that we must not lower more than we can help, or, if possible, not lower at all; but rather increase the land assessment, seeing that if we lower it, we must make up the deficit by more vexatious and strange methods

Right Hon.
W. N. Massey.

16 July
1872.

methods of taxation?—Yes, I think that the time and legitimate source, and the main source of Indian finance is the land revenue, and that the Governments cannot be too careful in their periodical revisions of the value of those lands not to estimate them too low.

8799. Because, in fact, by these low re-settlements, we are committing on a smaller scale the great error, as most people now conceive it to be, of our permanent settlement in Bengal?—Yes, and I am sorry to say that you have no inducement in lessening the burdens of the zemindars, such as you would have in a European country, of making them spend the sums which you remit to them for the benefit of their locality. I am afraid that very little good is done by that means.

8800. There is no outlay on improvements on their part, you mean?—They will pay no more than they are compelled to pay.

8801. Sir *T. Bazley.*] Supposing that two principal sources of revenue were established for India, one for Imperial, and the other for local purposes, what would be the relative amount of each, do you suppose?—The whole of our revenues now in round numbers are about 50,000,000 *l.*, and I think for Imperial purposes I should not like to say that the Imperial Government would retain less than 30,000,000 *l.*

8802. Leaving 20,000,000 *l.* for appropriation by the local governments?—Yes, that would be when the whole principle of local financial government was fully developed.

8803. Would not municipal government be required for the administration of so large a sum?—No, the municipal governments would have nothing to do with it; it would be entirely administered by the governments who are responsible to the Government of India and to the Secretary of State. The municipal governments have their own separate systems of taxation entirely independent of the Imperial system.

8804. Do I rightly understand that you are favourable to one system of collection of the revenue, one portion of which would be handed to the Imperial Government, and the other to the local governments?—Yes, I am extremely anxious to guard against the possibility in the operation of this system of the Imperial Government losing any portion of its revenue, and therefore, it is that I am disposed, under a system of this sort, at least in the first instance, to retain the collection of the Imperial revenue in the hands of the Imperial Government.

8805. Are you aware that in this country it is contemplated to have one system of collection for Imperial and local purposes?—I have heard so.

8806. And that possibly the economy to the public will be very considerable indeed?—Yes; but it is very unsafe to argue from English precedents to Indian usage.

8807. Of course, the same principle of economy will apply to India as here?—Not necessarily.

8808. But it is desirable at all events?—It is desirable perhaps.

8809. Mr. *Bourke.*] Have you seen the Resolution of the Government of India of the 14th of December 1870, with reference to local taxation?—Assigning 350,000 *l.* you mean.

8810. Yes; it was the resolution of the Government of India introducing to the local governments the system of local finance which they propose to carry out?—No, I have not read the detailed resolution; I was only aware of the result.

8811. £5,000,000, I think it is altogether, that they propose to allocate to the different local governments. You will see that there are there eight heads mentioned?—Yes. I think it is very prudent to go by steps in this matter. My impression is that the Government of India in inaugurating this system with care, have shown very great caution and wisdom.

8812. You think that it will be prudent to go by steps?—I think so; I am a very strong advocate for it, but at the same time I would go by very cautious steps. This resolution seems to me, on glancing at it now, to be a very able expansion of all the best reasons that can be urged in favour of the system.

8813. The second paragraph says, "Under the present system these governments (that is the local governments) have little liberty and but few motives for economy in their expenditure." Do you agree with that?—Yes, clearly.

8814. "It lies with the Government of India to control the growth of charges to meet which it has to raise the revenue. The local governments are deeply interested in the welfare of the people confided to their care, and, not knowing the requirements of other parts of the country, or of the empire as a whole, they are liable, in their anxiety for administrative progress, to allow too little weight to fiscal considerations." Do you think that that is the case?—I have said the same thing myself many times, not so well as it is said there.

8815. "Thus it happens that the supreme and local governments regard from different points of view measures involving expenditure; and the division of responsibility being ill defined, there occur conflicts of opinion injurious to the public service"?—That is an exact statement of the fact.

8816. "In order to avoid these conflicts it is expedient that, as far as possible, the obligation to find the funds necessary for administrative improvements should rest upon the authority whose immediate duty it is to devise such measures;" you agree with all that?—Quite.

8817. There have been one or two questions asked with regard to this system of local finance by different Members of the Committee, which go to show rather that when the local governments have received these different allocations of money they may go and spend these sums of money upon the different purposes to which they are applicable; and that then they may also go and tax the people further for local purposes without the Government of India having power to control them in that respect; now, do you think that there is any danger from this new system of local taxation of the local governments exercising those powers to a greater extent than they have done hitherto?—I think not; I think that when the local government is armed with the power of local taxation it will be very cautiously exercised, because the local government feels in common with the Imperial Government how dangerous and difficult a task it is to impose new charges upon the people of India.

8818. Is not this the case, that the same powers

Right Hon. *W. N. Massey.*

16 July 1872.

powers of control will remain to the Imperial Government to prevent the local governments from taxing the people to a greater extent for local purposes than they do now as at present exists?—Certainly; no act of the local government for the purpose of imposing taxation could be valid until it was submitted for the approval of the Imperial Government.

8819. The system at present is, is it not, for the local governments to send up their different budgets to the Supreme Government before the Acts are passed by the local legislatures, to give those budgets effect?—That is so.

8820. So that it will always be in the power of the Supreme Government to check any undue expenditure of money on the part of the local governments if the Supreme Government think that they are exceeding their due bounds?—Yes, that safeguard would unquestionably exist.

8821. Have you heard at all since this new system of local finance has been introduced, whether the local governments have had any practical experience of economy being practised by the different officers who have had the expenditure of money in their departments?—No, I have not heard any particulars of that kind; but I notice in the last Budget a statement of the financial member of Council, that already some of the local governments have administered their new powers with so much frugality that they have begun to accumulate a reserve fund.

8822. And you think that is a practical test of the results of the policy, of the new system of local finance?—I noticed that with very great satisfaction. I think it a most promising circumstance, and it struck me more especially because it seemed to me that the financial member of Council did not speak with very great warmth as to this policy.

8823. Do you think then if this attempt at local finance is successful it would be advisable to proceed further in the same direction, and to give to the local governments the power of control over the taxation as well as over the expenditure?—Yes; I think that the system is capable of very considerable expansion and that it should be developed gradually by the light of experience.

8824. Now generally do you look forward to a reform in Indian finance by means more of a reduction of expenditure than by a new system of taxation?—Yes. I am not at all hopeful of new systems of taxation, nor am I disposed to encourage them. The resources of India have now attained a very great amount; they were not one-third of their present amount 30 years ago, and at that time the expenditure of India was 2,000,000 *l.* in excess of its revenue; so that if the same proportions were maintained now we should have an annual deficit of 8,000,000 *l.* I am exceedingly opposed to any attempt to increase the resources of India by taxation; I am most favourable to every attempt to retrench expenditure.

8825. Do you think that in order to produce economy in every department it requires the most vigilant care on behalf of the people connected with the Supreme Government?—I am perfectly satisfied that it is a hopeless task for the Supreme Goverement to attempt to introduce economy into the details of Indian expenditure.

8826. To whom then would you look for accomplishing economy in details of expenditure?—I would look to the local governments.

8827. Mr. *Lyttelton.*] Would you make the permanently settled districts liable to be locally taxed to the same extent as those under a temporary settlement?—Yes; the fact of the permanent settlement being in operation would not make any difference in my mind to the application of the system.

8828. For instance, supposing in the case of Bengal the authorities thought fit to raise money for all their local requirements by means of a land tax, that would be equivalent, would it not, very nearly to a doubling of the existing land revenue?—If the Government of Bengal wished to supplement their resources by an undue taxation upon the landholders, they would be subject to the control of the Government of India, which I think would be very properly exercised; but I see no objection in principle to the taxation of the zemindars under the permanent settlement for local purposes; but I see every possible objection to their taxation for Imperial purposes.

8829. Do you think that they would be able to appreciate the difference between Imperial purposes and local purposes?—I think that they are sufficiently acute to appreciate the distinction. The injustice and the breach of compact in exacting from the zemindars as zemindars, an additional contribution to the State is manifest; but if you localise the administration of the government, and for local purposes an additional local cess is put upon the landholders in respect of their occupation of land, I see no objection to that, nor do I think that there is much reason to doubt that the distinction would be understood by themselves.

8830. Is it not the case, is it not in fact their argument, that taxes will be imposed upon them from which they were distinctly exempted by Lord Cornwallis's settlement?—I know they say so.

8831. But it is the case, is it not; a road in Lord Cornwallis's time would be made out of the revenues of India: in future if this scheme comes into operation, it will be made by means of a road cess?—Yes.

8832. That is an additional burden upon the zemindars?—It is a burden imposed upon the locality. If they want a road in Bengal there is a road cess; if they want to maintain a school in Bengal, there is a school cess; and that is done under the authority of the local government. No portion of the funds so raised find their way into the Imperial treasury, but are collected in the locality, and are applied to the purposes of the locality. You cannot carry the distinction any further; it appears to me that it is a valid distinction, and that a tax raised in a locality for local purposes is entirely distinguishable from a tax raised from the same class of people, and put into the Imperial Treasury, and which may be applied to something or other in which the locality has no interest.

8833. You think as a fact, that they will draw that distinction, and that there will be no political danger in developing to the extent you have sketched out, a system of local finance?—They

are

Right Hon. *W. N. Massey.*

16 July 1872.

are very ingenious and acute, and no class of people in the world understand distinctions better than the Bengalees do.

8834. You said, in answer to an Honourable Member, that you thought on the whole India should not pay for the naval establishment in the Indian seas?—Yes.

8835. What distinction do you draw between the naval establishment and the military establishment?—The military establishment is for the internal protection of the State. Our position in India is that of a nation in the occupation of a conquered country, and of course our power must be maintained by a military force.

8836. Then, to the extent that the military force in India is not maintained for preserving internal order, but to prevent foreign invasion, I understand that you would make such establishments chargeable to England?—Yes; if we were at war with any foreign power, and India was invaded, the expense of the additional troops which would be necessary for the protection of India ought to be defrayed either wholly or in part out of English resources.

8837. A considerable outlay has already been incurred I imagine, for those purposes in India?—Yes.

8838. On the north-western frontier, for instance, the railway from Lahore to Peshawur, would not that come under that head?—That is a great military road; it is a strategic railway; in fact it was laid out as such, and it will be defrayed out of the resources of India. It is impossible to distinguish with accuracy between that portion of military expenditure which ought to be properly chargeable to the revenues of Great Britain, and that which belongs to the revenues of India; but we only act in accordance with the practice of all ages, and with the necessities of the case, in imposing upon India the burden of maintaining the army which is necessary for the preservation of our power.

8839. But not a penny of that army which is kept up with a view of providing against foreign invasion, as a fact, has been or is paid by England?—That is so; I do not enter into the question whether England is quite just in that; England does not as a matter of fact contribute to the expense of the military occupation of India.

8840. Lord *E. Fitzmaurice.*] If then, you carry out your principle to its full conclusion, you, yourself, would be in favour of transferring a portion of the military expenditure to that extent to the taxation of England?—I do not say that; that is a very large question, and one which I would rather not enter into. It is very difficult to discriminate between those charges which should be debited to the resources of Great Britain, and those which properly belong to the charge of India. I can imagine an invasion of India caused by European complications, with which India had no concern whatever, which might involve a very large military expenditure, and it would be unjust to impose upon the revenues of India the defraying of that expenditure.

8841. There has been a great deal of complaint, has there not, about the increase of late years of the military expenditure in England chargeable upon the revenues of India?—Yes, there have been complaints, there always are complaints about the home charges, charges for stores for example, which are entirely incurred in this country; but I do not know what amount of foundation those complaints have.

8842. It is the case though, is it not, that the home charges have increased in England out of all proportion to the increase of the military charges in India?—Yes; but then several heads of charge have been transferred to the home charges that formerly were provided for in India. For instance, stores; that is entirely provided for now by the Home Government, and greatly swells the English charges, but in the same proportion the Indian charges are diminished.

8843. There is a feeling, is there not, in India, that many opportunities are taken of transferring items to the taxation of India, which ought fairly to be charged upon the taxation of England?—I have heard of that; I do not know that there really is any feeling of the kind.

8844. There was a petition presented a little while ago to the House of Commons, from, I think, Bombay, on the subject, which professed to be a very representative petition; have you seen that petition?—No. To what did it refer?

8845. It contained various complaints, and amongst others, it dwelt upon several items of expenditure, especially this item of military expenditure in England, chargeable on the revenues of India?—I do not think there is any foundation for such a complaint.

8846. You said just now, incidentally, when you gave that answer about the navy, that the loss of India would be a great material, as well as moral, blow to the prestige of England; I suppose you are aware that in the present day there are many people in England who do everything they can to persuade the English people that that would not be the case; and we have had a witness before us who has urged that view?—I have heard doubts expressed from time to time of the advantages which this country derives from the acquisition of India; but I look upon the state of things as it exists; India is attached to England; whether it was expedient to attach it is another matter; and the disruption of India from England would, in my opinion, be an enormous calamity to this country.

8847. Materially as well as morally?—Materially as well as morally.

8848. I suppose you consider that our trade in India, if it were governed by native state or any other foreign power, would be materially diminished?—It would disappear.

8849. And there would be a great loss, of course, upon our Indian debt, and all Indian securities?—Yes.

8850. Then there would a great number of indirect losses connected with those securities?—The material losses which this country would sustain would take a long time to enumerate; but what I should consider of still more importance would be the blow to which this country would sustain by the loss of the greatest dependency that any country ever possessed.

8851. You mean that it would injure our prestige all over the world and especially in Asia?—Yes, it would be a blow, from which this country I believe would never recover, but at once subside into a second-rate state. However,

Right Hon.
W. N. Massey.

16 July
1872.

ever, these questions are rather beyond my province.

8852. I thought it was a good opportunity to bring out the question, because nobody has had more experience than yourself?—I have no hesitation in expressing the opinion for what it is worth, which I have expressed on that point.

8853. *Chairman.*] You have expressed a strong opinion against the policy of the income tax, and you are very desirous that it should be abolished?—Yes.

8854. What course would you take to abolish it?—I would simply repeal it.

8855. But is it possible to repeal it in the present state of the revenue?—I cannot say what the present state of the revenue is.

8856. The present state of the revenue is this; the Finance Minister says that there is a surplus of about 250,000 *l.*; that that surplus has arisen from the opium revenue being much more productive than it has ever before been known for two years, in fact, last year opium produced nine millions, whereas it, I think, three years ago only produced six millions. Do you think that under these circumstances with such a surplus it is possible to abolish the income tax?—I do not mean to say that I would abolish it to-day, but I would take measures which would enable you to abolish it within a limited period, and these measures would be a reduction of expenditure. Your expenditure is enormous; I see no bounds to it if it goes on increasing year by year, and I particularly pointed out in the course of my evidence, that I believe that a careful and systematic supervision of the military accounts would result in a very large saving without any diminution of military power, which I do not for a moment advocate; and I believe also that large sums are squandered upon public works which are of no value, and that retrenchment must be extensively practised in that direction.

8857. Then you think that such a reduction might be made with safety in the military expenditure as would enable you to abolish the income tax?—I have expressed myself rather guardedly and generally upon the subject of the possibility of retrenching military expenditure; and my opinion is founded very much upon conversations which I have had with gentlemen connected with the military service, who are impressed with the belief that if the military accounts were placed under a different system of charge and supervision, the result would be, without any diminution in efficiency, a very considerable saving in expense; and I think that that is probable; but I can only speak generally upon the subject. As regard public works, I can speak more decidedly, because you could at once make reductions in that quarter if you found your resources were not adequate to your expenditure.

8858. But when you speak of reductions in the public works, what description of public works do you refer to?—The public works are of various kinds. Requisitions now come up from the local governments for expenditure on public works of the most costly character, and of every description. There is a standing item in the Indian Accounts which is charged to the ordinary revenues of India, what are called Public Works Ordinary; the amount is some five or six millions annually, that is totally independent of funds provided for irrigation and what are called reproductive works, which are constructed by means of loans, the interest only being charged to revenue. I do not make any observation whatever upon those works which are defrayed by loan, but I do say that the allowance for public works ordinary is very large, and the probability is that a very resolute determination to investigate that expenditure would result in a very considerable saving of money which is now wasted. In my experience in India there was more waste in the Public Works Department than in any other department of the administration.

8859. What would you define ordinary public works to be?—Barracks, jails, civil buildings, tanks, and every other work of construction except irrigation works.

8860. Those are works which it is necessary to pay for out of the revenue, are they not?—Yes, there are certain public works which must be defrayed out of revenue, because you cannot go on raising loans for works which are necessary for the purposes of a great government like that of India; but at the same time, when you are driven to the alternative of resorting to new taxation for providing public works, which are of immediate necessity, it would be very desirable to consider the propriety of partially defraying the expense of those works by loan. I now refer especially to the extensive system of barracks which was inaugurated during the sanitary furore which pervaded this country and India some years ago. Orders were issued that barracks should be erected all over India, at an estimated expense of ten millions of money; and these works were to be executed with the utmost possible dispatch; the consequence was that a very large addition to the expenditure of India was imposed in respect of this special necessity. I thought when I was concerned in the administration of the finance of India that, as our expenditure pressed very closely upon our income, it was a fair thing to provide for such an expenditure as that, partly, at least, by loan. I thought that, at all events, far preferable to resorting to income taxes or any additional taxation. It was impossible that the works could be provided within the time prescribed, unless the revenues of India was recruited from some new source; and I thought the least of two evils was that we should borrow at least a portion of the money required for the barracks, rather than have new taxation.

8861. *Chairman.*] Did you suggest that in such cases the money should be paid off in a certain period from revenue?—That was a matter of financial arrangement. I do think it desirable. It did enter into my plan that as it was to some extent a departure from the wholesome rule of keeping the expenditure within the income, a compensating principle should be established of providing something like a sinking fund for defraying this particular debt, or that a portion of the revenue should be appropriated every year until it was defrayed; and considering that it was not like an expenditure which might extend beyond any assignable time, but was an estimate founded on calculations which admitted of being confined within certain limits, I thought it was a very fair operation to borrow a portion of the funds so required, and on the other hand to make provision for the liquidation of those short loans within a certain time.

8862. That

Right Hon. *W. N. Massey.*

16 July 1872.

8862. That was a very sound principle, but was it acted upon?—The principle was sanctioned, and the Government of India was permitted to adopt that course in 1866, by the then Secretary of State; but subsequently the English Government thought fit to reconsider the matter, and the whole of the money so raised was charged to revenue.

8863. Now as regards extraordinary public works, such as are supposed to be reproductive, do you lay it down as a sound principle that the Government may borrow for such works?—Yes, unquestionably. If you can establish the fact that you are going to enter upon works which will pay the interest of the money borrowed, and ultimately the cost of construction, it is a mere commercial operation borrowing the funds; there is no objection to it.

8864. But in those circumstances would you provide that when the works became productive, the revenue from those works should be faithfully applied to the payment of the interest and the extinction of the principal?—Certainly.

8865. Is there any such provision made in the extraordinary public works that have been so executed?—I apprehend there is. When I was in India the system of borrowing for public works began, and there were certain works which were to pay their cost within a very short time, and in respect of those works I borrowed money on short debentures; and it so happened that I paid off one of the debentures in my last year of office.

8866. You are aware that there has been an enormous sum raised in borrowed money for the purpose of making railways in India?—Yes.

8867. I think we have it before us that the amount raised, including the accumulation of interest upon it was 120,000,000 *l.*, upon which we are paying 5 per cent., and that the revenue from those railways only produces about 3,000,000 *l.*, so that it leaves a loss of about 3,000,000 *l.* per annum upon the outlay. Now what is your opinion as to these railways being reproductive?—When the system of Indian railways was first proposed, the Government were not prepared to undertake the construction of them, and there was really no alternative but to get them made by the trade, so to speak, to get them undertaken by private enterprise, the funds being raised on the public credit. Well, the effect of that was the most lavish expenditure. The East Indian Railway costs far more, if not twice as much as it ought to have cost; enormous sums were lavished, and the contractors had no motive whatever for economy; all the money came from the English capitalist, and so long as he was guaranteed 5 per cent. on the revenues of India it was immaterial to him whether the funds that he lent were thrown into the Hooghly or converted into brick and mortar. The result was that these large sums were expended, and that the East India Railway cost, I think (I speak without book), about 30,000 *l.* a mile; and considering that there were no heavy expenses for land as there are in this country, and no law expenses, no vast engineering charges, in fact, considering that the Indian railways were free from the great heads of expenditure which have made our English system so costly, it seems to me that they are the most extravagant works that were ever undertaken.

8868. And that East Indian is a single line of railway only, is it not?—Yes.

8869. Do you think that it is expedient in the present state of the Indian finances to continue works of this kind?—I think that, referring to my former answer with regard to economy in public works, that answer applies equally to the extension of the railway system. You have now got the great trunk lines established through India, and your traffic and your commerce has obtained an outlet; in fact the whole continent of India is opened up. The extension of those lines into branches and feeders might be infinitesimal; there is no point at which you could say you would stop, and therefore it is that I should look with very great jealousy upon any scheme for the construction of new lines of railway in India; the Peshawur line was a strategic line, and that may be justifiable for military reasons, it being, of course, extremely desirable that the means should be provided for concentrating troops upon dangerous points with the greatest possible dispatch; it is not only strategically desirable, but it is conducive to military economy, because ultimately it may be found that you may be able to hold the country with a diminished force.

8870. It is stated in the railway accounts that a sum of 12,000,000 *l.* is appropriated to what are called political railways?—Yes.

8871. Now, do you think that in the present state of the Indian finances, it is wise to borrow money for the purpose of making those railways?—I do not know what particular railways are proposed to be made, but I should be disposed to scrutinise very strictly the reasons for embarking upon any additional expenditure of importance in respect of railways at the present time.

8872 One of the railways, called a political railway, is that from Lahore to Peshawur, and I think another is the Indus Valley line?—Yes, the Indus Valley line was a line which was very much advocated by the Government of Bombay, and no doubt it is a very important line. The estimates, I think, for that line were very carefully considered, and they were not excessive. I should hesitate about rejecting or even postponing that line.

8873. Of course these railways, I understand, are not supposed to do more then pay their working expenses?—I think that the estimate of the Lahore and Peshawur line was that it would pay commercially about 3 per cent., but even its projectors never ventured to go beyond that estimate.

8874. But we have it in evidence that the Scinde, Punjab, and Delhi Railway, I think, paid 11 *s.* 6 *d.* per cent. one year, 9 *s.* per cent. the next year, and the last half year it has paid 3 *s.* per cent.; is that a district which is likely to yield more than that railway is paying?—I cannot answer that question. The Scinde Railway has been proverbially a bad paying line ever since it was opened, and it seems to be getting worse; but whether it is railways or whether it is barracks, or whether it is churches, or whether it is palaces of justice, I say do no more than is absolutely necessary; do not tax the people of India for such things as those. If you have got surplus revenues, apply them judiciously to such works, but let them alone rather than impose new taxation to construct them.

Right Hon.
W. N. Massey.

16 July 1872.

8875. Then you would think it a wise policy always to keep the Indian finances in such a state that the Government should never be embarrassed?—I think so; that has never been attained yet.

8876. If the opium revenue should happen to prove rather more than was estimated, would you think it was wise, seeing that it is such a fluctuating revenue, to act upon that as a permanent income?—No; you must be very careful in your estimate of opium, otherwise you may derange your whole system of finance. I should always estimate for opium upon an average of years; that was the principle which I adopted, and I found it answer; but if you take an estimate next year upon the high price of this year it may run down. When I first landed in India the opium was 850 rupees the chest, and in the following year it rose to 1,400 rupees; such are the fluctuations. But if you take in the average of a certain number of years, and estimate your revenue upon that, without any reference to the yield of the existing price, or the price that you got in a former year, I think you will do as much as you can to avoid any financial confusion in consequence of a failure of the opium revenue.

8877. I think you are unfavourable to any increase in the salt duties?—Yes, very much so.

8878. But you are no doubt aware that the price of salt depends very much upon the cost of the carriage of the salt in many districts?—Yes, very much.

8879. And no doubt you are aware also that the opening out of the railways has had this favourable effect, that it has so much diminished the cost of carriage as to enable the people to provide themselves with salt at a lower rate, although the duty has been increased?—That is so in some parts of India.

8880. But still you would say that even in those cases it would be inexpedient to increase your revenue by any addition to the duty?—I am very much against any addition to the salt duties, and I am more especially for guarding against that, because it is an expedient so often urged upon the Government by the European community in India; and I think it a very dangerous one, not politically dangerous, because the poor people who pay the salt duty are not likely to become formidable, in a political sense, to the English rule; but it is a tax which you may say falls exclusively upon the lower orders of society in India, and one that cannot fairly be increased without oppression.

8881. But has there been much complaint of the salt duties on the part of the people?—They complain, as every member of the Indian community complains, of taxation; but they have no means of making their complaints heard. The lower orders of India have no organisation such as European countries have; their cry is little attended to; but it is not because they do not complain that I would increase the burden which particularly falls upon them; I think that a sense of justice and humanity forbid our deriving any additional revenue from the salt. It pays us now about six millions a year, and that is quite as much as we ought to exact from the labouring people.

8882. Mr. *Hermon.*] Have the natives ever suggested any equivalent to that tax?—Various taxes have been suggested. A tax on tobacco has been suggested. We went into that; and among the numerous taxes recommended, none of them will hold water at all; taxes on succession, and on tobacco were suggested, and the result of our investigations into a tax on tobacco was, that you might get a revenue from it, but it would be a revenue which would be paid by the same class of people who pay the salt tax, and the shorter way would be to increase the salt duties at once.

8883. I wanted to know whether they had suggested any other tax which would be more agreeable to them, but which would be to a certain extent to tax themselves in the same way as the salt duty does?—No, there is no other way by which you can get at the lower orders; it is, in fact, a poll tax.

8884. Mr. *Lyttelton.*] The people who do not use the Manchester goods are not reached in any other way, are they, than by the salt tax?—There are very few of the poorer people who consume any Manchester goods.

8885. Not piece goods?—No.

8886. You think then they are too poor to be taxed at all?—Yes.

8887. Mr. *Hermon.*] How has the alteration of the duties from the abolition of the discriminating duty between British products and those of other countries interfere with the British productions?—Not to any appreciable extent; the British production has the command of the market.

8888. Then you are of opinion that the old system of taxation, where there was a discriminating duty between the products of Great Britain and the products of other countries, was not exactly a tax that we could uphold?—No, the financial results were not such as to render it worth while to maintain it.

8889. And you give that answer in connection with the different guarantees that we give from this country in respect of railways, and so on?—Yes. I do not think that you affect the question of guarantee at all by the maintenance of discriminating duty between the products of this country and the products of foreign countries.

8890. *Chairman.*] As far as I understand your opinions, economy and retrenchment is the policy which ought to be adopted by the Indian financiers?—As distinguished from fresh taxation.

8891. Have you anything that you would wish to add to your evidence?—No, I have nothing to add.

8892. Sir *D. Wedderburn.*] I understand you to say that if you take a low estimate, and a good long period of years to make your average from, you may count upon opium as a tolerably permanent source of revenue?—I think you may count upon the funds which we have made available from that source as tolerably equal, year by year.

8893. You are not afraid of its disappearing on account of the increased cultivation of opium in China, or in other countries?—That is the great question. When I was in India there were frequent alarms of that kind, and there have been since, but we never could ascertain by the best inquiries that we could institute, that there was any real foundation for those alarms.

8894. I think you were not asked your opinion on those great irrigation works which are contemplated

Right Hon. *W. N. Massey.*

16 July 1872.

templated; a large sum of money, nearly half a million, has recently been sanctioned for irrigation works in Western India; now, do you think that the previous success of such works, and the financial condition of India, will justify that outlay?—Well, I would not embark in any of those works unless reliable data were furnished that the line was well selected and that it was likely to pay; because the whole of those works now are provided for by loans, and if the works should be ill-constructed, or if there should be no demand for the water or an inadequate demand, the debt of India would of course ultimately be increased by the amount expended on such works.

8895. In this particular case, the estimated revenue, exclusive of navigation, was estimated at from 15 to 20 per cent., but would you not say from the previous experience which we have had, that such estimates are extremely unreliable in the case of irrigation works?—Most unreliable; the revenues derived from some works in Madras have been very large indeed, but the estimates for some of the great works which have been constructed in Central India were very high and the profits very small.

LIST OF APPENDIX.

Appendix, No. 1.

Appendix, No. 10.

Papers handed in by Major General Sir Thomas Pears:

No. 1.—Return showing the Number of Officers now on Leave in England from Regiments serving in India, specifying whether on Sick Certificate or Private Affairs - 545

No. 2.—Return showing the Number of Brigades and Regiments which came home from India in each of the Years 1867, 1868, 1869, and 1870 - - - - - 545

No. 3.—Return showing the Number of Non-commissioned Officers and Men (exclusive of those who have not served Abroad) borne on the Rolls of Regiments serving in India, who were in the United Kingdom on the 1st January 1872 - - - - 547

No. 4.—Return showing the Number of Men who Volunteered for Regiments remaining in India in each of the Years 1867, 1868, 1869, 1870 - - - - - - 548

No. 5.—Return showing the Number of Men who Re-engaged in India in each of the Years 1867, 1868, 1869, 1870 - - - - - - - - - - - - - 548

No. 6.—Statement showing the Number of Officers of each Rank and Presidency, Effective and Non-Effective, who were in Receipt in this Country of Pay, Half-Pay, or Pension, on the 1st July 1872 - - - - - - - - - - - - 549

No. 7.—Return showing the Number of Officers, Non-Commissioned Officers, and Men serving with their Brigades and Regiments in India, on the 1st August 1872 - 550

Appendix, No. 11.

Statements handed in by Mr. T. L. Seccombe, C.B., and referred to in his Evidence:

Statement showing the Total Income and Expenditure of India in each Year from 1861-62 to 1870-71, and the Surplus or Deficit, inclusive and exclusive of Expenditure on Construction of Roads, Bridges, Canals, Tanks, Embankments, &c., and of Public Works Extraordinary (viz., large Irrigation Works and State Railways) - 551

Statement of Expenditure in India on Works tending to promote the Industry of the Country, and on Works connected with Civil and Military Administration in each Year, from 1867-68 to 1870-71 - - - - - - - - - - - 554

Appendix, No. 12.

Papers handed in by Mr. Thornton: PAGE
1. Rajpootana (State) Railway - - - - - - - - - - - - 555
2. Punjab Northern (State) Railway - - - - - - - - - - 565
3. Indus Valley (State) Railway - - - - - - - - - - - - 570
    Comparative Statement of the Value of the Principal Articles of Import into the Province of Scinde for the last 23 years - - - - - - 588
    Comparative Statement of the Value of the Principal Articles of Export from the Province of Sind for the last 23 years - - - - - - - - 590
    Statement of Boat Tonnage, River Traffic on the Indus from the Year 1856-1862, and 1865-1868 - - - - - - - - - - - - 590*
    Goods carried by the Sind Railway to Kurrachee - - - - - - 592
    Statement of Registered Burthen of Boats taken at Kotree - - - - 592
    Comparative Statement of Passenger Traffic and Population in Countries provided with Railways - - - - - - - - - - - 593
    Approximate Estimate of the probable Receipts to be expected from the Sind Valley Railway - - - - - - - - - - - - - - 594
    Abstract of Khetty Exports and Imports - - - - - - - - - 595
    Sind, Punjab, and Delhi Railway Company (Indus Steam Flotilla) - - - 596
4. Holkar (State) Railway - - - - - - - - - - - - - 599
5. Khamgaon and Oomraottee Branch (State) Railways - - - - - - - 602
6. Wurdah Valley (State) Railway - - - - - - - - - - 614

Appendix, No. 13.

Statement showing the Loss or Gain to India in each Year, by adopting in the Transactions with certain Guaranteed Indian Railway Companies the Exchange of 1 *s.* 10 *d.* the Rupee, as compared with the rate of 2 *s.* the Rupee, and as compared with the Average Rate obtained in each Year for Bills of Exchange drawn on India, also the Gain in each Year by adopting in the Transactions with the Oude and Rohilcund Railway Company and the Indian Tramway or Carnatic Railway Company, the Exchange of 2 *s.* the Rupee, as compared with the Average Rate obtained in each Year for Bills of Exchange drawn on India - - - - - - - - - - - - - - - - - 628

Appendix, No. 14.

Despatch to His Grace the Right Honourable the Duke of Argyll, K.T., Secretary of State for India, dated 1st June 1871 - - - - - - - - - - - - - 629

Appendix, No. 15.

Despatch from the Secretary to the Chief Commissioner of Mysore, Public Works Department, to the Secretary to the Government of India, Public Works Department, No. 120 General, dated Bangalore, the 8th May 1872 - - - - - - - - - 635
Observations by Lieutenant Colonel R. H. Sankey, R.E., Chief Engineer and Secretary to Governments of Mysore and Coorg, on Mr. R. H. Elliott's Report in his late Examination on the Public Works Department - - - - - - - - - - - 635

Appendix, No. 16.

Paper delivered in by Mr Thornton:
    Hydraulic Lift Dock at Hog Island, Bombay - - - - - - - - - - 639

Appendix, No. 17.

Paper handed in by Mr. Harrison:
    Statement of Circulation and Reserve of Paper Currency on 31st March 1871 - - 640
    Account of the Profits of the Currency Note Circulation, and of the Charges and Expenses incidental thereto during the Year 1870-71, or from April 1870 to March 1871 - - - - - - - - - - - - - - 640

Appendix, No. 18.

Paper supplied by Messrs. Harrison and Gay:
    Return showing the Income for 1870-71 of each Local Government in India, from Six important Heads of Revenue, also the Cost of Civil Administration, and the Proportion which such Charges bear to the Revenue under these selected Heads - - 641

Appendix, No. 19.

Papers handed in by Mr. Gay: PAGE
Abstract of Revenue Appointments - - - - - - - - - - - - - 642
Government of India (Coorg and Indore) - - - - - - - - - 642
North Western Provinces - - - - - - - - - - - - - 643

Appendix, No. 1.

COUNCIL of the Governor General of India, assembled at Calcutta, for the purpose of making Laws and Regulations.—6th April 1872.

FINANCIAL STATEMENT by the Hon. Sir *Richard Temple*, K.C.S.I.—6th April 1872.

My Lord,

I HAVE to present the Budget of British India for the year 1872-73.

Preface

In the midst of the preparation of this statement we were arrested by a most lamentable event which deprived the Indian Government of its head. The changes consequent on the death of the Earl of Mayo have delayed the completion of the Budget, and interrupted the consideration of some financial questions connected with it, therefore the exposition now to be made, though complete, we trust, in respect to facts, cannot be so complete in respect of policy as it might have been. My Lord, as it is impossible to avoid alluding here to that most grave occurrence, I feel bound on this occasion to bear witness to the serious loss which the financial department (in common with all other departments) has sustained by the death of Lord Mayo. This Council, and indeed all persons interested in Indian finance, well know how sound and just were his opinions on financial subjects. But those who were in almost daily communication with him regarding the administration of the exchequer, the work of the treasury department, the gathering in of receipts, the regulation of expenses, must necessarily know best how firm he was in the enforcement of economy, how strict he was in adherence to rule, how anxious he was that the State resources should be reserved, either for indispensable or for beneficent purposes, how consistent he was in the vindication of financial considerations, how generous he was in the support of those engaged in the conduct of affairs.

Your Lordship and the Council, then, will doubtless bear in mind the particular disadvantage under which this statement is made to-day.

Before proceeding further, I desire to make certain remarks supplementary to the statement delivered by me here on the 9th of March last year.

The Council may recollect that on that occasion I showed for the year 1869-70 an actual surplus of 118,668 *l.*, observing that this result was owing partly to management and partly to fortune. From observations since made in England, it would seem to have been supposed that this result arose from crediting to the income of the year various extraordinary receipts which ought not to have appeared there at all, and without which there would have been a deficit. From the tenor of some of these observations, indeed, it would further seem to be supposed that I had omitted in my exposition to bring this fact into prominent relief. I certainly stated the finance to be in surplus, and so it was. It was necessary to make this statement, and none other could have been made. At the same time, however, those credits, so far from being unnoticed, were prominently noticed, while the debits on the other side were also mentioned. This was in 1870. So clear, indeed, were the points made that some public attention was attracted to them; and this caused me to revert to the matter in 1871, and to draw attention once more to those large credits.

By the existing system of finance and accounts all receipts, of whatsoever nature, whether ordinary or extraordinary, whether regular receipts or casual receipts, commonly called "windfalls," or other, must appear in the income of the year, and cannot be excluded therefrom, in order to be embodied in any other account. I am not, indeed, prepared to say that the system can be altered in this respect; but whenever such extraordinary credits occur they should be clearly set forth, so that the financial position may not be allowed to seem better than it is; and they should not be permitted to affect the provision of ways and means, or to mitigate taxation, or to stay reduction of expenses. We should so arrange that the current finance may not derive any undue benefit from them. Now, this is just what has occurred in regard to these credits of late years. They were not entered in the Budget of 1869-70, for the reason that they were not expected to accrue within that year. Thus they did not affect the provision of ways and means. It was quite irrespectively of anything of this kind that we imposed the income tax and raised the salt duties. It was also irrespectively of this that we enforced various reductions of expenditure, civil and military. If the expectation of these credits had influenced our judgment, and induced us to waive the increase of taxation, or defer the reduction of expenditure, then the effect would have been bad. But the very contrary occurred, and the bad effect was avoided.

I proceed to deal with my subject in what are its well-established divisions; firstly, the "actuals," or figures of the last year (1870-71) for which the accounts are closed; secondly,

Appendix, No. 1.

the "regular estimate," or latest figures of the year 1871–72, just completed, for which the accounts are not yet closed; thirdly the "Budget," or the estimated figures for the year just commencing, 1872–73; fourthly, the ways and means and the cash balances.

Actuals, 1870–71.

I begin, then, with the actual figures of the year 1870–71. In my last exposition the surplus of income over ordinary expenditure for that year was shown to be estimated at just one million, or 997,100 *l.* The actual result now proves to be a surplus of 1½ million, or 1,482,990 *l.*, being an improvement of just half a million, or 485,890 *l.* the total income being 51,413,685 *l.*, or nearly 51½ millions, the largest ever yet attained in British India, and the ordinary expenditure being 49,930,695 *l.*, or close on 50 millions. This improvement in the surplus arises chiefly from increased receipts in India, but partly also from short expenditure in England. The expenditure in India turned out, on the whole, to be about the same as the estimate. The details will be found in the figured statements, and time will not permit me to explain them all here. But, in general terms, there were comparatively small increases under most heads of revenue, showing that the regular estimate had been cautiously made; and the net effect of the relatively slight variations on the expenditure side, items of increase being on the whole balanced by those of decrease, showed that the expenses of the State had been kept fairly well in hand.

The year 1870–71, then, ended thus: By the Budget estimate there was anticipated an equilibrium between income and ordinary expenditure with a small surplus of less than 200,000 *l.*; the actual result has been a surplus of 1½ millions. Certainly this satisfactory surplus has been secured not at all before it was wanted, as a partial set-off against the deficits of previous years. And we must remember that of the million and a half, full one million, or two-thirds of the surplus, arose from unlooked-for increase in our opium receipts; a resource on which we could not reckon beforehand, and on which we should have had no right to rely. Without this there would have been a very moderate surplus, not largely in excess of that which had been originally estimated. I may, therefore, reiterate what was explained in my last exposition, namely, that the actual surplus cannot be justly held to invalidate the policy of those special measures of direct taxation which were resorted to in that year.

In addition to the above, there was an extraordinary expenditure on reproductive public works of 1,167,810 *l.*, or more than one million from loan funds.

Regular Estimate, 1871–72.

We thus arrive at the second part of the subject, namely, the regular estimate for the year 1871–72. This estimate is based on the actual figures of 11 months for most, and 12 months for a few, of the main heads of income; of 11 months for most branches of civil expenditure and of nine months for the army and public works department. Still the remaining accounts yet to come in, and the inevitable adjusting entries in the last month of the year, are so important that, despite all precautions, many possible variations between this estimate and the future actuals must be looked for.

The result, however, so far as yet known, is in this wise. The budget estimate for the current year showed an equilibrium between income and ordinary expenditure with a small surplus of 93,400 *l.* The regular estimate, however, shows an income of 49,976,500 *l.*, or 50 millions, with an ordinary expenditure of 47,276,500 *l.*, or 47¼ millions, leaving a surplus of 2,700,000 *l.*, or 2¾ millions. The income is not quite so high as the income of the last two years; but the ordinary expenditure appears remarkably low as compared with the figures of previous years, and is the lowest that has been shown since 1866–67.

It will be very satisfactory if this anticipation shall be realised.

In this year, however, as in the preceding year, the main cause of the surplus arises from the opium receipts. Early in the spring of 1871 a very injurious blight befell the poppy crop of Behar, by reason (as appeared on inquiry) of unseasonable rains soon after seed time, and of unpropitious changes in the weather near harvest time. Hence there was, immediately, an anticipation of a short yield, which anticipation was but too fully borne out by the event, for the damage turned out ultimately to be a loss of 14,743 chests, or 26 per cent. on the expected out-turn. Consequently, the prices of Bengal opium rose, and continued to range at high rates. Thus the fiscal receipts became much enhanced. Under ordinary circumstances, it might be supposed that such enhancement would be counterbalanced by short supply. If, on the one hand, we received more than was expected for the quantity disposed of, we should, on the other hand, have less quantity to offer for disposal. But, in reality, such was not the case under the circumstances necessarily produced by the existing system. While the high prices were ruling, we were disposing of full quantities drawn from the yield of the previous year. The short harvest did not affect the supplies of the period immediately following. Consequently the revenue, for a time, gained the full advantage from enhanced price on a full supply.

	Chests.
Final Estimate	55,724
Out-turn -	40,981
Deficiency -	14,743

Besides this temporary advantage relating to the Bengal opium, the same causes appear slightly to have stimulated the exportation of Malwa opium from Bombay. The export of this opium which pays a fixed duty per chest has somewhat exceeded the estimate.

Again, these circumstances operated on the immediate financial out-turn in another way; which was this. The estimated outlay for Bengal opium on the part of Government had been framed on the supposition that there would be an average yield, and, consequently, an average payment to the cultivators for their produce. But, as the produce fell short, so the payments decreased. Hence, there was a large saving on the expenditure side.

On the receipt side there is under this item 1¼ million, or 1,214,900 *l.* more than the Budget; and on the expenditure side nearly half a million, or 491,600 *l.* less than the Budget. The real improvement on the receipt side is even larger than appears on the face of the accounts, for, owing to a change of system introduced during the year, the cost price

of

Appendix, No. 1.

Regular Estimate, 1871-72

of opium retailed for consumption in India has been removed from the head of opium on the receipt side, and from that of excise on the charge side. The sum of 138,600 *l.* was the estimated receipt on this account, and this sum must be added to the increase shown in the accounts, in order that the total real improvement may be understood.

Thus the total actual gain under opium as compared with the original estimate of the year amounts to more than 1¾ millions, or 1,845,100 *l.*

The prices of Bengal opium, which stood at 1,163 rupees per chest at the beginning of the year, that is, in April, rose gradually till they reached 1,569 rupees per chest in November. Then they fell to 1,425 rupees per chest in December, since which time they have remained steady on the whole, though with occasional fluctuations and indications of a tendency to decline. The average price per chest obtained for the 49,695 chests sold during the whole year has thus been 1,388 rupees, instead of 1,075 rupees as estimated. After the fluctuations which the prices have experienced, it were vain to predict their continuance at any such rates; especially as they probably depend on the vicissitudes of season not only in India, but also in China. If there should be, simultaneously, propitious seasons in both countries, a fall in prices is to be feared. At all events, we should be on our guard against a fall in prices, which are now ranging higher than the average of recent years.

By this great gain on opium, then, we account for nearly three-fourths of the surplus (2,606,600 *l.*) over the original estimate; in other words, for that part of the surplus which is abnormal or exceptional.

But there still remains more than one-fourth, represented by 761,500 *l.*, to be otherwise accounted for, which is of a more normal and regular character. This portion of the surplus does not at all arise from increase of receipts other than opium, for, on the contrary, there is some decrease in those receipts. It really arises from large savings in expenditure, as will be presently seen. The reductions on the side of charges amount to 1,098,800 *l.*, with a set-off of 337,300 *l.* loss of receipts, bringing out the net sum of 761,500 *l.* above shown.

I must, first, explain the decrease of revenue, which occurs, under various heads, as follows:—

Under land revenue there is a falling off of 142,700 *l.*, which occurs, in Oudh owing to floods, in Bombay, owing to large remissions necessitated by drought in the southern Mahratta country, and in Bengal owing to the sale of Government estates being stopped.

Under forest there is a decrease of 146,800 *l.*, partly balanced by a saving in the expenditure of 116,100 *l.*

The salt revenue shows a falling off of 193,800 *l.*, which is distributed through all the provinces and must cause some anxiety.

The decreases under post office, telegraph, law and justice, and marine are all largely exceeded by savings shown on the other side of the account. The decrease of 25,200 *l.* under public works ordinary is owing to the transfer of receipts to provincial funds. The falling off of 25,700 *l.* in canal rents, notwithstanding the heavy expenditure of capital on these works, is not satisfactory.

On the other hand, there are some increases, namely, 25,900 *l.* under tributes, due to a succession having occurred in the Nábha State; 224,600 *l.* under assessed taxes (Income Tax), the arrears from the preceding year having proved larger than was expected, and 64,300 *l.* under army receipts, sale of stores, and the like.

So much for the receipt side. On the expenditure side there are reductions as follow:—

There is decrease of 33,600 *l.* under interest on service funds and other accounts, attributable to transactions with the several civil funds; of 90,100 *l.* in land revenue establishments, arising chiefly in the allowances payable to village officers in the Bombay Presidency; of 12,800 *l.* under assessed taxes; of 8,500 *l.* under customs; of 103,300 *l.* under post office, partly due to economy in India, but chiefly relating to the payments in England of the subsidy for the overland postal service; of 48,400 under telegraph; of 16,700 *l* under minor departments; of 129,800 *l.* under law and justice, owing to general economy, but partly relating to the process-serving establishment in the Madras Presidency; of 170,900 *l.* under marine, relating partly to provision of stores in England, and partly to slack work in the Bombay dockyard; of 8,100 *l.* in the ecclesiastical department, owing to vacancies remaining unfilled, of 108 400 *l.* in the miscellaneous branch, owing to improvement in exchange. The decrease in excise of 159,500 *l.* is largely nominal, as already explained with reference to the opium figures, and the decrease under stamps and stationery of 150,900 *l.* is partly owing to the transfer of stationery to the heading of administration, which accordingly shows an increase of 82,200 *l.*

I am obliged to be brief in respect of these items, indicating only those circumstances which are special. But in general terms, it may be said that these reductions are largely (though not wholly) derived from real savings of various sorts all over the country, apparently small if reckoned singly, but making up a considerable aggregate when taken collectively.

In respect of the army, it will be observed that the charges are not expected to increase beyond the amount set down in the budget, but that on the contrary there is to be a saving of 240,100 *l.* That increase should be avoided, is a circumstance creditable to the military authorities and indicative of saving and economy. For the estimates are burdened with two items not originally contemplated. A saving of 100,000 *l.* in the native army was reckoned upon, which calculation was considered justifiable in the then condition of our correspondence on the subject with Her Majesty's Government. To our regret, however, we have not been able to secure that saving. Again, since the framing of the budget, it has been found necessary, as is well known, to undertake military operations against the

Appendix, No. 1.

Regular Estimate, 1871-72.

Looshais and other wild tribes on the eastern frontier. The cost of that expedition will entail an additional charge of 200,000 *l.* during the year.

It may therefore be asked how, notwithstanding these items of increase, the total result has not been unfavourably affected, but is turning out more favourable than the first estimate? Well, the reason is that there have been considerable savings, estimated at 480,000 *l.*, or nearly half a million sterling. There is hardly time now to specify the items of which this large economy is composed. But I may state briefly the chief of them. In the first place there is a total reduction of 198,000 *l.*, in various items, namely, the cost of provisioning European troops, the compensation payable to native troops for dearness of grain, the cost of feeding army remounts and commissariat cattle, the compensation for dearness of forage. Again, there have been lesser, though still appreciable reductions in the purchase of live stock, of rum, of remounts, of camp equipage; in the charges for sea transport by the Cape and for overland transit, in medical supplies, in barrack establishments and supplies, and in miscellaneous charges, by abolition of various appointments, or by vacancies left unfilled in the medical branch, in the military account department, in the commissariat establishments, together with other reductions. On the whole, I think we may congratulate our colleague at the head of the War Department (General Norman) on the satisfactory condition of the military estimates.

As some of the remarks made on this subject in my exposition before this Council of March 1871 have been followed by public discussion elsewhere, I am obliged to revert to that for a moment. The Council may recollect that commenting on the estimate of military expenditure *in India* for 1871–72, I remarked that the amount was the lowest that had been taken any year since the war of the Mutinies. From the comments evoked by this remark, it would almost seem to be supposed that the total military expenditure (both in India itself and in England on account of India) had been reduced; that the reduction itself was made to look larger than it was; that the fact was ignored of the expenditure not having decreased in proportion to the reduction in the strength of the army in India But if any such suppositions have been entertained by any one, they are quite incorrect.

It has never been represented in this place that the *total* expenditure (in India itself and in England on account of India) has been reduced. The figured statements laid year by year on this table have shown the contrary. And in my exposition of March 1869, it was not only declared that in the aggregate the expenditure has increased despite reduction of force, but it was shown, in some detail, how this had come about. On that occasion, a brief *resumé* was given of the inevitable circumstances which have enhanced the expenditure of late years, circumstances arising from the rise of prices, from organisation approved of by the Government in India and in England, from regulations applicable to India in common with all parts of the British empire, from improved armaments, from increased demands arising out of changes of system.

These points having been already stated on a former occasion, I did not last year trouble the Council with a re-statement. It was indeed stated, in March 1871, that the expenditure in India was at the lowest point reached since the war of the Mutinies, and thereby allusion was made not to any insignificant amount, but to a difference in our favour of 443,636 *l.*, or nearly half a million. And this, by itself, is fact of relevance and of consequence, inasmuch as the charges in India do, in the main, represent the effective charges of the army, less stores and transport charges, which are incurred in England. And this had arisen partly from efforts and sacrifices made by the Government of India. But in stating this, nothing was further from our intention than to intimate that no further reductions of expense could be judiciously made.

The decrease in railways, 101,300 *l.*, is owing to short expenditure of capital. Less land has accordingly been taken up, and there is less loss by exchange The head of guaranteed interest which was at one time during the year the source of some anxiety ends with a small improvement of 35,500 *l*

It will be observed that there is an increased charge of 101,400 *l.* for interest on the debt. This is due to large arrears of unclaimed interest having been paid during the year, partly in reference to the discharge of the 5 per cent. loan.

In the item of provincial services there will be found an increase of 51,800 *l.*; this has arisen from additional or supplementary grants made during the year to several local governments, to cover fresh services transferred to provincial administration, or for other reasons in special cases. Ordinarily, the allotment for these services ought not, under present arrangements, to increase, unless the services themselves be increased; in fact, the comparative fixity of the grants for services which would otherwise be growing constantly, is one of the financial merits of the scheme. But during this, the first year after the introduction of the measure, it has been necessary to make a few special and limited concessions in order to adjust claims relating to antecedent transactions. As one instance out of several, I may mention the allotment made for the construction of the small cause court house at Calcutta, whereby the annual rent defrayable by the Government of India has been capitalised and discharged by payment of an equitably calculated sum.

It might be premature to pronounce on the general merits of the scheme in practice after only one year's experience; but, from a financial point of view, it appears to be working well. There has been, of course, the avoidance of that friction which is inseparable from a central control over expenditure in matters specially local. There is some abridgment of labour. There has been either absence of complaint, or else expression of satisfaction on the part of the local authorities. Here and there it may be that charges have been allowed under the new, which would have been refused under the old system. But, on the whole, the local governments

Regular Estimate, 1871-72

governments seem to have been stimulated in the study of economy by the new and additional interest which they are enabled to feel in their financial affairs. And, further, this is evidenced by the fact that some of these governments have husbanded the sums at their credit, and keeping their expenses within the limits of their grants, have begun to accumulate funds for future use.

In previous expositions I have noticed the clearance effected in some parts of the accounts by the adjustment of long standing and unsettled items both on the credit and the debit sides. Having regard to the complexity and variety of the affairs in hand, we cannot say that no such adjustments will recur; but, as a fact, none have occurred during the year and none are immediately anticipated. One only, of any consequence, is looked for at present, and that relates to the capital of the civil service annuity funds recently abolished.

To return to the figures then, the sum of my explanation is this, that besides the surplus of 1,845,100 *l.* from opium, there is a surplus of 765,100 *l* due to other causes. This latter amount (761,500 *l*) is owing to large reductions in the expenditure. The budget estimate showed an equilibrium supported by a small surplus of 93,400 *l.* The regular estimate shows a surplus of 2¾ millions (2,700,000 *l*) Of the excess (2,606,600 *l.*) over the original estimate, more than 1¾ million is due to opium, under abnormal circumstances. But there remains three quarters of a million arising under normal circumstances of finance. Disclaiming any credit for the opium surplus, we may, perhaps, in some degree, claim credit for the remainder of the surplus, as tending to show that the original estimates were cautiously made, and that economy has been so enforced that the various departments have worked within the estimates of expenditure

It will be prudent to defer commenting on the consequences which may hence accrue to the position of our finance, until it shall be possible to compare this important estimate with the actual figures after closing the account. Whatever surplus shall ultimately be found to have accrued, will be, indeed, needed to compensate for deficit of former years. And, if the result now brought out shall be sustained and confirmed, its importance will be manifest, especially if considered together with the secured surplus of the year 1870–71. There would then be occasion for observing how far the deficit of previous years had been counterbalanced by surplus of succeeding years. Our hope is that, on the combined result of a series of years, there will be a sufficiently even balance between the incomings and outgoings of the Treasury; or, in other words, that one year taken with another, we shall have received as much as we have disbursed for ordinary expenditure, irrespective of the extraordinary account. This is a primary object of our financial management, and we shall, with unremitting effort, strive to place the attainment of the object beyond question or dispute.

The surplus arising from comparison between income and ordinary expenditure is irrespective of the extraordinary expenditure on reproductive public works, which is provided for by loan funds. An expenditure on this account of 3,626,000 *l.* was contemplated in the budget estimate; the regular estimate, however, shows only 1,736,800 *l.* so spent. This latter sum has been chiefly expended on the great canal works in the Cis-Sutlej States, from the river Sutlej; in the Agra division, from the river Jumna, below Delhi, in Behar, from the river Sone; in Orissa, from the river Mahanadi; in the delta of the Godavery, for extension of the irrigation system there. There has also been some expenditure on important projects, in Oudh from the river Sarda; in Rohilkhand, from the river Ganges (called the Eastern Ganges Canal); in the Lower Doab, also from the Ganges; these canals being in addition to the well known Ganges Canal.

In respect to the State railways, there has been expenditure on the lines between Lahore and Peshawar; between Delhi and Rewaree; between Agra and Ajmír; also on the project for the lines between Multan and Kotrí in Sindh; between Nimar and Indor in Central India, and between Dharwar and Karwar in the south Mahratta country.

That the estimated amount has not been more fully spent, is due chiefly to prolongation of the time allowed for the elaboration of the canal projects, and partly to the unavoidable delay in determining the narrow gauge for the State railways in India

According to the form prescribed for the financial statement, the sum of 1,736,800 *l.*, added to the 47,276,500 *l.* of ordinary expenditure, make up a total of 49,013,300 *l.*, or 49 millions.

Budget Estimate, 1872-73.

I now arrive at the third part of the subject, namely, the Budget Estimate for 1872–73.

Commencing on the receipt side, we find 21 millions (20,900,000 *l.*) under the head of Land Revenue, the calculation in this instance being based, for the most part, on the estimates by the local governments. The amount exceeds that of previous years, and (if adjustments and transfers be for the moment put out of question) is the largest sum of land revenue ever yet presented. The realisation of this large estimate must, however, partly depend on the ensuing rainy season.

Under Forests, there is an increase of 154,400 *l.*, against which must be set an increase on the charge side of 110,000 *l.* The department is at present largely engaged in furnishing sleepers for the State railways. Its receipts, indeed, for the most part represent the value of work done for the service of the State, The cash receipts from private persons and from the general public are not, as yet, considerable. The financial result is therefore unimportant; and there is no profit in the strictest and narrowest sense of the term. Such being the case, there is every reason for enforcing severe economy in the expenditure of a department which is not, ordinarily, and directly, remunerative. On the other hand, the expenses (on the whole increasing from time to time) do really subserve the national object of husbanding and preserving that wealth of forests wherewith nature has endowed

Appendix, No. 1.

Budget Estimate, 1872-73.

many parts of India—a wealth which would, otherwise, be wastefully and destructively expended, even up to the limit of exhaustion and extinction. In this view, our forest expenditure may be regarded as indirectly remunerative.

In Excise there is a nominal decrease of 125,700 *l.*, as the cost price of opium retailed in India is, henceforth, to be credited directly to opium, and not intermediately to excise.

The item of Assessed Taxes I shall reserve for remark hereafter.

The Customs revenue is estimated at 2,570,000 *l.*, being approximately the same as in the past year. It might be wished that the condition of trade warranted the anticipation of a large increase under this head of revenue. But the statistics of the foreign trade of India, for some years past, would not bear out such an estimate. It is not possible, at this place and time, to analyse these very interesting statistics; but I may here state that the figures for the last complete financial year, 1870–71, show the total value of imports and exports at 96½ millions; whereas the previous three years showed, for 1869–70, 100¼ millions, for 1868–69, 105½ millions; for 1867–68, 99¾ millions, respectively. So far, then, 1870–71, would seem to show a falling off as compared with previous years. Even those years fail to prove a tendency towards progressive increase. And the year just closed hardly promises more than a slight improvement. Such would *primâ facie* be the inference from the totals of the figures. But the inference would become less discouraging on further examination. For, as is well known, the American war imparted, from 1862 to 1865, a violent impetus to Indian trade; an impetus, indeed, too strong to last. The average trade of the five years preceding the war amounted to 52½ millions per annum. For the five years since the war, the trade has averaged 102 millions. The average increase of the latter quinquennial period over the former, then, is very considerable, and might encourage the hope that India is not losing, but is, to a large extent, maintaining, the commercial position which special circumstances enabled her for a time to acquire. Reverting to the trade of the year 1870–71, I would ask remembrance of the fact that the trade consists of two elements, merchandise and treasure. Now the total merchandise imported and exported amounted to 88¾ millions, which compares favourably enough with the 85½ millions of 1869–70, the 89 millions of 1868–69, and the 86½ millions of 1867–68. Again, for 1870–71, the exports amounting to 55½ millions represent the largest figure for any year since the American war, and, on the whole, this figure, representing the quantity of her produce which India sends to other countries, is the most important of all her commercial circumstances. Moreover, this good result was obtained, not in a year of peace, but in a year when the Franco-German war injured the trade with France and caused a diminution, by full two millions, of the exports from India to that country. The returns for the current year, so far as yet made up, promise that this favourable position will be maintained. Whatever else, then, may or may not, be inferred in respect to our trade generally, I may say that our export trade is such as to impart hopefulness to every well-wisher of British India. Again, the imports of 1870–71, valued at 33½ millions, exceed, somewhat, the 33 millions of the preceding year. Both years are, however, rather below the sums of the two previous years. But for this there is a particular reason, in that the tariff valuations of cotton goods and metals were reduced, in 1869, by 15 per cent. Had the valuation remained the same, then the value of imports for 1870–71 would have been higher than any year since the American war. Here again, therefore, no reason for discouragement appears. On the whole, however, it must be acknowledged that, with seasons generally prosperous, such as those we have lately had, we might have hoped that the Indian population would enlarge their consumption of European articles more than they are, apparently, doing at present.

But, if the last year and the current year have progressed fairly well as regards merchandise, why does the total trade show a diminution? Because the importation of treasure has greatly decreased of late. Even after the famous "drain of silver to the East" had become mitigated, still, during the first four years after the conclusion of the American war, India imported on an average 14 millions sterling worth of treasure annually. In 1870–71, however, only 5½ millions were imported. This fact may seem, at first sight, surprising. But the surprise would be lessened if it were remembered that, during the preceding years, the importations of treasure had been large, and that during this year, the drawings by the Secretary of State in London were high, amounting to nine millions. During the year 1871–72, the Secretary of State's drawings have been, again, large, 10¼ millions of pounds, and, till lately, but little treasure has been imported. For some time past, however, the importation has been rising.

Turning to particular staples, the importation of piece goods is, in respect to quantity, satisfactory enough. But I would recall to mind what was pointed out in my last exposition, namely, that this alone would not prove a favourable condition of the trade. There have been, and perhaps still are, complaints of difficulty of disposing profitably of these goods in the market in the interior of the country. As regards exports, cotton (577½ millions of lbs.), jute (3¾ millions of cwts.), oil seeds valued at 3½ millions sterling, coffee (33½ millions of lbs.), tea (13¼ millions of lbs.), indigo (101,421 cwts.), rice (15¾ millions of cwts.), for the year 1870–71, represent very satisfactory quantities; and there is good hope of these quantities being maintained, perhaps even exceeded.

The influence of the Suez Canal upon the trade of India is becoming clearly perceptible. The proportion of steamers to sailing vessels in our ports is fast increasing. To and from Calcutta alone, there passed through the canal during 1871 some 155 vessels, carrying produce valued at 13 millions sterling. I am not able to give similar statistics for the other ports. But the facts from Calcutta will give some idea of the magnitude which the canal-

borne

Appendix, No. 1

Budget Estimate, 1872–73

borne trade is fast reaching. Not only are the less bulky and more valuable imports being carried by that route, such as pressed cotton and piece goods, but also some of the more bulky exports, such as oil-seeds and fibres, and even rice. The extent to which an important export, the fibre of jute, is being thus conveyed, may be regarded as remarkable: last year (1871) some 74 ships laden with 633,000 cwts. of this staple, among other things, passed through the canal. This, of course, is contrary to the original expectation, according to which it was supposed that for the bulky articles, the Cape route would be preferred. The fact that British coal is appearing among our imports, to the partial suppression of Indian coal, is probably attributable to the canal For the ships sailing by the Cape route, being no longer able to find freight in piece goods and the like, from England to India, are beginning to carry coal. On the other hand, despite the competition of the canal, the season has been very favourable for the sailing vessels on the old route, and freights have been more than usually high.

I have made these observations here, because the state of trade greatly affects several items in the budget.

The next item is Salt, under which there is an increase of 106,800 *l.*, the revenue estimated being, however, a fraction less than the amount actually received in 1870–71, that is, the year before last

The amount set down for opium, 7,700,000 *l.*, or 7⅘ millions, though but little below a normal estimate, is considerably less than that which we are receiving for the current year. This decrease arises, as respects Bengal, from the circumstances I have mentioned to-day, namely, the short crop of last season. That failure of supply affected only one quarter of the financial year just closed. But it will affect three quarters of the present year. For these three quarters, then, the quantities are known, and have been already notified. The Government has further announced that it will not, in any case, sell *more* than 48,000 chests in the calendar year 1873. This has reference to the formation of a substantial reserve of opium; an object which we have long had in view, which we have been prevented from attaining by misfortune of harvest; but which we still hope to attain. The prospects of the poppy are good as yet, but we must take 951 chests from the present crop, to make up the quantity advertised for sale in 1872. If the yield should prove large enough to provide this and leave a margin, it has been determined not to postpone longer the commencement of a reserve sufficient to enable us to mitigate the effects of such a failure of crop as we have experienced during the past year

It has been shown to-day how greatly the prospect of short supply has caused prices to rise during the late financial year, and how, despite fluctuations, these prices remain high. If they were to continue steady at these rates, or nearly at these rates, then, notwithstanding the diminished quantity of the first three quarters, there would be a high revenue. But no reliance can be placed on their remaining steady. If the yield of the coming harvest in China were to be large, the possibility of fluctuations in prices, perhaps even of a serious decline, must be borne in mind. And if such a decline were to occur while we were disposing of the short quantities from last season, the falling off in fiscal receipts would be aggravated. Considering, then, that we must guard our financial arrangements against disturbance from failure in this precarious branch, we have assumed the price of Bengal opium at 1,200 rupees (or 120 *l.*) per chest, a price which, though considerably less than the average of prices during the past year, is yet a good deal more than the 1,075 rupees (107 *l.* 10 *s.*) per chest assumed in my last budget. This estimate will, I trust, be found to be safe, as it provides for the contingency of a fall in prices.

There remains the estimate of the number of chests of Malwa opium likely to be exported, which will pay the fixed duty per chest. In framing this estimate, we must be guided by the prospects of the trade and of the harvest, and the quantity of Bengal opium to be brought forward. These points having been considered, a probable number of 37,420 chests has been set down. Compared with 38,754 chests which paid duty in 1871–72, the number appears moderate. The reports of the Malwa crop now being gathered are quite satisfactory.

The estimated exports of Malwa opium, combined with the 44,175 chests of Bengal, will bring up the total estimate of Indian opium for China to 81,595 chests.

Year by year, experience brings home to us the conviction that there are few points of greater consequence to the prosperity of Indian finance than a safe and moderate estimate of the opium revenue.

The Stamp revenue is expected to amount to 2,500,000 *l.*, being almost the same as the figure shown for the year just closed. The progress of this item has been satisfactory for many years. Up to 1860, the highest annual sum received from stamps, was three-quarters of a million, 722,156 *l.* A revision of the law then took place, which brought the yield up to 1½ millions per annum, 1,455,633 *l.* In 1862, a further revision was made, under which the revenue rose to close on two millions per annum in 1867. Then a series of revisions, more complete than any previous undertakings were conducted, embracing both duties leviable on judicial proceedings and on legal instruments, that is, both the judicial and the commercial branches; in these affairs our late colleague, Mr. F. R. Cockerell, had a laborious and honourable share They were completed in 1870. The object aimed at was, to simplify and readjust the scale of duties; to rather lower them on the whole; and for increased returns, to rely mainly on improved strictness of administration. In arranging this, regard was had to the model of the English stamp law, to local custom, to the convenience of trade, and to the interests of the various classes of suitors. Under the operation of the recent legislation, the revenue has risen from two millions in 1866–67 (1,923,977 *l.*) to

2½ millions

Appendix, No. 1.

Budget Estimate, 1872–73.

2½ millions (2,496,000 *l.*) for the year just closed. On the whole, it may be said, that in 12 years, the stamp revenue of India has risen from three-quarters of a million to 2½ millions per annum.

The Mint receipts, arising chiefly from the seignorage on the coining of bullion presented by the public for that purpose, are governed by the considerations which I have mentioned regarding the importation of treasure. The two mints (at Calcutta and Bombay) have, for the last years, been often in a state of enforced inaction. At present there is much more activity; there is, at times, a brisk importation of bullion; and the high rates of exchange justify hope; therefore, the estimate is based upon a calculation of eight millions worth of silver bullion being probably presented for coinage during the year, and is taken at a figure higher than that of previous years. It is still, however, moderate in amount.

A decrease of 17,700 *l.* may be observed in Post Office receipts. This arises from improved arrangements respecting official postage, and does not indicate any falling off in the postage on private correspondence, which is, indeed, increasing steadily. A decrease of receipts arising from reduction in the weight of official correspondence, though it might cause the total out-turn to be diminished in the returns, would not show the financial effect adverse, but favourable, and would only be a proof of real economy. I have noticed, in former expositions, the development of postal correspondence, public and private, in this country, now represented by 86 millions of covers annually.

The Electric Telegraph receipts show a slight improvement of 13,400 *l.*, which is the more satisfactory, in that the telegrams on the Government service are diminishing, while the telegrams sent by private persons and the public are increasing. There have been some modifications of tariff during the year. On the whole, the income of this department is but poor, especially as compared with its expenses. The fact that its annual income is just one quarter of a million (249,000 *l.*), while its charges are little short of half a million (483,000 *l.*), should supply an incentive for stringent economy in working expenses.

Under the head of Interest there will be seen an increase of 102,000 *l.* This is owing to the completion of the investment in government securities of the specie reserve of the paper currency nearly to the full legal limit of six millions. The note circulation which has been generally in excess of 10 millions, rising up to 11 millions, afforded full justification for this measure. At the present moment, indeed, the circulation is above 13 millions; but its continuance at this high point cannot be depended upon. The profits of the currency (consisting of interest saved) are set down at 245,670 *l.*, the expenses at 7,627 *l.*; leaving a net annual gain of 238,043 *l.* to the State.

Under the heading of Railways the gain by exchange is set down at 262,900 *l.*; against which there is a slight set-off of 33,800 *l.* on the expenditure side as loss by exchange. This credit and this debit arise from the existing arrangement, which was explained in my exposition of 1869. Thereby we gain 2 *d.*, that is, the difference between 1 *s.* 10 *d.* and 2 *s.*, on every rupee we receive in India on account of the guaranteed railways, and lose 2 *d.* on every rupee we pay in India on that account. For many years, while the payments for the construction of the lines were large, and the receipts from traffic earnings were small, the Indian treasury suffered a net loss by the transaction. But now, as the lines are being completed and as the traffic is developed, the scale is turned the other way, and a compensation in the shape of net gain may be looked for.

The grand total of Receipts stands at 48¾ millions (48,771,000 *l.*), apparently a moderate estimate The amount is less than the average of the past three years. But this does not indicate any falling off in the revenues of India. The difference less is attributable to the opium prospect, to loss of assessed taxes, and to transfer of some receipts from the Imperial sheet to local funds.

On the whole, the State income, though not otherwise than flourishing, fails to evince that elasticity and that tendency to rapid growth which we might desire to see, and which would be looked for if the requirements of progress in the expenditure are to be met. And this should inspire us with caution in attempting to relinquish any existing revenue which can be collected without contravention of established economic principles.

Let us turn next to the Expenditure side. Here we have seen an increase of 1,254,300 *l.* in civil charges. This is chiefly caused by increase in the grant for the opium department of 711,700 *l.* This arises in Bengal, from provision being made for the purchase of the yield of a full crop on a somewhat extended area; from a sanctioned enhancement of 10 per cent. on the price paid to the cultivator; and from increased advances on a still further expansion of cultivation. If this expenditure shall be fully incurred, it will fructify in increased receipts under this very important head.

There are other items of less importance in the civil branch which claim a passing notice. The decrease of 129,400 *l.* in interest on the debt is owing to the loan transactions in India, to which I shall presently advert It would have been even greater, had not some increased interest payments accrued in England. It is deemed prudent to assume the increase of 30,300 *l.* under refunds and drawbacks, because the amount paid in the year just closed has been abnormally below the average. It has been necessary to provide an increase of 56,500 *l.* under Land Revenue, by reason of the demands of some of the local governments for grants for the prosecution of surveys and settlements. The increase of 110,000 *l.* taken for forests is more than covered by the increase on the receipt side; the one largely depends on the other. The increase of 26,700 *l.* under Salt does not indicate increased establishments, but has reference to replenishing of stock at Madras and at Sambhur in Rajpootana. The increase of 10,500 *l.* under Mint provides for increased coinage on influx of bullion, and if incurred will be covered several times over by improvement on the receipt side. Of the

Appendix, No. 1.

Budget Estimate, 1872–73.

increase of 96,200 *l* on the post office, 50,000 *l.* are due to circumstances affecting the payment of the subsidy in England. The remaining increase arises from certain charges relating to district posts being eliminated from the miscellaneous head and classed under the proper postal head. A similar explanation is applicable to the increase of 56,100 *l.* in minor departments; the item merely relates to transfers from the miscellaneous heading. The increase of 70,700 *l.* under law and justice arises partly from debits in Madras, on account of process serving, covered by improvement on the receipt side; partly from recasting of judicial establishments in Burma, and partly from savings having occurred in the year just closed, which cannot be reckoned on during the ensuing year. The increase of 4,200 *l.* in the ecclesiastical department is attributable to the low state of that department during the past two years, vacancies being left unfilled which may require at any moment to be filled. The increase of 44,000 *l.* in political agencies is partly owing to important negotiations respecting territorial boundaries with the Shah of Persia. The increase of 119,200 *l.* under superannuation allowances springs from the increased retirement of covenanted civil servants after the new orders concerning the annuity funds. Under existing arrangements, the Government has, in effect, to make up, at once, the capital value of the annuity of every civilian who retires. Before dealing with the capital of the funds we await the passing of an Act of Parliament. The diminution of 119,300 *l.* under the heading miscellaneous is caused entirely by transfers from this to other headings in consequence of improved classification in detail. The bulk of this item consists of 500,000 *l.*, the estimated loss by exchange on the intended drawings by the Secretary of State of 13 crores of rupees at a rate of about 1 *s.* 11 *s.* and one-eighth for the rupee. The actual loss thus incurred in 1871–72 has been 395.480 *l.*, the actual average rate of the drawings being 1 *s.* 11 *d.* The present state of the exchanges warrants us in assuming a slightly improved rate, notwithstanding the substantial increase of drawings expected. The increase of 66,900 *l.* in the allotment for provincial services, arises from the transfer to this head of several small services, such as museums, charitable grants, municipal rates, house rent, and the like.

The total army charge is set down at 15,862,000 *l*, or nearly 16 millions, showing an increase of 118,100 *l.*, which is due to expenditure for stores in England. In my last exposition I stated that the charge set down for the service within India itself at 12,410,000 *l.*, or nearly 12½ millions, was the lowest exhibited since the war of the Mutinies, and I have to-day vindicated that statement. The corresponding item in this Budget is still lower, being 12,099,700 *l.*, or just 12 millions. This, too, provides for some outstanding expenses of the Looshai Expedition, and includes 40,000 *l.* for camps of exercise held to be so necessary for military efficiency. It should be mentioned, however, that 100,000 *l.* have been transferred from the military grant to that for public works, it having been arranged that the Barrack Department shall in future be subordinate to the Public Works Department.

Notwithstanding this transfer, the grant for the public works ordinary shows a decrease of 99,300 *l.* The Council will bear in mind that the total grant of 2⅓ millions (2,332,500 *l.*) now shown is irrespective of the grants for roads and civil buildings transferred to provincial services, and comprises partly works relating to departments under the Government of India, to agricultural improvement, and to the accommodation of the army. The decrease just shown cannot be regarded with complete satisfaction, even from a financial point of view; for of late years the necessities of our position have precluded us from adequately providing for the accommodation of the troops and for military sanitation generally. Under this stress many works, which probably must be executed sooner or later, have been unavoidably deferred or suspended, to the detriment of efficiency in some degree. I wish, indeed, there were the means of increasing the provision for these works which were pointedly alluded to in my exposition of 1869; but, under the circumstances, we are not able to propose more.

The charge for guaranteed railway interest, less net traffic receipts, is set down at 1,800,000 *l.*, or 1¾ million, an amount not exceeding the charges for the past two years, but still very high. The gross payment for this interest is taken at 4,724,000 *l.*, or 4¾ millions, against which there is the set-off of 2,924,000 *l.*, or nearly three millions, traffic receipts in India (net, after allowing for working expenses), which leaves the charge above shown. In my last exposition I noticed the abatement which must be made from the credit which would otherwise attach to this great enterprise of railway communication in India. And I am still unable to present a favourable picture of the case from a financial point of view. During the year just closed there have been occasionally serious fluctuations in the traffic, necessitating immediate retrenchment of working expenses. Two lines, the Sindh Punjab and Delhi and the Eastern Bengal, suffered much destruction in their works from violent and disastrous floods, and in consequence there was grave interruption in traffic. At one time there was a marked falling off in the traffic of the line hitherto regarded as the best, namely, the East India line. Such circumstances caused anxiety, and are being especially investigated. Happily there has been a marked recovery in the traffic of this line. The Great Indian Peninsula line has been fairly successful during the year. The other lines in Southern and Western India, which were not doing very well before, have, at all events, not fallen off of late. On the whole, the conditions of the guaranteed railways during the year have added one more to the many anxieties of Indian finance. The interests which the Government has at stake in these undertakings are acquiring really vast proportions; and the result is not as yet so favourable as might be expected. The traffic, as regards both passengers and goods, is not advancing as it apparently ought to advance.

There are doubts whether the fares are such as to attract the moving and travelling masses of a poor population like that of India. There are fears that in some cases other modes of communication, by river and road, are proving competitors to the rail. The working expenses appear to be generally high; and, with so many railway companies, it becomes difficult to regulate them with uniform economy; on some lines the working expenses are proportionably too high; for all India they amount to more than four millions sterling per annum; and a difference, more or less, in this great item produces a perceptible effect on the State finance of the year. I say this not at all to disparage the great services which have been rendered to the country under the present system, but to explain the actual contingencies which beset our finance, and to reiterate what was indicated in my last exposition, namely, that no part of our State finance requires, at the present time, more firmness and vigilance than that which relates to the guaranteed railways.

Before finishing my explanation of the expenditure side, I must add that the estimate of interest on funded and unfunded debt has been favourably affected by the recent loan transactions, the circumstances of which must be briefly recounted. The five per cent. loan of 16¼ millions sterling raised in 1857-58 to defray the expenses caused by the mutiny and rebellion of 1857, became repayable at the option of the Government on the 16th January 1872: that is to say, Government had engaged not to discharge it until that date, but had reserved the power, after that date, of either discharging it at any time, or of continuing to pay the interest, the only condition being that at least three months' notice should be given of intended repayment. Considering the condition of the public credit of this country, we thought that the opportunity should be taken to reduce the 5 per cent. rate of interest, and to offer, in lieu of that rate, 4½ per cent. for seven years, and, thereafter, 4 per cent., or, failing the acceptance of that offer, to discharge the loan. Accordingly, on the 16th of September 1871, the intention of discharging the loan on expiration of the term was publicly notified to the stockholders. At the same time, an offer was made to the stockholders of transferring their holdings to a new transfer loan bearing 4½ per cent. interest for seven years, and, thenceforward, 4 per cent. Government engaged not to discharge this loan for the next ten years at least. This offer was restricted to 13½ millions out of the total amount of 16¼ millions. The residue, namely, 2¾ millions, was to be discharged absolutely by means of that portion of the cash reserve of the paper currency which was, by law, available, for investment in Government securities; and, in exchange for the coin thus paid out, there were to be issued to the currency department, at the market price of the day, Government promissory notes bearing 4 per cent. interest. In other words, the opportunity was to be taken of investing in Government securities a portion of the cash reserve of the paper currency, in strict accordance with the terms of the law, and of rendering that investment as advantageous as possible by making it assist in the substitution of a 4 per cent. for a 5 per cent. rate of interest, for a part of the national debt. This had become practicable from a combination of circumstances: the paper currency had expanded, justifying an extension of the legal limit for the investment of part of the reserve in Government securities; the cash reserve had for some time past been higher than the amount necessary by law to be kept up; and thus an opportunity was being looked for, to complete the investment up to the legal limit.

The Government offer met with general acceptance from the stockholders. The total of the stock (held partly in England and partly in India) tendered for conversion on the terms proposed, exceeded 13,500,000 *l.*, the limit fixed for the operation. But as the Government had itself tendered a quarter of a million on behalf of the currency department, it was able, by withdrawing a portion of its own tender, to satisfy every stockholder who had accepted the offer made by the Government within the time fixed. The currency investment has been duly effected in the manner above described. The loan of 16¼ millions having been thus discharged, the saving of interest during the next seven years will be 93,698 *l* per annum, and, thereafter, 161,198 *l.* per annum, besides the immediate annual gain of 109,367 *l.* arising from the investment of 2,700,000 *l.* currency reserve.

The ordinary expenditure, then, proposed for the year amounts in all to 48,534,000 *l.*, or 48½ millions. The total, though, for reasons set forth to-day, above the amount shown for the year just over (47,276,500 *l.*, or 47¼ millions), is yet low as compared with the actuals of previous years, namely,—

1870-71	- -	49,930,695 *l*, or 50 millions.
1869-70	- -	50,782,412 *l.*, or 50¾ „
1868-69	- -	52,036,722 *l.*, or 52 „
1867-68	- -	49,542,107 *l.*, or 49½ „

In other words, if these estimates shall be borne out by the actuals, we shall have got below the expenditure which prevailed five years ago, even allowing for the receipts (about 700,000 *l.*) transferred to provincial funds, and so deducted from both sides of the Imperial account, and that would probably be deemed satisfactory.

Such is the budget for 1872-73, with an income of 48,771,000 *l.*, and an ordinary expenditure of 48,534,000 *l.*, leaving a surplus of 237,000 *l*; the result may be described as equilibrium, secured by a small surplus of a quarter of a million. Doubtless the surplus is not as large as it ought to be, but we are not able, under the circumstances, to make it larger.

Appendix, No. 1.

Budget Estimate, 1872–73.

So much then for the income and ordinary expenditure of the year.

Besides the ordinary expenditure as above explained, there is proposed an expenditure for public works extraordinary of 2,615,000 *l.*, or 2⅝ millions, to be provided for from borrowed funds. To the general character of these works I have already adverted to-day.

According to the form prescribed for the financial statement, it will be seen that the addition of this amount brings up the total of ordinary and extraordinary expenditure to 51,149,000 *l.*, or nearly 51¼ millions.

I must now ask the Council to revert to the item of assessed taxes. The amount set down (570,000 *l.*) shows a decrease of 254,600 *l.* as compared with the previous year. From the explanation already given to-day, it will be apparent that last year's receipts were swollen by arrear collections, which will not recur. The present moderate figure, over half a million, is assumed in consequence of the proposal which I have now to make on behalf of the Government of India, that the light income tax, which was imposed for the year 1871–72 just expired, be re-imposed, with certain modifications, for the new year 1872–73. I have accordingly to ask leave to introduce a bill into this Council for that purpose. The measure is, manifestly, indispensable, because, without it, there would be a deficit in the budget, a position which we could not contemplate so long as any fair alternative remained to us. The rate of assessment is proposed to be the same as that prescribed for the last year, namely, two pies in the rupee, or a fraction over one per cent. This rate is, as explained on previous occasions, the lowest at which the tax could be levied, if retained at all.

The proposed modification above alluded to is this: last year, it will be recollected, that the minimum income liable to assessment was raised from 500 rupees to 750 rupees per annum, in other words, incomes below 750 rupees a year were exempted. It is now proposed to raise the minimum to 1,000 rupees per annum; in other words, to exempt incomes below 1,000 rupees a year. Last year, the number of persons liable to assessment was, by altering the minimum, reduced from 480,000 to 240,000. By the further alteration now proposed, the number will probably be further reduced to 180,000. The first named exemption caused an estimated sacrifice of 150 000 *l.* The exemption now proposed will involve a further estimated sacrifice of 63,000 *l.* We were glad last year to be able to propose so large an exemption. We have further satisfaction in being able to propose an additional exemption now.

The unfavourable reports in respect to the working of the tax received from some parts of India have been duly considered, and suitable orders have been issued to prevent any just cause of complaint arising. From some parts of India, however, the reports have been favourable; and in many parts there is an absence of complaints. Our general conclusion is, that whatever trouble may have existed, has been mostly removed by the exemption of a large number of the tax payers, and by the reduction of the rate. Whatever remnant of complaint may still exist, will, it is hoped, be effectually removed by exempting incomes below 1,000 rupees per annum. No poor or needy class would then be subject to the tax, which will be unquestionably what it was always intended to be, a tax on classes in comparatively easy circumstances.

With all its drawbacks, the measure has done right good service to the finances. From 1860 up to the present time, it has, in various shapes, yielded 13½ millions to the exchequer. If our finances, one year taken with another, on a series of years, shall be found now to occupy a strong position, the tax has borne a creditable part in producing that result.

During our earlier deliberations regarding the budget, in January last, it was under discussion whether it would not be desirable to re-impose the tax on this occasion in combination with reductions of other taxation, either for the advantage of the mass of the people or for the remedy of politico-economic defects in our fiscal system. A mature and complete consideration of these important and complicated questions has, however, been impracticable under existing circumstances, and the Government have felt that, in order to be just and satisfactory, the discussion of changes which may still be regarded as desirable must be reserved for a subsequent period.

In the course which is now being adopted we have the express concurrence of the Secretary of State.

While proposing the re-imposition of the income tax for one year, we are unable to afford any indication as to whether the income tax should or should not, in the future, be made an integral part of our fiscal system.

The remarks made by the late Governor General, Lord Mayo, in the budget debate of last year, seem applicable to the present occasion. He then said,—

> "We do not offer any opinion whether it" (the income tax) "ought or ought not to be continued as a permanent part of our fiscal system. . . . The Government and this Council ought to have an opportunity of fully considering the claims for relief of some other interests which may be considered as competing with the income tax in regard to the reduction of burden."

Cash Account.

From this explanation of the receipts and charges of the year, I pass on to the fourth and last division of the subject, namely, ways and means and the cash balance account.

The original estimate for 1871–72 showed the anticipation of a cash balance on the 31st

Appendix, No. 1.

Cash Account.

March 1872 of 15,121,251 *l.*, or 15 millions, in India, and of 2,125,283 *l.*, or 2¼ millions, in England; the total being 17,246, 534 *l.*, or 17¼ millions. This sum was the balancing item at the end of a vast estimate embracing many and various things besides the regular finance of Government. It is now, however, expected that the amount will be 24,346,015 *l.*, or 24¼ millions (being seven millions in excess of the original estimate), of which 21,640,143 *l.*, or 21⅝ millions, will be in India, and 2,705,872 *l.*, or 2¾ millions in England. This again is an entry in the balancing of a great estimate, and is liable to disturbance. It is, however, checked by facts of the actual balances at the principal treasuries, up to recent dates, and it will probably be found nearly correct. I shall, therefore, explain briefly the difference of 7,099,481 *l.*, or seven million pounds, between the original and the final estimate. In the first place the opening balance was better than estimate by 2,102,381 *l.*, of which 1,293,689 *l.*, or 1¼ millions, arose in England, owing to the Secretary of State having raised money for the home requirements earlier than was expected. The remainder, namely three-quarters of a million in India, is owing to the improvement already explained of the actual account as compared with the regular estimate, and to other minor causes.

Then the surplus on the ordinary account of the year is now estimated, as already set forth, to be 2,606,600 *l.*, or 2½ millions more than the small surplus originally estimated, and the extraordinary expenditure is expected to be 1,889,200 *l.*, or nearly two millions less than had been estimated.

The result of the account of the Secretary of State's bills is more favourable than estimate by 759,100 *l.*, or three quarters of a million; this large sum remaining yet to be paid in India, though already received and credited in England, and included in the cash balance there.

The net amount borrowed during the year appears to be 278,500 *l.* more than estimate, notwithstanding that the Secretary of State raised, in 1871–72, one million (1,086,600 *l.*) less than was expected. The apparent excess upon the whole account, notwithstanding this decrease, is due to a large amount of the 5 per cent. loan of 1856–57 (more than 1,300,000 *l.*) remaining as yet unpaid to our creditors, and awaiting application for payment, though the amount has been transferred to the treasury from the currency department, as already explained.

These various causes account for a gross improvement in the balance of 7½ millions. On the other hand, we have received 569,000 *l.*, or half a million less railway capital than was expected. Thus, the net improvement of seven millions sterling is fully explained.

The cash balances, which we expected to be high, have proved to be higher still. When the estimate was first put forth, the amount was held by some to be too high. In answer to criticism to the above effect, I stated in debate, before this Council, in March, 1871:—

"The matter is one of discretion in a large degree, and on consideration of all our requirements and liabilities for the coming year, I beg to assure the Council that the present amount of cash balances is not otherwise than satisfactory."

These anticipations have been amply justified by the experience of the year just closed. In my last exposition it was stated expressly: "We duly bear in mind the amounts of the loans bearing interest at 5 per cent. during the coming year."

Accordingly, we did, in September last, proceed to deal with this portion of the public debt, amounting to 16½ millions, in the manner described already to-day. If ever there was an occasion when the cash balances ought to have been exceptionally high, it was this. The total cash in the treasuries, even at that time of the year when the amount is usually at its lowest point, amounted to 16 millions, with, practically, a certainty of increase by January, when the period of discharge would mature. The possession of such a resource immediately available, facilitated the execution of a measure profitable to the State. It is true that the maintenance of such high balances did cause some cost to the State, appreciable indeed, though hard of exact estimation. But that is vastly exceeded, on the other hand, by the advantage derived from the strong position of the treasury and the high credit arising thereby.

Again, the loss to the public interest, caused by the maintenance of an extraordinarily high cash balance, cannot have been at all as great as seems to have been supposed by many, or must have been out-weighed by positive advantages. Objections have often been raised which, if I apprehend aright, appear to amount to this, that these large sums of money have been lying either unemployed, or inadequately employed. There might be some force in objections of this sort if the money were in the treasury vaults, as it used to be under the old system. But under the new system, as is well known, a large part of these balances is deposited in the three Presidency banks, and the banks must naturally have had the use of the money for the benefit and convenience of the public. Regarding the character and extent of this advantage opinions may differ, but that there has been great accommodation hereby afforded to trade is unquestionable. And this has been repeatedly admitted by persons versed in the affairs of the money market.

This circumstance is not at all adduced as a reason, *per se*, for keeping up a high balance. All I say is this, that a high balance having, for a time, become necessary for State purposes, we have so managed that the balance should not, meanwhile, lie idle and infructuous, but should subserve indirectly the legitimate interests of commerce.

The new official year thus commences with a total estimated balance (England and India) of

Appendix, No. 1.

Cash Account.

of 24¼ millions, as just seen, of which, if the Estimates shall prove correct, 4¼ millions may be regarded as due to the accumulated surplus income of the two years 1870–71 and 1871–72. The Estimate for the close of the year may be contrasted as follows:—

—	31st March 1872.	31st March 1873.
	£.	£.
England - - - - - -	2,705,872	2,089,672
India - - - - - -	21,640,143	17,541,543
Total - - - £.	24,346,015	19,631,215

The estimated balance in India of 21,640,143 *l.*, or 21½ millions, at the beginning of the new year, is an amount almost unprecedented. This condition will not continue long, nor, indeed, ought it to continue.

By the end of the year, that is on the 31st March 1873, the amount in India, anticipated by Estimate, stands at 17,541,543 *l.*, or 17½ millions. This sum, if it shall be realised, will be more than sufficient for the standard of our ordinary expenditure. But it would be premature to consider this until we are more sure than we can be now of really possessing the money. It might, perhaps, be possible, the cash balances continuing high, to carry on the extraordinary expenditure after the close of 1872–73 without borrowing; and, that, indeed, would be a happy result.

We have provided, as has just been seen, for an extraordinary expenditure of 2,615,000 *l.* to be defrayed from loan funds; and, for all this, there is no loan to be raised either in England or in India during the year. The expenditure therefore is to be met from the existing loan funds which are included in the cash balance. And the funds in hand are sufficient. For, one of the estimates appended to my last exposition showed a probable unexpended amount of 2,591,438 *l.* of loan money at the end of 1870–71, to be carried to account for 1871–72. The actual account of loan money spent in 1870–71, which is appended to the present statement, raises this amount to 3,149,225 *l.* During the year 1871–72 the Secretary of State has borrowed 1,408,400 *l.* or 1½ millions in England, which, together with the balance from former years and some minor receipts detailed in the Appendix, makes up 4,580,685 *l.*, or 4½ millions. Against this there has been an extraordinary expenditure (according to latest estimate) of 1,932,500 *l.*, or 2 millions, leaving 2,648,185 *l.* or 2½ millions in hand. This last-named sum represents the funds available for the extraordinary expenditure of the new year 1872–73, as above shown.

There seems, occasionally, to have been an apprehension in some quarters that money ostensibly borrowed for extraordinary public works of a directly remunerative character, would really be used for the ways and means of ordinary finance. The observations on this point in my expositions of April 1870 and March 1871 were intended to correct any such apprehension, if it really existed, and to show that since 1869–70, when the system fairly begun, we have acknowledged all the moneys thus borrowed to be a debt due to the Public Works Department, which the Treasury is bound to pay. Last year I exhibited an abstract account of these transactions, and a further account will be found among the Appendices to-day. The substance of the explanation is that (subject to corrections of latest estimate) there have been borrowed up to date since 1869–70, 11,207,307 *l.*, or 11¼ millions (including the Elphinstone land loan), of which 5,504,224 *l.*, or 5½ millions, have been expended on public works extraordinary, and 3,054,898 *l.*, or 3 millions, have been lent to municipal and other public corporations (including the Elphinstone land advance), leaving 2,648,185 *l.*, or 2½ millions, in hand for these works, and for loans of the same character, in the year just beginning. There is to be no borrowing in the year; the amount in hand will suffice to cover the extraordinary expenditure of 2,615,000 *l.* proposed for the year, and may, indeed, leave a small margin. But then the advances made to municipalities must be borne in mind. We cannot say at present how much will be required in 1872–73 on this account, but the amount is likely to be not inconsiderable. Calcutta is borrowing for a market place and for the extension of its drainage works, and Bombay for its immediate municipal necessities. Upon the whole, it seems likely that by the end of 1872–73 all the loan money in hand will have been paid away.

The fulfilment by the general treasury of the obligations springing from these affairs is regarded by us as most important.

If it be thought that money has been sometimes borrowed too long beforehand, and that the provision of funds has anticipated the expenditure, then it might be said, in answer, that there are times and seasons for borrowing, and that money must be taken up when it can be most advantageously obtained. And these points have, doubtless, been well determined by the authorities in England, where the money has been chiefly borrowed. At this time, after comparing the sum total raised with the sum total expended, there remains

Appendix, No. 1.

Cash Account.

in hand no more than enough to defray the proposed expenditure on these works in the new year, and to cover the advances to be made to municipalities.

The Bill which was adverted to in my last exposition to enable municipalities to contract financial obligations without legal question, and to practically prevent them from borrowing from any party save the State, has passed into law.

If, notwithstanding these considerations, the anticipated amount of cash balance were yet regarded as too large, I should rejoin further that the exchequer still owes a considerable sum on the capital account with the guaranteed railways. It may be observed that 93½ millions of railway capital have been, or are to be, raised up to the end of 1871–72. This is to be counterbalanced by expenditure in England on account of the guaranteed railways, or by the payments for the construction of the lines in India. These taken together will, by the end of 1871–72, amount to 90 millions, leaving a debt due by the Indian treasury on this account of 3½ millions. This will be cleared off in due course, but the circumstance suggests carefulness, so as to maintain the cash balances in a strong and satisfactory condition.

Such, then, is my explanation of the cash balances, and I maintain that, if regard be had to the liabilities of the treasury, in respect of the borrowed funds in hand for public works, of the unexpended railway capital, of the Secretary of State's bills outstanding in respect of the assets of the local funds and provincial services, of the various deposits received under many laws and various circumstances, and in respect of the absolute avoidance of borrowing for ordinary service of the State, then the amount will be found satisfactorily high, though not too high.

In adverting to the main heads of the general cash account I will not repeat the general description given in previous expositions, which description is applicable to the accounts both in England and India given among the Appendices to-day. It will be most convenient to summarise the total figures of the two accounts in England and India taken together, as the one so much depends on the other. Suffice it to state that on the receipt side, besides the opening balance of 24½ millions and the Government income of 48¾ millions, as shown to-day, there are railway traffic receipts, recoveries and deposits, local funds, and receipts on remittance or suspense account, which bring up the total to 133,500,015 *l.*, or or 133½ millions. On the payment side, besides the Government expenditure, ordinary and extraordinary, of 51 millions, as shown to-day, there are railway working expenses, advances recoverable, deposits to be repaid, sums payable on bills drawn by the Secretary of State, disbursements for construction of railways in India, and some transfer entries, which bring up the total to 115 millions. This deducted from the total on the receipt side leaves the anticipated sum of 19,631,215 *l.*, or 19½ millions, already mentioned as the probable balance at close of the year, that is, on the 31st March 1873.

The Appendix shows, in separate columns, an abstract of the cash account kept by the Secretary of State in London on account of India. On the receipt side there is the opening balance of 2¾ millions (2,705,812 *l.*); the amount to be received on bills of exchange drawn on India is set down at 13 millions; there will be 2,146,700 *l.*, or more than 2 millions railway capital subscribed; all which, together with some smaller items, make up a total of 18 millions (18,110,472 *l.*) On the payment side there will be an expenditure in England on account of India of 13¼ millions (13,327,000 *l.*); there will be 1¼ million (1,160,400 *l.*) paid on the remittance account, and there will be 1½ million (1,526,400 *l.*) of withdrawals of railway capital. These, together with some smaller items, make up a total of 16 millions (16,021,800 *l.*), which, deducted from the total on the receipt side, leaves a probable closing balance on 31st March 1873 of 2 millions (2,089,672 *l.*), which amount appears to be moderate.

In the cash accounts thus summarised there are only two points which need be selected for remark; they are, the income from local funds, and the Secretary of State's bills.

The income of the local funds was in my exposition for 1871–72, set down at 4,028,473 *l.*, or 4 millions for all India. To this was to be added whatever might be received from special taxation which was then being devised by the several local governments. Since that time the contemplated measures have been legally authorised and carried out in the various provinces of British India. In Bengal the bill for the road cess has passed into law, but the levy has not yet commenced. The future yield is not yet known, but is calculated at 84,000 *l.* per annum at present, with prospect of increase.

In the North Western Provinces there is an acreage tax in permanently settled districts, and a 5 per cent. cess on annual value in temporarily settled districts, estimated to yield 211,000 *l.* per annum.

In the Punjab and Oudh there are Acts for levying rates on land, estimated to yield 132,000 *l.* and 31,000 *l.* per annum respectively.

In the Madras Presidency there are the Towns Improvement Act and the Local Funds Act, which seem calculated to yield in all 235,000 *l.* per annum.

In the Bombay Presidency there are Acts for taxing non-agricultural classes, and for a new police rate, estimated to yield 61,000 *l.* per annum.

The receipts from all these local sources during the broken periods of the year just closed, the first year of their introduction, have not yet been fully returned; indeed, time hardly yet admits of such a return being complete, but the total appears to be 754,000 *l.*, or three-quarters of a million. The greater part falls on the land, and a small part only on trades and professions. The figure is, however, approximate, and is subject to correction hereafter. In this way the latest revised estimate for the year raises the total from 4 millions

to

Cash Account.

to 4¾ millions, or 4,782,473 *l.* This statement may not be fully complete, but in so far as it is complete it represents the aggregate of local taxation in British India. And certainly the amount does not seem excessive, as compared with the population and resources of the country, and with the State income.

As regards the bills to be drawn on India by the Secretary of State, the total has been seen in the cash account to amount to 13 millions sterling for the year 1872–73. The loss by exchange on these operations is set down in the budget estimate at 500,000 *l.* In other words, England is, during the year, to draw 13 millions from India, and the charge upon India for that operation is expected to amount to half a million. Thus India has to pay 13½ millions in all. The amount, though serious, can be well accounted for, and can be discharged without embarrassment in the present state of the cash balances in India. It arises in this way. The expenditure, ordinary, in England on account of the Government of India is estimated at 8,236,800 *l.*, or 8¼ millions; extraordinary (chiefly stores), for works in progress in India, at 410,200 *l.*, or nearly half a million, the guaranteed railway interest at 4,680,000 *l.*, or 4¾ millions. These three items make up the 13¼ millions, or 13,327,000 *l.* And, inasmuch as there is to be no money borrowed, and as the railway capital paid up during the year, 2,146,700 *l.* is, for the most part, to be "withdrawn," that is, expended in England on account of the Indian railways, it follows that there is no resource but to draw on India for 13 millions.

The 13 millions for 1872–73 represent the largest sum ever yet set down on this account. The average yearly sum during the previous five years amounted to 5,666,849 *l.*, or 5½ millions, and that for the preceding five years to 6,114,083 *l.*, or upwards of six millions. One cause of the increase is, of course, the growth of the expenditure. Another cause is this, that, for several years, large sums (amounting to several millions yearly) of railway capital were paid in by the guaranteed companies in England. These sums were for the construction of the railways in India, and India repaid the debt by advances for the works on the spot. The arrangement *pro tanto* lessened the amount to be drawn by England on India. At this time, however, the works are approaching completion, and the capital subscriptions in England are becoming less and less. A further cause of increase is this, that the borrowings for Indian public works extraordinary, have been effected in England. The receipt of loan money there has, proportionably, lessened the amount to be drawn from India by bills. This year, however, there is to be no borrowing in England, and the amount receivable from India is not diminished by that reason. Lastly, in the three years 1867–70, a net sum of 5,812,728 *l.* (5¾ millions) was received at the home treasury, from Her Majesty's Government, in repayment of advances made in India for the Abyssinian expedition, and, to this extent, the Secretary of State's bills on India were reduced in those years. But, however complete the explanation may be, there remains the fact of the very large sum to be drawn from India, a politico-economic fact of some gravity, in relation to exchange and to trade. There is neither space nor time for entering on the subject on this occasion; but the circumstances cause special interest to attach to the returns of the export trade of British India. If the country is to continue satisfactorily to bear these annual drawings of money by England, she must look more and more to disposing of her products to other nations, and to obtaining thereby the resources which can alone enable her to make the annual payments in England, without monetary or other derangement within her own limits

Before concluding I must touch on some few matters connected with finance.

Conclusion.

The Government savings banks of all kinds (including those at the Presidencies, in the districts, and in regiments) have now 35,600 depositors, and 1,126,772 *l.*, or near 1⅛ million of deposits. The figures, if not absolutely large as yet, are annually increasing. The new district savings banks in the interior of the Bengal Presidency have, within the past year, increased from 49 to 92 in number, the number of depositors up to recent date being 2,300, and the deposits amounting to 40,374 *l.* These are only beginnings; but they will grow.

There are now 362 money order offices in British India, the number of orders issued were, in 1870–71, 242,700; amounting in value to 1,300,600 *l.*, or 1⅓ million. These figures are the highest yet attained. The arrangements for a money order system between India and England (so long delayed) are now nearly complete, and will, I hope, soon be announced.

The paper currency has been already adverted to in a former part of this exposition. It will suffice to add that some effect has been given to the arrangements promulgated last year for establishing currency agencies at the district treasuries in the interior, in addition to the previously existing offices of issue. Some 27 of these agencies have been set on foot, and more are in contemplation. In all they have had consigned to them notes to the value of a quarter of a million sterling. This, too, is a commencement, and further development is hoped for. It is matter for regret that the new 5 rupee notes have not yet been received from England.

The loan operations explained to-day have simplified the classification of the national debt of India, which may now be abstracted as follows: There are 10½ millions (10,663,600 *l.*) bearing 5½ per cent. interest, raised in the troublous times consequent on the

Appendix, No. 1.

Conclusion.

the war of the Mutinies. This loan will not be repayable, under its conditions, until 1879, at which time there will accrue to Government an option of repaying. There is more than one million at 5 per cent. (1,100,000 *l.*) This is made up of debentures (for periods of 10 and 15 years) issued in 1867–68 to raise money for public works. There are 16 millions (16,033,650 *l.*) at 4½ per cent.; this includes the large item to which I have just been referring, and which, after seven years, is to bear only 4 per cent. It also includes the loan received from Maharaja Holkar and some remnant of former loans. The next item consists of 36¾ millions (36,778,775 *l.*) bearing 4 per cent. interest. This is a consolidated head, comprising the loans raised up to 1832, commonly called "the sicca fours," the loans raised in 1842, and in subsequent years up to 1854, and the loans of 1869, one received from the Maharaja of Patiála and the other raised in open market. There is a small item of 67,900 *l.* at 3½ per cent. Besides these rupee loans in India, there are the loans raised in England bearing 4 and 5 per cent. interest (departmentally called the "sterling" loans, the amounts being expressed, and the interest payable, in pounds sterling). These now amount to 39 millions (39,036,017 *l.*) of which 22,200,000 *l.* bear interest at 5 per cent., and the rest, except a petty sum of 20,917 *l.* on which no interest is paid, bear interest at 4 per cent. They have been chiefly, though not entirely, raised at various times since the war of the Mutinies in 1857. Thus, of the grand total of 104 millions of "rupee" and "sterling" loans, no less than 54 millions already bear 4 per cent. interest, and 16 millions now ot 4½, of which the greater part will bear only 4 per cent. after brief terms of years. Thirty-four millions are bearing a higher rate, and we are only prevented from dealing with these with a view to reduction of interest, by the obligatory conditions on which they were raised. The figures just given do not include the 6,299,700 *l.* East India Stock, for the redemption of which a guarantee fund is accumulating.

Now, inasmuch as the 4 per cent. stock in England and India has, during the year, commanded higher prices than ever, generally as much as 98 and 99 for 100 pounds or rupees, and has sometimes reached, even slightly exceeded, par, it would seem that the credit of the Government of India in the money market may be measured by a rate of something less than 4¼ per cent. On the whole, the public credit of British India has never at any period been in a more satisfactory position than during the year just closed.

I shall finish this exposition by summarising its chief points. It has been shown, then,—

That for 1870–71 there is an actual surplus of 1,482,990 *l.* or 1½ million of income over ordinary expenditure, chiefly owing to increment of opium receipts;

That, however, without this increment, there is still a moderate surplus owing to other and more normal causes;

That, for 1871–72, there is an estimated surplus of 2,700,000 *l.*, or 2¾ millions of income over ordinary expenditure, of which three-fourths are attributable to increase of opium receipts, and one-fourth to ordinary management of the finances;

That the ordinary expenditure has been reduced to a point lower than any which has been seen during the past five years;

That for 1872–73, there is estimated an equilibrium between income and ordinary expenditure, supported by a small surplus of 237,000 *l.*, or one quarter of a million;

That the Income Tax Act for 1871–72 having expired on the 31st of March 1871, its reimposition is proposed for 1872–73, at the same rate as before, namely a fraction above 1 per cent., but with the exemption of incomes between 750 rupees and 1,000 rupees per annum, causing the release of 60,000 tax-payers, and a sacrifice of only 63,000 *l.* of revenue;

That the concession of increased financial control to the several local governments, in respect to certain provincial services, is working well, apparently affording satisfaction to the local authorities, and fostering a spirit of economy in administration;

That in addition to the previously existing local funds, fresh provincial taxation has been imposed in the various provinces of India, probably amounting in the aggregate to 750,000 *l.* per annum;

That, at the commencement of 1872–73, there remained upwards of 2½ millions in hand of money borrowed for public works extraordinary, after deducting expenditure and advances on these works up to date;

That it is proposed to meet 2½ millions of expenditure on these works, during 1872–73, without borrowing either in England or India;

That the cash balances in India, estimated at 21½ millions on 31st March 1872, are satisfactorily large, though not too high for the requirements of the country, present and prospective;

That the Indian Treasury is to meet 13 crores of bills to be drawn by the Secretary of State in England upon India during 1872–73;

That

Appendix, No. 1.

Conclusion.

That the rate of interest on 13½ millions of the national debt has been reduced from 5 per cent. to 4½ for seven years, and thereafter to 4 per cent., and that 2¾ millions have been discharged;

That the investment of the specie reserve of the paper currency has been completed nearly up to the legal limit of 6 millions sterling;

That the establishment of district savings banks is gradually, but surely, extending in the interior of the country.

I must now conclude this exposition. In previous expositions I have dwelt on the principles which have guided our financial policy. There is now nothing to be added thereto. I can only say that, throughout the past year, those principles have been followed, and have on this occasion, with your Lordship's support, been firmly maintained. And, certainly, a retrospect of results should encourage us to persevere in our present course. For the ordinary finance is in a condition of surplus; expenditure is kept within limits; the treasury is full; and the State credit is high, higher, perhaps, than it has ever been. But, though something has been accomplished, still much remains for accomplishment in the way of fiscal and economic improvement. And that should serve as a further incentive for perseverance.

Note—The Accounts for 1856–57 having been re-arranged for comparison according to the system adopted in 1870–71 will be found to differ in any respects from those already laid before Parliament, and must be taken subject to the explanations given in the body of the Evidence.

Appendix, No. 3.

TROOP TRANSPORT CHARGES.

Appendix, No. 3.

The following statement of the approximate expense of the passage of officers and troops between Great Britain (or the Colonies) and India during the nine years from 1861-62 to 1869-70, will afford some idea of the cost of the different systems of relief. It is divided into three periods of three years each.

1. During the years 1861-62 to 1863-64 the troops conveyed were fewer than in subsequent years, the liability of India to effect the relief of a stated number of regiments annually having only been admitted in the year 1864. The passage charges were moreover increased in the year 1865 by the application of the Royal Passage Warrant to officers, &c. proceeding to India. Hence the average expenditure of these years (1861-64) is much the smallest.

2. From the year 1864-65 to 1866-67 the reliefs were effected, as before, by hired transports sailing *vià* the Cape, the increase in the cost, as compared with the previous years, being accounted for in the manner above described.

3. The passage arrangements during the years 1867-68 to 1869-70, were conducted by means of the India Overland Troop Service, supplemented by vessels chartered to sail *vià* the Cape. The cost of these services is separately stated, but their total shows a further average increase upon the expense of the preceding years.

Passage of Officers and Troops (excluding Overland Troop Service).

YEAR.	EXPENDITURE.			Average of Three Years.
	In India. 1.	In England. 2.	TOTAL. 3.	4.
	£	£.	£.	£.
1861-62 - - -	222,910*	148,010	370,920	360,598
1862-63 - - -	141,111*	139,631	280,742	
1863-64 - - -	256,050*	174,081	430,131	
1864-65 - - -	354,584	174,949	529,533	571,336
1865-66 - - -	338,176	278,455	616,631	
1866-67 - - -	295,638	272,207	567,845	
1867-68 - - -	161,191	158,831	320,022	282,553 (Supplementary).
1868-69 - - -	179,302	145,359	324,661	
1869-70 - - -	149,511	53,465	202,976	

* These amounts are taken from special returns, furnished by the Governments of India, and those for subsequent years from the Finance and Revenue Accounts.

The estimated average expense of the India Overland Troop Service during the years 1867-68, 1868-69, and 1869-70, shown in the accompanying memorandum, is only 435,755 *l.*; but by adding the average cost of supplementary passage for those years, as above stated, viz., 282,553 *l*, the total average expenditure is raised to 718,308 *l.*, or about 140,000 *l.* more than was incurred immediately before the establishment of the Troop Service. This amount might perhaps be slightly modified, inasmuch as the outstanding claims on account of the Overland Troop Service were included in the estimated cost of that service, but the total passage charges of the years 1867-68 to 1869-70, would still be at least 100,000 *l.* in advance of the average of the three previous years.

£.	678,308

Appendix, No. 3.

As marginally noted, the items in column 1 of the preceding statement, viz., the expenditure in India for the years 1861-62, 1862-63, and 1863-64, are taken from the special* returns furnished by the separate Governments, the "Sea Transport" charges of those years not being separately shown in the Finance and Revenue Accounts presented to Parliament.

* In reply to Secretary of State's Circular Despatch, dated 14 December 1869 (Military).

The approximate number of troops and their families (counting two children as one adult) conveyed to and from India, in the nine years before referred to, is as follows:—

Year.	By Hired Transports.		By Overland Troop Service.		Total.	Average of Three Years.
	Out.	Home.	Out.	Home.		
1861-62 - -	3,233	7,127	- -	- -	10,360	12,390 adults.
1862-63 - -	4,624	4,817	- -	- -	9,441	
1863-64 - -	10,217	7,153	- -	- -	17,370	
1864-65 - -	9,211	10,805	- -	- -	20,016	18,860 "
1865-66 - -	8,856	10,388	- -	- -	19,244	
1866-67 - -	9,310	8,012	- -	- -	17,322	
1867-68 - -	4,127	2,297	8,595	7,385	22,404	21,560 "
1868-69 - -	2,089	1,541	9,696	5,964	19,290	
1869-70 - -	624	696	11,305	10,360	22,985	

The numbers of the last three years are much in excess of the average of the three preceding years, and this would, at first sight, seem to explain the increased expenditure of those years, but from the foregoing data we have (observing that the expense of the officers' passages, is distributed over the number of troops conveyed)—

		£.	s.	d.
For the 3 years, 1861-62 to 1863-64, the average cost of a passage -	$\frac{360,598}{12,390} =$	29	2	-
For the 3 years, 1864-65 to 1866-67, the average cost of a passage -	$\frac{571,336}{18,860} =$	30	5	10
For the 3 years, 1867-68 to 1869-70, the average cost of a passage -	$\frac{678,308^{*}}{21,560} =$	31	9	2

*The amount marginally noted on page 1.

In comparing the numbers on passage in any given season, with the actual expenditure incurred, as shown in these accounts, there is this difficulty. Under the old system of transport the homeward service commenced about the month of November, and extended to April and May, small detachments of invalids being dispatched as late as the months of July and August; and the relieving regiments and drafts usually embarked in this country between the months of June and September inclusive. The payments for freight, disbursed partly in England and partly in India, were brought to account in the financial year in which the claims were paid. The expenditure is, moreover, considerably influenced by the number of officers conveyed, which cannot be stated, for want of correct information, as to the homeward passages and passage allowances granted during the years referred to.

The preceding data, however, do not appear sufficiently trustworthy, and I would therefore suggest another mode of comparing the expense of the two services, by estimating the cost per head.

In the Parliamentary Return, No. 159, of 1865, "Reports and Correspondence respecting the establishment of a Line of Steam Transports between England and India," an estimate is given of the cost of transport by hired vessels sailing *viâ* the Cape of Good Hope, and by the (proposed) overland troop service.

The comparison therein made is not strictly correct.

Appendix B.

1. The freight of troops and their families (*i.e.* excluding officers) has been computed at the average rate for the year 1863-64, viz., 10 *l.* 1 *s.* 5 *d.* outward, and 28 *l.* 6 *s.* 4 *d.* homeward per adult. The average of the six years preceding the establishment of the Overland Troop Service, notwithstanding that two or three of those years were exceptionally expensive, was 10 *l.* 17 *s.* 2 *d.* outward, and 28 *l.* 0 *s* 4 *d.* homeward; the average rates of the three years 1861-62 to 1863-64 being 10 *l.* 0 *s.* 4 *d.*, and 26 *l.* 13 *s.* 2 *d.*, and those of the three years 1864-65 to 1866-67, 11 *l.* 9 *s.* 4 *d*, and 28 *l.* 18 *s.* 2 *d.*, outward and homeward respectively.

YEAR.	Out.	Home.
1867-68 - -	8,595	7,385
1868-69 -	9,696	5,964
1869-70 - -	11,305	10,360
	29,596	23,709
Average -	9,865	7,903
	17,768	

By taking the outward and homeward freight together, say,—

	£.	s.	d.		£.
9,865 adults at	10	17	2	=	107,117
7,903 "	28	-	4	=	221,416
*17,768 adults.					£. 328,533

---

* The average numbers conveyed in the troop ships during three years.

it would give a general average of 18 *l.* 19 *s.* 9 *d.* per adult; or, by adding 1 *l.* each for bedding, medical comforts and incidental expenses, the total passage cost of each adult, outward or homeward, would be 19 *l.* 9 *s.* 9 *d.*

2. The passage of an officer is stated, upon an average, to have cost 100 *l.* 9 *s.* 6 *d.* outward, and 127 *l.* 2 *s.* 10 *d.* homeward. These rates have been arrived at in connection with the number of officers of each rank conveyed to and from India, under the old system, in hired transports, say,—

		£.
To India	Field officers, - - -	at 135
	Captains - - -	110
	Subalterns, &c. - -	95
From India,	Field officers - -	170
	Captains - - -	140
	Subalterns, &c. - -	120

(Subsequent to the year 1862–63 the Bombay homeward rates were reduced to 150 *l.*, 125 *l.*, and 110 *l.* respectively.) Under the regulations in force until 1865, the allowances granted, when an officer made his own outward passage arrangements, were those above quoted, less a table money deduction of 5 *l.*, but the passage charges for officers were greatly restricted. Her Majesty's regimental officers were entitled to passage to India, only when proceeding with their regiments, or subsequently to fill vacancies, provided such vacancies were not made for the convenience of the officers themselves; and from India, when returning with their regiments, or in charge of detachments of invalids. Subalterns returning home on sick certificate were granted an allowance of 120 *l.* A special sum of 85 *l.* was also allowed to captains coming to England on sick certificate, and to captains and subalterns of Her Majesty's regiments serving in India again proceeding to India after furlough on sick certificate, on a declaration that they did not possess a sum of 5,000 rupees.

In 1865 the restrictions above referred to were, to some extent, removed by the adoption of the Royal Passage Warrant, in which the allowances were revised.

For Bombay, 90 *l.* per steamer }
Madras, 94 *l.* „ } or *87 *l.* per sailing vessel.
Calcutta 98 *l.* „ }

*Usually granted.

for the outward or homeward passage, but the old rates were allowed to remain in the charter-parties, so that for an officer on duty with troops, India paid a much higher rate than for an officer who was allowed to engage his own passage.

The above rates, 100 *l.* 9 *s.* 6 *d.*, and 127 *l.* 2 *s.* 10 *d.*, have been computed upon the limited number of officers in charge of troops only, exclusive of those granted passage allowances, say, 305 outward and 118 homeward, it is therefore incorrect to take these rates as the basis for a comparison of the cost of the passage of the larger number of officers estimated to be conveyed by the Overland Troop Service, this larger number being greatly in excess of the officers required for duty on passage; thus, the number of officers taken into comparison in the return, as against the cost of the troop service, was,—

	£.	s.	d.		£.
334 outward at	100	9	6	=	33,559
280 homeward	127	2	10	=	35,600

£. 69,159; whereas a fairer estimate would be—

	£	s.	d.		£.	
305 at	100	9	6	=	30,645	Average 99 *l.* 15 *s.*
29	* 92	-	-	=	2,668	
118	127	2	10	=	15,003	„ 106 *l.* 16 *s.*
162	* 92	-	-	=	14,904	

*Assuming 92 *l* to have been the average allowance granted. General officers are altogether excluded.

£. 63,220; and if the actual average number of officers conveyed by the Overland Troop Service be taken, a result still more favourable to the old service is obtained:

	£.	s.	d.		£.	
305 at	100	9	6	=	30,645	Average 97 *l.* 6 *s.*
181	92	-	-	=	16,652	
118	127	2	10	=	15,003	„ 103 *l.* 19 *s.*
229	92	-	-	=	21,068	

YEAR.	Out.	Home.
1867–68 - -	456	304
1868–69 - -	482	261
1869–70 - -	520	477
	1,458	1,042
Average -	486	347

833

£ 83,368; or, for 833 officers out and home, an average rate of 100 *l.* 1 *s.* 6 *d.*, say, 100 *l.* for each officer conveyed under the old system.

3. The comparison in the Parliamentary Return, above referred to, is based upon the assumption that an equal number of men would be conveyed out and home, and in this point it is also defective. The estimate of 23 *l.* 1 *s.* 9 *d.*, stated as the average passage cost of each adult by the Cape route, cannot therefore be depended upon.

Assuming, however, that under the old system of transport, *viâ* the Cape, the cost of an officer's passage was 100 *l.* and that of a soldier's passage 19 *l.* 9 *s.* 9 *d.*, as before shown, it will not be difficult to arrive at an approximate comparison of the expense of the two services

Under

Under the former system of transport the shipbrokers had only to tender a rate per head for the troops and their families, the rates payable for officers being fixed by Government, and printed in the charter-parties. The officers made their own arrangements respecting their families, but the rates for the troops were undoubtedly modified by the number of officers apportioned to each ship.

By adopting the same principle and fixing an officer's passage by the Overland Troop Service at 100 *l.* (the approximate cost by the old service), the expense of a soldier's passage is shown as follows:—

The average cost of the Overland Troop Service for three years has been already stated at 435,755 *l.*, and the average numbers of officers and troops (with their families) conveyed, were 833 and 17,768 respectively.

Eight hundred and thirty three officers at 100 *l.* each equals 83,300 *l.*, which, deducted from the sum of 435,755 *l.* leaves 352,455 *l.* as the cost of conveying the troops and their families, say, for 17,768, an average of 19 *l.* 16 *s.* 9 *d.* for each adult.

A comparison of the average cost of a passage outward or homeward will therefore be:—

Rank, &c.	By Hired Transports, &c.	By Overland Troop Service.
	£. s. d.	£. s. d.
For an Officer - -	100 – –	100 – –
For a Soldier, &c. -	19 9 9	19 16 9

If the contrast had been made only for the years 1867–68 and 1868–69 the result would not have been so favourable to the Overland Troop Service, the average cost per man being greatly reduced by the unusually large number of troops (21,665 adults) embarked by the overland route, in 1869–70; and it may justly be observed that the comparative economy of the service greatly depends upon the number of troops requiring passage to and from India. Formerly, India only paid for the passage accommodation actually required, but since the adoption of the overland route, the service, with its ships and establishments, must be maintained, whether the troops to be conveyed are few or many.

There are, no doubt, considerations in favour of the Troop Service in the way of superior accommodation, and especially that afforded to officers for their families, the expense attending which has not been taken into consideration in the above estimate, this being altogether incidental to the adoption of the overland route, no such charges having been borne by India prior to 1867–68.

It should also be noticed that the charges for supplementary passage have been considerably increased by the establishment of the Troop Service. India has since had to pay very high rates for the homeward passage of Invalids, *viâ* the Cape, in some instances as much as 40 *l.* per head, for the reason that the healthy men were brought home in Her Majesty's Indian troop ships; and the uncertainty of sailing ships being required for the freight of troops homeward has, no doubt, precluded ship-owners from making the same economical arrangements for provisioning the troops that they were formerly in the habit of doing, so as to tender at low rates.

The adoption of the new Service has necessitated the embarkation and disembarkation of all troops at Bombay, and the consequent expense of increased railway carriage; but to this there may be some "sets-off," for instance, Major General Norman, in his recent exposition of military expenditure, alluded to a saving of 12,600 *l.* "by the abolition of the Kurrachee and Chinsurah Depôts, which the overland transport have rendered unnecessary."

I need hardly remark that a continuous effort is necessary to observe the strictest economy in the management of the service; for, with the increased facility of transport, there is a possibility of a tendency to send men home under circumstances which, hitherto, have not been deemed sufficient to necessitate their removal to England, in other words, to arrange the numbers to be conveyed by the capacity of the troop ships, the effect of which will be to reduce the average passage rate, and thus to prevent anything like a just comparison between the cost of the old and new transport services. Already, during the last few years, the number of troops provided with passage has so greatly increased that the subject demands serious attention.

In conclusion, I would observe, that until the outstanding accounts of the Overland Troop Service are prepared on the new forms, and until more intelligible returns of past charges are received from India, it is impossible to arrive at strictly accurate results.

The data that I have been able to collect, however, are submitted for consideration, and from time to time they will be supplemented by such further observations as may be necessary to elucidate the working of the new service and the comparative expense.

12 May 1871. (signed) *G. I. Jameson,*
Major General, Auditor.

† These figures include a number of Lunatics and Convicts, for whom very high rates were paid; also, the strength of two regiments conveyed to New Zealand.

G. I. Jameson.

Appendix, No. 3.

SUPPLEMENTARY STATEMENT of the Cost of the INDIAN TROOP SERVICE.

IN continuation of the late auditor's report, dated 12th May 1871, a statement is submitted of the number of officers and troops, with their families, conveyed to and from India by the Indian Troop Service in the year 1870–71, with an approximate statement of the average cost of the service for four years, instead of three years, as shown in the report above alluded to.

The number of officers conveyed in 1870–71, was,—

Outward - - - - - - - - -	425
Homeward - - - - - - - - -	427
Total - - -	852

giving an average for the four years as follows:—

Year.	Out.	Home.
1867–68 - - - -	456	304
1868–69 - - - -	482	261
1869–70 - - - -	520	477
1870–71 - - - -	425	427
	1,883	1,469
Average - - -	471	367

Total Average - - - 838

Officers' families are not taken into consideration, for the reason explained in the late Auditor's Report.

The number of troops and their families (counting two children for one adult) was,—

Outward - - - - - - - -	9,133
Homeward - - - - - - - - -	8,226
Total - - -	17,359

giving an average for the four years as follows:—

Year.	Out.	Home.
1867–68 - - - -	8,595	7,385
1868–69 - - - -	9,696	5,964
1869–70 - - - -	11,305	10,360
1870–71 - - - -	9,133	8,226
	38,729	31,935
Average - - -	9,682	7,984

Total Average - - - 17,666

The cost of the service to 31st March 1871 may be taken to approximate an annual average of *442,101 l.*, as shown in the accompanying Statement, which, divided by the average number of troops conveyed, in accordance with the principle laid down in the late Auditor's Report, gives, for,—

	£.		£.	s.	d.	
Officers, say - - - - -	83,800	or	100	–	–	each.
Troops and their families -	*358,301*	or	*20*	*5*	*8*	each adult.
Total - - -	*£. 442,101*					

4 March 1872.

G. J. J.

Note.—In the above calculation allowance has not been made for the following service: Conveyance of 28 officers (with five ladies and four children) and 699 adults (troops and their families) from Bombay, &c. to Beypore and Aden. If a credit is given to the Indian Troop Service on this account, the rates of passage between England and India would be reduced to very nearly that previously stated, viz., 100 *l.* and 19 *l.* 16 *s.* 9 *d.* officers and troops respectively.

Appendix, No. 3.

ESTIMATED COST of the Indian Troop Service.

The figures printed in *italic* are approximate.

Transport Department,
Admiralty,
9 March 1872.

Appendix. No. 6.

PAPERS handed in by Mr. *Rowley Richardson.*

Appendix, No. 6.

MEMORANDUM showing the shortest Period which would probably be occupied, during ordinary Weather, by Her Majesty's Indian Troop Ships, in performing the Voyage from Portsmouth to Bombay.

Distance between Portsmouth and Port Saïd (*viâ* Malta) - - - - -	3,175 knots.
Distance between Suez and Bombay - - - - - - - - -	2,975 „
Total Distance between Portsmouth and Bombay (exclusive of the Maritime Canal) - - -	6,150 knots.

If absolutely necessary, the troop ships could be propelled at an average speed of 10 knots, the time occupied in steaming would therefore be - - - - - 615 hours.

Add the time required for coaling and for passage of the Maritime Canal - 55 „

Total Estimated Period of Voyage from Portsmouth to Bomby - 670 hours, or, 28 days.

C. J. Cruttenden,
Deputy Director of Transport Services,
and Assistant for India.

Rowley Richardson,
Superintendent, for Director of
Transport Services.

Admiralty, 8 March 1872.

MEMORANDUM.

ONLY one steamer has been chartered for the conveyance of troops from England to *Bombay, viâ* the Maritime Canal, viz, the "Tagus," of 1,908 tons gross, in October 1870.

The numbers so conveyed from Gravesend to Bombay were—

Officers - - - - - - -	14
Lady - - - - - - -	1
Men - - - - - - - -	238
Women - - - - - - -	23
Children - - - - - - -	34
Total - - -	310, equal to 293 adults.

The time occupied on the voyage was (27th October to 13th December 1870) 47 days

The rates paid to the owners were,—

For each officer - - £. 50 } (with proportionate rates for the families),
For each man - - 22 } including everything except as stated below.

The total sum paid to the owners was - - - - - - - - £. 6,860 6 8

Or, on the 293 adults conveyed, at the rate of - £. 23 8 3 per adult.

The cost of the additional stores supplied and expenses incurred by Government was equal to about - - - - - - - - - - 14 - „

Making the total rate of - - - - £. 24 2 3 per adult.

C. J. Cruttenden,
Deputy Director of Transport Services,
and Assistant for India.

Rowley Richardson,
Superintendent, for Director of
Transport Services.

Admiralty, 8 March 1872.

7 March „	286	15	6
£.	6,860	6	8

Appendix, No. 7.

If the preceding Statements are reduced for comparison with the cost of the Indian Troop Service, in the manner described in the late Auditor's Report, dated 12th May 1871 (Appendix), the following rates will be given.

SHIP.	Officers.	Adults (Troops and Families).	Amount.
			£. s. d.
"Warrior" and "City of Brussels" -	23	872	21,162 18 4
"Atalanta" - - - - - -	13	444	7,876 15 –
"Tagus" - - - - - - -	14	280	6,860 6 8
TOTAL - - -	50	1,596	35,900 – –

50 Officers - = 5,000 *l.*, or 100 *l.* each.

1,596 Troops, &c. = 30,900 *l.*, or 19 *l.* 7 *s.* 2 *d.* each.

Say, adding for Incidental Expenses, Medicine, &c., rather more than 20 *l.* for each adult, *for a passage out only*, taken in connection with Freight to Calcutta, Madras, and Bombay.

If Bombay passage only be taken, it would be,—

14 Officers - = 1,400 *l.*, or 100 *l.* each.

280 Troops, &c. = 5,460 *l.*, or 19 *l.* 10 *s.* each.

Say, adding Incidental Expenses, Medicine, &c., about 20 *l.* 5 *s.* for each adult; but there is little doubt that if the whole of the Troops, both out and home, were conveyed by Merchant Steamers, these rates would be considerably reduced.

Appendix, No. 8.

PAPER handed in by Mr. *Seccombe*, C.B., 12th March 1872.

INDIAN TROOP SERVICE.

PARTICULARS of ITEM £.264,926. 15*s.* 7*d.* on page 9 of the EAST INDIA HOME Accounts, No. 21, of 1872.

* Exclusive of cost of the raft for the "Crocodile," which was not completed until August 1869.

† Less 1-25th depreciation

‡ Less 2-25ths depreciation, plus the cost of "Crocodile's" raft.

J. Beeby,
Accountant General of the Navy.

This claim has been duly noted in the Books of the Indian Branch of this Department, and we certify that the sum of 15,645 *l* 2 *s* appears to be due, as shown in the foregoing Statement

W. R. Mends,
Director of Transport Services.

C. J. Cruttenden,
Deputy Director and Assistant for India

Admiralty, S W.,
20 March 1871.

Appendix, No. 9.

PAPERS handed in by Mr. *Harrison.*

Appendix, No. 9.

COPY MILITARY DESPATCH to *Bombay*, dated 16th February 1871, No. 10, stating the Terms of Service of Officers in the Turret Ships for the Defence of Bombay Harbour.—Question 5302.

1. IN continuation of my Military Despatch, No. 138, dated 8th December 1870, paragraph 17, respecting the two turret ships intended for the defence of the harbour of Bombay, I have now to inform you of the various arrangements which have been made regarding the Navigating Lieutenant and Chief Engineer of the "Abyssinia," and the Warrant Officers of both vessels.

Dated 24 October 1870.

2. Mr. J. Mackinlay, the Chief Engineer and Inspector of Machinery in the dockyard at your Presidency, being in this country at the time of the trial of the "Magdala," at Sheerness, was directed to attend thereat. This he did on the 21st October 1870, and a copy of his remarks on the trial is herewith forwarded.

3. The following statement (*see* page 543) will show the names of the officers who have been appointed for service in these two vessels, as well as all information regarding their pay, allowances, and family money arrangements, &c.

3.

4. It has been arranged with the Lords Commissioners of the Admiralty, that the time served by all these officers under the Indian Government shall be allowed to count towards full half-pay and retirement (or pension, as the case may be), as all of them have been brought under the provisions of the Order in Council of the 22nd February 1870, section 7, clause 3, copies of which, applicable to the respective grades of the officers, are enclosed for your information.

To India, dated 7 November 1870. From India, dated 19 November 1870

5. As regards the chief engineer of the "Magdala," he will have him appointed in India, as stated in the telegrams to and from the Government of India, copies of which are enclosed.

Dated 17 December 1870.

6. A copy of a letter from the Admiralty regarding a payment due to Mr. Marwood, of the "Abyssinia," accompanies, and I request that you will cause him to be paid the amount.

7. I have also to request that the equivalent of 16*s.* 6*d.* may be paid to Mr. Ayres, of that vessel, for his expenses in proceeding from Plymouth to Portsmouth, in order to enable him to take passage in the Indian troopship "Crocodile," so as to join the "Abyssinia" at Bombay, the Admiralty having been informed that that sum should be paid when at Bombay.

8. The navigating lieutenant for the "Magdala" has not yet been selected by the Admiralty; so soon as he shall have been, you shall be made aware thereof.

No. 257, dated 20 October '70 and enclosures.

9. A copy of the Military Despatch which was addressed to the Government of India on the subject of those two vessels, as also a copy of the enclosures thereto, is enclosed for your information, and I request that a copy of this Despatch (No. 10) may be forwarded to the Government of India, in order that they may be in full possession of all the arrangements which have been made regarding these two vessels.

* Exclusive of the charges for tools, plant, stock, materials, stores, &c., which cannot be given for each description of work, as (with the exception of Public Works Extraordinary) the Accounts in this Office do not show the amount applicable to each. These charges are therefore shown in separate columns.

India Office,
23rd April 1872.

T. L. Seccombe,
Financial Secretary.

Appendix, No. 12.

PAPERS handed in by Mr. *Thornton.*

1.—RAJPOOTANA (STATE) RAILWAY.

Appendix, No. 12.

EXTRACT RAILWAY DESPATCH from the Government of India, No. 25 of 1869, Paragraph 16.

16. THE question must also be considered whether a second line, from the Great Indian Peninsula Railway to Indore, with a continuation to Neemuch and Ajmeer, should not be undertaken, whatever decision is come to respecting the direct Neemuch and Baroda line, or the alternative route by Deesa. The line from Ajmeer to Indore, besides its military and political value, would command the traffic of the Lambeer and other salts destined for Eastern Rajpootana, and, passing through Rutlam and the opium-growing tracts of Malwa, would derive a highly paying traffic from that source. It would, moreover, be able to take up the coal and timber of the Nerbudda Valley into Rajpootana, where these products are not naturally found, and will be much valued.

EXTRACTS REPORT *of Committee appointed to consider the* Route *of* Railway *from* Ajmeer to Rewaree, dated 17 April 1869.

Para. 2. The Government of India is desirous of obtaining complete information to show the exact line which will give the most convenient access to the principal salt sources at Sooltanpoor, and which will afford the greatest facilities for the transport of the salt to Delhi. We, having visited the spot, ascertained that the principal salt works of the Sooltanpoor tracts are situated at the villages of Landranah, Sooltanpoor, Mobarickpoor, and Basseerpoor. Out of a total out-turn in 1868–69 of 7,11,932 maunds, these works contributed rather more than 5,00,000 maunds. It is clear, then, that any line of railway constructed with a view to facilitate the transport of salt, must take these works.

* * * *

5. With a view to enable us to form some opinion as to the probable amount of traffic which will pass along this line, we obtained from Mr. Wright, the collector of customs at Delhi, a statement showing the quantity of salt and sugar which paid duty at the posts of Jhujjur, Badlee, Dhassa, and Gurhi-Hursroo, in each of the four years from 1865–66 to 1868–69. This statement, which is appended, shows that on an average 7,39,405 maunds of salt paid duty at these posts, of which seven lacs were the product of the Sooltanpoor works, and almost the entire balance was salt from the Sambhur Lake. In regard to the Sooltanpoor tracts, we are satisfied from personal inspection and inquiry on the spot, that by the utilisation of wells and pans already made, but not at present worked, and by the construction of new wells and pans, the out-turn of these works can be considerably increased, and we think that these works may be estimated to produce 12 lacs of maunds a year.

6. It will be seen from the statement that about 2,85,000 maunds of sugar yearly paid duty at these posts, but considering that upwards of seven lacs of maunds paid duty in 1867–68 in the Delhi division, it is evident that the principal portion of the sugar traffic crosses the customs line at posts east of Gurhi-Hursroo, or west of Jhujjur. The traders of the town of Furrucknuggur assured us that when the line of railway was made, even though it was carried no further than Furrucknuggur, a considerable portion of the sugar and the merchandise destined for Rewaree would travel by rail as far as Furrucknuggur. Be this as it may, we are of opinion that the amount of exports from Delhi will fall far short of the amount of imports if the line stops at Furrucknuggur. But if the line be continued to Rewaree, we have every reason to believe that the traffic proceeds will afford a fair remuneration for the cost of constructing and working the railway. On this point we enclose

Appendix, No. 12. enclose a memorandum drawn up by Lieutenant Pye, a member of our committee who visited Rewaree.

7. We have not taken passenger traffic into account, partly because we have no means of estimating its probable amount, although we are aware that the main line of communication between Delhi and the Rajpootana States lies through Rewaree, and partly because there would be little or no passenger traffic on that portion of the line with which we are more immediately concerned, especially if it follows the direct road from Delhi to Rewaree.

Delhi, 13 April 1869.

(signed) *W. W. Wright*,
Collector of Customs.

REPORT on the Advantages of Carrying the SOOLTANPOOR RAILWAY to REWAREE.

1. HAVING visited Rewaree and made inquiries into the trade of the city, I wish to lay a few remarks before the Committee on the advantages to be gained by making it the present terminus of the railway which will tap the Sooltanpoor salt district, whether the line be ultimately extended to Bombay or not.

2. The committee has ascertained that the salt works of Sooltanpoor are worked under advances from the merchants of the neighbouring town of Furrucknuggur, that the present out-turn is about 7,00,000 maunds a year; and that if all the existing pans were worked, and all the salt ground utilised, the out-turn would certainly be not less than 12,00,000 maunds.

3. This export trade is not balanced by corresponding imports. The salt goes northwards, but all goods coming south to Rajpootana take the straight road to Rewaree, where they are warehoused, or packed on camels and bullocks for their further journey.

4. From this it follows that the carts which take salt to Delhi generally return to the works empty, and the consequence is that the cost of carting this salt to Delhi, some 32 miles, is more than four annas a maund, while the cost of carting all goods from Rewaree to Delhi, some 50 miles, on an equally bad road, is exactly four annas.

5. If the railway were to stop at Furrucknuggur, it is possible that the sugar, food, grains, &c., for the south might be carried by the line. But this is doubtful. There is already a necessary break of bulk at Rewaree, and rail carriage to Furrucknuggur would involve another transhipment.

6. Rewaree is a large and thriving city. Its merchants are not commission agents, but wealthy, independent traders, having agents in Delhi and all the cities of Rajpootana, which they supply with sugars, grain, and iron and brass utensils. In return they purchase salt at the Sambhur Lake, cotton, spices, &c., and they say that no cart or camel that comes to the city has to wait for a return load, or seek one elsewhere.

7. The octroi returns of the town do not show the extent of its trade, for salt going north and sugar going south alike keep outside the city gates to avoid payment of the tax. Thus on the morning of the day on which I arrived at Rewaree, 500 camels came in with Sambhur salt, none of which was brought into the city, or is shown in its returns.

8. The annual import of sugars from the Delhi district is said by the traders to be between 6,00,000 and 7,00,000 maunds. This is corroborated by the statistics of the Customs Department. In 1867-68, 9,70,000 maunds of sugar crossed the customs line in the Delhi division, and of this three-fourths is believed to have been bound for Rewaree, or towns beyond it.

Appendix, No. 12.

9. About 3,00,000 maunds of this sugar crossed between Jhujjur and Gurhi-Hursroo; that is, to the west of the proposed line of railway.

10. On the whole it seems that the present import and export traffic of Rewaree, which would travel on a line of railway between that place and Delhi, is above 20,00,000 maunds. And all this must come to the line, for there is no river or metalled road to compete with it. The merchants are so eager for a railway to avoid the losses and delays of the present cart traffic, that they came forward unasked and offered to take shares in the line if that would hasten its construction.

11. That the traffic would increase largely is beyond a doubt. The principal salt merchants said that whereas now only from 80,000 to 1,00,000 maunds of salt come annually from the Sambhur Lake, they should in the first year from the opening of the line, send for 2,00,000 maunds, which they saw their way to selling, even though the Sooltanpoor pans were more fully worked, and that this amount would be subsequently increased.

12. Turning to the financial side of the question, a rate must first be assumed for carriage by the proposed railway. I think that half pie per maund per mile is fair and reasonable for salt and sugars. On the East Indian Railway these are carried for distances under 300 miles for one-third pie per maund per mile, but the additional one-sixth pie would involve no practical extra expense to the consumer. For the price of a maund of Sooltanpooree salt at Delhi is made up of three items: its price at the pits, say 8 annas, its carriage, say 4 annas, and the Government duty, 3 rupees. Now, considering that a man and his wife and three or four children are believed to eat only about half maund of salt in a year, the annual difference to them of the two rates is inconsiderable, as shown below:—

	Rs.	*a.*	*p.*
One-half maund salt at present cost - - -	1	14	–
Carried the 33 miles of rail at ⅓ pie - - -	1	12	5½
Ditto - - - ditto - ½ ditto - - -	1	12	8¼

13. On the other hand, as half pie per mile amounts to 1 *a.* 4½ *p* to Furrucknuggur, and 1 *a.* 10½ *p.* to Rewaree, the present charges being about 4 annas, in both cases this rate would be sufficiently attractive. Indeed the traders of Rewaree said that even though the rates were as high as the cost of cartage, yet not one maund would go by cart, such annoyance, delay, and loss did they now daily experience.

14. Taking half pie per maund per mile as the average rate, the higher charge for spices, &c., balancing the lower one for food grains; omitting all passenger traffic, the amount of which cannot be absolutely foretold; considering only the certain traffic, viz., 12,00,000 maunds of salt, travelling 33 miles from Sooltanpoor, and 20,00,000 maunds of goods, travelling 53 miles from and to Rewaree, then if the line were to stop at Furrucknuggur, the gross receipts per mile would be 3,125 rupees; if carried to Rewaree, they would be 7,154 rupees.

15. Now in the former case the traffic would be almost entirely in one direction, so that there would be much unprofitable running, and the working expenses cannot safely be taken at less than 60 per cent. of the receipts; in the latter case, where there is less of this running they may be assumed to be 50 per cent.

16. Then the net profits per mile of a line to Sooltanpoor would be 1,250 rupees, and of one to Rewaree 3,577 rupees.

17. The latter sum is 4 per cent. on 89,425 rupees, and 5 per cent on 71,540 rupees.

18. I believe that for the smaller of these two sums a suitable railway might be constructed and stocked, provided that it were made economically under close supervision, and that no unnecessary money were spent in expensive station buildings; and I must again repeat that the above figures do not show the probable traffic, but the certain weight that will at once seek the line apart from all future development of trade.

19. Between Sooltanpoor and Rewaree the road, after leaving the sand hills surrounding the salt pans, would be on a level. There is but one engineering work of importance on the line, the bridging of the Saubee Nuddee, somewhere near Mozimabad. This is a watercourse with undefined banks, which is quite dry and under cultivation, except in the rains, but when in flood carries off a considerable body of water, which moves slowly on its way to the Nujjufgurh Jheel. The amount of water required cannot be stated without a careful survey during flood, but there is no special difficulty to overcome. Perhaps 400 feet will be enough.

Kunkur is found at Mozimabad, and at many places north of this, but not near Rewaree. This city is built of stone brought some seven or eight miles from Kooree and Cheeumawas, and good stone is found within a few miles of the proposed line, throughout its length. There is abundance of labour, the rates being 1½ and 2 annas a day. Water is found everywhere on the line, but of course wood is scarce.

20. On the whole, I think that while a line to Sooltanpoor will not repay its cost, except in the sense of making a larger supply of salt certain, a line to Rewaree, irrespective of any future extension, will pay, will bring still more salt into the market, and will largely benefit and encourage commercial enterprise in both our own city of Rewaree, and the old native capitals of Rajasthan.

(signed) *K. C. Pye*, Lieutenant, R.E.

Appendix, No. 12.

EXTRACT REPORT by Mr. *Furnivall*, dated 2nd September 1869; Section 6, Para. 1.

IT would be useless for me to lengthen out the report by any reference to the probable traffic on the line. The committee which met in April last decided that the traffic which may be expected warrants the construction of a railway, and I fully concur with it. My data in calculating the amount are drawn from the same sources as Captain Pye's, from whose conclusions I see no cause to differ on any point: all calculations of traffic on a proposed railway are to a certain extent speculative, and are more often under the mark than over it. The miscalculation of the profits of a line is more often due to an increase in cost of the work than a decrease in traffic returns anticipated. I have endeavoured to avoid the fault of a too low estimate by putting down liberal prices for all works, and by making a liberal allowance of waterway.

EXTRACT LETTER from Major *T. F. Forster*, dated 24th March 1870.

Para. 3. IN my opinion there can be no question that the establishment of a branch railway from Delhi or its neighbourhood to Bhowani would prove a profitable and most useful undertaking; such a line would not only open out freely the trade of this and the neighbouring districts, but would largely increase the imports and exports of Bhowani, which is the entrepôt of the Hindostan and Rajpootana trade. Experience has shown elsewhere that the introduction of a railway has invariably given an impetus to existing traffic, and there is no reason why Bhowani, which attracts so much traffic from its convenient situation, should prove an exception to this rule.

EXTRACT LETTER from *W. C. Furnivall*, Esq., C.E., dated 4th May 1870.

Para. 12. THE greatest possible amount of salt that it is likely the Sooltanpoor field will produce is 4,000 maunds a day.

EXTRACT NOTE by Colonel *C. J. Hodgson*, dated 25th May 1870.

Para. 5. To secure gross earnings of 10 per cent., or net earnings of, say, 6 per cent., I find that about 55,520 tons of salt must be carried over the entire road line annually, and, therefore, about 60,000 tons over the other line, taking the charge for carrying at one-third pie per maund per mile.

DEMI-OFFICIAL from Mr. *W. C. Furnivall* to Major *T. F. Forster*, Deputy Commissioner of Hissar; dated 22nd June 1870.

I SEND you a copy of the statistics sent by you to Mr. Tait. Salt shows an import of 6,67,875 maunds, but no exports; is this in consequence of there being no export tax, or in what way does it happen? Of cloth there are no exports. The exports of sugar were over the imports. Does any of the trade from the west bring produce for exchange, or does the import trade come from the east mostly? The export, of course, goes to the west in great part.

DEMI-OFFICIAL from Major *T. F. Forster*, Deputy Commissioner of Hissar, to Mr. *W. C. Furnivall*; dated 7th July 1870.

IN reply to your demi-official of the 22nd ultimo, I beg to offer the following explanation on the several points you allude to. Through an oversight the export of salt and cloth were omitted. I have now included these items in the statistics sent with your letter. The reason why the export of sugar exceeded the import is because there was a surplus in stock from the preceding year.

Traders from the east generally bring goor, khand, cloths, brass and copper utensils, and other miscellaneous articles, taking in exchange chiefly salt, sujjee, and Mooltani-muttee. The import trade, therefore, comes mostly from the east, and, as you surmise, the exports are chiefly westward.

Should you desire any further information in regard to the Bhowani trade, I shall always be happy to use my best endeavours to comply with your wishes.

Appendix, No. 12.

T. F. Forster, Major,
Deputy Commissioner, Hissar.

From Colonel *H. J. Hawes*, Deputy Commissioner, Rohtuck, to Executive Engineer, Gurree and Bhowani Division, Rajpootana (State) Railway, No. 189; dated 29th April 1870.

In reply to your Office No. 85, dated 14th ultimo, I have the honour to inform you that it would be a great advantage to bring the line near to the large towns of Beree and Jhujjur, instead of direct from Gurree-Hurseroo to Bhowani.

2. It is roughly estimated that the amount of exports and imports from and to the town of Beree would not fall short of 15 to 20 lakhs of rupees, and of Jhujjur about half of the above amount.

3. The chief articles of import are rice, prepared saccharine produce, and ghee from Bengal to the North Western Provinces, cloth from Europe, *viâ* Calcutta, and metals, building materials, &c., from down country. The exports are goor, unrefined sugar, grains of all kinds, oil seeds, and other raw country produce to the Rajpootana States.

4. In short, there is a very large and increasing export and import trade carried on with the Lower Provinces on one side, and the Rajpootana States and the Bagur or Independent States on the other, which a line of rail passing through Beree and Jhujjur will catch.

Appendix, No. 12.

EXTRACT REPORT by *W. C. Furnivall*, Esq., M.I.C.E., Superintending Engineer, Delhi District, Rajpootana (State) Railway, on proposed Extension of the Narrow Gauge Branch Railway from Gurree-Hurseroo to Furrucknuggur to Bhowani; dated 13th September 1870.

Section, No. 1.

1. THE proposition to connect the town of Bhowani with a railway is not a new one, but I believe has never assumed a definite form until the present time. In a letter from the late Colonel Hamilton, Commissioner of Delhi, No. 329, dated 4th October 1865, para. 4, Note 11, to the Under Secretary to the Government of the Punjab, Public Works Department, Railway Branch, Colonel Hamilton remarks—

> "Bhowani is the great mart for exchange of commodities between the Gangetic Provinces, including also sea-borne produce from Calcutta and Bikaneer, Marwar, and a portion of the Punjab and Affghanistan. The produce of Eastern India and foreign countries is hence distributed to the westward, while it is also a mart for the distribution of the produce of the Punjab and Affghanistan."

2. A reference to the map of India will show the important commercial position of Bhowani, it is situated on the frontier of British territory, near enough to the thickly populated districts irrigated by the Ganges and Jumna, to be in constant communication, and to be able to supply itself with grains when scarcity in the country to the westward is felt, or with any other article that may be commonly required.

3. The western county, composed of Bikaneer, Jodhpoor, Jeysulmere, and part of Bhawulpoor, forming a considerable portion of the extensive tract between Bhowani and the Runn-of-Cutch, was originally supplied with foreign products by three marts, Pali on the south, Shikarpoor to the north, and Bhowani to the east. Shikarpoor and Pali have, I believe, fallen off in trade of late years, but Bhowani has retained its trade, if not increased it.

4. The late Colonel Hamilton, with the letter before referred to, No. 329, dated 4th October 1865, gives some valuable statistics of the trade of Bhowani, wherein it is proved that the trade is not less than the large sum of 20,00,000 rupees per annum. The latest account that I have received is from Major Forster, the Deputy Commissioner of Hissar, *vide* Appendix A., who puts the imports at 21,20,000 maunds nearly, and the exports at 12,52,000 maunds, together giving a trade of over 1,20,000 tons per annum.

5. Supposing that the imports only will be carried on the railway, and that the exports are entirely sent westwards, which is most certainly taking a minimum of trade, for assuredly certain articles would come from the west, it may be concluded that Bhowani would require 75,000 tons of merchandise per annum, or a daily average traffic of 200 tons. Calculating the value of this freight to the railway at one anna per ton, the traffic would pay gross receipts 90 rupees per mile per week, which would equal the traffic on the Jubbulpoor line, or be higher than the Punjab railway for the year 1868–69, although the traffic represented is entirely exclusive of passengers. Assuming the cost of the narrow gauge line, inclusive of rolling stock, at 32,000 rupees per mile, this will give nearly 14¾ per cent. gross earnings.

6. Passenger traffic must also be looked forward to. Statistics of the present number of travellers would only lead to error in any calculation of the passenger traffic that may be expected. Only those who are obliged by business go to Bhowani at present. The ordinary conveyance is a camel. Colonel Hamilton remarks in the letter before mentioned, "No one goes to Bombay from Bhowani on account of the great distance between these two places: the rail, if constructed, will greatly tend to increase the trade."

7. And, doubtless, it will be so; not only is the distance great, but the road at present is a hard one to travel.

8. The population of Bhowani is estimated at 32,000, but the number of the inhabitants of the city does not express correctly the commercial importance of the place; the inhabitants are a busy people, and their trading operations cause a constant influx and efflux of travellers, possibly comers from a short distance only, but still likely to form an important addition to the traffic receipts of the branch.

9. Casting aside, however, the question of passengers, 90 rupees gross receipts per week per mile produced by the passage of merchandise will, I think, be considered a very fair traffic to commence upon, and will warrant the construction of the narrow gauge branch. I say narrow-gauge branch, for I feel assured that the break of gauge will not be a serious inconvenience, nor a great expense, and that the traffic to Bhowani will never be sufficient to keep a broad gauge line in work.

10. The country between Furrucknuggur and Bhowani will also contribute towards the maintenance of a railway; Beree and Jhujjur are both large towns. Colonel Hawes, Deputy

Deputy Commissioner of Rohtuck, remarks in a letter to Mr. Tait, *vide* Appendix B., "It is roughly estimated that the amount of exports and imports from and to the town of Beree would not fall short of 15 to 20 lakhs of rupees a year, and of Jhujjur, about half that amount." I cannot, however, add this freight into the calculation of the traffic of the branch line; Beree and Jhujjur are both close to the roads that lead to Bhowani, and although some portion may be the legitimate trade of the towns mentioned, the major portion of the trade, I believe, will be found to go to Bhowani, so that by adding the amount stated by Colonel Hawes, I should run the risk of overstating the probable traffic. The line can be led round by Beree and Jhujjur at very little extra expense, as recommended by Colonel Hawes, which will doubtless be a profitable détour.

11. I think the foregoing evidence will show that, by constructing this branch line to Bhowani, a valuable feeder to the traffic of the Rajpootana railway may be opened, and a railway made which will itself become a remunerative work.

12. The question remains then for discussion as to what is the best point on main line from which the branch shall be led off.

Section, No. 2.

1. Supposing that all the trade which arrives at Bhowani went from Delhi and the country from the east, it would appear hard that such trade should be subject to a détour of 16 miles, and the difficulties of the drainage of the river Saubee to contend with, instead of being taken direct on the line by the Bahadoorgurh road. This, however, will not be the case when the Rajpootana railway opens up a communication with the country to the south-west, and to the sea-board. Trade will of a surety be opened up with Rajpootana, and then the westerly junction with the main line will be a benefit to all the freight which comes from or goes to the south-west.

Section, No. 3.

Para. 8. The product of the salt fields of Zahudpoor and Lilarna together, at the present time, is about 93,650 maunds of salt per annum. I do not say that this freight would be lost entirely to the railway if the dotted line were selected, but I am of opinion that it will be a pity not to give the stimulus to the manufactories of salt that a means of communication by railway will afford. Both the manufactories are capable of extension, the character of the salt is third rate, but still a maund manufactured is equal to three rupees in the coffers of the State. The wiser plan, therefore, will, I think, be to choose the route by Zahudpoor and Lilarna, although slightly more circuitous than that indicated by the dotted red line.

NOTE by Major *J. Bonus*, R.E., Deputy Consulting Engineer to the Government of the North Western Provinces, Railway Department, on the proposed Extension of the Narrow Gauge Branch Railway to Bhowani.

MR. FURNIVALL gives his grounds for the belief that a branch railway to Bhowani would be a commercial success, and his opinion is that the line should be an extension of the Furrucknuggur Salt Branch. I cannot say that I agree with him entirely in either view. It is quite possible, and even probable, that a railway to Bhowani from the Rajpootana line would pay, but it is, I think, desirable that the matter should be viewed from standpoints other than that selected by Mr. Furnivall. The statistics furnished to him show that during 1869 the imports of Bhowani were close on 75,000 tons, and the exports about 45,000 tons. But these figures may be deceptive; it is almost always a mistake to take the trade of any one year as an average; we want statistics of the trade for a series of years. These figures for 1869 are surely in some way exceptional; the imports exceed the exports by 33,000 tons; Bhowani cannot consume this amount. Either, then, the exports were exceptionally low, or the imports were exceptionally high. It is of importance to know which was the case; did the exports show a great decrease on former years, thus indicating a decline of trade, or did the dealers lay in very heavy stocks, showing that they at least feared no falling off in the trade of the place?—The statistics of the trade of the town for years are apparently on record, and they should, I think, be carefully consulted.

Except it may be considered whether Bhowani is likely to hold its position as an exchange mart? Will not the great changes which are taking place in the communications of the surrounding districts affect its position for the worst? The railway from Agra to Jeypoor and the Sambhur will be the route which the trade of Marwar will follow, and the Indus Valley Line passing through Bhawulpoor will probably take a considerable share of the traffic of Bikaneer and Jeysulmere. Bhowani has not, I gather, any native manufactures; its trade is wholly a transit trade, and must, I should say, be affected injuriously by the opening up of other routes into the heart of Rajpootana.

Appendix, No. 12.

Mr. Furnivall, taking the trade of 1869 as the basis of his calculations, assumes that the whole of the imports will pass over the branch; but is this at all likely to be the case? By what lines of road do the imports reach Bhowani? Major Forster, the Deputy Commissioner, says that the imports are chiefly from the east, and the exports to the west. There can, I should think, be very little doubt that a considerable portion of the trade must be with the districts lying to the north-west of Delhi and Meerut, and to take this to Bhowani, *viâ* Gurree-Hurseroo and Furrucknuggur, would be a roundabout proceeding. If a line is to be made to Bhowani at all, it should, I think, be taken from Delhi, passing through Bahadoorgurh and Beree, which are directly in the route. But would not all the purposes of a line to Bhowani be fulfilled by a line from Delhi to Rohtuck, and so on to Hansi and Hissar, and with this advantage, that such a line would in the future admit of extension to the valley of the Sutlej? I do not think much weight should be given to the fact that the line from Gurree-Hurseroo to Furrucknuggur has been sanctioned; that line is only seven miles in length, and the extension to Bhowani is 43. Further, the Furrucknuggur branch is to be a light line; the ruling gradient is to be 100; this style of line would not suit for the heavy goods traffic which Mr. Furnivall anticipates for the Bhowani extension. Should the extension be made and the result be disappointing, what remedy would there be; the only thing to be done would be to extend the line to Hansi; surely it would be better to adopt the direct route from Delhi to this place at once? A line from Gurree-Hurseroo to Bhowani is on the way to no place of importance; it would be entirely dependent upon the trade of Bhowani; should this decline the railway would become almost useless.

From the Government of India, Public Works Department, to Joint Secretary to the Government of the Punjab, in the Public Works Department, Railway Branch, No. 1820 R.; dated 26th September 1871.

I am directed to forward herewith copy of reports submitted by the Government of the North Western Provinces on the subject of railway extension to the tract of country lying to the north-west of the portion of the Rajpootana railway already under construction, and to convey the following observations on the several lines of communication proposed, and on the commercial importance of the chief places they are designed to connect.

2. The city of Bhowani, situated 66 miles west of Delhi, contains about 32,000 inhabitants, but has a larger trade than is proportional to this number, as it is the abode of a number of traders, and is a depôt for the supply of the sparsely inhabited country to the west. In the year 1869 it imported 75,670 tons of goods, chiefly from the east, and consisting of food-grains, oils, salt, and sugar of various qualities; while it exported 61,818 tons of goods, chiefly to the westward, and consisting of the same chief staples as it imported. It is thus not a manufacturing but a trading town.

3. Of the imports of 75,670 tons, 24,509 tons consisted of food-grains, and of these 19,705 tons were again exported. The inference is that the difference, 4,804 tons, were consumed by the inhabitants, a quantity obviously insufficient for such a purpose when the population of the town is remembered. Either, then, the returns are incomplete, or there was a large stock of grain in hand at the beginning of the year, which hypothesis would also account for the record of 38,257 maunds of gram having been imported, and 157,521 maunds exported during this period.

4. It is nowhere shown where these food-grains are grown or what distance they travel on their way to Bhowani, and, therefore, it cannot be determined whether or not they would be carried on any railway that might be made to it. If they come from the fertile country beyond Rohtuck to the north-east, it would be useless, so far as the grain trade goes, to make a railway to the south-east, but if they come from the fields of Goorgaon on the east, it would be useless to take the railway to the north. An inquiry into these matters is necessary to enable the trade of the town to be properly comprehended. So far as present information goes, it is simply shown that a certain quantity of grain is stored at Bhowani on its way from some unmentioned district where it is grown, to districts further west where it is consumed.

5. The article of trade next in magnitude was salt, of which 23,852 tons were imported, and 11,248 tons exported in 1869. The difference could hardly have been consumed in Bhowani, and, therefore, if the returns are correct, the stock must have largely increased. It is not stated where this salt comes from, but it must probably have been brought from either Sambhur or Furrucknuggur.

6. The third largest article of trade was sugar, of which 14,557 tons were imported, and 18,602 tons exported in 1869. This sugar came in all probability from Rohilkund, and passed through Delhi.

7. The conclusion to be drawn regarding Bhowani is, that the statistics of its trade have been imperfectly laid before Government, but that it has hitherto been a place of considerable importance, and is situated on a present highway of trade. A railway to it from Delhi would

would probably carry sugar, and one from Furrucknuggur or from any point on the Rajpootana railway, would carry salt; also a line from the grain districts would probably carry food-grains, but it is questionable whether any of these railways would obtain any considerable return traffic from the town.

8. About 25 miles short of Bhowani, on the way to it from Delhi, is Beree, a large town, of which it is said that the value of the exports and imports would probably be from 15 to 20 lakhs of rupees a year. About nine miles south-east of Beree is Jhujjur, which is said to have about half the trade of Beree. But it is pointed out that this may be transit trade, on its way to Bhowani, and should not be considered as a separate traffic.

9. The direct distance from Furrucknuggur, the terminus of the salt branch to Bhowani, is 48 miles, while that *viâ* Jhujjur and Beree is about 51 miles, and it is generally agreed that if such a railway were made it should go by the way of these two towns, and thus enable the two large outlying salt factories of Zahudpoor and Silarna to place their salt on the line.

10. The direct distance from Delhi, through Beree, to Bhowani is 66 miles, and if a détour to Jhujjur were made it would add three or four miles to this length. But there is another way of reaching Bhowani or its neighbourhood. Colonel Hodgson proposed that a line should be taken *viâ* Rohtuck to Hansi and Hissar, but it is not apparent how Bhowani could be touched, except by a considerable détour. His views, however, are not explained at length.

11. The three chief lines for consideration, therefore, are:—

	Miles.
1. Furrucknuggur to Jhujjur, Beree, Bhowani, Hansi, and Hissar - - - - - - - - -	91
2. Delhi to Rohtuck, Bhowani, Hansi, and Hissar - -	109
3. „ to „ Hansi, and Hissar - - - -	95

12. The Government of India see no reason to suppose that, until the main line and salt branch of the Rajpootana railway are completed, the construction of any of these lines will press for early consideration, but before the projects are placed aside as premature, and in view to future possible railway extensions, I am directed to suggest that, when the opportunity offers, a suitable officer may be deputed to make the inquiries and collect the facts necessary to enable the Government to decide on the most appropriate method of supplying this district with railway communication. Bhowani is doubtless a large mart still, but whether it will maintain its position as such after the opening of the Rajpootana railway to Sambhur is questionable. Such an opening will probably diminish considerably the portion of Marwar which is fed through Bhowani, if not the area of Bikaneer also thus supplied, while, with the opening of the Indus Valley Railway to Bhawulpoor, Bikaneer will have another source of supply, and Bhowani may fall into comparative decay. In considering the question, it should also be recollected that the extensions of the Western Jumna Canal, recently sanctioned, will afford water communication to at least a part of the tract which it is proposed to serve by rail, and if this source of communication should be practically sufficient, no railway in this direction could be sanctioned.

(No. 1821 R.)

Endorsed by Public Works Department.

Copy to North Western Provinces, in reply to No. 51 S.R.—C., dated 8th February 1871.

Extracts from Report by Lieutenant Colonel *Peile*, R.E., on Agra District, Rajpootana Railway.

1. This system of railways has for its immediate object the opening out of the great salt-producing centres of Sooltanpore, Bhurtpore, and the Sambhur Lake, by connecting them with Delhi and Agra. In effecting this, the capital towns of Ulwur, Bhurtpore, and Jeypoor, three independent states of Rajpootana, can be readily served, and the states generally be greatly benefited.

2. The Government has in mind the advantage of extending the line towards Bombay, but for the present this is not to be permitted to complicate the question of the location of the line to Jeypoor and Sambhur, and the instructions received are to the effect that the Sambhur Lake is, for the present, to be regarded as the terminal point of the system towards the west. In discussing the relative merits of certain lines, however, it will be impossible to banish the prospective view entirely from the mind, and the weight of it may possibly prove sufficient to turn the balance in favour of some particular line.

* * * * *

12. The

Appendix, No. 12.

12. The only large places, having any trade, on or near the line are Agra, Achneyra, Bhurtpoor, Khombher, Jeypore, and Sambhur. The other towns and villages are small, the population of the largest numbering under 4,000 souls, and the majority containing about 400 only. There is not a single mart of any consequence apparently in the whole of the Jeypore State beyond the capital. Sambhur, the centre of the salt trade, is miserably supplied, the population may be about 5,000, and from the circumstances of the place, some appearance of prosperity might be expected to display itself, but, in fact, it is difficult in Sambhur to procure the most necessary articles of food. The truth is, it is a mere caravanserai in the middle of a desert, visited only at a certain season of the year by those of the outside world who have business there. The salt merchants arrive attended by their long strings of camels, they make their purchases and decamp as soon as they can. Food they probably bring with them for their journey. There is no prospect of developing any general trade at Sambhur. It is not wanted. The requirements of the salt manufacture and trade demand a certain population which is there concentrated. There are no neighbouring towns or villages with which a traffic might be usefully established. Within a circle of 12 miles radius around this town there are probably not 4,000 souls. Of the other places in the Jeypore State it may be said that each appears to depend in a great measure on its own produce; there seems to be no interchange. Annual or periodical fairs are held at several towns. At Dosa, for instance, there is an annual fair which is maintained for a fortnight, and probably supplies the wants of the eastern half of the state, in regard to foreign commodities, for the whole year. The line runs near Dosa, and a station is proposed at Burkhera, four miles from the town. It may be said that there is no place in the state to which it is worth while to deflect the line, and that, most probably, towns will spring up near the several railway stations, which will become centres of trade. In the Bhurtpore State the line happens to fall favourably, passing near several places of comparative importance which are served by the stations proposed. No other line would do better service. Deeg and Khonbher, with populations of 19,000 and 11,000 respectively, will be well served by the salt branch.

EXTRACTS of RESOLUTION of the Government of India, dated 15th November 1871.

1. IT having been determined by the Government of India, with the consent of Her Majesty's Government, to construct a railway from Agra by Bhurtpoor and Jeypoor to the Sambhur Salt Lake, with the immediate object of facilitating the transport to British territory of the salt so largely produced there, as well as to form an important section of a railway which should eventually traverse Rajpootana and unite with the existing railways of the Bombay Presidency, instructions were issued on the 30th October 1869, for the immediate commencement of the surveys for the preparation of a project. These were carried on during the season of 1869–70, and resulted in the submission to the Government of India, during the recess of 1870, of an excellent preliminary project, from which it was evident that the several alternative alignments and deviations throughout the route that seemed to call for consideration had been very carefully investigated. This project was very creditable to the superintending engineer, Colonel Peile, R.E., and the staff employed under his orders.

* * * *

5. As respects the location of the line between the vicinity of Jeypoor and the Sambhur Lake, the question presented for decision chiefly turned on the expediency of placing Jeypoor and Sambhur on branches in order to save through traffic from the détour involved in the adoption of a circuitous line. Sambhur, on account of its important salt product, is an obligatory point, whether it be reached by a branch or the main line be carried through it. Jeypoor is by far the largest city in Rajpootana, having, it is believed, 250,000 inhabitants, and it is manifestly inexpedient to leave a place of this magnitude at a distance from the railway. Owing to the peculiar topography before referred to it would be six miles from the line, unless a specially abrupt deviation were made to reach it. If, therefore, the main line were not diverted to reach the city, a branch would be necessary.

* * * *

7. Jeypoor is not only a very large city, but it is the capital of the state, and between it and the surrounding districts, there must of necessity be much inter-communication which it is obviously undesirable that the railway should fail to serve to the utmost. The trade of the city is almost entirely with the east, and, in its interests, shortness of through transport to and from the west is comparatively of little moment. An inspection of a map, showing the boundaries of the Jeypoor State, affords no reason for the supposition that the more direct or southern line towards Sambhur would obtain more short local traffic to or from the city than is due to the towns and villages in its vicinity. The distances within the Jeypoor territory from the south-west districts of that state are in the aggregate so small that those resident at any distance from the line of railway would probably travel direct, and by one means of conveyance to and from the city, so that the northern route, though less populous, would not, if adopted for the railway, deprive it of any serious amount of traffic.

8. The

8. The general traffic on this line must for many years be light, and, therefore, the first cost as well as the cost of working should be kept down to the utmost. With branches to Sambhur and Jeypoor, the through traffic would be saved, paying toll over a certain length (perhaps 10 miles) of line; but while this would benefit trade in a small degree, the general public who pay for the railway would suffer, for the construction of the branches would require an outlay which would be excluded from participation in the earnings from through traffic.

2.—PUNJAB NORTHERN (STATE) RAILWAY.

Note by Mr. *Le Mesurier.*

Salt Trade.

I have examined the evidence of Mr. Wright, the collector of salt revenue at Shahpoor, as tendered in October 1865, and I have obtained some information connected with the salt trade from other independent sources, particularly from Mr. P. Melvill, the Commissioner of the Rawul Pindee Division, and from Lieutenant Colonel Bristow, the Deputy Commissioner of Jhelum.

It would appear from the fact before me, that if the main line of railway is carried by a circuitous route *viâ* Jullalpore and the salt mines, a quantity of salt equal to about 950,000 maunds, or say 34,000 tons, would annually pass over the line between Peshawur and Lahore for delivery at various points both within and beyond these termini.

The greater portion of this salt now goes to Umritsur, some of it goes to Pindee, and, I presume, on to Peshawur.

In quoting the above quantity, I have made some allowance for the diversion of a portion of the Mooltan salt to the line of railway for consumption at Lahore, but I have not added much for possible increase of traffic.

Eventually Umballa will probably be on the edge of the salt traffic shed, as being about equidistant from the Somber Lakes and the Salt Range mines.

In estimating, therefore, 100 miles as the mean distance for this salt lead on the Lahore and Peshawur Railway, a very liberal margin is given; then assuming the rate for carriage to be half a pie per maund per mile (it will hardly be carried for less, and the rate I have allowed is a fair one upon which to base a calculation), the total annual receipts by the railway from salt traffic would amount to, say 2,50,000 rupees, of which possibly 1,50,000 rupees would be profit.

With the existing means of communication this salt can be delivered readily in Jhelum by camels at 5 annas a maund, and by boat at 4 annas a maund; from 1 to 1¼ annas of which latter sum is the cost of carrying from the mine to the boat. In addition to the above rates of existing carriage, the merchants who purchase under the most favourable circumstances pay *Rs.* 1. 2. per 100 maunds at the mines for weighing, but the contingent cost to the poorer merchants considerably exceeds this sum of *Rs.* 1. 2. per 100 maunds.

If the railway is carried by Jhelum the chief salt mart would be at that place, and the 34,000 tons of salt would find their way to Jhelum for distribution by railway, over nearly the same mean distance and with the same amount of profit to the railway (whatever that mean distance and profit might be), as if the line was carried by Jullalpoor; but the adoption of the Jullalpoor route would cheapen the salt to the trader to the extent of about 5 annas a maund, or less than one pie, or the eighth of a penny per pound. It is very doubtful if the consumer would derive any benefit from such a result.

If, therefore, it is possible to make a good first-class railway by Jhelum which shall be materially shorter than a line by Jullalpore, for the same money that would make the longer line, then surely the profit or advantage to be derived from the salt traffic alone should not suffice to turn the scale in favour of the Jullalpore scheme, and to add for all time an additional eight or ten miles freight on all private goods passing over the railway, independently of the additional freight on all imperial carriage.

The result of the survey operations of this season, however, tends to show that the shorter or Jhelum route will be very materially the cheaper, and the gradients and curves which can be obtained are at least as favourable as those which are offered by the Jullalpoor line.

The cost of a tramway from the mines to the river bank, with proper weigh-bridges and jetties would not exceed 35,000 *l.*, and if 50,000 tons or 14,00,000 maunds, which includes salt for down-stream transport, passed over this tramway annually at a cost of 9 pie per maund for the whole distance, including the weighing, the earnings would be 65,000 rupees, of which at least half might be reckoned as profit, and the cost of weighing and carriage to boat would be reduced from about *Rs.* 7. 8. to *Rs.* 4. 12 per 100 maunds. The whole cost to Jhelum by river route, including weighing, would be *Rs.* 20. 5. per 100 maunds, or 3¼ annas a maund against 5 annas a maund by camel *plus* the weighing at *Rs.* 1. 2. per 100 maunds, which difference would suffice to ensure the adoption of the water carriage and tramway,

Appendix, No. 12.

tramway, even assuming that the item of 14 rupees per 100 maunds for boat carriage is never reduced by the adoption of small tug steamers or steam barges.

I have very carefully considered the question of land carriage by a good cart road, and also by tramway from the mines to Jhelum, constructed either to the main line gauge, but with lighter permanent way, or to a narrower gauge (say 3 feet 6 inches), in accordance with some of the best and most profitable examples of tramways of which professional records are published, but in no way can I satisfy myself that it is at present expedient to incur the expense of a tramway between the mines and Jhelum, or to construct a first-class cart road upon which it would be necessary to levy tolls, or otherwise to tax the salt for road maintenance, but rather to put the water carriage on a good footing, even if the tramway from the mines to the river bank is not constructed.

(signed) *H. P. Le Mesurier.*

EXTRACT NOTE by Colonel *Taylor*, R.E., dated 30th July 1868.

6. IT appears that the quantity of salt which may be expected to use a conveniently situated line of rail from the neighbourhood of the salt mines to Lahore is 950,000 maunds. The amount *now paid for the* carriage of this quantity (nearly the whole of which goes to Umritsur) is about 5½ lakhs of rupees. The price paid for carriage varies with the demand, but is about 9½ annas per maund.

7. Without disturbing the price of salt at Umritsur and Lahore the railway might charge for carriage say 5 lakhs, out of which, according to Mr. Le Mesurier's calculation, about 4 lakhs of rupees would possibly be profit. This is a large sum and would be raised on a class of goods not liable to fall off. It represents a capital of 72,72,727 rupees at 5½ per cent.

8. The line proposed by Mr. Lee Smith would secure the whole of this traffic and the profit resulting from it.

9. Mr. Le Mesurier's line would, I am persuaded, lose the whole of it. The cost of carriage per maund, *viâ* Jhelum, would be—

Mines to Jhelum - - - - - - -	5 annas.
Jhelum to Lahore by rail - - - - - -	4½ "
TOTAL to Lahore - - -	9½ "

Which is much what is now paid for camel carriage. There would thus be no saving in cost by sending the salt by Jhelum, while there would be all the inconveniences attending the breaking of bulk at Jhelum. Even if the salt were to adopt the Jhelum route, as anticipated by Mr. Le Mesurier, the cost of transit of the whole 9,50,000 maunds would be—

	Rs.
Mines to Jhelum - - - - - - - -	2,96,875
Jhelum to Lahore - - - - - - - -	2,50,000
TOTAL - - -	*Rs.* 5,46,675

So that the railway income would only be 2½ lakhs of rupees, instead of 5½ lakhs, or profit 1½ lakhs against 4½ lakhs.

10. As already said, however, I believe that the salt trade would not use a line passing through Jhelum and Goojerat at all.

EXTRACT NOTE by Colonel *Drummond*, R.E., Consulting Engineer to the Government of the Punjab, dated 28th July 1868.

3. * * * I MAY point out what appears to me to be a miscalculation of the profit from the salt trade in the memorandum by Colonel Taylor which accompanied Mr. Lee Smith's report of March 1866; not a miscalculation in the sense in which Colonel Taylor has viewed the question, but in this way, that to arrive at the result which he has set down as to the profit from the salt trade, it would be necessary to carry the salt at the rate at which valuable piece goods and medicinal drugs are carried on the East Indian and Punjab Railways, viz., one pie per maund per mile. I cannot believe that Government would consent to charge a higher rate for the carriage of salt than that which has been approved on the guaranteed railways, viz., one-third of a pie per maund per mile.

* * * *

6. * * * Mr. Le Mesurier has calculated the carriage of salt at a half pie per maund per mile, whereas it may and ought to be carried at one-third of a pie, and at that rate by rail from Jhelum to Lahore, and at 5 annas a maund by camel, or a trifle less by boat from the salt mines to Jhelum, the salt can be delivered at Lahore for a little under 8 annas a maund for the carriage; whereas by ordinary means of transit on the direct route it cannot be delivered under rates varying from 9 to 11 annas, a maund [inclusive of tolls at ferries. The arguments in favour of No. 1 (Mr. Lee Smith's line) may be summed up thus: salt, coal, and possible traffic from the westward; and against seven miles additional length, more tunnelling, stiffer gradients, and presumably therefore more money to construct and to work, extra expense for telegraph, abandonment of the old and well-established line of traffic through a richer and more populous country, and the loss of the great gain of a first-class metalled road in close proximity. I think, on the whole, the balance is in favour of No. 2 (Mr. Le Mesurier's line).

MINUTE by the Lieutenant Governor of the Punjab; dated 5th August 1868.

WHEN this subject was considered in 1866, I was certainly strongly impressed in favour of a line going as near as possible to the salt and coal mines, assuming that this was the only means by which the salt traffic could be secured for the railway, and the coal of the mines be rendered available for fuel.

Since, then, however, I have traversed the road between Pind Dadun Khan and Jhelum, and I see no valid ground for supposing that the salt traffic will not be secured by the railway, if the railway crosses the river at the latter place, and if the conveyance of coal thither from the mines should not prove remunerative, this is a matter of infinitely less importance. The above line of road, if taken between the river and the hill spur, which abuts on Jullalpore, as is proposed by the local authorities, will be perfectly level for the whole distance between the mines and Jhelum. It is an excellent dry weather road at the present time, measuring probably about 50 miles in length; and if the two or three considerable streams which cross it are bridged, the cost of which would be fully justified by the importance of securing the salt and other traffic, the road would be an excellent one throughout, practicable at all seasons.

Another reason which led me, in the first instance, to prefer the line selected by Mr. Lee Smith was this: That as soon as a canal shall have been formed from the Chenab traversing the Rechna Doab, I anticipate that this doab will surpass the Baree Doab in productiveness, the soil being universally deemed superior, and there is every prospect also of canal irrigation in various modes being ultimately introduced very generally throughout the Jech Doab between the Chenab and Jhelum. When this state of things shall have been attained, both doabs will become well peopled, prosperous and rich, and with this prospect in view, it seemed to me that a line intersecting the doabs lower down, and thus securing the traffic of a larger area, would be preferable to a line passing through the upper portion of the doabs, in greater proximity to the hills.

There can, however, be no doubt that some generations must elapse before the productiveness and population of the tract referred to can become largely developed, and when that shall be the case, I am now inclined to consider that the most advantageous line of railway to meet their requirements would be one, not from Lahore, *vià* Goojranwala to the salt mines, but one direct from Lahore to Shahpoor and Khoshab, which would then doubtless be taken advantage of by the traffic from Dera Ismael Khan and the regions beyond, as well as by the salt trade from the Sardee, Warcha, and Kalabagh mines.

On the other hand, it cannot be denied that, as shown by the consulting engineer in his memorandum, the selection for the railway line of a route closely adjoining the Grand Trunk-road, would secure many and great advantages not attainable by any other route that could be selected. I concur then with Mr. Le Mesurier and the consulting engineer in considering that if on the completion of more detailed inquiries it appears that the gradients on the line proposed by the former gentleman will be as favourable as that selected by Mr. Lee Smith, the former should be preferred. And this preference will of course be enhanced, if, as Mr. Le Mesurier anticipates, the gradients prove more favourable and the probable cost less.

In the consulting engineer's note, as in that supplied by Colonel Taylor in March 1866, it is assumed that the cost of conveying salt from the salt mines to Jhelum would be 5 annas per maund; but I feel quite convinced that with a good bridged road, the cost even from the Khewra mines (the Jutara one, to which Mr. Lee Smith refers, being at present closed), would not exceed from 2 to 3 annas per maund at the utmost. The consulting engineer also expresses the opinion that the charge per mile should not exceed one-third of a pie, the rate charged on the guaranteed railways. But seeing that no less than three great rivers will be crossed in a little more than 100 miles between Lahore and Jhelum, it would, in my opinion, be perfectly reasonable to charge half a pie. Even at this rate, I estimate that the entire cost of conveying the salt from the mines to Lahore would not exceed 7 annas at the utmost; and seeing that the charge at present is 10 or 11 annas a maund, it can hardly be doubted that the railway will be preferred, while the income accruing to the railway from this source alone will probably be from 2 to 3 lakhs per annum.

Appendix, No. 12.

EXTRACT LETTER from Colonel *Dickens*, Secretary to Government of *India*, to the Under Secretary to the Government of the *Punjab*; dated 5th October 1868.

4. IT is of all things essential that a line such as this, on which the prospect of remunerative traffic is remote, should be carried out with the strictest attention to economy. Rapidity of construction is also an element of much value. There would seem to be little doubt that both these conditions would be attained by following the route of the Trunk-road, and in a greater degree by appropriating a portion of the surface of the road for the rails. On the other hand, the commercial advantages to be derived by affording facilities to the salt traffic would be somewhat sacrificed by adopting the Trunk-road route. Not, however, altogether so; for with a proper tariff and with improvements in the communication between the mines and Jhelum, salt going to the eastward ought to be attracted to the rail at that place, and there break bulk as now it does at Lahore.

5. If, after making due allowance for the less decided facilities afforded to the salt trade, the advantage in point of cost of construction should be in favour of the Trunk-road route, it may be right to adopt it. This point should, therefore, be fully considered by the Punjab Government in communication with Mr. Lee Smith, and in the meantime the question of the best manner of providing for the salt trade, whether by a branch railway, a canal, a road, or by improving the existing water communication or means of transport, should be thoroughly investigated. Between Lahore and Goojranwalla there is no question as to the direction of the line, except that of the actual appropriation of a portion of the Trunk-road.

EXTRACT LETTER from Mr. *Le Mesurier*; dated 18th July 1868.

INDEPENDENTLY of the salt traffic, I am not aware of any special development of trade which can be expected from the location of a line of railway at a distance from the existing commercial centres.

The condition and prospects of the salt trade are not such as to warrant the adoption of a circuitous route *viâ* Jullalpoor, which would add 10 or 11 miles to the whole distance between Lahore and Pindee.

EXTRACT LETTER from Colonel *Strachey*, R.E., Officiating Secretary to the Government of India; dated 12th May 1869.

2. * * * HAVING regard to the probable small traffic on this railway, for many years to come at all events, the permanent burden on account of interest on a very costly line would be extremely onerous.

EXTRACT DESPATCH from the Government of India, No. 20, of 15th February 1870.

9. * * * THE question, however, remains to be considered whether the requirements of the salt trade may not be sufficiently met by the water communication in the Jhelum, and on this point further inquiry is being made.

COPY of LETTER from Lieutenant Colonel *Sandilands*, Executive Engineer in the Jullundier Division; dated 15th January 1870.

I HAVE the honour to state that while down on a visit to the salt range the other day, where I was once executive engineer for three years, I heard that there is some intention of constructing a narrow gauge railway from left bank of the Jhelum to join the Northern State Railway. As I know the place and its resources pretty well I take the liberty of pointing out a few things.

1stly. That it is doubtful whether, for a long time, at least, the rock salt will be much more used, for the people outside the Punjab have a prejudice against it and consider it unwholesome. In the time of the emperors the mines were shut, and only reopened by the seikhs. In old days I recollect the Hindostan sepoys used to eat it on ordinary occasions for economy, but on great days they ate the low country salt.

2ndly. With

Appendix, No. 12.

2ndly. With river carriage only 51 miles below the new Northern State Railway, and if there be no great increase over present demand, the necessity of land carriage is not apparent, and, as I shall presently show, salt can be tracked up to Jhelum for less than it could be taken by railway.

It is to be recollected that to get to the rail the salt must be ferried across the river and then loaded, and perhaps carried some distance to the station, while the salt, once in the boat, the native merchant, unless I greatly mistake, would sooner at once have it sent by river to Jhelum.

3rdly. The railway is simply of use as a means of conveyance. In a country so destitute of fuel it is injurious; if, therefore, the river be deemed not enough for the conveyance of the salt, a canal between the Jhelum and the Chenab, joining the Northern State Railway about Wuzeerabad, would carry salt, &c., save fuel, and fertilise the present desert which lies between these rivers. The salt could then be taken in canal boats at once from the right bank of the Jhelum at Chuck Nizam (eight miles from Pind Dadun Khan). The river runs through permanent banks, and is about 1,400 feet wide in flood, so without breaking bulk it could be tracked on by the canal to Wuzeerabad for transport by rail.

It is only during the dead winter months that boats are towed with trouble up the river Jhelum from scarcity of water. During the hot weather the wind almost always blows up stream, and with sails the boats go up quickly and return in one night.

The mines are only worked for 10 months in the year; the heat of the gorge and danger from slips in the mines, combine in preventing the miners working during the rains, and they move in a body to a village provided for the purpose on the top of the highest hill in the neighbourhood. They stay there till time to recommence operations. The quantity of salt turned out in these 10 months averages about 3,000 maunds per diem, and to remove the quantity to meet the train daily at Jhelum only 10 boats, holding 300 maunds each, would be required; and giving the absurdly long time for going and coming of 15 days, we have one boat carrying two freights per month of 300 maunds each, or 600 per mensem:—

Allowing a crew of six men at 5 rupees each per mensem - -	30 rupees.
One tindal at 7 rupees - - - - - - - - -	7 „

37÷6, or little over 6 rupees per 100 maunds, but three trips in the month will be often practicable, which would be a little over 4 rupees per 100. The carriage to the river side is, of course, common to both water and rail carriage:—

	Rs.	*a.*	*p.*	
The present ferry tolls levied for salt is 6 pies per maund, or - - -	3	2	–	per 100 maunds.
And the carriage of salt by railway, at 1-3rd pie per mile, for 51 miles, is 1 anna 5 pies per maund, or per 100 maunds *Rs.* 8. 13. 8. - - -	8	13	8	
TOTAL - - - *Rs.*	11	15	8	

Thus the Jhelum boatmen could underbid the railway offer.

Already the people are combining river with railway traffic for about one-third of the whole out-put of the mines, which is now conveyed by boats to Mooltan, and thence by rail to Lahore.

EXTRACT RAILWAY DESPATCH to the Government of India, No. 24 of 20th April 1870.

3. * * * I shall be glad if the result of the further inquiries you are making as to the requirements of the salt trade shall be such as to satisfy you that these may be sufficiently met without a special branch to the salt range, by water carriage on the Jhelum. If, however, a branch line should be found preferable, I quite agree with you that it should be of narrow gauge.

3.—INDUS VALLEY (STATE) RAILWAY.

MEMORANDUM by Colonel *R. Strachey*, R.E., Inspector General of Irrigation, dated 30th July 1868.

RAILWAY in SINDH.

THE Statistical Tables which I have obtained from Sindh enable me to give some more definite facts regarding the population and produce of the country than was possible when I wrote my Memorandum on this subject early last year.

First, I have the following Statement of the Exports from all the ports in Sindh for five years—

	Exported.	Railway down Goods.
	Tons.	*Tons.*
1861-2 - - - - - -	101,446	—
1862-3 - - - - -	157,265	89,724
1863-4 - - - - - -	184,889	109,956
1864-5 - - - - -	149,636	83,898
1865-6 - - - - - -	119,823	104,516

The bulk of the above is exported from Kurrachee, the other ports being of relative small importance. It will also be seen from the statement of the railway traffic for the several years, that nearly all the export goods now pass over the railway.

The average area in Sindh, under crop, is shown to be a little over 1½ million acres; of this, no doubt 1¼ million acres are food crops. From the figures given, eight maunds an acre is more than the average crop, so that 10 million maunds, or 370,000 tons, is in excess of the total weight of the grain produce. The residue of the area, if cultivated with oil seeds and cotton, which are the chief exports, may be reckoned to give four maunds per acre at the outside. This will be one million maunds, or 37,000 tons; thus the total produce of Sindh cannot be in excess of 400,000 tons, and almost certainly falls sensibly below that amount.

To consider the available produce for export we have to estimate for the food of the 1½ million of inhabitants and their cattle. At one seer per day, a man would eat nine maunds of grain in the year. To allow for women and children, it will be necessary to reduce this rate considerably, and perhaps one-fourth of it will be a safe proportion to reckon as the actual consumption. For the 1½ millions of people, we should therefore require 3,375,000 maunds, or say 125,000 tons of grain; this would leave 245,000 tons available for the cattle and export. If we consider that the cattle consume half the produce of the land under Jewar and Bajra, it would give 2,800,000 maunds. Let us suppose that two million maunds is so consumed, or say 70,000 tons, and we shall have a net remainder of grain for export of 175,000 tons as a maximum, and a total of 212,000 tons.

The details of the probable distribution of the produce in the returns are incomplete, but putting them together in the best way that I can, I obtain the following results:—

	Tons.
Total produce including Kurbee, *i.e.*, straw used for cattle-feeding - - - - - -	436,000
Consumed by the population - - - -	188,000
Exported - - - - - - - -	248,000

Considering the very rough character of the calculation in both ways, the results are not more at variance than might have been expected, and they seem to show that from 200,000 to to 250,000 tons is the outside of the possible total export of produce from Sindh, at present.

As I noticed in the paper to which I have referred, since the railway must run on one side of the Indus or the other, that side which it did not occupy could hardly be affected by it; and as Sindh is nearly divided into two equal parts by the Indus, it is very unlikely that if the whole available produce came on to the railway for transport to Kurrachee, it would, on the average, exceed much the half of the 250,000 tons, or say 125,000 tons, which could not possibly pay 5 per cent. on the cost of the line, or nearly that amount.

The comparison of the facts relating to the cultivated area and population on the line from Kotree to Rohree, and onwards to the Bhawulpoor frontier, with the corresponding facts for the North West Provinces, between Benares and Saharumpoor, gives the following results.

In Sindh, on a length of about 200 miles, the average per square mile of country passed, is as follows:—

Cultivated acres yearly, per square mile - - -	44
Rural population - - - - - - - -	57
Town population in towns of 5,000 and over - - -	7

In the North West Provinces, on a length of 560 miles, we have as follows:—

Cultivated acres yearly, per square mile - - -	396
Rural population - - - - - - - -	390
Town population, in towns of 5,000 and over - -	48

If the calculation of the town population is made for the mile in length of the railway, we should have for Sindh 315 per mile, and for the North Western Provinces 2,660 per mile. Of course, my only intention in putting these figures in juxtaposition is to give a standard of comparison with what is without doubt the richest part of India in point of cultivation and population.

The conclusion, I think, cannot be questioned after the comparison has been made, that all said by me about the poverty, the population, and bad cultivation of Sindh is fully justified.

(signed) *R. Strachey,*
Colonel, R.E.

TABLE I.—CLASSIFICATION of LANDS and CROPS.

CLASSIFICATION OF LANDS.			——	Frontier of Upper Sindh.	Shikarpore	Hyderabad.	Kurrachee.	TOTAL.

EXTRACT DESPATCH from the Government of India, No. 52, dated 17th May 1870.

5. * * * The poor returns hitherto realised on the Sindh and Punjab railways and on the Indus Flotilla do not justify our forming any sanguine expectation of an early remunerative traffic on the Indus Valley Railway, even when completed, so as to form a through-line of communication, and afford an additional reason, if needed, for keeping down the outlay, both on first cost and on working, to the lowest possible limits.

EXTRACTS from LETTER of Lieutenant Colonel *Pollard*, R.E., Joint Secretary to the Government of the Punjab, dated 14th June 1870.

FURTHER investigation and inquiry showed that it was very desirable to tap the important districts about Shoojabad, and to approach that town, which has a considerable grain market, as closely as the features of the country and the periodical inundations to which it is known to be subject, would permit.

* * * * * * *

The Shershal route, is locally very popular. There is a good deal of local traffic; Shershal is itself a place of interest to the people, and is the seat of an annual fair of some note.

Appendix, No. 12.

EXTRACT LETTER from the Secretary to the Government of India to the Secretary to the Government of the Punjab, of 29th June 1870.

3. THE arguments adduced in favour of a direct line south of Bahawulpoor to Mobarukpoor and Chunnee Ghote are less convincing. Mobarukpoor is a place of considerable commerce, and its convenience must be carefully consulted; the country between it and Chunnee Ghote is also represented to be less barren than the districts more to the westward, but Ahmedpoor is represented to contain upwards of 40,000 inhabitants; and although it is not the centre of any large trade, the requirements of so large a population of even a pleasure resort must constitute an important traffic on any railway. Should Ahmedpoor be as populous as it is represented to be, a slight deviation westerly should be considered so as to bring the line nearer to Ahmedpoor, without materially lengthening the railway, and thereby adding to its cost, and without also removing the line from that country which the Punjab Government is desirous to accommodate.

EXTRACT LETTER from Lieutenant Colonel *O'Connell*, dated 17th May 1871.

27. * * * No town of any importance is distant from this line. The village Oobaroo, near to which this line does not pass, is reported to be surrounded by water during the floods, and its population is only 1,345.

28. The present population of the district is, in fact, generally so small that provision for their convenience, though a necessary, is still a minor subject for consideration. Future additions to the population may, in the case of this line, be considered as sure to congregate near the railway, provided it be constructed so that it shall not be washed away during heavy floods.

BAHAWULPOOR STATES, THIRD OR KHANPOOR DIVISION, INDUS VALLEY (STATE) RAILWAY.

EXTRACTS from LETTER from Mr. *Wallace*, Acting Collector of Shikarpoor, dated 16th May 1871.

11. The line, moreover, passes through the best cultivated part of the district and the most important places, viz., Punnoo-Akil, Dadloee and Ghotkee.

12. From Surhud across to Meerpoor, the country is poor, being flooded; it yields only a rubbee crop, and there is no disguising the fact that, through the three breaches you mentioned in the high ridge connecting these two places, the greater portion of the flood which sweeps the district finds its way. It would be presumptuous in me to offer an opinion as to the engineering difficulty, or otherwise, of crossing these openings. I would, however, beg leave to suggest that a liberal addition be made to the depth and velocity of water, as ascertained by experiment at these places, as, for many years past, the floods from above have not been nearly as heavy as in my recollection of 1853 and 1854.

13. From Meerpoor to Khyrpoor-Deherkee and Rehtee is as good a line as could be chosen; the land is chiefly under rubbee cultivation, the floods or fear of them preventing much khureef cultivation anywhere between these towns and the river, whilst Khyrpoor-Deherkee is, in a commercial point of view, of more importance than Oobaoroo, the trade between the Marwar country and this part of Scinde having its head quarters at Khyrpoor.

* * * * * *

26. I subjoin a few statistics showing the area, population, revenue, &c., of the Rohree district. There are four Talookas:

Rohree.
Syudpoor (head quarters Punnoo-Akil).
Ghotkee.
Meerpoor.
Oobaoroo.

27. These Talookas are sub-divided into 31 tuppas and 350 villages.

28. Excluding the large sandy and desert tract on the east, which yields scarcely any revenue and is almost uninhabited, the area of the district is 2,796 square miles, with a population of 114,900 souls, according to the census taken in 1854, thus giving 41 souls to the square mile.

29. The land revenue of the district was as follows for the year 1869-70:

Talookas.	Khurreef.		Rubbee.		TOTAL.	
	Acres.	*Rs.*	*Acres.*	*Rs.*	*Acres.*	*Rs.*
Rohree - - -	22,534	38,801	11,808	28,481	34,342	67,282
Syndpore - - -	9,042	23,155	10,282	23,567	19,324	46,722
Ghotkee - - -	17,288	34,663	29,083	93,404	46,371	1,28,067
Meerpoor - - -	17,967	44,753	35,797	53,047	53,764	97,800
Oobaoroo - - -	6,668	13,677	35,221	64,464	41,889	78,141
TOTAL - - -	73,499	1,55,049	122,191	2,62,963	195,690	4,18,012

Appendix, No 12

30. The acreage shown above is an approximation, as, the land being under settlement, the precise acreage under cultivation has not hitherto been recorded, but only that which is taken up by the zemindars and cultivators.

31. The yield on the above acreage cannot be stated with positive accuracy; but from careful inquiry, I gather that the principal products of the district, the season of 1869–70 being a fairly good one, may be taken to have yielded the following weights:—

———	Maunds of 84 lbs.	Value.
KHURREEF.		
Jowaree and Bajree, &c. - - - - -	239,262	4,18,708
Rice in husk - - - - - - -	48,250	84,437
Indigo - - - - - - - -	3,920	3,13,600
Cotton, cleaned - - - - - -	940	17,000
Oil Seeds, &c. - - - - - - -	75,066	2,25,198
Total Khurreef - - -	367,438	10,58,943
RUBBEE.		
Wheat, Barley, &c. - - - - - -	506,630	12,66,575
Grain, &c. - - - - - - -	53,640	93,870
Oil Seeds, &c. - - - - - - -	50,686	88,700
Total Rubbee - - -	610,956	14,49,145
TOTAL Khurreef and Rubbee - - -	978,394	25,08,088

32. Of this it may be estimated that 458,355 maunds are consumed in the district, leaving the rest for exportation, thus:—

———	Maunds,	Value.
For home consumption - - - - -	458,355	11,75,064
Exported - - - - - - - -	520,039	13,33,024
Total - - -	978,394	25,08,088

33. Assuming this as being something near the mark, we may set down the following as—

———	Maunds.	Value.
Exported to Mooltan or upwards - - -	20,000	50,000
„ Jeysulmere and eastwards - -	162,610	4,19,232
„ Sukkur or downwards - -	337,429	8,63,792
Total - - -	520,039	13,33,024

EXTRACTS of DESPATCH from the Government of India, No 126, dated 31st October 1871.

1. IN reporting to your Grace, in Despatch No. 19 of 1871, the steps taken for the construction of the section already sanctioned of the Indus Valley Railway between Mootan and Rohree, we also forwarded copy of a resolution issued by us on the 9th February 1871, appointing a committee to investigate locally, and report on the route that might be selected as the most advantageous on commercial, financial, and political grounds, for pro-

Appendix, No. 12.

viding railway communication between Rohree on the left bank and Kotree on the right bank of the Indus.

* * * * * * *

10. * * The preference for either line must be based on their respective values from a political and military as well as from a commercial point of view, for it appears an essential part of the scheme that the Indus should be bridged. The committee are of opinion, that traffic will never be carried across the river to a railway on the opposite side, except, perhaps, at Sukkur (Rohree) where the banks are permanent, and that ferries at Kotree or Sehwan in place of bridges would be of no use should the left bank be adopted for the whole or a part of the extension.

* * * * * * *

16. Returning now to the Indus Valley line, and regarding the commercial aspects of the case, your Grace will observe that the committee have obtained the following data from investigation on the spot:—

The foreign traffic of the Punjab to be carried by rail through Sindh is calculated at 23,440 tons a year. This would pass over either line.

The foreign traffic of the right bank of the Indus is calculated at 40,000 tons, half of which would pass over a right bank line with a yearly ton mileage of 3,400,000 miles.

The foreign traffic of the left bank is calculated at 20,000 tons, half of which would pass over a left bank line, with a yearly ton mileage of 1,090,000 miles.

Computations are also made of the probable passenger traffic, which must, however, be hypothetical.

17. On these data, and assuming that 60 per cent. of the earnings are expended in working the traffic, the committee estimate that the right bank line would pay 2·41 per cent., the left bank line, 1·78 per cent., and the two lines, if both constructed, 1·7 per cent. In other words, if the Government could borrow money at 4½ per cent., the general revenues would be annually burdened with 24,000 *l.* if the right bank line were made, 33,500 *l.* if the left, and 66,500 *l.* if both lines were made.

18. As to the comparative wealth of the districts that would be respectively traversed by the right and left bank lines, the committee state that the right bank line between Kotree and Sukkur yields 19,00,000 rupees of land revenue, while the left bank, between Hydrabad and Rohree yields only 10,16,000 rupees. Taking the figures entered on the map attached to the committee's report, it appears that, omitting the terminal talooks on both sides, the population of the talooks between Sukkur and Hydrabad is almost precisely equal* on the two banks, but that the revenue of the right bank talooks is 13,96,422 rupees against 7,33,366 rupees derived from the left.

No.
*Right Bank 415,669
ft Bank - 414,862

19. It appears, also, that the right bank districts export more than twice as much as the left bank districts. Thus, with the same population, the right bank districts, owing to irrigation, are twice as wealthy, and afford to a railway the prospect of twice as much traffic as the left bank districts. A large irrigation canal has, however, been proposed below Rohree on the left bank, and it is not improbable, if the project be carried out, that ere many years elapse, the left bank districts, already as populous, will be as rich and fertile as those on the right bank.

20. As to the probable returns, the estimates of traffic made by the committee are very moderate, and differ very widely from those of the committee appointed by the Bombay Government in 1868, copy of whose report is enclosed. The Sindh Railway traffic is about 80,000 freight ton miles per mile open yearly; whereas, the committee's estimated traffic is only about 48,637 freight ton miles per mile open. The Sindh line obtains the left bank traffic above Hydrabad, as well as that of the right bank; and the boat traffic transhipped at Kotree is largely in excess of what the right bank project is credited with, namely, one-twentieth of that brought down in boats. But while the traffic is probably under-estimated by the committee, the profits are, as suggested by the consulting engineer to the Government of Bombay, decidedly over-estimated, owing to the working expenses being taken too low. Instead of net profits of 3,48,426 rupees on the right bank line, arrived at by the committee, the following, judging from the actual facts of working on the Sindh line, would be more probable,—

	Rs.
Gross traffic* - - - - - - - - -	7,25,000
Working expenses - - - - - - - -	5,85,000
Profits - - - *Rs.*	1,40,000

* Committee's estimate increased for through passengers.

or about 1·3 per cent. on the capital outlay. But, as already remarked, the estimate of gross traffic is very moderate; and if, as is not improbable, it should be increased to 10,00,000 rupees, we might look for a profit of 3,50,000 rupees, which would afford a return of 3¾ per cent. on the capital outlay on the line, stocked for two trains only each way daily.

21. The

21. The right bank will afford a better return than the left bank, with charges based on mileage rates; but the extra 34 miles to be worked over on the right bank is a disadvantage, and, in comparing the merits of the two lines, the same through charges for non-local traffic ought to be assumed over both. From the point of view, then, of the profits realised, there may not be much to choose between either bank; but if, as seems certain, the right bank will carry at least 10,000 more tons of local produce than the left, and still realise as much profit as the latter, the preference should be given to it.

22. It is apparent that we cannot calculate upon the Indus Valley Extension line as a direct remunerative work, however much we may succeed in keeping down its first cost. It is, however, more than probable that the sections of the railway already made will yield better returns than they now do when the two ends are joined, and though it cannot be expected that the full interest will be covered for a long time to come, there will be a moderate return, and a large advantage in the provision of a better outlet for the province of the Punjab.

23. On a perusal of the papers forwarded with this Despatch, your Grace will, we trust concur with us in thinking that the preponderance of authority is in favour of crossing the Indus by a bridge at Sukkur, and proceeding to Kotree by the right bank.

* * * * * * *

25. In a commercial point of view, the right bank has many advantages. The country through which the railway passes is better than on the other side. *It is probable that in* future years a canal may be made which will be sufficient for all the commercial requirements of the left bank, and though the number of miles travelled will be somewhat greater, the cost will be somewhat less, and the great uncertainty of bridging the Indus at Kotree will be avoided.

* * * * * * *

27. With regard to finance, this undertaking is not very promising, and if anything shows the soundness of the decision that was arrived at in reducing the gauge for future long lines of communication in India, it would be the forecast made in these papers; in fact, if our only mode of constructing a line was to be on the scale of the East Indian, or even the Delhi and Punjab Railways, from Mooltan to Kotree, the thing under our present circumstances would have been a financial impossibility.

28. The returns of expected traffic are not very reliable, but they are sufficient to show that for the present, at all events, a narrow gauge line made on the most economical principles cannot be remunerative.

29. If, however, we look upon it in a political light, and if we have only to pay 30,000 *l.* or 40,000 *l.* a year for building the "missing link," we consider that the money would be exceedingly well spent.

EXTRACT of REPORT of Committee on Indus Valley Railway.

13. THE population of Sind is extremely sparse. Unhappily we have no means of judging whether it has increased to any material extent since the province came under British rule. The only census ever taken was in the season 1856–57, but the agency employed was totally inadequate to the purpose, and no sufficient check was kept on the returns, which, in consequence, are regarded as very untrustworthy. The population is now estimated at 1,730,323, or about 35 to the square mile. It is distributed through the various districts, as follows:— Population

Kurrachee - - - - - - - - -	340,000
Hydrabad - - - - - - - - -	566,865
Shikarpoor - - - - - - - - -	513,458
Frontier, Upper Sind - - - - - - -	85,000
Thurr and Parkur - - - - - - - -	225,000
TOTAL - - -	1,730,323

The above estimate omits the territory of his Highness Meer Ali Moorad of Khyrpoor, as to which no information on this subject is forthcoming. Seventeen years ago an experienced officer in Upper Sind estimated the population of Khyrpoor at less than 50,000, and he stated that it was then decreasing. The numbers were perhaps understood, but it is known that some emigration has taken place from the territory of the Meer, that he is opposed to much extension of cultivation, and that his revenue has fallen off. It may, therefore, be assumed that the present population does not exceed 50,000.

14. The province being almost entirely dependent for the produce of its soil upon irrigation, the progress which this has made under our rule is obviously a most important point for consideration in reviewing the general condition of the country. The question, however, is too large a one for any but the most cursory notice in the present report. It may suffice to say that irrigation is as yet in a very backward condition, and that much remains to be done, Importance of irrigation, and its backward condition.

Appendix, No. 12.

done, both as regards increasing the supply of water, and in regulating that which is now provided.

Satisfactory evidence of the steady progress of the province afforded by the state of the revenue.

15. Highly satisfactory evidence of the steady progress of the province, notwithstanding the adverse conditions of climate, population, and irrigation with which it has to contend, is afforded by the state of the revenue. The increase in all branches of revenue is very remarkable. The gross land revenue has risen from 28,30,282 rupees in 1853–54 to 46,37,292 rupees in 1869–70, an increase of 18,07,010 rupees; or comparing the average of the three first, 31,44,015 rupees, to that of the three last, 43,84,747 rupees, the increase has been 39 per cent. It has averaged during the last 10 years * 41,87,457 rupees, during the last five years 42,11,725 rupees, during the last four years 43,41,328 rupees. Again, comparing the average revenue of the last nine years with the average revenue of the eight† preceding years, we find the former exceed the latter, as follows:—

	Rs.
Average revenue of nine years ending 1869–70 - -	43,70,575
Ditto - - of eight years ending 1860–61 - -	33,78,825
Difference - - - *Rs.*	9,91,750

an increase of nearly 30 per cent.

Probable increase in land revenue during the next 10 years.

16. Judging from the rate of progress exhibited by these figures, we may expect the land revenue to rise in the next 10 years to nearly 55,00,000 rupees, and should a more liberal expenditure on irrigational works be adopted, even this estimate will probably fall short of actual results.

The sayer revenue, and its rapid growth

17. In the same period of 17 years the sayer revenue, including customs, has risen from 3,99,784 rupees in 1853–54, to 20,32,907 rupees in 1869–70; that is to say, it has been more than quadrupled. The principal items of the sayer revenue, omitting "Customs," which require separate notice, are excise, stamps, assessed taxes, and forest receipts. The immense increase above recorded is, therefore, a most convincing proof of the great advance in prosperity made by the Province during the period under review.

The customs revenue, and its extraordinarily rapid growth.

Principal articles of import and export.

18. The customs revenue has increased from 48,361 rupees in 1853–54, to 4,03,885 rupees in 1869–70, an increase of 3,55,524 rupees, the revenue of the latter year being considerably more than seven times that of 1853–54. The chief articles of import are piece goods, metals, and sugar, and of export, cotton, wool, oilseeds, grain and pulse, and dyes. Of these the bulk of the cotton is supplied by the Punjab, the wool almost entirely by the countries beyond our north-west frontier. The oilseeds and grain are jointly contributed by the Punjab and Sind, the share of the latter being very considerable.

Railway communication.

19. We may now return to the railway communication.

Want of complete records of the traffic on the Indus.

20. Great difficulty has been met with in determining the commercial advantages of the different railway lines from the absence of complete records of the traffic on the Indus.

Statement of river Native boat traffic at Sukkur.

21. A statement (Appendix C.) showing the river trade at Sukkur from 1856 to 1862 and 1865 to 1868, is attached. This statement was prepared by Mr. Howe when in charge of the Boat Department at Sukkur, and is useful as far as it goes; and it is greatly to be regretted that the same information was not recorded for the whole of the years from 1856 up to the present time. The information, however, is defective in two important particulars: it does not show the nature of the merchandise, and what portion of it was really through traffic, but landed and embarked again for Lower Sind, or for export from the ports of the Province. No doubt some was actually used at Sukkur, or dispatched inland, and, in addition to what was re-shipped, produce from the districts in the vicinity of Sukkur was dispatched up and down river. It is impossible, therefore, to see how much of the merchandise which appears under the head of "Boats leaving the Bunder with merchandise," was through traffic and how much local, and this, of course, affects the question of a line of railway through Sind. The greater the through traffic and the smaller the local, the greater the advantage of the shortest line to the district supplying the through traffic.

Statement of river Native boat traffic at Mithunkote in 1863–64

22. Major Bonus, Deputy Consulting Engineer, in a Report, No. 4137, dated the 15th December 1864, gives the following figures of the river traffic by Native boats passing Mithunkote in 1863–64:—

Up - - - - - - - - -	185,885
Down - - - - - - - - -	1,179,177

23. It

---

* Cultivation of Government land has increased in this period as follows:—

Cultivated land in 1869–70 - - - - - - - -	2,171,770
Ditto - - in 1860–61 - - - - - - - -	1,349,449
Excess in 1869–70 - - -	822,321

or nearly 60 per cent.

† That is for a period commencing with 1853–54. No longer period is taken, as the revenue in that year was largely increased by the resumption of territory from Meer Ali Moorad, and the previous smaller amounts would be of no use for purposes of comparison.

Traffic at Sukkur not recorded in 1863-64.

23. It is unfortunate that the traffic at Sukkur was not recorded during the same year, and comparison with the Sukkur returns for any other year can be but of little use, as, during 1863-64 and the three subsequent years, the fluctuations in the traffic were extraordinary, partly from the down cotton trade, and partly from the failure of crops in the Punjab, which stimulated the up trade in grain.

Comparison of the Punjab trade with the whole import and export trade of Sind.

24. As the only means of calculating the through trade with the Punjab and the trade due to Sind, the through trade given by Major Bonus for 1863-64 has been compared with the total exports and imports of the Sind ports during the same year. The following are the figures:—

The traffic which passed Mithunkote (vide *Major Bonus' Report*).

Up - - - - - - - - - -	493,989
Down - - - - - - - - - -	1,483,393
	1,977,382 Maunds
	73,000 Tons.

These figures include the merchandise carried by the steamers of the Indus Steam Flotilla, the Oriental Island Steam Navigation Company, and the Punjab Flotilla.

25. The total weight of the exports and imports during the same period, including small articles which are only given in numbers in the Customs Returns, but for which a small allowance has been made, was—

	Tons
Imports - - - - - - - - - -	35,000
Exports - - - - - - - - - -	134,000
	169,000
Deducting the through traffic from the Punjab - -	73,000
That due to Sind is - -	96,000

River and railway traffic between Kotree and the sea-ports during the past three years.

26. During the past three years the average up and down traffic are reported by Captain Dowden, Deputy Consulting Engineer, to be as follows:—

	Tons	*Tons.*
Up.—By Sind Railway - - - - -	36,565	
By Native boats from Ketty - - -	4,909	
Total Up - -		41,474
Down.—By Sind Railway - - - - -	46,602	
By Native boats to Ketty - - -	29,683	
Total Down - - -		76,285
TOTAL - - -		117,759

The details are given in Appendix D.

Falling off in amount of traffic during the past three years explained.

27. The trade, as given by Captain Dowden, is less than that of 1863-64, but there is no reason to doubt the general correctness of the figures in either case, as, since that year, which was a brisk one in trade, there has been considerable depression. This is very clearly shown by the comparative statement of imports and exports, (Appendix B).

The export of grain, pulse, and oilseed, which form the bulk of the Indus traffic, has, moreover, diminished in consequence of the failure of rain in the Punjab and the famine in Marwar. To the latter large quantities of grain have been conveyed from the Indus Valley.

Distribution of the Sind trade.

28. With respect to the distribution of the Sind trade of 96,000 tons, there are no complete returns, but a fair approximation may be obtained by assigning a share to each portion of the province proportional to its revenue. The gross land revenue, including the territory of his Highness Meer Ali Moorad, is 48,37,295 rupees. Of this 19,02,534 rupees is derived from the right bank, between Kotree and Sukkur, and 10,15,977 rupees from the left bank, between Hydrabad and Rohree. The details will be seen from the map* attached, on which the revenue and population in each talooka are shown. Dividing the whole tonnage into shares, proportional to the revenue, the following result is obtained:—

	Revenue.	Tonnage
The whole province - - - - - -	*Rs.* 48,37,295	96,000
Right bank, between Kotree and Sukkur -	„ 19,68,524	40,000
Left bank, between Hydrabad and Rohree -	„ 10,15,977	20,000

---

* "Not reproduced."

Local traffic.

29. In addition to this there is a local traffic. The Committee has no means of ascertaining accurately what the amount of this may be, but, as each district produces more than it requires for its own consumption, and the whole country exports grain to a large extent, it is believed that the local traffic is small. It is of course in proportion to the population, and has been determined on the principles which will be found explained in paragraph 42 of this report.

Competition for the traffic between a railway and the river which affords fair means of transport for bulky goods; facts which show this, rate of freight, &c.

30. Before the traffic which would fall to a railway on either bank can be determined, however, it is necessary to consider how far the river navigation can compete for it. The Indus has often been condemned as a means of transit. For quick passenger traffic it is undoubtedly useless, but that it affords very fair means of transport for bulky goods is attested by the following facts:—

1st. The Native boats convey merchandise at an average rate, up and down stream, of three farthings, or six pies per ton per mile. The distance by river commonly exceeds that by land by one-fourth; hence the rate on the distance by land is 7½ pies.

2nd. They are increasing in number every year. From a statement obtained from Mr. How, the conservator of the Indus, the burthen of boats registered at Kotree during the year 1870 was 63,357 tons (*vide* Appendix E).

3rd. From the number of trips which the boats can make up and down during a year, between the Punjab and the coast, and between intermediate places, and the fact of their often lying for a long time without freight along the whole course of the river, it is known that they have not full employment, and, therefore, that the rate of six pies per ton per mile, when they have work, must be a remunerative one. Crews are not constantly maintained for every boat; at the end of a voyage they are discharged and go to boats which have freight.

4th. The steamers of the Indus flotilla convey merchandise at the following rates:—

Up.

	Per Ton per Mile.
Grain - - - - - - -	1·45 pence = 11·6 pies
Cotton, pressed - - - - -	2·17 ditto = 1 anna 5·4 pies.
Ditto, unpressed - - - -	3·00 ditto = 2 annas 0 6 pies.

Down.

	Per Ton per Mile.
Grain - - - - - - -	1·09 pence = 8·7 pies.
Cotton, pressed - - - - - -	1·09 ditto = 8·7 pies.
Ditto, unpressed - - - -	1·81 ditto = 1 anna 2·5 pies.

The above rates per ton per mile are calculated on the distance by land (450 miles), in order that they may be compared to the railway rates from place to place.

5th The up rates may be considered heavy, but the *down* rates are not so, and it is to be observed that the greater part of the trade is down.

6th. Under the excellent management which has been introduced of late years, the Indus Steam flotilla is working with profit. The rates of freight are, therefore, remunerative.

Share of the traffic which will fall to a railway.

31. These facts show that the Indus navigation will compete with a railway for the traffic. For such cargo as cotton and other valuable produce down, and for piece goods, &c., up, the railway will, as a rule, carry the whole of that which pertains to the district it may traverse, as well as that which belongs to the Punjab; but, with respect to grain, oilseed, and similar produce, the railway will possibly get only one-half of that produced in the district it traverses, and but a small fraction (possibly not more than one-twentieth) of that which arrives at Sukkur in Native boats from Punjab. Some of this merchandise will be cotton, but we question whether a cargo of cotton once shipped will be discharged above Kotree. The charge by Native boats is already lower than the railway rate for pressed cotton, and competition will lead to still lower rates by boats.

32. The merchandise now brought from the Punjab by the steam flotilla would no doubt come to the railway. This, during 1863-64, was shown by Major Bonus to be 20,900 tons, and adding one-twentieth, or 2,540 tons, of that conveyed by native boats, the whole through Punjab traffic which would come to the railway is 23,440 tons.

Improbable that produce will be carried across the river to the railway.

33. It is improbable that the produce of one side of the river will ever be carried across to the other, to be conveyed by the railway, except at Sukkur, where the permanancy of the banks and the facility for ferrying render the crossing of goods easy and certain. At all other points, including Sehwan, where the bank is permanent only on one side of the river, it is probable that, if merchandise is once brought to the river and placed in a boat, it will be carried down to Kotree by water.

Passengers will cross the river to avail themselves of the railway.

34. Passengers, however, may be expected to cross the river at all points, to avail themselves of the railway when they have any considerable distance to travel.

Objections to the Indus as a means of transit.

35. The objections to the Indus as a means of transit are, that the navigation is slow and uncertain. These disadvantages, however, do not affect the transport of grain and similar bulky articles, except under extraordinary circumstances. By the flotilla steamers the transit of merchandise is sufficiently quick, but it will be observed by comparison of the rates

rates of freight how low that for grain by the steamers must be to compete with the native boats. It has only been by good management that the steamers have succeeded in carrying grain at all. It is commonly taken to fill up a vessel just before starting when more valuable cargo is not obtainable; and it is taken at extremely low rates,—lower than those shown. The agent gives those under his orders a discretionary power to fill up vessels with grain at such rates as may be obtainable.

* * * * * * *

The cost and probable return for each line.

41. The respective estimates for the left and right-bank lines amount to 1,232,857 *l.* for the former, and 1,152,274 *l.* for the latter (*vide* Appendices F and G).

Probable passenger and boat traffic.

42. In estimating the probable returns which each of these two lines would obtain, we have thought it advisable to consider separately the purely local traffic of Sind, the foreign traffic of Sind itself, and the foreign traffic of the Punjab which passes through Sind. With given fares the local passenger and goods traffic may be expected to pay in proportion to population and to the average rate of wages, it being assumed that, taking one part of India with another, the inducements to travel are about the same, while the means of travelling among the people, as well as the money cost of producing and transporting the articles consumed by them, vary nearly as the rate of the wages of the labouring classes. We find that the rate of wages in Sind is high as compared with other parts of India. We learn that it very rarely falls below 4 annas a day, and that, in the vicinity of towns, it is as high as 5 or 6 annas a day. We are, therefore, inclined to think that the average daily passenger mileage in Sind per thousand inhabitants will exceed the average daily passenger mileage per thousand inhabitants in other parts of India. From the few facts entered in Appendix H. it will be seen that in 1847 this average amounted to 106 in the United Kingdom, and 52·4 in Belgium. At a period when only 96 miles of the Madras Railway were open to traffic, this average was only 18·7 with a 4 pies per mile fare, but it amounted to 63·08 with a 2 pies per mile rate. We believe that, with a 3 pies per mile rate the average daily passenger mileage may, at a moderate estimate, be put down at 50 per thousand inhabitants. The receipts from purely local goods traffic we have set down at half that from passenger traffic. Statistics which would decidedly settle this item do not, we believe, exist; but we are under the impression that our estimate is not far out. The result arrived at may, however, for convenience of reference, be stated in the following form:—

Annual average distance travelled by an individual along the railway, 18·25 miles.
Average annual sum paid by an individual for a railway ticket - 4·56 annas.
Average sum paid for goods traffic per individual per annum - - 2·28 „

which is about the charge for conveying one-third of a ton, or one man's annual consumption of food, eight miles.

Foreign traffic of Sind.

43. The distribution of the foreign traffic of Sind has been made in paragraph 28 of this report. It is there computed that 48,000 tons leave the right-bank district, being carried an average distance of 170 miles to Kotree from Larkhana, which is computed to be the trade centre of the right bank, and that one-half of this will be sent by rail, giving the right bank an annual ton mileage of 3,400,000, which is, in round numbers, equivalent to a through traffic of 15,300 tons along 222½ miles. A similar calculation makes the foreign traffic of the left bank to be 20,000 tons, carried an average distance of 109 miles from a centre of trade situated near the town of Mora, and yielding to the railway an annual ton mileage of 1,090,000.

44. The foreign traffic of the Punjab passing through Sind is computed at 23,440 tons as per margin. This will necessarily pass over whichever line of railway may be first constructed.

Foreign traffic of the Punjab:—	*Tons.*
1 Carried by the Indus flotilla - - - - - -	20,900
2. One-twentieth of that brought down in native boats - -	2,540
TOTAL - - -	23,440

Probable return on the outlay of capital.

45. From computations made on the above data for passenger and goods traffic and recorded in Appendix I., it will be seen that, if the working charges of the line amount to only 50 per cent. of the gross receipts, the right-bank line will yield 3·02 per cent., and the left-bank line 2·22 per cent.; but that, if the working charges amount to 60 per cent., these per-centages will be reduced to 2·41 and 1·78. If the whole charge for the through goods from the Punjab be made as great on the shorter left-bank line (or at the rate of 10 pies per ton per mile hitherto assumed to be common to the two lines) as it would be on the longer right-bank line, the per-centage of profit on the left bank will be raised from 1·78 to 2·118.

The section to be first undertaken.

46. It has been seen that the profits likely to be yielded by either the left-bank line alone or the right-bank line alone are small, even if only one line is in existence. Were they both constructed and working at the same time, either the whole of the through traffic from the Punjab would pass along the shortest line, or would be distributed between the two lines. In either case the whole net receipts would fall short of the following sum:—

	Rs.
1.—Net receipts for the right-bank line, as per Appendix - -	3,48,426
2.—Purely local traffic of the left-bank line, as per ditto - -	1,28,237
3.—Foreign trade of the left-bank districts:—	
Net receipts, at 5 pies per ton per mile, on 5,800 tons carried through the line - - - - - - - - - -	28,500
TOTAL - - - *Rs.*	5,05,163

Appendix, No. 12.

or 50,401 *l.* net receipts from a capital expenditure of 2,385,132 *l.* This return is at the rate of 2·12 per cent., and is based on the assumption that the working charges amount to only 50 per cent. of the gross receipts. If these amount to 60 per cent. of the gross receipts, the net return will only reach 1·7 per cent. of the capital expended.

Proposed irrigation and navigation canal from Rohree.

47. In the event of the proposed irrigation and navigation canal from Rohree to Hydrabad being constructed in addition to a line of railway, the latter might be laid down either on the right or the left bank of the Indus. If it were laid down on the left bank, it would be a competing line with the canal. Moreover, by this arrangement, the whole of the purely local traffic of the right-bank districts, as well as that caused by their foreign trade, would be lost. This loss may be estimated as follows, the figures being taken from Appendix I.:—

	Rs.
Right Bank of the Indus.	
Net local traffic receipts - - - - - - - - -	1,23,956
Through Traffic.	
Net receipts from 15,300 tons, through 222⅓ miles, at 5 pies per ton per mile - - - - - - - - -	88,400
TOTAL - - - *Rs.*	2,12,356

But, if the working charges amounted to 60 per cent. of the gross receipts, this amount would be reduced to four-fifths of 2,12,356 rupees, or 1,69,885 rupees.

Saving that ought to be effected by making railway and canal on the same side of the river.

48. This loss would be compensated if a saving of the capital of which this sum represents the interest would be made by constructing a line along the canal bank to the east of the Indus, instead of constructing the right-bank line. This capital amounts to 33,97,700 rupees, or 339,770 *l.*

49. The estimates for the right and the left-bank lines, made without any reference to the canal, are as follows:

	£.
Left-bank line - - - - - - - - - -	1,232,857
Right-bank line - - - - - - - - - -	1,152,275
Amount to be saved - - - - - - - - -	80,582
In addition to the above - - - - - - - - -	339,770
TOTAL - - - £.	420,352

This represents the total sum which should be saved by carrying the railway along the canal bank, if it were really sound economy to make this arrangement. That this is not the case will be seen from the following liberal estimate of the saving which might be effected by carrying the railway along the canal bank:—

	Rs.
1. Earthwork, the whole amount of the estimate - - -	1,27,500
2. Fencing, with carriage of rails, an average of distance of 50 miles, at 3½ annas per ton per mile, for 14,245 tons - -	1,55,800
3. Bridges, one-half - - - - - - - - -	2,03,500
4. Carriage of sleepers for 20 miles - - - - - - -	23,500
TOTAL - - - *Rs.*	5,10,300
OR £.	51,030

Inadvisability of constructing both the canal and railway on the left bank. The canal the more suitable work for that side of the river.

50. This is, in fact, but one example of a truth which may easily be demonstrated in a more general manner, viz., that the bringing together of two means of communication of unequal power greatly diminishes the utility of the weaker one, and renders the construction of both together undesirable. Applying this remark to the present subject, it may be said that it would be a waste of money to make a canal and a railway side by side from Rohree to Hydrabad. Moreover, the agricultural state of the province is such that a canal appears to be the more suitable work of the two on this line.

Effect of improvement in the condition of the country on the left bank in increasing railway net receipts very small.

Thinness of population must cause the dividend to be small for a long time to come.

Necessity for improved irrigation.

51. As the population on the left bank of the Indus is at present a poorer one than that on the right bank, its foreign trade has been estimated at only 20,000 tons per annum, whereas the foreign trade, from the nearly equal population of the districts on the right bank, has been set down at 40,000 tons per annum. In each case a railway would, it is supposed, convey one-half of the foreign trade. As it may be interesting to know what effect would be produced on the profits of the railway, if the present population on the left bank became, in consequence of improved irrigation, as rich as those on the right bank now are, we have made the computation required to answer this question. We find that it would raise the per-centage of profit for the left-bank line from 1·78 to 1·95, when the working charges are 60 per cent. of the gross receipts. This increase is small, and shows clearly that a considerable increase must take place in the population of Sind before a railway

Appendix, No. 12.

railway through it earns a fair dividend on the capital expended. A railway will, however, greatly facilitate any immigration which may be caused by an improvement in the irrigation of the country, or rather by the substitution of a really good system of irrigation canals for the present inundation channels, which only deliver the water on the surface of a very limited area of country, though they also facilitate irrigation by carrying the water below the surface of the land across large tracts.

* * * * * *

Branch lines.

Importance of a branch through Shikarpoor and Jacobabad towards the foot of the Bolan Pass.

54. No surveys have yet been made with the view to ascertaining the probable cost of constructing branch feeding lines of railway in Sind, but some allowance must be made to one important branch, which may ere long be necessary, that is, a branch from the right-bank main line, where it approaches the important town of Shikarpoor, through that town to Jacobabad, and on towards the Bolan Pass. The value of this branch in a military point of view is well known; commercially, also, it must be considered to be nearly, if not quite, as important as the main line itself.

COMPARATIVE STATEMENT of PASSENGER TRAFFIC and POPULATION in Countries provided with RAILWAYS.

———	Population.	Area in Square Miles.	Length of Railway.	Length of Railway per Million of Population.	Length of Railway per 1,000 Square Miles of Territory.	Number of Passengers booked Daily.	Number of Passengers booked daily per 1,000 Inhabitants.	Average distance Travelled Daily by Passengers.	Average Daily Mileage of Passengers per 1,000 Inhabitants.	REMARKS.
United Kingdom in 1847 - -	27,019,558	121,050	5,000	185·0	41·3	* 173,779	6·4	16·54	106	* When there were only 4,500 miles of Railway.
Belgium - - - - - -	4,335,319	11,256	457	105·2	40·3	10,087	2 32	22·6	52·4	
District affected by the Madras Railway from Madras to Goriattum -	1,500,000	2,400	96	64	40	720	·480	39	18·7	Before the reduction.
						2,500	1·66	38	63 08	After the reduction in the passenger rates.
Hydrabad Collectorate (Northern portion) - - - - -	† 480,000	* 4,800	120	250	25	480	1⅔	30	50	These are merely estimated.

---

* Allowing that the railway local traffic affects the districts within 20 miles of the railway on either side.

† Taking it at 100 to the square mile, as the portion of the district traversed by the line will, before long, probably have considerably more than the average population per square mile, the average being 64.

Appendix, No. 12.

APPROXIMATE ESTIMATE of the Probable Receipts to be expected from the Sind Valley Railway.

This may be divided into the receipts from:—

1st. Local traffic in passengers and goods.

2nd. Through traffic in passengers and goods.

	Length of Railway.	Population.	Probable Receipts from Passengers per Annum.	Net Local Traffic Receipts.
Right Bank of the Indus.			*Rs.*	*Rs.*
From Kotree to Sehwan - - -	81 miles	29,803	8,494	
From Sehwan to Sukkur - - -	141½ „	549,483	1,55,040	
			1,63,534	1,23,956
Through traffic net receipts, 5 pies per ton per mile, on 38,740 tons - -	- -	- -	- -	2,24,470
Total Net Receipts - - - *Rs.*	- -	- -	- -	3,48,426
Left Bank of the Indus.				
1. Kotree to Ali Morad's frontier - 2. Through Ali Morad's territory -	188½ „	599,240	1,68,985	1,28,237
Through traffic net receipts, 5 pies per ton per mile on 29,240 - - -	- -	- -	- -	1,44,000
		TOTAL Net Receipts - - - *Rs.*		2,72,237

The total cost of the Right Bank line is estimated at 1,15,22,746 rupees, or 1,152,275 *l.* The net receipts are estimated at 34,842 *l.*, or 3·02 per cent. on the above sum; but if the working charges are 60 per cent. of the gross receipts, this figure will be reduced to 2·41 per cent.

The total cost of the Left Bank line is estimated at 1,23,28,572 rupees, or 1,232,857 *l.* The net receipts are estimated at 27,224 *l.*, or 2·22 per cent. on the above sum; but if the working charges are 60 per cent. of the gross receipts, this figure will be reduced to 1·78 per cent.

Add 41,508 rupees for the difference between the receipts from through goods on the Right and Left Bank, yielding - - - - - - -	0·338 per cent.
	2·118

The receipts from passengers are deduced from the population as follows:

The daily passengers' mileage is assumed to be 5 per 1,000 inhabitants per diem, and the receipts 3 pies per passenger mile. This makes the annual receipts $\frac{365 \times 50 \times 3}{192} = 285$ rupees per thousand inhabitants, or ·285 rupees per head of the population; adding 50 per cent. for the local goods traffic, and assuming the working expenses to be 50 per cent. of the gross receipts, we have the net local traffic receipts $·285 \times \frac{3}{2} \times \frac{1}{2} = ·214$ rupees per head of the population.

PROBABLE through Traffic from Sukkur and Kotree.

RIGHT BANK LINE.

(signed) *J. Cambell,*
Accountant, &c, in Sind.
John Wood, Captain,
Agent in Sind.

STATEMENT giving Information supplied by *W. Cole*, Esq., Collector of Customs, respecting the Trade of Sind.

QUERY.	REPLY.
1st. At the end of the Chamber's report for 1867–68, there are comparative statements of imports and exports up to that year. Will you give us the same information for the following years?	You will find this information in the Chamber's reports for 1868–69 and 1869–70, sent to you with the report for 1867–68. The whole particulars were furnished from this office.
2nd. Your opinion as to how much of the export wool comes into Kurrachee by the hill routes, and how much down the Indus by native boats, and the Flotilla. Also as to whence the greater part of the wool is obtained.	Taking five years from the 1st of January 1866, I find a little upwards of nine lakhs of maunds of wool exported. Of this about one-third was brought down the Indus by native boats and Indus Steam Flotilla, and the remainder principally by the hill routes. From Khorasan (Afghanistan) decidedly.
3rd. Names of the different kinds of seed comprised under the general head of oil-seeds, and the kind most valuable and likely to increase, supposing its production in the Indus Valley to be increased.	Chiefly rape or sursee seed, mustard seed, and gingely or teel seed. Rape and gingely are the most valuable, and likely to increase in quantity. Our exports of oil-seeds are almost entirely of these latter.

Appendix, No. 12.

EXTRACT REPORT by Captain *Hancock*, R.E., Acting Consulting Engineer for Railways at Bombay.

4. They (the Committee) estimate that the net receipts on the first or left bank line will give a return on the capital expended of 2·22 per cent. per annum, if the working expenses amount to 50 per cent. of the gross earnings, and 1 78 per cent. if the working expenses are 60 per cent. of the gross earnings; and that the net receipts on the second or right bank line will yield 3·02 per cent. and 2·41 per cent. under the same conditions. They have not calculated the probable net revenue on the third alternative line, the great cost of which excludes it from consideration.

5. The decision of the Committee is in favour of the right bank line, and they do not report in favour of the proposal or suggestion put forward originally by Colonel Strachey, for combining a canal and a railway.

6. The difference in length between the right and left bank lines, as sketched in the map appended to the Committee's report, measured in both cases between Kotree and Rohree, is 19 miles only; but Rohree is off the direct line to Mooltan on the left bank route, and would be accommodated by a branch (this is clearly shown in the map appended to the report of Sir William Merewether's Committee of 1868), and the distance for through traffic from the Punjab would be nearly 40 miles less if the left bank line were adopted. For through traffic, therefore, the left bank line is the best of the two laid down, and, as pointed out by Colonel Trevor in his memorandum dated 11th January 1869, it would be possible to reduce the length of the left bank line very considerably by carrying it along the valley of the Eastern Narra, and cutting off the great bend in the River Indus. The Committee appear, however, to consider it an essential feature of the scheme that the line should follow the belt of cultivation and population along the bank of the river, and thus accommodate local traffic of Sindh; and they have not taken the direct route along the Eastern Narra, on which there is no population, into consideration at all.

* * * * * *

18. The Committee have considered the question of traffic earnings under three heads:

1. Through traffic with the Punjab.
2. Through traffic due to import and export trade, Sindh.
3. Local traffic, goods and passengers.

It appears to me, from paragraph 44 of the Report and the Appendix I., that the Committee have only allowed for receipts from *exports* under the first head, *i.e.*, from goods carried from the Punjab to Kotree. They put down the Punjab traffic at 23,440* tons per annum, the figures being arrived at by taking the whole tonnage brought down by the flotilla in 1863–64 (20,900 tons), and adding one-twentieth of that by native boats, but they do not appear to have included the return traffic from Kotree. On the other hand, I doubt if they are right in assuming that the flotilla will be superseded altogether by the railway, or that the right bank would get the same amount of through traffic as the left bank. The receipts for through traffic should certainly not be put down as less in the gross on the left bank than on the right bank A higher rate would be charged for the shorter distance.

19. The through traffic of Sindh proper, including exports and imports, is put down as 96,000 tons per annum, and the Committee estimates that the right bank line will get 24,000 tons, or one-half the traffic between Larkhana and Kotree, and the left bank line 10,000 tons, or half the traffic between Mora and Kotree, and that none will cross the river. This appears to be a very moderate estimate; the equivalent ton-mileage is added to that of the Punjab through traffic in the computation in Appendix I.

20. The Committee have calculated the local passenger traffic from the daily average passenger mileage in other parts of India in proportion to population, and they roughly set down the local goods traffic as yielding one-half the sum earned by local passenger traffic. Nothing seems to have been allowed for through passengers' traffic.

21. The gross earnings, according to the Committee's computation, would be on the right bank, 7 96,852 rupees, and on the left bank, 5,44,474 rupees per annum, being at the rate of 3,581 rupees per mile on the right bank, and 2,682 rupees per mile on the left bank. This is a very moderate estimate indeed; but the Committee's estimate of *net* receipts is, in my opinion, much too high with the very poor traffic which the Committee expect; the line will, I am sure, never be worked at 60 per cent. of the gross receipts.

22. There will, to the best of my judgment, be no saving in actual cost of working in narrow gauge lines as compared with broad gauge. The only saving will be in interest on capital invested. If the through goods traffic will not exceed 38,740 tons on the right bank, and 29,240 tons on the left bank per annum, and the average rate per ton cannot be fixed higher than 10 pies per ton per mile, I believe the working expenses on this small traffic will absorb all, or nearly all, the earnings. There are certain charges for establishments

---

* Since this was written I have looked at the fourth paragraph of Major Bonus's report, referred to by the Committee, and, as far as I can make out, they have taken the traffic of the Indus Steam Flotilla and the Oriental Inland Steam Navigation Company both up and down, so that 20,900 tons does include imports.

Appendix, No. 12. ments which are the same, whatever the amount of traffic, and, unless the balance of goods up and down the line is extraordinarily favourable, the fixed charges and the variable charges taken together will, I am pretty certain, not work out at a lower average than 10 pies per ton.

23. The Sind Railway may be said to pay nothing, though its annual receipts per mile have been as under:—

	1865.	1866.	1867.	1868.	1869.	1870.
	Rs.	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*
Passengers - - -	1,599	1,401	1,898	1,938	1,322	1,181
Goods - - - -	6,581	8,531	9,217	7,540	5,883	6,478
Miscellaneous - -	404	469	744	311	365	325
TOTAL - - - *Rs.*	8,554	10,401	11,859	9,789	7,570	7,984

What can be expected on a line on which the mileage receipts are estimated at much less than half that sum? Making every allowance for extravagance of Sindh Railway establishments, and the superior economy which is to result from Government undertaking the working of the valley line, I think it is clear that such a traffic as the Committee expect cannot possibly pay. To work cheaply a railway must have a large traffic. It is an utter mistake to apply an average working charge deduced from lines in tolerably full work to such a case as that of the Indus Valley line.

24. The general conclusions I have come to are, that the Committee have under estimated the probable cost of both the right and left bank line, especially the former; that the estimate of gross earnings is probably too low, especially for the left bank line; but that if the railway on either bank pays expenses, it is as much as can be expected; and that no return on capital invested can be counted upon until population and trade improve. I must, however repeat, that I know nothing personally about the country, and that I feel my opinion, which is merely the result of reading what has been written by others, is not entitled to much weight.

H. F. Hancock, Captain, R.E.,
Acting Consulting Engineer for Railways.

EXTRACT LETTER from Colonel *Kennedy*, Secretary to the Government of Bombay, to the Secretary to the Government of India; dated 1st August 1871.

5. The Committee's estimate of the cost of construction is very moderate, and Government believe that Captain Hancock's corrections supply data that are more reliable than those adopted by the Committee.

6. So also the Committee's estimate of revenue is low, and this Government would call special attention to the remarks as to the mode in which the net receipts have been calculated.

7. The actual experience of the Sind Railway tends to show that, with a much higher rate of mileage earnings than is estimated for by the Commissioner in respect to the Indus Valley line, the net receipts are nothing, or next to nothing, and that an estimate based on a per-centage of 50 or 60 per cent. of the gross earnings for working expenses on a line with so small a traffic, would be fallacious.

EXTRACT RAILWAY DESPATCH to the Government of India, No. 6 of 18th January 1872, para. 6.

6 I concur in the opinion of your Lordship as to the advantages attendant on the construction of the railway along the right bank of the river, and I accordingly sanction your proceedings. It is to be regretted that the financial prospects are not better; but there is reason to think that they are at least as good as could have been obtained from any other mode of completing the Indus Valley State Railway; and I agree in the opinion of your Lordship that the amount of interest on the capital expended in the construction of the line, beyond the net traffic receipts, will not be a heavy price to pay for the construction of so important a link in the Indian railway system.

4.—HOLKAR (STATE) RAILWAY.

EXTRACT LETTER from Mr. *Neill*, dated 14th July 1870.

2. * * The traffic on the line in question (*i. e.* between Khundwah and Indore) has since considerably increased, the returns for the past official year being,—

	Maunds.	Value.
Imports - -	63,584 - -	*Rs.* 65,95,904.
Exports - -	4,87,988 - -	1,17,89,102.

inclusive of the through opium traffic and military stores.

3. With regard to the sugar traffic which in 1868 was stated to be likely to increase, the following figures will show that the anticipation has been partly realised. The exports from Khundwah to Indore were, in—

1866–7 - - - - - - -	9,451 maunds.
1867–8 - - - - - - -	26,191 „
1868–9 - - - - - - -	7,978 „
1869–70 - - - - - - -	21,618 „

The falling off in 1868–9 was due to the imposition by the Inland Customs Department of a duty of one rupee per maund on consignments crossing the line into Indore, but it will be seen to have risen in the past official year to the level of 1867–8, the first year of the opening of the railway to Khundwah on the removal of the duty after the subject had been represented to the Government of India. It remains, however, to be seen, whether the opening of the railway through the Nerbudda Valley will not affect this direct trade to Indore in any way, that is, whether the Mirzapore sugars, which hitherto competed with the cheaper western sugars in the Central India markets, under great disadvantages as to carriage, &c., may not now reach those markets by shorter routes from the railway stations at Hoshungabad and Hurda, and thus curtail the general demand on this entrepôt at Indore.

EXTRACT LETTER from Mr. *Cadell*, dated 20th July 1870.

18. I AM, however, directed to state, that the trade statistics lately obtained, which are quoted in paragraph 107 of Mr. Campbell's report are quite reliable, and that with the additional traffic which will come to the line when constructed, there is no doubt that a railway from Indore to Khundwah, without taking into consideration the probable extension through Malwa, will certainly prove remunerative if economically constructed.

EXTRACTS REPORT by Mr. *Campbell*, Superintending Engineer, Halkar State Railway.

5. ON sheet No. 1 will be found a map of Malwa and Praut Nimar, showing the various marts and centres of trade. It is evident from this that, to secure the objects now in view, the railway should run through or near to the towns of Sunnawud, Burwail, and Mhow. The first of these is a small, but flourishing grain mart, through which the produce of the valley on the left bank of the Nerbudda finds an outlet. Burwail holds the same position with regard to the country on the right bank. It is a large and thriving town, and already carries on a considerable trade, which the opening of the railway will largely develope. A considerable passenger traffic may be expected here, for it is but five miles from Boukar Mandhatta, one of the most popular shrines on the sacred Nerbudda, to which thousands of pilgrims flock annually from all parts of India; whilst Muhesir, 28 miles to the west, is also a much frequented place of pilgrimage. A considerable increase of traffic may also be looked for from the Burwail ironworks when they are brought into railway communication with the Chanda and Nerbudda coal fields, and can thus be worked with sufficient economy to make them profitable.

6. Mhow will yield a large passenger traffic, and the mass of commissariat and ordnance stores which are yearly imported into it will bring in a considerable revenue. It will also be the station for the trade of Dhar and Amjeerah. Thus, commercially, as well as politically, there are valid reasons for taking the line *viâ* Mhow.

7. A railway passing through the above places will open out a large tract of fertile ground. For more than half its course, it runs through an open and richly cultivated country, and for much of the remaining distance passes through good, culturable land, where water abounds, and which only requires labour and capital, to be as valuable as the rest. It thus contrasts very favourably with the Banglee line, which, for nearly its whole course,

Appendix No. 12.

course, runs through broken ground and dense jungle, and does not go near a single place of trade, whilst it involves 43 miles of extra haulage to the traffic from Mhow, and 31 miles to that from Indore and the rest of Malwa.

8. Accepting then, the route *viâ* Sunnawud, Burwail, and Mhow, as the best on commercial grounds, we have to determine whether a practicable ascent of the bindyas and a favourable crossing of the Nerbudda can be got in this direction.

* * * *

28. The exports from Malwa consist of opium and cotton, all of which goes to Bombay. The imports comprise European miscellaneous and piece goods, all of which come from that part, and some oil, sugar, and tobacco, the bulk of which also comes in the same direction. Malwa does not grow sufficient food for its population, and imports large quantities of cereals from the rich grain districts of Bhopal and Bhilsa. A small quantity is also brought by bungaries on pack oxen from the British districts of Hoshungabad and Nursingpoor; but this comes direct across Bhopal. With the opening of the railway, however, it is probable that a small trade in grain and country produce will spring up with the districts beyond Minar, but it can never attain any great dimensions with so formidable a rival as the Bhopal and Bhilsa grain country, the construction of a light cheap railway towards which places and Saugor is a mere question of time. Under these circumstances, nine-tenths of the traffic of Malwa will always pass to and from Bombay. Khundwa is therefore the proper point of junction for our line, and I would strongly deprecate its being placed anywhere else.

* * * *

106. The map of Malwa, on sheet No. 1, shows at a glance how busy and prosperous is the country opened out by the projected line and its contemplated extension towards Neemuch and Rajpootana.

* * * *

107. * * For the last five years, the average trade of Indore and the territory around it has been as follows:

	Maunds.	Tons.
Exports - - - - - - - - -	1,73,560 =	6,198
Imports - - - - - - - - -	7,22,525 =	25,804
Goods passing through to other parts of Malwa -	6,65,262 =	23,760
Total Maunds -	15,61,347 or	55,762 tons.

108. Spread over 300 working days, this will give a daily goods traffic of 186 tons; and to it must be added that portion of the trade of Rutlam, Jowra, and Neemuch, which does not pass through Indore; also all the Ordnance, Commissariat, and other supplies imported into Mhow, and the whole of the trade with Dhar and Amjeera. An average daily goods traffic of from 250 to 300 tons may therefore be confidently expected on the opening of the line, and before many years have elapsed, Colonel Cadell's estimate of 400 tons per diem will certainly be reached.

EXTRACT MEMORANDUM by Mr. *Campbell*, dated 25th August 1870.

37. ON engineering grounds it matters but little whether the line to Jawur, or the alternative to Khundwa be taken. Both are equally good; the former has the advantage of being 2½ miles shorter, and of costing 20,000 *l.* less; but this argument has but little weight, for the expenditure of this sum will secure to Government the extra carriage of all the traffic for 2½ miles, and the money value of this can be easily estimated.

38. Take the goods traffic only, which I estimate at 90,000 tons per annum (300 tons over 300 working days, *see* paragraph 108 of the report). Taking the classification and rates of the Great Indian Peninsula Railway, our average charge per ton per mile will be one anna, and the profit on its carriage will be six pie. For 84 miles of line, costing one million sterling, this amounts to 23,620 *l.*, or 2·36 per cent. upon the capital sunk. Whereas at the same rates, the carriage of the same tonnage over 2½ miles of line costing 20,000 *l.*, represents an income of 700 *l.*, or 3½ per cent.

39. Whilst thus Government will be no loser, the trading community, and in consequence the consumer, will be largely benefited. They will save an extra haulage of nine miles, which, on the data above given, means an annual loss to them of over 5,000 *l.*, representing a permanent encumbrance upon the traffic of Central India, which will increase year by year as trade developes.

Appendix, No 12.

EXTRACT REPORT by Mr. *Campbell*.

7. * * * The question of through routes to other provinces no longer interfered with the claims of Indore to a line which should best accommodate its trade, and I had therefore to look for a short and cheap route towards the Great Indian Peninsula Railway and Bombay, which would at the same time accommodate as much as possible the intermediate marts and centres of population. The first point for inquiry was manifestly what these places were, so as to get some idea of the general direction of the intended line.

8. Between Indore and the Great Indian Peninsula Railway, Mhow is the only place north of the Ghats which possesses any trade. Maunpoora, Dultoda, Tillore, Peepuldah, and Banglee, though figuring on the map as large and important places, are mere villages, no larger than a hundred others round about, and without any general traffic. Mhow owes its importance to its being the seat of a large British cantonment, comprising 3,500 troops of all arms. It is one of the most important military positions in this part of India, as from it (especially when the various projected lines are completed), the whole of the territory under native jurisdiction in Central India and Southern Rajpootana can be completely commanded and held in check. It stands nearly 2,000 feet above the sea, possesses an excellent climate, and might be made one of the most healthy stations in India. Its importance is sure to increase in the future, but even in its present state it is well deserving of consideration in fixing the line to be followed by the railway. The Suddur Bazaar is large and wealthy, containing about 16,000 inhabitants, who, with the troops and camp-followers, bring up the total population of Mhow to 24,000 souls, so that a large passenger traffic may be expected. The trade of the place is at present wholly an import one, consisting of wines and stores, cereals and piece goods, which, in the aggregate, must be considerable. The Government stores imported amount to 872 tons in the Commissariat Department, and 116 tons in the Ordnance Department. These are at present conveyed from Khundwa by country carts at a cost of 1 rupee per maund, whereas by railway the charge will be only *Re.* 0. 3. 5. and *Re.* 0. 6. 10. per maund,* respectively.

9. With the opening of a railway, Mhow will quickly rise into importance, and become an export mart for the districts between it and Dhar, which are rich, populous, and well cultivated, producing both opium, and cotton, all of which at present goes down the Agra and Bombay road to Munmar in Khandeish, a station on the Great Indian Peninsula Railway. The distance between Dhar and Munmar is nearly 200 miles, the latter being 161 miles from Bombay. With a railway to Mhow, the distance would be 30 miles of cartage by road, and 397 miles by railway, and the cost of carriage would be reduced exactly one-half. Under these circumstances, there can be but little doubt that Mhow will become the seat of a considerable export trade. Indore, its only rival, is seven miles further from Dhar, and any goods going there would most undoubtedly have to pay a heavy toll to Holkar in the shape of transit dues. I have only to add that my instructions were to place Mhow, if possible, upon the railway—"It is scarcely necessary to state (it was said) that the Government regard it of very great importance that Mhow should, if conveniently and economically possible, be on the line."

* * * * * * * *

11. This Town (Burwai) has, in fact, risen upon the ruins of Mundlaisur and Mahesur. It is a well-built and thriving little place, containing 2,000 houses and 4,500 souls, and is daily increasing in size. It is the mart for all the produce of the rich valley between Mundlaisur and the Chandgurh Hills, once well cultivated and populous, but which, in the troublous times of the Mahratta and Pindaree incursions, fell off, much of the ground relapsing into jungle, which might, however, with a little trouble, be all reclaimed. Burwai is also the seat of ironworks, the resuscitation of which on the opening of the railway may be expected, and taking it altogether, it is certainly the most rising and promising mart in all this portion of the Nerbudda Valley.

12. Five miles to the eastward lies the sacred island of Oonkarjee Mandhatta, an ancient Buddhist fane, but new the seat of one of the most popular shrines of the Hindoo Deity Mahadeo. Thousands of pilgrims flock to it annually from all parts of India, and its fame is daily increasing. A very large passenger traffic may be looked for here.

13. South of the Nerbudda lie the large villages of Sunnawud and Soolgaon, with a considerable trade in grain. The former is the larger, wealthier, and more important of the two, containing 457 houses and 2,149 inhabitants, and would yield a considerable traffic to a railway. The other places between the Nerbudda and the Great Indian Peninsula Railway are mere villages of no importance, and must not be judged by their pretentious appearance on ordinary maps of the country.

14. Passing along the the line of the Great Indian Peninsula Railway, Moondee is a large village with some local traffic, which is fully accommodated by the adjacent station of Beerh; Jawur is a mere hamlet in the midst of a jungle; Sehara a large village with little

---

* This is at the East India Company's rates, and allowing ten miles extra for the ascent of the Vindhyas on one-fortieth grade

little foreign trade; Kundwa was once a populous and thriving city, but, like many others in the vicinity, fell into ruin during the troublous times of the latter part of the eighteenth century. Within the last few years it has revived, having been, in 1864, made the chief town of the British district of Nimar. Being the nearest station to Indore and Mhow, with a good metalled road all the way, it has formed the natural terminus for the traffic of Malwa, and has risen to be a thriving town of some 6,000 inhabitants. The traffic at the railway station, both goods and passengers, is very considerable, but hardly any of it is local in its origin, nearly the whole being through traffic to and from Central India. What its future will be it is difficult to say. I should not myself think that it is likely to increase; but those officials, who are better conversant with, and more interested in the subject, seem to anticipate no diminution in its importance.

15. A consideration of the above facts will show that the proper route for a railway from Indore to the Great Indian Peninsula Railway is *viâ* Mhow; passing near Burwai, Oonkar Mandhatta and Sunnawud; and striking the Great Indian Peninsula Railway at any point between Beerh and Kundwa; the latter place being the most eligible as far as population and trade are concerned.

* * * * * * * *

57. Bearing in mind that of the trade from Indore and Malwa, the whole of the exports consisting of opium and cotton, pass towards Bombay, whilst the imports, comprising European piece goods and stores, cereals, oil, sugar, and tobacco, nine-tenths also come in the same direction; this turns the balance largely in favour of Khundwa as a point of junction. It is true that Malwa does not grow sufficient corn for its population, and that whilst it imports large quantities of cereals from the rich grain districts around Bhilsa and Bhopal, a small quantity has hitherto been brought by the Bunjaras on pack oxen, from Hoshungabad across the Bhopal territory, which will now be diverted to the railway; but this can never increase much with such a formidable competition as that from above the Ghâts. It follows, therefore, that the bulk of the goods traffic along the new railway will always pass along it to and from Bombay, and this fact strongly indicates the Sirra route with Khundwa as its point of junction, as the one which best accommodates the commerce of Central India.

* * * * * * * *

101. * * * Comparing it with what, as will be hereafter seen, proves the cheapest of any, viz., the line selected last year from Kundwa *viâ* Sunnawud, Kheree Ghât, Burwai and the Choral Valley and Mhow, this latter has a total length of 85·80 miles, and costs 747,884 *l.* It runs through an open, healthy, well-cultivated and populous country, picking up the whole of the traffic between Indore and the Great Indian Peninsula Railway.

5.—KHAMGAON AND OOMRAOTTEE BRANCH (STATE) RAILWAYS.

EXTRACTS RAILWAY DESPATCH from the Government of India, No. 56, of 12th June 1869.

1. We have the honour to forward for your Grace's information a selection of papers referring to the construction of a branch to the Great Indian Peninsula Railway from the Jhellum station to Khamgaon, the great cotton mart of West Berar, and to report that having been satisfied of the importance of such a branch to the cotton trade, and that it may be constructed for a moderate sum on which a sufficient return may be anticipated, we have authorised its immediate commencement, and are sanguine that it may be completed in time for the bulk of the cotton traffic of the next season.

* * * * * * * *

3. * * Looking to the interests of the chief export of Bombay and the staple trade of the Berars, as well as to the responsibilities of the Government of India for the improvement of the means of communication in the assigned districts, we could not do better than appropriate some of their surplus revenues to the construction, as a State work, of this branch which will, by the outlay of about 30,000 *l.* on 7½ miles of railway, bring the greatest cotton mart of India into railway communication with its port of export, and in doing away with 12 miles of carriage over a cross-country road, extinguish the liability becoming most pressing, for making that road first class at a heavy expenditure, which may at the least be estimated at one-half what the branch railway seems likely to cost.

MEMORANDUM by *H. Rivett-Carnac*, Esq., Cotton Commissioner for the Central Provinces and the Berars on Khamgaon Roads; dated Camp, the 3rd March 1869.

Importance of Khamgaon as a cotton market.

1. It may be well to premise by alluding to the position Khamgaon now holds. During the last few years the trade has greatly developed; but inconveniently placed as the market

is,

Appendix, No. 12.

is, at a distance of 12 miles from the railway, few, save those who have business there, visit it, and as unless the market be seen during the season, the wealth and importance of this little "up-country" town cannot easily be realised, Khamgaon has, I fear, generally been regarded as an inconsiderable place, for which the ordinary provisions in the way of roads is ample. I hope, however, to be able to show that, although my demands may not, at first sight, appear very moderate, still that they are not more than the importance of this great market requires.

The wealthy classes of which the population of Khamgaon is composed

2. If I am not mistaken, the Census showed Khamgaon to contain about 9,000 inhabitants. But then the calculation was made late in the year, when the season was over, and when the large floating population that congregates here from November to May had returned to Bombay. But few towns can boast of such a very large proportion of rich residents as Khamgaon. The 9,000 are made up of the handful of Koombies who till the Khamgaon lands, of some few shopkeepers, and a large body of rich merchants and bankers, who buy and sell cotton during the season, and who, making Khamgaon their centre of operations, work from here the cotton trade of the Berars. Most of them have been established here for many years, and have substantial, well-built houses; and many of the native firms of Bombay have branches here, and own considerable property in Khamgaon, houses and gardens, and groves of trees, in which their agents reside during the cotton season. The importance of Khamgaon as a great cotton market has recently been appreciated by the European merchants of Bombay, and within the last two years several firms have established themselves here. Moreover, two large factories for cleaning cotton, and three establishments for "full pressing" the bales, all using steam power, are at work here during the season, besides a large number of half presses. The European firms now established at Khamgaon are as follows:

European firms and companies established there.

The Berar Ginning and Pressing Company (Limited), (factory for cleaning cotton, and steam presses for packing the bales).

The Mofussil Ginning and Pressing Company (Limited), (factory for cleaning cotton, and steam presses for packing the bales).

Messrs Booth & Co.
" Bomanjee, Touchee & Co. (Bombay firm has an agency here.)
" A. C. Brice & Co (Bombay firm has an agency here).
" Finlay, Scott. & Co. (Bombay firm has an agency here.)
Steuart Macnaghten, Esq.
Messrs Rogbe & Co
" Jules Siegfried & Co. (Bombay firm has a branch here, and presses worked by steam for full pressing the bales.)
Messrs. C. Smith & Co.

There is also a branch of the Bank of Bombay here, and a carting agency for carrying off the cotton has recently been established by the Great Indian Peninsula Railway Company.

Officer recently appointed to Khamgaon

3. These large factories and the steam cotton presses employ very large establishments, consisting of European Managers, assistants, and engineers. The staff required by the European cotton agents for purchasing cotton is also considerable; and the European official population is now beginning to increase. Besides the Cotton Commissioner, who is obliged to spend much of his time at Khamgaon, an officer of the Commission has lately been appointed to the Small Cause Court, and to the general charge of the town. An Assistant Engineer, an officer of police, an apothecary of the medical staff, and some employés of the Telegraph Department have been added during the year, and the appointment of so many new officers may be accepted as indicating the growing importance of the place. The wants of Khamgaon in respect to public buildings have been very liberally and promptly supplied, and a new cotton market, a house, as court for the resident officer of the Commission, a market-place for the general market, a serai, travellers' bungalow, post office, dispensary, and new schoolhouse have been built, or are in course of construction. The postal communication has been improved, and mail carts now run between Khamgaon, Nandoora, and Sheagaon, and a branch of the Government telegraph, by which Khamgaon has been placed in communication with all the cotton markets in India and Europe, has been opened.

Local improvements effected.

Development of the cotton trade.

4. The cotton trade, always very considerable, has developed in consequence of the presence of so many purchasers, and Khamgaon is not only the largest cotton market in the Berars, but the largest in India. In a good season the quantity of cotton sent away does not fall short of from 80,000 to 100,000 bales, and the trade of Khamgaon, during a short season that hardly extends beyond four months, may be taken to represent about 1,000,000 *l.* sterling.

5. I hope I have said enough to establish the importance of this cotton market.

* * * * * * * *

12. The above description does not, I fear, say much for the state of the communications between the railway and the largest cotton market in India, a place that sends away annually its 100,000 bales. I hope I have said quite enough to show that some improvement is required.

* * * * *

Appendix, No. 12.

Grounds for advocating the construction of a branch line of railway to Khamgaon.

Arguments for and against the scheme.

16. It may be necessary to allude to the great anxiety evinced by all connected with Khamgaon to see the railway brought home to this great market, and to notice the arguments for and against the construction of a branch line. If my description has conveyed any idea of the trade of the place, then it would seem that it may hardly be necessary to urge much in regard to the importance of connecting this market with the railway by means of a branch line. But I am not unprepared for the arguments that may be advanced against such a scheme. The whole of the trade, some may say, must come sooner or later to the railway, and Khamgaon will soon be left high and dry with a useless branch line constructed at great expense. Although no one would be more heartily glad than myself to see the markets more to the main line, I have not as yet noticed a tendency, consequent on the advent of the railway, to shift the great trade centres. It is true that Wurdah, Akola, and Sheagaon can now boast of some cotton trade; but this represents a small local business, which formerly was done in detail in the neighbouring villages, and which has now been concentrated in these towns, without affecting the trade of the great markets. Sheagaon perhaps intercepts some few cartloads of the cotton intended for Khamgaon; but the Khamgaon market does not depend only on the cotton that crosses the railway line, but is fed by the produce of the ghâts lying to the south, and the rich counrty to its east and west. Moreover, as a rule, the Koombie; even although he may save a 12-mile journey and a like distance on his return, will prefer-going on to Khamgaon, to parting with his cotton at Sheagaon. For at Khamgaon the number of buyers is larger, and prices generally range higher there than at any other market, and the Koombie, to whom at a season of the year when field-work is over, time is of no great consequence, with his own carts and bullocks and a sufficient store of fodder, finds it to his advantage to go on to Khamgaon and get a slightly enhanced price for his cotton. Moreover, at present at least, Khamgaon is undoubtedly the centre of the trade. Here are the many merchants, and the many traders and the Marwarrees who advance money on cotton, and who, with their agencies spread over the country, have many of the Koombies in their books; and here it is that the Koombie, if he has any "business" to transact, in the way of settling up his advances, can most conveniently do it. All these circumstances tend to ensure the stability of Khamgaon. Moreover, here at Khamgaon, all the principal native merchants for many years, have been established, and the European agents, rightly or wrongly, have made it their head quarters; and where the buyers are, there the trade will undoubtedly come. As yet, at least, not the slightest disposition has been evinced by the merchants to shift their quarters. Many of them have comfortable houses and gardens and groves here, and are the owners of considerable property in the town, and they are hardly likely to relinquish these conveniences and to go and settle near the railway, so long as they can ensure the trade coming to them. The port of Carwar on the Malabar coast is a remarkable example of the disinclination of native merchants to leave the market at which they have traded for years, and to which they are thoroughly accustomed, for any other place, notwithstanding the many advantages the change may offer. With the exception of Bombay, the only port on the Malabar coast is Carwar. Here even large ships can load with ease and safety, and the advantages offered to the coasting trade are great. Coompta, for many years the great outlet for the cotton of Dharwar, is distant only about 30 miles. There is no harbour here, but a river with an inconvenient bar, which renders the loading of cotton a matter of difficulty at all seasons of the year. But yet the cotton merchants at Coompta, notwithstanding the many advantages that have been crowded on Carwar, by the construction of roads, wharves, steam presses, &c., have not been induced to exchange Coompta for the port regarding the relative merits of which no doubt can exist. And I am inclined to believe that the same causes that have protected Coompta will be found to favour Khamgaon, in the event of there being any idea of removing the trade to some place on the line of railway. All natives, and particularly those engaged in trade, are notoriously superstitious; and to the man who for many years has done a good business at Khamgaon, or whose forefathers for one or two generations have driven a rattling trade there, there is something very uncomfortable in the idea of shifting the place of business. With it may come a change of luck, they think. One has heard of gamblers, who having won large sums of money, will not on any account change their seats lest their luck should change too; and it is not difficult to understand the feeling of the natives in these matters, who are at heart all gamblers more or less. Leave Khamgaon for Sheagaon, some think, and our luck will leave us too. Added to all these reasons, a large amount of capital has now been invested at Khamgaon by both Europeans and Natives. The two large ginning factories and the three establishments for pressing cotton represent several lakhs of rupees, and their owners are not likely to desert Khamgaon without a struggle. As, then, Khamgaon is not likely to go to the railway, I think our best endeavours should be directed towards bringing the railway to Khamgaon.

* * * * *

21. There is, perhaps, one other point which should not be left unnoticed, and that is the favour with which the railway company would regard the project; but, in the first place, we have the promise of the agent to lay the rails if Government will construct the roadway; and then, again, there can be no doubt of the advantage that would accrue to the company by the traffic being diverted from Nandoora to Jhellum; 10 miles' freight would be gained on nearly all the cotton exported from Khamgaon; and although it might not pay an independent company to construct a branch under the ordinary conditions, it would doubtless be to the interest of the Great Indian Peninsular Railway to work a line which would be

got

got on such advantageous terms The expense of the roadway, the great outlay, I believe, would be saved to them, and the interest in the permanent way, and the expenses connected with the working, would be much more than repaid by the large cotton traffic, and the additional 10 miles of freight (from Jhellum to Nandoora) that would be ensured. The Great Indian Peninsular Railway, with its large establishments close at hand, could work such a branch much more economically than any independent company, and the staff at Khamgaon and along the line could be employed during the season only, and the buildings, &c., would be of the most economical description. I hope then, that it may be fairly considered to be to the interest of everyone that this line should be constructed

---

Extract Letter from Mr. *Lyall*, dated 5th April, 1869.

3. The trade and importance of Khamgaon have not been overrated by Mr. Carnac, in fact, I think he might have taken stronger ground if he had given less prominency to the European merchants and agents who are doing business there, and had brought up in line with them the rich Native firms who have, this year at least, invested more capital in Berar cotton than the Europeans; but the latter have sunk more money in buildings and machinery.

4. The calculation (in paragraph 5 of the Memorandum) of the average quantity and value of cotton sent from Khamgaon is, perhaps, based upon a maximum estimate; but I cannot test it by any trustworthy returns until the end of this season.

5. It will be recollected that the Administration has already taken for granted the present importance and future development of Khamgaon. No place in Berar has been so liberally treated in the allotments of local funds, which have been made upon the principle that the whole district shares indirectly in the prosperity and improvement of the chief cotton emporium for its staple produce The public buildings of the place are enumerated by Mr. Carnac; they are quite sufficient to show that the State has already invested much money on its faith in the stability of this cotton mart, and that we are in a manner pledged to back up that belief. If we can secure the fortunes of the town by a fresh investment, if we can, as it were, anchor the cotton trade here by a line which shall tie Khamgaon to the main railway, the Government might be prudently advised to employ our provincial revenues in any measure certain to produce this result. I have no doubt that it would be produced by a branch line, for the commercial prestige of the place is far greater than would be necessary to counterpoise the superior convenience of a new market on the main railway. On the other hand, I am not convinced that, without this branch, Khamgaon will be able for many years to counteract or check the natural gravitation of all export business towards places having communication by rail. We have no good precedent to guide us, for in England no commercial town has been left without a railroad; but I suspect that the superstitious reluctance of Native merchants to change their locality would vanish if they found competitors at Sheagaon or Nandoora actually taking the wind out of their sails, while the European would be troubled by no such fancies at all.

Extract Letter from Colonel *Strachey*, R.E., dated 7th June 1869.

27. As to the eventual profits to be obtained from the line, it will suffice to remark that to earn five per cent. on the first cost, a gross income of, say, 30,000 rupees yearly should be obtained. This would be equivalent to weekly earnings of something less than 80 rupees, or 8 *l.* per mile of railway, which is a moderate sum to expect. The financial success of the work will mainly depend on the first cost being kept down to a small sum.

Extract Resolution of the Government of India, dated 17th January 1872.

3. It is believed that this change, to which the Great Indian Peninsula Railway Company can have no reasonable ground of objection, will not seriously affect the public. The existing rates charged at Khamgaon for carriage of cotton through to Bombay, 360 miles, after deducting for cartage, are—

	Pies per Maund.
Full pressed - - - - - - -	268
Half „ - - - - - - -	401
Docra - - - - - - - -	481

Appendix, No. 12.

and they will, according to the altered rates, be—

	Pies per Maund.
Full pressed - - - - - - -	270
Half „ - - - - - - -	402
Docra - - - - - - - -	481

The Oomraottee Branch Line should be treated similarly. The through rate from Budneira, as per page 32 of the Rate and Fare Book, should be charged on behalf of the Great Indian Peninsula, and a terminal of four pies per maund on account of the Berar Government, plus the mileage rate given in page 34, due to the distance, six miles from Oomraottee to Budneira. This would make the through rates from Oomraottee to Bombay 438 miles, exclusive of cartage,—

	Pies per Maund.
Full pressed - - - - - - -	324
Half „ - - - - - - -	486
Docra - - - - - - - -	584

While they are, according to existing rates—

	Pies per Maund.
Full pressed - - - - - - -	324
Half „ - - - - - - -	486
Docra - - - - - - - -	584.

EXTRACT LETTER from the Government of India, Public Works Department; dated 1st April 1871.

8. * * THE Government of Bombay, it will be observed, reckon on a net return of 13,000 rupees per annum, from the terms for working under consideration. This appears to be based on a traffic in cotton of 24,000 tons. Taking the outside cost of the branch at 5,00,000 rupees, the yearly charge at five per cent. for interest will be 25,000 rupees, and this would be covered by an addition to the proposed Government toll on cotton of eight annas per ton. It may not be expedient to raise the toll to this amount immediately, or to make any changes during the present season now drawing to a close, but the principle of so regulating the tariff that the outlay incurred shall prove remunerative, should be held constantly in view.

MEMORANDUM by Major *J. O. Mayne*, R.E., Secretary to the Resident at Hyderabad, in the P. W. Department, on the working of the Khamgaon and Oomraotee Railways, Berars, up to half-year ending 30th June 1871, and their prospects, drawn up for the information of the Resident, Hyderabad.

KHAMGAON LINE.

The Khamgaon line was opened in March 1870 (somewhat late in the cotton season), and it was closed for traffic on the 18th July following.

The line was incomplete for want of station buildings, &c., and as the engines had to be worked from the junction end, and put up at Sheagaon, the nearest engine station, a very considerable amount of light running had to be paid for. Consequently the working of the line for this period was unsatisfactory, and no fair deduction could be made as to the prospects of the line under favourable circumstances.

The trains commenced running again on the 1st December 1870, and have continued ever since.

2. I propose at first reviewing the results of the working for the whole year 1870, and then for the half-year ending 30th June 1871.

3. The line was open during the year 1870 for 22 weeks and three days.

The total receipts for that period, as returned by the agent of the Great Indian Peninsula Railway Company, and confirmed by the Consulting Engineer's Office, Bombay, amounted to *Rs.* 2,040. 14. 3. from passenger, *Rs.* 8,201. 9. 8. from goods, *Rs.* 49. 13. from electric telegraph, and in addition *Rs.* 420. 3 1. due on account of special train run over the line on the occasion of the opening: Total, *Rs.* 10,712. 8. 10.; being on an average 476 rupees per week, and *Rs.* 59. 4. per mile per week.

The audit of the accounts rests entirely between the Great Indian Peninsula Railway Company and the Consulting Engineer's Office, Bombay, and the results have been always accepted by this Administration as correct.

The total number of passengers carried over the line, as taken from the half-yearly statement of passenger and goods traffic for half-years ending 30th June and 31st December 1870, amounted to 10,521 rupees, or 467·5 rupees per week.

The

The total quantity of goods carried over the line amounted to 311,723 maunds, or 11,411 tons, of which 8,868 tons consisted of cotton from Khamgaon.

For the above quantity of goods and passengers, the Company charged 6,808 train miles, of which 2,290 were for light running between Jhellum and Sheagaon, leaving 4,518 due to traffic.

The length of the line being 7½ miles (or, as I observe, by mileage returns it is calculated at eight miles), this will give 564 trains as having run, each of which carried on an average 18·8 passengers, and 20·2 tons of goods, or allowing that about three-sevenths of the trains consisted of empties to Khamgaon, each loaded train carried about 35·3 tons of goods.

The train service during this year was left to the authorities at Bombay, and apparently trains were run entirely to suit the convenience of the Great Indian Peninsula Railway Company without any regard to the cost to Government.

4. As before stated, the receipts amounted to 10,712 rupees.

We were not furnished with the returns of the classes of passengers, or of goods sent to Khamgaon.

By rough calculation the receipt for passengers is correct, being *Rs.* 2,040. 14. 7., but the goods apparently ought to have yielded a far larger return.

The rates for passengers and goods carried on the line are the same as those in force on the Great Indian Peninsula Railway. As regards terminal charges, it was laid down in May 1870,* that "all terminal charges collected at Khamgaon should be credited to the State Railway, and for goods on which only one terminal is charged, as cotton, Government are entitled to half the terminal charge, less the cartage in Bombay. For instance:—

	Rs.	*a.*	*p.*
Terminal charge for cotton - - - - -	3	15	–
Less for delivery in Bombay - - - -	–	15	–
2)	3	–	–
Share of terminal charge that belongs to Government per ton.	1	8	–"

Of 11,411 tons of goods, 8,868 were cotton, leaving 2,543 tons of mixed goods, which for purpose of calculation may be taken as first class. These latter should have returned as follows, viz.:—

	Rs
2,543 tons, at 10 pies per ton per mile for eight miles	1,059
Terminal charge on ditto at Khamgaon, at 8 pies per maund, or *Rs.* 1. 2. 2. per ton.	2,887
TOTAL - - - *Rs*	3,946

The cotton may be divided as follows:—

Looking at the cotton returns from Khamgaon for last year, I observe that out of 42,798 bales, 37,948 were full pressed, 2,453 half pressed, and 2,397 docres, which, as regards weight, allowing two half-pressed bales or two docres to represent one full-pressed bale, would give the following proportions, viz., $\frac{15}{16}$ of the total weight full-pressed, $\frac{1}{32}$ half-pressed, and $\frac{1}{32}$ docres; 8,868 tons of cotton divided in this proportion would give 8,310 tons full-pressed, 279 tons half-pressed, and 279 tons docres.

The rate it appears for full-pressed cotton per ton, exclusive of terminals charged between Khamgaon and Bombay, is 18 pies per mile, which for eight miles would be 144 pies, or 12 annas. For half-pressed cotton, 28 pies per mile, or *Rs.* 1. 2. 8. per ton for the whole distance. For docres, 34 pies, or *Rs.* 1. 6. 8. per ton.

The return for cotton over the eight miles should therefore, it appears to me, have been as follows:

	Rs.	*a.*	*p.*
8,310 tons full-pressed, at 12 annas - - -	6,232	8	–
279 „ half-pressed, at *Rs.* 1. 2. 8. - - -	325	8	–
279 docres, at *Rs.* 1. 6. 8. - - - - -	395	4	–
Share of terminal charges due to Government, 8,868 tons at *Rs.* 1. 8. - - - -	13,302	–	–
TOTAL - - *Rs.*	20,255	4	–

and our total revenue from goods should have been *Rs.* 3,946 + *Rs.* 20,255, or *Rs.* 24,201 against *Rs.* 8,201. 9. 8. returned by the Great Indian Peninsula authorities. This requires explanation.

It appears to me that they have omitted to credit the State with any terminal charges, which we are clearly entitled to. Deducting the terminal charges as shown above, viz., *Rs.* 2,887 + *Rs.* 13,302, or *Rs.* 16,189, from my total estimate of receipts for goods, viz., *Rs.* 24,201, leaves *Rs.* 8,012, about 2½ per cent. less than the sum returned by the Company,

---

* *Vide* enclosure to Consulting Engineer's Memorandum, No. 1692, dated 11 May 1870.

Appendix, No. 12.

pany, the difference being no doubt due to the higher rates for mixed goods other than first class.

The total receipts derived from all sources should be as follows:—

	Rs.	a.	p.
Passenger - - - - - - - - -	2,040	14	7
Goods - - - - - - - - - -	24,201	–	–
Electric telegraph - - - - - - -	49	13	–
TOTAL - - - *Rs*	26,291	11	7

amounting to *Rs.* 1,168. 5 per week, and 146·06 rupees per mile per week.

5. As regards the working expenses of the railway originally, it was agreed that we should pay solely a train mileage rate to the Great Indian Peninsula Company; but in modification of this, the Board of Directors in England suggested that we should pay a train mileage rate according to the actual cost to the Company for working their own lines, as shown in the half-yearly revenue accounts, on account of locomotive charges and repairs of carriages and waggons, and a per-centage on gross receipts as shown in same return for coaching and merchandising charges and compensation. This effected a small saving to Government, and the full charges for the year amount to the following:—

	Rs.	a.	p.
UP to 30th JUNE.			
Train-mileage, 5,044 miles, at *Rs* 1. 3. 10. - -	6,252	7	4
Rs. 10. 8. 2. per cent. on *Rs.* 9,254. –. 9. - -	972	10	2
Total - - -	7,225	1	6
UP TO 31st DECEMBER.			
Train-mileage 1,764 miles, at *Rs.* 1. 4. 3. - -	2,232	9	–
Rs. 14. 14. 5. per cent. on *Rs.* 1,458. 8. 1. - -	217	5	4
Total - - -	2,449	14	4
GRAND TOTAL - - *Rs.*	9,674	15	10

This is what has been charged, but in the event of my estimate of receipts proving correct, the charges will be increased by the per-centage on gross receipts, and will probably amount to some 1,500 rupees more, making a total of 11,167 rupees.

The maintenance charges amounted to 10,470 rupees. This was excessive, considering the line was only open for about 5½ months, but was due to the unsettled state of the line, and ought to have been charged to capital.

The total charges, therefore, should amount to 11,175 rupees + 10,470, or 21,645 rupees, against 26,850 rupees due, leaving 5,213 rupees net profit.

This, considering the extra expenses incurred in working and extra charges necessitated for maintenance, is more satisfactory than was anticipated.

HALF-YEAR ENDING 30th JUNE 1871.

6. During the current year at first no special orders were issued to the Company regarding the train service, but from 1st March the Resident authorised two trains daily for the cotton season, but as soon as it was ascertained that any considerable falling-off of traffic took place, the service was reduced to one train per diem.

The half-year consisted of 26 weeks (less one day). The total receipts, as returned by the Company, amounted to *Rs.* 2,486. 13. 1. for passengers, *Rs.* 16,605. 5. 8. for goods, and *Rs.* 66. 11. 11. for electric telegraph, total, *Rs.* 19,158. 10. 8., giving, on an average, *Rs.* 736. 5. per week, or *Rs.* 91. 14. per mile per week.

The number of passengers carried over the line amounted to 11,970, or 460 per week, being a slight falling-off when compared with the average of the previous year.

The goods carried amounted to 534,661 maunds, equal to 19,572·4 tons. I have not yet received the half-yearly return of traffic, so am not aware of what these goods consisted, but for purpose of calculation, 16,000 tons may be taken as cotton, and 3,572 tons as first-class goods.

The train-mileage amounted to 5,886 miles, representing about 734 trains.

This for the same period in another year will probably be reduced by some 1,000 miles; as as far as can be judged, one train per diem will suffice during the months of January and June.

The average load per train during the half-year will have been as follows: viz., number of passengers, 16·4; tons of goods, 26·6; or, allowing for empties in the same proportion as before, each loaded train carried, on an average, 46·6 tons of goods, or about nine small waggon loads.

7. The receipts, as returned by the Great Indian Peninsula Railway Authorities, amount only to 19,158 rupees.

The return for passengers, viz., *Rs.* 2,486. 13. 1. is probably correct, but evidently the same omission has been made on account of goods as was made last year, the amount returned being only 16,605 rupees, whereas the terminal charges alone would amount to as follows:—

	Rs.
16,000 tons of cotton, at *Rs.* 1. 8. - - -	24,000
3,572 „ of mixed goods, *Rs.* 1. 2. 2. - -	4,055
TOTAL - - - *Rs.*	28,055

or 11,400 rupees more than returned as receipts from goods. By similar calculation as for last year, the returns for carriage only of goods amount to 14,029 rupees, or 2,600 rupees less than the amount given by the Company, a difference altogether insufficient to account for the above-mentioned terminal charges. Our total receipts, therefore, from all heads should have been about 47,000 rupees instead of 19,158 rupees, as follows, viz.:—

	Rs.
Receipt for passengers - - - - -	2,487
„ for goods (16,605 + 28,055) - -	44,660
Electric telegraph - - - - - - -	67
TOTAL - - - *Rs.*	47,214

amounting to 1,806 rupees per week, and 227·2 rupees per mile per week.

The working expenses cannot be fully calculated out until we know the working rates of the Great Indian Peninsula for the half-year, but allowing approximately the same rate as last season, they will be as follows:

WORKING EXPENSES.

	Rs.
Train mileage on 5,886 miles, at *Rs.* 1. 4. - -	7,357
15 per cent. on 47,214 rupees - - - -	7,080
TOTAL - - -	14,437
Maintenance charges - - - - - -	5,132
Total expenditure - - - -	19,569
Balance net profit - - - -	27,645
TOTAL - - - *Rs.*	47,214

For the second half-year the net profits will be comparatively very small, or say 6,000 rupees, making a total for the whole year of about 33,200 rupees. Of this sum, 6,000 rupees a year at least should be set aside for renewals, leaving 27,200 rupees clear profit.

The capital expenditure will not be less than 4,85,000 rupees. The return, therefore, should be 5·6 per cent.

OOMRAOTEE RAILWAY.

The line was opened for traffic on the 18th February last, and up to the 30th June was open for 19 weeks (less one day).

The length of line is actually 5½ miles, but, as charged by the Company, six miles.

Appendix, No. 12.

The total receipts for that period, as returned by the Company, amount to 11,126 rupees, being 585 rupees per week, and 97·5 per mile per week, composed as follows, viz.:—

	Rs.	*a.*	*p.*
From passengers - - - - - - -	2,268	2	8
„ goods - - - - - - - -	8,821	5	7
„ electric telegraph - - - - -	36	8	7

The total number of passengers carried amounted to 15,002, or 789·6 per week.

The total quantity of goods carried amounted to 369,461 maunds, or 13,525 tons, of which (not having yet the correct return of classification) 11,000 may be put down as cotton, and the rest, or 2,525 tons, as first-class mixed goods.

The train mileage amounted to 2,640 miles, being equal to 440 trains. The load per train, therefore, amounted to 34·1 passengers, and 30·7 tons of goods, or allowing for empties in the same proportion as on the Khamgaon Line, each loaded train carried 53·7 tons, or about 11 small waggon loads.

8. The receipts, as returned by the Great Indian Peninsula Authorities, as before mentioned, amount only to 11,126 rupees.

The return for passengers, viz., 2,268 rupees, is probably correct, but the same omission on account of goods, as pointed out in regard to the Khamgaon Line, has been made on this line.

The returns from carriage of goods, I calculate, should have been 7,059 rupees, as below. By the Cotton return published by the Cotton Commissioner, I observe no docres have been sent from Oomraotee, and the number of full-pressed bales to half-pressed were as 41·8 to 3·1, which, as regards weight, would be as $\frac{27}{28}$ to $\frac{1}{28}$; 11,000 tons of cotton divided in this proportion would be 10,607 tons full-pressed bales, and 393 tons half-pressed.

The receipts, therefore, for carriage only from all goods would be—

	Rs.
2,525 tons of first-class goods at 9½ pies per ton per mile, for 6 miles (being over 400 miles from Bombay) -	749
10,607 tons of full-pressed cotton at 18 pies per ton per mile, for six miles - - - - - - -	5,966
393 tons of half-pressed cotton at 28 pies per ton per mile - - - - - - - -	344
TOTAL - - - *Rs.*	7,059

This is some 1,800 rupees less than shown by the Company, but my estimate is entirely founded on assumption. It is, however, sufficient to show that the terminal charges due, which amount to 19,367 rupees, as below, are not included in their returns.

TERMINAL CHARGES.

	Rs.
11,000 tons of cotton at *Rs.* 1. 8. - - - - -	16,500
2,525 tons of mixed goods, at *Rs.* 1. 2. 2. - - -	2,867
TOTAL - - - *Rs.*	19,367

The total receipts from the line from all sources should have been—

	Rs.
From passengers - - - - - - -	2,268
From goods - - - - - - -	8,821 19,367
From electric telegraph - - - - - -	36
TOTAL - - - *Rs.*	30,492

instead of 11,126 rupees as returned by the Company, and amounting to 1,605 rupees per week, and 267·5 per mile per week.

The

The charge on account of the line may be estimated as follows:—

WORKING EXPENSES.

	Rs.
2,640 miles, at *Rs.* 1. 4. = - - - - - -	3,300
15 per cent. on 30,492 rupees = - - - - - -	4,575
TOTAL - - - *Rs.*	7,875
The maintenance charges will be heavy, the line being newly opened, and will no doubt for the 4½ months be	3,000
Total Expenditure - - *Rs.*	10,875
Balance Net Profit - - *Rs.*	19,617

For the second half year the profits may be put down at 6,000 rupees, making a total of 25,617 rupees. This will be for 45 weeks only, and for a whole year in future the profits may be estimated at not less than 30,000 rupees, of which 5,000 rupees per annum will be required for renewals, leaving 25,000 rupees clear profits.

The capital expenditure will not be less than 4,45,000 rupees, so the return will be 5·6 per cent., or the same as for Khamgaon, and this will be the return for the current year, as no renewals will be required.

9. In commencing this report, my object was to endeavour to draw some conclusions as to how to make these lines pay a fair return for the money invested, but if my conclusions are correct, and all my calculations are based on authority, the lines will pay a very good return; in fact, with more economical working in future, will pay upwards of 6 per cent.

GREAT INDIAN PENINSULA RAILWAY.

6.—WURDAH VALLEY (STATE) RAILWAY.

Appendix, No. 12.

EXTRACT DESPATCH from Government of India, No. 63, of 19th June 1871.

2. OUR Resolution in the Public Works Department, No. 613, of 3rd April 1871, which is among the papers now transmitted, enters fully into the subject, and will explain to your Grace in what way the existence of the coalfields, the adjacent cotton country, and the surveys for a railway, have been taken into our consideration. The geological investigation of the coalfield, although by no means complete, has been extended far enough to convince us that valuable coal exists at such a distance below the surface as to render it readily accessible. The coal lies in beds of varying thickness, and extends, though not continuously, on both sides of the river Wurda, from the village of Wurora, which is about 45 miles from the Nagpoor branch of the Great Indian Peninsula Railway, to the town of Chanda, which is 70 miles.

3. Extremely rich iron ores are found in abundance on both sides of the river. In the Central Provinces, the well-known Lohara Hill, north-east of Chanda, contains 70 per cent. of metal, while a poorer ore lies on the surface in the immediate neighbourhood of that city. In the heart of the coalfields, in the Berars, are the Yenak and Mularga iron-fields, where the brown hematite, containing 50 to 70 per cent. of iron, was extensively worked during the native rule. Much cotton, which seeks Hingunghât as a market, is grown in the districts on both banks of the Wurda; but there appears to be little, if any, doubt that the greater part comes from the Berars, and is carted across the river to that mart, whence it finds its way to the Wurda Railway station.

4. The map which accompanies this despatch exhibits the sites of the borings for coal, the principal localities of the richer iron ores, and the several lines which have been surveyed by our engineers. To the south of the explored portion of the coalfield lie the territories of his Highness the Nizam; and it will be remarked that the River Wurda, the boundary between the Central Provinces and the Berars, divides the field. We have entertained no doubt that in some way the resources of the Wurda Valley should be made available by the construction of a railway; but the claims of the Berars and of the Central Provinces, and the value of their commerce, have appeared to us to be so equally balanced, and the difference between the estimated cost of a railway, either east or west of the Wurda River, has been shown to be so small, that it is not without hesitation that we have come to a decision as to the line to recommend for a railway.

5. On a full review, however, of all the circumstances of the case, we have decided that, whatever may be its future, it would be a mistake to avoid an existing and well-known cotton mart like Hingunghât, and that, looking to the probable cost of any railway in these parts, the extent of the demand for the coal of the Wurda Valley cannot for some years at least be so great as to justify the outlay of a rupee that can be avoided. The adoption of the shortest possible line which shall serve the interests of both the Central Provinces and the Berars has, therefore, commended itself to us as the proper course, and we have accordingly ordered that a project shall be prepared for submission to Her Majesty's Government, for a narrow gauge railway extending from Wurda or its vicinity, on the Nagpoor branch of the Great Indian Peninsula Railway, through Hingunghât to Wurora, which is, so far as we know at present, the northern limit of the coalfield, and that the line shall be laid out so as to permit of a branch being readily made into the Berar coalfield. Either this branch, or the railway through Wurora may readily be extended to Wove if the cotton and coal traffic justify the extra expense.

EXTRACTS RESOLUTION of the Government of India, dated 3rd April 1871.

1. THE geographical position of the known coalfields of India is such that the importance of the existence of large deposits of good workable coal in the Central Provinces can scarcely be overrated. Comparatively recent examination has determined the great extent of the coal deposits of the Valley of the Wurdah, the river which separates the Central Provinces from the Berars, ascertained to exist on both banks of this river, the deposits have lately been proved as far north as Wurora, in the Central Provinces, or within less than 50 miles of the Nagpoor branch of the Great Indian Peninsula Railway, the locomotives of which, throughout its entire system of 1,286 miles, are at present dependent on imported sea-borne fuel.

2. The districts in, or adjacent to which the coal is found, are rich in other respects. Very fine iron ores are found in the Berars, adjacent to the coal. Centuries ago, under the native rule, this iron was famous, and the slag heaps occasionally contain 30 per cent. of the metal. The eastern portion of the coalfield in the Central Provinces is at no great distance from the Lhara iron mines, 50 miles north-east of Chanda, and 48 miles east of Wurora, the

the most northerly point at which coal has been proved. The ore of these mines is said to be a remarkably rich hematite, containing 67 per cent. of metallic iron, a proportion which contrasts favourably with the Swedish ores, wich seldom contain more than 73 per cent. Turning to agricultural products, there are to the south of Chanda the valuable but inaccessible teak forests of Aheree, the timber of which can only be brought to market by an improved means of communication. Nearer at hand, and situated on a direct line from the nearest point on the Great Indian Peninsula Railway to Wurora, is the cotton mart of Hingunghât, a great proportion of the cotton taken to which is, however, grown on the opposite side of the Wurdah in the Berars.

3. Desiring that this vast mineral wealth shall be utilised, and that the adjacent cotton-producing district shall also be benefited, but more particularly in view of the importance of providing the means by which the demand for coal, existing, it may be said, almost at the pit's mouth, should be supplied, the Government of India decided, in the early part of last year, that measures should be taken to determine the best means of obtaining access to the coal from the Great Indian Peninsula Railway.

* * * *

8. There can be little doubt that the construction of any branch railway in these parts would stimulate the production of cotton, and would be in every way a great benefit to the cotton traders of East Berar and the Central Provinces; but be this as it may, the great assistance to economical working which access to the Wurdah coalfields would afford to the Great Indian Peninsula Railway is of such importance as to warrant the construction of a branch on such a line as will suit all interests, irrespective of territorial limits. The locomotives running on the Nagpoor branch of the Great Indian Peninsula Railway, between Bhosawul and Nagpoor would certainly use the coal of the Wurdah field, and upon the average throughout the year from 60 to 70 tons daily, but no more may be required for some time to come.

* * * *

17. It is very desirable that the boundaries of the coalfield should be completely investigated without loss of time, and that steps should be taken to determine the point at which workings should be commenced, so that by the time the railway is completed, an out-turn of 20,000 or 30,000 tons annually may be obtained.

EXTRACTS NOTE by Chief Engineer, Central Provinces, dated 25th August 1870.

2. * * GENERALLY, the route from the Wurdah station of the Great Indian Peninsula Railway, *viâ* Hingunghât, to Chanda was approved of, and the point of departure from this line was fixed in order that cotton and coal might have as direct a route to Bombay as is consistent with keeping down to the lowest the total mileage of new railway to be constructed.

* * * *

3. * * The expected traffic not being a highly organised one, comprising few passengers, and consisting chiefly of cotton and coal, it was ordered that the road and permanent way be good and substantial, while all elaborate buildings and expensive works should be postponed until the development of the country and its trade made their construction desirable and necessary.

* * * *

22. At the 54th mile from Wurdah on the Chanda main line, near the village of Majree, the first proved bed of good coal is met with. By actual boring, a seam of coal, 50 ft. 8 in. in thickness, is here known to exist. The exact area of this fine bed must be determined hereafter.

EXTRACT SUPPLEMENTARY NOTE by the Chief Engineer.

1. SINCE my Note of the 25th August was written, an important and interesting report has been received regarding a bore-hole now being sunk near Wurrora, in the Chanda district.

Mr. Mark Fryar states, under date from Wurrora, 1st September 1870, as follows:—

> "The bore-hole is now into 12 feet of coal, and not yet through it. There can now, I think, be no doubt of our being in the regular beds found south of Nandooree."

Appendix, No. 12.

On the 2nd instant he writes—

"At the hand-boring, where we have found coal, and which is called No. 3, bore-hole, Wurrora, up to this evening the following section has been passed through:

Coal - - - - - - - -	4½ feet.
Shale - - - - - - -	1 foot.
Coal - - - - - - - -	9 feet.
Sandy shale - - - - - - -	1½ foot.
Sandy coal - - - - - - -	1 foot.
Sandy shale - - - - - - -	1½ foot.

This section commences at 102 feet from the surface."

This is very important and valuable information. The existence of coal at Wurrora was, I am informed, doubted by the Geological Department.

NOTE by the Commissioner of Nagpore, regarding the British Territory and the Towns through which the Chandah Railway will pass.

Two alternative lines of Railway are proposed, namely:—

No. 1.—The Hingunghât and Wurora line, which runs through Hingunghât and Wurora, and which will serve

One-third of the Hoozoor Tehseel - - - - - The whole of the Hingunghât Tehseel - - - -	Wurdah district;
The whole Wurora Tehseel - - - - - - - One-third of the Mhool Tehseel, and all the country east of Chandah - - - - - - - - - - -	Chandah district.

No. 2.—The Pohona and Woon line, which will run southward from Wurdah towards Woon, and which will serve

One-third of the Hoozoor Tehseel - - - - - One-third of the Hingunghât Tehseel - - - - -	Wurdah district;

but which will not serve any part of the Chandah district, unless a branch be led across the Wurdah from Woon *viâ* Googoose into Chandah.

2. Some of the statistics of the country through which line No. 1 passes may be exhibited thus:—

Wurdah District Tract.

Total area - - - - - - -	980 square miles.
Cultivated area - - - - - -	359,000 acres.
Estimated gross value and weight of yearly produce - - - - - - -	29,40,000 rupees. 860,000 maunds.
Population - - - - - - - -	134,000 souls.
Area under cotton - - - - - - -	84,000 acres.

Chandah District Tract.

Total area - - - - - - -	6,500 square miles.
Cultivated area - - - - - -	427,000 acres.
Estimated gross value and weight of yearly produce - - - - - - -	32,26,000 rupees. 1,135,000 maunds.
Population - - - - - - - -	375,000 souls.
Area under cotton - - - - - -	39,169 acres.

3. There are no statistics showing precisely the whole trade of these tracts, but if we take the Wurdah and Chandah tracts together we can offer reliable statistics of the trade of three towns, viz.:—

	Population.	Exports and Imports for 1868–69.	
		Weight in Maunds.	Value in Rupees.
Chandah - - - - - - - -	18,706	433,000	28,23,000
Hingunghât - - - - - - -	8,361	288,001	43,46,794
Wurora - - - - - - - -	4,500	49,000	2,70,000

4. We

Appendix, No. 12.

4. We know that the population of the railway tract (508,000 souls, at the rate of one maund of salt to 10 persons) will consume yearly more than 50,000 maunds of salt, every ounce of which would come* from Bombay *viâ* the Great Indian Peninsula and Chandah Railways.

5. It is estimated that at least 15,000 maunds (Major Lucie Smith put it at 25,000 maunds, but I prefer the lower figure) of Chandah iron is exported annually into Wurdah and Berar

6. From 15,000 to 20,000 cart-loads of forest produce (timber, firewood, bamboos, mats, gums, horns,) annually cross the Chandah border towards Wurdah and Berar. At 7 maunds per cart, this gives a trade of at least 105,000 maunds a year.

7. A large fair is held every year at Chandah, and another at Bhanduk; each of these places is on the railway. The statistics of goods brought to these fairs in 1868–69 are,

Bhanduk fair - - - - -	2,33,405 rupees worth of property.	
Chandah fair - - - - -	16,49,806 „ „ „	

8. If we add together all these branches of trade of which we really have some statistics, or can form a reliable estimate, then we get a total thus:—

	Maunds.	Value in Rupees.
Urban trade - - - - - - -	770,001	74,39,794
Salt trade - - - - - - -	50,000	2,50,000
Forest produce trade - - - -	105,000	3,15,000
Country iron trade - - - - - -	15,000	75,000
Goods brought to two fairs (estimated weight) - - - - - -	376,642	18,83,211
Total - - -	1,316,643	99,63,005

These totals take no account of the movement of agricultural produce, of country and English piece goods, or of hardware for the supply of the rural districts.

9. The alternative line *viâ* Pohona and Woon, will not go near a single town with a population of 5,000 souls; it will leave the cotton mart of Hingunghât nine miles on its east; and it will depart entirely from the existing traffic routes of the country. It will serve in the Wurdah district tract—

Total area - - - - - - -	490 square miles.
Cultivated area - - - - - -	160,000 acres.
Population - - - - - - -	64,000 souls.
Area under cotton - - - - - -	40,000 acres.

10. The state of the case, as between the two alternative lines, seems just to be this: the Chândah Railway is being undertaken primarily to serve the Wurdah River coalfields. The line will pass over coal beds, which, for all practical purposes, are inexhaustible, whether it takes the right bank or the left bank of the Wurdah. If Berar and the Nagpore country be both regarded as British territories, then the railway should undoubtedly† take the bank of the river where it will find most trade. There cannot be much doubt but that Hingunghât is, and has been for years, the commercial centre of the lower Wurdah Valley; it attracts to itself all the exportable cotton of this tract, and it supplies the people with piece goods, hardware, salt, and other foreign commodities. If a railway went to Chandah *viâ* Hingunghât and Wurora, it would find all the Woon (Berar) and Chandah traffic ready to meet it on this very route. The trade would take to the railway at once.

11. If on the other hand the railway were taken down the right bank of the Wurdah, the traffic of the Woon country would doubtless soon gravitate to the new trade route. But much of the Chandah and Wurora trade could not take the Woon line, and none of the Hingunghât traffic would come upon the Chandah Railway at all. One of two things would happen, either the Government would be driven to make branch lines to Hingunghât and to Chandah, or else the trade of these places would permanently decline, and the trade of the Wurdah Valley would have to take a new direction. One can hardly doubt but that the former alternative would be adopted.

12. If Berar and Chandah were both British territory, and stood precisely on the same footing, then there could hardly be a doubt but that the Government would decide to lay the Chandah Railway on the left bank of the Wurdah. The line is the straightest between the points (Wurdah railway station on the Great Indian Peninsular Railway and Chandah City), and moreover, it passes through the only marts of the lower Wurdah Valley, and it takes the existing traffic route. But as matters stand, Berar and Chandah are not on precisely

---

* If the Godavery navigation were complete then much of this country would get salt from the east coast.

† Public Works Circular of 1870, regarding the alignment of new lines of railway.

cisely the same footing; Berar has separate revenues, and is not British territory. The right bank of the Wurdah line might, so far as it runs through Berar, be paid for from the Berar surplus; while the left bank line will have to be a charge on the Imperial (Indian) Treasury. Perhaps the Chandah line may be held to have a countervailing advantage in that it will run through British territory; whereas there is always a doubt (no one can say what is the value of the doubt; but the outcome of the Mysore discussion compels us to admit the existence of such a doubt) how long Berar will be administered by the British Government. But, even if this consideration be put aside, there still remains the question whether the Indian Treasury would not lose more than it gained by letting the Chandah railway go partly through Berar. Thus:

The line to Chandah *viâ* Hingunghât, taking the Majree and Telwassa coalfields *en route*, will be	82·5 miles long.
The line to Chandah *viâ* Woon will be, in British territory, railway station, Wurdah, to the Wurdah river crossing	36 miles.
Branch from opposite Googoose to Chandah	15 „
Branch from Alipore to Hingunghât	9 „
In Berar, from the Wurdah river to a point opposite Googoose	38 „

Thus if we reckon the two obligatory branches, we shall have 82·5 miles paid from the Indian Treasury according to the left bank scheme; and 60 miles, according to the right bank scheme. While, if the right bank scheme were taken, all the Chandah and Hingunghât traffic would have to pay for 30 per cent. mileage over and above what it would have to pay if it were carried down the left bank.

13. It may possibly be a mistake to think that Berar revenues would ever be made to pay for a portion of an imperial undertaking (such as a railway to the coal sources for Central and Western India), just because a portion of the line ran through Berar territory. For there was never any talk of Berar revenues paying part of the guaranteed interest or the capital for the Great Indian Peninsular Railway, which has had so enormous a share in civilising and enriching the Berar country. But even if Berar paid for the length of line within its own limits, it would still be the best economy for British India that the Chandah railway should be taken down the left bank of the Wurdah, and that Berar should be left to pay for any branches it might require, either from Wuroro to Woon (about 12 miles), or from Telwassa to Woon (about 8 miles).

10 August 1870. *C. Bernard*, Commissioner.

EXTRACTS LETTER from Major *Mayne*, R.E., Officiating Secretary to the Resident at *Hyderabad*, to the Secretary to the Government of India; dated 19th September 1870.

6. * * As far as can be estimated from the surveys yet carried on, about five-sixths of the estimated quantity of coal in the Wurdah coalfields is found in the Berars, in addition to which (*vide* conclusion of Report) vast beds of iron ores of most excellent quality have been proved to exist, extending for about 10 miles alongside of the coal. This iron was known to exist, and, in fact, had been worked many centuries ago, the Yenâh iron being noted in Western India. More than 20 years ago, Mr Mulheran, of the Topographical Survey, reported both Yeotmal and Oomraotee as peculiarly rich in iron deposits, and added that Yeotmal alone had iron sufficient to supply all the railways in India.

These ores, no doubt, ceased to be worked on account of scarcity of fuel, and the difficulty of transport, Europe iron supplying the market for general purposes at a cheaper rate; but now, with the coal alongside, and the facilities of railway communication, the value of these ores may truly be said to be incalculable.

By official assays, different specimens have been proved to possess from 53 to 68·5 per cent. of iron.

7. In addition to all this coal and iron, it has undoubtedly been proved that most of the cotton carried to Hingunghât passes through, or grows in these very districts. The Yedlabad district, in the Nizam's country, just to the south of Woon below the Pynegunga, is one of the finest cotton, producing countries in India, and sends most of its cotton through Woon, either to Hingunghât, or up to the Great Indian Peninsula Railway.

* * * * * *

11. The survey now submitted, for reasons explained in Mr. Steell's Report on estimate, was carried to Boree to join on to the survey carried out by the Central Provinces Government, as time would not permit further work, otherwise it would have been carried a few miles more west, down to a place marked on the Trigonometrical Maps, Pisgaon, where a bore-hole has been commenced, and a seam of good coal, struck at 77 feet from surface, pierced 30 feet, but not gone through, and said to be of better quality than "any yet found." This is the most northern point where good coal has yet been proved to exist, but it is anticipated that it will, on further search, be found yet more northward.

EXTRACTS of NOTES by Mr. *Hughes*, Assistant in the Geological Survey, dated 1st July 1870.

Area.—The total area of the field exceeds 1,000 square miles, but my season's work does not embrace more than 560. I had to devote considerable attention to the task of *exactly* defining the boundary between the true coal-bearing strata and the unproductive beds above them, and thus a lesser area was surveyed than might otherwise have been the case.

* * * * * *

ESTIMATE OF COAL.

Berar Estimate.—It is only on the Berar side of the Wurdah that an estimate of the total amount of coal and shale can be made. The borings show that coal occurs over almost the entire area of the field. The only subtractions that have to be made from the entire area are the 8 square miles occupied by the Talchirs, the 10 square miles occupied by the Barakars, and a few miles for the overlapping of the Kamthis, say 10 square miles; a total of 28 square miles.

The area of the field is 149 square miles. The average thickness of the coal is 40 feet; the total amount of coal, therefore, is 149 28 by 40 by 1,000,000, equal to the entire amount of coal in tons, viz., 4,840,000,000. Dr. Oldham's estimate has reference solely to the amount which may be considered *economically accessible* (according to present system of working in India, and according to present received notions as regards workable depths). Of course it falls far short of the total amount of coal, being only 480 millions of tons.[*]

Chandah Estimate.—An estimate of the amount of coal in the Chandah district is necessarily imperfect. But, if we confine the estimate to the area explored in the vicinity of the Wurdah, we can arrive at a pretty accurable result.

The greatest store of coal in the Chandah district is probably in the direction of its eastern boundary, but no borings have yet been put down to prove the existence of the coal, and at what depth at a given distance from the boundary coal is to be met with.

I am told by Mr. Fryar that the dip holds steadily east, and at a minimum angle of 14°. This high angle of dip is disadvantageous, for, at a given distance from the out-crop, the seams will sink much deeper below the surface than if the angle of inclination was less.

The out-crop of the seams, east of Chandah, would, if they were not overlapped by the Kamthis, be exposed on the Muhl Road, about half a mile west of the Jarpat Nodi. If this be so, a calculation will show that, at the distance of a mile east of the out-crop, with a dip of 14, the depth to which the coal will have sunk will be 1,300 feet; at two miles, 2,700 feet; at three miles, 4,000 feet.

There are no Barakars visible along the eastern boundary, nor are there any east of those which crop up near the town of Chandah. Had there been, we might have inferred that the beds formed a kind of bow, and that the coal would nowhere be very deep.

Should the coal occur east of Chandah, it ought to be won by pits sunk within a reasonable distance of the out-crop.

In the vicinity of the Wurdah there are two coal-boring circuits, that of Ghugus and that of Majri.

Ghugus.—The Ghugus area is about 2 75 square miles, allowing 40 feet of coal, this gives 110,000,000 tons.

Majri.—The boundaries of this area are the Siruadi, the Trunk road between Nagpoor and Chandah, the River Wurdah, and a line about three miles north of Warora, joining Mukta and Chunira. Within these limits the coal probably occupies 22 square miles. Again, allowing 40 feet, this gives 880,000,000 tons.

In this estimate of 22 square miles, I have allowed for the area covered by trap. The coal may possibly occur rather deep down, or may have been denuded. But I think the probability is, that it occupies the area which I have assumed.

Estimates of available amount of coal differ so much in the bases upon which they are calculated, that they are seldom thoroughly reliable. If the total quantity of coal exceeds 200,000,000 to 300,000,000 tons, and if the dips be not too high, no estimate is required to show how many tons are available.

Conclusion.—From the foregoing facts regarding the coal and iron of the Wurdah field, it will be seen that the Woon portion of it is specially favoured.

A large quantity of iron ores exists, and there is a vast reservoir of coal to utilise it in close proximity.

Side by side with the fuel, iron ore extends continuously, or almost continuously, from the Peimgunga to Sirpur, a length of 10 miles.

---

[*] At the present rate of consumption of coal in England this amount (480,000,000 tons) would be exhausted in four years and a half.

At the present rate of consumption of India coal, viz., 600,000 tons per annum, the Berar field would last for 800 years.

Appendix, No. 12.

DEMI-OFFICIAL LETTER from Major *W. Nembhard* to Major *Mayne*, dated 20 July 1870.

As requested in your demi-official of the 30th May last, enclosing extract of a note from Williams, I now send a long letter from your brother, with appendices, showing the amount of cotton exported from East Berar to Hingunghât.

The local (Woon) bogah = 120 seers.

The Hingunghât do. = 165 „

Your brother shows fair reason for doubting the Assistant Cotton Commissioner's conclusions.

In the first place, none of the Darwar cotton crosses the Wurdah; and why should it? when Oomraotee, Budnaira, Damuch, and Karinjah are close by.

Secondly, Mr. Nago Rao could scarcely take it upon himself to doubt the figures of the revenue officers at the last Jummabundee. That Jummabundee showed that in the Woon and Yeotmal Talooks we had 65,473 acres under cotton. Now we all know that the Revenue Survey invariably proves that there is a vast amount of surreptitious cultivation. Take any of the Settlement Reports, Mintazapoor for instance, which have gone into the Resident, and you will find that if we make the 65,473 into 100,000 acres, we should be even then probably under the mark. However, your brother adopts his actual acreage as the basis of his estimate, and as in Woon there are two crops, "Juree" and "Bunnee," he allows 80 lbs. of cleaned cotton per acre, which is under rather than over the mark, considering that about 60 lbs. is the out-turn of cleaned cotton per acre of single crop; even the Assistant Cotton Commissioner allows 95 lbs. per acre.

After deducting 435 bojahs consumed at home in the two talooks, he finds that 15,297 bojahs of 120 seers each = 11,125 Hingunghât bojahs of 165 seers each were exported *across the Wurdah.* In addition to the above, about 12,000 bojahs of 120 seers each from the Nizam's dominions pass up *viâ* Woon Talook to Hingunghât, so that about *two-thirds* of the cotton in the Hingunghât market goes from this side the Wurdah River, and this confirms my former statements that almost seven-tenths was the proportion; and this again confirms Dr. Oldham, and also confirms the information supplied him by Mr. Curwen, of the Hingunghât firm of Warwick & Co.

EXTRACT of LETTER from Major *C. T. O. Mayne*, Deputy Commissioner of Woon District, to Commissioner of *East Berar;* dated 16th July 1870.

14. * * As from Mr. Carnac's Cotton Report for the past season, the following are the exports from the Wurdah Station during the past season:—

Full-pressed Bales.	Half-pressed.	Dokras.
9,856	10,769	25

Assuming a full-pressed bale to be 360 seers, a half-pressed one 200 seers, and a dokra 60 seers, which I believe is correct, the exports from the Wurdah Station for the past year were 34,566 bojahs of 165 seers each, which would give nearly 20,000 bojahs from places near the Wurdah Station *other* than Hingunghât, the largest mart, if we accept Mr. Nobbs's figures of 15,400 bojahs as the past season's income there as correct.

* * * * * *

18. The basis on which my calculations are founded are the *actual acreage* under the cotton cultivation as accurately ascertained at the last Jummabundee. To make every possible allowance for a bad season, which I suppose the Assistant Cotton Commissioner took into consideration when he allowed the amount of 95 lbs. of cleaned cotton per acre, I have only assessed 80 lbs., or one maund of 40 seers per acre; from these results an ample deduction has been made for consumption in the district. The balance must therefore have been exported, and although there may be some difficulty in arriving at the *exact amount* of exports, yet there is no doubt whatever as to *where* the exports go to. A very little inquiry will satisfy any one in this point, as it is a matter of public notoriety.

19. These results have been again tested by the trade statistics of the district, and the results are found to be very nearly the same as those arrived at from the cultivation statistics; and these trade statistics, kept by carcoons on the border employed for the purpose, corroborate my estimate of the amount of cotton sent through the Woon Talook across the Wurdah River from the Edlabad Mogullai.

20. The Woon bojah is only 120 seers, or three maunds; and the Hingunghât bojah is 165 seers. In the accompanying returns both rates are shown.

21. I have assumed that only half the produce of the Yeotmal Talook is exported across the Wurdah river, and this is *under* rather than *over* the mark. *None* goes from the Dharwa

Dharwa Talook, and the *whole* of that produced in the Woon Talook is exported in that direction.

* * * * *

23. The exports of last year across the Wurdah river were as follows:—

	Bojahs of 120 Seers.	Bojahs of 165 Seers.
Woon Talook - - - - - - - - - - -	9,205	6,695
Yeotmal Talook - - - - - - - - - - -	6,092	4,430
Edlabad Mogullai, through Woon Talook - - - -	12,000	8,727
Total - - -	27,297	19,852

or about one-half of the amount despatched from the Wurdah and Poolgaon stations.

24. If a railway is made through this district from Damungaon or Chandoor to Woon, probably about one quarter of the Dharwa produce will find its way to it.

25. From the *Woon* Talook and *Mogullai* 21,205 bojahs of 120 seers, or 15,422 bojahs of 165 seers, are exported to *Hingunghât*, being about two-thirds of the income there.

26. The actual land under cotton cultivation is without doubt much greater than the acreage given, because on fields being properly measured by the Revenue Survey, they are invariably several acres above the supposed area. This would make the quantity of cotton grown and exported larger than that given in this report.

27. The grain statistics I do not certify to be absolutely correct. They are framed on the trade statistics of the district and other inquiry, and probably are not more than 15 per cent. wrong either way, a little more or a little less. They are nearly correct enough to give a good idea of the exports crossing the Wurdah.

Appendix, No 12.

Extract of **Letter** from Colonel *M. K. Kennedy*, R.E., Secretary to the Government of Bombay, in the Public Works Department, Railway Branch, to Secretary to the Government of India, Public Works Department; dated 7 December 1870.

I am directed to transmit, for the information of the Government of India, a copy of a Table prepared by the consulting engineer, of the comparative saving to be effected by use of Mopani and Chandah coal on the Great Indian Peninsula Railway.

2. It will be observed from this Table that the construction of a railway to the Chandah coal-fields is of far more importance to the Great Indian Peninsula Railway Company than the construction of the branch to Mopani, and that the loss to them at the present price of coal in Bombay, from inability to utilise the Chandah fields, is close on nine lakhs per annum.

Statement showing the comparative Cost of Working the Great Indian Peninsula Railway with English, Mopani, and Chandah Coal.

(Cost of carriage, 4 pies per ton per mile.)

DEPOTS.	Quantity.	English Coal (25 Rupees per Ton)			Mopani Coal (*Rs* 13 8 per 1½ Ton)			Chandah Coal (6 Rupees per 1½ Ton).		
		Distance carried.	Price at Depôt	Total Price.	Distance carried.	Price at Depôt.	Total Price	Distance carried.	Price at Depôt.	Total Price.

N B—Extra distance for Thull Ghât, 20 miles
" " for Bhore Ghât, 34 "

Mopani, distance from Gurrawarra, 12 miles
Chanda " to Wurdah, 50 "

Note.—From the foregoing Table it would appear that, as long as the selling price of English coal is 25 rupees per ton loaded into trucks at Bombay, the company will save about 4,77,000 rupees per annum by having access to Mopani coal If they had access to both Chandah and Mopani coal, their saving would be 9,00,000 rupees; if to Chandah, without Mopani, 8,28,000 rupees Mopani coal, till completion of branch, is delivered at Gurrawarra by cart for 2½ rupees per ton, or 2¼ rupees more than it will cost on completion of branch Allowing for the increased quantity required of Mopani coal in comparison to English coal, the loss to company by non-completion of branch is about 1,31,600 rupees per annum But this is on the assumption that the Mopani Company can supply 58,500 tons per annum. They, however, cannot as yet furnish more than 1,200 to 1,500 tons per mensem, or say 20,000 tons per annum. On this quantity the annual loss will be 45,000 rupees per annum.

J. S. Trevor, Lieutenant Colonel, R E,
Consulting Engineer for Railways.

Bombay, 1 December 1870

Extract Letter from Dr. *Oldham*, dated 15th May 1871.

9. There are only two well-marked localities for iron on the Berar side of the Wurdah, in immediate contiguity to the coal. One at Yenak yields ore, containing by assay 68·5 per cent. of iron, and near Mulargao Hill there are veins of fine brown hematite, yielding on the average of four assays some 56 per cent. of iron That these ores have been in former times largely used, is proved by the abundance of slag, much of which itself yields more than 30 per cent. of iron. In many places among the rocks extending north, and also east from Chanda, beds can be found yielding 20 per cent. of iron, but these would only yield ores that could be mixed with others; alone they would be useless.

10. The great source from which the native smelters in that part of the country draw their supplies of ore is the enormous deposits of specular iron, which forms almost the entire hill of Lohara, in the north-east of Chanda, as marked. This is nearly one mass of ore, yielding about 70 per cent. of iron, extending for about two miles in length.

Appendix, No. 12.

EXTRACT RAILWAY DESPATCH from the Government of India, No. 138, of 6 December 1871.

1. WE have the honour to acknowledge the receipt of your Grace's Despatch, No. 69, dated 30th August 1871, stating that you would defer making any observations on the schemes for the projected line of railway from the Nagpoor branch of the Great Indian Peninsula Railway, into the coal and iron fields and cotton districts in the neighbourhood of the Wurdah Valley, until the further communication on the subject which we proposed to make had been received. We now beg to address your Grace more fully on the matter, and explain the views which further consideration of the information that has been collected has induced us to hold.

2. It will be recollected that the main inducement for the construction of this line is not the direct profit to be expected from the traffic which will pass over it, but the indirect profit in reducing the cost of coal on the Great Indian Peninsula Railway. This affects chiefly the Nagpoor branch, though it will affect more or less the whole of the northern portion of that railway above the ghâts. At Egutpoora, for instance, allowing the ghât to reckon as 20 miles of extra carriage, the English coal would require conveyance 105 miles from Bombay, and at Nundgaum, the next changing station, 198 miles. Allowing ½ *d.* per mile, these distances would give 4 *s.* 4½ *d.* and 8 *s.* 3 *d.* per ton respectively, in addition to the price of coal at Bombay. Allowing only 2 *l.* as the price of English coal per ton at Bombay, it would stand at those places at 2 *l.* 4 *s.* 4½ *d.* and 2 *l.* 8 *s.* 3 *d.* respectively. The equivalent cost of country coal at two-thirds the value for steam would be 1 *l.* 9 *s.* 7 *d.* and 1 *l.* 12 *s.* 2 *d.* Now the Wurdah Valley coal carried 50 miles over the proposed branch line, and from Wurdah on the Great Indian Peninsula Railway, would reach Egutpoora and Nundgaum with a lead of 436 and 343 miles respeetively, giving at the above rates conveyance charges of 18 *s.* 2 *d.* and 14 *s.* 3½ *d.* Adding the probable price of delivery on the trucks, at pits' mouth 10 *s.*, the charge for the Wurdah Valley coal at these places would be 1 *l.* 8 *s.* 2 *d.* and 1 *l.* 4 *s.* 3½ *d.* respectively per ton. The Wurdah Valley coal would thus meet the English coal at Egutpoora on equal terms, and at Nundgaum at a considerable advantage. The same would be the case with the Mopani coal, except that the distance, 12 miles on the Mopani branch, and from Gurrawarra, on the Great Indian Peninsula Railway, to the two stations named, would be 463 and 378 miles respectively, giving the Wurdah coal the advantage by 27 miles, or 1 *s.* 1½ *d.* in both cases, supposing the Mopani coal to be supplied also at 10 *s.* on truck at pits' mouth.

3. As regards Nundgaum and Bhosuwul, therefore, the opening of the branch railway now in contemplation would give a saving on these calculations of 1 *s.* 1½ *d.* per ton; and as it appears from the Table attached at the end, to our Proceedings of April 1871, which formed one of the enclosures to our former Despatch, that 17,000 tons of English, equal to 25,500 tons of country coal, are consumed by engines coaling at these stations, this saving will be 1,434 *l.* annually on the whole.

4. Again, as regards the changing stations on the Nagpoor Branch, we have the distances as follows:

Coal to be Consumed.		Distance from Wurdah.	Distance from Mopani.	Difference.
3,000	Sheagaum - - - - - - -	181	334	153
4,500	Budneira - - - - - - - -	109	406	297
1,500	Nagpoor - - - - - - - -	99	515	416

giving in the first case 6 *s.* 4½ *d.*, in the second 12 *s.* 4½ *d.*, and in the last 17 *s.* 4 *d.* per ton of saving. On the quantities of coal above indicated, therefore, the saving would be—

	£.	s.	d.
At Sheagaum - - - - - - - - -	956	5	–
„ Budneira - - - - - - - - -	2,784	7	6
„ Nagpoor - - - - - - - - -	1,300	–	–
Total at these three stations - -	5,040	12	6
Add; saving at Nundgaum and Bhosawul - -	1,434	–	–
Total direct Saving - £.	6,474	12	6

5. But besides this direct saving, there is the command this competition of the Wurdah Valley coal will give over the price of the Mopani coal. It will be observed that in the Table we have referred to, the Mopani coal is calculated at 18 *s.* per ton on the trucks, while

Appendix, No. 12

while we have above taken taken it at 10 *s.* only. The difference may fairly be taken as the effect of this command of prices, which at 8 *s.* per ton, affecting a consumption of 25,000 tons, will amount to 10,000 *l.*

6. This gives the whole saving in coal at about 16,500 *l.* per annum, taking the price of English coal at Bombay at 2 *l.* per ton. In the Table we have before referred to, it will be seen that the Bombay Government estimate it at:

	£.
Access to both Wurda and Mopani coal - - -	90,000
„ to Mopani only - - - - - -	47,700
Difference due to the Wurda coal branch - - -	£. 42,300

But this is taking English coal at 2 *l.* 10 *s.* per ton in Bombay.

7. The above calculations, however, both presume that there is no break of gauge between the coal pits and the Great Indian Peninsula Railway. If the coal line were made on the narrow gauge, as at first contemplated, something must be allowed for this. We think the following would be fair to allow per ton:—

	£.	s.	d.
Actual shifting, with proper appliances - - - - - - - -	–	–	4
Deterioration, at 3 per cent. on a price of 1 *l.* per ton - - - - -	–	–	7
Extra expense of working a separate short line - - - - -	–	–	4
Total - - -	£.–	1	3

This would have to be taken on the whole 25,000 + 9,000 = 34,000 tons of coal affected, giving a reduction, in the case of the narrow gauge, of the profits from 16,500 *l.* per annum to about 14,600 *l.*

8. To these sums we may add a rough estimate of the profits on freight over the line for cotton and local goods and passengers, which may be taken, as in the margin at 4,500 *l.* for the broad, and 2,900 *l.* for the narrow gauge. The total will thus be 21,000 *l.* for the broad, and 17,500 *l.* for the narrow gauge line.

———	Broad Gauge.	Narrow Gauge.
	£	£.
34,000 / 18,000 } tons* of Coal, at 1 rupee -	3,400	1,800
3,000 tons of Cotton - - -	600	600
Passengers, Grain, &c. - - -	500	500
£	4,500	2,900

* If there be no break of gauge, the Wurdah Valley coal will be used to Nundgaum, otherwise only to Bhosawul, and not entirely there.

9. The questions involved in the determination of the course to be pursued in regard to this project are somewhat complicated, and make it necessary to deal with both the gauge and direction of the projected railway. The chief objects sought in its construction, are the reduction in the cost of the fuel used in working the Great Indian Peninsula Railway, and the advancement of the cotton trade of the districts. Of these two objects, the former is at the present time the more important in a financial point of view. According to the calculations we have made, and which are above repeated, the direct and indirect profits on the coal railway, if made on a narrow gauge, would be about 17,500 *l.* a year; and if on a broad gauge, 21,000 *l.* a year; the difference between the two sums being caused by the necessity, in the case of the narrow-gauge lines, of transferring coal to broad-gauge waggons, of working a short isolated narrow-gauge line, which must necessarily be expensive, and of, consequently, raising the price of the coal so as to prevent its entering into favourable competition with the Mopani coal on the Great Indian Peninsula Railway at and below Bhosawul. The cost of the two kinds of railway (exclusive of large bridges) may, it appears from the estimates that have been prepared, be taken at 6,000 *l.* a mile for a narrow-gauge line, including rolling stock, and 7,500 *l.* a mile for a broad gauge, excluding rolling stock, which would be supplied by the parent line.

10. The following five projects have been suggested (*see* sketch map), for the alignment of a railway, starting from Wurda:—

I. Viâ Hingunghât to Wurrora, 48 miles.
II. Direct to Pisgaon, 50 miles.
III. The same, with a branch to Hingunghât, 55 miles.
IV. Viâ Hingunghât to Wurrora, with a branch to Pisgaon, crossing the Wurdah, 60 miles.
V. To Hingunghât, returning across the Wunna, and proceeding by its left bank to Pisgaon, crossing the Wurdah, therefore, above the junction of the Wunna.

On these lines there are large bridges to be constructed, the cost of which must be added to the mileage cost above mentioned. The bridge over the Wunna at Hingunghât may be taken at 35,000 *l.* for the narrow, and 38,500 *l.* for the broad gauge. The Wurdah Bridge, above the junction of the Wunna, may be taken at 60,000 *l.* or 66,000 *l.*, according to gauge,

Appendix, No. 12.

gauge, and that below the junction, at 80,000 *l.* or 88,000 *l.* Putting these data together, the financial view of the several proposals is as follows:—

	Narrow Gauge.	Broad Gauge.
I.—To Wurrora, viâ Hingunghât.	£.	£.
Forty-eight miles of railway - - - - - - - -	288,000	360,000
Wunna bridge - - - - - - - - -	35,000	36,500
	323,000	396,500
4½ per cent. on this - - - - - - - - -	14,535	17,843
Calculated net earnings - - - - - - -	17,500	21,000
Annual Surplus - - - £.	2,965	3,157
II.—To Pisgaon direct:		
50 miles of railway - - - - - - - - -	300,000	375,000
Wurdah bridge - - - - - - - - -	60,000	66,000
	360,000	441,000
4½ per cent. on this - - - - - - - - -	16,200	19,845
Calculated net earnings - - - - - - -	17,500	21,000
Annual Surplus - - - £.	1,300	1,155
III.—To Pisgaon, with branch to Hingunghât:		
As in II. - - - - - - - - - -	360,000	441,000
5 miles of branch - - - - - - - - -	30,000	37,500
	390,000	478,500
4½ per cent. on this - - - - - - - - -	17,550	21,533
Calculated net earnings (adding 250 *l.* for branch) - - -	17,750	21,250
Annual Surplus and Deficit - - £.	200	283
IV.—To Wurrora, viâ Hingunghât, with branch to Pisgaon:		
As in I. - - - - - - - - - -	323,000	396,500
Lower Wurdah bridge - - - - - - - -	80,000	88,000
12 miles of branch - - - - - - - -	72,000	96,000
Total - - - £.	475,000	580,500
4½ per cent. on this - - - - - - - - -	21,375	26,123
Calculated net earnings (adding 500 *l.* for branch) - -	18,000	21,500
Annual Deficit - - - £.	3,375	4,623
V.—To Hingunghât, and returning over the Wunna to Pisgaon:		
The cost and return on this may be taken the same as in No. III.		

N.B.—Although the bridges have been included here, it is possible that the Wurrora line might at first be worked by diversions, without bridges, during the dry season, being closed during the rains. This could not be done with the deep channel of the Wurdah. The comparison is therefore rather more in favour of the Wurrora line than is shown above.

11. It thus appears that the broad gauge would not be materially different, as regards profits from the narrow; but when it is borne in mind that the greater portion of the girders and rails for the broad gauge can be supplied from surplus stock already in this country, bearing interest as part of the guaranteed capital of the Great Indian Peninsula Railway, it seems that the financial advantage is clearly in favour of the broad gauge. The arguments in favour of this gauge are further strengthened by two considerations. First, that if the traffic on the lines should be greater than that on which we have thought it advisable to calculate, the advantage would be less to a narrow-gauge line, than to a broad-gauge one, for which a practically inexhaustible supply of rolling stock could be hired; and, secondly, that in the case of possible future extensions, a break of gauge could be made at the source of the fuel supply with less inconvenience than elsewhere. In view of all these circumstances, we have therefore come to the conclusion that the broad gauge is the proper one to adopt.

12. Next

12. Next as to the direction to be followed. If Hingunghât be considered an obligatory point, then one of the schemes, Nos. I., III., IV., or V., must be adopted; that is, if, for the sake of the coal traffic, the direct line to Pisgaon be preferred, then the branch to Hingunghât (No. III.), or the return curve (No. V.), would be made at an increased cost of 1,100 *l.*, or 1,200 *l.* per annum. This would not, in our opinion, be unreasonable; for although the export of cotton from Hingunghât appears to be, from a railway point of view, of no great consequence, still there are a large number of persons interested in the trade who are averse to the deflection of the line from the town. On the whole, we consider it proper that the railway should run, either direct or by means of a branch or return curve, to Hingunghât. The advantage of adopting No. V. line is the avoidance of the inconvenience of working a branch, which we think will more than cover the additional length of lead for the coal; but in either case it appears proper to commence at once on so much of the line as to enable us to reach Hingunghât.

13. With regard to the location of the remainder of the railway, we are not at present in a position to offer a definite opinion. In Dr. Oldham's judgment the superiority of the Pisgaon to the Wurrora coalfields is undoubted, and we fully recognise the value of this opinion; but it still remains to be decided whether, admitting this, the Wurrora works may not afford a sufficient supply of coal at a workable price to meet all the objects of this coal line, and at a less capital and working outlay than if pits were opened at Pisgaon, and the coal carried thence to the Great Indian Peninsula Railway. Further investigations are now in progress which will, we trust, settle the matter, and enable a positive decision to be made as to the sufficiency of the Wurrora coal, and the degree of facility to be expected in working it. The result of these inquiries may soon be expected, and, as it would be a great advantage to make use of a portion of the present working season, we beg that we may receive by telegraph your Grace's sanction to the immediate construction of the railway as far as Hingunghât, and to the subsequent prosecution of whichever line may appear to us to be most desirable, and also to the construction of the railway on a broad gauge, for the reasons herein given. The full estimates and plan will be submitted to your Grace when the points now at issue are finally settled.

EXTRACT of DESPATCH from the Secretary of State for India to the Governor General of India in Council; dated 15th February 1872, No. 19 (Railway).

My Lord,

Para. 1 YOUR Despatch, No. 138, of 6th December last, relative to a projected line of railway from the Nagpore branch of the Great Indian Peninsula Line into the coal, iron, and cotton fields intersected by the River Wurdah, was received by me on 6th ultimo, and on the 17th of the same month was answered by telegraph as follows.—

> "Wurdah Valley Railway. Broad gauge. Sanctioned far as B, 15 miles from Wurdah Station, five short of Hingunghât."

2. I wish now to explain why the request of your Government for immediate sanction to construction as far as Hingunghât has not been complied with to its full extent.

3. The Despatch under acknowledgment shows that your Government is itself still in doubt whether Pisgaon on the right, or Wurrora on the left, of the River Wurdah, is to be preferred for the lower terminus of the line, but intimates that the final selection will depend on which of the two may be ascertained, on further inquiry, to have the best and most abundant coal-beds in its immediate vicinity. The evidence as yet collected on that point seems to preponderate in favour of Pisgaon, but in case it be decided to make that place the terminus, to cause the line from Wurdah to pass through Hingunghât, instead of turning off at the point marked B. on the sketch map sent with your Despatch, would be to add five miles to its length, and 30,000 *l.* to its cost, to counterbalance which, the only compensating advantage would be that of somewhat facilitating the conveyance of cotton over the 20 miles of ground separating Hingunghât from Wurdah. This advantage might be worth the cost, if Hingunghât were a considerable cotton mart; but although the most considerable in the district, the maximum quantity of cotton which a railway from it to the Great Indian Peninsula Line would get, is, I observe, estimated by both the Officiating Chief Commissioner of the Central Provinces and the Commissioner of Eastern Berar, at no more than 3,000 tons annually. It seems very questionable whether it would be worth while to sink so large a sum as 30,000 *l.* for the purpose of enabling so insignificant a quantity of cotton to travel for 20 miles of its way to market by railway instead of road, particularly as all the coal carried northward by the same line (estimated, I observe, at 50,000 tons) would have to be carried five miles more in consequence.

4. In these circumstances it seems to me, that if Pisgaon be fixed upon for the terminus, the proposed line from Wurdah had better turn off at B. If, on the other hand, it is to proceed to Wurrora, no deviation from the directest practicable course seems necessary to make it pass through or by Hingunghât. In either case, however, I am content to leave the final disposal of the matter to your Excellency in Council, only desiring that the considerations adverted to above may be duly weighed.

Appendix, No. 13,

STATEMENT showing the Loss or GAIN to *India* in each Year, by adopting in the Transactions with certain GUARANTEED INDIAN RAILWAY COMPANIES the Exchange of 1 *s.* 10 *d.* the Rupee, as compared with the rate of 2 *s.* the Rupee, and as compared with the Average Rate obtained in each Year for Bills of Exchange drawn on *India*; also the Gain in each Year by adopting in the Transactions with the OUDE and ROHILKUND RAILWAY COMPANY and the INDIAN TRAMWAY or CARNATIC RAILWAY COMPANY, the Exchange of 2 *s.* the Rupee, as compared with the Average Rate obtained in each Year for Bills of Exchange drawn on *India.*

* Up to the year 1860–61 inclusive, the Home Treasury was open at all times for the sale of Bills on India, at rates altered from time to time by advertisement. Consequent on the Mutiny it was necessary to refrain from drawing on India, and the exchange was raised to a prohibitory rate.

T. W. Keith, Accountant.

1 March 1872.

Appendix, No. 14.

Appendix, No. 14.

(No. 63, PUBLIC WORKS.)

Government of India.—Public Works Department.—Buildings and Roads.—Communications.

To His Grace the Right Honourable the Duke of *Argyll*, K.T.,
Secretary of State for India.

My Lord Duke, Simla, 1 June 1871.

IN addressing your Grace on the present position of the operations which have now been going on for many years on the Upper Godavery, having for their object the improvement of the navigation of that river from Berar and the Central Provinces to the sea at Coconada, it will be convenient if we review the past history of the works, and indicate the decisions that have from time to time been come to on the subject by the Government of India and Her Majesty's Government.

2. The scheme was first mooted in a general way in 1851 by Major F. C. Cotton. Various explorations and surveys were undertaken from time to time in the following years under the authority of the Honourable Court of Directors of the East India Company, and up to 1861 a sum of about 20,000 *l.* had been spent in these and other preliminaries. In 1861–62 operations were begun with more vigour, and the Madras Government having sanctioned a design for the works at the lower barrier, they were put in hand, as well as various other operations having in view the removal of obstacles which existed at various points in the bed of the river. Tramways were also commenced at the three barriers to admit of the passage of the traffic until the canals at these obstructions were completed.

3. In 1863 the works were transferred from the control of the Government of Madras to that of the Administration of the Central Provinces, and were thus brought more directly under the cognisance of the Government of India. Up to this period, 1862–63, the total outlay had been about 100,000 *l.*, of which about 30,000 *l.* was for the tramways, leaving 20,000 *l.* to complete those works, which, however, have subsequently been abandoned. At that time no complete estimates had been received by the Government of India, though the work had been in progress since 1861.

4. In 1863, when the project fairly came under the Government of India for the first time, it was reported by Mr. Temple, then Chief Commissioner of the Central Provinces, on the authority of Major Haig, that the probable outlay necessary to open the river in a partial manner to the foot of the third barrier would be about 25½ lakhs, 255,000 *l.*, in addition to the former outlay. The works contemplated at that time were nearly those that have since been in progress. The estimated cost for the complete works was as follows:—

	£.
1st Barrier Works - - - - - - -	120,000
2nd " " - - - - - - -	200,000
3rd " " - - - - - - -	150,000
Works in river - - - - - - - -	122,500
TOTAL - - - £.	592,500

But with the exception of the first barrier, no designs had been prepared, and these sums were little more than guesses. In issuing orders at this time, the necessity for completing proper estimates and designs was strongly stated, but the work at the first barrier was permitted to go on in accordance with a design that had been approved by the Madras Government. These orders of the Government of India were reported in its Despatch to Sir Charles Wood, No. 116, dated 13th September 1865, which reviewed past proceedings and expenditure in connection with the scheme, and gave the views of the Government of India as to the prospective measures to be adopted with reference to it. At that time the expenditure had risen to 286,000 *l.*, and the estimated cost of the works, including the third barrier, was then stated at 800,000 *l.* or even one million.

5. The

Appendix, No. 14.

5. The orders of the Home Government, in reply to the Despatch above referred to, were communicated in Sir Charles Wood's Despatch, No. 11, dated 8th February 1866, which was written after personal communication with Major Haig, under whose superintendence the greater part of the work had been carried out from the outset.

6. The general conclusions at which the then Secretary of State for India arrived were, that in order to secure the more important and more immediate advantages which the project was originally undertaken to obtain, navigation must be made to extend nearly as far as Hingunghât, to effect which a total outlay of 800,000 *l.*, or 538,000 *l.* beyond the sum which had been spent up to that time, was estimated as necessary. The Secretary of State agreed with the Government of India in thinking that as the works at the first and second barriers and between the second and the foot of the third barrier had proceeded so far, it was desirable to prosecute so much of the scheme with vigour, but that nothing should be done on the third barrier until detailed plans and estimates should be prepared, surveys of this barrier and of the river up to Hingunghât being, however, set in hand during the prosecution of the works on the lower barriers. An opinion unfavourable to the connection of Chanda with the foot of the third barrier by road was also given.

7. Previously to the receipt of this exposition of the views of Her Majesty's Government, the Government of India had appointed a Committee to report on the whole subject of these works, and in March 1867, after a consideration of this report and the minute by the Chief Commissioner (Mr. Temple), which accompanied it, and also of a memorandum by Major Haig on the report of the Committee, and governed by the express wishes of the Secretary of State, the Government of India issued orders for the completion of the first barrier project, with a short canal, with full sized locks for steamers, estimated to cost 170,000 *l.*, and also sanctioned an estimate amounting to 113,400 *l.* for the works at the second barrier, which were ordered to be pushed on with all practical expedition. In all other points the Chief Commissioner was authorised to do whatever might be necessary for opening up communication to the foot of the third barrier, subject only to the restriction that no work was to be commenced until a detailed estimate for the same should have been approved by him.

8. At the same time surveys were ordered to be set in hand, both for navigation works above the foot of the third barrier as far as Hingunghât, and for a road to connect the foot of that barrier with Chanda; but nothing was to be done in the matter of preparing designs for storage of water, or the extension of navigation up the Wurdah and Wynegunga, until the estimates for the third barrier works should be completed.

9. These orders were communicated to the Secretary of State in our Despatch, No. 36, dated 8th March 1867, and the question of the extension of the project was then submitted for the orders of the Home Government, an opinion being expressed that it was necessary that a cheap road should be constructed at once from Chanda, either to Sironcha, or to the foot of the third barrier, and permission being asked to carry it out.

10. The Government of India at the same time remarked that the works were not likely to "prove profitable in any degree commensurate with the expense" they would entail, and that nothing should be done even in the way of surveys beyond the work already ordered, until the detailed estimates for the works at that barrier should be received.

11. These views, objecting to the prosecution of surveys, were reiterated in papers sent to the Secretary of State with our Despatch, No. 107, dated 11th July 1867, but on a further representation from the Chief Commissioner, he received eventually a discretionary power of extending the surveys to the lower 60 miles of the Wynegunga.

12. These orders were reviewed in Sir Stafford Northcote's Despatch, No. 86, dated 14th September 1867, in which various modifications of them were proposed.

13. In the first place, the Secretary of State expressed a preference for the long canal of 20 miles at the first barrier, over the short one sanctioned, involving an increased prospective expenditure of some 150,000 *l.*, and in the next place he desired the immediate prosecution of the investigations connected with the extension of navigation to the utmost extent, including surveys with reference to the storage of water to increase the supply of the river in the dry season.

14. In other respects, the orders of our Government were approved, and also the expenditure of 10,000 *l.* on a road from Mogellee at the third barrier to Chanda, to be used pending the completion of the navigation works in the upper reaches.

15. In reply to these orders (*see* our Despatch, No. 196, dated 29th November 1867), it was reported that the short canal at the first barrier was nearly completed, and that no difficulties were anticipated by Colonel Haig in the clearances in the bed of the stream necessary to make the canal available for traffic, and an opinion was given that it was, therefore, unnecessary to proceed at that time with the long canal.

16. Any

16. Any extension of surveys beyond those already sanctioned was strongly opposed, and the Government of India remarked on the necessity of conducting the future operations on the river with more system and order than, owing to the instructions received from the Home Government during the early stages of the work, had previously been attained.

17. The Secretary of State in his reply (No. 18, dated 29th February 1868) approved of these views with regard to the long canal at the first barrier, but adhered to the opinion formerly expressed by him regarding the necessity for the early prosecution of surveys for works designed for the storage of water for increasing the natural supply of the river in the dry season, and desired that the instructions previously given by him on this subject might not be overlooked.

18. The Government of India replied (Despatch, No. 68, dated 22nd April 1868) that these instructions would be borne in mind, but that from reports recently received in regard to there being no want of an additional supply of water for irrigation in the Delta of the Godavery, which was one of the more prominent reasons adduced for going on with these surveys, the matter was not so urgent as had been before supposed.

19. In 1869 Mr. Morris, who had become the Chief Commissioner of the Central Provinces, considering that the works had up to that time continued to be carried on without a complete estimate of the cost of bringing any definite scheme to completion, especially called for the preparation of two estimates, one for a series of works on the smallest possible scale consistent with the object in view, and another for a scheme which should meet Colonel Haig's own views of the requirements of the navigation.

20. These orders were generally approved by us, but in their details we somewhat modified them, requiring that Major Haig should be instructed to deal with his proposals on the following basis:

1st. To show the best practicable results with the natural river supply only.

2nd. To show the best results possible with reservoirs sufficient merely for supplementing the supply for the upper reaches of the Wurdah and Wunna Rivers, that is, above the third barrier only, to the extent necessary to continue the navigation in that part of the river, as long as it would be open below the third barrier, with the natural supply.

3rd. To give his own views as to the system which should be adopted for a permanent navigation.

21. These orders, which were reported to your Grace in our Despatch, No. 56, dated 9th May 1870, have led to the preparation of a series of estimates and to a review of the whole scheme by Mr. Morris, which we now submit for your Grace's consideration and for final orders as to the further prosecution of the works.

22. The total expenditure on these works up to the present time, including that incurred under the Madras Government prior to 1863, is about 700,000 *l.*, and for this the works at the first barrier, including the short canal, have been opened for traffic, and some progress has been made on the works at the second barrier.

23. The estimates submitted may be combined in various ways so as to form alternative schemes varying in their scope from one which will provide merely a three or four month's navigation from Dowlaishwaram to the foot of the third barrier for steamers, and a road thence to Chanda likely to cost, including everything, say, 900,000 *l.*, to one which will give a complete navigation for steamers of large size (2½ feet draft) throughout the year from the sea to the Great Indian Peninsula Railway at Wurdah, which might cost 1,350,000 *l.*

24. The results of some of the combinations which may be made are given in paragraph 49 (pages 24 to 26) of Colonel Haig's Report, and paragraphs 6 to 22 of Mr. Morris' Minute. The figures in both of these now require some correction, in consequence of the expenditure which has been incurred since they were written; but they will give a sufficiently close approximation to the facts of the case to admit of a judgment being formed as to the comparative cost of the various schemes which are now possible.

25. We do not propose, however, now to discuss any of the large schemes which it is possible to undertake.

26. We think that Mr. Morris's Minute shows conclusively that if the works were completed to the full extent necessary for the most perfect navigation, there is no prospect of sufficient traffic for very many years to come to bring in a fair return for the money which would be expended. This being the case, it seems to us that the only question for immediate consideration is, whether expenditure on a project, which, carried out on the most restricted scale, will still involve a considerable outlay in the future; which will not in the present generation, at any rate, be in any way directly remunerative; which will be of little use for political or military purposes; which, even if it succeeds in drawing off a portion of the produce of the Central Provinces to Coconada, will do so at the expense of the Great Indian Peninsula Railway, the interest on the capital for which must somehow be met; and which will certainly involve the imposition of a considerable burden on the rest of India, for only a possible benefit to portions of the territories of the Central Provinces, Hyderabad, and Madras, shall be absolutely stopped as

as soon as the work already carried out shall be secured from damage, or whether, in consideration of the large sum already spent on the works, their further prosecution shall be permitted to such extent as may be necessary to provide a continuous communication of some kind from the sea to the cotton mart at Hingunghât.

27. In considering how to deal with this question in its present state, it appears to us that three alternatives have to be discussed:—

I. Of giving up, for the present at least, all idea of deriving benefit from the past outlay, except so far as the opening of the first barrier may be useful, and of stopping all further expenditure.

II. Of completing the navigation works as far as the foot of the third barrier on the smallest possible scale, and making a road thence to Chanda to join existing roads to Nagpoor and Hingunghât.

III. Of completing works for the navigation up to Hingunghât on the smallest possible scale.

28. As before observed, the first barrier works are practically finished, and this barrier is now passable for a certain portion of the year for steamers of 2½ feet draft. For a limited period, too, the reaches as far as the foot of the second barrier are also passable for such steamers.

29. To complete the works at the second barrier, according to the present design, will cost about 120,000 *l.*, in addition to the sum already spent, and this expenditure will consequently give some sort of communication from the sea to the foot of the third barrier for steamers and country boats.

30. Mr. Scott's estimate for a third-class road from the foot of the third barrier to Chanda is slightly over 30,000 *l.* The kind of communication for which this estimate provides is described in the 61st paragraph of Colonel Haig's Report. For a second-class road between these places, Colonel Haig roughly estimates the cost at 106,500 *l.*, besides which a further sum would be required for the improvement of the road north of Chanda.

31. From the figures given in the two preceding paragraphs it will be seen that to provide the cheapest possible communication between Hingunghât and the sea, will involve, at the lowest estimate, a future expenditure of 150,000 *l.*, but it will be best to take it at 200,000 *l.*, making a total expenditure of about 900,000 *l.*

32. The cost of conveying goods by the road would no doubt be greater than by canal, as contended by Colonel Haig. But still it is well known that where there is a demand for communication, roads are largely made use of even in preference to available water communication, as in the case of cotton carried from Mirzapoor to Calcutta by road in preference to the water route by the Ganges, prior to the construction of the railway. Doubtless some kinds of goods might in this case be brought forward which would bear the enhanced charge of transport by road for part of the distance. This second alternative, therefore, of completing the communication by a road at a future outlay altogether of 150,000 *l.*, or even of 200,000 *l.*, we consider not to be one to be left out of consideration in arriving at a decision on the question now under discussion.

33. The cost of the boat canal round the third barrier is estimated at about 190,000 *l.*, so that the smallest expenditure which will give any water communication between the cultivated districts of the Central Provinces and the sea may be estimated at 310,000 *l.*, which, added to the past expenditure, gives a total of 1,010,000 *l.*

34. To complete water communication from the head of this canal to Hingunghât will cost, according to the present estimates, about 230,000 *l.* more, and continuing it, to join the Great Indian Peninsula Railway at Wurdah, a further sum of 100,000 *l.*; paragraph 71 of Report.

35. The least sums, therefore, for which these places can be connected with the sea by water communication, and that in a very imperfect manner, are,—

	£.
Wurdah, on the Great Indian Peninsula Railway - -	1,340,000
Hingunghât - - - - - - - - - - -	1,240,000

involving in the one case a prospective expenditure of 640,000 *l.*, and in the other of 540,000 *l.*

36. These last figures, be it remembered, are not based on precise estimates, and when the detailed projects are worked out, the sums named may be found to be insufficient, although we believe that the amounts taken by Colonel Haig were arrived at with great care, and on the best available data.

37. We are clearly of opinion that it would not be wise to incur this expenditure for the sake of a traffic which has yet to be created, and the necessary charges connected with which are wholly based on conjecture. For the cotton export traffic the railway to Bombay has not as yet been found insufficient. If, as is most improbable, this traffic were to be diverted to the Godavery, the receipts of the railway, in which Government has

has a large interest, would be *pro tanto* diminished. There has not been, and, so far as we can see, there cannot be any reliable calculation made as to the probable cost of transport by the Godavery to the sea. This question evidently depends on the return traffic, and as evidently it is quite impossible to judge of this in a case like the present in which we start with no trade whatever in either direction. The transport must, in the first place, be burdened with the charge for interest on the capital, and next with the outlay for maintenance, which would certainly be heavy. If there was not a fair balance between the up and the down trade, the burden on the traffic would be in a corresponding degree increased. In short, there seems to us no evidence whatever to justify the belief, that if the large outlay necessary to complete this navigation were incurred, the trade of the districts concerned could pay for it and for the railway together, or that there would be such a relief given to commerce generally as might fairly lead to the anticipation that this result would be soon secured. Viewing the question financially, and it is essentially in such a manner that these large engineering questions must be viewed if we are to avoid calamitous failure, the balance of the arguments seem to us conclusive against the prosecution of the scheme in the existing condition of India generally, and the provinces in particular, which the scheme might benefit.

38. The recent discovery of the Chanda coal fields, however, must be considered as affecting this project. The part of the scheme which relates to the navigation of the river above Chanda has now an aspect different from that which it had in the earlier discussions on the project. Then, this portion of the works had only to be considered as being a section of the through line of navigation from Hingunghât to the sea. Now, it has also to be considered as an independent project for connecting the newly-discovered coal fields in the Chanda district and in the Berars with the Great Indian Peninsula Railway, and this aspect of the case has been treated of at some length in the report by Colonel Haig and the Minute by Mr. Morris.

39. If, on other grounds, it be determined to carry out this portion of the scheme, its utility will no doubt be increased by the possibility of using it for the transport of coal to the railway; but having regard to the length of time which must necessarily elapse before water communication could be completed between Chanda and the railway, to the comparative cost of the two means of communication, and to the other points mentioned in the 21st paragraph of Mr. Morris's Minute, we consider that the railway would certainly be the preferable communication. Should it be determined to canalise the Wurdah, as proposed by Colonel Haig, then it will be for consideration whether the railway should also be constructed or not.

40. The prospect of employment in the conveyance of the Chanda coal southwards to Cocanada and Madras is also a new circumstance to be considered But the recent discovery of coal, apparently of good quality, on the lower parts of the Godavery, near the first barrier, removes much of the weight that might be assigned to the utility of the higher parts of the navigation as a means of getting cheap coal in Southern India; and indeed furnishes some greater justification for our being for the present content with the opening of the first barrier, and for at once closing the operations at the second barrier.

41. Our conclusion on the whole question is that, considering the large sums required for works of public improvement in all parts of the country, the difficulty we have in meeting the various demands of this nature made upon us, and the uncertainty which attends the prospects of this work, both as respects the sum for which it can be completed, and the effect which, when finished, it will have on the trade of the Central Provinces, the best policy will be to leave the works as nearly as possible in the state in which they now are, and withdraw our establishments. This course we recommend for your Grace's sanction.

42. Such a course will doubtless be condemned by some as rendering profitless, for the present at any rate, the past expenditure of nearly three-fourths of a million sterling; but it must be remembered that the greater part of the work already done can be utilised at any future date, if the state of the Central Provinces should render a resumption of operations desirable.

43. Our colleague, Sir Richard Temple, differs from us in this conclusion, and would complete the works at the second barrier, and construct a third class road from the foot of the third barrier to Chanda, at a cost not exceeding in all 195,000 *l.* A Minute by Sir R. Temple, explaining his views more at length, is submitted with this Despatch.

44. We are unanimous in protesting against any further expenditure on navigation works above the second barrier.

45. Until your Grace's orders are received, we shall limit the expenditure to the completion of the works already in progress below the second barrier.

46. Before concluding we desire to record our satisfaction at the complete manner in which the project has now been prepared by Colonel Haig and his assistants. The plans and estimates now sent up, together with Colonel Haig's very full report, will be a substantial basis for future operations on the river whenever they may be carried out, and give, for the first time, a view of the whole project for opening up the Godavery.

47. But

47. But we must add that it is impossible not to see that the want of such a comprehensive scheme as has at length been furnished has led to work being carried on very much in the dark, and to an expenditure which assuredly would not have been permitted had all the facts of the case been known when the scheme was first taken up. The Godavery navigation project commenced with an assurance that "the entire cost of the measures necessary for opening the navigation for immediate use is 35,600 rupees, with an allowance of about 5,760 rupees per annum for portage establishments." This estimate was accepted by the Madras Government as sufficient to keep up the navigation "for nearly nine months from the coast to the Roonjai Falls on the Wurdah, 20 miles from Hingunghât, and 70 from Nagpoor," while a sum of 300,000 *l.* was considered likely to be sufficient to meet all difficulties. The project has already swallowed up 700,000 *l.*, with no practical result, in obtaining a through communication; the work done cannot be utilised in any sensible degree until a total outlay of at least 900,000 *l.* has been incurred, and cannot be made complete for navigation under a total outlay of 1,200,000 *l.* The history of this project should, we think, be a caution to every future Government of India not to take up engineering projects until complete designs for the works and estimates of their cost have been carefully worked out.

We have, &c.

Appendix, No. 15.

App. No. 15.

From the Secretary to the Chief Commissioner of Mysore, Public Works Department, to the Secretary to the Government of India, Public Works Department, No. 120, General; dated Bangalore, the 8th May 1872.

I HAVE the honour, by desire, to submit the accompanying Paper, drawn up by the chief engineer, in reply to certain observations and strictures passed upon his department by Mr. R. H. Elliott, in his late examination before the Parliamentary Committee on the East India Finance, and to request that, should his Excellency in Council see no objection, the same may be transmitted to the Home Government, for such use as Her Majesty's Secretary of State may see fit to apply it.

2. Colonel Sankey would, I am desired to say, naturally prefer that the statement should, if possible, be laid before the Parliamentary Committee who examined Mr. Elliott.

OBSERVATIONS by Lieutenant Colonel *R. H. Sankey*, R.E., Chief Engineer and Secretary to Governments of Mysore and Coorg, on Mr. *R. H. Elliott's* Report in his late Examination on the Public Works Department.

PARLIAMENTARY COMMITTEE ON EAST INDIA FINANCE—12th April 1872. SPECIAL REPORT for the "Times of India." Mr. R. H. ELLIOTT, examined.	OBSERVATIONS by Lieutenant Colonel *R. H. Sankey*, R.E., Chief Engineer and Secretary to the Governments of Mysore and Coorg.
Q. I.—With regard to the Public Works Department, I think you are able to give us some information regarding it? *A.* Yes, I have had occasion to go into that matter very closely with a view to writing on the subject, to look out a number of documents, and, generally, to inform myself from official sources on the subject of that department. I have done so particularly as regards Mysore, and I believe that to be a good illustrative case for all India.	OBSERVATION I. I HAVE had the pleasure of Mr. Elliott's acquaintance, and should with the utmost pleasure at all times have afforded him any information in regard to the department, consistent with my duty to Government; yet though I have been in Mysore since 1861, first as assistant to the chief engineer, and subsequently as chief engineer, I have never had any inquiry as regarded works or administration, directly or indirectly, from Mr. Elliott. The sources of the information acquired by him are not specified; but as the official head of the department, I think it desirable to disclaim the notion that such information has emanated from me, as possibly might be inferred from his reported reply.
Q. II.—Perhaps that case would lead to too many details; but have you any suggestions to offer as to an improved and more economical working of the Public Works Department? *A.* Yes, certainly; and the principal suggestion is that the engineer office should be under the collector of the district, for the simple reason that he understands the interests and wants of the whole district better than anybody else can.	OBSERVATION II. As there is nothing very specific in this reply, I shall only observe that with the fullest discussion of the subject, the Government of India decided to maintain the present constitution of the department; that many of the so-called "collectors," entirely on their own account, disclaimed interference with the department; and that in all matters connected with the roads, civil buildings, or indeed any work affecting the interests of the people or the administration, the opinions of all civil officers concerned are elicited and most anxiously weighed by the local administration before any action is taken, or can be taken by the Public Works Department. This is a fundamental rule of the code of public works, not in any way special to Mysore.
Q. III.—As regards bridges, and other matters, have you any information to give? *A.* As regards bridges in particular, I have some facts. I have here some pictures which will illustrate the Native bridges, and the bridges built by the Europeans; and they show that the English engineers, instead of building bridges better than the Native engineers, build them worse.	No remark.

App. No. 15.

Mr. R. H. Elliott, examined.	Observations IV. and V.
Q. IV.—What is the distinguishing feature of the construction of the Native bridges? *A.* It is simply this, that while we place large piers in opposition to the stream of the water, they hardly place any. The consequence is that in great floods our bridges go away. I can point to a first class bridge in Mysore, over a very large and wide river, which has stood for 150 years. *Q.* V.—Will you explain how it is that the Native bridges are superior for those special purposes than the bridges of our engineers? *A.*—Yes, the Native bridges are constructed by placing a long slab of stone about 18 inches or two feet wide by about 8 inches thick. They lay this stone in the sand of the river just like piles, with the sharp end towards the stream. There is a certain distance, I cannot say how much, between each stone.	First, as regards Native bridges. There is only one in Mysore, that over the Cubbany river, in which the principle of the arch (Moresque in this case) has been adopted. There are five what I may call pillar and girder (granite) bridges, two over the arms of the Cauvery at Sevasamoodrum, and the others at Seringapatam, over the same stream. There are also about four minor bridges in all, of old Native construction, near the ancient city of Nuggur, the piers being of cut stone, laid horizontally in mortar in the usual way, with stone girders above. In the Cubbany bridge the piers take up no less than one-third of the entire water-way. In the Cauvery bridges the granite pillars (usually 1½ feet square) are at 10 feet intervals, and consequently take up nearly one-sixth of the water-way. Lastly, in the Nuggur bridges the built piers occupy not much less than one-half the water-way of the stream. Now the bridge at Suklaspoor, which is that singled out by Mr. Elliott for comment, consists of four iron lattice girder spans of 120 feet, and as the piers consist of hollow cast-iron piles only 1½ feet in diameter, it follows that they only occupy one-twenty-third of the water-way. With our large bridges for instance— 1. That at Hurryhur, consisting of 14 spans of 60 feet, the piers only take up one-eighth of the water-way. 2. The Shimogah bridge, consisting of 16 spans of 50 feet, the piers take up one-fifth of ditto. 3. The Benkipoor bridge of 13 arches of 50 feet span occupy the same relative proportion. But it is needless to go through the list of bridges in Mysore which have been erected by this department, and which not only have stood, but I trust are likely to stand for some time: suffice it to say, that in single iron spans the water-way is not in the least interrupted by any obstacle whatever, and in arched structures, of which the name is legion throughout the province, the piers as a rule interrupt only from one-eighth to one- th of the water-way. It is clear from this, first, that Mr. Elliott is unacquainted with the fact that there is no fixed type of Native bridge; secondly, that his statement as regards the water-way interrupted by the few Native structures he is acquainted with in the small portion of Mysore he has visited, is absolutely opposed to the facts. As regards the lasting powers of the Native bridges, I can only say that those at Sevasamoodrum are known to have been carried away, and that, were it not for the peculiar conformation of the Cauvery river at Seringapatam, it is more than likely that it would have shared the same fate. Two, moreover, of the Nuggur bridges adverted to are at present in ruins; and probably there are others, which have not attracted attention, in the same condition. The lasting powers of such works are very indifferent. From the way in which they block up the water-way, a single large tree borne along by a flood would almost inevitably destroy any of them.
	Observation VI.
Q. VI.—What would be the probable difference in cost between such a bridge as that which you have now described, and such bridge as we would build? *A.* There was a bridge in Tinnevelly which was swept away in a flood, and Native build-	I do not know anything about the Tinnevelly bridge alluded to here, but it is clear that the destroyed bridge had not sufficiently high piers to keep the girders clear of the flood. The example is therefore an example of bad engineering, not a test of principles of construction. With

ings which disappeared for three days, when, the flood subsided, were found to be as good as ever. This was an iron bridge brought from Newcastle, and, with the cost of carriage, it must have cost 12,000 *l.*

I cannot tell you the cost of a native bridge, but I have no doubt that it must have been much cheaper.

Q. VII.—I understand that the Public Works Department have, in certain cases, built bridges where they were not required by the district?

A. Yes.

Q. VIII.—Could you give an example?

A. Yes, there is one in the district of Mysore.

Q. IX.—In what respect was that bridge not required?

A. It was rather a loss to the district. Formerly we could cross the river free, but now we have to pay toll. During a great part of the season there is no water in the bed of the river, or at least only a foot or two of water, which was insufficient for preventing any one from crossing.

Q. X.—During the rainy season in which such a bridge only is required in many districts, are the roads passable?

A. No, the roads are not practicable, so that there is no use for a bridge.

OBSERVATION VI.—*continued.*

With reference to the relative cost of the Native pillar and girder bridges described by Mr. Elliott, we have, fortunately, facts to refer to.

The Dewan Poorneah, who governed Mysore during the minority of the late Rajah, erected the bridge over the Cauvery at Seringapatam (known as the Wellesley Bridge) on the granite pillar and girder principle. The roadway is tortuous, and inconveniently narrow, being only about 14 feet, on an average, in width, which, in a bridge 1,000 feet long, is a serious evil. It was under construction from A.D. 1802 to 1805, and, with slight outlay in 1808, cost, according to the Native accounts in the Chief Commissioner's office, no less than 5,55,879 rupees. With the high selling price of grain now-a-days, the work could not cost less than double this, or 11 lakhs of rupees; or, again, about 1,100 rupees per foot run.

Now, this Department, in 1864 to 1866, bridged the Toongabudra at Hurryhur; it is a larger bridge in every respect, and there were extreme difficulties about the foundations. The roadway is 23 feet wide in the clear, and nearly 50 feet above the water, whereas the Wellesley Bridge roadway is only 22 feet above the bottom. The cost of this Hurryhur Bridge was only 3,50,000 rupees all told. The cost of other masonry bridges in Mysore has been as low as 100, 110, and 120 rupees per foot run; in fact not more than, say, one-tenth of the price of the native bridge over the Cauvery, according to the accounts we possess.

OBSERVATION VII.

The bridge alluded to here as useless is the bridge at Suklaspoor, over the Hemawutty river, erected for two lakhs in 1868–70, in the Mungerabad talook of the Hassan district, as the river during the monsoon cut the whole European planting community off this, probably the most important, district of Mysore. Its absolute necessity was continually being agitated, so much so that a design and estimate had been framed as early as 1852, and it was long one of the standing reproaches against the department that it had not earlier carried out this very work. From the depth of sand in the bed, this river was the greatest impediment to traffic, and proved an extremely heavy tax to all who had to cross it. To show the appreciation of the Munzerabad planters of the benefits conferred on the community by this work, they, as a body, subscribed many thousands of rupees for a grand entertainment, to which all officials were invited on the opening of the work to the public in 1870. As regards Mr. Elliott's statement that formerly he could cross the river free, I have only to say that carts were often detained two or three days by the stream, and had always to pay heavily for assistance to cross. For foot passengers there was a ferry, which was also paid for.

Since the construction of the bridge, carts do not pay in toll one quarter what they did before for assistance, nor do foot passengers crossing the bridge pay more than when as formerly they crossed by ferry.

How the statement, moreover, can be preferred, that whereas formerly carts, &c., crossed free, a toll must now be paid, I am at a loss to understand, as anyone that likes can, instead of using the bridge, cross the river without any opposition, precisely as before.

I am also entirely at a loss to comprehend how such a statement as that following can be substantiated, viz., as regards the impassability of the roads during the rainy season. I have traversed the country in all seasons of the year, and can safely say that there is no founda-

App. No. 15.

Mr. R. H. ELLIOTT, examined.

Q. XI.—With regard to the special economies that may be effected by placing the Public Works Department under the revenue authorities, will you state a few particulars in which the economy can be effected?

A. As regards all matters of communication in which the people are most interested, the collectors are far more competent to form an opinion than the engineers.

Q. XII.—With regard to public works, do I understand you to say that a collector is not consulted before a public work is commenced in his district?

A. When I first went to Mysore the whole of the irrigation works were under the charge of the revenue authorities, but when the Public Works Department was established it took over every kind of work.

Q. XIII. When was that?

A. It was in 1856.

OBSERVATION VII—*continued.*

tion whatever for this allegation. Where the country is closed during the monsoon (as it is in one part of Nuggur) this arises solely from the fact of there being no bridge over two large rivers, and it is the supply of these very links that is the main desideratum. Bridges are, in fact, the crying want of the unopened portions of the Mulnaad or rainy tracts.

Vide supra, OBSERVATION II.

OBSERVATION XII.

The only thing correct about these answers is, that the Department Public Works was commenced in 1866. It was simply formed as a road department, as shown by all the official documents of the time. The revenue authorities were never relieved of the irrigation works. It is in fact only quite lately that the Department Public Works has taken up the direct responsibility in regard to certain specific portions of the tank systems of Mysore and the river channels.

It is useless to follow Mr. Elliott's further evidence on the subject of this Department, as he has evidently not made himself acquainted with any fact of importance as regards its constitution or working.

His acquaintance with the province, as a whole, is also extremely limited.

Appendix, No. 16.

PAPER delivered in by Mr. *Thornton.*

Hydraulic Lift Dock at Hog Island, Bombay.

Appendix, No. 16.

The total expenditure on the Hydraulic Lift Graving Dock at Bombay, up to the present time, has been about 240,000 *l.*; and has been charged, year by year, in the Home Accounts under the heading of "Public Works, Ordinary, Stores for India."

The expenditure required to complete the dock will probably not exceed 10,000 *l.*, unless a proposal now under consideration is carried into effect, to add to it three pontoons for docking smaller vessels, at a further cost of about 75,000 *l.* No estimate can be given of the cost of works, and shops attached to it, until it is decided what kind of repairs will be carried on, and how far the plant at present in Bombay can be employed for the purpose.

The Hydraulic Dock was erected in consequence of the urgent representations of the Governments of India and Bombay, respecting the want, which attracted great attention in 1866, of dock accommodation at Bombay, chiefly for the Government transports, but also for the increasing number of iron ships in the mercantile fleet, the existing docks being only accessible at spring-tides. Many of the objections that existed to the construction of a masonry or floating dock, would, it was considered, be obviated by the use of Mr. Clark's Hydraulic Lift Graving Dock.

It is anticipated that, if furnished with pontoons of various sizes, it may be of the greatest use for docking all kinds of vessels.

The lift was constructed by Messrs. Emerson & Murgatroyd, of Stockport, under the superintendence of Mr. Edwin Clark, the patentee, the expenditure being supervised by the Director General of Stores on behalf of the Secretary of State in Council.

The Hydraulic Dock was selected on the recommendation of Colonel Kennedy, Secretary to the Bombay Government in the Public Works Department (who was instructed to visit the chief dockyards in England, and report on the various kinds of floating docks in use, to which, however, he considered the hydraulic lift preferable), of Captain Sherard Osborn, R.N., who was also personally acquainted with the harbour of Bombay, and of Mr. Scamp, Deputy Director of Engineering at the Admiralty.

W. T. Thornton.

Appendix, No. 19.

QUESTION relative to the Strength of the INDIAN CIVIL SERVICE and the Principle on which the Supply to that Service is regulated.

(Questions 3633, 3634.)

1. THE Governments in India annually state the numbers which will be required to fill vacancies in the Civil Service of the different Presidencies. The applications are made, not with reference to immediate wants, but prospectively as to what will be required after three years. In 1869 applications are made with reference to the numbers which will be required in 1872.

2. The principle on which the applications are regulated may be thus explained. Bombay may be taken as an example. In that Presidency there are, in round numbers, 42 headships of departments which, by law, must be held by members of the Civil Service. To each of these heads of departments are attached, on an average, two assistants. These raise up the total number of offices to be held by civilians to 126. Then the Government has to consider that about 26 members of the service will be in England on furlough or medical certificates. It follows then that the Government will require that its covenanted Civil Establishment shall consist of 152 members. The Government makes its requisitions with the view of maintaining the service at that strength.

3. The same plan is followed by the other Governments.

4. The only representation made as to excessive numbers in the Civil Service has proceeded from Bombay, in which Presidency it may be admitted, that at the present moment the service is overstocked.

5. The Goverment of Bombay at the end of 1869, stated that it had, in its requisitions for 1870 and 1871, applied for 19 more civilians than it actually wanted.

6. It was found very difficult to rectify this error because the Government of India, in its requisition for 1872, lowered its usual demand by eight, and thus prevented a transfer from Bombay. But the fact that the number of civilians in Bombay is excessive is recognised, and the evil is under process of gradual diminution.

7. It may be stated that in 1840 the numbers of the Bombay Civil Service stood at 133. It is now about 173. But since 1840 Sind, Sattara, Canara (taken from Madras), several large Jagheers in the Southern Mahratta country, and some cessions from Sindia, have been added to the Bombay Presidency. Taking these facts into consideration, it may be suggested that the Bombay Civil Service is, at the present time, numerically stronger by about 20 than it ought to be.

8. There is no reason to suppose that in other parts of India the covenanted Civil Service is overstocked.

9. With respect to the question of whether there is a disposition to displace military officers by civilians, it is possibly true that there is, to a very limited extent, such a disposition. That limited extent may be thus explained. In all acquisitions of territory in the early stage of British rule the administration may fairly be entrusted to military officers; but when the time comes for the more exact operation of the regulations, civilians must be employed. Under this view it is probable that in the Punjaub, Oude, Sind, and the Central Provinces, civilians have, in recent years, been more frequently employed. In addition to this cause it may be stated that it has been felt that civilians should be more employed than was formerly the case in the Political Department, and it is probable that on the occurrence of vacancies in late years they have been nominated more frequently than usual to appointments in that Department.

H. L. Anderson, Secretary,
July 25. Judicial, Revenue, and Public Departments.

Appendix, No. 20.

Appendix, No. 20.

PAPERS handed in by Mr. *Seccombe*, 11th May 1872, with reference to his Evidence on the 28th April 1871.

STATEMENTS furnished by the several Local Governments and Administrations in *India* of the Number of Persons Assessed, and the Amounts Collected, under the several INCOME, LICENSE, and CERTIFICATE TAXES, from 1860–61 to 1870–71.

(No. 118 of 1872.)

Government of India.—Financial Department.—Accounts.

To His Grace the Duke of *Argyll*, K.T., Her Majesty's Secretary of State for India.

My Lord Duke,

Fort William, 5 April 1872.

WITH reference to paragraph 2 of your Grace's financial Despatch, No. 142, dated the 4th May 1871, we have the honour to forward the statements specified in the margin, containing the statistics which have been obtained from the local Governments and Administrations in India of the number of persons assessed and the amounts collected under the several income, license, and certificate taxes from 1860–61 to 1870–71.

I.

Income Tax.—A. Statement showing the number of persons assessed and amounts realised under Acts XXXII. and XXXIX. of 1860, exclusive of deduction from the salaries of Government servants.

B. Statement showing the number of persons assessed and amounts realised under Acts IX. and XXIII. of 1869 and XVI. of 1870, exclusive of deductions from the salaries of Government servants

License Tax.—C. Statement showing the number of persons assessed and the amounts realised under Acts XXI. and XXVII. of 1867.

Certificate Tax.—D. Statement showing the number of persons assessed, and the amounts realised, under Act IX. of 1868, exclusive of deductions from the salaries of Government servants.

II.

Statement showing the number of officers employed in the assessment of the several income, license, and certificate taxes, and the allowances paid to them for the years 1860–61 to 1870–71

III.

Statement showing the number of Government servants in the Civil, Public Works, and Military Departments, from whose salaries deductions have been made on account of the several taxes from 1860–61 to 1870–71, and the amount of such deductions during each year.

We have, &c.

(signed) *Napier.*

TOTAL	842,514	1,52,38,725	10,17,038	1,57,41,071	308,400	1,27,07,728	217,006	95,06,745	222,894	98,22,880	2,607,852	6,30,17,149

(a) Includes 2,03,700 rupees realised from lump assessments in the districts of Allahabad and Benares—

	Rs
Allahabad	80,000
Benares	1,23,700
	2,03,700

(b) Number not given by the Punjab Government.

(c) Apparently include Government servants; but the local Government does not show the two classes separately.

(d) The "number of persons" assessed is not given for three districts in Oudh, because the records of two districts appertaining to the income tax assessments under Act XXXII. of 1860, were destroyed by white ants, and those of another were either sold or destroyed in 1865 as old and useless records.

(e) In some districts in British Burmah collections for certain years cannot be ascertained, while in others no details can be furnished as to numbers assessed under the several classifications These omissions are owing to records having in some instances been destroyed by white ants, and to their being otherwise incomplete.

(f) These are not accurate figures, as the number given is said "to include a double and triple enumeration of the same person when assessed under more than one of the schedules."

(g) Information of the number of persons assessed in 1863-64 and 1864-65 is wanting, and the Chief Commissioner says "it would be difficult now to ascertain the number, though it would not be wrong to assume it at about the number assessed in 1862-63, in which year the first classified returns were called for from districts, and the number of persons assessed under all schedules was then for the first time ascertained."

(h) Includes 1,77,639 rupees realised in 1865-66.

	5	1,22,821 3 2

The collections under Acts IX. and XXIII. of 1869 in Madras, include the tax levied on the interest of Government securities, because as these Acts did not make provision for the separate levy of income tax on interest on Government securities as distinguished from the general class of incomes, the tax on interest was not shown separately in the collectors' accounts. But the tax from Government securities has been excluded from the collections under the Income Tax Act of 1860.

(*c*) This is the amount realised from incomes of "2,000 rupees and upwards." No separate figures are given for incomes under Classes IV. and V.

I. c.—LICENSE TAX.

(*a*) Statement compiled from the Audit Registers, and includes for those years in which the assessment work was performed by the Calcutta collectorate, moiety of salary of every officer and employé in Calcutta collectorate employed on Income Tax work.

(*b*) The number of officers is the average for the several months in the year.

(*c*) These figures include village officers, such as patels, coolcurnees, tullatees, and the remuneration paid to them as follows —

Number of Officers Employed in the Collection of the Taxes.	Amount of Allowances Paid	Patels, Coolcurnees, Tullatees, Employed for the Assessment and Collection of the Taxes.		TOTAL.	
		Number.	Amount.		
	Rs.		*Rs.*		*Rs.*
2,026	8,76,265	31,349	1,24,165	33,375	10,00,430

(*d*) In these Provinces no special staff of assessors was employed in the assessment of the taxes, the number of men shown represents that of clerks, accountants, and mohurrirs employed by the tehsildars for this department.

(*e*) In the Punjab all district officers and cantonment magistrates were employed as assessors and collectors of the various taxes. They received no extra pay, but undertook those duties in addition to their ordinary work. Small extra establishments were entertained in some districts, while in others extra allowances were merely given to members of existing establishments.

(*f*) The number of officers in 1867-68 includes 275 thoogyees, who were allowed commission.

III.—STATEMENT showing the Number of Government Servants in the Civil, Public Works, and Military 1860-61 to 1870-71, and the Amount

(a) The figures for the License Tax have been obtained from the original vouchers; but as the submission of these returns would have been delayed if a similar course had been followed with respect to the other taxes, and as neither the original accounts nor the office abstracts and books showed more than the amount deducted on account of the tax in lump sum, the figures have been taken from the annual establishment books which have been carefully abstracted after check with the audit registers.

(b) The "Number of Officers" is the average for the several months in each year.

(c) For want of records the number of persons assessed cannot be given for the years 1860-61 to 1865-66 in Madras, and from 1860-61 to 1867-68 in Bombay.

(d) The deductions up to 1865-66 have been taken from the Audit Registers. In addition to the tax collected from salaries, the Accountant General has shown the following deductions from pensions:—

	Number of Pensions.	Amount of Tax.
		Rs
1860-61	12	163
1861-62	31	826
1862-63	33	840
1863-64	27	860

(*e*) The figures up to 1863-64 were furnished by the Accountant General, Bengal The Returns from 1864-65 have been furnished by the Accountant General, British Burmah

(*f*) The realisations in 1860-61 were from Government servants in the Sagar and Narbada territories and the old Nagpur Province, and in the absence of vouchers, the number of Government servants in the latter province is approximate, being taken from the Audit Registers. The realisations for the other years are from the entire Central Provinces.

(*g*) The Income Tax was not in force in Mysore previous to the year 1863-64

(*h*) The figures under 1860-61 include realisations in some provinces of Nagpur and Haidarabad

(*i*) The statements for 1860-61 to 1865-66 inclusive show the approximate number of commissioned, warrant, and non-commissioned officers from whose salaries deductions on account of such taxes were made Approximate numbers, arrived at by a reference to the Army List and by comparison with the actual figures obtained from the records for the three years commencing with 1867-68 have been given, there being no records in the Military Account Department from which the actual numbers could be obtained

(*k*) Shows the actual number of commissioned, warrant, and non-commissioned officers

(*l*) Shows the average number of commissioned, warrant, and non-commissioned officers.

(*m*) Assessed in Civil Department; particulars not ascertainable,

(*n*) Acts not in operation in Mysore and Coorg during these years

(*o*) Included in Bombay and North Western Provinces Returns

(*p*) Included in Bombay Returns.

(*q*) Included in India and British Burmah Returns

Appendix, No. 20.

ABSTRACT.

(*a*) This officer received fees in the Admiralty jurisdiction of the Court, likewise for commissions to take the evidence of native ladies His salary, when he was in the receipt of fees, was 4,800 rupees. No other instance can be traced of an increase of salary in Bengal consequent on the abolition of fees.

In addition to the above, there are 30 pensioners whose pensions have not been claimed for periods varying from one to 12 years and upwards, and who are believed to be dead, although no evidence to that effect has been furnished.

The following Rules apply to the case of H. C. Nash, on page 703:—

Rule 23. That the amount of any income or property which any commander, officer, midshipman, surgeon, surgeon's mate, purser, master of a pilot sloop, or mate, may possess, either in right of himself or of his wife, or that his wife may possess independent of him, shall be taken in abatement of, and be deducted from, the regulated amount of the annuity from the Fund. For example, if the captain of a regular ship has, either in right of himself or his wife, 100 *l.* per annum, or if his wife has an income of that amount independent of him, he shall only derive from the Fund the sum of 50 *l.* per annum to make his income equal to the pension of 150 *l.* per annum. That this rule shall apply to the widows and children of persons of the above description, and that it shall not be departed from in any case, or any pretence whatever.

Rule 27. That the class of persons described in the 23rd clause who shall be allowed a pension, do annually, in the month of June, transmit an affidavit to the Committee of Shipping of the amount of any income or value of property, for the year preceding, arising from sources other than this Fund.

India Office, 5 March 1872.

PAPERS handed in by Mr. *Seccombe.*

Appendix, No. 29.

MEMORANDUM as to the Grant of ANNUITIES from the INDIAN CIVIL SERVICE ANNUITY FUNDS.

PREVIOUSLY to the year 1825, funds existed in the Madras and Bombay Presidencies for the grant of annuities to covenanted civil servants of the East India Company on their retirement from the service. They were of the nature of private funds to which the Company contributed. At Madras, annuities of 400 *l.* were granted under fund deeds of 1800 and 1814, and annuities of 600 *l.* under a fund deed of 1818. At Bombay, annuities of 400 *l.* were granted under the regulations of a fund which was established in 1806. Nineteen recipients of annuities from those funds now remain. There was not any civil annuity fund in the Bengal Presidency before the year 1825.

In a Public Despatch to the Governor General in Council, dated the 8th December 1824, the Court of Directors communicated to that Government their views on a proposal made by the Bengal civil servants to establish a fund for the grant of annuities, and the Court laid down certain regulations under which they would be prepared to give their sanction and assistance to such an institution.

On the 31st December 1824, the Court forwarded to the Governments of Madras and Bombay copies of their Despatch to the Governor General, and expressed their desire that the regulations of the annuity funds at Madras and Bombay should be altered, to correspond in principle with those of the proposed Bengal fund.

The members of the Civil Service agreed to the Court's proposals, and annuity funds were accordingly established under similar regulations at the three Presidencies from the 1st May 1825.

The object of these funds was to facilitate the retirement of civil servants after such a period of residence in India as would secure to the Company the services of Europeans in the most active period of their lives, and make way for the advancement of younger servants.

The annuity was fixed at 1,000 *l.* on retirement after 25 years' service and 22 years' actual residence in India. One-half of the value of each annuity was to be paid by the annuitant, and the other half was to be granted by the Company, the value of each annuity when granted being set aside as part of an appropriated fund.

To enable subscribers to pay the half value of their annuities, a deduction of 4 per cent. was made from the salary of each civil servant during the whole period of his service, and interest at 6 per cent. was allowed thereon by the Court. It was calculated that at the end of the prescribed period of service, the deduction so made would amount, with interest, to four-fifths of one-half value of the annuity, and a subscriber was required, on retirement, to pay a sum sufficient to make up the half value. If a subscriber died, or left the service before he obtained an annuity, his subscriptions lapsed.

The number of annuities to be annually available for acceptance was limited to,—

Nine for the Bengal Presidency,
Four „ Madras „
Three „ Bombay „

In the year 1835, it appeared that in Bengal and Bombay about one-half only of the sanctioned number of annuities had been taken during the preceding 10 years, and the Court of Directors thereupon authorised the funds to grant, in the event of a sufficient number of annuities remaining unappropriated, invalid pensions at half value to civil servants compelled to quit India and leave the service on account of ill health. The invalid pensions were to be of the following amounts, viz.:—

500 *l.* per annum, after a residence of 15 years, and upwards.

250 *l.* „ „ 10 „ and less than 15 years, and a donation of 500 *l.* was to be granted to civil servants compelled to quit the service on account of ill-health before completing 10 years' residence.

In

In the year 1852, statements were received from the Government of India showing the working of the Bengal fund, and as it then appeared that the number of civil servants in the Bengal Presidency had increased, the Court of Directors raised the number of annuities annually available in Bengal to 10, on certain conditions.

The Court also acceded to a proposition that every civil servant, qualified by service and residence for an annuity on retirement, should, irrespectively of his own contributions, be entitled to the unconditional grant of 500 *l.* per annum, and to such addition to that sum, not exceeding 500 *l.* per annum, as the amount of his aggregate contributions, and of any fine that he might pay at the period of retirement, would purchase, thus relieving him of the necessity of paying the half value of the full annuity

In the year 1862, the civil servants of the three Presidencies memorialised the Secretary of State for India, and applied for the grant of annuities exceeding 1,000 *l.* for extended periods of service. They represented that, although the scheme of 1825 contemplated the direct provision by the East India Company of one-half of the annuity, it appeared that when the contingency under which all subscriptions lapsed, in the event of a subscriber dying or leaving the service before he obtained an annuity, was taken into account, the actual portion of the annuity granted by the Government was considerably below one-half; and that as the funds were established with reference to a scale of salaries which no longer existed, the subscriptions of a civil servant, instead of yielding four-fifths of the half value of an annuity of 1,000 *l*, amounted on an average only to between only two and three-fifths.

After considering these memorials the Secretary of State in Council decided—

1st. That every civil servant, qualified by service and residence for an annuity on retirement, should be granted an annuity of 600 *l.* by Government, with such addition, not exceeding 400 *l.*, as the amount of his aggregate subscriptions with interest, and of any fine which he might pay on retirement, would purchase.

2nd. That annuities, without limitation as to number, might be granted on application at any time to civil servants duly qualified.

3rd. That invalid annuities should be granted, according to the following scale, in lieu of that which had previously existed, viz. :—

				Annuity.
After 5	years' service,	and under	10	£150
„ 10	„	„	15	250
„ 15	„	„	20	350
„ 20	„	„	25	450

and, if under five years' service, a donation of 500 *l.*

In the year 1870 further memorials were received from the civil servants of the several Presidencies. They represented that, if the average of the three Presidencies was taken, the provision by Government towards each full annuity was only 437 *l.*, which was less than was contemplated by the Court of Directors when the funds were established, and they prayed for an increase to their retiring allowances.

The Secretary of State in Council did not comply with the application for an increase to the amount of the full annuity, but determined that every civil servant who should complete 25 years' service and 21 years' residence in India should, in future, be granted 1,000 *l.* per annum on retirement, without reference to the amount of his contributions to the fund, the deduction of four per cent. from salaries being continued; and that in lieu of the quinquennial increase of 100 *l.* to the invalid annuity of 150 *l.* for every additional five years' service, an annual increase of 20 *l.* should be made for each additional year's service; the maximum invalid annuity remaining at 450 *l.* after 20 years' service.

That decision was communicated by the Secretary of State to the Government of India in a Financial Despatch, dated the 10th February 1871, and as these and the previous changes which had been sanctioned in the mode of granting annuities, rendered the continuance of the machinery of the funds unnecessary, he requested the Government to take measures for the abolition of the funds.

Propositions to make over the accumulated capital to the Secretary of State in Council were accordingly submitted for the votes of the subscribers to the several Civil Service Annuity Funds, and the propositions were carried at each Presidency by a large majority of votes.

T. L. Seccombe,
Financial Secretary.

India Office, 23 April 1872.

Appendix, No. 29.

EXTRACTS from ACTS of PARLIAMENT under which PENSIONS are granted by the Secretary of State for *India* in Council out of the Revenues of *India*.

EXTRACT from ACT 53 Geo. 3, c. 155.

LIV. And be it further enacted, that it shall and may be lawful for his Majesty, by Warrant under his Royal Sign Manual, countersigned by the Chancellor of the Exchequer for the time being, to grant to any such bishop and archdeacons respectively who shall have exercised in the East Indies, or parts aforesaid for 15 years, the office or offices of bishop or archdeacon, or either of them, the following pensions; that is to say, to any such bishop a pension not exceeding 1,500 *l.* per annum, and to any such archdeacon a pension not exceeding 800 *l.* per annum; which said pension shall be paid and defrayed quarterly by the said Company, and shall be deemed and taken as part of the political charges of the said Company.

* * * *

XCIII. And whereas it is reasonable that the said Court of Directors should have power to grant allowances, in the nature of superannuations, to such of their officers and servants in England as from age or infirmity may no longer be qualified for the execution of their several offices or employments; be it therefore enacted, that it shall and may be lawful to and for the said Court of Directors to make allowances, compensations, remunerations, or superannuations, to the officers and servants of the said Company in England, subject to the restrictions and according to the conditions and proportions following; that is to say, where it shall be proved, to the satisfaction of the said Court of Directors, that any such officer or servant, being under 60 years of age, shall be incapable, from infirmity of mind or body, to discharge the duties of his office, in such case, if he shall have served with diligence and fidelity in the service of the said Company for 10 years, it shall and may be lawful to grant him, by way of superannuation, any annual sum not exceeding one-third of the salary and allowed emoluments of his office; if above 10 years and less than 20, any such sum not exceeding one half of such salary and allowed emoluments; if above 20 years, any such sum not exceeding two-thirds of such salary and allowed emoluments; if such officer or servant shall be above 60 years of age, and he shall have served 15 years or upwards, it shall and may be lawful, without proof of infirmity of mind or body, to grant him, by way of superannuation, any annual sum not exceeding two-thirds of the salary and allowed emoluments of his office; if 65 years of age, or upwards, and he shall have served 40 years or upwards, any such sum not exceeding three-fourths of such salary and allowed emoluments; if 65 years of age, or upwards, and he shall have served 50 years or upwards, any such sum not exceeding the whole of such salary and allowed emoluments. All which allowances so to be made shall be charged in the books of account of the said Company to the debit of that branch of the Company's affairs to which the said officers or servants may respectively belong; anything in the said Act of the 33rd year of his Majesty's reign to the contrary notwithstanding.

EXTRACT from ACT 4 Geo. 4, c. 71.

III. And be it further enacted, that it shall and may be lawful for his Majesty, his heirs and successors, in manner in the said Act mentioned, to grant to any such bishop who shall have exercised in the East Indies, or parts aforesaid, for 10 years, the office of bishop or archdeacon, and to any such archdeacon who shall have exercised in the East Indies or parts aforesaid, for 10 years, the office of archdeacon, pensions not exceeding such sums respectively as his Majesty by the said Act of the 53rd year of the reign of his late Majesty is empowered to grant to any such bishop or archdeacon.

EXTRACT from ACT 6 Geo. 4, c. 85.

VII. And be it further enacted, that if any of the chief justices or puisne judges of the said Supreme Courts of Judicature at Fort William, Madras, or Bombay respectively, or the Recorder of the Court of Judicature of Prince of Wales Island, shall resign his office in consequence of age, infirmity, or other cause, to be approved by his Majesty, his heirs or successors, it shall and may be lawful for his Majesty, his heirs or sucessors, by warrants under the Sign Manual, to direct and authorise an allowance to be made out of the revenues of the British Territories in India, to such chief justice, puisne judges, or recorder so resigning, subject to the limitations and restrictions hereinafter provided; that is to say, provided always that it shall not be lawful for his Majesty to direct any such allowance to be made to any person who shall not have resided in India for five years, either as chief justice, or as a puisne judge (or partly as one and partly as the other) of some or one of the said Supreme Courts.

VIII. Provided also, and be it enacted, that it shall not be lawful to direct any larger allowance to be made to any chief justice of the said Supreme Court of Judicature at Fort William, than the sum of 1,000 *l.* sterling per annum, unless he shall have resided in India as such chief justice or puisne judge, or partly as one and partly as the other, for seven years; nor if he shall have so resided for seven years, shall it be lawful to direct any larger

allowance

allowance to be made to him than the sum of 1,300 *l.* sterling per annum, unless he shall have resided in India as such chief justice or puisne judge, or partly as one and partly as the other, for 10 years; nor if he shall have so resided for 10 years, shall it be lawful to direct any larger allowance to be made to him than the sum of 2,000 *l.* sterling per annum.

IX. Provided also, and be it further enacted, that it shall not be lawful to direct any larger allowance to be made to either of the chief justices of the said Supreme Courts of Judicature at Madras or Bombay, than the sum of 800 *l.* sterling per annum, unless he shall have resided in India as such chief justice or puisne judge, or partly as one and partly as the other, for seven years; nor if he shall have so resided for seven years, shall it be lawful to direct any larger allowance to be made to him than the sum of 1,000 *l.* sterling per annum, unless he shall have resided in India as such chief justice or puisne judge, or partly as one and partly as the other, for 10 years; nor if he shall have so resided for 10 years, shall it be lawful to direct any larger allowance to be made to him than the sum of 1,600 *l.* sterling per annum.

X. Provided also, and be it further enacted, that it shall not be lawful to direct any larger allowance to be made to either of the puisne judges of the said Supreme Court of Judicature at Fort William, than the sum of 750 *l* sterling per annum, unless he shall have resided in India as such puisne judge for seven years; nor if he shall have so resided for seven years, shall it be lawful to direct any larger allowance to be made to him than the sum of 1,000 *l.* sterling per annum, unless he shall have resided in India as such puisne judge for 10 years; nor if he shall have so resided for 10 years, shall it be lawful to direct any larger allowance to be made to him than the sum of 1,500 *l* sterling per annum.

XI. And be it further enacted, that it shall not be lawful to direct any larger allowance to be made to any one of the puisne judges of either of the said Supreme Courts of Judicature at Madras or Bombay respectively, than the sum of 600 *l.* sterling, per annum, unless he shall have resided in India as such puisne judge for seven years; nor if he shall have so resided for seven years, shall it be lawful to direct any larger allowance to be made to him than the sum of 800 *l.* sterling per annum, unless he shall have resided in India as such puisne judge for 10 years; nor if he shall have so resided for 10 years, shall it be lawful to direct any larger allowance to be made to him than the sum of 1,200 *l.* sterling per annum.

XII. Provided also, and be it further enacted, that it shall not be lawful for his Majesty to direct any larger allowance to be made to any chief justice of any of the said Supreme Courts so resigning, than the amount by this Act limited for the allowance to be made to the puisne judges of the Court to which such chief justice shall belong, unless he shall have held the office of a chief justice of one of the said Supreme Courts during five years of his residence in India.

* * * *

XV. And whereas under and by virtue of an Act made and passed in the 53rd year of the reign of his late Majesty King George the Third, and of another Act made and passed in the fourth year of the reign of his present Majesty, provision is made for granting a pension to the Bishop of Calcutta, under the limitations therein contained, and it is expedient to make further provision in respect thereof; be it further enacted, that it shall and may be lawful for his Majesty, his heirs and successors, in manner in the said Act of the 53rd year of the reign of his late Majesty mentioned, to grant to any such bishop who shall have exercised within the limits of the charter of the said united company the office of Bishop of Calcutta for five years, a pension not exceeding one-half of the sum, which his Majesty, by the said Act of the 53rd year of the reign of his late Majesty, is empowered to grant to any such bishop; and also to grant to any such bishop who shall have exercised within the limits aforesaid the said office of Bishop of Calcutta for seven years, a pension not exceeding two-thirds of the sum which his Majesty, by the said Act of the 53rd year of his late Majesty's reign, is empowered to grant to any such bishop.

XVI. Provided also, and be it further enacted, that it shall not be lawful for his Majesty, his heirs or successors, to direct any such allowance to be made to any such chief justice, puisne judge, recorder, or bishop respectively, who before he shall have held and exercised such office, or some or one of such offices, for the space of ten years in the whole, shall resign his said office for any other cause than in consequence of illness or infirmity, to be proved to the satisfaction of his Majesty, his heirs or successors.

EXTRACT from ACT 3 & 4 Will. 4, c. 85.

VII. And be it enacted, that it shall be lawful for the said Company to take into consideration the claims of any persons now or heretofore employed by or under the said Company, or the widows and children of any such persons, whose interests may be affected by the discontinuance of the said Company's trade, or who may from time to time be reduced, and under the control of the said Board, to grant such compensations, superannuations, or allowances (the charge thereof to be defrayed by the said Company as hereinafter mentioned) as shall appear reasonable: Provided always, that no such compensations, superannuations, or allowances shall be granted until the expiration of two calendar months after particulars of the compensation, superannuation, or allowance proposed to be so granted shall have been laid before both Houses of Parliament.

VIII. Provided always, and be it enacted, that within the first 14 sitting days after the

Appendix, No. 29.

first meeting of Parliament in every year there be laid before both Houses of Parliament the particulars of all compensations, superannuations, and allowances so granted, and of the salaries and allowances directed to be paid to such officers as may be appointed by the said Board as aforesaid during the preceding year.

* * *

XCVI. And be it enacted, that it shall and may be lawful for his Majesty, his heirs and successors, by warrant under his Royal Sign Manual, countersigned by the Chancellor of the Exchequer for the time being, to grant to any such Bishop of Madras or Bombay respectively, who shall have exercised in the British territories aforesaid for 15 years the office of such bishop, a pension not exceeding 800 *l.* per annum, to be paid quarterly by the said Company.

EXTRACT from ACT 21 & 22 VICT. c. 106.

III. Save as herein otherwise provided, one of Her Majesty's Principal Secretaries of State shall have and perform all such or the like powers and duties in anywise relating to the Government or Revenues of India, and all such or the like powers over all officers appointed or continued under this Act, as might or should have been exercised or performed by the East India Company, or by the Court of Directors or Court of Proprietors of the said Company, either alone or by the direction or with the sanction or approbation of the Commissioners for the affairs of India in relation to such Government or revenues, and the officers and servants of the said Company respectively, and also all such powers as might have been exercised by the said Commissioners alone; and any warrant or writing under Her Majesty's Royal Sign Manual, which by the Act of the Session holden in the 17th and 18th years of Her Majesty, c. 77, or otherwise, is required to be countersigned by the President of the Commissioners for the Affairs of India, shall in lieu of being so countersigned be countersigned by one of Her Majesty's Principal Secretaries of State.

* * * *

XIV. Any Member of the Council may, by writing under his hand, which shall be recorded in the Minutes of the Council, resign his office, and it shall be lawful for Her Majesty, by Warrant under Her Royal Sign Manual, countersigned by the Chancellor of the Exchequer, to grant to any person who, having held the office of Member of the Council for the period of 10 years or upwards, shall so resign by reason of infirmity disabling him from a due execution of the duties of the office, a retiring pension during life of 500 *l.*: Provided, that if at any time hereafter it should appear to Parliament expedient to reduce the number or otherwise deal with the constitution of the said Council, no Member of Council who has not served in his office for a period of 10 years shall be entitled to claim any compensation for the loss of his office, or for any alteration in the terms and conditions under which the same is held.

XV. The secretaries and other officers and servants on the Home Establishment of the said Company, and on the Establishment of the Commissioners for the Affairs of India, immediately before the commencement of this Act, shall on such commencement be and form the Establishment of the Secretary of State in Council; and the Secretary of State shall with all convenient speed make such arrangement of the said Establishments, and such reductions therein, as may seem to him consistent with the due conduct of the public business, and shall within six months after the commencement of this Act submit a scheme for the permanent Establishment to Her Majesty in Council; and it shall be lawful for Her Majesty, by the advice of Her Privy Council, upon consideration of such scheme, to fix and declare what shall constitute and be the Establishment of the Secretary of State in Council, and what salaries shall be paid to the persons on the Establishment, and the Order of Her Majesty in Council shall be laid before both Houses of Parliament within 14 days after the making thereof, provided Parliament be then sitting, or otherwise within 14 days after the next meeting thereof; and after such Establishment has been formed by such Order in Council, no addition of persons shall be made to such establishment, nor any addition made to the salaries authorised by such Order, except by a similar Order in Council, to be laid in like manner before both Houses of Parliament.

* * * *

XVII. It shall be lawful for Her Majesty, by Warrant under her Royal Sign Manual, countersigned by the Chancellor of the Exchequer, to grant to any secretary, officer, or servant on the Home Establishment of the said Company, or on the Establishment of the said Commissioners, who in consequence of such reduction as aforesaid by the Secretary of State or under such order in Council, is not retained on the establishment of the Secretary of State in Council, any compensation, either by way of a gross or annual payment, as, having regard to the circumstances, may seem just.

XVIII. It shall be lawful for Her Majesty, by warrant countersigned as aforesaid, to grant to any such secretary, officer or servant as aforesaid, retained on such last-mentioned establishment, such compensation, superannuation, or retiring allowance on his ceasing to hold office as might have been granted to him if this Act had not been passed, and the transfer of any person to the service of the Secretary of State in Council shall be deemed to be a continuance of his previous appointment or employment, and shall not prejudice any claims which he might have had in respect of length of service if his service under the said company or commissioners had continued; and it shall be lawful for Her Majesty, by Warrant countersigned as aforesaid, to grant to any secretary, officer, or servant appointed

on

on the said establishment after the first formation thereof such compensation, superannuation, or retiring allowance as, under the Act of the Session holden in the fourth and fifth years of King William IV., c. 24, or any other Act for the time being in force concerning superannuations and other allowances to persons having held civil offices in the public service, may be granted to persons appointed on the establishment of one of Her Majesty's Principal Secretaries of State.

* * * *

XLI. The expenditure of the revenues of India, both in India and elsewhere, shall be subject to the control of the Secretary of State in Council, and no grant or appropriation of any part of such revenues, or of any other property coming into the possession of the Secretary of State in Council by virtue of this Act, shall be made without the concurrence of a majority of votes at a meeting of the Council.

The Act referred to in section 18 of the 21 & 22 Vict. c. 106, is 4 & 5 Will. 4, c. 24, dated 25th July 1834, being " An Act to alter, amend, and consolidate the Laws for regulating the Pensions, Compensations and Allowances to be made to Persons in respect of their having held Civil Offices in His Majesty's Service," and Act 22 Vict. c. 26, dated 19th April 1859, has been recently passed, being " An Act to amend the Laws concerning Superannuations and other Allowances to Persons having held Civil Offices in the Public Service."

Act 23 & 24 Vict. c. 89, dated 13th August 1860, extends in certain cases the provisions of the Superannuation Act, 1859.

EXTRACT from ACT 24 & 25 Vict. c. 104.

VI. Any chief justice or judge transferred to any High Court from the Supreme Court shall receive the like salary and be entitled to the like retiring pension and advantage as he would have been entitled to for and in respect of service in the Supreme Court, if such court had been continued, his service in the High Court being reckoned as service in the Supreme Court; and, except as aforesaid, it shall be lawful for the Secretary of State in Council of India to fix the salaries, allowances, furloughs, retiring pensions, and (where necessary), expenses for equipment and voyage of the chief justices and judges of the several High Courts under this Act, and from time to time to alter the same: Provided always, that such alteration shall not affect the salary of any judge appointed prior to the date thereof.

EXTRACT from ACT 32 & 33 Vict. c. 97.

VI. Any member of Council may, by writing under his hand, which shall be recorded in the Minutes of the Council, resign his office; and it shall be lawful for Her Majesty, by warrant under Her Sign Manual, countersigned by the Chancellor of the Exchequer, to grant to any member so resigning, out of the revenues of India, if he shall have been elected or appointed before the passing of this Act, and if he shall have held the said office for the period of 10 years and upwards at the date of such resignation, a retiring pension during life of 500 *l.*

VII. If at any time hereafter it should appear to Parliament expedient to reduce the number, or otherwise to deal with the constitution of the said Council, no member of Council who has not served in his office for a period of 10 years shall be entitled to claim any compensation for the loss of his office, or for any alteration in the terms and condition under which the same is held.

PENSION RULES applicable to JUDGES of the HIGH COURTS, &c.; to UNCOVENANTED SERVANTS of the GOVERNMENT of *India;* and to Members of the PILOT SERVICE in *Bengal.*

JUDGES OF THE HIGH COURTS.

THE following are the regulations made by the Secretary of State in Council of India, under the provisions of 24 & 25 Vict. c. 104, s. 6, respecting the retiring pensions of the judges of the High Courts. They were approved in the Judicial Despatch by the Secretary of State, No. 48, dated 11th October 1871.

Section 1. A chief justice of the High Court at Calcutta, after an actual service of 11½ years as judge of the High Court, of which period at least half shall have been in the office of chief justice, shall receive a pension not exceeding 1,800 *l.* per annum.

> [*Note.*—In these rules "actual service" includes the period during which a judge is carrying on his duties in a High Court, also periods spent on privilege and subsidiary leave, and periods of vacation during which the judge is not on "furlough or extraordinary leave."

"Extraordinary leave" means any leave granted otherwise than under the rules made by the Secretary of State in Council of India, under any provisions of the Act of Parliament above quoted.]

Section 2. A puisne judge of the High Court at Calcutta, on the same terms as to length of service, shall receive a pension not exceeding 1,200 *l.* per annum.

Section 3. A chief justice of the High Courts of Madras, Bombay, and the North Western Provinces respectively, after an actual service of 11½ years as judge of the High Court, of which period at least half shall have been in the office of chief justice, shall receive a pension not exceeding 1,500 *l.* per annum.

Section 4. A puisne judge of the High Courts of Madras, Bombay, and the North Western Provinces, respectively, on the same terms as to length of service, shall receive a pension not exceeding 1,200 *l.* per annum.

Section 5. A chief justice or puisne judge compelled to retire on medical certificate after six years and nine months actual service, shall receive a pension not exceeding one-half the amount of pension allowed for the full period of service.

Section 6. In the event of a judge of the High Court, selected from the covenanted or uncovenanted services, receiving a pension under these rules, he will not be entitled to any pension or retiring allowance under the rules applicable to covenanted and uncovenanted servants respectively.

Section 7. When a judge of the High Court, selected from the covenanted or uncovenanted branches of the Civil Service, is permitted to retire before completing the full period of service entitling him to the pension of a judge of that court, he shall, on retiring, receive such a pension as he would be entitled to under the rules applicable to covenanted or uncovenanted servants respectively, reckoning the period during which he shall have served as judge of a High Court towards his time for such pension.

Section 8. Provided, however, that if a judge of the High Court, selected from the covenanted or uncovenanted branches of the Civil Service, shall be compelled to retire, on medical certificate, after six years and nine months actual service, he shall be allowed the option of taking his pension or retiring allowance either under these rules or under the rules applicable to the service to which he belongs.

Section 9. A judge of the High Court, selected from the Covenanted Civil Service, shall be required to continue his subscriptions to the Civil Annuity and Civil Service Funds.

Section 10. If a judge be transferred from one court to another, the period he shall have officiated in the first court shall count as service qualifying for retiring pension.

Section 11. If a puisne judge be promoted to be a chief justice in the same or another court, the time he will have served as judge will count for pension, according to the rate of a judge's pension, and the time he shall serve as chief justice will count for pension according to the rate of a chief justice's pension.

Section 12. If a judge of Madras, Bombay, or North Western Provinces be promoted to be Chief Justice of Calcutta, the time he will have served as a judge will count for pension at the rate of a judge's pension, and the time he will serve as Chief Justice of Calcutta will count for pension according to the rate of such chief justice's pension.

Section 13. If a chief justice of Madras, Bombay, or the North Western Provinces be transferred to be Chief Justice of Calcutta, the time he shall have served in the former capacity will count for pension according to the rate of pension of a chief justice of Madras, Bombay, or the North Western Provinces, and the time he shall serve as Chief Justice of Calcutta shall count for pension according to the rate of pension of a chief justice of the High Court of Calcutta.

To the following officers, being barristers-at-law, or advocates of one of the High Courts of India, or of the Court of Session of Scotland, viz.:

Judges of the Chief Court of the Punjab.

First judges of small cause courts of Presidency towns.

Recorder of Rangûn.

Secretary (formerly Assistant Secretary) to the Council of the Governor General for making laws and regulations.

Invalid and retiring pensions are admissible as follows:

(*a.*) After six years and nine months active service in one or more of the above offices, an invalid pension of 300 *l.* a year.

(*b.*) After eight years and eight months such service, an invalid pension of 500 *l.* a year.

(*c.*) After 12 years such service, a retiring pension of 750 *l.* a year.

RULES for the Grant of SUPERANNUATION ALLOWANCES and PENSIONS to UNCOVENANTED SERVANTS of the GOVERNMENT of *India.*

RULES for the Grant of SUPERANNUATION ALLOWANCES and PENSIONS to UNCOVENANTED SERVANTS.

1. THESE rules are applicable to all officers of the uncovenanted civil service in the receipt of more than 10 rupees a month on a permanent establishment with the following exceptions:—

I. Jemadars, sowars, peons, lascars, boatmen, smiths, artificers, and all those engaged in any handicraft, labourers, and other inferior servants.

II. Officers whose whole time is not devoted to the duties of their office.

III. Officers not paid from the general revenues of the State, whose eligibility to pension may not be provided for by an order issued expressly for the particular case by the Government of India, and approved by the Right Honourable the Secretary of State.

IV. Officers for whom other pension rules or separate superannuation funds are provided.

Application for Pension.

2. Applications for pension must be submitted in a letter to Government by the head of the office or department in which the applicant may be employed, who shall certify whether the character, conduct, and past service of the applicant are such as to entitle him to the favourable consideration of Government.

3. Every application shall be accompanied by a register prepared according to Form A. in the Appendix. In cases of other than a good service pension, every application shall be accompanied by a medical certificate stating the applicant's incapacity for further service, with the cause thereof, and whether it has been induced by irregular or intemperate habits.

4. Applicants* for a superannuation allowance must be examined by the principal inspector-general of the medical department, if serving at the Presidency, or by a military invaliding committee, if serving elsewhere within a moderate distance of a station at which a military invaliding committee is periodically assembled. It is optional, however, with the local government to accept the certificate of a single medical officer, or to convene a special invaliding committee at a convenient civil station, if the applicant be serving at an inconvenient distance from a station where a military invaliding committee can be assembled.

5. Good service and superannuation allowances on retirement, sanctioned under these rules by the local governments, will be reported to the Government of India in quarterly returns in the form given in Appendix B.

Allowances on Retirement.

6. On production by an applicant of such medical certificates as shall satisfy the Government under which he may be serving of his incapacity to serve longer in India, he may be allowed:—

I.† Under 15 years' service, a gratuity not exceeding 12 months' salary.

II.† After 15 years' service, one-third of his average salary (and of his personal allowance, if any) during the previous five years, provided that in no case shall a pension be granted exceeding the sum of 3,000 rupees per annum, whatever the amount of salary, nor of 2,000 rupees per annum, if the salary shall not exceed 12,000 rupees per annum.

III.† After 25 years' service, one-half of his average salary (and of his personal allowance, if any) during the previous five years, provided, however, that in no case shall a pension be granted exceeding 5,000 rupees per annum, whatever the amount of salary, nor exceeding 4,000 rupees per annum, if the salary shall not exceed 12,000 rupees per annum.

7.† After 30 years' service or upwards, a pension may be granted, without production of medical

---

* If the applicant is on leave in England, a certificate from the Medical Board of the India Office is required.

† For educational officers of the following classes entering the service after 25 years of age, the periods of service for pension are 12, 22, and 27 years, instead of 15, 25, and 30 years respectively.—

(1.) Inspectors of schools.
(2.) Principals and professors of colleges.
(3.) Head masters of schools and colleges.

To entitle an officer to the benefit of this rule, the whole of the requisite period of service must have been passed in the grades specified.

Appendix, No. 29.

medical certificate, of the same amount and subject to the same limitation as that sanctioned for 25 years' service on medical certificate. This pension, as the reward of faithful, efficient discharge of duty for 30 years, is termed a good service pension.

8. Pensions of the full amount authorised in paragraphs 6 and 7 are to be granted only as the reward of approved service. In any case in which an uncovenanted servant, without having incurred the penalty of removal from Government employ, shall, nevertheless, in the opinion of the Government under which he has been serving not be entitled to the full amount of pension, the local Government will make such a reduction in the amount of pension as it shall consider just.

9. The foregoing rates of pension and gratuity are applicable also, without the production of a medical certificate of unfitness for service, to officers discharged on reduction of establishment.

Service towards Pension.

10. Dismissal for misconduct entails forfeiture of the benefit of past service.

11. Service as a substitute does not count towards pension.

12. Periods of service before the age of 22, or of absence on other than privilege leave and preparatory leave, shall not count towards pension. Nor shall preparatory leave be allowed to count as service, if it is granted in addition to leave on medical certificate to an officer who has enjoyed leave of the latter description on two previous occasions.

13. The whole of the service in virtue of which pension is claimed must have been passed in an eligible grade and on a permanent establishment; but claims barred by this rule will be specially considered if the promotion from an ineligible grade was bestowed as a reward for meritorious service or for good conduct.

14. The period of service must be continuous, but, in case of the abolition of the office held by an officer, and his being subsequently employed by Government, his first period of service is to be taken into account.

Gratuities.

15. When an officer is discharged with a gratuity under these rules on reduction of establishment, the gratuity will not be given to him in one sum, but in monthly instalments of a month's pay until the full amount is paid. Should he be re-employed before or after the period for which gratuity is allowed, he will have the option of refunding the gratuity and recovering his former service, or of forfeiting that service by retaining the gratuity. In the latter case, any balance of gratuity remaining undrawn at the date of his re-employment may be paid to him.

Payment of Pensions.

16. Payment of pension will commence from the date on which the applicant ceases to be borne on the establishment, or from that of his application, whichever may be the later date.

17. No pension shall be payable in arrear, for a period exceeding six months, without the express sanction of Government obtained through the civil paymaster, unless the cause of the suspension of payment shall have been the neglect, order, or act of some public officer, and beyond the control of the pensioner, when the civil paymaster, on a reference being made to him, shall exercise his discretion in passing arrears for payment, or submit a representation of the case for the information and orders of Government, as he shall consider proper.

18. An officer shall, on retirement, have the option of drawing his pension either in India or from the Home Treasury. After exercising his option on retirement, he may, at a subsequent period, change the place of payment from England to India, or *vice versâ.* This change can, however, be allowed but once. The payments in England will be made at the rate of exchange which is annually fixed in communication with the Lords of the Treasury for the adjustment of transactions between the British and Indian Exchequers.

APPENDIX (A).

REGISTER of an Application for a Superannuation Pension from the Establishment of preferred under the Rules passed by Government, under date the

Name of the Person by whom the Pension is Applied for, with the Name of his Father	Number on the Establishment	Identification of the Applicant's Person.	Size. Secretary to the Government of India.

Appendix, No. 29.

MEMBERS OF THE PILOT SERVICE IN BENGAL.

[*Note.*—The following Rules were declared in 1835.]

Contribution	*Rs.*
Branch Pilot - - -	40 a month.
Master - - - -	20 „
First Mate - - -	10 „
Second Mate and Volunteer	4 „

Section 1. In consideration of a monthly contribution to the extent noted in the margin, by the pilots of the several grades towards a fund for pensionary support to their widows and orphans, the following pensions will be allowed by Government:—

	Rs.
Branch Pilot - - - - - - - - -	200 a month.
Master - - - - - - - - -	100 „
First Mate - - - - - - - - -	60 „
Second Mate and Volunteer - - - -	30 „
Families.	
Widow of Branch Pilot - - - - - -	100 „
Ditto - Master - - - - - - -	50 „
Ditto - First Mate - - - - - - -	30 „
Ditto - Second Mate and Volunteer - - - -	15 „
Children.	
Girls until 10 years of age - - - - - -	14 „
„ after 10 years until married - - - -	20 „
Boys until 15 years of age - - - - - -	12 „

1. The widow of a pilot married to him after he became a pensioner, and the children of such marriages are not entitled to the benefit of these rules.

Section 2. (*a.*) Pilots are entitled to pension at the above rates, on medical certificates, by the standing invaliding committee.

(*b.*) A pilot, after 30 years actual service in India, if he shall have attained the grade of branch pilot, shall be entitled to retire upon the pension of Government rupees 200 a month, or if below the grade, upon a pension of Government rupees 100 a month, provided that in any period of three consecutive years the number of pensions so granted do not exceed four.

Section 3. To entitle widows and orphans to the above pensions, pilots are to forward to the master attendant certificates of their marriage, of the birth of their children, and of their baptism, within one month after the occurrence thereof. Notices of death are in like manner to be forwarded to the master attendant.

Section 4. No widow who may have been legally divorced or separated from her husband for adultery, or who at the period of her husband's demise may have quitted his protection, and be living in a state of notorious adultery, though not divorced or separated from him by law, or who, subsequently to her husband's decease, may be living in a notorious state of incontinence, nor any female orphan living in such state, shall be entitled to receive, or continue to receive, any pension under these rules.

Section 5. If a widow pensioner marries, her pension is to cease during her coverture; but in the event of her again becoming a widow, she shall be re-admitted to the pension to which she was entitled during her first widowhood, unless her second husband shall have been a member of the pilot service, and have been at his death of a higher grade than her first husband, in which case she shall be entitled to the pension of the higher rank.

Section 6. All pensioners under these rules are to make personal appearance at the Accountant General's Office on the first day of every alternate month, or to afford such other proof of their existence as the Accountant General may from time to time require.

Section 7. Widows and female orphans above the age of 15 years are required to forward to the Accountant General's Office declarations half-yearly, in May and November, that they are not married, and that they have not been married at any intervening period. The declarations are to be countersigned by the executor to the estate of the deceased member of the pilot service, or pensioner, or by the guardian of an orphan, and by a member of the pilot service, certifying to the truth of the declaration to the best of their knowledge and belief. Forms of the declaration will be furnished on application at the Office of the Accountant General.

Section 8. Contributions to the pension fund by members of the pilot service who joined the service on or before the 1st July 1835, and pensions to them and to their families, will continue to be paid in Sicca rupees. All other contributions, allowances, and pensions will be paid in Government rupees.

1. If pensions payable in Sicca rupees are paid at the Home Treasury of the Government of India, payment is made at 1*s.* 11*d.* for each Government rupee, 104⅙ Government rupees being taken as equivalent to 100 Sicca rupees.

India Office, 23 April 1872.

T. L. Seccombe,
Financial Secretary.

Appendix, No. 32.

STATEMENTS handed in by the Honourable *G. C. Talbot* on the Evidence given before the Committee on 8th March 1872.

Appendix, No. 32.

LIST OF PAPERS.

- A.—Proportion of Cost for Indian Telegraph Lines and Indo-European Lines. (Q. 963.)
- B.—Expenditure on Stationery for last five years (Q 1020)
- C.—Insurance Account—Per-centage on Losses—Total Losses—Average and Surveyors' Fees (Q. 1115.)
- D.—Steps taken to procure Anchors in 1865, and cost, and whether Anchors of same quality could not have been obtained at a cheaper rate. (Q. 1154.)
- E.—Difference between cost of Ordnance Stores from Government or from Private Firms. (Q 1239.)
- F.—Per-centage which the India Store Department, Establishment, &c, represents on Total Expenditure on Stores. (Q. 1281)

(A.)

(Question No. 963.)

COST of STORES for INDIAN TELEGRAPH and INDO-EUROPEAN DEPARTMENTS.

THE item in the Home Accounts for the year ending 31st March 1871, Telegraph Lines in India—Stores for India, 75,237 *l.* 3 *s.*, is the cost of stores and freight for Indian lines only.

The stores and freight for Indo-European telegraph amount to 2,943 *l.* 1 *s.* 10 *d.*, and are included in the charge for that Department, amounting to 26,719 *l.* 16 *s.* 10 *d.* A further sum of about 3,000 *l.* is also included in this total, on account of expenses connected with the collision of the ship "Calcutta," carrying cable for the Persian Gulf.

Gerald C. Talbot,
Director General of Stores.

India Office, 19 March 1872.

(B.)

(Question No. 1020.)

STATEMENT of EXPENDITURE on STATIONERY for the Seasons 1866-67, 1867-68, 1868-69, 1869-70, and 1870-71.

	£.
Season 1866-67	117,178
" 1867-68	32,467
" 1868-69	146,500
" 1869-70	114,000
" 1870-71	158,000

The apparent decrease in the amount expended in the Season 1867-68 is owing to certain payments made in this year not having been brought to account until 1868-69.

Gerald C. Talbot.
Director General of Stores.

India Office, 19 March 1872.

(C.)

(Question No. 1115.)

STATEMENT of LOSSES, &c., which would be covered by Marine Insurance on Government Stores shipped for India.

FOR the 10 years ending December 1871 the losses, total and partial, amounted to the following sums:—

	£.	s.	d.
Total Losses - - - - - - -	*57,235	1	1
Contributions to General Averages - - -	1,600	–	–
	58,835	1	1
Add Surveyors' Fees - - - - -	4,500	–	–
£.	63,335	1	1

Total value of Stores, 1 May 1861, to 31 March 1871 - - £. 11,008,243 8 7.

Average loss over 10 years, 11 s. 6 d. per cent.

India Office, 19 March 1872.

Gerald C. Talbot,
Director General of Stores.

---

* Of this sum 36,000 *l.* fell within little more than the first twelve months.

(D.)

(Question No. 1154.)

COST of MOORING ANCHORS for *Calcutta.*

No mooring anchors were purchased or sent to Calcutta in 1868.

The only mooring anchors sent, were those at the beginning of 1865, after the cyclone of 1864.

These were obtained partly from the Admiralty, from the naval stores; and partly from Messrs. Brown and Lenox, the Admiralty contractors.

The prices paid were as follows:—

Admiralty - - - from 28 *s.* 9 *d.* to 56 *s.* 6 *d.* per cwt.
Brown and Lenox „ 30 *s.* to 57 *s.* 6 *d.* „

The Admiralty bills were not sent in until 1868 and 1869, and the price therefore not ascertained or communicated to India until that date.

Under the special circumstances of the case, anchors could not have been obtained at a cheaper rate, inasmuch as they were not procurable at all from any other source. Application was made in vain to the Conservancy Boards in London and Liverpool, and the only large anchors available were from the Admiralty, or from their contractors, who happened to have some under manufacture for the Admiralty.

The variation in the prices arises from the fact that anchors of different weights are charged at different weights per cwt.

The heaviest anchors, moreover, were ships' anchors altered for the occasion for mooring purposes.

Ships' anchors are much more highly finished and of more expensive construction than ordinary mooring anchors. For instance, under the Admiralty contract in 1865, a ship's anchor of 75 cwt. was charged 57 *s.* 6 *d.* per cwt. A mooring anchor by the same maker, would be 42 *s.* per cwt.

All anchors for India were formerly obtained from the Admiralty contractors at the Admiralty contract prices. On the alteration of system at the Admiralty, by which anchors were procured competitively, the same course was followed in the India Store Department, and the prices have been greatly reduced.

Very few anchors are now however sent to India, the demand being but limited.

India Office, 19 March 1872.

Gerald C. Talbot,
Director General of Stores.

Appendix, No. 32.

(E.)

(Question No. 1239.)

No Ordnance (guns) have been purchased by contract by the Indian Office for a very long period of time, therefore no comparison exists as to the prices charged by the trade, and by the War Office respectively.

In the case of small arms, the only instances which have occurred within the last 10 years, are as follows:—

	s.	*d.*	
Smooth-bore Muskets; contract, 1864 - - -	40	9	each.
Ditto - ditto, from War Office 1866 - -	38	3	"
Brunswick Rifles; contract 1864 - - - -	72	–	"
Ditto - ditto, War Office 1862 - - -	45	5½	"

India Office, 19 March 1872.

Gerald C. Talbot,
Director General of Stores.

(F.)

(Questions 1063 to 1082, and 1281.)

COST of STORE DEPARTMENT with relation to the EXPENDITURE on STORES.

In 1870–71, the total expenditure on stores amounted to 1,466,089 *l.*

The Establishment charges of the Store Department were, in the same year—

	£.	*s.*	*d.*
Salaries - - - - - - - - - -	19,000	–	–
Wages of labourers - - - - - - -	9,715	12	1
Fees to Surveyors, Engineers, and others -	2,731	18	10
Travelling charges - - - - - - -	2,095	17	4
Rates and taxes, police, water - - - -	717	17	5
Repairs - - - - - - - - -	1,616	6	–
Sundries, horse and cart removing refuse, &c. -	274	10	7
Supplies, coal, &c., &c., &c., patterns - -	2,138	13	9
Petty disbursements - - - - - -	462	3	6
£.	38,752	19	6

These items cover all charges whatever for establishments, permanent and extra labour, supplies, patterns, repairs, and new plant, and amount to a per-centage of 2 *l.* 12 *s.* 10 *d.* on the cost of the stores.

If interest on the cost of the building and plant, and ground-rent be added, the addition will be as follows:—

	£.	*s.*	*d.*
Five per cent. on 63,357 *l.*, the cost of building and plant - - - - - - - -	3,168	–	–
Ground-rent - - - - - - - -	353	–	–
	3,521	–	–
Add cost of establishment, &c. - - -	38,752	19	6
Total - - - £.	42,273	19	6

Which raises the per-centage for the year 1870–71 to 2 *l.* 17 *s.* 8 *d.*

India Office, 19 March 1872.

Gerald C. Talbot,
Director General of Stores.

INDEX

TO THE

REPORT

FROM THE

SELECT COMMITTEE

ON

EAST INDIA FINANCE.

Ordered, by The House of Commons, *to be Printed,*
23 *July* 1872.

ANALYSIS OF INDEX.

ALPHABETICAL and CLASSIFIED LIST of the PRINCIPAL HEADINGS in the following INDEX, with the Pages at which they will be found.

PAGE

Accounts - - - - - - - - - - 747

ARMY:

INDEX.

[*N. B*—In this Index the *Figures* following the Names of the Witnesses refer to the Questions in the Evidence; those following *App.* to the Pages in the Appendix; and the *Numerals* following *Rep.* to the Pages in the Report.]

A.

ABYSSINIAN EXPEDITION. Unfairness to India if burdened with part of the cost of the Abyssinian War, *Laing* 7519. 7678.

Accounts. Increased detail in which the Indian Home Accounts are now furnished to Parliament, *Seccombe* 1425-1427——Much stricter system of account at present than in the time of the East India Company, *ib.* 1596. 1624.

Witness (who is Deputy Comptroller General in India) has brought home the accounts required by the Committee in the greatest detail in which they could be prepared up to the time of his departure for England, *Gay* 3484-3488.

Doubt as to any advantage arising from the system in India of showing the gross revenue, with all the repayments separately on the other side of the account, *Harrison* 3625-3627——Item of 133,440 *l.* as the charge in India in 1870-71, under the head of Audit and Account, the charge in 1856-57 having been 96,000 *l.*; several causes of this increase in the different provinces, the chief increase being due to the centralisation of the accounts in Calcutta, *ib.* 4554-4564——Important decrease in the salaries in the Account and Audit branch at Calcutta, *ib.* 4565.

Witness is not cognisant of irregular charges in the Indian accounts, nor have there been any remonstrances from England as to payments passed in India, *Harrison* 4592-4594. 4628-4630——Information in connection with the Treasury Account of the Government of India, which comprises all the cash transactions of the Government as well as the revenue and expenditure, *ib.* 6134-6143——Reference to the accounts current between the Presidencies as involving very extensive details, *ib.* 6146.

Whatever the system of accounts, the financial condition of the country has not relapsed since 1861, *Laing* 7650.

See also *Audit of Accounts. Expenditure. Local Taxation and Finance. Public Works. Railways. Revenue.*

Administration in India. Total of 1,153,192 *l.* as the cost of "Administration in India" in 1870-71; information relative to the chief items comprised in this charge, *Harrison* 4352 *et seq.*

Administration of Justice. See *Law and Justice.*

Admiralty. See *Troop Service.*

Agricultural Department. Recent transfer of the forests of India to the Agricultural Department, *Strachey* 6158, 6159. 6309.

Agriculture. See *Cultivation of the Soil. Irrigation. Manure.*

Ahmedabad Limited extent of the Ahmedabad district under irrigation as compared with the total area; much has, however, been done by local enterprise, *Ashburner* 2211-2214. 2254, 2255.

Alienations (*Land Revenue*). See *Rent-free Lands.*

Allahabad Barracks. Severe censure passed by Lord Mayo on the officers engaged in the construction of the barracks at Allahabad, *Dacosta* 8086-8088.

Ammunition. Manufacture of all muzzle-loading ammunition in India, the muzzle-loaders and other small arms being supplied from England; steps being taken to manufacture Snider ammunition locally, *Bedford* 1282-1284.

Anchors. Explanation as to witness having made no reply to a statement in a Report on the Calcutta Port Fund, that unduly high prices had been paid for anchors sent out from his department to India, *Hon. G. C. Talbot* 1127. 1144–1154——Anchors were obtained from the Admiralty for India in 1864–65; belief that none were sent out in 1868, *Bedford* 1144. 1147.

Paper submitted by Mr. Talbot containing explanations on the subject of mooring anchors for Calcutta, and their cost; these were sent out in the beginning of 1865, *App.* 740.

Annuity Funds (*Civil Service*). Memorandum by Mr. Seccombe as to the grant of annuities from the Indian Civil Service Annuity Funds, *App.* 710, 711.

Appeals (*India*). Great expense, as compared with the means of the natives, in taking appeals into court, *Dacosta* 8164–8172. 8270–8281.

Appeals (*Privy Council*). Large item of expense in England in connection with appeals to the Privy Council, *Seccombe* 894–896.

Appellate Courts (*India*). Probable room for economy by a re-organisation of the higher Judicial Courts of Appeal throughout India, *Rt. Hon. W. N. Massey* 8751–8753.

Appointments (*Civil Service*). Return showing the number of officers of different classes employed in the land revenue administration, in the different provinces, distinguishing between natives and Europeans, and showing the salaries of each class, *App.* 642–650.

Information supplied by Sir H. L. Anderson relative to the strength of the Indian Civil Service and the principle on which the supply is regulated, *App.* 651.

ARMY:

1. *Home Charges in respect of Depôts and of Recruits for India.*
2. *Pensions, Retired Pay, &c.*
3. *Furlough Allowances.*
4. *Number of Officers on Leave.*
5. *Room for Economy in the Military Expenditure.*
6. *Undue Cost in effecting the Fusion of the Indian Army with the Queen's Army.*
7. *Military Officers in Civil Employment.*
8. *Other Details generally.*
9. *Further Inquiry proposed by the Committee into the Military Expenditure.*
10. *Estimate of nearly* 16,000,000 *l. for the Army in* 1872–73.

Home Charges in respect of Depôts and of Recruits for India:

Payment in 1870–71 of 475,320 *l.* for home charges connected with the British forces in India, 351,632 *l.* of this amount being for recruits, *Pears* 235——Arrangement that for every battalion in India there shall be two companies in England as depôts; payment out of Indian revenues of a large portion of the cost of home companies, though reckoned among the effectives of the British army, *ib.* 235. 255. 311–320.

Explanation of the data upon which the charge for each infantry recruit up to the time of his embarkation for India has been fixed at 63 *l.* 8 *s.* 5 *d.*, and of each cavalry recruit at 136 *l.* 13 *s.* 11 *d.*; great excess of this charge as compared with the cost when the East India Company provided recruits, *Pears* 235–238. 255–274. 292–299. 303–310. 321–334. 337, 338. 350–353——Fixed charge of 27 *l.* 7 *s.* 11 *d.* for each man who goes to India with his regiment, as a finished soldier, credit given to the Indian Government for the men returned, *ib.* 239, 240.

Different rates charged by the War Office against the Indian Office for recruits sent to India, and for men sent with their regiments, *Seccombe* 253, 254——The War Office contended that the 10 *l.* capitation did not cover all expenses, *ib.* 256——Several items comprised in the former capitation rate, *ib.* 258.

Liability of the rate for recruits to annual revision, *Pears* 284, 285——Remonstrance made to the War Office some six months ago against the charges for recruits, but without any reply having been received, *ib.* 335, 336——Statement as to the officers and men of the depôts in England being available for service in India, *ib.* 341, 342.

Causes of the greatly increased charge per head for recruits as compared with the cost when the East India Company provided the recruiting establishment and the men; conclusion that the Indian Government is paying an unduly large sum at the present time, *Seccombe* 300, 301——Difficulty in spreading the expense of training recruits over the whole term of service, instead of paying the full amount with reference to service in India; return of the amount, in account, when men are sent home again, *ib.* 354–363.

Statement on the question as to the propriety of India paying the full charge for the recruits in England, whilst these are available for any purposes for which England may require them, *Pears* 364, 365. 378, 379——No payment is made till the men are embarked

ARMY—continued.

1. *Home Charges in respect of Depôts and of Recruits for India*—continued:

barked, *Pears* 371. 378, 379——Important effect of the re-organisation of the British army upon the question as to the payments by India for recruits, *Seccombe* 425, 426.

2. *Pensions, Retired Pay, &c.*

Explanation relative to the payment of 216,000 *l.* during 1870–71 as the proportion chargeable to India of the capitalised value of retired pay, pensions, &c., granted during the year in respect of the Queen's troops in India; the real charge for the year will be 428,000 *l.*, but this large increase will not continue, *Seccombe* 708–710. 716–723. 732–743——Inability of India to control the foregoing charge, so far as it may be effected by a too liberal grant of pensions by the War Office, *ib.* 724–726. 728–730.

Particulars relative to a charge of 754,000 *l.* for retired pay of officers of the Indian service, including colonels' allowances; diminishing character of the charge for retiring pay, whilst the latter charge will largely increase, *Pears* 750–756. 763–772. 775–779——Doubt as to future increase of the charge for payment of pensions to the British army, *ib.* 773, 774.

Total of about 1,600,000 *l.* as the non-effective charges in respect of officers, *Pears* 780–784——Very rare application from retired officers of the Indian service to commute their pensions; invariable refusal, *ib.* 789–791.

Statement showing the number of officers of each rank and Presidency, effective and non-effective, who were in receipt in the United Kingdom of pay, half-pay, or pension, on the 1st July 1872, *App.* 549.

3. *Furlough Allowances:*

Item of 133,000 *l.* as the charge in 1870–71 for the furlough pay of officers and of colonels commandant of artillery of the Queen's army, *Pears* 339, 340. 388. 409——Difficulty of making any valuable comparison between the cost for furlough and pensions under the East India Company, and under the present system of administration, *ib.* 343–349.

Charge of 469,000 *l.* for furlough allowances of officers of the Indian service, whilst on leave in England; steps taken to control this charge, which may be considered a diminishing one, *Pears* 380–387——Less pay drawn by officers of the British army when on leave, *ib.* 391–394. 403–405——Small charge for furlough allowances of officers on leave in other parts of the world than England or Europe, *ib.* 404. 410–412.

4. *Number of Officers on Leave:*

Average of from 600 to 700 officers of the native army on leave in England out of about 3,200 on service in India; witness will obtain details on this point, showing also the proportion of officers of the Queen's army on leave, *Pears* 389–391. 395–402. 406.

Return dated for April 1872, showing the number of officers on leave in England from regiments in India, specifying whether on sick certificate or private affairs, *App.* 545.

5. *Room for Economy in the Military Expenditure.*

Large increase of home military expenditure since 1862; possible room for retrenchment in this direction, *Laing* 7489. 7522, 7523——Views of Lord Sandhurst as to the economy feasible in the military administration, and as to the expediency of concentration under one commander-in-chief, *Dacosta* 8033–8035——Statement showing the great want of a more systematic revision of the military estimates, witness believing that much economy may be secured by placing a Member of the Council in India in special and sole charge of the vast outlay under this head; detailed and constant investigation to be exercised by him, *Right Honourable W. N. Massey* 8583–8585——Admission that there may be some force in the argument that the cost of the military occupation of India should not all fall upon Indian revenue; witness is not prepared to enter into this question, *ib.* 8834–8840——Further reference to the military expenditure as one likely to admit of large reduction, *ib.* 8856, 8857.

6. *Undue Cost in effecting the Fusion of the Indian Army with the Queen's Army:*

Probability of greater economy in carrying out the fusion of the Indian army with the Queen's army, if the Government of India had been allowed to have their own way in the matter, *Laing* 7517——Further reference to the amalgamation of the local European army with the Queen's army as having been forced upon India, and as having caused unnecessary expense, *ib.* 7678. 7692, 7693.

7. *Military Officers in Civil Employment:*

List of military officers in civil employment in the different provinces, showing the department in which employed, and the nature of the service, *App.* 721–735.

ARMY—continued.

8. *Other Details generally:*

Average of about 3,000 men as the annual excess sent out beyond the number returned, *Pears* 241. 376, 377——Charge of 30,000 *l.* for invalids and time-expired men awaiting discharge, *ib.* 242——Obstacles to a satisfactory estimate of the payment for British troops in India; delay in fixing the rate for artillery, *Seccombe* 249-252. 284-288——Intended increase of the period of regimental service in India, *Pears* 289, 290.

Payments by the Imperial Government for the withdrawal of regiments in India for imperial purposes, *Pears* 291——Tendency of the Enlistment Act to increase the expense to India, *ib.* 302——Probability of some increase of charge in respect of changes of officers from one battalion to another, *ib.* 420——Expectation that more men may be induced to re-engage in India, as a set-off against the increased expense of the shorter term of enlistment in the British army, *ib.* 421-424. 428-430.

Arrangement that out of fifty regiments of infantry four are to be brought home every year, *Pears* 427——Payment of the passage each way by India, *ib.* 431——Payment made in gratuities to officers of the late Indian regiments on their retiring from the service and entering the British service, *ib.* 713-715. 731——Gradual reduction being effected in the officers of the Indian army, *ib.* 785.

Necessary sanction on the part of the Home Government before any reduction in the military establishment, *Laing* 7489. 7507——Doubt as to there being good grounds for the complaint that military items of charge incurred in England are transferred in an unfair proportion to the taxation of India, *Right Honourable W. N. Massey* 8841-8845.

Return showing the number of brigades and regiments which came home from India in each of the years 1867-70, *App.* 545-547——Return showing the number of non-commissioned officers and men borne on the rolls of regiments serving in India, who were in the United Kingdom on 1st January 1872, *ib.* 547.

Return showing the number of men who volunteered for regiments remaining in India, in each of the years 1867-70; *App.* 548——Return showing the number of men who re-engaged in India in the years 1867-70, *ib.*

Return showing the number of officers, non-commissioned officers, and men serving with their brigades and regiments in India, on the 1st August 1872, *App.* 550.

9. *Further Inquiry proposed by the Committee into the Military Expenditure:*

Postponement of investigation into the military expenditure, *Rep.* iii.

10. *Estimate of nearly* 16,000,000 *l. for the Army in* 1872-73*:*

Explanations by Sir R. Temple in connection with the estimated expenditure of 15,862,000 *l.* under the head of "Army," in 1872-73, *App.* 497.

See also *Clothing of Troops. Colonels* (*British Regiments in India*). *Commissariat. Ensigns. Lunatic Asylum* (*Ealing*). *Police. Troop Service.*

Ashburner, Lionel, C.S.I. (Analysis of his Evidence.)—Experience of witness for twenty-four years in the Civil Service of India, chiefly in Guzerat and Khandeish, 2116, 2117——Details relative to the establishment, by witness, and the operation of a model farm of about 500 acres in Khandeish; limited effect hitherto produced as regards the surrounding cultivation, the farm not having had sufficient time to make itself felt through the country, 2118-2134. 2156-2161. 2200, 2203. 2222-2224——Loss hitherto upon the working of the farm; belief that after a time it will pay its expenses, 2121-2125. 2156-2161. 2222-2224——Unfitness of the improved English ploughs for use in India, as compared with the native ploughs, 2130. 2153-2155, 2200, 2201.

Large increase in the production of cotton per acre in Khandeish, owing to recent improvements, 2133, 2134. 2208——Very small produce obtained from the land in India, owing mainly to the want of manure and to the ignorance and poverty of the cultivators; consideration more especially of the difficulties as to manure supplies through a large portion of the manure being used as fuel, 2135-2152. 2164-2171. 2183-2186. 2194-2199. 2204, 2205——The present production is probably not more than one-fourth what the land might produce, 2142. 2164-2169. 2221.

Very low rate of the land revenue in Western India; great increase yearly in the area under cultivation, 2144-2148——Attempts made to develope the cultivation of tobacco, but without success; causes of failure, 2162, 2163——Fertility generally of the soil, if there were only proper culture, 2164-2169. 2221——Very good system of rotation of crops, 2166. 2170——Fluctuating crops of cotton, the supply being stimulated by high prices, 2170-2172——Information in connection with the ginning and packing of the cotton, and the frauds and adulteration practised; successful opposition by the Bombay merchants to a Bill introduced for the prevention of fraud, 2173-2182——Large and profitable cultivation of sugar in Khandeish and other districts, 2187-2189.

Great want of better facilities of irrigation, as admitting of more profitable cultivation, and of an increased land revenue; entire inadequacy of the present irrigation by wells in certain

Ashburner, Lionel, C.S.I. (Analysis of his Evidence)—*continued.*
certain districts, 2190-2193. 2210-2223——Doubt as to any general improvement in cultivation concurrently with the increase of area cultivated, 2206-2209——Great importance of an irrigation tank for each village, as in Mysore; suggestions hereon, 2214-2220. 2225-2233. 2254, 2255——Regret expressed at the proposed abandonment of the model farm in Khandeish, 2223, 2224.

Evidence in favour of a larger latitude and power of expenditure by local officers in irrigation and other works of improvement; slow progress of local improvement under the centralisation system, 2231-2261——Gigantic character of the irrigation schemes contemplated by the central government, but not carried out, whereas by local agency numerous small and useful works might be promptly brought into operation, 2231-2256.

Intimate experience of witness as to the assessment and working of the income-tax; conclusion that complaints proceed chiefly from the European community, although there is doubtless great difficulty in the fair assessment of the natives, and much hardship and evasion in consequence, 2262-2283. 2300 *et seq.*——Opinion that a property tax would be better than an income tax, as less difficult to assess; grounds for this view, 2268. 2287. 2322-2328. 2340. 2345. 2349. 2366-2369——Dissent from statements that the income-is tax regarded with special aversion by the natives; witness more than doubled the proceeds of the tax in Khandeish, and it was paid without a murmur, 2274-2276. 2309 *et seq.*

Larger proportion of customs taxation borne by Europeans than by natives, 2284-2286——Suggestions for the levying of an excise duty upon tobacco; consideration of objections thereto, 2287-2294. 2319-2321. 2360-2365——Proposal also for levying an excise duty upon sugar, 2287. 2295-2299——Suggestion as regards the income tax, that Government should fix the amount to be contributed by each district, 2344-2346——Very small amount of the salt tax per head, there not being much discontent, 2357, 2358.

Assessed Taxes. Total refund of 40,000 *l.* in 1870-71, on account of assessed taxes, 13,000 *l.* of this amount being in respect of the Pandhri tax in the Central Provinces, *Gay* 3502, 3503; *Harrison* 3503, 3504. 3512-3516.

See also *Certificate Tax.* *Income Tax.* *License Tax.*

Audit of Accounts. Charge of 3,000 *l.* in 1870-71 for the auditor's establishment at the India Office, *Seccombe* 879, 880.

Examination relative to the functions of the audit department in India, and of the action of the department at Calcutta and Madras and Bombay respectively, *Harrison* 4566 *et seq.*——Absence of any systematic audit in England of the accounts in India; there are not the materials for such audit, *ib.* 4586-4591. 4620, 4621——Opinion that greater responsibility might with advantage be placed upon the Auditor General in India, *ib.* 4623-4627. 4638-4640.

Statement of the salaries in the department of auditor of the accounts of the Secretary of State for India in Council, *App.* 708.

See also *Accounts.* *Political Agencies.*

B.

Balances. See *Cash Balances.*

Banda, ex-Newab of. Great reduction made in the pension to the ex-Newab of Banda, in consequence of the part taken by him in the mutiny, *Sir J. W. Kaye* 7305.

Bank of England. Payment of 15,266 *l.* to the Bank of England and Bank of Ireland for management of the debt of India, at the rate of 340 *l.* per million, *Seccombe* 899-902.

Banks of Bengal, Bombay, and Madras. New charge of 26,849 *l.* since 1856, for allowances to the three presidency banks for certain duties discharged by them for Government, *Harrison* 4669-4682——Explanation relative to a charge of 48,000 *l.* in 1870-71 for loss on Government shares in the old Bank of Bombay, *ib.* 5919-5924.

Statement in defence of the connection of the Government of India with the presidency banks, the advantages outweighing the disadvantages, *Laing* 7575-7581.

Evidence in explanation and strong disapproval of the connection of the Government of India with the presidency banks at Bengal, Bombay, and Madras; strong protest recorded by witness before leaving India, against Government continuing to hold shares in these banks, *Right Honourable W. N. Massey* 8602-8610——Reference especially to the perilous state of the Bank of Bombay in 1866 and 1867, the action of Government in extending support to the bank, and the effect thereof upon the value of the shares, *ib.* 8602-8604. 8610.

Witness trusts the Government of India will be compelled to sever its connection with the banks at the earliest possible moment, *Right Honourable W. N. Massey* 8604, 8605

Banks of Bengal, Bombay, and Madras—continued.

——The whole of the Government of India were opposed to witness on the subject, but the Secretary of State took the same view that he did, *Right Honourable W. N. Massey* 8604——Necessity of paid inspection of the banks on the part of Government so long as the connection lasts, *ib.* 8606–8608.

Barracks, &c. Reduction from 232,000 *l.* in 1867 to 201,000 *l* in 1870 in the expenditure on repairs of military buildings; expected sufficiency of the latter sum in future, through the completion of new barracks, *Strachey* 6272–6274——Great variation in the annual expenditure on new military buildings; item of 791,000 *l.* in 1870 as compared with 1,507,000 *l.* in 1867; *ib.* 6274, 6275.

Explanation of the practice in the selection of military buildings to be constructed in each year, and in the limitation of construction by the Government of India according to the sum to be assigned, *Strachey* 6276–6281——Origination of the suggestion for new barracks, &c., in the military department, *ib.* 6277.

Bad construction of some barracks adverted to in reference to the measure of blame attaching to the department; strong opinion expressed by Lord Mayo on this matter, *Strachey* 6519–6529——Statement that barracks now fall under the head of ordinary works, though for a short period they were dealt with as extraordinary works, provided out of loans, *ib.* 6855–6859——Total expenditure of 9,000,000 *l.* on barracks by the end of 1872–73, *ib* 7005——Practice since 1865 or 1866 to limit the expenditure on barracks to such sums as can be provided from the revenue of the year, *ib.* 7789, 7790.

Great loss and waste in respect of faulty construction of barracks at several places, the fault resting with the officers of the Public Works Department, *Dacosta* 8081–8088——Severe censure passed by Lord Mayo on the officers engaged in the construction of the barracks at Allahabad, *ib.* 8086–8088.

Very large outlay on barracks when witness was Finance Minister; view of witness that a portion at least of this expenditure should be provided by loans, *Right Honourable W. N. Massey* 8860–8862.

Statement of expenditure in the construction and repair of military buildings and fortifications in each year from 1867–68 to 1870–71; *App.* 554.

Bedford, Henry C. G. See *Talbot, The Honourable Gerald Chetwynd, &c.*

Beer. Item of 311,000 *l.* in the store accounts for 1870–71, the bulk of which is for malt liquor; sundry details relative to the system of procuring the required supply of beer, the test as to quality, the price paid, the wastage, &c., *Bedford* 1186–1209. 1258–1261. 1273–1280. 1290–1298——System, previously to 1867, of delivery in India by the brewers at their own risk; great saving under the system of delivery by the Store Department, *ib.* 1193–1207. 1258–1261——System of limited competition from a selected number of brewers; mode of selection of the competing firms, *ib.* 1190. 1290–1298.

Doubt as to beer made in India being supplied to the army in any quantity, *Bedford* 1208. 1264, 1265——In 1870–71 the charge for beer, was 275,369 *l.*; in 1867–68 (the highest year under the new system) the amount was 322,600 *l.*, *ib.* 1273, 1274——The consumption has been about a hogshead per head per annum, *ib.* 1280.

Benares, Rajah of. Permanent pension of the Rajah of Benares, *Sir J. W. Kaye* 7340.

Bengal. See *the headings generally throughout the Index.*

Bills of Exchange on India. Explanation by Sir. R. Temple, in his financial statement for 1873–73, relative to the amount of bills estimated to be drawn on India, *App.* 503.

Bombay Bank. See *Banks of Bengal, Bombay, and Madras.*

Bombay, Baroda, and Central India Railway. Adoption of the departmental system of construction, in lieu of lump contracts, in carrying out the Bombay and Baroda line; advocacy of this system by Colonel Kennedy, which proved to be very costly, *Danvers* 2911–2917——Lapse of many years without completion of the Bombay station of the line, *ib.* 2918–2924.

Bombay Dockyard. Considerable expenditure in connection with the dockyard at Bombay, *Harrison* 5247–5262. 5278. 5293, 5294. 5300–5302.

Bombay (Governor's Residences). Several residences of the Governor of Bombay; considerable outlay for furniture, &c., *Harrison* 4469–4479——Belief that there are four residences altogether, *ib.* 4469.

Particulars in connection with an expenditure of 156,000 *l.* for a residence for the Governor of Bombay near Poonah; strong and frequent remonstrance by the Governor General in Council whilst this expenditure was being incurred, although it was not positively stopped, *Strachey* 7160–7169. 7238–7249——Receipt of 30,000 *l.* derived from the sale of the former Government House near Poonah, *ib.* 7163, 7164. 7167——Probability of the foregoing expenditure being exclusive of the cost of roads to the house; it is exclusive of cost of furniture, *ib.* 7167–7171.

Bombay Harbour Board. Reference to an item of 20,000 *l.* in the accounts for 1870–71 as being the amount of a debt due by the Old Bombay Harbour Board and remitted by Government, *Harrison* 5271, 5272. 5288–5292.

Bombay Harbour Defences. Payment of 84,954 *l.* on account of two iron-clad monitors for Bombay; total cost of these vessels, *Pears* 15–22——The cost of one vessel was about 110,000 *l.*, and of the other about 140,000 *l.*, that is, exclusive of armaments, *ib.* 17–19——A further charge of about 22,000 *l.* will close this account, *Seccombe* 22.

Explanation relative to the expenditure on account of two iron-clads for Bombay Harbour; arrangements as to the manning of these vessels, *Harrison* 5238–5246.

Particulars of the terms of service, and the pay, of officers and men in the two ships, *App.* 542, 543.

Bombay (*Local Expenditure*). Larger proportionate increase of charge for customs collection in Bombay than in Bengal, there having been an important advance since 1856–57 in prices and in salaries in the Bombay Presidency, *Harrison* 3792–3807. 3813–3819. 3835–3838——Inability of witness to account for the much larger proportionate expenditure under various heads in Bombay than in Madras; the enhanced prices in Bombay are probably one cause, *ib.* 4941–4946. 4950–4953.

Extravagance of the Government of Bombay more especially, *Right Honourable W. N Massey*, 8613.

See also *the Headings generally throughout the Index.*

Bombay Marine. See *Navy and Marine.*

Bombay (*Native Judges' Fund*). Complaint by Sir Seymour Fitzgerald as to the Supreme Government having seized the Natives Judges' Fund at Bombay (about 100,000 *l.*), which was required for the High Court of Judicature, *Hutton* 8569.

Bombay Port Fund. See *Elphinstone Company.*

Bombay (*Special Fund*). Explanations relative to the special fund at Bombay, the Government contributions thereto, and the receipts; excess of expenditure of 1,668,000 *l.* when the fund was brought to a close, *Strachey* 7172–7180——Assets still to be realised from the special fund, there being a great deal of land to be sold, *ib.* 7176, 7177——Expenditure of about 770,000 *l.* on reclamations at Bombay out of the special fund; outlay also on public offices, *ib.* 7177–7180.

Botanical Gardens. Charge of 11,470 *l.* in 1870–71 under this head, *Harrison* 4729–4731. 4742, 4743.

Bridges. Description of the mode of construction of the Government bridges in Mysore and of native bridges, much greater durability and economy of the latter, *Elliot* 3098–3106. 3161——Particulars relative to a bridge over the river Hemawutty, provided by the Public Works Department, which is a loss rather than a gain to the district, *ib.* 3107–3109. 3165–3169. 3244–3248——Comparative unimportance of bridges; much waste of expenditure thereon, *ib.* 3190–3208. 3244–3262. 3333–3335.

Obstacle to an extensive use of the plan of ferrying trains across rivers in lieu of building bridges, *Sir A. T. Cotton* 8544–8549——Great mistakes made in carrying out the construction of railway bridges, *ib.* 8548.

Exceptions taken by Colonel Sankey to the evidence of Mr. Elliot relative to native bridges; correction of the statements in question, *App.* 636, 637——Reply by Colonel Sankey to the statement that a useless bridge had been built over the Hemawutty river, *ib.* 637, 638.

British Indian Steam Navigation Company. Explanation relative to the postal contract with the British Indian Steam Navigation Company for the conveyance of letters to ports in the Persian Gulf, British Burmah, &c., *Harrison* 4110–4115. 4145–4148.

British Rule. Better condition of the people, to a limited extent, under British rule, in the non-regulation provinces more especially, *Elliot* 3175–3179——Diminished confidence of witness in the stability of British rule in India, owing to the unsatisfactory state of the finances, *ib.* 3460–3471. 3475. 3480, 3481.

Incomparably better position of India since the existence of the Indian debt than in the period before the British rule, *Strachey* 6955——Excellence of the administration as shown by the immense improvement in the condition of the country, *ib.* 7004–7006.

See also *Condition of the People.* *Debt of India.* *Expenditure.* *Mysore.* *Revenue.* *Taxation.*

Budget of India. Constant consultation of the Governor General by witness (as former Finance Minister) when preparing the annual budget, *Laing* 7435–7442.

Financial statement made by Sir Richard Temple in submitting the budget for British India for 1872–73, *App.* 489–505——Sundry tables and estimates containing details of receipts and expenditure, *ib.* 506–514.

Bullion. Explanation of a loss of 13,500 *l.* in 1870–71 on bullion sent to England, *Harrison* 5898, 5899.

Burmah (*British Provinces*). Large increase of customs revenue in British Burmah since 1856–57; considerable increase also in the charges, *Harrison* 3783–3787——Explanation of a nominal reduction of about 7,000 *l.* in the cost of civil courts in British Burmah since 1856–57, *ib.* 4793, 4794——Nominal reduction of charge in connection with the criminal courts, *ib.* 4914–4916——Revision of the police in the British Provinces; increase of cost from 56,870 *l.* in 1856–57 to 109,800 *l.* in 1870–71, *ib.* 5326–5331.

C.

Calcutta Dockyard. Question under consideration as to maintaining the dockyard at Calcutta, *Harrison* 5158, 5159.

Calcutta and South Eastern Railway. Instance in the case of the Calcutta and South Eastern Railway of the receipts having been unequal to the working expenses; indulgence shown to the company by Government, the deficit not having been deducted from the guaranteed interest, *Danvers* 1693, 1694. 1704–1710. 1811, 1812——Notice given by the company to Government of surrender of the line, in accordance with the terms of contract; repayment of the entire capital raised by the company, whilst the line is not profitable to Government, *ib.* 1693–1701——Disappointment of the company in Government not having established Port Canning, on which the success of the line depended, *ib.* 1812.

Sundry details relative to the origination, sanction, and working of the Calcutta and South Eastern (or Mutlah) Railway, the ultimate purchase of the undertaking by Government, and the great loss incurred; responsibility attaching to the Secretary of State for India (for the time being) rather than to the authorities in India for the guarantee and construction of this line, *Strachey* 6319–6338. 6346–6357. 6488–6496. 6509–6513. 6552–6556——Strong objection made by the Government of India to the Mutlah project, but without effect, *ib.* 6319–6323. 6332. 6354–6357——Failure of the line to pay its working expenses, the deficit as well as the guarantee having been made up by Government until the line was transferred, *ib.* 6327. 6488–6492.

Further statement with regard to the Mutlah project that a mistake was doubtless made by the Secretary of State, *Strachey* 6509–6512——Further reference to the Mutlah project as having involved objectionable and unnecessary expenditure, *ib.* 6733, 6734.

Closing of the Port of Mutlah adverted to, although in April 1864 the Secretary to the Government of Bengal stated that the success of the port was of vital importance to the commerce of Bengal, *Strachey* 7015——Denial of the accuracy of a statement by the promoters of the Mutlah Railway that nothing had been done by Government towards draining or improving the locality of the port, *ib.* 7016——Several grounds for the conclusion that in any case the port could not have succeeded; relative navigation of the Mutlah and of the Hooghly adverted to hereon, *ib.* 7017–7021——Unfavourable elevation of the land at Mutlah for the formation of a port; difficulty also as to water supply at Port Canning, these obstacles having probably been raised by the Government of India in reference to the guarantee to the railway, *ib.* 7022–7033.

Campbell, The Honourable George. Views of Mr. Campbell, Lieutenant Governor of Bengal, relative to the oppressive operation of the income tax, and its tendency to cause emigration to Nepaul; concurrence of witness in these conclusions, *Dacosta* 7980, 7981. 7987–7996.

Canals (*Irrigation*). See *Irrigation.*

Canals (*Water Communication*). Primary want of a complete system of water communication in India, in conjunction with a large extension of irrigation works, *Sir A. T. Cotton* 8380–8384——Complete success of water carriage; complete failure of railways, *ib.* 8383, 8384. 8405.

Great economy if there had been a canal instead of a railway from Delhi to Calcutta, whilst the former would carry a much greater quantity of merchandise than the latter, and at infinitely less cost, *Sir A. T. Cotton* 8384.

Explanation of various main lines of canal communication which may be carried out all over India, without being rendered impracticable by physical obstacles or special engineering difficulties, *Sir A. T. Cotton* 8428–8455——Facility of maintaining a speed of twenty miles an hour on the Ganges Canal and other irrigation canals, *ib.* 8462–8467. 8482–8484.

Better accommodation which may be afforded for passengers on canals than on railways, *Sir A. T. Cotton* 8468–8470——Adequacy of water carriage to meet all the requirements of the country, *ib.* 8474, 8475——Official communication made by witness to the Secretary of State on the subject of water carriage in India, *ib.* 8550, 8551.

Canals (*Water Communication*)—continued.

Further advocacy of water carriage as one of the chief wants of India; great economy and great efficiency as compared with railway carriage, *Sir A. T. Cotton* 8560. Steamboat canals would not have cost one-eighth that of the railways, and would have been infinitely more efficient, *ib*——Irrigation could be combined with navigation, so that the canals would be doubly beneficial, and would not involve any charge upon the public revenue, *ib.*

See also *Ganges Canal.* *Irrigation.* *Madras Irrigation and Canal Company.*

Candidates (*Civil Service*). Circumstance of there being no supervision over the Civil Service candidates during the interval in England before their final examination; allowance of 300 *l.* to each of these, *Seccombe* 1346–1355——*See* also *Examinations* (*Civil Service*).

Canning, Lord. Strong views of Lord Canning adverse to direct taxation in India, *Laing* 7474.

Capital. Great importance attached to the employment of English capital in the execution of works of improvement in India, *Strachey* 7013, 7014——Suggestion that it might be left to private capital to establish works of irrigation, &c.; examination hereon as to the probability of capitalists coming forward for this purpose, *Dacosta* 8217. 8227–8245——Check to the introduction of private capital into India by the system of government guarantee, *ib.* 8282–8286.

Carnatic (*Native Princes*). Explanation of a charge of 87,000 *l.* in 1870–71 for stipends &c., to native princes, under the head of Carnatic; pension of 30,000 *l.* a year now paid to Azim Jah, Prince of Arcot, *Sir J. W. Kaye* 7294–7296——Decreasing amount of the payment to the Carnatic family and dependents, *ib.* 7296——In 1867 the Carnatic stipendiaries cost 107,700 *l.*, *ib.*

Carnatic Railway. Recent guarantee to the Carnatic Railway; impression that the Government of India was not consulted in the matter, *Strachey* 6777–6780.

Cash Balances. Large cash balances available for State railways and irrigation works, *Seccombe* 1479. 1484–1488——Necessity of very large cash balances, the present balances in England being about 2,500,000 *l.*, and the interest received being 2 per cent, *ib.* 1542–1545. 1562.

Increase of about 3,000,000 *l* in the cash balances of the Treasury of India in 1870–71, accounted for by receipts from loans during the year, *Harrison* 6147–6156——Increase of nearly 4,000,000 *l.* in the cash balances in the Treasury in 1870 as compared with 1862, *Laing* 7453 7456——Advantage of keeping large cash balances in India in order to meet the fluctuations in the opium revenue, *ib.* 7505, 7506——Statement of the several local balances and items constituting the cash balances in India, *ib.* 7763–7766.

Explanations by Sir R. Temple relative to the cash balances at the end of the year 1871–72, and the estimated balances at the end of 1872–73; necessity of large balances being maintained, *App.* 499–502. 504.

Central Provinces. Large portion of the refunds of assessed taxes which consists of the return of a local tax on trades in the Central Provinces, *Gay* 3502, 3503; *Harrison* 3503, 3504. 3512–3516——Explanation of a nominal reduction of 10,000 *l.* in the cost of the Civil courts since 1856–57, *Harrison* 4792——Causes of the large increase of cost in connection with the criminal courts, *ib.* 4907–4913——Threefold increase in the police force since 1856–57; saving by the abolition of military or semi-military forces, *ib.* 5315–5325——*See* also *Customs.* *Land Revenue.*

Certificate Tax. Statement showing the number of persons assessed, and the amounts realised, in respect of the certificate tax, in 1868–69, exclusive of deductions from the salaries of Government servants, *App.* 656——Number of persons employed in the assessment of the certificate tax, and allowances paid to them in 1868–69, *ib.* 657——Statement showing the number of Government servants from whose salaries deductions have been made on account of the tax, *ib.* 658, 659.

Ceylon. Expediency of Ceylon continuing to form a separate administration, instead of being added to India, *Right Honourable W. N. Massey* 8778, 8779.

Chanda Coal District. See *Wurdah Valley* (*State*) *Railway.*

Ceylon Telegraph. Loss of about 3,000 *l.* a year in working the Ceylon telegraph, *Robinson*, 4207–4209.

Chaplains. Large increase of expenditure on account of the increased number of chaplains in Oude, the Punjaub, &c., *Harrison*, 5567–5572——Maintenance of the staff of chaplains chiefly for the military, *ib.* 5573. 5587–5591. 5595–5599. 5612–5614——Statement of the salaries and pensions of the chaplains, *ib.* 5582–5584——Several Presbyterian

Chaplains—continued.

terian chaplains in the three Presidencies, *Harrison* 5600-5603——Restriction upon the chaplains engaging in missionary work, *ib.* 5620. 5625, 5626.

Statement showing the places at which chaplains were stationed according to the Indian Army Lists of January 1872, with the number of European troops at each station, *App.* 667-669.

Charities. Explanation of an increased charge of 18,000 *l.* in India in 1870-71 for donations for charitable purposes, *Harrison* 5904-5912.

Chesney, Lieutenant Colonel George, R.E. (Analysis of his Evidence.)—Is President of the Indian Civil Engineering College, at Cooper's Hill, 2370, 2371——Purchase of the college and estate, including 120 acres of land for 55,000 *l.*, there having been a further expenditure of 28,000 *l.* for professors' residences and other buildings, and about 10,000 *l.* being still required for furniture, fittings, &c., 2372-2376. 2399-2401——Admission of the first batch of fifty students by open competition in July 1871, the accommodation being equal to 100 students, and a further examination for fifty more students having being announced for July 1872, 2377-2380——Contemplated increase of accommodation, so as to provide for 150 students altogether, 2380-2383——Course of three years' study of the students, 2380.

Total of 18,988 *l.* as the estimated annual cost of the college; various items comprised in this amount, 2384-2390. 2399-2410——Provision made in the estimate for fees paid with students when placed as pupils with a civil or mechanical engineer, for eight months, before they are sent to India after a final test examination at the college, 2386. 2392-2395——Annual charge of 150 *l.* for each student in residence, representing a nominal receipt of 22,500 *l.*, 2391. 2396——Option of the students, on passing the entrance examination, to get their education elsewhere, provided they pass their final examination at the college, 2396, 2397.

Impression that the Government of India suggested that forty men should be sent out annually, the Secretary of State preferring to fix the number at fifty, 2398——(*Mr. Thornton.*) Belief that fifty students were suggested in the first instance by the Government of India, *ib.*——(*Colonel Chesney.*) Examination upon the question whether a considerable annual loss is not likely to accrue from the college, and whether the fees and expenses for examiners will not be much greater than is assumed by witness, 2399-2410. 2435-2442.

Salary of 420 *l.* a year to be paid to the young men on entering the service; somewhat lower salary before the establishment of the college, but for lower qualifications, 2411, 2412——Impracticability of obtaining at any existing institution in England the instruction in surveying, &c., which is being provided at Cooper's Hill; great importance of the college in this respect, 2413-2417. 2427-2431——Object of the college to assist the policy of carrying out public works in India by direct State agency; decided approval of such policy, 2418-2421——Very unsatisfactory mode of recruiting the Public Works staff in India, 2418.

Demand in India for a competent and large staff in the Public Works Department; an annual supply of fifty young men from Cooper's Hill will be none too many, 2419. 2422-2426. 2456-2458. 2485-2497. 2542——Experience of witness from 1864 to 1870 as Government auditor of the Guaranteed Railway and Irrigation accounts, 2421——Advantage of a general examination and of subsequent training in a Government College rather than of direct examination for appointments by open competition, whereby a large proportion of specially trained candidates must be rejected, 2431-2434. 2447——Outline of the studies and examinations at the college at Cooper's Hill; high standard of industry required, 2436-2439. 2443. 2448. 2459. 2523-2531.

Large proportion of the candidates who come direct from public schools, 2444——Admission of young men from seventeen to twenty-one years of age; impression that the maximum is rather too high, 2445. 2466——Disadvantages of the option to reside away from the college, and to complete the education elsewhere, 2448, 2449.

Information relative to Roorkee College, the inducements given to natives to enter the college, and the relative prospects and stipends of natives who enter the Public Works Department from the college, and of Europeans from Cooper's Hill, 2450. 2463. 2477. 2551 *et seq.*——Grounds for the conclusion that the natives are not fitted for the higher engineering appointments, though they are largely employed in subordinate posts; single instance of a native who has made a mark as an engineer, at the present time, 2450-2477. 2569-2572——Impression that in Bombay and Madras sufficient encouragement has not been given to the employment of natives as engineers in the Public Works Department; due encouragement in Bengal, 2462, 2463. 2473-2477. 2567, 2568——Evidence to the effect that no great engineering works have been constructed by natives, 2467-2472. 2532-2541. 2553-2555.

Improbability of many of those who have passed the first examination for Cooper's Hill College going into other pursuits, and not being available for the final examination; large

Chesney, Lieutenant Colonel George, R.E. (Analysis of his Evidence)—*continued.*
Large supply of engineer officers irrespectively of the college, 2478–2480. 2501–2514——Explanation and approval of the final examination as a test examination; improbability of the test being degraded, 2481, 2482. 2498–2519——Large failure of masonry works on the railways, &c., attributed very much to imperfect workmanship; character and extent of the subordinate superintendence adverted to, 2483–2489. 2545–2550.

Laudable desire to economise by which the public works officers have always been actuated, 2485——Statement as to the department being greatly under-officered at the present time, 2485. 2490–2497——Liability to peculation by employing officers of low grade in charge of canals, &c. 2485–2489. 2495–2497——Moderate salaries in the Public Works Department, 2493.

Inducements at Cooper's Hill in the shape of scholarships and prizes, 2521, 2522——Due attention paid to the study of water and of hydraulics, 2524–2531——Similar test examination of those educated at the college and of those educated elsewhere after the first examination, 2543, 2544——Examination upon the circumstance of natives having no special inducements to compete for the college, whilst they are under the disadvantage and expense of travelling from India for the purpose; advantage on the other hand of the facilities to natives at Roorkee College, 2551 *et seq.*——Grounds for the conclusion that natives are not unfairly treated in view of the enhanced salaries given to Europeans as engineers, &c; different terms and qualifications in each case, 2557 *et seq.*——Witness is, however, strongly of opinion that the natives do not receive their proper share of public employment, 2564——Readiness evinced by the Government of India to employ natives in civil engineering work, and to promote them according to their merits, 2618, 2619

Opinion that but for the guarantee system (and this was its only merit) the scheme of railways in India would never have been carried out at the time, 2620, 2621. 2639, 2640. 2642, 2643. 2646——Several respects in which the guarantee system was much more costly and wasteful than if the construction had been undertaken by Government, 2622–2625——Almost total absence of control over the railway engineers in the first instance, the supervision generally having been very lax, 2623–2625——Very imperfect system of audit, 2623.

Statement as to 4,000,000 *l.* of expenditure on the East Indian Railway having been disallowed, because it was spent without previous sanction, inasmuch, however, as under the contract this expenditure was entitled to guaranteed interest, it was eventually allowed to form part of the capital account, 2623. 2626–2633——More irregularity in the accounts of the East Indian than of the other railways, 2630——Amended system now in force whereby all railway expenditure must have previous sanction, and is submitted to a searching audit, 2633.

Unfinished state of several of the lines, and of the stations, so that the capital guaranteed has necessarily gone on increasing; difficulty in calculating the total increase on this score, 2634–2638——Conclusion that there should be no further guarantees, the disadvantages being greater than the advantages, 2641–2644——Opinion that the best policy of the Government would be to buy up the railways as soon as they can, 2645. 2647.

China (Consular Establishment). Item of 44,962 *l.* paid in 1870–71 as one-third share of the consular establishments in China, the Imperial Government paying two-thirds; opinion that the payment by India is not excessive, considering the immense trade between India and China, *Seccombe* 920–940.

China Wars. Undue charge thrown upon India in respect of some of the China wars, *Laing* 7518. 7678.

Choheedaree Tax (Bombay). Explanation that this is not a new tax, *Strachey* 7400–7403——Belief that the tax was first imposed in December 1870, under an Act passed in 1855–56, *Dacosta* 8004——The tax is levied at the option of the assessor on the rental, or on the general circumstances of the taxpayers, *ib.* 8005. 8007. 8014, 8015——The tax is for the payment of watchmen, but is not always so spent, *ib.* 8006. 8022.

Cinchona. Charge of 478 *l.* in respect of the cinchona plants obtained from Peru and sent to India, *Seccombe* 1432–1434.

Civil Buildings. Slight variation in the annual charge in the period 1867–70 for repairs of civil buildings, *Strachey* 6265–6267——Large decrease in 1870 as compared with 1867 in the charge for new civil buildings; way in which the new buildings are selected out of the extensive demands put forward, *ib.* 6268–6272.

Civil Charges. Data for the conclusion that the real cause of the difficulty in making the income cover the expenditure has arisen, not from public works, but from the increase of civil charges; statistics hereon showing an increase of such charges to the amount of 6,110,000 *l.* between 1861–62 and 1870–71; *Strachey* 7255–7259——Increased activity of Government in its various branches owing to which the large increase of civil charges has arisen; valuable results generally from this increase of charge, *ib.* 7261, 7262.

Civil Charges—continued.

Explanations by Sir R. Temple in connection with the estimated increase of 1,254,300 *l.* in the Civil charges in 1872-73; *App.* 496, 497.

Return showing the proportion borne by the total Civil expenditure to the total income in the Civil department under each local Government, *App.* 641.

See also *the Headings generally throughout the Index.*

Civil Courts (*Law and Justice*). Total increase of 228,000 *l.* in the charge for the Civil Courts since 1856-57; particulars of the causes and amount of increase or decrease in each Presidency or Province, *Harrison* 4789-4802. 4880-4902——Increase from 198,000 to 340,000 *l.* in the cost of Civil courts in Bengal since 1856-57; this is caused chiefly by the increased salaries, and by a new charge for service of processes, *ib.* 4795-4802.

Information relative to the charge in 1856-57 and in 1870-71 on account of the Civil and sessions courts in the North Western Provinces, Madras, Bombay, &c.; causes of the large increase in the North Western Provinces and Bombay, more especially, *Harrison* 4880-4888——Increase from 97,000 *l.* in 1856-57 to 137,000 *l.* in 1870-71 in the charge for the Civil and sessions courts in Bombay, *ib.* 4886, 4887——Relative receipt from fees in the Civil courts in 1856-57 and in 1870-71; increase of 1,461,000 *l.*, *ib* 4896-4902.

See also *Law and Justice.*

Civil Engineers. See *Cooper's Hill Engineering College. Natives. Public Works. Roorkee College.*

Civil Service. See *the Headings generally throughout the Index.*

Civil Stores. Charge of 16,554 *l.* in England in 1870-71 for miscellaneous Civil stores; a large proportion of these consist of currency notes sent out for circulation, *Hon. G. C. Talbot* 1163-1165.

Clive Fund. Obligation as to the continuance by Government of the pensions paid out of Lord Clive's fund; this charge will gradually die out, *Pears* 757-762.

Clothing of Troops. Discontinuance of a former charge for clothing of the depôts of British regiments serving in India, *Pears* 407, 408——Making-up of clothing in India, the materials being sent out; how these are procured and examined, *Hon. G. C. Talbot* 1167-1170——Charge of 160,000 *l* in 1870-71 for clothing for European troops in India, and of 25,000 *l.* for native troops, *Bedford* 1179. 1210-1212.

Coal. Information relative to the use, respectively, of coal, wood, and coke as fuel for the railway engines; question considered more especially whether by the increased use of native coal, or of patent fuel, the large annual consumption of wood from the forests might not be obviated, *Danvers* 1989-2018——Inferior character of the Burdwan coal, *ib.* 2011-2013——Steps taken to obtain supplies from the Nerbudda coal fields, the quality being considered good, *ib.* 2014-2018.

Coinage. See *Copper Coinage. Gold Coinage. Mints. Silver Coinage.*

"*Colaba" Light Ship* (*Bombay*). Special charge of 13,500 *l.* in the accounts for 1870-71 in respect of this vessel, *Harrison* 5275, 5276; *Gay* 5277.

Collection of Revenue. Expenditure of 3,089,682 *l.* in India in 1870-71 in the collection of the land revenue, the forest revenue, and the revenue from spirits and drugs, *Harrison* 3520, 3521——Expenditure of 84,900 *l.* in the remuneration of native collectors in Burmah and Assam, by a per-centage on the collections, *ib.* 3698-3700——Expenditure of 186,991 *l.* in the collection of the Customs revenue, *ib.* 3776, 3777.

Explanation relative to the mode of collection of the revenue, and the staff to be employed, if the revenue were divided under Imperial and local heads; doubt as to any conflict of jurisdiction by retaining the local collection of Imperial revenue in Imperial hands, *Right Hon. W. N. Massey* 8719-8730. 8804-8808.

See also *Customs. Income Tax. Land Revenue. Local Taxation and Finance. Opium. Salt Tax.*

Colleges. Charge of 85,760 *l.* for colleges in 1870-71, as against 41,361 *l.* in 1856-57; large increase of colleges during the period, *Harrison* 5458-5464.

Colonels' Allowances (*Indian Army*). Explanation relative to the charge for colonels' allowances, and the large increase expected therein, *Pears* 750. 763-772. 775-779.

Colonels (*British Regiments in India*). Item of 55,000 *l.* in 1870-71 in respect of the pay of the honorary colonels in England of British regiments in India; consideration of objections to this charge upon the revenues of India, *Pears* 243-247. 275-283.

Commander-

Commander-in-Chief (India). Charge against army expenditure in respect of the services of the commander-in-chief as member of the supreme council, *Harrison* 4480–4485.

Views of Lord Sandhurst as to the economy feasible in the military administration, and as to the expediency of concentiation under one commander-in-chief, *Dacosta* 8033–8035.

Commissariat. Want of better control over the commissariat expenses, which are very great, *Dacosta* 8219.

Compassionate Allowances. Authority and discretion of the Secretary of State with respect to the grant of compassionate allowances, *Seccombe* 146. 149–151.

Condition of the People. Better condition of the people under British rule, up to a certain extent; illustration of this in the non-regulation provinces, *Elliot* 3175–3179——Wonderful increase of prosperity concurrently with the development of public works since 1854, *Strachey* 6956–6959. 7004–7006——Proofs of immense improvement in the condition of the country, and testimony therein to the excellence of the administration, *ib* 7004–7006——Great rise of wages as well as of prices in India in recent years, the people being on the whole very much better off, *Laing* 7668, 7669. 7730. 7774–7777——Enormous progress of the country since the time of the Mutiny, *ib.* 7669. 7730.

See also *British Rule. Cultivation of the Soil. Exports. Famines. Taxation.*

Convict Labour. Varying practice as to the mode of account for the labour of convict prisoners employed on roads or other public works, *Harrison* 5036–5040——Discontinuance of the practice of sending convicts to the Straits Settlements, the charge under this head in 1870–71 being a final one, *ib.* 5042.

See also *Gaols Port Blair.*

COOPER'S HILL ENGINEERING COLLEGE:

1. *Accommodation, and Number of Supply of Students.*
2. *Cost.*
4. *Examinations and Course of Study.*
4. *Question of Facilities to Natives.*

1. *Accommodation, and Number and Supply of Students.*

Admission of the first batch of sixty students by open competition in July 1871, the accommodation being equal to 100 students, and a further examination for fifty more students having been announced for July 1872, *Chesney* 2377–2380——Contemplated increase of accommodation so as to provide for 150 students altogether, *ib.* 2380–2383——Impression that the Government of India suggested that forty men should be sent out annually, the Secretary of State preferring to fix the number at fifty, *ib.* 2398——Belief that fifty students were suggested in the first instance by the Government of India, *Thornton* 2398.

Large proportion of the candidates who come direct from public schools, *Chesney* 2444——Admission of young men from seventeeen to twenty-one years of age; impression that the maximum is rather too high, *ib.* 2445; 2446——Improbability of many of those who have passed the first examination for Cooper's Hill College going into other pursuits, and not being available for the final examination; large supply of engineer officers respectively of the college, *ib.* 2478–2480. 2501–2514——Inducements at Cooper's-hill in the shape of scholarships and prizes, *ib.* 2521, 2522.

2. *Cost:*

Purchase of the college and estate, including 120 acres of land, for 55,000 *l.*, there having been a further expenditure of 28,000 *l.* for professors' residences and other buildings, and about 10,000 *l.* being still required for furniture, fittings, &c., *Chesney* 2372–2376. 2399–2401——Total of 18,988 *l.* as the estimated annual cost of the college; various items comprised in this amount, *ib.* 2384–2390. 2399–2410——Annual charge of 150 *l.* for each student in residence, representing a normal receipt of 22,500 *l.*, *ib.* 2391. 2396.

Examination upon the question whether a considerable annual loss is not likely to accrue from the college, and whether the fees and expenses for examiners will not be much greater than is assumed by witness, *Chesney* 2399–2410. 2435–2442.

3. *Examinations and Course of Study:*

Course of the three years' study of the students, *Chesney* 2380——Provision made in the estimate for fees paid with students when placed as pupils with a civil or mechanical engineer, for eight months before they are sent to India, after a final test examination at the college, *ib.* 2386, 2392–2395——Option of the students on passing the entrance examination to get their education elsewhere provided they pass their final examination at the college, *ib.* 2396, 2397.

Impracticability of obtaining at any existing institution in England the instruction in surveying, &c., which is being provided at Cooper's Hill; great importance of the college

Cooper's Hill Engineering College—continued.

3. *Examinations and Course of Study*—continued.

in this respect, *Chesney* 2427–2431——Advantage of a general examination, and of subsequent training in a Government College rather than of direct examination for appointments, by open competition, whereby a large proportion of specially trained candidates must be rejected, *ib.* 2431–2434. 2447.

Outline of the studies and examinations at the college; high standard of industry required, *Chesney* 2436–2439. 2443. 2448. 2459. 2523–2531——Disadvantages of the option of students to reside away from the college, and to complete their education elsewhere, *ib.* 2448, 2449.

Explanation and approval of the final examination as a test examination; improbability of the test being degraded, *Chesney* 2481, 2482. 2498–2519——Due attention paid to the study of water and of hydraulics, *ib.* 2524–2531——Similar test examination of those educated at the college, and of those educated elsewhere after the first examination, *ib.* 2543, 2544.

4. *Question of Facilities to Natives:*

Examination upon the circumstance of natives having no special inducements to compete for the college, whilst they are under the disadvantage and expense of travelling from India for the purpose; advantage on the other hand of the facilities to natives at Roorkee College in India, *Chesney* 2551 *et seq.*

Grounds for the complaint by the natives of India against the establishment and cost of the Engineering College in this country, *Hutton* 8572.

Coorg, ex-Rajah of. Items paid to members of the family of the ex-Rajah of Coorg; total of 3,057 *l.* paid in India, the original pension (in 1834) having been 6,000 *l.*, *Sir J. W. Kaye* 7306–7308.

Copper Coinage. Great reduction of copper coinage; large profits attaching to such coinage, *Harrison* 3988, 3989. 4012 4015. 4025–4052.

Cossipore Gun Foundry. Steps being taken to develope the Cossipore Gun Foundry, *Bedford* 1281.

Cost of Administration. See *the headings generally throughout the Index.*

Cotton, Lieutenant General Sir Arthur Thomas, K.C.S.I. (Analysis of his Evidence.)—Long service of witness in the Public Works Department in India: he left the country six years ago, 8287–8290——His first principal work was the irrigation of Tanjore in 1828; 8291, 8292——Projection also by witness of the Godavery Delta Works, which came under his charge in 1845; 8293–8296——Information relative to the cost, operation, and financial results of these works; immense increase in the annual revenue of the irrigated district, irrespectively of the receipts for water rates, 8297–8310. 8324–8326——Great difficulty in obtaining the money required for the full completion of the works, so as to bring a million acres under irrigation instead of half that quantity, as hitherto; supply recently of 100,000 *l.* for the purpose of completion, 8311–8314. 8403–8405——Facility, on the other hand, in getting immense sums for railways which do not pay, 8311.

Particulars relative to the irrigation works in the delta of the Kistna, and the exceedingly successful effect thereof, as shown by the large increase of revenue from the district, 8315–8328——Comparison between highly irrigated and moderately irrigated districts as regards the revenue therefrom in 1843–44 and in 1870–71; very large increase in the former case contrasted with the small increase in the latter case, 8320–8332.

Intimate acquaintance of witness with the Godavery Navigation Works, though he did not project nor execute them, 8333–8338——Expenditure of about 700,000 *l.* on these works, another 100,000 *l.* being required in order to give 400 miles of navigation, 8339——Sundry details relative to the efficiency of the works, and their value for irrigation as well as navigation; conviction that a further outlay of about 200,000 *l.* would make the works among the most valuable in India, 8340–8363——Results hitherto of the navigation of the Godavery; small draught of water required for the peculiar boats in use, 8354–8363

Facility of accounting separately for the water-rate levied for irrigation, 8364–8370 Belief that irrigation works may generally be made much more than self-supporting, 8371, 8372——Great readiness of the natives of Madras to pay for the water: belief that by proper arrangements the cultivators of Bengal would also be desirous to use the water at a proper rent, 8373–8379. 8385–8388.

Primary want of a complete system of water communication in India, in conjunction with a large extension of irrigation works, 8380–8384——Total failure of the railways in every essential particular, whilst water carriage has been a complete success, 8383, 8384. 8405–8419——Great economy if there had been a canal instead of a railway from Delhi to Calcutta, whilst the former would carry a much greater quantity of merchandise than the latter, and at infinitely less cost, 8384.

Belief

Cotton, Lieutenant General Sir A. T., K.C.S.I. (Analysis of his Evidence)—*continued.*

Belief that in Orissa irrigation works are wanted every year, although there may be a large rainfall, 8385-8388——Satisfactory financial results of all the works carried to completion in Madras, 8389. 8405——Correction of certain statements as to the failure of the Madras Irrigation Company's works; prospect of a large revenue in the current year, 8390-8399——Large excess of the estimated cost of these works; circumstance of its having been found difficult to raise the extra capital required for their completion, 8398-8402.

Consideration of the comparative returns from the East Indian Railway and from the Ganges Canal; conclusion as to the higher interest from the latter, although it was badly projected, and cost much more than it should have done, 8407-8419.

[Second Examination.]—Further statistics as to the much larger revenue yielded by irrigated than by unirrigated or partly irrigated districts, 8420-8426——Statement in further support of the conclusion as to the great value of the Upper Godavery Works; economy as compared with railway communication, both in original construction and in working, 8426, 8427.

Explanation of various main lines of canal communication which may be carried out all over India, without being rendered impracticable by physical obstacles or special engineering difficulties, 8428-8455—— Cheapness of canal irrigation as compared with well irrigation, 8456——Much greater manuring properties of river water than of well water, *ib.*——Correction of certain statements as to the objectionable character of the water of the Ganges for irrigation purposes, and as to the effect of the canal in reducing the water in the wells, 8457-8461.

Facility of maintaining a speed of twenty miles an hour on the Ganges Canal and other irrigation canals, 8462-8467. 8482-8484——Better accommodation which may be afforded for passengers on canals than on railways, 8468-8470 ——Successful competition of the Ganges Canal with the East Indian Railway, in the conveyance of goods traffic, 8470-8473 ——Adequacy of water carriage to meet all the requirements of the country, 8474, 8475——Imperfect navigation of the Ganges Canal, there having been several mistakes in its original projection, 8476. 8479, 8480. 8485-8488 ——Great advantage of the East Indian Railway, by reason of its guarantee, over the canal, 8476, 8477——Small return from this railway, taking the cost of the land, &c., into consideration, 8478, 8479.

Examination in detail with reference to the Godavery Navigation Works, witness strongly insisting upon the great importance of their completion, and denying the accuracy of various statements by General Strachey depreciatory of the works, 8489-8534——Very small return on the Great Indian Peninsula Railway, 8502——Opinion that there should be a profit on the navigation of the Indus if properly managed, 8518-8524 — Much better return from the steam-boats on the Indus than from the Scinde, Punjab, and Delhi Railway, 8522-8527.

Inaccuracy of a statement that there are not more than 50,000 acres of cultivated land on the navigable part of the Godavery, and that the population up the river is very scanty, 8529-8534——Expediency of a canal in the Indus Valley rather than a railway, 8535-8539—— Advantage of a canal on military grounds as being far more defensible than a railway, 8539-8543——Obstacle to an extensive use of the plan of ferrying trains across rivers, in lieu of building bridges, 8544-8549 — Great mistakes made in carrying out the construction of railway bridges, 8548.

Official communication made by witness to the Secretary of State on the subject of water carriage in India, 8550, 8551——Vital mistake in laying out the Madras Railway, as it passes by all the principal towns at a considerable distance from them; enumeration of these, 8552-8562——Further advocacy of water carriage, as one of the chief wants of India; great economy and great efficiency as compared with railway carriage, 8560.

Cotton. Charge of 500 *l.* in 1870-71 on account of cotton experiments at Manchester, just completed, *Seccombe* 1411.

Large increase in the production of cotton per acre in Khandeish owing to recent improvements, *Ashburner* 2133, 2134, 2208——Fluctuating crops of cotton, the supply being stimulated by high prices, *ib.* 2170-2172——Information in connection with the ginning and packing of the cotton, and the frauds and adulteration practised; successful opposition by the Bombay merchants to a Bill introduced for the prevention of fraud, *ib.* 2173-2182.

Importance of cotton being conveyed as cheaply as possible; competition with American cotton adverted to hereon, *Strachy* 7863-7870.

Council of India. Information relative to the attendance of the Members of the Council; this is discretionary, and no account is kept of the attendances, *Seccombe* 850-875——Meeting of the Council once a week; frequent meeting also of the committees, *ib.* 850-852. 865-872.

Council of India—continued.

Grounds for the conclusion that, as regards supplies of stores from England, and executive duties generally in England, there should be an executive head who should have a specific responsibility; want of concentration in this respect under the present system and working of the Indian Council, *Strachey* 6807–6819. 6826–6835——Contemplated continuance of the system of consultation of the Members of the Council upon questions of policy and finance, *ib.* 6807–6814.

Frequent representations made by the Secretary of State in Council relative to the finances (when witness was in India); direct control exercised from home over the financial policy and the military expenditure, &c., *Laing* 7485–7489. 7507, 7508. 7514–7517——Statement that practically the existence of the Council did not affect the action of the Indian authorities relative to questions of expenditure, *ib.* 7487, 7488——Explanation that witness considers the Council at the India Office a very useful adjunct to the Secretary of State, though the former cannot interfere much in detailed questions of expenditure in India, *ib.* 7685–7687.

Statement showing the names of the Members of the Secretary of State's Council who have recorded dissents from orders directing or sanctioning expenditure since the passing of the Act of 1858; also the subject of expenditure in each case *App.* 702.

Number of members present at each meeting of the Council in January and February 1872, *App.* 703.

Councils (*India*). Explanations relative to the charges for the Supreme and Legislative Councils at Calcutta and for the Councils at Madras, and at Bombay, *Harrison* 4433–4449. 4497.

Counsel (*India Office*). Salary of 500 *l.* a year to a standing counsel, who is also paid by fees for work done; recent change in this arrangement, *Seccombe* 882. 883. 888, 889. 894–898.

Courts of Law. See *Law and Justice.*

Criminal Courts. Increase from 568,000 *l.* to 840,000 *l.* in the expenditure for criminal courts, between 1856–57 and 1870–71, *Harrison* 4903, 4904——Particulars as to the increase in the items of salaries, establishments, &c., in the criminal courts in the several presidencies and provinces in 1870–71 as compared with 1856–57, *ib.* 4905–4936.

Increase of over 50,000 *l* since 1856–57 in connection with criminal courts in Bengal; particulars hereon, *Harrison* 4916–4922——Explanation in connection with an apparent increase of cost of 30,000 *l.* in connection with criminal courts in the North Western Provinces, *ib.* 4923, 4924——Particulars relative to an increase from 78,000 *l.* to 140,000 *l.* in respect of criminal courts, *ib.* 4925–4928.

Explanations relative to an increase of about 21,000 *l.* in the cost of criminal courts since 1856–57 in Madras, *Harrison* 4929–4933——Information on the subject of the increase from 106,000 *l.* to 157,000 *l.* in the cost of criminal courts since 1856–57 in Bombay, *ib.* 4934–4936.

See also *Law and Justice.*

Cultivation of the Soil. Very small produce obtained from the land in India, owing mainly to the want of manure, and to the ignorance and poverty of the cultivators; consideration more especially of the difficulties as to manure supplies, though a large portion of the manure being used as fuel, *Ashburner* 2135–2152. 2164–2171. 2183–2186. 2194–2199. 2204–2205——The present production is probably not more than one-fourth what the land might produce, *ib.* 2142. 2164–2169. 2221——Fertility generally of the soil, if there were only proper culture, *ib.* 2164–2169. 2221——Very good system of rotation of crops, *ib.* 2166. 2170——Doubt as to any general improvement in cultivation concurrently with the increase of area cultivated, *ib.* 2206–2209.

Examination in support of the conclusion that the natives have very little to learn from Europeans in the matter of agriculture, *Elliot* 3113–3115. 3170–3174. 3180–3225. 3263–3269. 3318–3326. 3340, 3341——Inappreciable loss by using the manure as fuel, the ashes being utilised on the soil, *ib.* 3115, 3116. 3210–3213. 3408, 3409——Inaccuracy of statements as to the fertility of the soil of India; it is on the whole one of the poorest countries in the world, *ib.* 3234–3239. 3301–3315. 3410, 3411——Entire dissent from the opinion that the present productions of the country might be increased fourfold, *ib.* 3410, 3411.

See also *Cotton.* *Irrigation.* *Model Farm* (*Khandeish*). *Sugar.*

Currency. See *Copper Coinage.* *Gold Coinage.* *Paper Currency.* *Silver Coinage.*

Currency Department. Charge of 23,334 *l.* in 1870–71 for the Currency Department, which has been established since 1856–57, *Harrison* 4659–4665.

Customs. Larger proportion of customs taxation borne by Europeans than by Natives, *Ashburner* 2284–2286.

Explanations

Customs—continued.

Explanations relative to the customs revenue, and the cost of collection, in each presidency or province in 1856-57 and in 1870-71; largely increased cost, owing chiefly to increased establishments, the revenue, however, having increased in an equal ratio, *Harrison* 3776-3838——Total of 186,991 *l.* as the cost of collection of the customs revenue in 1870-71, *ib.* 3776, 3777.

Reduction of customs charge at Madras owing to the reduced salaries of the collector and deputy collector, *Harrison* 3788-3791——Larger proportionate increase of customs charge for collection in Bombay than in Bengal; important advance of prices and of salaries in Bombay adverted to as a main cause of such increase, *ib.* 3792-3807. 3813-3819. 3835-3838——Larger number of ports in Bombay than Bengal which require to be watched, *ib.* 3807. 3838.

Small customs revenue in the Central Provinces, the collection being undertaken by the Salt Establishment, small revenue also in the North Western Provinces, there being no charge, *Harrison* 3808, 3809. 3826-3828.

More responsible position of the Commissioner of Customs at Bombay than of the Collector at Calcutta; salary of each officer, *Harrison* 3810-3812——Explanation as to the large drawback at Bombay on re-exported goods, *ib.* 3822-3825——Charge against customs of the entire expense of the office of Commissioner of Customs at Bombay, although the establishment for salt and customs is under the same commissioner, *ib.* 3829, 3830.

Approval of an increase of customs or import duties, as an alternative for the income tax; feeling of the people of India to this effect, *Laing* 7475-7480. 7490-7493. 7599-7605.

Statement by Sir R. Temple, in explanation of the estimate of 2,570,000 *l.* as the customs revenue in 1872-73, *App.* 494, 495.

D.

Dacosta, John. (Analysis of his Evidence.)—Long experience of witness as a merchant in Bengal; he has paid much attention to various branches of Indian finance, 7965-7971——Evidence in support of the conclusion that the income tax falls with the greatest severity upon the class of ryots and agriculturists, whom it was not intended to touch; that great extortion, evasion, and oppression are produced by the tax and its assessment, and that widespread discontent is the result, 7972-7999. 8021——Assessment of large numbers not assessable by law, 7975-7977. 7982.

Views of Mr. Campbell, Lieutenant Governor of Bengal, relative to the oppressive operation of the income tax, and its tendency to cause emigration to Nepaul, concurrence of witness in these conclusions, 7980, 7981 7987-7996——Strong statement by Mr. Inglis, confirmed by Sir William Muir, relative to the great oppression and extortion in applying the tax in the North Western Provinces, 7984-7986——Belief that it is impracticable to assess the tax properly; if it were, the tax might not be oppressive, 7995-7997.

Grounds for the conclusion that the great number of new local taxes, and the mode of assessing such taxes, as the chokeedaree tax, have led to much discontent and irritation in the native mind, 8000-8025. 8199-8202——Extortion and irritation in connection with proposals or rumours of new taxes, though not really imposed, 8009-8012——Feeling among officials that the road cess would practically fall entirely on the ryots, 8017, 8018—— Uncertainty existing as to the mode of application of local taxes, 8022, 8023——Way in which the decentralisation scheme will have a direct effect in increasing local taxation, 8026-8029.

Great increase of taxation generally, it being essential to effect means of retrenchment, 8030-8032——Views of Lord Sandhurst as to the economy feasible in the military administration, and as to the expediency of concentration under one Commander in Chief, 8033-8035——Room for economy also in the item of transport of troops; expediency of investigation on this subject, 8033. 8036. 8222-8226——Instances of delay and waste under the system of indenting for stores through the Secretary of State; unduly large payment for freight, 8037-8044——Improvement if tenders were invited publicly, 8045.

Exceptions taken to the expense (about 40,000 *l.*) of the Governor General's annual migration to Simla; grounds for the conclusion that the Government of the country suffers thereby, and that it is not necessary for him or his Council to go there on the score of health, 8046-8054. 8176-8194. 8251-8258. 8265-8269.

Immense expenditure on irrigation canals and railways without any adequate return in many cases; details in illustration, 8055-8077. 8101 *et seq.*——Information relative to the excessive cost of the Ganges Canal, as compared with its usefulness or the receipts derived from it; interference, moreover, of the canal with irrigation by wells, 8056-8065. 8101-8103. 8123-8125——Very small returns from the Government canals in the Punjab, 8066, 8067——Entire inaccuracy of the estimated returns from the Orissa canals; instead of

Dacosta, John. (Analysis of his Evidence)—*continued.*

of 400,000 *l.* the amount is more likely to be 40,000 *l.*, 8067——Good returns from the Western Jumna Canal, which was constructed before British rule, 8067. 8126.

Exception taken to a statement that the irrigation works in the Madras Presidency are yielding large returns, 8068–8070——Very unreliable estimates in the case of the Madras Water Supply Scheme, 8071, 8072——Great imprudence of the further large outlay (some 40,000,000 *l.*) proposed for irrigation works, 8073, 8074——Decided objection to the proposed expenditure of nearly 30,000,000 *l.* on State railways; heavy loss expected on lines through Rajpootana and the Indus Valley, 8075–8078. 8104. 8114–8118. 8144–8156——Necessity of a large expenditure on Kurrachee Harbour in connection with the Indus Valley Railway, 8077, 8078.

Very unsatisfactory system of accounts in the Public Works Department, 8079, 8080——Great loss and waste in respect of faulty construction of barracks at several places, the fault resting with the officers of the department, 8081–8088——Particulars in connection with the Punjab Canal Act, witness objecting thereto on the ground, more especially, that it enables the Government to impress labour 8089, 8090. 8107–8110——Exaction and corruption on the part of the police, through the want of a proper controlling power, 8090. 8097–8100. 8111, 8112. 8259–8264.

Objection to the Land Improvement Act, as unduly restricting the application of capital to loans on the security of land, 8091–8094——Much higher interest on landed security than on personal security, 8095. 8113——Comment upon the increased expenditure for police, whilst the efficiency of the force has been lessened; grounds for the conclusion that the police are, generally, corrupt, oppressive, and extortionate, 8096 8100. 8111, 8112. 8140–8143. 8259–8264——Great improvement by a more extensive appointment of honorary magistrates, native as well as European; beneficial effect of such appointment in the Purneah district, in Bengal, 8098. 8130–8138.

Advantages of the system of irrigation by means of tanks and wells; preference of the natives for such system as compared with canal irrigation, involving water rents, 8101–8103. 8127–8129. 8227——Expediency of rendering the guaranteed railways self-paying before constructing new lines, 8104——Failure generally of the canals constructed by Government to return sufficient to meet the interest on the outlay, 8105, 8106. 8126. 8227——Great convenience if there were a connection between the East Indian and Eastern Bengal lines at Howrah, near Calcutta, 8119——Probability of tram-railways proving remunerative in India, if judiciously applied, 8119–8121. 8157–8163.

Great cost in connection with appeals against over-assessment for the income tax, so that this protection against abuse is very sparingly resorted to, 8164–8172. 8270–8281——Unpopular and oppressive nature of a tobacco tax, 8173–8175——Examination as to the best means of collecting the opinion of the community on questions of taxation or expenditure; importance attached more especially to public opinion in Calcutta, 8176–8194 Expediency of a repeal of the income tax, in accordance with the general opinion amongst the community, 8195, 8196——General opinion also that the loss by repeal of taxes should be met by retrenchment in the expenditure; concurrence of witness in this view, 8197–8210.

Doubt as to the opium revenue being likely to fall off to any material extent, 8203, 8204——Absence of any room for increase of revenue under the heads of customs, salt, stamps, &c., 8205–8208——Objection to the policy of increasing the debt of India, in order to carry out irrigation works and railways, unless it could be shown that the outlay were remunerative; belief that this cannot be done, 8211–8217——Suggestion that it might be left to private capital to establish works of irrigation, &c.; examination hereon as to the probability of capitalists coming forward for the purpose, 8217. 8227–8245.

Reference generally to several heads under which economy might be effected, public works more especially admitting of curtailment, 8218–8229——Feeling in Calcutta that the transport system is most extravagant, 8222–8224——Misapprehension of witness upon the question of a guarantee having been given in the first instance to the Orissa scheme, 8238–8245——Circumstance of witness not being conversant with the large outlay already on Kurrachee Harbour, or the present state of the harbour, 8246–8250——Check to the introduction of private capital into India by the system of Government guarantee, 8282–8286.

Dalhousie (*the late*) *Earl of.* See *Railways.*

Danvers, Juland. (Analysis of his Evidence.)—Is Government Director of the Indian Railway Companies; outline of his duties in that capacity, 1675–1679——Control exercised by him over such matters of expenditure as come within his province, 1676——Similar terms of the contracts with the different guaranteed railway companies, save in the case of the Oude and Rohilcund and the Carnatic Companies, when the periods are shorter in which Government can take possession of the lines, the mode of repayment being also different, 1680, 1681. 1712——Guarantee of interest upon the amount of capital paid by the companies into the Government Treasury, any deficiency in working the lines being borne by the companies, 1682–1692.

Large

Danvers, Juland. (Analysis of his Evidence)—*continued.*

Large control of Government over the proceedings of the companies, no expenditure being disbursed without previous sanction, 1682. 1685–1687——Instance, in the case of the Calcutta and South Eastern Railway, of the receipts having been unequal to the working expenses; indulgence shown to the company, the deficit not having been deducted from the interest, 1693, 1694 1704–1710. 1811, 1812——Notice given by this company to Government of surrender of the line, in accordance with the terms of the contract; repayment of the entire capital raised by the company, the line not being profitable to Government, 1693–1701——Deficiency, for a time, of receipts to cover working expense in the case of a branch line of the East Indian Railway, 1702, 1703——Doubt as to Government having really the power to make deduction from the guaranteed interest, 1711.

Information relative to the dates at which Government has now the power to acquire possession of the different lines; enlarged terms granted in consideration of Government being given a right in perpetuity to half the surplus profits beyond the annual amount of guaranteed interest, 1713–1725——Absence of modification as to surplus profits in the case of the East Indian Railway, there being power to acquire this line in 1879; 1716, 1717.

Varying rates of interest at which the capital has been raised, explanation as to the higher rates paid than are paid for Government loans, although the former has the Government guarantee, 1728–1746——Considerable amount received as premiums upon the issue of new capital; saving of interest on this portion of the capital 1731–1739——Issue of a large amount of Four per Cent. Debenture Stock at a discount, by the Great Indian Peninsular Company, 1730. 1741——Net payment of 1,562,000 *l.* for guaranteed interest in 1870–71, after deducting the net revenue receipts of the companies, 1740. 1747–1749.

Opinion that the cost of the railways has not been enhanced by the Government control, and will bear favourable comparison with the cost of the public works carried out by Government officers, 1750–1753. 1758——Explanation in connection with the gain to Government on the exchange by allowing only 1 *s.* 10 *d.* for every rupee of revenue receipts remitted to England, 1754–1757——Circumstance of the capital account of any railway not being closed; Despatch in March 1864 laying down the principles upon which expenditure was to be charged to capital and to revenue respectively, 1759–1770. 1869——Non-approval by the Secretary of State of a proposal from India that all expenditure under 500 *l.* should be charged to revenue, 1771, 1772.

Construction of most of the railways before 1861, in which year witness was appointed to his present position, 1773–1775——Admission that the railways were constructed at an undue cost, owing chiefly to want of experience in the officers charged with the control and supervision, rather than to the guarantee system, 1776–1780. 1783–1789——Extensive failure of bridges, &c., owing to inexperience or defect of construction: reference more especially to the numerous and costly failures on the Great Indian Peninsular Line, and the charge imposed thereby on the revenues of India for the further capital guaranteed, 1790, 1791. 1793–1804.

Careful inquiry before lines are doubled, belief as to the necessity of such doubling in all cases hitherto sanctioned, 1805–1808——Increase hitherto in the annual charge for guaranteed interest, 1813, 1814——Large diminution expected in the charge when the lines have been properly developed, sufficient time not having yet elapsed for this purpose, 1815–1817. 1892–1894——Capital expenditure still going on in respect of unfinished portions of nearly all the lines; difficulty in allocating the increase of capital outlay yearly to the different portions of any line, 1821–1833.

Consideration of the authorities responsible for the guarantee to the Jubbulpore branch of the East Indian Railway; experienced Government officers from whom, as well as from the Company's officers, advice was taken in the matter, by Lord Dalhousie, 1834–1851——Consultation generally of the companies' officers and the Public Works officers before the sanction of new lines, 1851, 1852.

Dissent from Mr. Thornton's views in strong condemnation of the guarantee system; doubt whether any other system could at the time have equally well secured the construction of railways in India, 1861–1863. 1881–1891——Limit proposed by the Government to the guarantee system, 1862. 1868——Failure of an attempt by Lord Dalhousie to subsidise railways, 1865——Very limited extent of direct construction by Government, 1866, 1867——Extension of guarantees accordingly as further capital is spent by the guaranteed companies, 1869——Lower rate at which the required capital might have been raised direct by Government, 1887, 1888.

[Second Examination.]—Explanation of the objects and the cost of the Chord line of the East Indian Railway; doubt as to the expediency of this line, if it were not for the coal district which it opens, 1938–1952——Use of the five-feet-six-inches gauge on the guaranteed railways, 1953, 1954——Adoption of the French metre gauge (three-feet-three-and-three-eighth inches) for the State lines, 1953–1956——Cheap and rapid construction of the Kattywar line, on the broad gauge, 1957, 1958. 1988——Very much larger extension of railways throughout India if the money expended on broad-gauge lines

Danvers, Juland. (Analysis of his Evidence)—*continued.*

lines had been all applied to the narrow gauge, 1959–1961——Limited extent to which the lines are double; average of about 2,000 *l.* a mile as the cost of doubling a broad-gauge line, 1962–1967.

Charge for Government superintendence adverted to as not being very costly, 1968–1970——Small additional mileage in 1871–72, the total extent of accommodation being about 5,200 miles, 1971, 1972——Belief that no tramways have been established, 1973, 1974——Total of about 2,200 miles still to be constructed, the greater portion being State lines, 1975, 1976——Very much less cost at which it is expected that all future lines will be made, 1977–1980.

Limit put to the guarantee system, save as regards existing companies, 1981, 1982——Saving by not fencing the lines, 1983, 1984——Total of about 1,000,000 *l.* of railway capital held in India, doubt as to the proportion held by natives, 1985, 1986——Statement as to Lord Dalhousie having laid down the system of railways, 1987. 2019, 2020.

Information relative to the use, respectively, of coal, wood, and coke as fuel for the engines; question considered more especially whether by the increased use of native coal, or of patent fuel, the large annual consumption of wood from the forests might not be obviated, 1989–2018——Successful trial of patent fuel, in lieu of coal or wood; attention paid to this source of supply, 1995–2010——Inferior character of the Burdwan coal, 2011–2013——Steps taken to obtain supplies from the Nerbudda coalfields, the quality being considered good, 2014–2018.

Investigations by a Commission which led the Government to adopt the metre as the gauge to be adopted in lieu of the broad gauge, 2021–2023——Much lighter description of permanent way under the narrow-gauge system, 2026——Entire inaccuracy of a certain statement that the Jubbulpore branch had not paid its working expenses up to the present time; deficiency has occurred in only one half-year since the line was opened, 2042–2047.

Conclusion as regards the guarantee system, that, whilst it is open to many objections, it was a suitable and proper system to adopt under the peculiar circumstances of India twenty-five years ago, and that several important advantages have appertained to the system, 2048–2065. 2108–2114——Advantage of the system in having secured the continuous and almost undivided attention of a competent body of men in this country to each undertaking, 2049——Further advantage of the system in having provided a regular supply of funds as required; facility of supply even during the Mutiny, 2049. 2108–2114——Disapproval of a continuance of the system save as regards extensions of existing lines, 2056–2058.

Strong views of Lord Dalhousie, as expressed in a Minute in April 1853, as to the advantages of construction by companies under guarantee, and subject to supervision, 2059–2062——Opinion of Lord Mayo as to the value of the work performed by the companies, though he was adverse to a maintenance of the system down to the present time, 2063–2065.

Effect of the Mutiny in greatly enhancing the cost of the East Indian Railway; illustrations of this, 2066–2080——Very difficult country through which part of the railway runs; immense bridges necessitated and efficiently constructed, 2081–2092——Several objects of the Chord line further adverted to; facility and economy produced in the working of the traffic on the main line, 2093–2103——Efficient maintenance of the East Indian line, concurrently with a very low per-centage of working expenses, 2102–2107.

[Third Examination.]—Lengthened negotiations between the railway companies and the East India Company as to the terms of the contracts and of the guarantee, the arrangement finally taking the shape of a compromise, and thus involving some inconsistencies, 2751——Explanation as regards the grant of a lease to the companies for ninety-nine years, that power was taken to purchase at the end of twenty-five years or of fifty years, so that the lease was practically terminable at those periods, *ib.*

Dissent from certain views expressed in a Despatch from the Government of India, dated 22nd March 1869, as to the guaranteed companies having little, if any, interest in keeping down the capital expenditure or the working expenses so long as these are covered by the receipts, 2752–2767. 2816–2823——Result of witness's experience at the railway boards, that the guarantee does not destroy proper incentive to economy, 2753–2755——Constant desire evinced by the East Indian Railway Company to keep down the expenditure, and to prevent waste in the construction of works, 2758–2760——Tendency of the companies generally to place charges to capital instead of to revenue in doubtful cases, 2760–2764——Opinion that there is no ground for a statement by one of the Government engineers in India, that there is a direct inducement to the directors to expend as much as possible on their works, 2768.

Explanation (in reply to charges in a Minute by Mr. Laing, in 1861) relative to the practice at the railway boards in obtaining and accepting tenders for stores for India: presence of witness as official director on these occasions, 2769–2777——Evidence at

variance

Danvers, Juland. (Analysis of his Evidence)—*continued.*

variance with a statement by Mr. Laing that the company system is opposed to lump contracts, and that directors are individually interested in keeping the expenditure in their own hands, 2778–2787——Concurrence with Mr. Laing as to the advantage of the facilities of the companies for providing capital for the works by means of calls upon the shares, 2788, 2789.

Rule as to the sanction of Government being given for all the capital expenditure on the railways, 2791. 2846–2854*——Statement of the rules laid down for regulating and controlling the expenditure in India, by means of the consulting engineer of Government, 2792——Extract from a report by witness, and from a paper prepared by the chairman of the East Indian Company, showing the constitution and working of the Boards, and the detailed mode of transacting business, 2792.

Personal interest taken by the individual directors in the transaction of business; amount of their remuneration adverted to hereon, 2793–2796——Circumstance of witness having on only one occasion felt compelled to exercise his power of veto at the Boards, 2797–2801, 2824, 2825.

Opportunities of witness for forming an opinion as to the inaccuracy of certain statements by Mr Laing, though these referred to a time anterior to witness's official position at the Boards, 2804–2814—— Official utterance given by witness to his view that the guarantee system had been of great service, but that the time had come for altering it, 2815.

Statement as to witness having no voice at the Boards upon the question of the adoption of extension or branch lines; ample data before the Secretary of State, in coming to a decision upon such question, 2824–2831——Doubt as to witness having ever represented to the Secretary of State that any branch or extension line should not be carried out; recent instance of his having recommended an extension line, 2833–2835——Importance, politically, of the Jubbulpore line as a link in the communication between Calcutta and Bombay; importance also on commercial grounds, though hitherto the earnings have not been encouraging, 2836–2845——Circumstance of the East Indian Company having undertaken the Jubbulpore line at the instance of Government, 2843–2845. 2876.

Practice as to the sanction of works and of expenditure adverted to in connection with a statement by Colonel Chesney that the East India Company had spent 4,000,000 *l.*, without sanction; doubt as to the accuracy of this statement, 2846–2854——Probable accuracy of Colonel Chesney in stating that there had been irregularity in the accounts of the East Indian Company, 2855–2858.

Further statement as to the greater facility with which the required capital was raised through the guarantee system, than if the Government of twenty-five years ago had sought to raise the whole sum directly, 2859–2861. 2874, 2875——Degree of advantage to Government under the contracts, as to the option to purchase the lines on certain terms, and to do so by annuity or by a lump sum, 2862–2873——Necessity of the offer of good terms to capitalists or the large capital required would not have been forthcoming, 2874, 2875.

Willingness generally of the companies to undertake extensions suggested by Government, 2876, 2877——Interest of the Boards in practising economy, although there may not, for the time being, be any prospect of earnings in excess of the guarantee, 2878, 2879——Work performed by the directors, adverted to in connection with their remuneration, 2880–2883——Doubt as to any system having been arranged for interworking with the railways being made in Native States, 2884–2888.

Loss of about 3,000,000 *l.* entailed upon Government in the cost of construction, by adopting 1 *s.* 10 *d.* as the price of the rupee in their contracts with the guaranteed companies, origin of the adoption of this rate, 2889–2902——Doubt as to its having been feared in the case of the Soane Bridge that the river would leave its course and form a new channel, 2903, 2904——Advantage of the Chord line of the East Indian Railway, on account of the rapid progress in its construction, 2905——Subsidy from Government to the short line from Nulhutee to Moorshedabad; recent purchase of this line for 30,000 *l.*, 2906, 2907.

Explanation that in referring to the public works officers, as inexperienced at first in the construction of railways, witness does not mean to imply that they are or were ignorant of their professional duties, 2908, 2989——Careless supervision of the materials used in the bridges on the Great Indian Peninsula line, 2910——Adoption of the departmental system of construction in lieu of lump contracts, in carrying out the Bombay and Baroda line; advocacy of this system by Colonel Kennedy, which proved to be very costly, 2911–2917——Lapse of many years without completion of the Bombay station of the foregoing line, 2918–2924.

Absence of any decision hitherto as to the best mode of working the traffic of the Great Indian Peninsula line over the Ghâts, 2925–2929——Delay in the erection of the terminal station of the line, 2930–2932 ——Tendency of the divided responsibility under the guarantee system to produce delay generally, 2933——Doubt as to works and esti-

Danvers, Juland. (Analysis of his Evidence)—*continued.*

mates being the more readily assented to, because there are two parties in the matter, 2934–2939——Conclusion as to the railway committee at the Indian Office being well qualified to consider railway questions; constitution of the committee adverted to, 2940–2945.

Further statement as to the very heavy losses entailed by the mutiny in the construction of the East Indian line, 2951–2953——Explanation in modification of former statement that the directors of the companies gave their "almost undivided" attention to the business of the railways, 2955–2962——Arrangement as to the premium at which stock is now issued, the amount thus derived being applied to capital without carrying interest 3018–3024——Estimate of about 10,000,000 *l.* as the sum required to finish lines and works on which guarantees have been promised, the guaranteed expenditure hitherto amounting to about 90,000,000 *l.*, 3028.

Power of Government to take possession of the lines if not satisfactorily managed; consequent interest of the companies to administer the railways efficiently, 3071–3074——Further explanation as to the large loss experienced by Government in adopting 1 *s.* 10 *d.* as the rate of exchange for the rupee in respect of capital receipts; material gain on the other hand on the exchange in respect of the revenue receipts, 3076–3088——Efficiency of the present condition of the bridge over the Nerbudda, though it broke down in 1870; 3089, 3090.

Decentralisation (Financial System). See *Local Taxation and Finance.*

Debt of India:

Enumeration of amounts now outstanding under the different loans contracted in England, and the rate of interest in each case, *Seccombe* 1474–1478——Frequent issue of loans to make good deficiencies in the revenue, *ib.* 1480–1482——Large increase of debt in the year after the mutiny, *ib.* 1480. 1492. 1523——Statement of the amount of loans raised in each year since 1857–58, there having been only two years without borrowing; increase of 32,000,000 *l.* in the Home Debt of India during the thirteen years since the mutiny, *ib* 1490–1507. 1523, 1524.

Comparative amount of the debt when the East India Company was abolished, and at the present time; increase of the permanent debt from about 70,000,000 *l.* to about 106,000,000 *l.*, *Seccombe* 1515–1522——Constant effort made to keep down the debt, *ib.* 1558——Power of paying off the transfer loan in a few years; conditions as to repayment, *ib* 1563–1567.

Explanation relative to a statement made about two years ago, estimating the proportion of the registered debt of India held by natives and by Europeans respectively, *Seccombe* 1571–1574——Very small and diminishing portion of the debt of India which is held by natives, *ib.* 1654.

Diminished confidence of witness in the stability of the Government, owing to the unsatisfactory state of the finances; he is not at present prepared with a definite remedy, *Elliot* 3460–3471, 3475. 3480, 3481——Ignorance of English investors as to the security upon which Indian investments rest, *ib.* 3476, 3477.

Explanation in detail relative to the public debt of India, and the interest thereon, in 1870–71, distinguishing the amount of debt at different rates of interest, *Harrison* 6087–6129.

Very much smaller proportion of debt to revenue in the case of India (including the railway debt) than in the case of England, *Strachey* 6949–6952——Satisfactory position of the debt of India, as an investment, both in England and in India; large amount held by natives, *ib.* 6953, 6954——Calculation to the effect that between 1861–62 and 1872–73 there has been a virtual increase of not more than 1,000,000 *l.* of debt, whilst the expenditure on railways, irrigation works, barracks, &c., will have amounted to 19,000,000 *l.* *ib*, 7002–7005.

Increase of only 1,000,000 *l.* in the total debt of India between 1861 and 1869, *Laing* 7633–7635——Reduced rate at which loans have been raised, owing partly to the Act which authorises trust money to be invested in Indian securities, *ib.* 7636–7640——Doubt as to the foregoing Act having led the English public to believe that this country is responsible for the debt of India; opinion that there is no necessity for any authorised disclaimer on this point, *ib.* 7641–7644.

Explanation as to certain funds, such as the Mysore Pension Fund, the Nizamut Fund, &c., not being included in the amount returned as the debt of India, though they exist as part of the national liability, and interest is charged in respect of them, *Laing* 7766–7733.

Explanations by Sir R. Temple, in his financial statement for 1872–73, relative to recent loan transactions, and the reduction effected in the charge for interest, *App.* 498.

Simplified classification of the national debt of India, owing to recent loan operations; particulars hereon, *App.* 503, 504.

Statement

DEBT OF INDIA—continued.

Statement showing the increase of the home Indian debt in each year from 1856–57 to 1870–1871; amount of 3,915,317 *l.* at the end of the former year, and of 37,627,617 *l.* at the end of the latter, *App.* 709.

See also *Expenditure.* *Public Works.* *Taxation.*

Delhi, King of. Total revenue of about 150,000 *l.* a year paid to the King of Delhi and his family previously to the Mutiny; explanation as to the reduction of this charge to about 15,000 *l.* a year, *Sir J. W. Kaye* 7291–7293.

Despatches, Postage of. Explanation in connection with a charge of 8,673 *l.* in 1870–71 for postage of despatches to and from India, *Seccombe* 903–911.

Dewasthan Allowances. Permanent character of the charge under this head, as being in respect of religious purposes, *Sir J. W. Kaye* 7377–7379.

Direct Taxation. See *Income Tax.* *Taxation.*

Distressed Natives. Very small payments in England in 1870–71 for relief of distressed natives of India, *Seccombe* 186.

Dockyards. See *Bombay Dockyard.* *Calcutta Dockyard.*

Duleep Singh. Explanation in connection with the payment of 19,335 *l.* to the Maharajah Duleep Singh; advances made to him in 1856 and 1863, the interest on which is deducted from the original allowance of 25,000 *l.* a year, *Seccombe* 835, 836——Decreasing character of the foregoing charge in course of time, *ib.* 836——Reference to certain small payments made in India on account of the pension to the Maharajah Duleep Singh, *Sir J. W. Kaye* 7303, 7304.

Durbar Presents. Large increase in the charge for durbar presents between 1856–57 and 1870–71; receipt from the sale of presents, *Harrison* 5799–5802.

E.

Ealing Lunatic Asylum. See *Lunatic Asylum* (*Ealing*).

East India Company. Explanation of a payment of 800 *l.* in 1870–71 for the East India Company's expenses in connection with the distribution of dividends on their capital stock, this charge has been reduced from 1,200 *l.*, and will expire in 1874, *Seccombe* 1324–1330——Sinking fund being accumulated on the debt to the East India Company, the amount in 1874 will be about seven and a half millions, *ib.* 1347, 1348——Increase from 70,000,000 *l.* to 106,000,000 *l.* in the permanent debt of India since the abolition of the East India Company, *ib.* 1515–1522.

Dissent from the view that the abolition of the East India Company goes to account for the increased cost of administration, as regards stationery and other heads of expenditure, *Harrison* 5713–5721.

East India Irrigation and Canal Company. See *Orissa and Behar Irrigation Works.*

EAST INDIAN RAILWAY:

Absence of modification of the original arrangement as to surplus profits in the case of the East India Railway, there being power to acquire this line in 1879, *Danvers* 1716, 1717——Explanation of the objects and the cost of the Chord line of the East Indian Railway; doubt as to the expediency of this line, if it were not for the coal district which it opens, *ib.* 1938–1952——Effect of the Mutiny in greatly enhancing the cost of the railway; illustrations of this, *ib.* 2066–2080——It has been estimated that the loss through the Mutiny amounted to between two and three millions, *ib.* 2066.

Very difficult country through which part of the railway runs; immense bridges necessitated, and efficiently constructed, *Danvers* 2081–2092——Several objects of the Chord line further adverted to; facility and economy produced in the working of the traffic on the main line, *ib.* 2093–2103——Efficient maintenance of the East Indian line, concurrently with a very low per-centage of working expenses, *ib.* 2102–2107——Facility with which capital was provided by the Company during the Mutiny, *ib.* 2112–2114.

Statement as to 4,000,000 *l.* of expenditure on the East Indian Railway having been disallowed, because it was spent without previous sanction; inasmuch, however, as under the contract this expenditure was entitled to guaranteed interest, it was eventually allowed to form part of the capital account, *Chesney* 2623. 2626–2633——More irregularity in the accounts of the East Indian than of the other railways, *ib.* 2630.

EAST INDIAN RAILWAY—continued.

Constant desire evinced by the East Indian Company to keep down the expenditure, and to prevent waste in the construction of works, *Danvers* 2758–2760——Practice as to the sanction of works and of expenditure adverted to in connection with the statement by Colonel Chesney that the Company had spent 4,000,000 *l.* without previous sanction; doubt as to the accuracy of this statement, *ib.* 2846–2854——Probable accuracy of Colonel Chesney in stating that there had been irregularity in the accounts of the Company, *ib.* 2855–2858.

Advantage of the Chord line on account of the rapid progress in its construction, *Danvers* 2905——Further statement as to the very heavy losses entailed by the Mutiny in the construction of the East Indian line, *ib.* 2951–2953.

Very excessive cost of the East Indian Railway, without including the heavy increase of cost said to have been incurred through the Mutiny, *Thornton* 2951. 2953, 2954.

Falling off in the goods traffic of the line, attributed to an unwise alteration of the tariff when there was a tendency to stagnation in trade, *Strachey* 6505–6508——Enormous advantage of the railway in facilitating commerce and agricultural produce, *ib.* 6996–6998——Remunerative character of the railway, *ib.* 7835, 7836. 7935, 7936.

Great convenience if there were a connection between the East Indian and Eastern Bengal lines at Howrah, near Calcutta, *Dacosta* 8119.

Great advantage of the East Indian Railway, by reason of its guarantee, over the Ganges Canal, *Sir A. T. Cotton* 8476, 8477——Small return from the railway, taking the cost of the land, &c., into consideration, *ib.* 8478, 8479.

Illustration in the case of the East Indian Railway of the enormous waste of money in construction, *Right Hon. W. N. Massey* 8867, 8868.

See also *Jubbulpore Railway.*

Eastern Jumna Canal. Very large income from the Eastern Jumna Canal in the years 1867–68 to 1869–70; *Strachey* 6565——Error of a statement that the canal was constructed antecedent to British rule, *ib.* 6568–6570——Explanation relative to the comparatively inexpensive character of the canal; natural facilities of construction, *ib.* 6681–6688——Progressive increase of revenue from the canal, *ib.* 6990.

Further examination relative to the Eastern Jumna Canal, and its comparatively useless state previously to Government expenditure upon it, *Strachey* 7142–7149.

Ecclesiastical Expenditure. Ecclesiastical expenditure of 153,544 *l.* in 1870–71 as compared with 127,727 *l.* in 1856–57, *Harrison* 5566——Maintenance of the establishment chiefly for military services, *ib.* 5573. 5587–5591. 5595–5599. 5612–5614——Statement of the stipends and pensions of the bishops and archdeacons; also of the chaplains, *ib.* 5574–5584——Allowance made to Roman Catholic clergy for performing ecclesiastical duties, *ib.* 5604——Doubt as to any native agitation having been raised against the ecclesiastical charge upon the revenues of the country, *ib.* 5617–5619. 5622–5624.

See also *Chaplains.*

Edinburgh, Duke of. Examination upon a payment for travelling expenses and allowances of two officers in attendance on the Duke of Edinburgh whilst in India; witness disclaims responsibility in the matter, the arrangement having been made in the Political Department, *Seccombe* 1416–1424. 1436–1439——Charge of 10,088 *l.* in the Home Accounts of 1869–70 in respect of the Duke's visit to India, the charge in 1870–71 having been 1,555 *l.*; many of the presents bought with the money have not been distributed, *ib.* 1419.

EDUCATION:

Aggregate expenditure of 624,690 *l.* in India under the head of education in 1870–71, as compared with 207,818 *l.* in 1856–57, *Harrison* 5442——Evidence explanatory of the foregoing increase *ib.* 5443 *et seq.*——Increase of educational charge for general superintendence from 87,612 *l.* in 1856 to 130,763 *l.* in 1870; particulars hereon as to the staff of inspectors, &c., in the different provinces, *ib.* 5447–5457. 5498–5511.

Statement of the expenditure for higher-class schools and for lower-class schools in 1856–57 and in 1870–71, showing the causes of increase under these heads; number of pupils adverted to, *Harrison* 5465–5476——Charge of 18,349 *l.* for normal schools, *ib.* 5477, 5478——Expenditure of 167,780 in 1870–71, as against 13,618 *l.* in 1856–57 for grants-in-aid; details hereon relative to the various schools aided, *ib.* 5479–5486. 5496–5498. 5518 *et seq.*——Large increase in the charge for scholarships and prizes, *ib.* 5487–5489——Great increase also in the charges connected with book depôts, *ib.* 5490–5493.

Sundry details relative to the operation of the schools, the expenses borne by Government and by local rates, or funds, &c., *Harrison* 5512 *et seq.*——Teaching of the English language in some of the schools, *ib.* 5512, 5513——Limitation of the tenure of the scholarships

EDUCATION—continued.

scholarships to the period of residence at the colleges, *ib.* 5520, 5521——Causes of the larger expenses in Bombay than in Madras, *ib.* 5522. 5526-5528.

Question considered as to the Imperial charge for education being on the whole likely to increase still more; increasing practice of making local educational rates, *Harrison* 5523-5525. 5555-5565——Principle of charging a fee in the schools, this is not done invariably, *ib.* 5534-5536——Very few educational endowments, *ib.* 5537-5542——Less willingness of the Mahomedans than of the Hindoos to avail themselves of the schools, *ib.* 5543-5554.

New arrangement since April 1871, whereby the head of Education will come out of the accounts of the Government of India, and will appear under the provisional accounts, *Harrison* 5986, 5987. 5991.

Check by the education cess to voluntary educational efforts, *Hutton* 8569-8572——Strong complaint against the educational cess in Bengal, *ib.*.

Statement showing the number of scholars in Government schools and colleges in British India; total of, 734,340, *App.* 544.

See also *Universities.*

Elahee Bux. Information relative to the pensions and allowances to Elahee Bux, in the Punjaub and elsewhere, *Sir J. W. Kaye,* 7291-7293. 7344. 7347.

Elliot, Robert Henry. (Analysis of his Evidence.)—Experience of witness for many years in Mysore as a coffee planter, 3091-3095——Paper submitted to the Committee, containing details relative to the working of the Public Works Department in Mysore, 3096——Great improvement if the engineer officers of the department were under the collectors of the districts, who are much better acquainted with the local wants, 3097. 3110-3112. 3147-3153——Description of the mode of construction of the Government bridges and of native bridges; much greater durability and economy of the latter, 3098-3106. 3161——Particulars relative to a bridge over the River Hemavutty, provided by the Public Works Department, which is a loss rather than a gain to the district, 3107-3109. 3165-3169. 3244-3248.

Importance, in irrigation matters more especially, of the Government engineers being guided by the local revenue officers, 3111. 3147-3152——Conclusion that the natives have very little to learn in the matter of agriculture, 3113-3115——Inappreciable loss, by using the manure as fuel, the ashes being utilised on the soil, 3115, 3116. 3210-3213. 3408, 3409——Impracticability of obtaining native evidence before the present Committee; suggestions as to the mode of obtaining such evidence in India, it being essential to suppress the names of witnesses, 3117-3122. 3154, 3155. 3346-3351——Objection of the natives to be taxed for local improvements, 3123-3125.

Very great danger of India from famines, more especially since the increased export of the produce of the country and the increased import of coin, 3126-3135. 3337-3329. 3342-3345. 3376——Grounds for the conclusion that Government should take part of the land revenue in grain, which should be stored for times of famine, consideration of sundry objections to the working of this plan, and to its policy, 3126-3146. 3162-3164. 3356-3374. 3382-3389. 3416-3423. 3438-3440.

Primary importance of expenditure on irrigation, bridges being of secondary importance, 3145. 3190-3213——Very objectionable operation of the system of executing all petty repairs to works in Mysore through the Pubic Works Department, 3147-3149——Extent of witness's experience in other parts of India, as well as in Mysore, 3156-3158——Magnificent irrigation works in Mysore, executed by the natives in former times, 3159, 3160. 3336-3339——Examination relative to the details of the system and practice of cultivation of the soil in Mysore, witness contending that the natives have but little to learn from Europeans, 3170-3174. 3180-3225. 3263-3269. 3318-3326. 3340, 3341——Numerous irrigation tanks in Mysore, there being, however, a large proportion out of repair, 3172. 3241-3243. 3412-3415.

Limited extent to which the practice of hoarding is carried in Mysore, 3173——Better condition of the people, under British rule, up to a certain extent; illustration of this in the non-regulation provinces, 3175-3179——Wasteful expenditure on bridges further adverted to; importance, however, of improved roads, 3190-3208——Manuring properties in irrigation water, 3213. 3300——Loss of nearly three millions of people from famines since 1861; 3217, 3218. 3226, 3227.

Conclusion that, in view of the prevention of famines, works of irrigation should be extensively carried out, but that in view of the state of the finances all other works for developing the resources of the country should for the present be stopped, 3227-3233. 3375-3381. 3482, 3483.

Inaccuracy of statements as to the fertility of the soil of India; it is, on the whole, one of the poorest countries in the world, 3234-3239. 3301-3315. 3410, 3411——Comparative unimportance of bridges further adverted to, much waste of expenditure thereon, 3244-3262. 3333-3335——Obstacles to the import of corn from foreign countries in time, or

Elliot, Robert Henry. (Analysis of his Evidence)—*continued.*

in sufficient quantity, to meet the pressure of famines, 3270-3273. 3382-3384. 3421-3423. 3432-3437——Facilities available, but not utilised, for relieving the Orissa Famine 3274, 3275. 3438, 3439.

Decay of native manufactures in India, 3276-3279——Doubt as to the railway extension to Bangalore having been any material improvement to Mysore, 3280-3282——Failure of an attempt to introduce Merino sheep, 3283-3285——Information relative to the manures used by witness in his coffee plantations, 3293-3298——Poverty of India as regards mineral productions; difficulty more especially as regards coal, 3302-3309——Great importance of the forests of India; value attached to a large extension of plantations, 3310-3314.

Careful study by witness of the revenues and finances of India, and of the administration generally, 3330-3332. 3481——Wasteful expenditure on public works, it being desirable to concentrate this expenditure on irrigation, 3333-3335. 3375-3389. 3424-3429. 3482, 3483——Bankrupt state of the finances if it were not for the opium revenue, a most uncertain source of income, 3352-3355. 3472-3474——Contemplated construction of irrigation works out of annual revenue, it being essential to restrict the general expenditure, 3390-3392. 3441-3445. 3480-3483.

Consideration of objections to the proposal that irrigation works and local improvement works should be initiated by the local revenue officers; way in which the Estimates might be prepared and checked, 3393-3407——Entire dissent from the opinion that the present production of the country might be increased four-fold, 3410, 3411——Remunerative character of irrigation works in many instances, 3424-3429.

Approval of a certain portion of the land revenue being allocated to the local authorities for improvements, 3430, 3431——Economy by employing natives more extensively as engineers, and in other capacities, 3446, 3447——Large room for economy in respect of the Board of Revenue in Madras, 3448——Far too costly administration of India in proportion to its means, 3449.

Great evil through there being no recognised channel of communication between the Government and the people; suggestions hereon for the formation of such channel, and for its development in the direction of representative institutions, 3450-3455——Expediency of the European civil servants being able to converse freely with the natives; they are quite unable to do so at present, 3456-3458——Importance of irrigation as admitting of the increased cultivation of dry crops, without breaking up the pasturage for cattle, 3459.

Comment upon the decreasing investments of natives in Government securities, 3460-3462. 3466-3471. 3475——Diminished confidence of witness in the stability of the Government owing to the unsatisfactory state of the finances; he is not at present prepared with a definite remedy, 3460-3471. 3475. 3480, 3481——Ignorance of English investors as to the security upon which Indian investments rest, 3476, 3477.

Elliot, Mr. Observations by Colonel Sankey, Chief Engineer and Secretary to the Government of Mysore and Coorg, upon the evidence of Mr. Elliot relative to the operation of the Public Works Department in Mysore; denial of the accuracy of certain statements and conclusions in this evidence, *App* 635-638.

Elphinstone Company (*Bombay*). Information in connection with the Port Trust at Bombay, as intended to be constituted in order to take over the property brought by Government from the Elphinstone Company, *Strachey* 7177. 7181-7186——Statement of the circumstances under which Government bought the property of the Elphinstone Company, and of the price paid; question hereon whether an unduly high sum was not paid, *ib.* 7181-7202.

Employment (*Public Service*). See *Natives* (*Public Employment*).

Engineer Officers. Explanation as to the small charge (895 *l.*) in 1870-71 for education of officers of the Artillery and Engineers at Chatham and Sandhurst, for service in India, *Pears* 436——Special rates fixed as payment to the War Office for the Engineers required in India, there being a special education for the service, *ib.* 436-438——Very small proportion of engineer officers in India who are employed with the troops; large number employed in the Public Works Department, *Strachey* 6165-6169——*See* also *Public Works.*

Engineers. See *Natives* (*Public Employment*). *Public Works.*

Ensigns (*British Regiments in India*). Explanation of an item of 23,000 *l.* as the charge to India in 1870-71 for the cost of absorption of supernumerary ensigncies in British regiments; ultimate saving by the reduction of officers, *Pears* 711, 712. 745-749.

Euphrates and Tigris Steam Navigation Company. Particulars relative to a payment of 4,800 *l.* in 1870-71 as subsidy to the Euphrates and Tigris Steam Navigation Company for mail services between Bussorah and Bagdad, *Seccombe* 796-800. 803-805——The company is an English one, and the contract was made in England, *ib.* 797-799.

European British Subjects Bill. Remonstrance made to Government in March 1871 relative to the passing of the European British Subjects Bill at Simla, without any consultation of the persons interested, official reply to the remonstrance against the Bill, *Hutton* 8565.

Evidence. Impracticability of obtaining native evidence before the present Committee; suggestions as to the mode of obtaining such evidence in India, it being essential to suppress the names of witnesses, *Elliot* 3117–3122. 3154, 3155. 3346–3351.

Expediency of evidence being given to the Committee by those who have filled the office of Secretary of State for India, and by persons who have held responsible positions in Indian administration, *Rep.* iii, iv.

Examinations (Civil Service). Statement of the charges respectively, for examination, and for allowances, of candidates for the Civil Service, total of 17,159 *l.* in 1870–71, *Seccombe* 1331–1333 —— Small charge in respect of the examination of candidates for the Civil Engineers' Establishment in India, *ib.* 1338, 1339.

Explanation relative to a charge of 7,000 *l.* in 1870–71 in respect of examinations at Calcutta and Madras before admission of natives to the Civil Service, *Harrison* 4707–4716 —— The expense is more than covered by the candidates' fees, *ib.* 4709.

Exchange, Rate of. Explanation relative to the increase from 45,508 *l.* in 1856–57 to 608,068 *l.* in 1870–71, as the loss on transactions with London through the rate of exchange; consideration of the loss, more especially in the case of the railway companies, *Harrison* 5862–5896. 5938, 5939. —— *See* also *Railways.*

Excise Duties. See *Opium. Salt Tax. Spirits and Drugs. Sugar Tobacco.*

Exemption from Land Tax. See *Rent-free Lands.*

EXPENDITURE:

1. *Generally as to the Large Increase of Expenditure between* 1856–57 *and* 1870–71.
2. *Conclusions as to the Necessity of Curtailment.*
3. *Reductions effected when Mr Laing was Finance Minister.*
4. *Apportionment of Expenditure between India and England.*
5. *Estimates for* 1872–73, *and Explanations by Sir Richard Temple.*

1. *Generally as to the Large Increase of Expenditure between* 1856–57 *and* 1870–71.

Importance of the question of prices as affecting the cost of administration, there having been for some years a general tendency to increased prices, *Harrison* 3805. 3813–3819. 4974 4976–4983 —— Increased cost of administration concurrently with the depreciation in the value of money, *ib.* 5954–5958.

Great increase of civil charges since 1861–62, this being the real course of the financial difficulty, *Strachey* 7255–7259 —— Unfairness of a suggestion that the civil servants are constantly proposing schemes involving increased expenditure, in order to bring themselves into notice, *ib.* 7262–7264 —— Limited extent to which increased public expenditure is necessarily due to increase of prices, consequent upon the depreciation in the value of money, *ib* 7268–7271.

Comparative statement of the revenues and expenditure in the departments in India, exclusive of public works and army expenditure, in 1856–57 and in 1870–71; increased expenditure from 14,964,867 *l.* to 23,271,082 *l.* *App* 518.

Statement showing the total income and expenditure in each year, from 1861–62 to 1870–71, and the annual surplus or deficit, *App.* 551–553.

Paper, supplied by Messrs. Harrison and Gay, showing the income for 1870–71 of each local Government in India, from six important heads of revenue, also the cost of Civil Administration, and the proportion which such charges bear to the revenue under these selected heads, *App.* 641.

Comparison instituted by the Committee between the expenditure in 1870–71 and in 1856–57, this year being selected as the one before the mutiny, and before the direct administration by the Minister of the Crown was introduced, *Rep.* iii —— Increase of the Civil expenditure in this period from 14,964,872 *l.* to 23,271,082 *l.*, *ib.*

2. *Conclusions as to the Necessity of Curtailment:*

Evidence in support of the conclusion that it is essential to restrict the general expenditure, save as regards irrigation works, *Elliot* 3227–3233. 3375–3381. 3390–3392. 3441–3445. 3480–3483 —— Far too costly administration of India in proportion to its means, *ib.* 3449.

EXPENDITURE—continued.

2. *Conclusions as to the Necessity of Curtailment*—continued.

Opinion that the only efficient safeguard against continued increase of expenditure is by providing absolutely that the expenditure must not be increased until the necessary funds are forthcoming by an increase of revenue, *Strachey* 7260. 7265–7267.

General opinion in India that the loss by repeal of taxes should be met by retrenchment in the expenditure; concurrence of witness in this view, *Dacosta* 8197–8210——Reference generally to several heads under which economy might be effected, public works more especially admitting of curtailment, *ib.* 8218–8226.

Expediency, in dealing with Indian finance, of adjusting expenditure to income rather than income to expenditure, *Right Hon. W. N. Massey* 8583. 8612——Economy and retrenchment should be the policy of Indian financiers, as distinguished from the policy of fresh taxation, *ib.* 8824. 8856–8860. 8890——The present expenditure is enormous, *ib.* 8856.

3. *Reductions effected when Mr. Laing was Finance Minister:*

Large reduction of military, naval, and other charges in 1861–62, in which year the deficit was about a million; surplus of about a million in the following year, *Laing* 7443 7449——Favourable circumstances in 1860–62 which facilitated the reductions effected by witness when Finance Minister, *ib.* 7688–7691.

4. *Apportionment of Expenditure between India and England:*

Frequent discussion between the India Office on the one hand and the War Office and Treasury on the other, upon questions of expenditure; disadvantage of the India Office in contending with these departments, *Pears* 269. 282, 283. 292, 293. 325–336.

Instances, in the past, of expenditure having been charged against India which more properly belonged to England; feeling of natives on this point, *Laing* 7518–7522——Consideration of the grounds for a statement by witness, some two years ago, that "the finances of India are constantly being sacrificed to the exigencies of English Estimates;" security against this abuse in future through the growth of public opinion both in India and in England on questions of Indian finance, *ib.* 7676–7684.

5. *Estimates for* 1872–73, *and Explanations by Sir Richard Temple:*

Summary, in financial statement by Sir Richard Temple, of the chief heads of expenditure, as estimated for 1872–73, and the causes of increase or decrease under each head, *App.* 496–498——Aggregate of 48,534,000 *l.* as the ordinary expenditure proposed for 1872–73, *ib.* 498——Satisfactory comparison between this expenditure and that in the previous five years, with the exception of 1871–72; *ib.* 498. 504——Increased expenditure, by 2,615,000 *l.*; if public works extraordinary be included, *ib.* 499.

Estimates in detail showing the expenditure under various heads in 1872–73, *App.* 506–514.

See also *the Headings generally throughout the Index.*

Exports. Consideration of the value of the exports from India as compared with the value of the imports, the former being much in excess of the latter, and the balance being made up by the import of bullion; denial that the balance represents so much tribute paid by India to England, witness contending that an equivalent is received by India for all its exports, *Laing* 7656–7667. 7751–7762. 7778–7785.

Enormous increase of exports and imports; inference therefrom as to the excellence of the administration on the whole, *Strachey* 7005, 7006——Statistics in support of the conclusion that the increase in the quantities of exports and imports between 1861–62 and 1868–69 is quite as substantial as the increase in values, *ib.* 7960, 7961——Value of the imports and of the exports of merchandise and of treasure in different years from 1861–62 to 1871–72; large increase, and inference therefrom as to the great advance in the prosperity and general productive power of the country, *ib.* 7964.

F.

Famines. Very great danger of India from famines, more especially since the increased exports of the produce of the country and the increased imports of corn, *Elliot* 3126–3135. 3327–3329. 3342–3345, 3376——Grounds for the conclusion that Government should take part of the land revenue in grain, which should be stored for times of famine; consideration of sundry objections to the working of this plan, and to its policy, *ib.* 3126–3146. 3162–3164. 3356–3374. 3382–3389. 3416–3423. 3438–3440——Loss of nearly three millions of people from famines since 1861, *ib.* 3217, 3218. 3226, 3227——Obstacles to the import of corn from foreign countries in time, or in sufficient quantity, to meet the pressure of famines, *ib.* 3270–3273. 3382–3384. 3421–3423. 3432–3437.

Famines—continued.

Great value of railways and irrigation works in the prevention of famines in the North Western Provinces, as in 1869, *Strachey* 6999——Total dissent from the statement by Mr. Geddes before the Committee in 1871 that famines had been on the increase under British rule, *ib.* 7052, 7053.

Fees (*Courts of Justice*). Increase of 1,461,000 *l.* in the receipt from fees in the civil courts between 1856-57 and 1870-71, *Harrison* 4896-4902——Certain court fees still paid in money instead of in stamps, *ib.* 4954.

Steps taken by witness for a revision of the scale of fees upon the institution of legal proceedings; additional receipts of about half a million from this source, *Right Hon. W. N. Massey* 8581.

Finance Minister of India. Respect in which the Finance Minister in India has a larger control than the Finance Minister in most other countries, relative to the revenue and expenditure, *Laing* 7434.

Fitzpatrick, D. Allowance of 1,600 *l.* a year to Mr. D. Fitzpatrick, of the Bengal Civil Service, whilst in England upon the Dyce Sombre case, *Seccombe* 1412-1415.

Forests. Great importance of the forests of India; value attached to a large extension of plantations, *Elliot* 3310-3314.

Expenditure of 373,000 *l.* in India on Forests in 1870-71, comprising 109,000 *l.* for salaries and 264,000 *l.* for conservancy and working expenses, *Harrison* 3740-3742——Charge of only 40,292 *l.* for forests in 1856-57; great increase in the operations of the department since that year, *ib.* 3743-3749.

Net revenue of 91,000 *l.* from the forests in 1856-57, the net revenue in 1870-71 being 73,215 *l.*; *Harrison* 3750-3752. 3755, 3756——In 1856-57 the entire revenue was 131,492 *l.*, *ib.* 3750——Statement as to certain charges in respect of the forests in 1856-57 having been carried to the collection of the land revenue, *ib.* 3752, 3753——The total income in 1870-71 was 453,443 *l.*, and the total charge 380,227 *l.*, *ib.* 3755.

Recent transfer of the administration of the forests to the Agricultural Department, *Strachey* 6158, 6159. 6309.

Remarks by Sir R. Temple upon the forests estimate for 1872-73, and the increased revenue expected; increased receipt of 154,400 *l.* as against an increased expenditure of 110,000, *App.* 493, 494. 496.

Freights. See *Stores, &c.,* 3. *Troop Service.*

G.

Ganges Canal. Separate account kept of the Ganges Canal; satisfactory results as regards the revenue therefrom in proportion to the charge, *Strachey* 6254-6257——Statement of the income from the Canal in the three years, 1867-68 to 1869-70; *ib.* 6565.

Consideration of a paper (submitted by the Member for Brighton) professing to show that the returns from the Ganges and Eastern Jumna Canals, with reference to accumulated capital, are much less than are assumed by witness, *Strachey* 6566-6578——Investigation of the accounts of the Ganges Canal, with reference more especially to the cost of the canal to the people of India before returns were derived, *ib.* 6583-6594. 6620-6625.

Great physical and engineering difficulties which had to be overcome on the Ganges Canal, so that the work was costly, *Strachey* 6687, 6688——Large progressive increase of net revenue from the canal, *ib.* 6990.

Information relative to the excessive cost of the Ganges Canal as compared with its usefulness, or the receipts derived from it; interference moreover of the canal with irrigation by wells, *Dacosta* 8056-8065. 8101-8103. 8123-8125——Inadequacy of the canal to avert famines in the district, *ib.* 8073.

Consideration of the comparative returns from the East Indian Railway and from the Ganges Canal; conclusion as to the higher interest from the latter, although it was badly projected and cost much more than it should have done, *Sir A. T. Cotton* 8407-8419.

Correction of certain statements as to the objectionable character of the water of the Ganges for irrigation purposes, and as to the effect of the canal in reducing the water in the wells, *Sir A. T. Cotton* 8457-8461——Successful competition of the canal with the East Indian Railway in the conveyance of goods traffic, *ib.* 8470-8473——Imperfect navigation of the canal, there having been several mistakes in its original projection, *ib.* 8476. 8479, 8480. 8485-8488.

Gaols. Charge of 283,000 *l.* for gaols in 1856-57, the charge in 1870-71 having been 727,000 *l.* *Harrison* 4749——Increase from 18,900 *l.* in 1856-57 to 26,800 *l.* in 1870-71, in the expenditure for the inspection and general superintendence of the gaols; explanation of the amount of increase in each Presidency or province, *ib.* 4962-4966——Charge of 121,400 *l.* in 1870-71 for central gaols and Houses of Correction, the charge in 1856-57 having been 38,900 *l.*, particulars of the amount and cause of increase locally, *ib.* 4967-4972. 4984-4994.

Largely increased cost for prisoners' rations, owing very much to the rise in prices; exceptional reduction in the North Western Provinces in 1870-71 as compared with 1869-70, *Harrison* 4972-4983——Considerable increase of cost for district gaols, both in respect of gaol establishments, and of gaol supplies, such as rations, hospital expenses, &c.; distribution of this increase locally, *ib.* 4995-5013.

Large nominal increase of expenditure on account of gaol manufactures, more especially in Bengal; explanation as to the returns on the other hand from gaol labour, and the expenditure of the proceeds in local improvement, *Harrison* 5014-5031——Explanation relative to the large variation in the cost of prisoners' rations per head in the different provinces; belief as to the sufficiency of 15 or 16 rupees per annum for maintenance in the North Western Provinces, *ib.* 5048-5056——Separate charge made for the cost of maintaining the vegetable gardens attached to the gaols; diminished cost of the gaols from this source, *ib.* 5057-5061.

Gay, Edward. For Analysis of his Evidence, see *Harrison, Edward Francis, & Edward Gay.*

"*Gazette of India.*" Inability of witness to state, separately, the cost of printing the "Gazette of India," *Harrison* 5697. 5763. 5768-5770.

Geological Survey. Explanation relative to the increase from 7,000 *l.* in 1856-57 to 22,000 *l.* in 1870-71 for the geological survey of India; operations of the department adverted to, *Harrison* 4698, 4699. 4717-4720.

Godavery Irrigation Works. Projection by witness of the Godavery Delta Works, which came under his charge in 1845, *Sir A. T. Cotton* 8293-8296——Information relative to the cost, operation, and financial results of these works; immense increase in the annual revenues of the irrigated district, irrespectively of the receipts for water rates, *ib.* 8297-8310. 8324-8326——The cost of the works has been less than 500,000 *l.*, *ib.* 8303, 8304.

Great difficulty in obtaining the money required for the full completion of the works, so as to bring a million acres under irrigation, instead of half that quantity, as hitherto; supply recently of 100,000 *l.* for the purpose of completion, *Sir A. T. Cotton* 8311-8314. 8403-8405.

GODAVERY *NAVIGATION WORKS:*

1. *Strong Disapproval of the Works, and of any large additional Expenditure upon them.*
2. *Action, respectively, of the Government of India and of the Secretary of State; decision eventually to stop the Works.*
3. *Defence and Approval of the Works; advocacy of further Expenditure upon them.*

1. *Strong Disapproval of the Works, and of any large additional Expenditure upon them:*

Information relative to the object of the Godavery Navigation Works, and the expense involved; unremunerative character of the scheme, *Strachey* 6735-6739. 6741. 6750, 6751——Very problematic success of the works, *ib.* 7038, 7039——Particulars relative to the rates of freight to and from Kurrachee, as compared with Calcutta and Bombay; disadvantage of the former port, *ib.* 7039-7046——Probable increase of expense of the Kurrachee and Godavery works by reason of delay in the supply of money by Government, *ib.* 7047.

Examination upon the question of opening out the Godavery river, at an additional expenditure of a quarter of a million, so as to facilitate the traffic in cotton and other produce from Berar, Nagpore, and other districts; grounds for the conclusion that this would not be a wise expenditure, *Strachey* 7866-7931——Pressure from Manchester relative to the Godavery navigation; justification of non-compliance therewith, *ib.* 7870 *et seq.* 7927, 7928——Very little traffic to be expected on the Godavery; there are hardly 50,000 acres of cultivated land on the navigable part of the river, *ib.* 7873-7893.

2. *Action,*

GODAVERY NAVIGATION WORKS—continued.

2. *Action, respectively, of the Government of India and of the Secretary of State; decision eventually to stop the Works:*

Explanation of the action respectively of the Secretary of State and of the Government of India relative to the Godavery works, and their sanction in the first instance; disapproval of the scheme by the latter, *Strachey* 6741–6749.

Further examination in detail relative to the part taken respectively by the Government of India and by the Secretary of State in Council, relative to the initiation and prosecution of the Godavery works; sundry despatches cited in order to show that no pressure was exercised in the matter by the Secretary of State, *Strachey* 7089–7118——Approval of the decision in 1867 not to stop the works, *ib.* 7119——Final decision by the Secretary of State to prosecute the works on a limited scale; concurrence in such decision, *ib.* 7120–7123.

Further reference to the Godavery Works, to the effect that on a representation by Lord Mayo the Secretary of State directed that the whole of the works should be stopped, *Strachey* 7786——Expenditure already of 750,000 *l* on the Godavery works, decision of Government to stop the works rather than spend 250,000 *l.* more in order to render them partly operative, *ib.* 7872, 7873. 7929–7931.

Despatch from the Government of India to the Secretary of State for India, dated 1st June 1871, containing sundry details relative to the Upper Godavery Navigation Works, representing the large and fruitless outlay incurred, and advising a strict limitation of the works, *App.* 629–634.

3. *Defence and Approval of the Works; advocacy of further Expenditure upon them:*

Considerable benefit to be derived from the Godavery Navigation Works, if efficiently carried out, and not at too great a cost, *Laing* 7583.

Intimate acquaintance of witness with the Upper Godavery Works, though he did not project nor execute them, *Sir A. T. Cotton*, 8333–8338——Expenditure of about 700,000 *l.* on these works, another 100,000 *l.* being required in order to give 400 miles of navigation, *ib.* 8339——Sundry details relative to the efficiency of the works, and their value for irrigation as well as navigation; conviction that a further outlay of about 200,000 *l* would make the works among the most valuable in India, *ib.* 8340–8363.

Results hitherto of the navigation of the Godavery; small draught of water required for the peculiar boats in use, *Sir A. T. Cotton* 8354–8363——Statement in further support of the conclusion as to the great value of the Upper Godavery Works; economy as compared with railway communication, both in original construction and in working, *ib.* 8426, 8427.

Examination in detail with further reference to the Godavery Navigation Works, witness strongly insisting upon the great importance of their completion, and denying the accuracy of various statements by General Strachey depreciatory of the works, *Sir A. T. Cotton* 8489–8534——Dissent from the statement that the traffic on the Indus is greater than on the Godavery, *ib.* 8517——Inaccuracy of a statement that there are not more than 50,000 acres of cultivated land on the navigable part of the Godavery, and that the population up the river is very scanty, *ib.* 8529–8534.

Gold Coinage. Inappreciable coinage of gold in India, *Harrison* 4001——Recent issue of a gold coin from the Calcutta Mints; it is not a legal tender, *ib.* 4067–4069——Value attached by the natives to gold of a high standard for the purpose of ornaments, *ib.* 4085–4089.

Goldsmid, Major General. Charge of 4,544 *l.*, in 1870–71, for a special mission of Major General Goldsmid in order to settle the boundary between Persia, Affghanistan, and part of British India, *Seccombe* 918, 919.

Government Estates. Charge of 24,391 *l.*, in 1870–71, on account of Government estates, chiefly for local improvement, *Harrison* 3695–3697.

Government of India. See *Expenditure.* *Local Taxation and Finance.* *Simla.* *Taxation.*

Governor General Charge of 18,000 *l.*, in 1870–71, for the Governor General's staff and household, *Harrison* 4363——Explanations relative to the expenditure of 46,772 *l.*, in 1870–71, on account of the Viceroy's tour expenses; careful check applied to these charges by the Viceroy, *ib.* 4382–4419 4495——Statement as to there being no power to disallow charges sanctioned by the Governor General in Council, and as to there being no actual limit to the personal expenditure of the Viceroy, *ib.* 4566–4637.

Complaint by natives relative to the large cost of the staff and household of the Governor General, *Hutton* 8572.

See also *Simla.*

Grain. Small addition made by witness to the duty on the export of grain, this having brought in about 200,000 *l.* without diminishing the trade, *Right Hon. W. N. Massey,* 8581.——*See* also *Famines.*

Gratuities. Particulars relative to the charge for gratuities, and for gratuities in lieu of pensions, to members of the uncovenanted service, *Seccombe* 170–175. 184, 185.

Great Indian Peninsula Railway. Issue of a large amount of 4 per cent. debenture at a discount, by the Great Indian Peninsula Company, *Danvers* 1730–1741——Statement as to 2,000 structures of all kinds, including bridges and viaducts, having required to be repaired on the Great Indian Peninsula line, *Thornton* 1792. 1895.

Careless supervision of the materials used in the bridges on the line, *Danvers* 2910——Absence of any decision hitherto as to the best mode of working the Great Indian Peninsula line over the ghâts, *ib.* 2925–2929——Delay in the erection of the terminal station of the line, *ib.* 2930–2932.

Very small return on the Great Indian Peninsula Railway, *Sir A. T. Cotton* 8502.

See also *Railways,* I., 15.

Guarantees (Public Works). See *Calcutta and South Eastern Railways. Madras Irrigation and Canal Company. Railways.*

Guicowar. Expenditure of 12,651 *l.* for some Armstrong guns as a present to the Guicowar; authority of the Governor General in Council for this outlay, *Harrison* 5805. 5813. 5845–5847.

H.

Harrison, Edward Francis, and Edward Gay. (Analysis of their Evidence.)—(*Mr. Gay.*) Is Deputy Comptroller General in India; has brought home the accounts required by the Committee in the greatest detail in which they could be prepared up to the time of his departure for England, 3484–3488.

Total of 356,431 *l.* as the amount of refunds, drawbacks, &c., in the year 1870–71; several heads of revenue under which these refunds arise, 3489. 3493–3498——Practice formerly of showing the receipts net, so that in 1856–57 there was no account of refunds, &c., 3490–3492——Refund of 72,050 *l.*, in 1870–71, in respect of land revenue, over-collected and repaid on appeal, 3499. 3501——Large portion of the refunds of assessed taxes which consists of the return of a local tax on trades in the Central Provinces, 3502, 3503.

(*Mr. Harrison.*) Total refund of 40,000 *l.*, in 1870–71, on account of assessed taxes, 13,000 *l.* of this amount being in respect of the Pandhri tax in the Central Provinces, 3503, 3504. 3512–3516——Refund of 31,000 *l.* in respect of salt duty, of which 29,500 *l.* is in Calcutta; short delivery of imported salt to which this refund refers, 3505–3507——Total of 35,000 *l.* as the refund for stamps, including the allowance for spoiled stamps; discontinuance in future of a large portion of this refund, 3508, 3509——Aggregate of 96,000 *l.* as the miscellaneous refunds, 3510——Total of 45,000 *l.* as the refunds under law and justice, *ib.*——Separate statement of remissions of land revenue, apart from refunds, 3518, 3519.

Expenditure of 3,089,682 *l.* in India, in 1870–71, in the collection of the land revenue, the forest revenue, and the revenue from spirits and drugs, 3520, 3521——Chief heads of expenditure comprised in the total of 2,422,856 *l.* for the collection of the land revenue, 3522–3525. 3628——Explanations in detail relative to the comparative charge in 1856–57 and in 1870–71, and the increase in the latter year, for collection of the land revenue, under the different heads in the accounts before the Committee, 3526 *et seq.*

Information relative to the revision and increase made, in 1866, in the scale of pay of the deputy commissioners and other civil servants in Oude, the Punjaub, the Central Provinces and British Burmah; large increase from this cause in the cost of collection of the land revenue in those Provinces, 3528–3541. 3677–3687——Total increase of about 289,000 *l.*, since 1856–57, for collectors and deputy commissioners, and subordinate officers, 3541. 3561, 3562. 3569, 3570. 3603——Very little change since 1856–57 in the cost of collection in the North Western Provinces, 3542——Considerable increase in Madras owing to the large increase, in 1870, in the number of young civilians employed as assistant collectors, 3543, 3548. 3614–3624.

Increased cost of collection in Bombay from 208,000 *l.* in 1856–57 to 365,000 *l.* in 1870–71; several items composing this increase, 3549–3560——Explanation relative to the system of double change in respect of services rendered by the Post Office for the land revenue and other departments, 3542. 3556, 3557. 3563–3568——Statement of the gross land revenue and the cost of collection, in 1856–57, and in 1870–71, respectively, 3571. 3587——Circumstance of the accounts of the cost of collection of the land revenue including charges which might more fairly be placed to other heads, 3573–3580.

Particulars

Harrison, Edward Francis, and Edward Gay. (Analysis of their Evidence.)—*continued.*

Particulars relative to the large number of natives with very small salaries, in comparison with the small number of Europeans with large salaries, employed in the collection of the land revenue, 3581–3586. 3637–3651——Security given by the subordinate collectors, but not by the district collectors, 3588–3590——Limited amount or number of defalcations on the part of native collectors, 3591–3594——Information as to the employment of military officers and of civilians, respectively, in the administration and collection of the land revenue; absence of economy in the cost of collection in the former case, 3595–3602. 3604–3613. 3672–3676. 3688–3691——Explanation on the subject of out-of-employ allowance to civil officers on return from furlough, 3600–3602. 3610–3612, 3662–3671.

Doubt as to any advantage arising from the system of showing the gross revenue, with all the repayments, separately, on the other side of the account, 3625–3627——Variations and expected reduction of charge under the head of revenue surveys, the charge in 1870–71 being 228,000 *l.*; 3629. 3701–3706——Constant variation also in the land settlement charges in the different provinces, 3629——Termination, practically, of the charge in respect of the Inam Commission, 3630. 3718——Restriction in force as to the office of collector being filled by a member of the Civil Service; practical obstacles to the admission of natives into the Civil Service, 3641. 3652–3660. 3692–3694.

Charge of 24,361 *l.*, in 1870–71, on account of Government estates, chiefly for local improvements, 3695–3697——Expenditure of 84,900 *l.* in the remuneration of native collectors in Burmah and Assam, by a per-centage on the collections, 3698–3700——Varying character of the charge for revenue surveys, 3702–3706——Increased payments made to the native officers employed on the surveys, 3707–3709——Considerable increase since 1856–57, in the Land Settlement charges, the amount in 1870–71 being 244,000 *l.*, and there not being prospect of immediate reduction, 3710–3717.

Explanation relative to a nominal item of 230,000 *l.* in respect of alienations of land for hereditary village officers, chiefly in Bombay; doubt as to services being rendered to the State in respect of these lands, 3719–3731.——(*Mr. Gay.*) Voluntary character of the settlement with the holders of alienated lands; practice in dealing with the money received in composition of services, 3732–3739.

(*Mr. Harrison.*) Expenditure of 373,000 *l.* in India on forests, in 1870–71, comprising 109,000 *l.* for salaries, and 264,000 *l.* for conservancy and working expenses, 3740–3742——Charge of only 40,292 *l.* for forests in 1856–57; great increase in the operations of the department since that year, 3743–3749——Net revenue of 91,000 *l.* from the forests, in 1856–57, the net revenue, in 1870–71, being 73,215 *l.*; 3750–3752. 3755, 3756.——(*Mr. Gay.*) Statement as to certain charges in respect of the forests, in 1856–57, having been carried to the collection of the land revenue, 3752, 3753.

(*Mr. Harrison.*) Charge of 95,753 *l.*, in 1870–71, for the collection of the excise revenue on spirits and drugs, there being also a charge of 197,723 *l.* for the cost price of opium, 3757–3762——Complete change, since 1856–57, as regards the excise administration, and considerable increase of expense, owing to the adoption of the Sudder Distillery system, 3764–3766.

[Second Examination.]—(*Mr. Harrison.*) Charge of 43,991 *l.*, in India, for the collection of the income tax, in 1870–71, the chief expense having been in Bengal; limited amount of this charge, owing to the use made of existing establishments, 3769–3775——Larger charge in Bombay than in Madras for the collection of the income tax, there being a larger staff for the purpose in the former Presidency, 3773, 3774. 3835–3837.

Total of 186,991 *l.* as the cost of collection of the Customs' revenue in 1870–71; 3776, 3777——Explanations relative to the Customs' revenue, and the cost of collection, in each Presidency or Province in 1856–57, and in 1870–71, largely increased cost, owing chiefly to increased establishments, the revenue however having increased in an equal ratio, 3778–3838——Reduction of Customs charge at Madras, owing to the reduced salaries of the collector and deputy collector, 3788–3791——Larger proportionate increase of Customs charge for collection in Bombay than in Bengal; important advance of prices and of salaries in Bombay adverted to as a main cause of such increase, 3792–3807. 3813–3819. 3835–3838——Larger number of ports in Bombay than Bengal, which require to be watched, 3807. 3838.

Small Customs revenue in the Central Provinces, the collection being undertaken by the salt establishment; small revenue also in the North Western Provinces, there being no charge, 3808, 3809. 3826–3828——More responsible position of the Commissioner of Customs at Bombay than of the Collector at Calcutta; salary of each officer, 3810–3812——Explanation as to the large drawback at Bombay on re-exported goods, 3822–3825——Charge against Customs of the entire expense of the office of Commissioner of Customs at Bombay, although the establishment for salt and Customs is under the same Commissioner, 3829, 3830.

Total expenditure of 389,964 *l.*, in India, for collecting the salt revenue; several heads under which this charge is divided, 3839, 3840——Charge of 127,000 *l.* in Madras, of which 93,000 *l.* is for the purchase of salt, 3840–3842——Charge of 107,000 *l.* in the

North

Harrison, Edward Francis, and Edward Gay. (Analysis of their Evidence)—*continued.*

North Western Provinces, a large portion of which is for a preventive staff along the frontier line between British and native territory, 3843——Explanation of a charge of 9,600 *l.* for saltpetre establishments in Oude, 3844——Charge in the Central Provinces for the preventive line on the frontier, 3845-3847.

Particulars relative to the comparative expenditure in collection of the salt duty in the several Presidencies and Provinces in 1856-57 and in 1870-71; the revenue now exceeds 6,000,000 *l.* the expenditure being under 400,000 *l.*; 3848-3882——Large increase of charge in the North Western Provinces owing chiefly to the arrangements for manufacture at the Sambhur Lake, 3849——Increase from 31,000 *l.*, in 1856-57 to 93,000 *l.* in 1870-71 for the Government purchase of salt in Madras; large increase in the rate paid to the producer, 3851-3856. 3865-3868.

Small charge for collecting the salt duty in Bengal, this referring almost entirely to imported salt; belief that there is no smuggling, 3857-3863. 3878-3880——Large cost formerly of Government manufacture in Bengal, 3858——(*Mr. Gay.*) Cause of the much greater cost of manufacture in Bengal than in Madras, 3866——(*Mr. Harrison*) Duty paid out of Oude upon the salt consumed in Oude, 3869, 3870. 3881——Small amount of salt duty, and small charge in British Burmah, 3871-3875——Difficulty in apportioning the salt revenue and the cost according to the consumption in the several Provinces, 3876——(*Mr. Gay*) Belief that there are no salt works licensed in Oude, 3883, 3884.

(*Mr. Harrison.*) Duty of about 400 per cent. represented by the revenue from salt, the consumption being very general over all India, 3885-3893——(*Mr. Gay.*) Use of duty-paid salt in Upper Burmah, without any drawback being allowed, 3894, 3895——(*Mr. Harrison.*) Payments made as compensation for the use of duty-paid salt in the French Settlement, and in Cochin China and Travancore, 3896-3904.

Total of 2,014,000 *l.* as the cost of collection of the opium revenue, nearly the entire charge being in Bengal, 3905, 3906. 3925——Comparative charges under different heads, in 1856-57 and in 1870-71, in respect of opium, in the Behar Division and in the Benares Divison; explanation of the causes of increase, 3907-3924. 3936——Expenditure of 2,486 *l.* in Bombay, in respect of the collection of opium duty; smallness of this charge adverted to and explained, 3926-3933——Facility of realising the opium revenue in Bengal by public sale of the opium at Calcutta, 3934.

Statement relative to the duty on opium consumed in Bombay, more especially as regards the question of an Excise duty being levied in addition to the Customs duty, 3937-3944. 3947-3954——(*Mr. Gay.*) Indirect way in which the Excise duty is collected on opium purchased for consumption in Bombay, 3945, 3946——(*Mr. Harrison.*) Belief that there is no consumption in Madras, 3955-3957.

Increase from 32,124 *l.* in 1856-57 to 101,610 *l.* in 1870-71, in the charges in connection with the stamp duties; chief cause of this difference in the increase from 15,000 *l.* to 80,000 *l.* for discounts on sale of stamps, 3958-3974——Increase of stamp duty from 637,900 *l.*, in 1856-57, to 2,310,000 *l.* in 1870-71, 3962.

Reduction from 96,000 *l.*, in 1856-57, to 59,532 *l.* in 1870-71, in the expenditure for the mints at Calcutta, Bombay, and Madras, 3975-3979——Closing of the Madras Mint about two years ago, endeavour made to sell the machinery and plant, 3975, 3976. 3997-4000. 4002——Decrease of silver coinage by the mints from 10,000,000 *l.*, in 1856-57, to 1,000,000 *l.* in 1870-71; obstacles and objections to any large or rapid reduction of the establishments, in consequence of the decreased work required, 3980-3993——Great reduction of copper coinage; large profits attaching to such coinage, 3988, 3989. 4012-4015. 4025. 4052——Loss of 33,000 *l.* on the coinage operations in 1870-71; 3990.

Explanation relative to the charge of two per cent. made for the conversion of silver bullion at the mints; doubt as to this being the cause of decreased import of bullion, 3993-3996. 4011, 4012. 4016-4024——Inappreciable coinage of gold, 4001——Considerable local inconvenience if the Bombay Mint were closed, 4003, 4004——Unimportant coinage at the native mints, 4007-4009——Effect of the circulation of bank notes on the coinage circulation, 4010——Improbability of the mint paying its expenses in future, a silver coinage of 3,000,000 *l.* a year being required to cover expenses, 4025-4027, 4052, 4053.

Consideration of the question of abolishing the mint in India, and of supplying the required silver coinage from the Mint in England; several objections to this proposal, 4028-4061——Very limited circulation of sovereigns in India; statement hereon as to the sovereign being worth more than 10¼ rupees, as given for it at the Government treasuries, 4062, 4063. 4074-4084——Circumstance of the rupee being worth a little more than the English two-shilling piece; doubt as to the advantage of making them precisely equivalent, 4064-4066. 4070, 4071.

Recent issue of a gold coin from the Calcutta mint; it is not a legal tender, 4067-4069——(*Mr. Gay.*) Preference given at Aden and Suez to florins over rupees, as the former can be exchanged for sovereigns without loss, but not the latter, 4072, 4073——

(*Mr.*

Harrison, Edward Francis, and Edward Gay. (Analysis of their Evidence)—*continued.*

(*Mr. Harrison.*) Value attached by the natives to gold of a high standard for the purpose of ornaments, 4085–4089.

[Third Examination.]—(*Mr. Harrison.*) Total of 613,000 *l.* as the expenses of the Post Office in India in 1870–71, as compared with 312,796 *l.* in 1856–57, 4090. 4122 ——Cost of 14,600 *l.* for the central post office at Calcutta; explanation as to the very little charge under this head in 1856–57: 4090–4096——Large reduction made in the postage rates in India in 1854; 4095. 4131. 4143, 4144——Important increase since 1856–57 in the cost of post offices throughout the country, the number having increased from 779 to 2,743; 4097–4102——Largely increased cost of the conveyance of mails, owing to the great extension of postal facilities, 4103–4105.

Information relative to the use made of the railways for the conveyance of the mails; saving of expenditure thereby, 4106–4109. 4155. 4159——Explanation relative to the postal contract with the British Indian Steam Navigation Company for the conveyance of letters to ports in the Persian Gulf, British Burmah, &c., 4110–4115. 4145–4148——Charge of 14,500 *l.* in respect of discount on sale of stamps, 4116–4119——Aggregate Post Office expenditure of 754,940 *l.*, including the payments in England, 4123, 4124.

Threefold increase of postal revenue since 1856–57, the expenditure having about doubled, 4125–4130. 4136–4142——Several changes made in the postage charge between England and India; charge now in force, 4132–4135. 4160, 4161——Conclusion as to the successful administration of the Post Office, 4136–4142——Explanation of the high postage on letters sent by the mail steamers between Calcutta and Madras, 4149–4154——Very little use of the rivers for postal communication, 4156–4158——Increase generally in the salaries of the native officials under the Post Office, 4162–4166.

[Fourth Examination.]—(*Mr. Harrison.*) Total charge of 96,000 *l.* in 1870–71, for the salaries of the Governor General, the Governors, Lieutenant Governors, and Chief Commissioners, distribution of this charge among the several Presidencies, 4352–4360 ——Charge of 58,000 *l.* for the staff and household of the Governor General and the Governors; explanation as to the large increase under this head in the case of Bombay, since 1856–57, and as to the material increase also in Madras, 4361–4379——Cause of the increased expenditure in 1870–71, as compared with 1856–57, in respect of the Commissioner of Scinde, 4380, 4381.

Information in detail relative to the expenditure of 46,772 *l.* in 1870–71 on account of the Viceroy's tour expenses; careful scrutiny of this expenditure by the Viceroy personally, 4382–4419. 4495—— Particulars also relative to the tour expenses in Bombay, Madras, and the North Western Provinces respectively; large increase in the former and latter case as compared with 1856–57; 4420–4432.

Total of 64,720 *l.* as the charge for salaries of the Supreme Council, 4433–4437. 4486–4489——Large reduction since 1856–57 in the charge for the Legislative Council, the constitution of the Council having been altered since that year, 4438–4445——Explanation also relative to the charges for the Councils at Madras and at Bombay, 4446–4449. 4497.

Total of 221,500 *l.* as the charge for secretariats in 1870–71, as compared with 173,500 *l.* in 1856–57, explanation of the causes and items of increase, 4450–4462. 4498, 4499——Causes of the increase from 39,800 *l.* in 1856–57 to 50,400 *l.* in 1870–71, in the cost of the military secretariats, 4463, 4464——Cost of 31,960 *l.* for the Public Works secretariat in 1870–71, as against 14,300 *l.* in 1856–57; great extension of duties in the interval in respect of railways and irrigation works, 4465–4468.

Several residences of the Governor of Bombay; considerable outlay for furniture, &c., 4469–4479——Charge against army expenditure in respect of the services of the Commander in Chief as member of the Council, 4480–4485——Varying cost for official residences in the different Presidencies and Provinces, 4490–4494.

[Fifth Examination.]—(*Mr. Harrison.*) Information relative to the causes of increase or decrease since 1856–57 in the different Presidencies, &c., on account of the Board of Revenue Establishment and the Revenue Commissioners; considerable increase in the aggregate, 4500–4549——Total of 209,600 *l* as the charge in 1870–71 against 165,900 *l.* in 1856 in respect of Revenue Commissioners; particulars hereon, 4512–4549——Large increase in the charge for Revenue Commissioners in Bengal; explanation of the relative charge in Bengal and in Madras and Bombay, 4528–4536.

Further reference to the total land revenue charges in the three Presidencies, 4537–4539. 4550–4553——Much larger charge in Bengal than in the North Western Provinces; much larger area in the former case, 4540–4542——Absence of any comprehensive inquiry in recent years into the salaries in the land revenue departments, 4543, 4544——Causes of the increase in the charge for Commissioners in the North Western

Harrison, Edward Francis, and Edward Gay. (Analysis of their Evidence)—*continued.*

Provinces since 1856–57; 4545–4548——Large increase also in the Punjab, where there are now ten commissioners instead of seven, in 1856–57; 4549.

Item of 133,440 *l.* as the charge under the head of Audit and Account, the charge in 1856–57 having been 96,000 *l.*; several causes of this increase in the different provinces, the chief increase being due to the centralisation of the accounts in Calcutta, 4554–4564——Important decrease in the salaries in the Account and Audit branch, 4565.

Examination relative to the functions of the Audit Department in India, and of the department at Calcutta and Madras and Bombay respectively, 4566 *et seq.*——Statement as to there being no power to disallow charges sanctioned by the Governor General in Council, and as to there being no actual limit to the personal expenditure of the Viceroy, 4566–4637——Absence of any systematic audit in England of the accounts in India; there are not the materials for such audit, 4586–4591. 4620, 4621—— Witness is not cognisant of irregular charges, nor have there been any remonstrances from England as to payments passed in India, 4592–4594. 4628–4630——Opinion that greater responsibility might with advantage be placed upon the Auditor General in India, 4623–4627. 4638–4640.

Great discrepancy between the cost of collection of the revenue and the amount of the revenue in Oude, as compared with the Central Provinces or the North Western Provinces, 4641, 4642——Economy by the substitution of Revenue Commissioners for Revenue Boards, 4643–4647.

Separate department for the audit of the accounts of the Public Works Department, the charge being 10,000 *l.*; very limited interference of witness's department with these accounts, 4648–4658——Charge of 23,334 *l.*, in 1870–71, for the Currency Department, which has been established since 1856–57; 4659–4665——Duties discharged by the Money Order Office, which is not in connection with the Post Office; charge of 6,420 *l.* under this head, 4666–4668——New charge of 26,849 *l.*, since 1856, for allowances to the three Presidency banks for certain duties discharged by them for Government, 4669–4682.

Expenditure of 212,897 *l.*, in 1870–71, as compared with 99,525 *l.*, in 1856–57, under the head of Minor Departments, 4684——Particulars relative to various items of charge under the foregoing head; explanation, more especially as to the creation of several new departments, this largely accounting for the increased expenditure, 4685–4745.

Aggregate of 2,996,000 *l.* as the expenditure in 1870–71, in the administration of law and justice, the charge in 1856–57 having been 1,741,000 *l.*; 4746——Increase, from 1,458,000 *l.*, in 1856–57, to 2,162,000 *l.* in 1870–71, for the civil and criminal courts of justice, 4747, 4748——Charge of 283,000 *l.* for gaols in 1856–57, the charge in 1870–71 having been 727,000 *l.*; 4749——Recent creation of the Registration Department, the charge being 106,000 *l.*; 4749, 4750.

Increase from 96,400 *l.*, in 1856–57, to 149,600 *l.* in 1870–71, in the cost of salaries of the judges of the High Courts; explanation that this arises chiefly from the increased number of judges, 4751–4769——Increased establishments of the High Courts, 4759. 4765——Important reduction in the scale of salaries of the principal officers of the High Court at Calcutta, 4763.

New charge since 1856 in respect of the High Courts at Allahabad and Lahore, and the Recorder's Court at Rangoon, 4770–4773——Option of the judges of the High Court to have their pensions according to the ordinary civil service system, 4774–4776——Necessary contribution by the civil servants of a per-centage of their salaries towards their pensions, 4777–4779——Requirement of twelve years' service for the maximum pension of a judge, the minimum pension being granted after seven years' service in the event of failure of health, 4780–4782.

[Sixth Examination.]—(*Mr. Harrison.*) Total increase of 228,000 *l.* in the charge for the civil courts since 1856–57; particulars of the causes, and amount of increase or decrease in each Presidency or Province, 4789–4802. 4880–4902——Increase from 198,000 *l.* to 340,000 *l.* in the cost of civil courts in Bengal since 1856–57; this is caused chiefly by the increased salaries, and by a new charge for service of processes, 4795–4802——Information relative to the various grades of judges in Bengal, showing the number of natives in each grade, and the salaries; exceedingly few natives holding any of the higher and well-salaried judicial appointments, 4802–4871.

Exclusion of natives from thirty civil judgeships in Bengal, which are reserved for the covenanted civil service; examination as to the policy or justice of such exclusion, 4830–4869——Admission of some half dozen natives to the civil service, which comprises about 1,000 Europeans, 4835–4838——Value attached by the natives to the opening of the High Court to native judges, 4849–4853——Circumstance of its having been several times under consideration to re-organise the judicial service, and extend the appointment of natives thereto, 4870, 4871——Statement of the salaries of the Small Cause Judges in Bengal, one out of six judges being a native, 4872–4875.

Information

Harrison, Edward Francis, and Edward Gay. (Analysis of their Evidence)—*continued.*

Information relative to the charge in 1856–57 and in 1870–71 on account of the civil and sessions courts in the North Western Provinces, Madras, Bombay, &c.; causes of the large increase in the North Western Provinces, and Bombay, more especially, 4880–4888——Large extension of small cause courts in India; increased cost in respect thereof in Madras, Bombay, &c., 4888–4895——Relative receipt from fees in the civil courts in 1856–57 and in 1870–71; increase of 1,461,000 *l.*; 4896–4902.

Increase from 568,600 *l* to 840,000 *l.* in the expenditure for criminal courts, 4903, 4904——Particulars as to the increase in the items of salaries, establishments, &c. in the several Presidencies and Provinces in 1870–71, as compared with 1856–57; 4905–4936——New civil charge in connection with the appointment of cantonment magistrates; explanation hereon, 4905. 4909. 4924, 4925. 4937–4940. 4958–4961.

Inability of witness to account for the much larger proportionate expenditure under various heads in Bombay than in Madras; the enhanced prices in Bombay are probably one cause, 4941–4946. 4950–4953——Certain court fees still paid in money instead of in stamps, 4954——Greater cost of the High Courts than of the former Supreme Court and Sudder Court, 4955, 4956.

Increase from 18,900 *l.* in 1856–57 to 26,800 *l.* in 1870–71 in the expenditure on the inspection and general superintendence of the goals; explanation of the amount and cause of increase in each Presidency or Province, 4962–4966——Charge of 121,400 *l.* in 1870–71 for central gaols and houses of correction, the charge in 1856–57 having been 38,900 *l.*; particulars of the amount and cause of increase locally, 4967–4972. 4984–4994——Largely increased cost for prisoners' rations, owing very much to the rise in prices; exceptional reduction in the North Western Provinces in 1870–71, as compared with 1869–70; 4972–4983.

Importance of the question of prices, as affecting the cost of administration in India, there having been for some years a general tendency to a rise of prices, 4974. 4976–4983——Considerable increase of cost for district gaols, both in respect of gaol establishments and of gaol supplies, such as rations, hospital expenses, &c.; distribution of this increase locally, 4995–5013——Large nominal increase of expenditure on account of gaol manufactures, more especially in Bengal; explanation as to the returns on the other hand from gaol labour, and the expenditure of the proceeds in local improvements, 5014–5031.

New charge of 109,900 *l.* for the convict settlement at Port Blair; this is exclusive of the military expenditure at the settlement, 5032–5035. 5045. 5047——Varying practice as to the mode of account for the labour of convict prisoners employed on roads or other public works, 5036–5040——Return of 35,700 *l.* from convict labour at Port Blair in 1870–71; 5041——Discontinuance of the practice of sending convicts to the Straits Settlements, the charge under this head in 1870–71 being a final one, 5042–5044——Total of 6,965 male and 638 female convicts at Port Blair on 31st December 1870; 5046, 5047.

Explanation relative to the large variation in the cost of prisoners' rations per head in the different provinces; belief as to the sufficiency of fifteen or sixteen rupees per annum for maintenance in the North Western Provinces, 5048–5056——Separate charge made for the cost of maintaining the vegetable gardens attached to the gaols; diminished cost of the gaols from this source, 5057–5061.

Creation of the Registration Department under an Act of 1864, the charge in 1870–71 having been 106,300 *l.*; 5062–5065——Receipt on the other hand of 148,000 *l.* for fees for registration of documents, 5065.

Increase from 1,098,000 *l.* in 1856–57 to 2,275,000 *l.* in 1870–71 in the expenditure for the police of India, 5066, 5067——Office of commissioner of police at Madras, but not at Bombay or Calcutta, 5068–5071——(*Mr. Gay.*) System at Madras of showing the charge for the town police in gross, recovery being made from the municipality of about three-fourths of the cost, 5071——(*Mr. Harrison.*) Statement of the gross and net expenditure for town police of the different presidency towns, 5072–5085.

New charge since 1856–57, for the provincial superintending officers of police in India, 5086–5090——Statement relative to the very small charge for superintendence in Bombay, the duty being performed by the Revenue Commissioners, 5090–5094——Charge of 1,900,000 *l.* in 1870–71, as against 1,044,000 *l.* in 1856–57, for the executive police force of India, 5095–5097——Explanation as regards the foregoing increase, that it has been attended with a somewhat corresponding decrease of military expenditure by reduction of the native army, 5098–5114——Particulars relative more especially to the re-organization of the Madras police force, its increased cost, and the large, or larger corresponding saving by reduction of the native army, 5100–5113.

[Seventh Examination.]—(*Mr. Harrison.*) Aggregate of 759,770 *l.* as the amount of marine charges in 1870–71, the amount in 1856–57, having been 709,700 *l.*, 5115——Great changes as regards the marine or navy since 1856, so that any comparison with the present time in the matter of cost is difficult, 5116——Discontinuance of the

Harrison, Edward Francis, and Edward Gay. (Analysis of their Evidence)—*continued.*

Burmese flotilla since 1856; arrangements now in force, and cost incurred, 5117-5119 ——Details relative to the marine expenditure in Bengal, of 181,400 *l.* in 1870-71, as against 290,400 *l.* in 1856-57, 5120-5179.

Particulars relative to the pilotage establishment at Calcutta, its constitution, cost, &c.; charge of 65,400 *l.* in 1870-71, whilst the pilotage receipts were 82,100 *l.*, 5137, 5138. 5146-5157. 5166-5177. 5179——Explanation as to the maintenance of a yacht for the Viceroy, and of another for the Lieutenant Governor of Bengal; amount of charge in each case, 5141-5145——Question under consideration as to maintaining the dockyard at Calcutta, 5158, 5159——Employment of only one transport vessel at Calcutta; duties discharged, and cost incurred, 5160-5165.

Explanation relative to the Government flotilla on the Indus, the cost of which in 1870-71 was 23,200 *l*, and the earnings about 10,000 *l.*, 5181-5199——Reduction of marine charges at Madras, from 20,900 *l.* in 1856-57, to 6,800 *l.* in 1870-71; 5200-5203 ——Details relative to the marine expenditure of 241,000 *l.* in Bombay, the charge in 1856-57 having been 275,600 *l.*; abolition in the mean time of the India navy, 5204 *et seq.*

Information relative to the several vessels still employed under the Government of Bombay, and the cost incurred, in addition to the vessels of the Royal Navy in the Persian Gulf and elsewhere, 5212-5238. 5247 *et seq.*——Expenditure on account of two ironclads for Bombay Harbour; arrangement as to the manning of these vessels, 5238-5246 ——Considerable expenditure in connection with the Bombay Dockyard, 5247-5262. 5278. 5293, 5294. 5300-5302——Reference to an item of 20,000 *l.* as being the amount of a debt due by the old Bombay Harbour Board, and admitted by Government, 5271, 5272. 5288-5292.

[Eighth Examination.]—(*Mr. Harrison.*) Increase from 28,000 *l.* in 1856-57 to 89,000 *l.* in 1870-71 in expenditure for police in Oude; statement as to the population and area in reference to the police force, 5304-5314——Causes of the increase from 35,900 *l.* to 109,000 *l.* in the cost of the police in the Central Provinces; abolition at the same time of several military or semi-military bodies, 5315-5325——Particulars relative to the revision of the police in Burmah, where the cost in 1870-71 was 109,800 *l.* against 56,870 *l.* in 1856-57; 5326-5331.

Charge of 415,200 *l.* in 1870-71 against 115,700 *l.* in 1856-57 for the district executive police in Bengal; re-organisation of the force during this period, the pay having been increased, and the duties having been recast, 5332-5347——Important changes made in the organisation of the police force in the North Western Provinces, the cost having increased from 126,000 *l.* in 1856-57 to 275,000 *l.* in 1870-71; 5348-5353—— Total of 257,000 *l.* as the cost of the district and military police in the Punjab in 1856-57, the cost in 1870-71 being 241,900 *l.*; revision of the force in 1861; 5354-5361.

Charge of 353,168 *l.* for the district police in Bombay in 1870-71 as compared with 216,700 *l.* in 1856-57; re-organisation of the force in 1861; 5362-5374——Explanation that the foregoing statistics do not comprise the charges for the town police, 5370-5374 ——Separate charge of 14,796 *l.* for military police in the North Western Provinces, 5375——Separate charges also for Thuggee and Dacoity police in different districts, this being chiefly a detective force, 5375-5379. 5385-5389——Explanation relative the railway police and the charge under this head; re-imbursement of three-fourths of the charge by the railway companies, 5375-5384. 5440.

Information as to the separate police administration in the different provinces, there being a superintendent of police for each revenue collectorate, 5392-5404——Statement of the general charge for officers and for rank and file, respectively, in the different provinces, 5406-5411——Partially military organisation of the police throughout India; mode of arming the force adverted to, 5412-5418. 5435. 5437.

Improbability of any further increase of police expenditure, or of further transfer of duties performed by military forces, 5422-5425——Doubt as to there being much room for economy by reduction of the number of officers; revision already in this direction, 5426-5428——Exclusion of the charge for buildings and for pensions from the accounts of expenditure; witness will prepare a statement showing the gross cost, directly or indirectly, together with the deductions, 5430-5434.

Aggregate expenditure of 624,690 *l.* in India under the head of education, in 1870-71, as compared with 207,818 *l.* in 1856-57; 5442——Evidence explanatory of the foregoing increase, 5443 *et seq.*——Charge of 10,715 *l.* in 1870-71 for universities at Calcutta, Madras, and Bombay; receipts, on the other hand, from examination fees, 5443-5446——Increase of educational charge for general superintendence from 87,612 in 1856 to 130,763 *l.* in 1870-71; particulars hereon as to the staff of inspectors, &c. in the different provinces, 5447-5457. 5498-5511.

Charge of 85,760 *l.* for colleges in 1870-71, as against 41,361 *l.* in 1856-57; large increase of colleges during this period, 5458-5464——Statement of the expenditure for higher class schools and for lower class schools in 1856-57 and in 1870-71, showing the causes

Harrison, Edward Francis, and Edward Gay. (Analysis of their Evidence)—*continued.*

causes of increase under these heads; number of pupils adverted to, 5465–5476——Charge of 18,349 *l.* for normal schools, 5477, 5478.

Expenditure of 167,780 *l.* in 1870–71, as against 13,618 *l.* in 1856–57 for grants in aid; details hereon relative to the various schools aided, 5479–5486. 5496–5498. 5518 *et seq.* ——Large increase in the charge for scholarships and prizes, 5487–5489——Great increase also in the charges connected with book depôts, 5490–5493——Sundry details relative to the operation of the schools, the expenses borne by Government and by local rates or funds, &c., 5512 *et seq.*

Ecclesiastical expenditure of 153,544 *l.* in 1870–71 as compared with 127,727 *l.* in 1856–57; 5566——Large increase of expenditure on account of the increased number of chaplains in Oude, the Punjab, &c., 5567–5572——Maintenance of the staff of chaplains chiefly for the military, 5573. 5587–5591. 5597–5599. 5612–5614——Statement of the stipends and pensions of the bishops and archdeacons; also of the chaplains, 5574–5584——Several Presbyterian chaplains in the three Presidencies, 5600–5603——Allowance made to Roman Catholic clergy for performing ecclesiastic duties, 5604.

Payments made by Government, under treaty engagements, towards native religious purposes, 5605, 5606. 5627——Large alienations of land for native religious purposes; exemption from assessment in these cases, 5607–5611. 5615, 5616. 5621——Doubt as to any native agitation having been raised against the ecclesiastical charge upon the revenues of the country, 5617–5619. 5622–5624——Restriction upon the chaplains engaging in missionary work, 5620. 5625, 5626.

[Ninth Examination.] (*Mr. Harrison.*)—Expenditure of 523,486 *l.* under the head of Medical Charges in 1870–71, the amount in 1856–57 having been 175,714 *l.*; 5628——Particulars relative to the several branches of the Medical Department, and their operation, showing the amount of increased expenditure in each case, 5629–5687——Charge of 26,233 *l.* for the Sanitary Commission; important duties of this branch, which is new, 5631–5634. 5682–5691——Large increase in medical officers' salaries, 5636, 5637.

Charge of 233,675 *l.* for stationery and printing in 1870–71, as against 90,541 *l.* in 1856–57; this is exclusive of the charge in England, 5692–5694——Slight increase of cost of the stationery offices in Calcutta, Bombay, and Madras, 5695, 5696——Details relative to the largely increased use of the printing press by Government, for the printing of official documents of various kinds; examination as to the extent and as to the policy of the great additional expense thereby, 5696–5703. 5711 *et seq.*

Instance of a saving of 6,000 *l.* by substituting printing for the employment of copying clerks; that is, in the Secretary's office in the North Western Provinces, 5703. 5736–5741——Statement as to portion of the expense under the head of Stationery having formerly been included under other heads, 5704. 5722–5725——Failure of attempts to make really good paper in India, so that Government supplies are procured from England, 5705–5710——Dissent from the view that the abolition of the East India Company goes to account for the increased cost of administration, as regards stationery and other heads of expenditure, 5713–5721——Less expense for printing in 1870–71 than in 1869–70; 5731–5733. 5755.

Statement to the effect that the control over the expenditure for printing has not hitherto been thoroughly effective, 5743–5756. (*Mr. Gay.*)——Recent arrangement for delegating to the local Government the control of the printing expenditure, 5757–5762.

(*Mr. Harrison.*) Inquiry made in India into the relative cost of Government printing and of private printing, 5764, 5765——Large amount of printing done for Government at the Central Alipore Gaol, 5765–5767——Question of printing of the Government Gazette by the Missionaries, adverted to, 5771–5774——Very little return derived from the sale of official documents printed; efforts made in this direction, 5776–5783.

Total of 291,459 *l.* as the charge for political agencies in 1870–71, the charge in 1856–57 having been 178,852 *l.*; 5784——Explanations in detail relative to the various items comprised under the foregoing head of expenditure, together with the causes of increase in the latter year, 5785 *et seq.*——Examination with reference more especially to an increase in Bombay from 7,708 *l.* in 1856–57 to 45,489 *l.* in 1870–71; statement as to the account furnished by the Audit Department at Bombay to the Government of India not explaining this expenditure in detail, whilst no question has been raised by the Audit Officer relative to the increase in question, 5805–5828. 5845–5852.

Expenditure of 61,000 *l.* in England for political agencies, in addition to the sum of 291,459 *l.* spent in India, 5829–5835——Power, respectively, of the Secretary of State and of the Governors and Governor General in India relative to expenditure under the head of political agencies; question of want of proper control in the matter, 5836–5844. 5853–5856——Necessary authority of the Secretary of State before any increase of the pay of a political agent, 5855, 5856.

Aggregate expenditure of 1,010,530 *l.* in 1870–71 for miscellaneous charges as compared with 216,218 *l.* in 1856–57; paper submitted showing the several items and the increase in each case, 5857–5861——Explanation relative to the increase from 45,508 *l.* in

Harrison, Edward Francis, and Edward Gay. (Analysis of their Evidence)—*continued.*

1856-57 to 608,068 *l.* in 1870-71, as the loss on transactions with London through the rate of exchange; consideration of the loss more especially in the case of the Railway Companies, and the payment of guaranteed interest at the rate of 2 *s.* for the rupee, 5862-5896. 5938, 5939——Particulars as to various other items of increase comprised under miscellaneous expenditure, 5897-5937.

Total of 655,969 *l.* as the charge in India for Superannuation, Retired, and Compassionate Allowances, the charge in 1856-57 having been 424,930 *l.*; 5940, 5941——Very large increase since 1856, owing to the extension of pensions to the lower grades of servants, and to the increased salaries upon which the pensions are based; increasing character of this charge at the present time as well as for several years past, 5941-5969——Increased cost of administration concurrently with the depreciation in the value of money, 5954-5958.

Instances of deduction from pay towards the cost of pensions, 5959-5962——Decision by the Secretary of State of questions of extension of pensions, the applications originating in India with the persons interested, 5963-5969——Explanation of the increase of charge between 1856 and 1870 in respect of the pensions of the Military Fund, the Military Orphans Fund, &c., 5970-5973.

[Tenth Examination.] (*Mr. Harrison.*)—Explanation in connection with a new charge of 200,000 *l.* in 1870-71 under the head of Allotments for Provincial Services, 5974 *et seq.* ——Examination in detail relative to the arrangement made in December 1870 whereby various branches of administration and expenditure were made over to the local or provincial Governments, and a sum in gross assigned out of the annual revenue to meet the charges in question, *ib.*

Several items of expenditure in 1870-71 comprising a total of 5,103,564 *l.* which will henceforth be withdrawn from the Imperial Accounts; essentially local character of many of these charges, 5980, 5981. 5983-6008. 6046-6051——Deduction of 350,000 *l.* from the foregoing total, in respect of receipts of local revenue, 5980, 5981. 6046-6054 ——Total charge of 4,918,000 *l.* in the Estimates for 1872-73 on account of Allotments for Provincial Services, 5994, 5995——Question considered whether under the new arrangement as to accounts and local administration the English Parliament and the English public will not be deprived of such information as was previously afforded in regard to local taxation, and the imposition of new burdens, such as the income tax, 6009-6042. 6073-6082.

Increased care and economy expected in local administration under the new system, 6013——Intended publication of the accounts to be furnished by the local Governments to the central Government, 6014-6032. 6073-6082——Necessity of every new local tax receiving the sanction of the Governor General in Council; impression that the sanction of the Secretary of State is also required, 6033-6042. 6063-6072——Inability of witness to state the present amount levied in local taxation in India, 6043-6045——Intention that the net sum of 4,688,711 *l.* to be granted from Imperial revenue shall be apportioned in fixed and permanent shares among the several local administrations, 6052-6056—— Necessity of any future local deficits being made up from local taxation; instance of this in the Bombay Presidency, 6057-6062——Total of 51,413,000 *l.* as the gross revenues of the Government of India according to the accounts for 1870-71; 6083-6086.

Explanations in detail relative to the public debt of India, and the interest thereon, in 1870-71, and in 1856-57, distinguishing the amounts of debt at different rates of interest, 6087-6129——Total of 2,997,155 *l.* as the annual interest on 31st October 1872; 6089 ——Ability of the Government to raise loans at 4 per cent. at the present time; explanation hereon as to the large amount of railway capital raised on a guarantee of 5 per cent., 6107-6128——Total of 1,952,030 *l.* as the interest on the debt in 1856-57; 6129—— Payment of interest on sums amounting to 530,491 *l.* in the hands of Government, such as savings bank balances, &c., 6130-6133.

Information in connection with the Treasury Account of the Government of India, which comprises all the cash transactions of the Government as well as the revenue and expenditure, 6134-6143——Statement of the chief items under the head of supplies from London; items on the other side of this account under the head of Supplies to London, 6144, 6145——Reference to the accounts current between the presidencies as involving very extensive details, 6146.

Increase of about 3,000,000 *l.* in the cash balances of the Treasury of India in 1870-71, accounted for by receipts from loans during the year, 6147-6156——Actual excess of income over expenditure, to the amount of 315,000 *l.*, in 1870-71; 6150-52.

High Courts. Increase from 96,400 *l.* in 1856-57 to 149,600 in 1870-71 in the cost of salaries of the judges of the high courts; explanation that this arises chiefly from the increased number of judges, *Harrison* 4751-4769——Increased establishment of the high courts, *ib.* 4759. 4765——Important reduction in the scale of salaries of the principal officers of the high court at Calcutta, *ib.* 4763.

New charge since 1856 in respect of the high courts at Allahabad and Lahore, and the

High Courts—continued.

the Recorder's Court at Rangoon, *Harrison* 4770–4773——Option of the judges of the High Court to have their pensions according to the ordinary civil service system, *ib.* 4774–4776——Greater cost of the High Courts than of the former Supreme Court and Sudder Court, *ib.* 4955, 4956.

Hoarding. Limited extent to which the practice of hoarding is carried in Mysore, *Elliot* 3173——Extensive hoarding in India so that a large balance of specie may be poured into the country yearly without sensibly affecting prices; poverty of the community adverted to on this point, *Strachey* 7269–7274.

Holkar (State) Railway. Very difficult country traversed by the line from Khundwah to Indore; much greater cost than of the Rajpootana line, *Strachey* 7124, 7125. 7134–7141.

Extracts from letters and reports by Mr. Neill, Mr. Cadell, and Mr. Campbell, relative to the traffic on the proposed railway, *App.* 599–602.

Home Service Pensions. See *Pensions.*

Hospitals and Dispensaries. Large increase of charge for hospitals and dispensaries since 1856–57; particulars as to the operation of these institutions, *Harrison* 5659–5665.

Hutton, James. (Analysis of his Evidence.)—Has resided in India for several years; represents in London the British Indian Association of Calcutta, 8561, 8562——Complains strongly of the annual migration of the Government of India to Simla, great expense involved, whilst the legislation of the country is much prejudiced, 8564, 8565——Comment upon the introduction and passing of the Land Improvements Bill at Simla, and upon its extension to the whole of India, without opportunity for discussion in Calcutta, 8565——Remonstrance made to Government in March 1871 relative to the passing of the European British Subjects Bill at Simla, without any consultation of the persons interested; official reply to the remonstance against the Bill, *ib.*

Exceptions taken to the constitution of the Legislative Council; nature of the amendment required, 8566——Intended abandonment of Simla, as being unhealthy, 8567——Large expenditure being incurred for a new sanatorium at Raneekhet; great doubt whether the place will answer, *ib.*

Sundry details in illustration of the great oppression and abuse in the assessment and operation of the income tax, 8568——Testimony borne by Mr. George Campbell, the Lieutenant Governor of Bengal, to the excessive pressure of the tax in 1869–70 upon small cultivators, *ib.*——Great number of wrong and corrupt assessments, and great difficulty of successful appeal or correction, *ib.*——Widespread discontent caused among the natives by the increased tax in 1870–71, *ib.*

Opinion in India that a great increase of taxation will result from the new system of throwing upon the local governments the onus of expense in respect of education, roads, gaols, &c., 8569——Strong complaint in Bengal against the road cess and the education cess; several authorities of great experience who opposed the measure by which these cesses were imposed, 8569–8572——Grievance in the road cess falling entirely upon the rural population, the municipalities being exempt, *ib.*——Check by the education cess to voluntary educational efforts, *ib.*——Large deficiency to be made up by local taxation in Bombay in regard to gaols, &c., 8569——Instances of local funds having been seized by the Supreme Government, thus necessitating local taxation for the purposes for which the funds were accumulated, *ib.*

Grounds for the complaint by the natives of India against the Cooper's Hill Engineering College, 8572——Statement that the natives have never had a fair chance, under British rule, of studying engineering, or of proving their capacity in this direction, *ib.*——Complaint also by natives relative to the large cost of the staff and household of the Governor General, *ib.*——Strong objection made also against India being charged with the cost of the Sultan's ball at the India House, *ib.*

Further complaint by natives relative to the charge in respect of articles sent from India to International Exhibitions in London; facility thereby to Manchester manufacturers to compete the better with native productions, 8572–8577——Grounds for the complaint by the natives against the expense of the Panthay Mission being debited to India, 8572.

Hydraulic Dock (Bombay). Paper submitted by Mr. Thornton containing information relative to the Hydraulic Lift Dock at Hog Island, Bombay, the expenditure incurred, and the further outlay required, *App.* 639.

I.

Imperial Government. Disadvantage of the India Office in contending with the War Office and Treasury upon questions of expenditure, *Pears* 269. 282, 283. 292, 293. 325–336——Instances of expenditure having been charged against India which should have been

Imperial Government—continued.

borne by the Imperial Government, *Laing* 7518–7522——Grounds for a former statement by witness that "the finances of India are constantly being sacrificed to the exigencies of English Estimates," *ib.* 7676–7682.

Imperial Interests. Conviction of witness that the loss of India to England would be an enormous calamity to this country, materially as well as morally, and that Great Britain would at once subside into a second-rate power, *Right Honourable W. N. Massey* 8846–8852.

Imports. Enormous increase of exports and imports since 1861–62; inference therefrom as to the excellent administration of the country, *Strachey* 7005, 7006——Statistics in support of the conclusion that the increase in the quantities of exports and imports between 1861-62 and 1898-69 is quite as substantial as the increase in values, *ib.* 7960, 7961.

Value of the imports and exports of merchandise and of treasure in different years from 1861–62 to 1871–72; large increase, and inference from as to the great advance in the prosperity and general productive power of the country, *Strachey* 7964——Increase of about eleven millions in value as the increased consumption of the people between 1861–62 and 1868–69; total of about thirteen and a-half millions as the entire increase of values, *ib.*

Inappreciable effect as regards the import of British productions, through the abolition of the former discriminating duties between British products and those of other countries, *Right Honourable W. N. Massey* 8887–8889.

Inam Commission. Charge of 2,651 *l.* in 1870–71, for the Inam Commission, *Harrison* 3524——Termination practically of the charge in respect of the Inam Commission, *ib.* 3630. 3718.

Income and Expenditure. See *the Headings generally throughout the Index.*

INCOME TAX:

1. *As to the original Imposition of the Tax by Mr. Wilson.*
2. *Reluctant Sanction of the Tax by Lord Canning.*
3. *Concurrence of Evidence in strong Disapproval of the Tax; Expediency of its immediate Repeal.*
4. *Abuse in the Assessment and Collection of the Tax.*
5. *Obstacles to appeal against Over-assessment.*
6. *Cost of Assessment and Collection.*
7. *Defence of the Tax, though open to some Complaint.*
8. *Responsibility, respectively, of the Government of India, and of the Home Government, for the Continuance of the Tax.*
9. *Proposed Determination of the Amount to be contributed by each District.*
10. *Inexpediency of making the Local Communities responsible for the Tax.*
11. *Statistics relative to the Number of Persons assessed, and the Amounts realised in different Years.*
12. *Statement by Sir Richard Temple in proposing the modified Tax for 1872–73.*

1. *As to the original Imposition of the Tax by Mr. Wilson:*

Under the circumstance of India after the mutiny Mr. Wilson was perfectly justified in resorting to an income tax; he was strongly of opinion that it should not be a permanent impost, *Right Hon. W. N. Massey* 8562.

2. *Reluctant Sanction of the Tax by Lord Canning:*

Great reluctance with which Lord Canning sanctioned the proposal for the tax, *Laing* 7474.

3. *Concurrence of Evidence in strong Disapproval of the Tax; Expediency of its immediate Repeal:*

Evidence in strong disapproval generally of an income tax in India, the oriental mind being peculiarly jealous of the inquisition involved, and the tax tending to produce widespread discontent, *Laing* 7462–7465. 7474. 7550, 7551——Opinion that the income tax should not have appeared in the budget for 1872–73, *ib.* 7462. 7551. 7603–7605——Tendency of the tax to cause evasion and perjury, *ib.* 7465——Belief that by strict economy of expenditure the half million of net revenue represented by the present rate of income tax might be rendered unnecessary, *ib.* 7482–7484. 7489. 7604, 7605——Approval of an addition to the loans for public works, as a means of enabling the income tax to be dispensed with, *ib.* 7517. 7532, 7535.

Conclusion that in the present satisfactory state of the finances not only is it unnecessary to cast about for new sources of revenue, but the income tax might be dispensed with, *INCOME TAX*—continued.

3. *Concurrence of Evidence, &c.*—continued.

with, *Laing* 7586–7590. 7603–7605——Great dislike of the natives to an income tax further adverted to, *ib.* 7674, 7675. 7716——Less unpopularity doubtless of the income tax accordingly as the limit is made higher, great diminution thereby in the proceeds, *ib.* 7696–7698. 7741–7746.

Further statement adverse to the maintenance of the tax, even though steps were taken to exempt all the working population and all persons of small incomes, *Laing* 7739–7746——Great impolicy of exempting any class of Europeans from the tax, *ib.* 7742–7744.

Evidence in support of the conclusion that the income tax falls with the greatest severity upon the class of ryots and agriculturists, whom it was not intended to touch; that great evasion, extortion, and oppression are produced by the tax and its assessment, and that widespread discontent is the result, *Dacosta* 7972–7999. 8021——Expediency of a repeal of the income tax, in accordance with the general opinion amongst the community, *ib.* 8195, 8196.

Condemnation of the tax on various grounds, *Hutton* 8568——Widespread discontent caused among the natives by the increased tax in 1870–71, *ib.*

Pressure upon witness as Finance Minister to maintain the income tax; his objections thereto, *Right Honourable W. N. Massey* 8581, 8582——Grounds for the conclusion that the permanent maintenance of an income tax in India is most dangerous and unwise, the natives having the greatest aversion to the inquisitorial process of the tax; it should in fact be resorted to only in times of emergency, as when it was first imposed by Mr. Wilson, *ib.* 8582——Explanation that in recommending a repeal of the income tax, witness would at first effect a retrenchment of the present enormous expenditure, *ib.* 8853–8856.

4. *Abuse in the Assessment and Collection of the Tax:*

Great abuse and extortion in the collection of the tax, *Laing* 7465——Failure of the former system of requiring natives to make returns of their incomes; constant surcharge by the assessors, *ib.* 7747–7749——Grounds for the conclusion that great abuse arises in the assessment and collection of the tax, *Dacosta* 7972–7999. 8021——Assessment of large numbers not assessable by law, *ib.* 7975–7977. 7982.

Views of Mr. Campbell, Lieutenant Governor of Bengal, relative to the oppressive operation of the income tax, and its tendency to cause emigration to Nepaul; concurrence of witness in these conclusions, *Dacosta* 7980, 7981. 7987–7996——Strong statement by Mr. Inglis, confirmed by Sir William Muir, relative to the great oppression and extortion in applying the tax in the North Western Provinces, *ib.* 7984–7986——Belief that it is impracticable to assess the tax properly; if it were, the tax might not be oppressive, *ib.* 7995–7997.

Sundry details in illustration of the great oppression and abuse in the assessment and operation of the income tax, *Hutton* 8586——Testimony borne by Mr. George Campbell, the Lieutenant Governor of Bengal, to the excessive pressure of the tax in 1869–70 upon small cultivators, *ib.*——Great number of wrong and corrupt assessments, and great difficulty of successful appeal or correction, *ib.*

5. *Obstacles to appeal against Over-assessment:*

Great cost in connection with appeals against over-assessment for the income tax, so that this protection against abuse is very sparingly resorted to, *Dacosta* 8164–8172. 8270–8281——Great difficulty of successful appeal against wrong and corrupt assessments, *Hutton* 8568.

6. *Cost of Assessment and Collection:*

Charge of 43,991 *l.* in India for the collection of the income tax in 1870–71, the chief expense having been in Bengal; limited amount of this charge, owing to the use made of existing establishments, *Harrison* 3769–3775——Larger charge in Bombay than in Madras for the collection of the income tax, there being a larger staff for the purpose in the former Presidency, *ib.* 3773, 3774. 3835–3837.

Number of persons employed in the assessment of the income tax, and allowances paid to them, for the years from 1860–61 to 1865–66, and in 1869–70 and 1870–71, *App.* 657.

7. *Defence of the Tax, though open to some Complaint:*

Intimate experience of witness as to the assessment and working of the income tax; conclusion that complaints proceed chiefly from the European community, although there is doubtless great difficulty in the fair assessment of the natives, and much hardship and evasion in consequence, *Ashburner* 2262–2283. 2300 *et seq.*——Dissent from statements that the income tax is regarded with special aversion by the natives; witness more than doubled the proceeds of the tax in Khandeish, and it was paid without a murmur, *ib.* 2267.

INCOME TAX—continued.

7. *Defence of the Tax, though open to some Complaint*—continued.

2267. 2274–2276. 2300 *et seq.*——But for complaints by Europeans and by wealthy natives there would have been much less objection by the natives generally, *Ashburner* 2267. 2274–2281. 2347–2350.

Question raised as to the income tax having caused great dissatisfaction, or as to its having been wisely reduced, *Strachey* 6893–6896——Further reference to the income tax, as a tax of which witness does not disapprove, *ib.* 7000, 7001——Remission of about a million and a half of Imperial taxation by the reduction of the income tax, so that there was a set-off against increase of local taxation, *ib.* 7150–7155——Doubt as to the tax having caused discontent, save amongst the comparatively few who have to pay it, *ib.* 7388, 7389——Existence doubtless of much abuse in the collection of the tax, *ib.* 7390–7392.

8. *Responsibility, respectively, of the Government of India and of the Home Government, for the Continuance of the Tax:*

Impression that the income tax would have been repealed ere this if the authorities in India had been left to themselves, *Laing* 7517——Probability of the Government of India rather than the Secretary of State in Council being responsible for the maintenance of the income tax at the present time, *ib.* 7737, 7738.

9. *Proposed Determination of the Amount to be contributed by each District*

Suggestions as regards the income tax that Government should fix the amount to be contributed by each district, after taking into consideration the local resources; this should be done through the collector of revenue for the district, *Ashburner* 2344–2346.

10. *Inexpediency of making the Local Communities responsible for the Tax:*

Objection to the income tax being levied on communities who should collect it from individuals; probability of increased oppression in such case, *Ashburner* 2344, 2345; *Laing* 7717, 7718.

11. *Statistics relative to the Number of Persons assessed, and the Amounts realised in different Years:*

Statement showing the number of persons assessed and amounts realised in each province from 1860–61 to 1864–65, exclusive of deductions from the salaries of Government servants, *App.* 653——Number of persons assessed, and amounts realised, in 1869–70 and in 1870–71, in each province, *ib.* 654.

Statement showing the number of Government servants from whose salaries deductions have been made on account of the tax in each year, *App.* 658, 659——Total number of persons assessed and total amount of tax realised in all India in each year since the tax has been levied, *ib.* 660.

12. *Statement by Sir Richard Temple in proposing a modified Tax for* 1872–73:

Explanations by Sir Richard Temple relative to the modifications proposed in the income tax for 1872–73; necessity of continuing the tax, as without it there would be a deficiency in the revenue, *App.* 499. 504——Proposed exemption of incomes below 1,000 rupees, *ib.* 499——Steps taken to remove complaints relative to the working of the tax, *ib.*——Good service done by the tax to the finances, notwithstanding all its drawbacks, *ib.*

India Office. Item of 134,000 *l.* as the charge in 1870–71 for salaries, &c. of the establishment under the Secretary of State in England; comparative charge in previous years, *Seccombe* 837–845——Very heavy work in the India Office in proportion to the staff employed, *ib.* 841. 845——Circumstances of the home administration accounts not including any charge for interest on the money spent on building the India Office, *ib.* 846–848——Office hours of attendance from ten to four, there being an annual holiday of forty-eight working days, *ib.* 849. 854, 855. 876–878.

Statement showing the salaries of the Secretary of State for India, of the Under Secretaries and Assistant Under Secretary, of the Members of Council, and of the officers and clerks of the India Office for the year 1870–71, *App.* 705–708.

See also *Store Department.*

Indian Law Commission. Charge of 1,849 *l.* under this head in 1870–71; the Commission is now at an end, *Seccombe* 1404, 1405.

Indo-European Telegraph. Loss of about 25,000 *l.* in 1870–71 upon the working of the Indo-European telegraph, upon which there was a capital outlay of a million; prospects of the receipts covering the expenses in 1871–72, *Seccombe* 826–834.

Separate administration of the Indo-European line from Kurrachee to Fao; practice as to the re-transmission of messages at Kurrachee, *Robinson* 4201–4206. 4225–4228. 4234–4238.

Report, 1872—*continued.*

Indore Agency. Several items comprised in the charge of 21,800 *l.* in 1870–71 for the Indore Agency, *Harrison* 5789. 5791.

Indus Steam Flotilla. Explanation relative to the Government flotilla on the Indus, the cost of which in 1870–71 was 23,200 *l.*, and the earnings about 10,000 *l.*; *Harrison* 5181–5199.

Opinion that there should be a profit on the navigation of the Indus if properly managed, *Sir A. T. Cotton* 8518–8524——Much better return from the steamboats on the Indus than from the Scinde, Punjaub, and Delhi Railway, *ib.* 8522–8527.

INDUS VALLEY RAILWAY:

1. *Evidence relative to the Cost and Value of the Line, and the probable Results financially.*
2. *Official Papers explanatory of the Origination and Sanction of the Line, and the probable Amount of Traffic.*

1. *Evidence relative to the Cost and Value of the Line, and the probable Results financially:*

The Indus Valley line is not expected to pay, but is considered important on military grounds, *Thornton* 2037.

Examination relative to the Indus Valley line, the traffic returns, and the cost of working; necessary payment of some 20,000 *l.* or 30,000 *l.* by Government, in order to make up the guarantee of 5 per cent., *Strachey* 6360–6378——Excessive first cost of the line from Kotri to Kurrachee, whilst the traffic must be small, *ib.* 6361–6363. 6375. 6497–6503——Circumstance of witness having opposed the construction of the Indus Valley line, *ib.* 6364. 6377.

Expected loss of 30,000 *l.* or 40,000 *l.* a year on the Moultan and Kotri line; gain on political grounds, *Strachey* 6366–6369. 6795, 6876. 7845, 7846. 7852. 7874——Promotion of the line from Moultan to Kotri chiefly on military grounds, *ib.* 6795——Costly dispute in the case of the Kotri and Kurrachee line, between the company and the contractor, *ib.* 6503.

Calculation that the line from Moultan to Kotri will cost, not 5,000,000 *l.*, but 3,000,000 *l.*; *Strachey* 6875——Doubt whether the time has come for the line from Moultan to Kotri, *ib.* 7037.

Expediency of a canal in the Indus Valley rather than a railway, *Sir A. T. Cotton* 8535–8539——Advantage of a canal on military grounds as being far more defensible than a railway, *ib.* 8539–8543.

Considerable importance attached to the Indus Valley line, *Rt. Hon. W. N. Massey* 8872.

2. *Official Papers explanatory of the Origination and Sanction of the Line, and the probable Amount of Traffic.*

Sundry papers and statistics relative to the probable traffic of a railway along the Indus Valley, the route to be taken, &c., *App.* 570–598.

Memorandum by Colonel Strachey, dated 30th July 1868, relative to the probable amount of traffic to be conveyed; conclusion as to the poverty and bad cultivation of Scinde, *App.* 570, 571.

Tables and statistics relative to the cultivation, crops, population, &c., *App.* 572–575.

Extracts from despatch from the Government of India, dated 31st October 1871, relative to the traffic, the route to be taken, &c. *App.* 579–581.

Extract of Report of Committee on the Indus Valley Railway, dated Kurrachee, 9th April 1871, containing details relative to the population and produce of Scinde, the benefits to be derived from the proposed railway, and the result financially, *App.* 581–587.

Tabular returns of the revenue and produce of the province of Scinde, the traffic on the Indus river, and on the Scinde, Punjab, and Delhi Railway, *App.* 587–596.

Extract from Report by Captain Hancock, acting consulting engineer for railways at Bombay, with reference to the probable traffic on the railway, the cost of the line, working expenses, &c., *App.* 598, 599.

Conclusions of the Government of Bombay as to the very small returns to be derived from the line, *App* 598.

Sanction of the Secretary of State to the proposed line along the right bank of the river; importance attached to the railway, although the returns are not expected to be large, *App.* 598.

Interest on Debt. Large conversion of debt, and reduction of interest, effected in 1871, *Seccombe* 1541——Calculated annual saving of about 450,000 *l.* in 1874, on the redemption of the East India 10½ per Cent. Stock, *ib.* 1575–1579.

Details relative to the amount of debt at different rates of interest, *Harrison* 6087–

Interest on Debt—continued.

6087–6129——Total of 2,997,155 *l.* as the annual interest on 31st October 1872, *Harrison* 6089.

Ability of the Government to raise loans at 4 per cent. at the present time; explanation hereon as to the large amount of railway capital raised on a guarantee of 5 per cent., *Harrison* 6107–6128 ——Total of 1,952,030 *l.* as the interest on the debt in 1856–57, *ib.* 6129——Payment of interest on sums amounting to 530,491 *l.* in the hands of Government, such as savings banks, balances, &c., *ib.* 6130–6133.

Statement showing that the annual charge for interest on the debt of India was about the same in 1870 and 1862; that is, exclusive of the charge for railways, canals, &c., *Laing* 7452–7454. 7530, 7531——Advantage to India by her connection with England, in being able to raise loans at a very moderate rate of interest; gain on the other hand to England by the low import duties in India on British manufactures, *ib.* 7477, 7478. 7599–7602.

Reduction in the rate at which loans have been raised, owing partly to the Act which authorises trust money to be invested in Indian securities, *Laing* 7636–7640——Further statement as to the slight difference between the amount of interest on the debt of India in 1861 and 1870; increase of only 15,000 *l.*, *ib.* 7651–7655.

Explanations by Sir R. Temple, in his financial statement for 1872–73, relative to the interest on the funded and unfunded debt, and the satisfactory effect of recent loan transactions, *App.* 498.

Details relative to the rate of interest on the various stocks, *App.* 503, 504.

See also *Debt of India.*

Interest, Rate of (*Landed Security*). Much higher rate of interest on landed security in India than on personal security, *Dacosta* 8095. 8113.

International Exhibitions (*London*). Complaint by natives relative to the charge in respect of articles sent from India to International Exhibitions in London; facility thereby to Manchester manufacturers to compete the better with native productions, *Hutton* 8572–8577.

IRRIGATION:

1. *Concurrence of Evidence as to the great Importance of enlarged Facilities of Irrigation.*
2. *Question of constructing Works out of Annual Revenue, or by means of Loans.*
3. *Immense Outlay contemplated on future Works; Objection thereto.*
4. *Compulsory Provisions as to Water-rent and Labour.*
5. *Advantage of numerous small Works, rather than of large and costly Schemes.*
6. *System of Accounts; Question more especially of including the increased Returns from Land Revenue.*
7. *Financial Results of Public Irrigation Works.*
8. *Office of Inspector General of Irrigation.*
9. *Valuable Information obtainable from the Local Revenue Officers as to the New Works required.*
10. *Excellent Works constructed in Mysore under Native Rule.*

1. *Concurrence of Evidence as to the great Importance of enlarged Facilities of Irrigation:*

Great want of better facilities of irrigation, as admitting of more profitable cultivation and of an increased land revenue; entire inadequacy of the present irrigation by wells in certain districts, *Ashburner* 2190–2193. 2210–2223——Importance of an irrigation tank for each village, as in Mysore; suggestions hereon, *ib.* 2214–2220. 2225–2233.

Primary importance of expenditure on irrigation, bridges being of secondary importance, *Elliot* 3145. 3190–3213——Manuring properties in irrigation water, *ib.* 3213. 3300——Conclusion that in view of the recurrence of famines, works of irrigation should be largely prosecuted, *ib.* 3227–3233. 3375–3381. 3482, 3483——Importance of irrigation as admitting of the increased cultivation of dry crops, without breaking up the pasturage for cattle, *ib.* 3459.

Much greater value of irrigation in some parts of India than in others, where there is a good rain-fall; in Scinde, cultivation is impossible without irrigation, *Strachey* 6702–6705——Great importance of irrigation works for the prevention of famines, *ib.* 6990. 6999.

Comment upon the stinted advances for valuable irrigation works as compared with the enormous sums guaranteed for railways, *Sir A. T. Cotton* 8311——Cheapness of canal irrigation as compared with well irrigation, *ib.* 8456——Much greater manuring properties of river water than of well water, *ib.*

IRRIGATION—continued.

2. *Question of Constructing Works out of Annual Revenue, or by means of Loans:*

Contemplated construction of irrigation works out of annual revenue, it being essential to restrict the general expenditure, *Elliot* 3390–3392. 3441–3445. 3480–3483——Gradual increase of pressure upon the Public Works Department by the Financial Department in the direction of throwing nearly all the expenditure on irrigation works upon borrowed money, *Strachey* 6229–6231——Argument in defence of the system of constructing irrigation works out of borrowed money, a primary consideration being the prevention of famines, *ib.* 6990. 6999. 7617–7620——Inexpediency of increasing the public debt on account of irrigation works, *Ducosta* 8211–8217.

3. *Immense Outlay contemplated on future Works; Objection thereto:*

Admission as to witness having suggested an expenditure of 30,000,000 *l.* or 40,000,000 *l.* upon future irrigation works, *Strachey* 6676–6681.

Great imprudence of the further large outlay (some 40,000,000 *l.*) proposed for irrigation works, *Dacosta* 8073, 8074.

4. *Compulsory Provisions as to Water-rent and Labour:*

Details as to the system upon which cultivators are charged with water from irrigation works; provision in certain Bills that a water rate might be demanded from the occupiers even though the canals were not utilised, *Strachey* 6597–6619. 6635 *et seq.*——Defence on several grounds of the compulsory rating of land for irrigation, as under certain Acts, *ib.* 6992. 6994——Examination with further reference to the Acts, or rather the Act, relative to the compulsory payment of irrigation rates in the Punjaub, &c.; provisions also in this Act on the subject of compulsory labour, *ib.* 7203–7227.

Particulars in connection with the Punjaub Canal Act, witness objecting thereto on the ground more especially that it enables the Government to impress labour, *Dacosta* 8089, 8090. 8107–8110.

5. *Advantage of numerous small Works, rather than of large and costly Schemes:*

Gigantic character of the irrigation schemes contemplated by the central Government, but not carried out, whereas by local agency numerous small and useful works might be promptly brought into operation, *Ashburner* 2231–2256.

Advantages of the system of irrigation by means of tanks and wells; preference of the natives for such system as compared with canal irrigation, involving water rents, *Dacosta* 8101–8103. 8127–8129. 8227.

6. *System of Accounts; Question more especially of including the increased Returns from Land Revenue:*

Obstacles to an account showing the returns from irrigation works in relation to the total cost; value of such works in raising the land revenue, and in preventing famines, irrespectively of the direct receipts from water rents, *Seccombe* 1604–1623.

Objection raised by the Public Works Department against advances out of loans for small irrigation works not admitting of a capital and revenue account, *Strachey* 6231–6233——Argument that so far as the incidence of taxation goes, it is not correct to add to the capital cost of canals the surplus charges for interest, &c., which are met out of the annual revenue of the country, *ib.* 6571–6586.

Statement relative to the large indirect return from the Ganges and other irrigation canals in the shape of increased land revenue; credit to be taken for this under a different and improved form of accounts, *Strachey* 6594 *et seq.*——Examination upon witness's suggestion that in the separate yearly revenue accounts of irrigation works the income should be held to exclude all increase of land revenue actually obtained on irrigated land *ib.* 6635 *et seq.*

Further explanation and defence of witness's proposal that the increase of land revenue should be ascertained by deducting from the actual revenue on the irrigated lands the former revenue received before the irrigation began, *Strachey* 6689–6699. 6702–6705——Suggestion made by witness, when in India, that the general annual accounts of the revenues should show together the whole of the revenue from irrigation, *ib.* 6700, 6701.

Facility of accounting separately for the water-rate levied for irrigation, *Sir A. T. Cotton* 8364–8370.

7. *Financial Results of Public Irrigation Works:*

Remunerative character of irrigation works in many instances, *Elliot* 3424–3429——Insufficient time, hitherto, for judging of the financial results of irrigation works created with borrowed capital, *Strachey* 6254. 6260–6262——Opinion that irrigation works in

IRRIGATION—continued.

7. *Financial Results of Public Irrigation Works*—continued.

India will in most cases give satisfactory returns, *Strachey*. 6557——Expectation further expressed that the expenditure recommended on canals will be remunerative, *ib.* 6563, 6564——Admission that in the case of some irrigation works it has not been found practicable to levy such high rates as were at first proposed, *ib.* 6730.

Despatches from the Secretary of State in August 1869, and subsequently, adverted to as showing that he took steps to obtain accurate information relative to expenditure on irrigation works, *Strachey* 6976–6980——Belief that ultimately the irrigation works will largely develop agriculture, to the great benefit of the revenue, *ib.* 6990.

Very large expenditure, without any adequate return in many cases, *Dacosta* 8055–8077. 8101 *et seq.*——Very small returns from the government canals in the Punjaub, *ib.* 8066, 8067——Exceptions taken to a statement that the irrigation works in the Madras Presidency are yielding large returns, *ib.* 8068–8070——Failure, generally, of the canals constructed by Government to return sufficient to meet the interest on the outlay, *ib.* 8105; 8106. 8126, 8127.

Comparison between highly irrigated and un-irrigated, or partly irrigated districts as regards the revenue therefrom in 1843–44, and in 1870–71; very large increase in the former case, contrasted with the small increase in the latter, *Sir A. T. Cotton* 8320–8332——Belief that irrigation works may generally be made much more than self-supporting, *ib.* 8371, 8372.

Great readiness of the natives of Madras to pay for the water; belief that by proper arrangements the cultivators of Bengal would also be desirous to use the water, at a proper rent, *Sir A. T. Cotton* 8372–8379. 8385–8388——Satisfactory financial results of all the works carried to completion in Madras, *ib.* 8389. 8405.

Further statistics as to the much larger revenue yielded by irrigated than by un-irrigated or partly irrigated districts, *Sir A. T. Cotton* 8420–8426.

The estimates for some of the works in Central India have been very high, and the profits very small, *Right Hon. W. N. Massey* 8895——Great caution necessary before raising loans for irrigation works, though the returns of from some works in Madras have been very large, *ib.* 8894, 8895.

8. *Office of Inspector General of Irrigation:*

Functions discharged by the Inspector General of Irrigation; creation of this office in 1864, *Strachey* 6306——Witness held the office for two years; it is now held by Colonel Rundall, *ib.*——The Inspector General is expected to go all over India, and to make himself acquainted with all works in progress, and all new projects, *ib.*

9. *Valuable Information obtainable from the Local Revenue Officers as to the New Works required:*

Importance, in irrigation matters, of the Government engineers being guided by the local revenue officers, as being possessed of useful information as to local wants; consideration of objections to this proposal, *Elliot* 3097. 3110–3112. 3147–3152. 3393–3407.

10. *Excellent Works constructed in Mysore under Native Rule:*

Magnificent irrigation works in Mysore executed by the natives in former times, *Elliot* 3159, 3160. 3336–3339——Duration of some of these works for a period of 400 years; excellence of the details of construction, *ib.* 3159. 3339.

See also *Canals.* *Ganges Canal.* *Godavery Irrigation.* *Madras Irrigation and Canal Company.* *Orissa and Behar Irrigation Works.* *Public Works.*

J.

Jameson, General. See *Troop Service.*

Jubbulpore Railway. Deficiency, for a time, of receipts to cover working expenses, in the case of the Jubbulpore branch of the East Indian Railway, *Danvers* 1702, 1703——Consideration of the authorities responsible for the guarantee to the Jubbulpore Railway, experienced Government officers from whom, as well as from the Company's officers, advice was taken in the matter, *ib.* 1834–1851——Entire inaccuracy of a certain statement, that the Jubbulpore Branch had not paid its working expenses up to the present time; deficiency has occurred in only one half year since the line was opened, *ib.* 2042–2047.

Importance, politically, of the Jubbulpore line as a link in the communication between Calcutta and Bombay; importance also on commercial grounds, though hitherto the earnings have not been encouraging, *Danvers* 2836–2845——Circumstance of the East India Company having undertaken the Jubbulpore line at the instance of Government, *ib.* 2843–2845. 2876.

Judges.

Judges. Decrease in the scale of salaries of the judges of the High Courts, except the Chief Judge of each Court, *Harrison* 4756–4758——Requirement of twelve years' service for the maximum pension of a judge, the minimum pension being granted after seven years' service in the event of failure of health, *ib.* 4780–4782.

Information relative to the various grades of judges in Bengal, showing the number of natives in each grade, and the salaries; exceedingly few natives holding any of the higher and well-salaried judicial appointments, *Harrison* 4802–4871——Statement of the number of subordinate judges or principal sudder ameens, and the number of moonsiffs in the courts in Bengal, and of the increase made in the salaries in recent years a large proportion of natives who fill these offices, *ib.* 4802–4871. 4887——The principal sudder ameens are now called subordinate judges, *ib.* 4804–4809. 4887.

Exclusion of natives from thirty civil judgeships in Bengal, which are reserved for the convenanted Civil Service; examination as to the policy or justice of such exclusion, *Harrison* 4830–4869——Value attached by the natives to the opening of the High Court to native judges, *ib.* 4849–4853——Statement of the salaries of the small cause judges in Bengal, one out of six judges being a native, *ib.* 4872–4875.

Judges' Outfit. Explanation of a charge of 800 *l.* for outfit of each puisne judge appointed from England, *Seccombe* 1341–1346.

K.

Karwar Gaol (*Bombay*). Strong complaint by Sir Seymour Fitzgerald relative to the condition of this gaol, and the treatment of the prisoners, *Hutton* 8569.

Kattywar Railway. Cheap and rapid construction of the Kattywar line on the broad gauge, *Danvers* 1957, 1958. 1988.

Kaye, Sir John William, K.C.S.I. (Analysis of his Evidence.)—Is Secretary in the Political and Secret Department of the India Office, 6918——Charge of 1,756,973 *l.* in the accounts for 1870–71, being payments made chiefly to the extinct dynasties of India, 6919——Liberal treatment of the conquered rulers and princes of India, the pensions and allowances on this score being necessarily very heavy, 6920.

Provisions of the Partition Treaty of 1799 relative to the payment of a sum of not less than 65,000 *l.* a year to the families of the Sultan Tippoo and Hyder Ali, 6921——Formation of the Mysore Deposit Fund out of unappropriated balances of the foregoing charge, *ib.*——Claim made upon this Fund by Prince Gholam Mahomed in 1859 or 1860, on behalf of the descendants of Tippoo; arrangement subsequently negotiated with Prince Gholam by witness on the part of Sir Charles Wood, *ib.*——Terms of this arrangement, the effect being that by the creation of a capital fund there will be a permanent endowment for the family, whilst the amount now paid out of Indian revenues will go on decreasing every year, 6921–6923. 6926–6930.

Inability of witness (whose department is not one of account) to explain in detail those items in a certain account before the Committee which relate to the family of Tippoo Sultan, 6924–6933.

[Second Examination.] Further and fuller particulars relative to the provision made for the families of Hyder Ali and Tippoo Sultan, the stipend paid to Prince Gholam, and the saving being gradually effected as the pensioners die off, 7275–7290——Capitulisation of a sum of 420,000 *l.* in order to provide a permanent allowance, in addition to the pensions terminable at death, 7275.

Advantage if an annual return were prepared in India showing the amount of political liability in respect of each family, the amount of stipend in each case, the lapses during the year, &c., 7286. 7387——Confusion through the names of the stipendiaries being entered under the head of the particular treasuries which disbursed the amount, 7289, 7290. 7387.

Total revenue of about 150,000 *l.* a year paid to the King of Delhi and his family previously to the mutiny: explanation as to the reduction of this charge to about 15,000 *l.* a year, 7291–7293——Explanation of a charge of 87,000 *l.* for stipends, &c., to native princes, under the head of Carnatic; pension of 30,000 *l.* a year now paid to Azim Jah, Prince of Arcot, 7294–7296——Decreasing amount of the payment to the Carnatic family and dependants, 7296.

Pension of 120,000 *l.* a year to the ex-King of Oude, to be re-considered upon his death, 7297——Information relative to the payments made to the Oude family and dependents generally; terminable character of many of these, 7297–7302——Reference to certain small payments made in India on account of the pension to the Maharajah Duleep Singh, 7303, 7304——Great reduction made in the pension to the ex-Nawab of Banda, in consequence of the part taken by him in the mutiny, 7305.

Kaye, Sir John William, K. C. S. I. (Analysis of his Evidence)—*continued.*

Items paid to members of the family of the ex-Rajah of Coorg; total of 3,057 *l.* paid in India, 7306–7308——Explanation of a payment of 1,388 *l.* under the head of "Pagoda and Mosque Allowances," 7310, 7311——Terminable character of numerous small political pensions, under 5,000 rupees per annum, paid in different parts of India, 7312, 7313. 7321–7324. 7346. 7364.

Origin of a charge of 10,684 *l.* paid in the Central Provinces to Sustanic Gund Rajah; belief as to the permanent character of this charge, which resulted from our acquisition of Nagpore, 7314, 7315——Explanation relative to a pension of 9,000 *l.* to Janoojee Bhonslah, as adopted son of the late Rajah of Nagpore, the adoption having been carried into effect by the elder widow of the Rajah, 7316–7320——Several small pensions of a terminable character paid in consequence of the transfer of the revenues of Nagpore to the Government of India, 7321–7324.

Explanatory statement relative to the Nizamut Fund in Bengal, the stipends and allowances of the Nizamut, and the large liability (to the extent of 550,000 *l.*), beyond the actual amount of the fund; distinct recognition of this liability in a certain despatch of Sir Charles Wood, 7325–7333——Terminable character of most of the pensions or payments in Bengal, which make up a total of 40,171 *l.*, 7334, 7335——Permanent charge of 44,600 *l.* as compensation payable under convention with the French Government in lieu of salt formerly supplied to them; object of this payment to dispense with salt manufacture in the French territories, 7336, 7337——Belief as to the permanent character of payments in Bengal and other parts of India for Sayer compensations, 7338, 7339. 7342. 7348. 7370.

Terminable character of a large portion of the territorial and political pensions, &c. in the North Western Provinces, and in the Punjaub, 7340–7349——Explanation relative to a charge of 31,397 *l.* in respect of the family of the late Rajah of Tanjore; rapid diminution of this charge, 7350, 7351——With respect to various other items of charge in Madras and Bombay, on account of pensions to native families, charitable allowances, &c., witness submits explanations in detail, 7352–7379.

Permanent character of a receipt of 719,421 *l.* under the head of tributes and contributions from native states, 7380——Explanation that, in addition to the money tributes paid by native states, large assignments of land have been made to Government, which add considerably to the land revenue, 7380–7386.

Conclusion that, on the whole, there has been a large decrease during the last ten years in the charge for pensions to native princes and their dependents, 7387——Further statement as to the want of improved and fuller accounts annually from India in respect of territorial and political pensions, *ib.*

Khamgaon and Oomraottee Branch (State) Railways. Official papers and statistics relative to the extension of the Great Indian Peninsula Railway to Khamgaon, and the traffic in cotton, &c. on the Khamgaon line, and on the Oomraottee line, *App.* 602–613.

Khandeish. Information relative to the assessment and working of the income tax; denial that there any special aversion was shown to the tax by the natives, the complaints proceeding rather from Europeans, *Ashburner* 2262–2283. 2300 *et seq.*

See also *Cultivation of the Soil.* *Model Farm.*

Kistna Irrigation Works. Particulars relative to the irrigation works in the delta of the Kistna, and the exceedingly successful effect thereof, as shown by the large increase of revenue from the district, *Sir A. T. Cotton* 8315–8328.

Kurnoul, late Newab of. Explanation relative to the pension to the son of the late Newab of Kurnoul, *Sir J. W. Kaye* 7356.

Kurrachee Harbour. Opinion that the large expenditure on Kurrachee Harbour is at least premature, and that the money might have been better spent elsewhere, *Strachey* 6771–6773——An exaggerated idea was formed in the first instance as to the trade of Kurrachee, *ib.* 6772.

Important advantages, doubtless, by the completion of the works at Kurrachee Harbour, witness submitting, however, that the money might have been better spent elsewhere, *Strachey* 7034–7036.

Necessity of a large expenditure on Kurrachee Harbour in connection with the Indus Valley Railway, *Dacosta* 8077, 8078——Circumstance of witness not being conversant with the large outlay already on Kurrachee Harbour, or the present state of the harbour, *ib.* 8246–8250.

See also *Godavery Navigation Works.*

L.

Laing, Samuel. (Analysis of his Evidence).—Experience of witness as Finance Minister of India for about two years from the end of 1860, 7432, 7433. 7445——Respect in which the Finance Minister in India has a larger control than the Finance Minister in most other countries relative to the revenue and expenditure, 7434——Constant consultation of the Governor General by witness when preparing the annual Budget, 7435–7442——Gloomy state of the finances of India when witness went out at the end of 1860; deficit of 5,250,000 *l.* in the year 1860–61; 7443–7445. 7448——Large reduction of military, naval, and other charges in 1861–62, in which year the deficit was about a million; surplus of about a million in the following year, 7443–7449.

Hopeful view entertained by witness of Indian finance, judging from the results during the last ten or twelve years; examination in detail hereon, 7443. 7450 *et seq.*——Statement showing that the annual charge for interest on the debt of India was about the same in 1870 and 1862, that is, exclusive of the charge for railways, canals, &c., 7452–7454. 7530, 7531——Additional expenditure of about 30,000,000 *l.* on railways between 1862 and 1870, whereas the charge for guaranteed interest had increased only by 300,000 *l.*, 7453.

Belief that within twenty years the charge or loss for guaranteed interest will entirely disappear; data for this conclusion, 7453. 7455. 7551–7556. 7567–7569. 7582. 7584——Increase of nearly 4,000,000 *l.* in the cash balances in the Treasury in 1870 as compared with 1862; 7453. 7456——Further proof that during the last ten years an equilibrium has been maintained in the finances, in the fact that the charge for public works has to a large extent been met out of revenue, 7457–7461.

Opinion that the income tax should not have appeared in the Budget for 1872–73; 7462. 7551. 7603–7605——Evidence in strong disapproval generally of an income tax in India, the oriental mind being peculiarly jealous of the inquisition involved, and the tax tending to produce wide-spread discontent, 7462–7465. 7474. 7550. 7551——Grave objections to a license tax as well as to an income tax; respects in which the former is the less objectionable of the two, 7466–7473. 7498–7500.

Objections to any form of direct taxation in India, 7467. 7473. 7474. 7482——Statement to the effect that, instead of resorting to the income tax after the mutiny, a tobacco tax would have been preferable; way in which such tax might be introduced and assessed, if it became a necessity, 7473. 7495–7497. 7509. 7510——Strong views of Lord Canning adverse to direct taxation in India, 7474——Approval of an increase of Customs or import duties as an alternative for the income tax; feeling of the people of India to this effect, 7475–7480. 7490–7493. 7599–7605.

Advantage to India by her connection with England in being able to raise loans at a very moderate rate of interest; gain on the other hand to England by the low import duties in India on British manufactures, 7477, 7478. 7599–7602——Evidence in detail on the subject of the opium revenue, witness showing that over a series of years the revenue has been an increasing one, and submitting that the demand for Indian opium in China is not likely to be affected by increased growth in China or Persia, 7481. 7501–7504. 7536–7539. 7589. 7590. 7593–7598. 7621–7632.

Expediency of more attention being given to public opinion in India when the Budget is being framed, and of direct taxation being, if possible, ignored, 7482. 7603, 7604——Belief that by strict economy of expenditure the half million of net revenue, represented by the present rate of income tax, might be rendered unnecessary, 7482–7484. 7489. 7604, 7605——Frequent representations made by the Secretary of State in Council, relative to the finances (when witness was in India); direct control exercised from home over the financial policy and the military expenditure, &c., 7485–7489. 7507, 7508. 7514–7517——Statement that practically the existence of the Council did not affect the action of the Indian authorities relative to questions of expenditure, 7487, 7488.

Large increase of home military expenditure since 1862; possible room for retrenchment in this direction, 7489. 7522, 7523——Advantage of keeping large cash balances in India in order to meet the fluctuations in the opium revenue, 7505, 7506——Belief that but for pressure from the Secretary of State in Council some of the more unpopular taxes would not have been imposed, 7508–7517——Relative merits of the Bombay system and the Bengal system of opium revenue; impression that each is best under its own peculiar circumstances, 7511–7513.

Probability of greater economy in carrying out the fusion of the Indian Army with the Queen's Army, if the Government of India had been allowed to have their own way in the matter, 7517——Impression that the income tax would have been repealed ere this if the authorities in India had been left to themselves, 7517——Approval of an addition to the loans for public works as a means of enabling the income tax to be dispensed with, 7517. 7532. 7535——Instances in the past of expenditure having been charged against India which more properly belonged to England; feeling of natives on this point, 7518–7522.

Laing, Samuel. (Analysis of his Evidence)—*continued.*

Decided approval of a liberal expenditure on reproductive public works, provided there be a competent staff of engineers, &c. to secure efficiency, 7524, 7525. 7532-7535——Immense importance attached to the railways carried out under the guarantee system; wisdom of the large expenditure on this score, though the returns hitherto involve a considerable loss to Government, 7526, 7527. 7556, 7557——Important advantages of the guarantee system, witness being disposed to prefer the system to the plan of construction by the State, 7528, 7529.

Expediency of some greater liability in making loans for public works as an alternative for unpopular taxation, 7532-7535. 7563-7566——Examination in approval of the principle of raising loans for State railways, although, in some instances, these may be useful chiefly for military or political purposes, and may cause a charge upon the revenue, 7540-7559. 7563, 7564——Decided approval, on political grounds, of the line from Lahore to Peshawur, 7540-7547. 7558, 7559. 7563——Necessity of judging each work on its own merits, 7545. 7558. 7563-7566——Belief that the natives of India see no objection to the opium monopoly on moral grounds, 7560.

Dissent from a statement by the present Finance Minister that the State income fails to evince elasticity, 7561, 7562——Statement in defence of the connection of the Government of India with the Presidency Banks, the advantages outweighing the disadvantages, 7575-7581——Considerable benefit to be derived from the Godavery Navigation Works, if efficiently carried out, and not at too great a cost, 7583——Doubt as to the expediency of the purchase of the guaranteed railways by Government, or of greatly reduced rates, 7585.

Conclusion that in the present satisfactory state of the finances, not only is it unnecessary to cast about for new sources of revenue, but the income tax might be dispensed with, 7586-7590. 7603-7605——Disapproval of any forced extension of the paper currency, 7591——Objection generally to any changes, without a very clear advantage, 7592——Unpopularity of any new tax, 7606——Approval of the settlement of the land revenue for periods of thirty years, rather than of redemption, 7607-7613.

Check to local demands upon the Central Government for money through the decentralisation system, 7614——Doubt as to incentives to local expenditure on works, by reason of the staff of officers maintained, 7615-7616——Further approval of the system of borrowing for extraordinary works, due care being taken by the responsible heads that expenditure is properly apportioned between revenue and capital, 7617-7620.

Increase of only one million in the total debt of India between 1861 and 1869; 7633-7635——Reduction in the rate at which loans have been raised, owing partly to the Act which authorises trust money to be invested in Indian Securities, 7636-7640——Doubt as to the foregoing Act having led the English public to believe that this country was responsible for the debt of India; opinion that there is no necessity for any authoritative disclaimer on this point, 7641-7644.

Limitation of expenditure out of revenue on public works when witness was Finance Minister, 7645, 7646——Amendment required in the accounts if these do not show clearly how the money raised by loan has been expended on each public work, and whether it has been duly applied to purposes of capital, 7646-7650——Whatever the system of accounts the financial condition of the country has not relapsed since 1861; 7650.

[Second Examination.] Further statement as to the slight difference between the amount of interest on the debt of India in 1861 and 1870; increase of only 15,000 *l.*; 7651-7655——Consideration of the value of the exports from India as compared with the value of the imports, the former being much in excess of the latter, and the balance being made up by the import of bullion; denial that the balance represents so much tribute paid by India to England, witness contending that an equivalent is received by India for all its exports, 7656-7667. 7751-7762. 7778-7785.

Great rise of wages as well as of prices in India in recent years, the people being on the whole very much better off, 7668, 7669. 7730. 7774-7777——Enormous progress of the country since the time of the Mutiny, 7669. 7730——Origination by witness, when in India, of the decentralisation scheme of finance, 7670-7671——Full attention of the local public attracted to proposals for new local taxes under the decentralisation system; less attention probably in England, 7672, 7673——Great dislike of the natives to an income tax, further adverted to, 7674, 7675. 7617.

Consideration of the grounds for a statement by witness some two years ago, that "the finances of India are constantly being sacrificed to the exigencies of English estimates; security against this abuse in future through the growth of public opinion, both in India and in England, on questions of Indian finance, 7677-7684——Further reference to the amalgamation of the local European Army with the Queen's Army as having been forced upon India, and as having caused unnecessary expense, 7678. 7692, 7693.

Explanation that witness considers the Council at the India Office a very useful adjunct to the Secretary of State, though the former cannot interfere much in detailed

questions

Laing, Samuel. (Analysis of his Evidence)—*continued.*

questions of expenditure in India, 7685–7687——Favourable circumstances in 1860–62, which facilitated the reductions effected by witness when finance minister, 7688–7691——Less unpopularity doubtless of the income tax accordingly as the limit is made higher; great diminution thereby in the proceeds, 7696–7698. 7741–7746——Conclusion that increase of local taxation is far preferable to an income tax, the latter causing infinitely greater discontent than the former, 7697–7710.

Evidence in defence generally of the present system of local taxation for local purposes; consideration more especially of the security against the imposition of unpopular taxes, 7699–7710. 7719–7736——Concurrence in the view that the natives of India are very impatient of taxation, so that the greater tact and direction are required in the imposition of taxes, 7702, 7703. 7710. 7724, 7725.

Obstacle to raising public loans in India, unless by offering a high rate of interest, 7711–7715——Objection to the income tax being levied on communities, who should collect it from individuals, 7717, 7718——Approval of local cesses or taxation for roads, education, &c., notwithstanding the permanent settlement of the revenue, 7719–7729——Great importance of tact and ability in the local commissioners and other authorities, as regards questions of local taxation and administration, 7731–7736.

Probability of the Government of India rather than the Secretary of State in Council being responsible for the maintenance of the income tax at the present time, 7737, 7738——Further statement adverse to the continuance of the tax, even though steps were taken to exempt all the working population and all persons of small incomes, 7739–7746——Great impolicy of exempting any class of Europeans from the tax, 7742–7744——Failure of the former system of requiring natives to make returns of their incomes; constant surcharge by the assessors, 7747–7749——Objection to any new tax, such as a succession tax, in the present state of the finances, 7750.

Statement of the several local balances and items constituting the cash balances in India, 7763–7766——Explanation as to certain funds, such as the Mysore Pension Fund, the Nizamut Fund, &c., not being included in the amount returned as the debt of India, though they exist as part of the national liability, and interest is charged in respect of them, 7766–7773.

Land Improvement Act. Objection to the Land Improvement Act, as unduly restricting the application of capital to loans on the security of land, *Dacosta* 8091–8094——Comment upon the introduction and passing of the Land Improvement Bill at Simla, and upon its extension to the whole of India, without opportunity for discussion in Calcutta, *Hutton* 8565.

LAND REVENUE:

1. *Refunds and Remissions.*
2. *Cost of Collection, and Machinery employed.*
3. *Cost of Revenue Surveys and Land Settlement Charges.*
4. *Objections to permanent Settlement, or Redemption.*
5. *Rate of Assessment.*
6. *Amount of Revenue in 1870–71; Estimate for 1872–73.*

1. *Refunds and Remissions:*

Total refund of 72,050 *l.* in 1870–71, in respect of land revenue, over-collected and repaid on appeal, *Gay* 3499. 3501——Separate statement of remissions of land revenue, apart from refunds, *Harrison* 3518, 3519.

2. *Cost of Collection, and Machinery employed:*

Chief heads of expenditure comprised in the total of 2,422,856 *l.* for the collection of the land revenue in 1870–71, *Harrison* 3522–3525. 3628——Charge of 1,607,199 *l.* for the collectors and deputy commissioners and their establishments, *ib.* 3522–3524.

Explanations in detail relative to the comparative charge in 1856–57 and in 1870–71, and the increase in the latter year, for collection of the land revenue, under the different heads in the accounts before the Committee, *Harrison* 3526 *et seq.*——Information relative to the revision and increase made in 1866 in the scale of pay of the deputy commissioners and other civil servants in Oude, the Punjaub, the Central Provinces, and British Burmah; large increase from this cause in the cost of collection in those Provinces, *ib.* 3528–3541. 3677–3687——Total increase of about 289,000 *l.* since 1856–57, for collectors and deputy commissioners, and subordinate officers, *ib.* 3541. 3561–3562, 3569, 3570. 3603.

Very little change since 1856–57 in the cost of collection in the North Western Provinces, *Harrison* 3542——Considerable increase in Madras owing to the large increase in 1870 in the number of young civilians employed as assistant collectors, *ib.* 3543–3548. 3614–3624——Increased cost of collection in Bombay from 208,000 *l.* in 1856–57 to 365,000 *l.* in 1870–71; several items composing this increase, *ib.* 3549–3560.

LAND REVENUE—continued.

2. *Cost of Collection, and Machinery employed*—continued.

Statement of the gross land revenue, and the cost of collection, in 1856-57 and in 1870-71, respectively, *Harrison* 3571. 3587——Circumstance of the accounts of the cost of collection of the land revenue, including charges which might more fairly be placed to other heads, *ib.* 3573-3580——Security given by the subordinate collectors but not by the district collectors, *ib.* 3588-3590.

Information as to the employment of military officers and of civilians respectively, in the administration and collection of the land revenue; absence of economy in the cost of collection in the former case, *Harrison* 3595-3602. 3604-3613. 3672-3676. 3688-3691——Absence of any comprehensive inquiry in recent years into the salaries in the land revenue departments, *ib.* 4543, 4544.

Causes of the increase in the charge for Commissioners in the North Western Provinces since 1856-57, *Harrison* 4545-4548——Large increase also in the Punjaub, where there are now ten Commissioners instead of seven in 1856-57, *ib.* 4549——Item of 216,700 *l.* for allowances to district and village officers in Bombay, there being no corresponding item in Madras, *ib.* 4550-4552.

Abstract of land revenue appointments in 1870-71 in the several Provinces, distinguishing between Europeans and natives, and showing the monthly salaries of each class, *App.* 642-650.

3. *Cost of Revenue Surveys and Land Settlement Charges:*

Variation and expected reduction of charges under the head of revenue surveys, the charge in 1870-71 being 228,000 *l.*, *Harrison* 3629. 3701-3706——Constant variation also in the land settlement charges in the different Provinces, *ib.* 3629——Varying character of the charge for revenue surveys further adverted to, *ib.* 3702-3706. 4553——Increased payments made to the native officers employed on the surveys, *ib.* 3707-3709.

Considerable increase since 1856-57 in the land settlement charges, the amount in 1870-71 being 244,000 *l.*, and there not being prospect of immediate reduction, *Harrison* 3710-3717——Increase from 250,000 *l.* in 1856-57 to 472,000 *l.* in 1870-71, in the revenue surveys and land settlement charges, *ib.* 3714.

Further reference to the total land revenue charges in the three Presidencies, *Harrison* 4537-4539. 4550-4553——Much larger charge in Bengal than in the North Western Provinces; much larger area in the former case, *ib.* 4540-4542.

4. *Objections to permanent Settlement, or Redemption:*

Approval of the settlement of the land revenue for periods of thirty years, rather than of redemption, *Laing* 7607-7613——Witness looks upon the land revenue as the great mainstay of Indian finance, *Massey* 8623. 8792——Doubt as to the expediency of the redemption of the land revenue, *ib.* 8635-8637——The proceeds of redemption should be carried to capital, *ib.* 8638.

Conclusion further expressed, as regards the land revenue, that Government cannot be too careful in dealing with it, as being the main source of Indian finance, *Right Hon. W. N. Massey* 8792-8800.

5. *Rate of Assessment:*

Great care taken in the re-assessment of the land revenue; witness considers that the rates are lenient, *Right Hon. W. N. Massey* 8793, 8794——Bad policy in making the assessment too low at first; difficulty in raising it subsequently, *ib.* 8794-8800.

6. *Amount of Revenue in 1870-71; Estimate for 1872-73:*

Return showing the income for 1870-71 of each local government under the head of land revenue; total of 20,550,773 *l.*, *App.* 641——Amount of land revenue in each province in 1870-71 in proportion to the area, population, &c.; also the proportional cost of administration, *ib.* 642-650.

Estimate of 20,900,000 *l.* as the amount of land revenue in 1872-73, this being the largest estimate yet presented under this head, *App.* 493.

See also *Famines.* *Irrigation.* *Rent-free Lands.*

Law and Justice. Total of 45,000 *l.* as the refunds in 1870-71 under law and justice, *Harrison* 3510——Aggregate of 2,996,000 *l.* as the expenditure in 1870-71 in the administration of law and justice, the charge in 1856-57 having been 1,741,000 *l.*; details hereon, *ib.* 4746 *et seq.*——Increase, from 1,458,000 *l.* in 1856-57 to 2,162,000 *l.* in 1870-71, for the civil and criminal courts of justice; particulars as to this increase, *ib.* 4747 *et seq.*——Great increase in the cost of the Presidency Court in Bombay, *ib.* 4892-4895——The judicial officers are, as a rule, confined to one presidency or province, *ib.* 4948, 4949.

Statement showing the salaries of the judges and the establishments of the High Courts at Calcutta, Madras, Bombay, and Allahabad, the Chief Court at Lahore, and the

Law and Justice—continued.

the Courts of the Recorders of Rangoon and Moulmein, *App.* 662–665——Statement explanatory of the charges for civil judicial officers in the several provinces, *ib.* 666.

See also *Civil Courts. Criminal Courts. Fees. High Courts. Judges. Small Cause Courts. Stamps.*

Lawrence, Lord. Special Act passed in order to enable Lord Lawrence to continue in the possession of a special pension, when appointed Governor General, *Seccombe* 1467, 1468.

Views of Sir John Lawrence as to the bad and extravagant management on the part of the guaranteed railway companies, *Thornton* 2947. 2950.

Leave of Absence. Total charge of 175,000 *l.* for allowance to officers of the covenanted service and the uncovenant service, when absent on leave in England, *Seccombe* 230–234.

Legislative Council. Large reduction since 1856–57 in the charge for the Legislative Council, the constitution of the Council having been altered since that year, *Harrison* 4438–4445.

Exceptions taken to the constitution of the Legislative Council; nature of the amendment required, *Hutton* 8566.

See also *Simla.*

License Tax. Grave objections to a license tax as well as to an income tax, respects in which the former is less objectionable of the two, *Laing* 7466–7473. 7498–7500.

Increase of about 650,000 *l.*, obtained by witness from a moderate license tax on trades and professions; several advantages of this tax over an income tax, *Right Hon. W. N. Massey* 8581, 8582.

Statement showing the number of persons assessed, and the amounts realised, in respect of the license tax in 1867–68, *App.* 655——Number of persons employed in the assessment of the license tax, and allowances paid to them in 1867–68, *ib.* 657——Statement showing the number of Government servants from whose salaries deductions have been made on account of the tax in 1867–68, *ib.* 658, 659.

Loans (*India*). Obstacle to raising public loans in India unless by offering a high rate of interest, *Seccombe* 1652, 1653; *Laing* 7711–7715.

See also *Debt of India.*

Loans to Municipalities. Practice of making special loans to municipal bodies and others for public purposes, such as the water supply of towns; loss incurred on some of these transactions, *Strachey* 6394–6399.

Statement of special loans to municipalities, &c., during 1870–71, *App.* 515——Operation of sinking funds for redemption of loans, *ib.* 516——Accounts of the total loans to municipalities, &c., in 1870–71 and 1871–72, *ib.* 516, 517.

LOCAL TAXATION AND FINANCE (*DECENTRALISATION SYSTEM*):

1. *Great Imperfections of the present System of Central Financial Control.*
2. *Decentralisation Scheme of Finance, as recently established; its Operation.*
3. *Views of Mr Massey as to the Expediency of a large Development of the Decentralisation System.*
4. *Amount of Revenue to be administered, respectively, by the Central and Local Governments.*
5. *Central Control now exercised and still to be exercised over Local Taxation.*
6. *Amount of Local Taxation under the System hitherto, and under the Decentralisation System.*
7. *Public Opinion in England and in India as affected by the proposed System.*
8. *Objection to a Rateable Contribution by the Local Governments to Imperial Expenditure.*
9. *Question of an amended Form of Local Government.*
10. *Approval generally of larger Powers of Expenditure in the Local Authorities.*
11. *Question of Local Taxation under the permanent Settlement.*
12. *Further Inquiry contemplated by the Committee into the New System of Local Finance.*

1. *Great Imperfections of the present System of Central Financial Control:*

Evidence as to the exceedingly weak and inadequate control of the Government over the civil administration and expenditure of the local Governments; in the nature of things any effectual supervision by the central Government is impracticable, *Right Hon. W. N. Massey* 8586–8588——Direct communication of Madras and Bombay with the Secretary of State, and effect thereof as regards the independent position of those Presidencies,

LOCAL TAXATION AND FINANCE, &c.—continued.

1. *Great Imperfections of the present System, &c.*—continued.

Presidencies, *Right Hon. W. N. Massey* 8586. 8625–8627——Great impatience of central financial control exhibited by Bombay and other local Governments, *ib.* 8586, 8587.

Failure of the present system of Indian finance, in not imposing a motive for economy upon the spenders of the public money, *Right Hon. W. N. Massey* 8589——Large amount of fruitless and unsatisfactory correspondence on local financial questions under the present system, *ib.* 8743——Great clog to the action of the local Governments by the financial control exercised by the central Government over the local expenditure, *ib.* 8749.

2. *Decentralisation Scheme of Finance, as recently established; its Operation:*

Explanation in connection with a new charge of 200,000 *l.* in 1870–71 under the head of Allotments for Provincial Services, *Harrison* 5974 *et seq.*—— Examination in detail relative to the arrangement made in December 1870, whereby various branches of administration and expenditure were made over to the local provincial Governments, and a sum in gross assigned out of the annual revenue to meet the charges in question, *ib.* 5974 *et seq.*

Several items of expenditure in 1870–72, comprising a total of 5,103,564 *l.*, which will henceforth be withdrawn from the Imperial Accounts; essentially local character of many of these charges, *Harrison* 5980, 5981. 5983–6008. 6046–6051——Deduction of 350,000 *l.* from the foregoing total, in respect of receipts of local revenue, *ib.* 5980, 5981. 6046-6054——Total charge of 4,918,000 *l.* in the Estimates for 1872-73, on account of Allotments for Provincial Services, *ib.* 5994, 5995.

Increased care and economy expected in local administration under the new system, *Harrison* 6013——Intention that the net sum of 4,688,741 *l.* to be granted from Imperial Revenue, shall be apportioned in fixed and permanent shares among the several local administrations, *ib.* 6052–6056——Necessity of any future local deficits being made up from local taxation; instance of this in the Bombay Presidency, *ib.* 6057–6062.

Evidence in explanation of the object and operation of the decentralisation scheme; clear intention that the assignments from Imperial revenues to the Local Governments should not be increased, and that the latter must rely upon local resources to meet increased expenditure, *Strachey* 6445–6448. 7150–7159.

Check to local demands upon the central Governments for money through the decentralisation system, *Laing* 7614——Origination by witness, when in India, of the decentralisation scheme of finance, *ib.* 7670, 7671——Evidence in defence generally of the system of local taxation for local purposes, consideration more especially of the security against the imposition of unpopular taxes, *ib.* 7699–7710. 7719–7736——Great importance of tact and ability in the local Commissioners, and other authorites, as regards questions of local taxation and administration, *ib.* 7731.

Opinion that the Government of India have shown great wisdom in their mode of introduction of the decentralisation system, *Right Hon. W. N. Massey* 8809-8812——Concurrence in the views and conclusions expressed in the Resolution of the Government on the subject in December 1870, *ib.* 8812-8816——Importance attached to the circumstance of a reserve fund having been commenced by the local Governments since they have been entrusted with increased financial powers, *ib.* 8821, 8822.

3. *Views of Mr. Massey as to the Expediency of a large Development of the Decentralisation System:*

Conclusion arrived at by witness before leaving India, that a portion of the Imperial Revenue should be allotted to the several Governments for their domestic expenditure, and that they should be allowed a license of taxation within certain limits; sundry reasons urged in support of this view, *Right Hon. W. N. Massey* 8588–8592. 8614–8620——Important motive to economy under the system of local finance advocated by witness, *ib.* 8590, 8591——Expediency of the proposed system being gradual and tentative, *ib.* 8591, 8592. 8620. 8624.

Importance of the Imperial Government, in India, still retaining to itself certain sources of revenue, such as the land revenue, *Right Hon. W. N. Massey* 8618. 8622–8624——Futher explanation and defence of the proposition for giving the administration of finance and the power of taxation (within certain limits) to the local Governments; approval for this purpose of retaining the present local divisions of the country, eight in number, *ib.* 8643–8664.

Further explanation in detail relative to the propesed separation of the revenue, showing the several sources of revenue still to be retained by the Imperial Governments and the several sources to be handed ovor to the local Governments, *Right Hon. W. N. Massey* 8665 *et seq.* 8801–8823——The items of expenditure would follow the items of receipt, *ib.* 8682.

LOCAL TAXATION AND FINANCE—continued.

3. *Views of Mr. Massey as to the Expediency of a large Development, &c.*—contd.

Consideration of sundry objections to the proposed separation or division, and to the practical working of the scheme, witness further advocating the charge as an exceeding improvement upon the present system, *Right Hon. W. N. Massey* 8698 *et seq.* 8801–8823 ——Respect in which there would be a motive to economy under the system of local taxation, whilst there is no such motive at present, *ib.* 8718.

Effect of the decentralisation scheme in increasing the responsibilities of the local governments and in relieving them of much troublesome reference to the central governments; relief also to the central administration, *Right Hon. W. N Massey* 8740–8749 ——Inexpediency of anything like a division of British India into independent States; save as regards financial administration the local governments should have no increase of independence, *ib.* 8775–8777——Explanation that the municipalities would have nohing to do with the administration, *ib.* 8803.

Considerable expansion of which the system of local financial control is capable, *Right Hon. W. N. Massey* 8823——Reliance upon the local governments, and not upon the Supreme Government, for effecting economy in the details of expenditure, *ib.* 8825, 8826.

4. *Amount of Revenue to be administered, respectively, by the Central and Local Governments:*

Question considered whether under the new system of extended local administration, the Government of India will not keep, for Imperial purposes, all increasing sources of revenue, whilst any increased charge for public works will fall upon the the local governments, *Strachey* 6445–6448. 7150–7159.

Estimate of about 30,000,000 *l.* as the amount of revenue to be retained for Imperial purposes, whilst about 20,000,000 *l.* should, ultimately, be administered by the local governments, *Right Hon. W. N. Massey* 8801, 8802.

5. *Central Control now exercised and still to be exercised over Local Taxation:*

Necessity of every new local tax receiving the sanction of the Governor General in Council; impression that the sanction of the Secretary of State is also required, *Harrison* 6033–6042. 6063–6072——Question considered whether under the Punjaub Municipal Act of 1867, the local authorities have not full power to levy taxes, irrespectively of the Governor General, *Strachey* 6706–6711——Disapproval of any unlimited powers of taxation in the local authorities, *ib.* 6719——Equal powers of the local governments as to local taxation before the decentralisation system, *ib.* 6899–6901.

Contemplated veto in the Governor General in Council, or in the Secretary of State, upon new taxation by the local government, *Right Hon. W. N. Massey* 8590. 8592—— Power of the central governments still to prevent undue taxation and expenditure by the local governments, *ib.* 8818–8820.

6. *Amount of Local Taxation under the System hitherto, and under the Decentralisation System:*

Exception taken to certain statements as to excessively large amounts having been levied by way of local taxation in the North Western Provinces, Bombay, &c.; that is, in proportion to the land revenue, *Strachey* 6712–6714——Very objectionable character of much of the local taxation, *ib.* 6719——Inability of witness to state the present amount levied in local taxation in India, *Harrison* 6043–6045.

Uncertainty existing as to the mode of application of new local taxes, *Dacosta* 8022, 8023——Way in which the decentralisation scheme will have a direct effect in increasing local taxation, *ib.* 8026–8029.

Opinion in India that a great increase of taxation will result from the new system of throwing upon the local governments the onus of expense in respect of education, roads, gaols, &c., *Hutton* 8569—— Large deficiency to be made up by local taxation in Bombay in regard to gaols, &c., *ib.*——Instance of local funds having been seized by the Supreme Government, thus necessitating local taxation for the purposes for which the funds were accumulated, *ib.*

Question considerd whether the decentralisation scheme is not likely to cause increase of local taxation, instead of economy, as for roads, education, &c., *Right Hon. W. N. Massey* 8589. 8614–8617——More public money would probably be spent in India under the scheme advocated by witness, *ib.* 8589——Belief that the local governments are fully alive to the danger and difficulty of imposing new burdens on the people, *ib.* 8817.

7. *Public Opinion in England and in India as affected by the proposed System:*

Question considered whether under the new arrangement as to accounts and local administration the English Parliament and the English public will not be deprived of such information as was previously afforded in regard to local taxation, and the imposition of new burdens, such as the income tax, *Harrison* 6009–6042. 6073–6082——

LOCAL TAXATION AND FINANCE—continued.

7. *Public Opinion in England and in India as affected by proposed System, &c.*—contd.

Intended publication of the accounts to be furnished by the local government to the central government, *Harrison* 6014–6032. 6073–6082.

Full attention of the local public attracted to proposals for new local taxes under the decentralisation system; less attention probably in England, *Laing* 7672, 7673.

8. *Objection to a rateable Contribution by the Local Governments to Imperial Expenditure:*

Consideration of a proposal that the local governments should contribute rateably to the Imperial expenditure or charges, as for the army, debt, &c., and should be allowed to spend any local surplus as they pleased; exception taken to this scheme, *Right Hon. W. N. Massey* 8618–8624.

9. *Question of an amended Form of Local Government:*

Non-objection to an assimilation of the provincial governments to some simpler form of administration; the Executive Councils of Madras, Bombay, and Bengal are not essential to the government of those Presidencies, *Right Hon. W. N. Massey* 8731–8734. 8740–8750.

10. *Approval generally of larger Powers of Expenditure in the Local Authorities:*

Evidence in favour of a larger latitude and power of expenditure by local officers in irrigation and other works of improvement, than under the present centralisation system, *Ashburner* 2231–2261——Approval of a certain portion of the land revenue being allocated, to the local authorities for improvements to be carried out at their discretion, *Elliot* 3430, 3431.

11. *Question of Local Taxation under the permanent Settlement:*

Objection of the natives generally to be taxed for local improvements, *Elliot* 3123–3125——Approval of local cesses or taxation for roads, education, &c., notwithstanding the permanent settlement of the revenue, *Laing* 7719–7729.

Strong complaint in Bengal against the road cess and the education cess; several authorities of great experience who opposed the measures by which these cesses were imposed, *Hutton* 8569–8572——Incidence of these cesses upon the ryots, *ib.* 8569–8572——Complaint by the natives in Bengal that the road and education cesses are in direct infringement of the permanent settlement, *ib.* 8569.

Breach of compact if cesses were levied on the Zemindars in Bengal for Imperial purposes, though they may well be levied for local purposes, *Right Hon. W. N. Massey* 8640–8642; 8827–8833.

12. *Further Inquiry contemplated by the Committee into the New System of Local Finance:*

Necessity of examination by the Committee into the system now growing up of local finance and local taxation, *Rep.* iii.——Detailed information required from India in order that the Committee may obtain a clear view of the system of local finance, *ib.*

Lock Hospitals. Explanation relative to the Government expenditure in aid of Lock hospitals and other private hospitals, *Harrison* 5676–5681.

Lunatic Asylum (Ealing). Information relative to the circumstances under which the Royal Indian Lunatic Asylum, at Ealing, was established, when public lunatic patients from India could no longer be received in a lunatic asylum at Hackney, *Pears* 67——Careful inquiry made and steps taken with a view to the reception of the patients in some other asylums, but without effect, *ib.* 67. 76–82. 93. 100–103——Total of 123 patients now at Ealing; different classes of patients, all being chronic cases, and there having been no cures, *ib.* 68. 74. 83–95. 111, 112.

Explanations in connection with the charge for patients in the lunatic asylum at Ealing; charge of from 7,000 *l.* to 9,000 *l.* a year when these patients were in the private asylum at Hackney, *Seccombe* 69–75. 96–99——Decreasing number of lunatic patients, *ib.* 74, 75——Reduction of the charge for each patient by the pay or pension to which he is entitled, *ib.* 96. 110——Inspection of the asylum by the Lunacy Commissioners, *Pears* 106–108.

Further reference to the circumstances under which the expenditure in respect of the lunatic asylum at Ealing was incurred; letter from the Lunacy Commissioners stating that the required accommodation could not be found in existing asylums, *Pears* 704–706.

Paper showing the expenditure in respect of the Ealing Asylum, and the number of patients of different classes, *App.* 527.

Lunatic Asylums (India). Large increase of expense, especially in Bombay, for lunatic asylums; several such asylums, *Harrison* 5669–5672.

M.

Maafee Tenures (Punjaub). Permanent character of the pensions in respect of Maafee tenures, *Sir J. W. Kaye* 7345.

MADRAS IRRIGATION AND CANAL COMPANY:

Guarantee upon 1,000,000 *l.* of capital by Government in the case of the Madras Irrigation and Canal Company, this amount having proved entirely insufficient, and a loan of 600,000 *l.* having been subsequently made on certain conditions, *Thornton* 2648–2651——Important differences between the terms of this contract and the terms of the railway contracts; better position of the irrigation company than of the railway companies, *ib.* 2652, 2653. 2713–2718——Local agency and staff in Madras for carrying out the works, there being also a consulting and superintending engineer appointed by Government; impracticability of any really valid check by the latter, *ib* 2654–2661.

Partial completion of the works, the expenditure hitherto being about 1,600,000 *l.*, *Thornton* 2662–2667——Nominal earnings in 1870–71; expected receipt of about 6,000 *l.* in the current year (1871–72), from irrigation, *ib.* 2665–2668——Obstacles to any reliable estimate of the income and expenditure, small returns expected by the Government officers as compared with the large expectations of the company, more especially until recently, *ib.* 2669–2679 2707–2712——Charge of six rupees per acre for irrigation, *ib.* 2672. 2704–2706——Improbability of the canal not paying its working expenses, *ib.* 2676. 2740–2743.

Origin of the guarantee to the company, object more especially to promote similar undertaking by means of private enterprise without guarantee, *Thornton* 2677, 2678. 2696–2703. 2707–2711——Doubt expressed by the Government engineer whether the canal would be effectual to hold the water, *ib.* 2679. 2712. 2741——Want of extensive supply tanks or reservoirs in connection with the canal; large additional expense on this score, *ib.* 2679–2681.

Degree of responsibility of the Madras Government and its consulting engineer in reference to the canal, *Thornton* 2682–2684——Power of Government to purchase the canal at the end of every period of twenty-five years, *ib.* 2685——Arrangement that the water rate is to be levied and collected by Government officers, *ib.* 2686–2689.

Desire of the Madras Company to carry out additional or extension works, under guarantee; invariable refusal of a further guarantee by Government, *Thornton* 2692–2695——If the work had been designed for irrigation only, and had been properly carried out, it might now be paying five or six per cent., *ib.* 2711——Aggregate of 511,852 *l.* paid in interest to the company up to a recent period, *ib.* 2719–2723.

Conditions of the loan of 600,000 *l.* further adverted to; responsibility of Lord de Grey for this transaction, *Thornton* 2724–2729——The loan seems to have been made without adequate security for the payment either of interest or principal, *ib.* 2725–2728——List of the directors of the company when the loan of 600,000 *l.* was advanced, *ib.* 2730–2733——Power of the company to compel Government to relieve them of the concern if it should fail to pay its working expenses, *ib.* 2738–2743.

Evidence relative to the guarantee on 1,000,000 *l.* by Government in the case of the Madras Irrigation and Canal Company, there having been a subsequent loan of 600,000*l.* to the company; incomplete state of the works, *Strachey* 6761–6767.

Correction of certain statements as to the failure of the Madras Irrigation Company's works; prospect of a large revenue in the current year, *Sir A. T. Cotton* 8390–8399——Large excess of the estimated cost of the works; circumstance of its having been found difficult to raise the extra capital required for their completion, *ib.* 8398–8402.

Madras Presidency. See *the Headings generally throughout the Index.*

Madras Railway. Explanation on the subject of the Madras Railway passing at a distance of seven or eight miles from the towns of Vellore and Arcot, authorities responsible, *Strachey* 7937–7947——Vital mistake in laying out the Madras Railway, as it passes by all the principal towns at a considerable distance from them; enumeration of these, *Sir A. T. Cotton* 8552–8562.

Madras Revenue Board. Large room for economy in respect of the Board of Revenue in Madras, *Elliot* 3448——Larger cost of the Board of Revenue in Madras than of the Revenue Commissioners in Bombay, *Harrison* 4506–4511.

Madras Water Supply. Very unreliable estimates in the case of the Madras water supply scheme, *Dacosta* 8071, 8072.

Magistrates. New civil charge in connection with the appointment of cantonment magistrates; explanation hereon, *Harrison* 4905–4909. 4924, 4925. 4937–4940. 4958–4961——Great improvement by a more extensive appointment of honorary magistrates, Native as well European; beneficial effect of such appointment in the Purneah district in Bengal, *Dacosta* 8098. 8130–8138.

Malta and Alexandra Telegraph. Impression that India was not fairly treated as regards her sharing in the expense of the Malta and Alexandria telegraph, *Laing* 7681, 7682.

Manufactures. Decay of native manufactures in India, *Elliot* 3276–3279.

See also *International Exhibitions.*

Manure. Obstacle to improved cultivation through the difficulties as to manure, a large portion of the manure being used as fuel, *Ashburner* 2135–2152. 2164–2171. 2183–2186. 2194–2199. 2204, 2205.

Inappreciable loss by using the manure as fuel, the ashes being utilised on the soil, *Elliott* 3115, 3116 3210–3213. 3408, 3409——Information relative to the manure used by witness in his coffee plantations, *ib.* 3293–3298.

Marine (India). See *Navy and Marine.*

Maritime Service (East India Company). Decreasing charge for compensation pensions to officers of the Maritime Service of the East India Company, *Seccombe* 161–163; *General Pears* 164.

Massey, The Right Hon. William Nathaniel. (Analysis of his Evidence.)—Was financial member of Council in India from the spring of 1865 till the spring of 1868; 8578, 8579——Want of an additional revenue of about a million a year in order to cover the expenditure when witness went to India in 1865; 8580, 8581——Very narrow field to which witness was limited in casting about for increased taxation, new sources of taxation being impracticable, 8581. 8583——Pressure upon witness to maintain the income tax; his objections thereto, 8581, 8582.

Steps taken by witness for a reversion of the scale of fees upon the institution of legal proceedings; additional receipt of about half a million from this source, 8581——Small addition made to the duty on the export of grain, this having brought in about 200,000 *l.* without diminishing the trade, *ib.*——Further increase of about 650,000 *l.* obtained by witness from a moderate license tax on trades and professions; several advantages of this tax over an income tax, 8581, 8582.

Grounds for the conclusion that the permanent maintenance of an income tax in India is most dangerous and unwise, the natives having the greatest aversion to the inquisitorial process of the tax; it should, in fact, be resorted to only in times of emergency, as when it was first imposed by Mr. Wilson, 8582.

Expediency, in dealing with Indian finance, of adjusting expenditure to income rather than income to expenditure, 8583. 8612——Statement showing the great want of a more systematic revision of the military estimates, witness believing that much economy may be secured by placing a member of the Council in India in special and sole charge of the vast outlay under this head; detailed and constant investigation to be exercised by him, 8583–8585.

Evidence as to the exceedingly weak and inadequate control of the Government of India over the civil administration and expenditure of the local governments; in the nature of things any effectual supervision by the central government is impracticable, 8586–8588——Direct communication of Madras and Bombay with the Secretary of State, and effect thereof as regards the independent position of those Presidencies, 8586. 8625–8627——Great impatience of central financial control exhibited by Bombay and other local governments, 8586, 8587——Conclusion arrived at by witness, before leaving India, that a portion of the Imperial revenue should be allotted to the several governments for their domestic expenditure, and that they should be allowed a license of taxation within certain limits; sundry reasons urged in support of this view, 8588–8592. 8614–8620.

Failure of the present system of Indian finance, in not imposing a motive for economy upon the spenders of the public money, 8589——Contemplated veto in the Governor General in Council, or in the Secretary of State, upon new taxation by the local governments, 8590. 8592——Important motive to economy under the system of local finance advocated by witness, 8590, 8591——Expediency of the proposed system being gradual and tentative, 8591, 8592. 8620. 8624.

Effect of the increased facilities of communication in divesting the governors and the Governor General of responsibility, and in concentrating responsibility in the Secretary of State, 8593——Importance of the personal responsibility of the governors of provinces, and of the Governor General being duly maintained as regards finance; full recognition of this responsibility by Lord Lawrence, 8594–8601.

Evidence in explanation and strong disapproval of the connection of the Government of India with the Presidency Banks at Bengal, Bombay, and Madras; strong protest recorded by witness, before leaving India, against Government continuing to hold shares in these banks, 8602–8610——Reference especially to the perilous state of the Bank of Bombay in 1866 and 1867, the action of Government in extending support to the bank, and the effect thereof upon the value of the shares, 8602–8604. 8610——Witness trusts the Government of India will be compelled to sever its connection with the banks at the earliest

Massey, The Right Hon. William Nathaniel. (Analysis of his Evidence)—*continued.* earliest possible moment, 8604, 8605——Necessity of paid inspection of the banks on the part of Government so long as the connection lasts, 8606–8608.

Opinion that it is not necessary nor desirable to have a large surplus revenue; numerous claims which would at once be made upon it, 8611——Extravagance of the Government of Bombay more especially, 8613——Question considered whether the decentralisation scheme is not likely to cause increase of local taxation, instead of economy, as for roads, education, &c., 8614–8617.

Importance of the Imperial Government in India still retaining to itself certain sources of revenue, such as the land revenue, 8618. 8622–8624——Consideration of a proposal that the local governments should contribute rateably to the Imperial expenditure or charges, as for the army, debt, &c., and should be allowed to spend any local surplus as they pleased; exception taken to this scheme, 8618–8624.

Opinion that though the opium revenue is doubtless a precarious revenue, the experience of the past would go to prove that its failure need not be apprehended, 8628–8631——Higher prices in Bombay than in Madras, 8632, 8633——Tendency to lower prices through the increase of intercommunication, 8634——Doubt as to the expediency of the redemption of the land revenue, 8635–8637——The proceeds of redemption should be carried to capital, 8638——Impression that the public works staff maintained in the provinces does not induce enlarged expenditure, 8639——Breach of contract if cesses were levied on the zemindars in Bengal for Imperial purposes, though they may well be levied for local purposes, 8640–8642.

Further explanation and defence of the proposition for giving the administration of finance and the power of taxation (within certain limits) to the local governments; approval for this purpose of retaining the present local divisions of the country, eight in number, 8643–8664.

[Second Examination.]—Further explanations in detail relative to the proposed separation of the revenue, showing the several sources of revenue still to be retained by the Imperial Government, and the several sources to be handed over to the local governments, 8665 *et seq.*; 8801–8823——Consideration of sundry objections to the proposed separation or division, and to the practical working of the scheme, witness further advocating the change as an exceeding improvement upon the present system, 8698 *et seq.*; 8801–8823.

Non-objection to a separate financial administration of Scinde, 8708, 8709——Respect in which there would be a motive to economy under the system of local taxation, whilst there is no such motive at present, 8718——Explanation relative to the mode of collection of the revenue, and the staff to be employed, if the revenue were divided under Imperial and local heads; doubt as to any conflict of jurisdiction by retaining the local collection of Imperial revenue in Imperial hands, 8719–8730. 8804–8808——Non-objection to an assimilation of the provincial governments to some simpler form of administration; the Executive Councils of Madras, Bombay, and Bengal are not essential to the government of those Presidencies, 8731–8734. 8740–8750.

Effect of the decentralization scheme in increasing the responsibilities of the local governments, and in relieving them of much troublesome reference to the Central Government; relief also to the central administration, 8740–8749——Large amount of fruitless and unsatisfactory correspondence on local financial questions under the present system, 8743——Great clog to the action of the local governments, by the financial control exercised by the Central Government over the local expenditure, 8749.

Probable room for economy by a re-organisation of the higher Judicial Courts of Appeal throughout India, 8751–8753——Very unsatisfactory system of transit duties upon British goods going through native States; obstacle to any remedy for this evil save by equitable treaties and by compensation, 8754–8764——Non-imposition of any transit duties in British territory, 8758–8786——Advantage if the native States could be dealt with collectively as regards customs, transit duties, police, &c., instead of being approached by a separate treaty in each case, 8760–8774——Difficulty in the way of a general system of police applicable to all India, including the native States, 8768–8770.

Inexpediency of anything like a division of British India into independent States; save as regards financial administration, the local governments should have no increase of independence, 8775–8777——Expediency of Ceylon continuing to form a separate administration, instead of being added to India, 8778, 8779——Exception taken to the restoration of Mysore to native rule, 8779.

Opinion that the protection of the shores of India forms part of the naval policy of England, and should be entirely an Imperial charge, 8780–8783——Objection to the charge made upon India in respect of the Persian Mission, 8784, 8785——Conclusion that the salt line may be re-adjusted on a much more convenient and economical basis; it is very doubtful whether the maintenance of the line is worth the great cost involved, 8787, 8788——Decided objection to any increase of the salt duties; decrease of con-

Massey, The Right Hon. William Nathaniel. (Analysis of his Evidence)—*continued.*

sumption by an increase of the duties, whilst any further increase would fall oppressively upon the very poorest of the community, 8789–8791. 8877–8886——Conclusion as regards the land revenue that Government cannot be too careful in dealing with it, as being the main source of Indian finance, 8792–8800——Strong disapproval of ingenious devices for imposing fresh burdens on the people of India, new taxation being most repugnant to the native mind, and being in fact uncalled for, 8792. 8824. 8882——Great care taken in the re-assessment of the land revenue; witness considers that the rates are lenient, 8793, 8794——Bad policy in making the assessment too low at first; difficulty in raising it subsequently, 8794–8800.

Estimate of about 30,000,000 *l.* as the amount of revenue to be retained for Imperial purposes, whilst about 20,000,000 *l.* should ultimately be administered by the local governments, 8801, 8802——Explanation that the municipalities would have nothing to do with the administration, 8803——Opinion that the Government of India have shown great wisdom in their mode of introduction of the decentralization system, 8809–8812——Concurrence in the views and conclusions expressed in the resolutions of the Government on the subject, in December 1870; 8812–8816.

Belief that the local governments are fully alive to the danger and difficulty of imposing new burdens upon the people, 8817——Power of the Central Government still to prevent undue taxation and expenditure by the local governments, 8818–8820——Importance attached to the circumstance of a reserve fund having been commenced by the local governments since they have been entrusted with increased financial powers, 8821, 8822——Considerable expansion of which the system of local financial control is capable, 8823.

Conclusion that economy and retrenchment should be the policy of Indian financiers, as distinguished from the policy of fresh taxation, 8824. 8856–8860. 8890——Reliance upon the local governments, and not upon the Supreme Government, for effecting economy in the details of expenditure, 8825, 8826——Further statement that under the permanent settlement in Bengal the zemindars may fairly be taxed for local improvements, such as roads and schools, but not for Imperial purposes, 8827–8833.

Admission that there may be some force in the argument that the cost of the military occupation of India should not all fall upon Indian revenue; witness is not prepared to enter into this question, 8834–8840——Doubt as to there being good grounds for the complaint that military items of charge incurred in England are transferred in an unfair proportion to the taxation of India, 8841–8845——Conviction of witness that the loss of India to England would be an enormous calamity to this country, materially as well as morally, and that Great Britain would at once subside into a second-rate power, 8846–8852.

Explanation that in recommending a repeal of the income tax, witness would first effect a retrenchment of the present enormous expenditure, 8853–8856——Further reference to the military expenditure as one likely to admit of large reduction, 8856, 8857——Room for extensive reductions on account of Public Works Ordinary, paid for out of revenue, 8857–8860——Approval of loans for extraordinary public works of a reproductive character; expediency of the revenue in these cases being applied not only to the payment of interest but the extinction of principal, 8858. 8863–8865.

Statement that in witness's experience of India there was more waste in the Public Works Department than in any other department of the administration, 8858–8860——Very large outlay on barracks when witness was Finance Minister; view of witness that a portion at least of this expenditure should be provided by loans, 8860–8862——Lavish expenditure in connection with the guaranteed railways and their construction, 8866, 8867——Illustration, in the case of the East Indian Railway, of the enormous waste of money in construction, 8867, 8868——Conclusion that great caution should be exercised before the construction of any new lines of railway, or of public works generally, 8869–8875. 8894, 8895.

Expediency of estimating the opium revenue upon an average of years, the revenue from year to year fluctuating greatly; belief that there need be no apprehension of loss of revenue from this source, 8876. 8892, 8893——Statement as to the natives having no organisation for making their complaints heard in the matter of taxation, 8881——Reason for the decision against a tobacco tax when witness was in India, 8882——Inappreciable effect as regards the import of British productions through the abolition of the former discriminating duties between British products and those of other countries, 8887–8889——Great caution necessary before raising loans for irrigation works, though the returns from some works in Madras have been very large, 8894, 8895.

Maxwell, Colonel. Charge of 2,915 *l.* for expenses of officers acquiring scientific knowledge; reference more especially to the payments to Colonel Maxwell whilst thus employed in England, *Seccombe* 1356–1362.

Mayo, Earl of. Opinion of Lord Mayo as to the value of the work performed through the guaranteed railway companies, though he was adverse to the continuance of the guarantee system, *Danvers* 2063–2065——Statement showing that Lord Mayo and his

Council

Mayo, Earl of—continued.

Council concurred in the views of Sir John Lawrence as to the bad and extravagant management by the guaranteed companies, *Thornton* 2947–2951.

Prompt measures adopted by Lord Mayo for restricting the chronic excess of expenditure, and for increasing the revenue, *Strachey* 6458——Credit due to Lord Mayo for having put the finances in a very improved condition, *ib.* 6897, 6898——Views of Lord Mayo as to the difficulty of raising revenue by new taxes, *ib.* 7395, 7396.

Severe censure passed by Lord Mayo on the officers engaged in the construction of the barracks at Allahabad, *Dacosta* 8086–8088.

Testimony borne by Sir Richard Temple to the soundness of the views of Lord Mayo on financial subjects, *App.* 489.——*See also Public Works*, 2, 3.

Medical Department. Charge of 9,342 *l.* in 1870–71 for professional instruction at Netley of medical officers appointed to the Indian service by competitive examination, *Pears* 432, 433——Charge of 59,000 *l.* for medical stores sent to India, including instruments as well as drugs, *Bedford* 1180–1182.

Expenditure of 523,486 *l.* in India in 1870–71, under the head of Medical Charges in 1870–71, the amount in 1856–57 having been 175,714 *l.*, *Harrison* 5628——Particulars relative to the several branches of the medical department, and their operation, showing the amount of increased expenditure in each case, *ib.* 5629–5087——Large increase in medical officers' salaries, *ib.* 5636, 5637.

Increased duties thrown upon the civil surgeons, necessitating an increase of the numbers, *Harrison* 5638–5641——Staff of uncovenanted medical officers; increase made in their pay, *ib.* 5643–5645——Large increase of expense for medical colleges, *ib.* 5666–5668.

Medical Funds See *Military and Medical Funds.*

Metals, Import of. Large import of metals, which should be considered as being consumed by the people, *Strachey* 7962.

Military Buildings, See *Barracks, &c.*

Military Expenditure. See *Army.*

Military and Medical Funds. Several military and medical funds in respect of which there was a charge of 554,541 *l.* in 1870–71 for pensions to subscribers, the funds and subscriptions having been made over to Government, *Seccombe* 176–183——Gradual absorption of the capital of the military and medical funds towards payment of the pensions; large increase of charge out of revenue when the capital accumulated is entirely paid away, *ib.* 181. 215–229.

Statement on the subject of the appropriation of certain military and medical funds as revenue, this involving an increased charge for pensions in future years; question hereon whether the East India Company were not equally ready to avail themselves of "windfalls" of this description, *Seccombe* 1589–1596. 1624–1637.

Explanation of the increase of charge between 1856 and 1870 in respect of the pensions of the Military Fund, the Military Orphan Fund, &c. *Harrison* 5970–5973

Military Officers (*Civil Employment*). Returns showing the military officers engaged in civil employment throughout India, *App* 721–735.

Military Works, Inspector General of. Functions discharged by the Inspector General of Military Works, *Strachey* 6306.

Mineral Products Poverty of India as regards mineral productions; difficulty more especially as regards coal, *Elliot* 3302–3309.——*See* also *Coal.*

Minor Departments. Expenditure of 212,897 *l.* in India in 1870–71 as compared with 99,525 *l.* in 1856–57, under the head of minor departments, *Harrison* 4684——Particulars relative to various items of charge under the foregoing head; explanation more especially of several new departments, this largely accounting for the increased expenditure, *ib.* 4685–4745

Mints. Item of 6,700 *l.* in 1870–71 for machinery, &c., for the Mints in India, *Hon. G. C. Talbot* 948–950——Stores are no longer supplied to the Madras Mint, *Bedford* 951.

Reduction from 96,000 *l.* in 1856–57 to 59,532 in 1870–71 in the expenditure in India for the Mints at Calcutta, Bombay and Madras, *Harrison* 3975–3979——Closing of the Madras Mint about two years ago; endeavour made to sell the machinery and plant, *ib.* 3975, 3976. 3997–4000. 4002——In 1856–57 the charge for the Madras Mint was 17,460 *l.*, and in 1870–71 only 3,729 *l.*, *ib.* 3975–3980.

Loss of 33,000 *l.* on the coinage operations in 1870–71, *Harrison* 3990——Considerable local inconvenience if the Bombay Mint were closed, *ib.* 4003, 4004——Unimportant coinage at the Native Mints, *ib.* 4007–4009.

Mints—continued.

Improbability of the Mint paying its expenses in future, a silver coinage of 3,000,000*l*. a year being required to cover expenses, *Harrison* 4025-4027. 4052, 4053——Consideration of the question of abolishing the Mint in India and of supplying the required coinage from the Mint in England; several objections to this proposal, *ib.* 4028-4061.

Miscellaneous Expenditure. Aggregate expenditure of 1,010,530 *l.* in India, in 1870-71, for miscellaneous charges as compared with 216,218 *l.* in 1856-57; paper submitted showing the several items and the increase in each case, *Harrison* 5857-5861——Evidence explanatory of various items of increase comprised under Miscellaneous Expenditure, *ib.* 5862 *et seq.*

List of miscellaneous payments to be brought to charge or recovered in India, making a total of 145,290, *App.* 661.

Model Farm (*Khandeish*). Details relative to the establishment, by witness, and the operation, of a model farm of about 500 acres in Khandeish; limited effect hitherto produced as regards the surrounding cultivation, the farm not having had sufficient time to make itself felt through the country, *Ashburner* 2118-2134. 2156-2161. 2200-2203. 2222-2224——Various objects of the farm, *ib.* 2119-2135.

Loss hitherto upon the working of the farm; belief that after a time it will pay its expenses, *Ashburner* 2121-2125. 2156-2161. 2222-2224——About 4,000 *l.* or 5,000 *l.* has been applied to the farm, in addition to which there has been a loss in three years of from 20,000 to 30,000 rupees, *ib.* 2121-2125. 2156——Regret expressed at the proposed abandonment of the farm, *ib.* 2223, 2224.

Money Order Office. Duties discharged by the Money Order Office, which is not in connection with the Post Office; charge of 6,420 *l.* in 1870-71 under this head, *Harrison* 4666-4668.

Moorshedabad Branch Railway. Subsidy from Government to the short line from Nulhutee to Moorshedabad; recent purchase of this line for 30,000 *l.*, *Danvers* 2906, 2907.

Muir, Sir William. See *Income-Tax*, 4.

Museums. Explanation relative to a charge of 9,387 *l.* for central and other Museums, *Harrison* 4700-4704.

Mutlah Railway. See *Calcutta and South Eastern Railway.*

Muzzle-loading Guns. Explanation of an expenditure of 951 *l.* for stores for experiments with a new muzzle-loading gun for India, *Pears* 445.

MYSORE:

Great value of the tank system of irrigation as carried out in Mysore by General Cubbon, *Ashburner* 2225-2233.

Paper submitted to the Committee containing details relative to, and in condemnation of, the working of the Public Works Department in Mysore, *Elliot* 3096——Wasteful expenditure on Public Works; expediency of concentrating this expenditure on irrigation, and of the initiative being taken by the local revenue officers, *ib.* 3097. 3110-3112. 3147-3153. 3333-3335. 3375-3389. 3424-3429. 3482, 3483.

Examination relative to the details of the system and practice of cultivation of the soil in Mysore, witness contending that the natives have but little to learn from Europeans, *Elliot* 3113-3115. 3170-3174. 3180-3225. 3263-3269. 3318-3326. 3340, 3341——Excellent irrigation works executed formerly by the natives, *ib.* 3159, 3160. 3336-3339——Numerous irrigation tanks in Mysore, there being, however, a large proportion out of repair, *ib.* 3172. 3241-3243. 3412-3415.

Great gain to Mysore when it first came under British rule, *Elliot* 3177-3179——Doubt as to the railway extension to Bangalore having been any material improvement to Mysore, *ib.* 3280-3282.

Provisions of the Partition Treaty of 1799 relative to the payment of a sum of not less than 65,000 *l.* a year to the families of the Sultan Tippoo and Hyder Ali, *Sir J. W. Kaye* 6921——Formation of the Mysore Deposit Fund out of unappropriated balances of the foregoing charge, *ib.*——Claim made upon this fund by Prince Gholam Mahomed in 1859 or 1860 on behalf of the descendants of Tippoo; arrangement subsequently negotiated with Prince Gholam by witness on the part of Sir Charles Wood, *ib.*——Terms of this arrangement, the effect being that by the creation of a capital fund there will be a permanent endowment for the family, whilst the amount now paid out of Indian revenues will go on decreasing every year, *ib.* 6921-6923. 6926-6930.

Inability of witness (whose department is not one of account) to explain in detail those items in a certain account before the Committee which relate to the family of Tippoo

MYSORE—continued.

Tippoo Sultan, *Sir J. W. Kaye* 6924–6933——Some members of the family have declined the offers made to them, *ib.* 6926. 6930.

Further and fuller particulars relative to the provision made for the families of Hyder Ali and Tippoo Sultan, the stipend paid to Prince Gholam, and the saving being gradually effected as the pensioners die off, *Sir J. W. Kaye* 7275–7290——Capitalization pensions terminable at death, *ib.* 7275——To the best of witness's belief the family are perfectly satisfied with the provision made for them, *ib* 7282, 7283

Exception taken to the restoration of Mysore to native rule, *Right Hon. W. N. Massey* 8779.

Communication from Lieutenant Colonel Sankey, Secretary to the Government of Mysore and Coorg, in reply to certain statements by Mr. Elliot, reflecting on the operations of the Public Works Department in Mysore, *App.* 635–638.

N.

Nagpore. Origin of a charge of 10,684 *l.* in 1870–71 paid in the Central Provinces to Sustanic Gund Rajah, belief as to the permanent character of this charge, which resulted from our acquisition of Nagpore, *Sir J W. Kaye* 7314, 7315——Explanation relative to a pension of 9,000 *l* to Janoojee Bhonslah, as adopted son of the late Rajah of Nagpore, the adoption having been carried into effect by the elder widow of the Rajah, *ib.* 7316–7320——Several small pensions, of a terminable character, paid in consequence of the transfer of the revenues of Nagpore to the Government of India, *ib.* 7321–7324.

Native Evidence. Impracticability of obtaining native evidence before the present Committee; suggestions as to the mode of obtaining such evidence in India, it being essential to suppress the names of witnesses, *Elliot* 3117–3122. 3154, 3155. 3346–3351.

Native Languages (*Civil Servants*) Expediency of the European civil servants being competent to converse freely with the natives, they are quite unable to do so at present, *Elliot* 3456–3458.

Native Opinion. Comment upon the decreasing investments of natives in Government securities, *Elliot* 3460–3462. 3466–3471 3475——Suggestions for the collection of the opinion of the community upon questions of finance, *Dacosta* 8176–8194——Circumstance of the natives having no organisation for making their financial grievances or complaints known, *Right Hon. W. N. Massey* 8881.

See also *Income Tax.* *Public Opinion.* *Representative Institutions.* *Taxation.*

Native Princes. Charge of 1,756,973 *l.* in the accounts for 1870–71, being payments made chiefly to the extinct dynasties of India, *Sir J. W. Kaye* 6919——Liberal treatment of the conquered rulers and princes of India, the pensions and allowances on this score being necessarily very heavy, *ib.* 6920.

Advantage if an annual return were prepared in India showing the amount of political liability in respect of each family, the amount of stipend in each case, the lapses during the year, &c., *Sir J. W. Kaye* 7286. 7387——Confusion through the names of the stipendiaries being entered under the head of the particular treasuries which disburse the amount, *ib.* 7289, 7290. 7387.

Conclusion that on the whole there has been a large decrease during the last ten years in the charge for pensions to native princes and their dependents, *Sir J. W. Kaye* 7387.

See also *Carnatic.* *Delhi, King of.* *Duleep Singh.* *Mysore.* *Nagpore.* *Oude.* *Tanjore.*

Native States. Advantage if the native states could be dealt with collectively as regards customs, transit duties, police, &c., instead of being approached by a separate treaty in each case, *Right Hon. W. N. Massey* 8760–8774.

See also *Tribute* (*Native States*).

NATIVES (PUBLIC EMPLOYMENT):

Examination relative to a charge of 1,600 *l.*, discontinued since 1870–71, for enabling natives to come to England and compete for the civil service; power now possessed by the Government of India to appoint natives direct to the covenanted service, though such power has not yet been exercised, *Seccombe* 1363–1384.

Grounds for the conclusion that the natives are not fitted for the higher engineering appointments, though they are largely employed in subordinate posts; single instance of a native who has made a mark as an engineer at the present time, *Chesney* 2450–2477. 2569–2572——Impression that in Bombay and Madras sufficient encouragement has not been given to the employment of natives as engineers in the Public Works Department; due encouragement in Bengal, *ib.* 2462, 2463. 2473–2477. 2567, 2568——Evidence to the

NATIVES (PUBLIC EMPLOYMENT)—continued.

the effect that no great engineering works have been constructed by natives, *Chesney* 2467–2472. 2532–2541. 2553–2555.

Grounds for the conclusion that natives are not unfairly treated in view of the enhanced salaries given to Europeans as engineers, &c.; different terms and qualifications in each case, *Chesney* 2557 *et seq.*——Witness is, however, strongly of opinion that the natives do not receive their proper share of public employment, *ib.* 2564——Readiness evinced by the Government of India to employ natives in civil engineering work, and to promote them according to their merits, *ib.* 2618, 2619.

Economy, by employing natives more extensively as engineers, and in other capacities, *Elliot* 3446, 3447.

Particulars relative to the large number of natives with very small salaries, in comparison with the small number of Europeans with large salaries, employed in the collection of the land revenue, *Harrison* 3581–3586. 3637–3651——Limited amount or number of defalcations on the part of native collectors, *ib* 3591–3594——Restriction in force as to the office of collector being filled by a member of the civil service; practical obstacles to the admission of natives into the civil service, *ib.* 3641. 3652–3660. 3692–3694.

Statement of the number of natives holding judgeships; very few natives holding any of the higher and well-salaried judicial appointments, *Harrison* 4802 *et seq.*——Examination as to the policy of the exclusion of natives from thirty civil judgeships in Bengal, *ib.* 4830–4869——Admission of some half dozen natives to the civil service, which comprises about 1,000 Europeans, *ib.* 4835–4838——Circumstance of its having been several times under consideration to re-organise the judicial service, and extend the appointments of natives thereto, *ib.* 4870, 4871.

Statement showing that, save in the lower grades, very few natives are employed in the Public Works Department; obstacle to their qualifying for the higher grades, *Strachey* 6172–6176——Good grounds for the conclusion that the natives of India have not any special fitness for engineering works, *ib.* 6987–6989.

Statement that the natives have never had a fair chance, under British rule, of studying engineering, or of proving their capacity in this direction, *Hutton* 8572.

Return showing the salaries of natives employed in the land revenue administration, *App* 642–650.

See also *Cooper's Hill Engineering College.*

NAVY AND MARINE:

Total of 51,663 *l.* as the expenditure in 1870–71 for pensions and retiring allowances of the officers of the late Indian Navy, there being also an expenditure for 4,817 *l.* for commuted pensions, *Pears* 2–8. 32. 41, 42——Gradually decreasing character of the foregoing charge, *ib.* 9, 10. 32–35. 48, 49——Item of 2,200 *l.*, paid in 1870–71 as furlough allowances to officers of the Bombay marine and Bengal marine, *ib.* 11–14.

Payment of 63,255 *l.* in 1870–71, by way of contribution towards the expenses of six vessels of the Royal Navy employed in the Persian Gulf and elsewhere; maximum of 70,000 *l.* as the annual sum payable to the Imperial Government for this service, *Pears* 23, 24——Explanation relative to the foregoing arrangement, and the duty performed by the vessels in question; difficulty of comparing the cost with the cost when vessels of the Indian Navy were employed, *ib.* 23. 36–40. 43–46 54–65——Reduction made from the stipulated payment (70,000 *l.*), when any one of the six vessels is absent from the service, *ib.* 23. 43——Three of the vessels are always in the Persian Gulf, and are under the orders of the Resident at Bushire, *ib.* 23. 54–59.

Occurrence of some complaint as to the character of the Queen's vessels employed in the Persian Gulf, and their unfitness for the climate, *Pears* 187–193. 197–200——Absence of difficulty through the officers of the Royal Navy in the Persian Gulf not being conversant with the language and politics of the country, *ib.* 194–196.

Great variety of supplies included in an item of 77,000 *l.* for stores sent from England for the marine in India; these are all obtained by competition, *Hon. G. C. Talbot* 1124–1226.

Aggregate of 759,770 *l.* as the amount of marine charges in India in 1870–71, the amount in 1856–57 having been 709,700 *l.*, *Harrison* 5115——Great changes as regards the marine or navy since 1856, so that any comparison with the present time in the matter of cost is difficult, *ib.* 5116——Discontinuance of the Burmese flotilla since 1856; arrangements now in force, and cost incurred, *ib.* 5117–5119.

Details relative to the marine expenditure in Bengal of 181,400 *l.* in 1870–71, as against 290,400 *l.* in 1856–57, *Harrison* 5120–5179——Statement of the several vessels employed by Government on the Ganges, Hooghly, &c., *ib.* 5123–5125——Employment of only one transport vessel at Calcutta; duties discharged, and cost incurred, *ib.* 5160–5165——Reduction of marine charges at Madras from 20,900 *l.* in 1856–57, to 6,800 *l.* in 1870–71, *ib.* 5200–5203.

Details

NAVY AND MARINE—continued.

Details relative to the marine expenditure of 241,000 *l.* in Bombay, the charge in 1856–57 having been 275,600 *l.*; abolition in the meantime of the Indian navy, *Harrison* 5204 *et seq.*——Information relative to the several vessels still employed under the Government of Bombay, and the cost incurred, in addition to the vessels of the Royal Navy in the Persian Gulf and elsewhere, *ib.* 5212–5238. 5247 *et seq.*——Cost of a vessel at Kurrachee, which is at the disposal of the Commissioner of Scinde, *ib.* 5229–5233.

Opinion that the protection of the shores of India forms part of the naval policy of England, and should be entirely an Imperial charge, *Right Hon W. N. Massey* 8780–8783.

Military despatch to Bombay, dated 16th February 1871, stating the terms of service of officers in the turret ships for the defence of Bombay harbour, *App.* 542——Return relative to officers appointed for service in the turret ships, "Abyssinia" and "Magdala," showing the rates of pay and allowances, *ib.* 543.

See also *Bombay Harbour Defences.*

Nerbudda Railway Bridge. Efficiency of the present condition of the bridge over the Nerbudda, though it broke down in 1870, *Danvers* 3089, 3090.

Nizamut Fund. Explanatory statement relative to the Nizamut Fund in Bengal, the stipends and allowances of the Nizamut, and the large liability (to the extent of 550,000 *l.*), beyond the actual amount of the fund; distinct recognition of this liability in a certain despatch of Sir Charles Wood, *Sir J. W. Kaye* 7325–7333.

North Western Provinces. See *the Headings generally throughout the Index.*

O.

Official Documents, Sale of. Very little return derived from the sale of official documents printed; efforts made in this direction, *Harrison* 3776–3783.

Official Residencies. Varying cost for official residencies in the different Presidencies and Provinces, *Harrison* 4490–4494——Details relative to the excessive expenditure (150,000 *l.*) for a residence for the Governor of Bombay near Poonah, *Strachey* 7160–7171. 7238–7249——Limitation (to 20,000 *l.*) of the cost of a new Government House in the North Western Provinces at Allahabad, *ib.* 7169.

Oomraottee Branch Railway. See *Khamgaon and Oomraottee, &c.*

OPIUM:

Bankrupt state of the finances if it were not for the opium revenue, a most uncertain source of income, *Elliot* 3352–3355. 3472–3474.

Total of 2,014,000 *l.* as the cost of collection of the opium revenue, nearly the entire charge being in Bengal, *Harrison* 3905, 3906. 3925—— Comparative charges, under different heads, in 1856–57 and in 1870–71, in respect of opium, in the Behar Division and in the Benares Division; explanation of the causes of increase, *ib.* 3907–3924. 3936.

Expenditure of 2,486 *l.* in Bombay in 1870–71, in respect of the collection of opium duty, smallness of this charge adverted to and explained, *Harrison* 3926–3933——Facility of realising the opium revenue in Bengal by public sale of the opium at Calcutta, *ib.* 3934——Statement relative to the duty on opium consumed in Bombay, more especially as regards the question of an excise duty being levied in addition to the customs duty, *ib.* 3937–3944. 3947–3954——Indirect way in which the excise duty is collected on opium purchased for consumption in Bombay, *Gay* 3945, 3946——Belief that there is no consumption in Madras, *Harrison* 3955–3957.

Means of obviating the fluctuations in the opium revenue, *Strachey* 6889, 6890——Portion only of the increased income from opium which can be regarded as taxation, *ib.* 7420, 7421.

Evidence in detail on the subject of the opium revenue, witness showing that over a series of years the revenue has been an increasing one, and submitting that the demand for Indian opium in China is not likely to be affected by increased growth in China or Persia, *Laing* 7481. 7501–7504. 7536–7539. 7589, 7590. 7593–7598. 7621–7632——Increase of net revenue from 5,000,000 *l.* to 7,000,000 *l.* in the last ten years, *ib.* 7481——Relative merits of the Bombay system and the Bengal system of opium revenue; impression that each is best under its own peculiar circumstances, *ib.* 7511–7513——Belief that the natives of India see no objection to the opium monopoly on moral grounds, *ib.* 7560.

Reference made by Sir Richard Temple to the uncertainty of the opium revenue; steady increase however in the revenue from opium for the last fifteen or twenty years, *Strachey* 7853, 7854——Opinion that by proper arrangements the opium revenue may be

OPIUM—continued.
be maintained at 8,000,000 *l.* or 9,000,000 *l.*, *Strachey* 7854——Doubt as to the opium revenue being likely to fall off to any material extent, *Dacosta* 8203, 8204.

Opinion that though the opium revenue is doubtless a precarious revenue, the experience of the past would go to prove that its failure need not be apprehended, *Right Hon. W. N. Massey* 8628–8631——Expediency of estimating the opium revenue upon an average of years, the revenue from year to year fluctuating greatly; belief there need be no apprehension of loss of revenue from this source, *ib.* 8876. 8892, 8893.

Large surplus beyond the estimate of receipts from opium in 1871–72, as well as in 1870–71: particulars hereon, *App.* 490, 491——Large surplus revenue in 1870–71, owing chiefly to the enlarged opium receipts, *ib.* 490–504.

Explanations by Sir R. Temple in connection with the estimate of 7,700,000 *l.* as the opium revenue for 1872–73, *App.* 495——Increased grant of 711,700 *l.* for the opium department: several grounds for this increase, *ib.* 496.

Ordnance, and Ordnance Stores. Total of 929,000 *l.* as the expenditure in England in 1870–71 on ordnance supplies, army clothing, &c., *Hon. G. C. Talbot* 1136——Supply of ordnance mainly from Woolwich, the price being left to the authorities there, *ib.* 1171–1175.

Priced vocabulary of the War Office according to which the charges for ordnance are regulated, *Bedford* 1175, 1176——Sub-division of the item of 929,000 *l.* for ordnance stores, clothing, malt liquor, &c., *ib.* 1179–1182——Item of 364,004 *l.* for ordnance stores, including small sums, *ib.* 1179.

Examination on the circumstance of the department not investigating the accounts or prices in the case of ordnance supplied by the English Government; instructions under which the department act in purchasing from Government, *Bedford* 1222–1251——Statement as to the trade not having been applied to in order to check the price paid to Government: supplies have however been obtained from private manufacturers, *ib.* 1237–1244.

Per-centage or agency charge in addition to the published prices paid to Government for ordnance or clothing, *Bedford* 1252–1257. 1281——Limited extent to which it can be said that England is supplied before India with newly invented or improved arms, *ib.* 1285–1289.

Orissa. Facilities available but not utilised for relieving the Orissa famine, *Elliot* 3274, 3275. 3438, 3439.

Decided dissent from a statement by Mr. Geddes that the famine in Orissa was chiefly owing to the weight of Government taxation in that province, *Strachey* 7048–7050.

Belief that in Orissa irrigation works are wanted every year, although there may be a large rainfall, *Sir A. T. Cotton* 8385–8388.

Orissa and Behar Irrigation Works. Promotion of the Orissa and Behar Irrigation Company as a consequence of the Madras Company, but without a guarantee: purchase of the former concern by Government at a price very largely in excess of its market value, *Thornton* 2696–2703. 2734–2737——Impression that the works would have turned out profitably if the Company could have completed them, *ib.* 2700.

Explanation as regards the Orissa works, that these were devised by the East India Irrigation and Canal Company, and that the estimates were discredited by Government, *Strachey* 6731——Pressure in connection with the question of famine, which decided Government to take over the Orissa works, and to pay for them far more than their market value, *ib.* 6731, 6732——Outlay still required, in order to bring the works into a proper state, it being estimated, however, that the returns will eventually prove remunerative, *ib.* 6752–6760.

Complicated arrangements entered into between Government and the Orissa Company previously to the transfer of the works, *Strachey* 6768–6770——Approval of the cost of the Orissa irrigation works falling upon the province; good prospect of their being eventually profitable, *ib.* 7051.

Entire inaccuracy of the estimated returns from the Orissa canals; instead of 400,000 *l.* the amount is more likely to be 40,000 *l.*, *Dacosta* 8067——Misapprehension of witness upon the question of a guarantee having been given in the first instance to the Orissa scheme, *ib.* 8238–8245.

Oude. Recent abolition of the office of Financial Commissioner in Oude; charge for Revenue Commissioners in this province, *Harrison* 4503. 4515–4521——Great discrepancy between the cost of collection of the revenue and the amount of the revenue in Oude, as compared with the Central Provinces or the North Western Provinces, *ib.* 4641, 4642.

Charge of 6,700 *l.* in 1870–71 in respect of the court of the civil judge at Lucknow: creation of this court since 1856–57, *Harrison* 4790–4792——Causes of the large increase of cost for criminal courts, *ib.* 4905, 4906.

Oude—continued.

Increase from 28,000 *l.* in 1856–57 to 89,000 *l.* in 1870–71 in the expenditure for police; population and area in reference to the police, *Harrison* 5304–5314.

Information relative to the payments made to the Oude Royal family and dependents generally; terminable character of many of these, *Sir J. W. Kaye* 7297–7302——Pension of 120,000 *l.* a year to the ex-king of Oude, to be reconsidered on his death, *ib.*

See also *the Headings generally throughout the Index.*

Oude and Rohilcund Railway. Failure of an attempt to raise the capital for this railway by a subsidy from Government, in lieu of a guarantee of interest, *Thornton* 1879, 1880——Necessity of the guarantee to the Oude and Rohilcund Railway; probable approval by the Government of India in this case, *Strachey* 6778. 6783, 6784——Large portion of the line on which income has not yet begun, *ib.* 7842.

Out-of-employ Allowances. Explanation on the subject of out-of-employ allowances to civil officers on return from furlough, *Harrison* 3600–3602. 3610–3612. 3662–3671.

P.

Pagoda. Explanation of a home payment of 1,388 *l.* in 1870–71 under the head of Pagoda and Mosque allowances, *Sir J. W. Kaye* 7310, 7311——Permanent character of the charge in Madras for pagoda and mosque allowances, *ib.* 7353.

Panthay Mission. Grounds for the complaint by the natives against the expense of the Panthay Mission being debited to India, *Hutton* 8572.

Paper. Absence of complaint from India against the paper sent out from England as not being worth the price; there are, however, frequent complaints about the quality, *Bedford* 1039——Failure of attempts to make really good paper in India, so that Government supplies are procured from England, *Harrison* 5705–5710.

Paper Currency. Effect of the circulation of bank notes on the coinage circulation, *Harrison* 4010——Disapproval of any forced extension of the paper currency, *Laing* 7591.

Statement by Sir R. Temple relative to the paper currency, and the large profits therefrom, *App* 496. 503.

Account of the profits of the currency note circulation, and of the charges and expenses incidental thereto, during the year 1870–71. *App.* 640.

Patent Fuel (*Railways*). Successful trial of patent fuel on the railways in lieu of coal or wood; attention paid to this source of supply, *Danvers* 1995–2010.

Pears, Major General Sir Thomas Townsend, K.C.B. (Analysis of his Evidence.)—Is Secretary in the Military Department of the India Office, 1——Total of 51,663 *l.* as the expenditure in 1870–71 for pensions and retiring allowances of the officers of the late Indian Navy, there being also an expenditure of 4,817 *l.* for commuted pensions, 2–8. 32. 41, 42——Gradually decreasing character of the foregoing charge, 9, 10. 32–35. 48, 49——Item of 2,200 *l.* paid in 1870–71 as furlough allowances to officers of the Bombay Marine and Bengal Marine, 11–14——Payment of 84,954 *l.* on account of two iron-clad monitors for Bombay; total cost of these vessels, 15–22.

Payment of 63,255 *l.* in 1870–71 by way of contribution towards the expenses of six vessels of the Royal Navy employed in the Persian Gulf and elsewhere; maximum of 70,000 *l.* as the annual sum payable to the Imperial Government for this service, 23, 24.

Explanation relative to the foregoing arrangement, and the duty performed by the vessels in question; difficulty of comparing the cost with the cost when vessels of the Indian Navy were employed, 23. 36–40. 43–46. 54–65——Total of 77,000 *l.* as the expenditure for stores from England for various marine purposes in India; checks upon the quality of these stores, 25–30. 47.

Information relative to the circumstances under which the Royal Indian Lunatic Asylum at Ealing was established, when public lunatic patients from India could no longer be received in a private asylum at Hackney, 67——Careful inquiry made and steps taken with a view to the reception of the patients in some other asylum, but without effect, 67. 76–82. 93. 100–103——Total of 123 patients now at Ealing; different classes of patients, all being chronic cases, and there having been no cures, 68. 74. 83–95. 111, 112——Inspection of the asylum by the Lunacy Commissioners, 106–108.

Occurrence of some complaints as to the character of the Queen's vessels employed in the Persian Gulf, and their unfitness for the climate, 187–193. 197–200——Absence of difficulty through the officers of the Royal Navy in the Persian Gulf not being conversant with the language and politics of the country, 194–196.

Payment of 475,320 *l.* for home charges connected with the British forces in India, the chief portion being for recruits, 235——Explanation of the data upon which the charge

Pears, Major Gen. Sir Thomas Townsend, K.C.B. (Analysis of his Evidence)—*continued.* charge for each infantry recruit up to the time of his embarkation for India has been fixed at 63 *l.* 8*s.* 5*d*, and of each cavalry recruit at 136 *l.* 13*s.* 11 *d.*; great excess of this charge as compared with the cost when the East India Company provided recruits, 235–238, 252–274. 292–299. 303–310. 321–334. 337, 338. 350–353——Arrangement that for every battalion in India there shall be two companies in England as depôts; payment out of Indian revenues of a large portion of the cost of the home companies, though reckoned among the effectives of the British army, 235. 255. 311–320.

Fixed charge of 27 *l.* 7*s.* 11 *d.* for each man who goes to India with his regiment, as a finished soldier; credit given to the Indian Government for the men returned, 239, 240——Average of about 3,000 men as the annual excess sent out beyond the number returned, 241. 376, 377——Charge of 30,000 *l.* for invalids and time-expired men awaiting discharge, 242——Item of 55,000 *l.* in respect of the pay of the honorary colonels in England of British regiments in India; consideration of objections to this charge upon the revenues of India, 243–247. 275–283.

Frequent discussion between the India Office on the one hand and the War Office and Treasury on the other upon questions of expenditure; disadvantage of the India Office in contending with these departments, 269. 282, 283. 292, 293 325–336——Liability of the rate for recruits to annual revision, 284, 285——Intended increase of the period of regimental service in India, 289, 290——Payment by the Imperial Government for the withdrawal of regiments in India for Imperial purposes, 291——Tendency of the Enlistment Act to increase the expense to India, 302——Remonstrance made to the War Office some six months ago against the charges for recruits, but without any reply having been received, 335, 336.

Item of 133,000 *l.* as the charge in 1870–71 for the furlough pay of officers and of colonels commandant of artillery of the Queen's army, 339, 340. 388. 409——Statement as to the officers and men of the depôts in England being available for service in India, 341, 342——Difficulty of making any valuable comparison between the cost for furlough and pensions under the East India Company and under the present system of administration, 343–349.

Statement on the question as to the propriety of India paying the full charge for the recruits in England, whilst these are available for any purposes for which England may require them, 364–375. 378, 379——Charge of 469,000 *l.* for furlough allowances of officers of the Indian service whilst on leave in England; steps taken to curtail this charge, which may be considered a diminishing one, 380–387——Average of from 600 to 700 officers of the native army on leave in England out of about 3,200 on service in India; witness will obtain details on this point, showing also the proportion of officers of the Queen's army on leave, 389–391. 395–402. 406.

Less pay drawn by officers of the British army when on leave, 391–394. 403. 405——Small charge for furlough allowances of officers on leave in other parts of the world than England or Europe, 404. 410–412——Discontinuance of a former charge for clothing of the depôts of British regiments serving in India, 407, 408——Explanation relative to a charge of nearly 50,000 *l.* for passage of officers and troops, the troop ships not having been adequate to the whole business of transport; there is no such charge in 1871–72; 414–419——Probability of some increase of charge in respect of changes of officers from one battalion to another, 420.

Expectation that more men may be induced to re-engage in India, as a set-off against the increased expense of the shorter term of enlistment in the British army, 421–424. 428–430——Arrangement that out of fifty regiments of infantry four are to be brought home every year, 427——Payment of the passage each way by India, 431——Charge of 9,342 *l.* for professional instruction at Netley of medical officers appointed to the Indian service by competitive examination, 432, 433——Explanation as to the small charge (895 *l.*) for education of officers of the artillery and engineers at Chatham and Sandhurst, 436.

[Second Examination.]—Special rates fixed as payment to the War Office for the engineers required in India, there being a special education for the service, 436–438——Belief that an item of 264,926 *l.* for "Indian troop service" is exclusive of certain expenditure in India, 439. 468——Explanation of an expenditure of 951 *l.* for stores for experiments with a new muzzle-loading gun for India, 445——With respect to an expenditure of 929,000 *l.* for stores for India, these consist chiefly of ordnance stores, 447——Supply of some military stores from Government manufactories in India, but not from any other source, 448, 449——Careful check at Calcutta upon the indents from the minor Presidencies for stores, 450.

Reference to a report by Sir George Jameson (*App.* 519–522) as showing the financial result of the working of the troop-ship service for the nine years from 1861–62 to 1869–70; 451, 452. 466. 646——Respects in which advantage accrues from the shorter time in sending troops to India by the Suez Canal than by the Cape, 460–462——Arrangement whereby the five troop ships have all worked from England, since the opening of the

Pears, Major Gen. Sir Thomas Townsend, K.C.B. (Analysis of his Evidence)—*continued.*
the Canal, 463, 464——Expected necessity of continuing the employment of five ships, 465——Greater expense in bringing men home than in sending them out, 467.

Expectation that under the new arrangement as to the Indian troop ships the Imperial Government will occasionally employ the vessels as transports, and will pay India for the services rendered, 537–539. 662——Management of the troop ships, not by the Admiralty, but by an Admiralty officer placed at the disposal of the Secretary of State for India, 586. 597, 598——Probable repair of the vessels in the Royal dockyard, 599–601——Payment by India of the pay of the officers and men of the navy in charge of the vessels, 602–606——Objection to the service being entirely under the Admiralty, and being paid for by India, without the latter having the entire disposal of the ships, 607–609.

Property of India in all five ships, though two of them have not hitherto been entirely under the control of India; re-arrangement in contemplation, 615——Great saving of time in sending troops by the Suez route, the expense, however, being about the same as by the Cape, 650–654——Obstacle to utilising the vessels on the other side of Suez throughout the year, 661, 662——Belief that the vessels could carry light guns, 663, 664——Advantages of the system of Government transport *viâ* the Canal, as compared with the system of hired transports, 690, 691——Information relative to the comparative expense for each officer and each man in the Government troop ships and in hired transports, 695–703.

Further reference to the circumstances under which the expenditure in respect of the lunatic asylum at Ealing was incurred; letter from the Lunacy Commissioners stating that the required accommodation could not be found in existing asylums, 704–706.

Explanation of an item of 23,000 *l.* as the charge to India in 1870–71 for the cost of absorption of supernumerary ensigncies in British regiments; ultimate saving by the reduction of officers, 711, 712. 745–749——Payment made in gratuities to officers of the late Indian regiments on their retiring from the service and entering the British service, 713–715. 731.

Particulars relative to a charge of 754,000 *l.* for retired pay of officers of the Indian service, including colonels' allowances, diminishing character of the charge for retiring pay, whilst the latter charge will largely increase, 750–756. 763–772. 775–779——Obligation as to the continuance by Government of the pensions paid out of Lord Clive's fund; this charge will gradually die out, 757–762——Doubt as to future increase of the charge for payment of pensions to the British army, 773, 774.

Total of about 1,600,000 *l.* as the non-effective charges in respect of officers, 780–784——Gradual reduction being effected in the officers of the Indian army, 785——Doubt as to the army charges generally increasing on account of the increase of prices, 786–788——Very rare application from retired officers of the Indian service to commute their pensions; invariable refusal, 789–791.

Peninsular and Oriental Steam Navigation Company. See *Post Office.*

PENSIONS:

1. *Evidence explanatory of various Classes and Amounts of Civil Service Pensions in* 1870–71.
2. *Rules and Regulations relative to the Grant of Pensions in different Departments.*
3. *Statistics in Detail for the Year* 1870–71.
4. *Increased Amount estimated for* 1872–73.

1. *Evidence explanatory of various Classes and Amounts of Civil Service Pensions in* 1870–71.

Information relative to several classes of civil and miscellaneous pensions and retired allowances paid in England, which make up a total of 215,264 *l.* in 1870–71; data for the conclusion that the greater portion of this expenditure will not recur, the charge being on the whole a decreasing one, *Seccombe* 116 *et seq.*——Expected decrease in the Home Service pensions, the scale of salaries having been reduced, *ib.* 125–135.

Item of 27,770 *l.* in the charge for pensions to the uncovenanted service of India, this being an increasing charge, *Seccombe* 139——Explanation as to the foregoing pensions being made payable in England though granted in India, *ib.* 139. 152–160——Distinct rules by which pensions are regulated as regards the Home Service, *ib.* 145–148.

Instance of double pension received by the same person; details promised to be furnished on this point, *Seccombe* 1458, 1459——Different practice in India and in England in regard to the cessation of pensions when the holders are employed again in the service, *ib.* 1460–1470——Temporary character of many of the pensions included in an item of 215,364 *l.*; particulars promised to be supplied relative to this charge, *ib.* 1446–1451. 1471–1473.

PENSIONS—continued.

1. *Evidence explanatory of various Classes and Amounts, &c.*—continued.

Necessary contribution by the civil servants of a per-centage of their salaries towards their pensions, *Harrison* 4777–4779. 5160——Total of 655,969 *l.* as the charge in India for superannuation, retired, and compassionate allowances, the charge in 1856–57 having been 424,900 *l.*, *ib.* 5940, 5941. 5960.

Very large increase since 1856 owing to the extension of pensions to the lower grades of servants, and to the increased salaries upon which the pensions are based; increasing character of this charge at the present time as well as for several years past, *Harrison* 5941–5969——Instances of deduction from pay towards the cost of pensions, *ib.* 5959–5962——Decision by the Secretary of State of questions of extension of pensions, the applications originating in India with the persons interested, *ib.* 5963–5969.

2. *Rules and Regulations relative to the Grant of Pensions in different Departments:*

Memorandum by Mr. Seccombe relative to the grant of pensions out of the Indian Civil Service Funds, *App.* 710, 711.

Extracts from Acts of Parliament under which pensions are granted by the Secretary of State for India in Council out of the revenues of India, *App.* 712–715.

Pension rules applicable to Judges of the High Courts, &c., *App.* 715, 716——Rules for the grant of superannuation allowances and pensions to uncovenanted servants, *ib.* 717–719——Rules declared in 1835, on the subject of pensions to members of the pilot service in Bengal, *ib.* 720.

3. *Statistics in Detail for the Year* 1870–71 *:*

List of pensions, payable in 1870–71, granted under regulations to members of the Home Service of the Indian Government, including officers of the Board of Control, *App.* 670, 671.

Return of pensions, in course of payment in 1870–71, granted on the abolition of the Commercial Charter of the East India Company in 1834, *App.* 672, 673.

Details relative to the sundry classes of pensioners, showing the name and office of each pensioner, and the amount of the pension in each case, *App.* 674 *et seq.*

Nominal return of pensions, payable in 1870–71, granted to the families of officers who lost their lives in the mutiny, or who were killed in action with the enemy, or who died of wounds so received, *App.* 683–690.

List of pensions granted for miscellaneous services, or in consideration of special circumstances, *App.* 690–697.

List of officers (civil and military) drawing from Indian revenues, pensions, annuities, or colonels' allowances, as well as salaries of appointments in this country in the year 1870–71, *App.* 698, 699.

List of persons drawing in England more than one annuity or pension from Indian revenues in the year 1870–71, *App.* 699, 700.

Total amount of each class of pensions and retiring allowances paid in 1870–71, *App.* 737——Abstract of compassionate and miscellaneous pensions, *ib.*

Details of pensions, payable in 1870–71, for distinguished services; total of 9,300 *l.*, *App.* 738——Details of pensions for judicial services; total of 19,800 *l.*, *ib.*

4. *Increased Amount estimated for* 1872–73 :

Explanation by Sir R. Temple that the estimated increase of 119,200 *l.* under superannuation allowances, in 1872–73, springs from the increased retirement of covenanted civil servants after the new orders concerning the annuity funds, *App.* 497.

See also *Army*, 2. *Carnatic* (*Native Princes*). *Delhi, King of.* *Duleep Singh.* *Elahee Bux.* *Gratuities.* *Military and Medical Funds.* *Mysore.* *Nagpore.* *Native Princes.* *Nizamut Fund.* *Oude.* *Perry, Sir Erskine.* *Political Pensions.* *Poplar Fund.* *Tanjore.*

Permanent Settlement. See *Land Revenue.*

Perry, Sir Erskine. Circumstance of Sir Erskine Perry continuing to receive his pension for service in India in addition to his salary as member of the Council at the India Office, *Seccombe* 1452. 1456, 1457. 1469, 1470.

Persia. Old arrangement, since 1835, under which a payment of 12,000 *l.* a year is made by India in respect of the Persian mission, *Seccombe* 914–917——Objection to the charge made upon India in respect of the Persian mission, *Right Hon. W. N. Massey* 8784, 8785.

Pilot

Pilot Service. Particulars relative to the pilotage establishment at Calcutta, its constitution, cost, &c.; charge of 65,400 *l.* in 1870–71, whilst the pilotage receipts were 82,100 *l.*, *Harrison* 5137, 5138. 5146–5157. 5166–5177. 5179——The pilots are nearly all Europeans; there might be some saving by employing natives, *ib.* 5173, 5174. 5179——Great difficulty of the navigation of the Hooghly, *Gay* 5179.

Ploughs. Unfitness of the improved English ploughs for use in India, as compared with the native ploughs, *Ashburner* 2130. 2153–2155. 2200, 2201.

POLICE:

1. *Cost, generally, in 1856–57, and in 1870–71.*
2. *Question of Administration and Efficiency.*
3. *Thuggee and Dacoity Police.*
4. *Railway Police.*
5. *Bengal.*
6. *Bombay.*
7. *Burmah.*
8. *Central Provinces.*
9. *Madras.*
10. *North Western Provinces.*
11. *Oude.*
12. *Punjaub.*

1. *Cost, generally, in 1856–57, and in 1870–71:*

Increase from 1,098,000 *l.* in 1856–57 to 2,275,000 *l.* in 1870–71 in the expenditure for the police of India, *Harrison* 5066, 5067——Statement of the gross and net expenditure for town police of the different presidency towns, *ib.* 5072–5085——New charge since 1856–57 for the provincial superintending officers of police in India, *ib.* 5086–5090.

Charge of 1,900,000 *l.* in 1870–71 as against 1,044,000 *l.* in 1856–57 for the executive police force of India, *Harrison* 5095–5097——Explanation as regards the foregoing increase that it has been attended with a somewhat corresponding decrease of military expenditure by reduction of the native army, *ib.* 5098–5114——Explanation that the foregoing statistics do not comprise the charges for the town police, *ib.* 5370–5374.

Statement of the general charge for officers and for rank and file, respectively, in the different provinces, *Harrison* 5406–5411——Improbability of any further increase of police expenditure or of further transfer of duties performed by military forces, *ib.* 5422–5425——Doubt as to there being much room for economy by reduction of the number of officers; revision already in this direction, *ib.* 5426–5428——Exclusion of the charge for buildings and for pensions from the accounts of expenditure; witness will prepare a statement showing the gross cost, directly or indirectly, together with the deductions, *ib.* 5430–5434.

Statement showing the total cost to Government of police in each province, with the deductions and recoveries, and the net charge; aggregate net expenditure of 2,071,176 *l.*, *App.* 736.

2. *Question of Administration and Efficiency:*

Information as to the separate police administration in the different provinces, there being a superintendent of police for each revenue collectorate, *Harrison* 5392–5404——Partially military organisation of the police throughout India; mode of arming the force adverted to, *ib.* 5412–5418. 5435–5437.

Exaction and corruption on the part of the police, through the want of a proper controlling power, *Dacosta* 8090. 8097–8100. 8111, 8112. 8259–8264——Comment upon the increased expenditure for police, whilst the efficiency of the force has been lessened; grounds for the conclusion that the police are, generally, corrupt, oppressive, and extortionate, *ib.* 8096–8100. 8111, 8112. 8140–8143. 8259–8264.

Approval of the police being exclusively a branch of local administration, *Right Hon. W. N. Massey* 8678. 8735–8739——Difficulty in the way of a general system of police applicable to all India, including the Native States, *ib.* 8768–8770.

3. *Thuggee and Dacoity Police:*

Separate charge for Thuggee and Dacoity Police in different districts, this being chiefly a detective force, *Harrison* 5375–5379. 5385–5389.

4. *Railway Police:*

Explanation relative to the railway police and the charge under this head; re-imbursement of three-fourths of this charge by the railway companies, *Harrison* 5375–5384. 5440.

POLICE—continued.

5. *Bengal:*

Charge of 415,200 *l.* in 1870-71, against 115,700 *l.* in 1856-57, for the district executive police in Bengal; re-organisation of the force during this period, the pay having been increased, and the duties having been increased, *Harrison* 5332-5347——The total force in Bengal is 22,640, *ib.* 5346.

6. *Bombay:*

Statement relative to the very small charge for superintendence in Bombay, the duty being performed by the Revenue Commissioners, *Harrison* 5090——Charge of 355,168 *l.* for the district police in Bombay in 1870-71, as compared with 216,700 *l.* in 1856-57; re-organisation of the force in 1861, *ib.* 5362-5374.

7. *Burmah:*

Particulars relative to the revision of the police in Burmah, where the cost in 1870-71 was 109,800 *l.* against 56,870 in 1856-57, *Harrison* 5326-5331.

8. *Central Provinces:*

Causes of the increase from 35,900 *l.* to 109,000 *l.* in the cost of the police in the Central Provinces; abolition at the same time of several military or semi-military bodies, *Harrison* 5315-5325.

9. *Madras:*

Office of Commissioner of Police at Madras but not at Bombay or Calcutta, *Harrison* 5068-5071——System at Madras of showing the charge for the town police in gross, recovery being made from the municipality of about three-fourths of the cost, *Gay* 5071.

Particulars relative to the re-organisation of the Madras police, its increased cost, and the large or larger corresponding saving by reduction of the native army, *Harrison* 5100-5113——Very large saving of military expenditure in Madras by the reduction of twelve native regiments, through the increase of the police force; important saving also on other grounds, *ib.*

10. *North Western Provinces:*

Important charges made in the organisation of the police force in the North Western Provinces, the cost having increased from 126,000 *l.* in 1856-57 to 275,000 *l.* in 1870-71, *Harrison* 5348-5353——In 1870 the force was reduced from 23,212 men to 19,600, *ib.* 5351——Separate charge of 14,796 *l.* for military police, *ib.* 5375.

11. *Oude:*

Increase from 28,000 *l.* in 1856-57 to 89,000 *l.* in 1870-71 in expenditure for police in Oude; statement as to the population and area in reference to the police force, *Harrison* 5304-5314.

12. *Punjaub:*

Total of 257,000 *l.* as the cost of the district and military police in the Punjaub in 1856-57, the cost in 1870-71 being 241,900 *l.*; revision of the force in 1861, *Harrison* 5354-5361.

Political Agencies. Total of 291,459 *l.* as the charge for political agencies in 1870-71, the charge in 1856-57 having been 178,852 *l.*; *Harrison* 5784——Explanations in detail relative to the various items comprised under the foregoing head of expenditure, together with the causes of increase in the latter year, *ib.* 5785 *et seq.*

Examination with reference especially to an increase in Bombay from 7,708 *l.* in 1856-57 to 45,489 *l.* in 1870-71; statement as to the account furnished by the audit department at Bombay to the Government of India not explaining this expenditure, whilst no question has been raised by the audit officer relative to the increase in question, *Harrison* 5805-5828. 5845-5852——Expenditure of 61,000 *l.* in England for political agencies, in addition to the sum of 291,459 *l.* spent in India, *ib.* 5829-5835.

Power respectively, of the Secretary of State, and of the Governors and Governor General in India relative to expenditure under the head of political agencies; question of want of proper control in the matter, *Harrison* 5836-5844. 5853-5856——Necessary authority of the Secretary of State before any increase of the pay of a political agent, *ib.* 5855, 5856.

Increase of 44,000 *l.* in the estimated charge in 1872-73 for political agencies, *App.* 497.

Political Pensions. Evidence in detail explanatory of various items comprised in a total charge of 1,756,973 *l.* in the accounts for 1870-71, for payments to native princes and their families and dependents, *Sir J. W. Kaye* 6919-6933. 7275 *et seq.*

Explanations in detail relative to various territorial and political pensions in Madras; terminable character of many of these, *Sir J. W. Kaye* 6921 *et seq.*; 7275 *et seq.*——Information also relative to these pensions in the North Western Provinces, the Central Provinces, and Bengal, *ib.* 7307-7339——Statement as to the want of improved and fuller accounts, annually, from India in respect of territorial and political pensions, *ib.* 7286. 7387.

Terminable character of numerous small political pensions, under 5,000 rupees per annum paid in different parts of India, *Sir J. W. Kaye* 7312, 7313. 7321-7324——Terminable character of most of the pensions or payments in Bengal, which make up a total of 40,171 *l.* *ib.* 7334, 7335——Terminable character also of a large portion of the territorial and political pensions, &c. in the North Western Provinces; also in the Punjaub, *ib.* 7340-7349.

With respect to various other items of charge in Madras and Bombay, on account of pensions to native families, charitable allowances, &c., witness submits explanations in detail, *Sir J. W. Kaye* 7352-7379.

Poonah Lunatic Asylum. Statement by Sir Seymour Fitzgerald that this asylum is a scandal to a civilised nation, *Hutton* 8569.

Poplar Fund. Explanation relative to the item of Poplar Fund Pensions; reversion of the capital of the fund to Government, *Seccombe* 165. 201-214.

Nominal list, with rates of pension, of pensioners on the Poplar Fund in the year 1870-71, *App.* 703, 704.

Port Blair. New charge of 109,900 *l.* in 1870-71, for the convict settlement at Port Blair; this is exclusive of the military expenditure at the settlement, *Harrison* 5032-5035. 5045. 5047——Return of 35,700 *l.* from convict labour at Port Blair in 1870-71, *ib.* 5041——Total of 6,965 male and 638 female convicts at Port Blair on 31st December 1870, *ib.* 5046, 5047.

Port Improvements, Docks, &c. Difficulty of the question whether port improvements or docks should be a local or an Imperial charge, *Massey* 8702-8705.

POST OFFICE:

Item of 132,000 *l.* in the Accounts for 1870-71, as India's share of the loss to be borne under the postal arrangement with the Treasury; the actual loss will however be reduced to about 70,000 *l.*, *Seccombe* 792-795. 801, 802——Explanation of the principle upon which the contribution of India to the loss under the postal arrangement was settled; circumstance of India not having been consulted upon the contract with the Peninsular and Oriental Company under which this loss accrued, *ib.* 794, 795. 806-823.

Statement as to the India Office being very much in the hands of the Post Office, in the matter of accounts under the postal arrangement, *Seccombe* 801, 802. 816——Improved terms of the existing contract with the Peninsular and Oriental Company made in 1870, *ib.* 821, 822.

Item of 4,315 *l.* in 1870-71 for pillar boxes, postage stamps, &c., for the Post Office in India, *Bedford* 952, 953.

Explanation relative to the system of double charge in respect of services rendered by the Post Office for the land revenue and other departments, *Harrison* 3542. 3556, 3557. 3563-3568——Total of 613,000 *l.* as the expenses of the Post Office in India in 1870-71 as compared with 312,796 *l.* in 1856-57, *ib.* 4090. 4122——Cost of 14,600 *l.* for the Central Post Office at Calcutta; explanation as to the very little charge under this head in 1856-57, *ib.* 4090-4096——Large reduction made in the postage rates in India in 1854, *ib.* 4095. 4131. 4143.

Important increase since 1856-57 in the cost of post-offices throughout the country, the number having increased from 779 to 2,743, *Harrison* 4097-4102——Largely increased cost of the conveyance of mails, owing to the great extension of postal facilities, *ib.* 4103-4105——Information relative to the use made of the railways for the conveyance of mails; saving of expenditure thereby, *ib.* 4106-4109. 4155. 4159——Charge of 14,500 *l.* in respect of discount on sale of stamps, *ib.* 4116-4119——Aggregate expenditure of 754,940 *l.*, including the payments in England, *ib.* 4123, 4124.

POST OFFICE—continued.

Threefold increase of postal revenue since 1856-57, the expenditure having about doubled, *Harrison* 4125-4130. 4136-4142——Several changes made in the postage charge between England and India; charge now in force, *ib.* 4132-4135. 4160, 4161——Conclusion as to the successful administration of the Post Office, *ib.* 4136-4142——Explanation of the high postage on letters sent by the mail steamers between Calcutta and Madras, *ib.* 4149-4154——Very little use of the rivers for postal communication, *ib.* 4156-4158——Increase generally in the salaries of the native officials under the Post Office, *ib.* 4162-4166.

Explanation of the large increase of charge in 1870-71 in respect of the District Post Establishment, *Harrison* 5899-5903.

Explanation by Sir R. Temple in connection with a decrease of 17,700 *l.* in the estimated receipts from the Post Office in 1872-73; *App.* 496.

See also *British Indian Steam Navigation Company. Euphrates and Tigris Steam Navigation Company.*

Presidency Banks. See *Banks of Bengal, Bombay, and Madras.*

Prices. Doubt as to the army charges generally increasing on account of the increase of prices, *Pears* 786-788——Rise of prices and increase in the cost of living adverted to as a main cause of the increased expenditure in Bombay in the collection of the revenue, *Harrison* 3805. 3813-3819——Importance of the question of prices as affecting the cost of administration in India, there having been for some years a general tendency to a rise of prices, *ib.* 4974. 4976-4983. 5954-5958.

Limited extent to which increased public expenditure is necessarily due to increase of prices, consequent upon depreciation in the value of money, *Strachey* 7268-7271——Higher prices in Bombay than in Madras, *Right Hon. W. N. Massey* 8632, 8633——Tendency to lower prices through the increase of intercommunication, *ib.* 8634.

Printing. Details relative to the largely increased use of the printing press by Government for printing documents of various kinds; examination as to the extent and as to the policy of the great additional expense thereby, *Harrison* 5696-5703. 5711 *et seq.*——Instance of a saving of 6,000 *l.* by substituting printing for the employment of copying clerks; that is, in the Secretary's office in the North Western Provinces, *ib.* 5703. 5736-5741——Less expense for printing in 1870-71 than in 1869-70; *ib.* 5731-5733. 5755.

Statement to the effect that the control over the expenditure for printing has not hitherto been thoroughly effective, *Harrison* 5743-5756——Recent arrangement for delegating to the local government the control of the printing expenditure, *Gay* 5757-5762.

Inquiry made in India into the relative cost of Government printing and of private printing, *Harrison* 5764, 5765——Large amount of printing done for Government at Central Alipore gaol, *ib.* 5765-5767——Question of printing the Government Gazette by the missionaries adverted to, *ib.* 5771-5774.

Prisoners. Statement of the average number of prisoners in custody in each province in the year 1856-57; total of 68,206; *App.* 667.

See also *Convict Labour. Gaols. Port Blair.*

Property Tax. Opinion that a property tax would be better than an income tax, as less difficult to assess; grounds for this view, *Ashburner* 2268. 2287. 2322-2328. 2340. 2345. 2349. 2366-2369.

Public Opinion. Very limited influence of public opinion in India, *Strachey* 6726. 6849-6852——Expediency of more attention being given to public opinion in India when the Budget is being framed, and of direct taxation being, if possible, ignored, *Laing* 7482. 7603, 7604——Importance of the growth of public opinion in England and in India, as a check upon the future sacrifice of the finances of India to the exigencies of English estimates, *ib.* 7676-7684——Examination as to the best means of collecting the opinion of the community on questions of taxation or expenditure; importance attached more especially to public opinion in Calcutta, *Dacosta* 8176-8194——Statement as to the natives having no organisation for making their complaints heard in the matter of taxation, *Right Hon. W. N. Massey*, 8881.——*See* also *Local Taxation and Finance*, 7.

PUBLIC WORKS:

1. *Origination of the Public Works Department by Lord Dalhousie in* 1854.
2. *Organisation and Control of the Department, Improvement if placed in Charge of a Special Member of the Council.*
3. *Accounts and Audit; Amendments required.*
4. *Staff and Salaries.*
5. *Principle upon which Expenditure is allocated out of Revenue, or out of Loans; Distinction on this Score between Ordinary Works and Extraordinary Works.*
6. *Explanation and Defence of the Actual Expenditure in the last Ten Years*
7. *Approval of the System of Loans for Reproductive Works.*
8. *Exceptions taken generally to the Expenditure; Importance of Curtailment.*
9. *Large Outlay contemplated in future Years.*
10. *Responsibility respectively of the Home Authorities, and of the Authorities in India, for wasteful Expenditure, Exception taken to the Action of the Secretary of State in the Matter.*
11. *Local Initiation of Works; Improvements suggested.*
12. *Estimates of the Central Department.*
13. *Local Departments; System of Allocation of Expenditure to the Local Governments.*
14. *Suggested Division of Public Works into Imperial and Local.*
15. *Intended Adoption of State Agency in carrying out all future Works.*
16. *Practice of excluding Interest from the Capital Cost.*
17. *Repairs.*
18. *Stores.*
19. *Detailed Execution and Supervision of Works.*
20. *Mysore.*
21. *Statistics of Annual Expenditure.*
22. *Estimate of Expenditure for* 1872–73.

1. *Origination of the Public Works Department by Lord Dalhousie in* 1854:

Formation of the Public Works Secretarial Department by Lord Dalhousie in 1854, gradual growth of the department since that period, *Strachey* 6158——Before 1854 there was no special department of the Government of India in charge of the Public Works administration, *ib.*——Necessity experienced in 1854 for a separate department in consequence chiefly of the extension of railways and irrigation works, *ib.*

2. *Organisation and Control of the Department; Improvement if placed in Charge of a Special Member of the Council*

Tendency of the Administration of India in recent years to assign the business of the different departments to individual or special members of the Council, the only exception being that no member has been specially designated to take charge of the Public Works Department; prejudice thereby, *Strachey* 6300–6304——Personal charge of the department by Lord Mayo, *ib.* 6302.

Opinion that the general system of organisation of the department is satisfactory, though for certain reasons it is the best abused department in the Administration, *Strachey* 6313, 6314——Great defect in there not being a member of the Council of the Governor General specially responsible for the administration of public works; witness has repeatedly made representations to this effect, although nothing has been done, *ib.* 6536–6544——Reform contemplated by Lord Mayo to the foregoing effect, *ib.* 6541.

Absence of any laxity in the Government of India in its supervision of the Public Works Department, *Strachey* 6821–6824——Continued improvement being made in the Administration within the department, *ib.* 6823——Correction of some misconception which exists as to the constitution and functions of the department, and its relations to the Financial Department and to the Governor General in Council, *ib.* 6824.

Repetition of the opinion that there should be a special member of the Council of the Governor General charged with the duty of controlling the Public Works administration, *Strachey* 6840–6842——Inadequate authority of the secretary in the Public Works Department, *ib.* 6841, 6842——Mischief in works originated by witness (when secretary in the department) having been carried out under the name of the Governor General in Council, *ib.* 6842, 6843.

Inability of witness to suggest, off-hand, any improvement in the organisation of the department; constant change going on in the direction of improvement, *Strachey* 7063, 7064——Further reference to the suggested appointment of a Minister of Public Works in India, and to the improvement contemplated in the department in this country, *ib* 7070–7072.

PUBLIC WORKS—continued.

3. *Accounts and Audit; Amendments required:*

Separate department for the audit of the accounts of the Public Works Department, the annual charge being 10,000 *l.*; very limited interference of witness's department with these accounts, *Harrison* 4648–4658.

Special account branch attached to the department; duties and remuneration of the accountants, *Strachey* 6185–6191. 6193——Want of a more complete and satisfactory account of the annual loans and expenditure in respect of public works extraordinary; concurrence of Lord Mayo with witness as to the improvement required on this point, the Financial Department having, however, interposed obstacles to the amendment proposed, *ib.* 6286–6299.

Management and audit of the accounts of the Public Works Department by the department itself; control also over the accounts of the railways, *Strachey* 6309, 6310——Further reference to the intended keeping of separate accounts of extraordinary works, showing the expenditure continuously, *ib.* 6428.

Further evidence relative to the several improvements, long desired by witness, in the accounts of irrigation works, the representations made by him on the subject, and the reasons for the non-adoption hitherto of the required reforms, *Strachey* 6594–6597. 6626–6639. 6689–6701——Room for much improvement in the accounts generally relative to the returns derived from the works, *ib.* 6846——Power, doubtless, of Lord Mayo to have removed the obstacles offered by the Financial Department to the improved accounts recommended by witness, *ib.* 6971–6975——Importance of the Public Works Accounts being in charge of officers of high position and of thorough efficiency, *ib.* 7054. 7061, 7062.

Little room for friction between the Public Works Department and the General Accounts Department, *Strachey* 7055——Explanation and approval of the practice as to audit of the Public Works Accounts within the department, *ib.* 7056–7062——Objection to any fixed limit of time as to service in the accounts branch, 7065–7069.

Statement to the effect that the accounts hitherto do not show separately the amount of capital contributed to any public work out of borrowed money, and the amount out of revenue; obstacle, through this defect, to ascertaining accurately the financial results of the policy of loans for public works, *Strachey* 7228–7337——Responsibility of the Financial Department, and not of the Public Works Account Department, for the imperfections still requiring correction in the accounts generally, *ib.* 7234–7237.

Amendment required in the accounts if these do not show clearly how the money raised by loan has been expended on each public work, and whether it has been duly applied to purposes of capital, *Laing* 7646–7650.

Evidence in further explanation of the mode of keeping the accounts of expenditure on public works, the deficiencies of the system, and the amendments required, *Strachey* 7787, 7788. 7793–7799——Circumstance of the Government of India having frequently insisted upon the necessity of improved accounts in the provinces, but without success up to the time that witness left India, *ib.* 7795–7799.

Very unsatisfactory system of accounts in the Public Works Department, *Dacosta* 8079, 8080.

4. *Staff and Salaries:*

Salary of 420 *l.* per annum to be paid to the young men entering the Public Works Service as civil engineers from the college at Cooper's Hill; somewhat lower salary before the establishment of the college, but for lower qualifications, *Chesney* 2411, 2412——Very unsatisfactory mode of recruiting the public works staff in India, *ib.* 2418——Demand in India for a competent and large staff in the Public Works Department; an annual supply of fifty young men from Cooper's Hill will be none too many, *ib.* 2419. 2422–2426. 2456–2458. 2485–2497. 2542.

Laudable desire to economise by which the public works officers have always been actuated, *Chesney* 2485——Statement as to the department being greatly under-officered at the present time, *ib.* 2485. 2490–2497——Liability to peculation by employing officers of a low grade in charge of canals, &c., *ib.* 2485–2489. 2495–2497——Moderate salaries in the Public Works Department, *ib.* 2493.

Organisation and staff of the Public Works Department under each local Administration; various grades of engineers and subordinates, the head of the department being termed the Public Works secretary and chief engineer, *Strachey* 6164——Under the head officer there are superintending engineers, and under these there are executive engineers and assistant engineers, *ib.*

Large number of Royal Engineer officers employed in the department, who are for the time regarded as being entirely in civil employ; addition to their military pay while thus engaged, *Strachey* 6165–6169——Practice as to the employment also of sappers on public works, *ib.* 6170, 6171——Rate of pay in the different grades; similar pay of

PUBLIC WORKS—continued.

4. *Staff and Salaries*—continued.

natives and Europeans in the same grade, *ib.* 6177–6184——Necessary sanction of the Financial Department before any increase of salary in the Public Works Department, *Strachey* 6203–6208——Disadvantages of any large or sudden fluctuations of work and of establishment, *ib.* 6209.

Strong organisation of the department as regards its staff, there being special officers in charge of military buildings, of irrigation works, and of railways, *Strachey* 6305–6307——Instances of misapplication of monies by persons connected with the department, the department, as a whole, not being open to much censure on this point, *ib.* 6969, 6970.

Doubt as to incentives to local expenditure on works by reason of the staff of officers maintained, *Laing* 7615, 7616——Exception taken to the view that the establishment charges in the case of public works are altogether excessive, *Strachey* 7953–7957——Impression that the public works staff maintained in the provinces does not induce enlarged expenditure, *Right Hon. W. N. Massey* 8639.

List of appointments in the Public Works Department held by military officers, *App.* 735.

5. *Principle upon which Expenditure is allocated out of Revenue or out of Loans; Distinction on this Score between Ordinary Works and Extraordinary Works:*

Consideration of the distinction between ordinary public works and extraordinary or reproductive works, the expenditure on the former going against the revenue of the year, *Seccombe* 1580, 1581. 1599–1605——Irrigation works and State railways are regarded as reproductive works, *ib.* 1605. 1614.

Explanatory statement relative to the distinction drawn between ordinary new works and extraordinary new works, as for irrigation; conditions laid down in regard to continued expenditure out of revenue, so that loans should not be too largely resorted to, *Strachey* 6220–6233——Clear distinction shown in the Budget Estimate between assignments for public works extraordinary out of loan and out of revenue; absence of distinction as regards the work, but only as regards the expenditure, *ib.* 6388–6394. 6400–6404. 6408.

Evidence with further reference to the system upon which money is applied to, and is allocated by, the Financial Department to the Public Works Department, as regards extraordinary works; conclusion that the former department, in having never yet remonstrated against the amount, has only refrained from doing so because the expenditure has been reasonable, *Strachey* 6404–6427. 6449–6486——Distinct and avowed borrowing for works extraordinary, witness showing that but a very small portion of the expenditure comes out of the revenue of the year, *ib.* 6464–6477.

Further explanation that ordinary public works, such as repairs, and new works not carried out with borrowed money, are paid for out of revenue, *Strachey* 6853, 6854——System of classifying expenditure instead of classifying works, *ib.* 6853——Intention of the Goverment that extraordinary public works, constructed out of loans, shall as a rule be reproductive; action of the Government to this effect, *ib.* 6860–6866.

Limitation of expenditure, out of revenue, on public works, when witness was Finance Minister, *Laing* 7645, 7646.

6. *Explanation and Defence of the actual Expenditure in the last Ten Years:*

Much larger expenditure in reproductive works since the administration of India by the East India Company; surplus, instead of deficiency, in the years 1861–70, if all expenditure on public works had been excluded, *Seccombe* 1568–1570. 1580–1601——Reference to a certain classification of the annual expenditure in the years 1860–69, on public improvements, and on military works and civil buildings respectively; deficit of 10,347,000 *l.* in these ten years, after including all expenditure on public works, *ib.* 1638–1651.

Important decrease under the head of "Construction," or new works ordinary, since 1867, in accordance with the demands of the Financial Department, *Strachey* 6218–6220——Statement relative to various heads of expenditure of the Public Works Department during each of the years 1867–70, *ib.* 6265–6284.

Further statement as regards the expenditure on public works extraordinary in 1867–70, showing that after allowing for certain special expenditure in 1868 and 1869, the assignments in each year were tolerably regular, *Strachey* 6387——Examination upon the statement that the Public Works Department has never asked for an unduly large sum in borrowed money for extraordinary works, *ib.* 6409 *et seq.*

Argument as to the great fallacy of the reasoning that but for the public works expenditure there would have been a surplus instead of a deficiency in the ten years from 1860 to 1870, equal claim, on public grounds, to expenditure on irrigation, roads, &c., as

PUBLIC WORKS—continued.

6. *Explanation and Defence of the actual Expenditure in the last Ten Years*—cont^d.

&c., as on the improved administration of justice, the post office, &c., *Strachey* 6458-6461——Absence of increase of expenditure on ordinary works in 1870, as compared with 1860, the increased expenditure being really in the civil administration, *ib.* 6461-6464.

Great increase in the development of all useful public works since 1856-57, *Strachey* 6487——Prevalence of two extreme and opposing views upon the question of expenditure on public works, the Government pursuing a mid-course between the two, *ib.* 6945-6948.

Statistics relative to the enormous increase of imports and exports since 1861-62, as showing conclusively the excellent administration of the country on the whole, and the valuable effect of the expenditure on railways and irrigation works, *Strachey* 7005, 7006. 7960, 7961.

Further investigation of the actual charge entailed upon the revenues of India by the expenditure on public works, witness contending that the charge is more than repaid by the direct increase of the practical productiveness of the country, *Strachey* 7250-7255.

Explanation that in taking the years 1861-62 for comparison with the year 1870-71, witness argues from a public works point of view, and considers that he has shown the Government to have been justified in its increased expenditure upon new works within that period, *Strachey* 7429-7431.

As a proof that during the last ten years an equilibrium has been maintained in the finances, witness refers to the fact that the charge for public works has to a large extent been met out of revenue, *Laing* 7457-7461.

7. *Approval of the System of Loans for Reproductive Works:*

Defence of the practice of openly borrowing money for carrying out reproductive works, *Strachey* 6259. 6264-6277——Conclusion further expressed as to the propriety and wisdom of the policy of raising loans for extraordinary works of a reproductive character, *ib.* 7791, 7792.

Defence of the system of borrowing for extraordinary works, due care being taken by the responsible heads that expenditure is properly apportioned between revenue and capital, *Laing* 6990 6999. 7617-7620——Decided approval of a liberal expenditure on reproductive public works, provided there be a competent staff of engineers, &c. to secure efficiency, *ib.* 7524, 7525——Expediency of some greater liberality in making loans for public works, as an alternative for unpopular taxation, *ib.* 7532-7535 7563-7566——Necessity of judging each work on its own merit, *ib.* 7545. 7558. 7563-7566.

Approval of loans for extraordinary public works, if of a reproductive character; expediency of the revenue from these works being applied not only to the payment of interest, but the extinction of principal, *Right Hon. W. N. Massey* 8858. 8863-8865.

8. *Exceptions taken generally to the Expenditure; Importance of Curtailment:*

Conclusion that in view of the prevention of famines, works of irrigation should be extensively proceeded with; but that in view of the state of the finances, all other works for developing the resources of the country should for the present be stopped, *Elliot* 3227-3233. 3375-3381. 3482, 3483——Wasteful expenditure on public works, it being desirable to concentrate this expenditure on irrigation, *ib.* 3333-3335. 3375-3389. 3424-3429. 3482, 3483.

Immense expenditure on irrigation canals, and railways, without any adequate return in many cases; details in illustration, *Dacosta* 8055-8077. 8101 *et seq.*——Objection to the policy of increasing the debt of India, in order to carry out irrigation works and railways, unless it could be shown that the outlay were remunerative; belief that this cannot be done, *ib.* 8211-8217——Room for curtailment of expenditure, more especially in the Public Works Department, *ib.* 8218-8226.

Room for extensive deductions on account of Public Works Ordinary, paid for out of revenue, *Right Hon. W. N. Massey* 8857-8860——Statement that in witness's experience of India there was more waste in the Public Works Department than in any other department of the Administration, *ib.* 8858-8860.

9. *Large Outlay contemplated in future Years:*

Considerable amount about to be expended on public works in 1872-73, whilst the prospective or suggested works involve an immense cost; Government is not, however, committed in any way to so large an expenditure as 70,000,000 *l.*, *Strachey* 6545-6551——Explanation as regards the large expenditure suggested by witness on reproductive works, that the cost would be borne by loan and would not necessarily increase local taxation, *ib* 6720-6726.

PUBLIC WORKS—continued.

10. *Responsibility respectively of the Home Authorities, and of the Authorities in India, for wasteful Expenditure; Exception taken to the Action of the Secretary of State in the Matter:*

Admission that the operations of the Public Works Department have not been free from mistakes; value of past experience in this respect, *Strachey* 6314, 6315. 6960–6964——Belief, however, that on the score of extravagant and inconsiderate expenditure on public works, the Home Government have been more open to censure than the Government of India or the Public Works Department; examination as to the grounds for this conclusion, *ib.* 6315 *et seq.*

Further consideration of the amount of responsibility or blame attaching to the Public Works Department in respect of the wasteful expenditure on railways, &c.; primary responsibility (in India) of the Government of India, whose instructions the Department carry out, without suggesting or originating expenditure, *Strachey* 6513–6536——Expediency of great caution before the Secretary of State prescribes to the Government of India expenditure on a work in opposition to the representations of the latter, *ib.* 6555, 6556.

Origination, doubtless, of misdirected expenditure in India as well as in England; opinion that the worst specimens have arisen from interference from England, *Strachey* 6773–6775——Different persons who may be responsible for excess of expenditure beyond estimates for public works, *ib.* 6820——Several authorities responsible for different mistakes or failures; limited responsibility attaching to the Secretary of State, *ib.* 6965, 6966.

Further statement as to extravagant expenditure having been caused rather by interference from England than by the Government of India, full admission on the other hand that the influence of the Secretary of State has been most valuable on various occasions of projected expenditure, *Strachey* 6981–6986——Great caution desirable on the part of the Secretary of State before proposing expenditure on works, *ib.* 6984——Considerable responsibility assumed by witness as one of the chief advisers of Government in respect of public works, *ib.* 6990.

Approval of the initiative being taken by the Secretary of State in Council in reference to public works, provided very great care be exercised, *Strachey* 7007–7012. 7014——Commercial pressure sometimes brought in England upon the Secretary of State with reference to works in India, *ib.* 7932.

11. *Local Initiation of Works; Improvements suggested:*

Great improvement if the engineer officers of the department were under the collectors, who are much better acquainted with the local wants of the districts, *Elliot* 3097. 3110–3112. 3147–3153——Consideration of objections to the proposal that irrigation works and local improvement works should be initiated by the local revenue officers; way in which the Estimates might be prepared and checked, *ib.* 3393–3407.

Explanation relative to the initiation of works in the department, and the conditions as to their sanction, and as to Estimates before works are undertaken, *Strachey* 6192. 6194–6199. 6204–6208——Fundamental rule of the department that no work can be undertaken without a previous Estimate, *ib.* 6197 6199——Military works or buildings are originated by the party that requires them, *ib.* 6277.

Advantage if concurrently with provincial financial administration, there were local consultative bodies by whom schemes should be investigated; natives should be included in these bodies, *Strachey* 6726, 6727.

12. *Estimates of the Central Department:*

Obstacles to preparing the Estimates for works in India in the same form as the English Estimates for works, the particular work being estimated for separately, *Strachey* 6404. 6441–6443——Careful preparation and revision of the Estimates of the Department, though in some instances there has been much inaccuracy, *ib.* 6431, 6432.

13. *Local Departments, System of Allocation of Expenditure to the Local Governments:*

Existence of a Public Works Department under each local Government, with full discretion in carrying out works, the Government of India exercising a general control both of policy and finance over the local Administrations, *Strachey* 6158–6163. 6201–6203——Direct control by the Government of India, of the railway administration, save in Bombay and Madras, where the control rests with the local Governments, *ib.* 6158——Direct control also of the Government of India over military works in Upper India; recent date of this arrangement, *ib.*

System upon which the annual expenditure in each Presidency is estimated; right reserved by the Government of India of limiting the outlay on any particular class of works, *Strachey* 6200–6202——Specific appropriation for military works and for irrigation works, transfers from one class of work to another not being allowed, without special sanction from the central Government, *ib.* 6201——The remission of authority to the local Governments was the result to some extent of suggestions by witness, *ib.* 6202.

Practice

PUBLIC WORKS—continued.

13. *Local Departments; System of Allocation, &c.*—continued.

Practice of placing at the disposal of the local Governments, as nearly similar a sum every year as possible for ordinary works; amount of allocation in each of the four years, 1867–70, adverted to hereon, *Strachey* 6209–6214——Very similar organisation of the department in the provinces to the central organisation, *ib.* 6311.

14. *Suggested Division of Public Works into Imperial and Local:*

There should be a division of public works into Imperial and local, *Right Hon. W. N. Massey* 8696–8699.

15. *Intended Adoption of State Agency in carrying out all future Works:*

Object of the Cooper's Hill Civil Engineering College to assist the policy of carrying out public works in India by direct State agency; decided approval of such policy, *Chesney* 2418–2421.

16. *Practice of excluding Interest from the Capital Cost:*

Explanation and defence of the system of treating as capital in the account of any canal, &c. only the outlay on construction, exclusive of interest on such outlay, *Strachey* 6571–6586——Denial that in commercial transactions it is the practice to charge capital with interest up to the time of profits accruing, *ib.* 6586.

Statement in further explanation of witness's views on the subject of not adding the charge for interest to the capital cost of construction, *Strachey* 7085–7088.

17. *Repairs:*

Limited variation in the annual expenditure from 1867 to 1870, under the head of "Repairs;" indispensable character of this charge, *Strachey* 6215–6217——Circumstance of repairs being excluded from the capital account of extraordinary expenditure on reproductive works; means, however, of showing the return from each work, after deducting the cost of repairs, *ib.* 6234–6263.

18. *Stores:*

Various descriptions of public works stores represented by an item of 134,000 *l.* expended in England in 1870–71, these being procured by open competition, and being carefully examined, *Hon. G. O. Talbot* 1299–1303.

19. *Detailed Execution and Supervision of Works:*

Large failure of masonry works on the railways, &c., attributed very much to imperfect workmanship; character and extent of the subordinate superintendence adverted to, *Chesney* 2483–2489. 2545–2550.

Due care taken to supervise the detailed expenditure on each work; careful allocation of the charge for supervision, *Strachey* 6429, 6430. 6443, 6444——Execution of works by contract, so far as this is practicable; superior advantage in some respects of the system of departmental work, which is largely carried out, *ib.* 6433, 6434.

Considerable outlay formerly in the execution of works, much unnecessary expense having been incurred through the want of concentration; remedy of this evil recently, *Strachey* 6435–6440——Satisfactory local contracts sometimes made in India in carrying out public works, *ib.* 6844——Extent to which increase of cost may have resulted from delay in the prosecution of works, or from too many works being on hand at the same time, *ib.* 7798–7808.

20. *Mysore:*

Paper submitted to the Committee, and evidence in explanation, relative to the unsatisfactory operation of the Public Works Department in Mysore, *Elliot* 3096, *et seq.* 3333–3335. 3375–3389. 3424–3429.

Observations by Colonel Sankey, Chief Engineer and Secretary to the Government of Mysore and Coorg, upon the evidence of Mr. Elliot relative to the operation of the Public Works Department in Mysore; denial of the accuracy of certain statements and conclusions in this evidence, *App.* 635–638.

21. *Statistics of Annual Expenditure:*

Account of money raised on loan in 1870–71, for reproductive works, and of extraordinary expenditure during the year, *App.* 516——Similar Account for 1871–72, *ib.* 517.

Statement showing the total income and expenditure of India in each year from 1861–62 to 1870–71, inclusive and exclusive of expenditure on construction of roads, bridges, canals, tanks, embankments, &c., and of public works extraordinary, *App.* 551–553

Statement of expenditure on works tending to promote the industry of the country, and on works connected with civil and military administration, in each year from 1867–1868 to 1870–71; *App.* 554.

22. *Estimate of Expenditure for 1872–73:*

Total of 2,615,000 *l.* as the Estimate of extraordinary outlay for 1872–73; opinion that this expenditure, out of loan, is not unduly large, *Strachey* 6410. 6421–6427. 6459.

Explanations by Sir R. Temple in connection with the estimated decrease of 99,300 *l.* in the grant for public works ordinary, in 1872–73, *App.* 497——Proposed expenditure of

PUBLIC WORKS—continued.

22. *Estimate of Expenditure for 1872-73*—continued.

of 2,615,000 *l.* for public works ordinary in 1872–73, *App.* 499——Intention to defray the large expenditure in 1872–73 on public works extraordinary, without borrowing either in England or India, *ib.* 504.

See also *Barracks, &c.* *Bridges.* *Canals.* *Capital.* *Cooper's Hill Engineering College.* *East India Railway.* *Ganges Canal.* *Great Indian Peninsula Railway.* *Irrigation.* *Kurrachee Harbour.* *Railways.* *Repairs.* *Secretariats.* *Stores, &c.,* 6. *Trevelyan, Sir Charles*

Punjaub Northern Railway. Military object of the Peshawur line, which is not expected to pay, *Thornton* 2037.

Inaccuracy of certain figures in a report by the Government Director of Railways relative to the cost to be incurred by the Punjaub Northern and other State lines, *Major Strachey* 6794. 6873, 6874. 7081–7084——Promotion of the Lahore and Peshawur line entirely on military grounds, *ib.* 6795.

Statement as to the whole line from Lahore to Peshawur not being yet sanctioned, *Strachey* 6874——The line has only been sanctioned from Lahore to Rawul Pindee, *ib.* 6874. 7081–7084——Approval of the line from Lahore to Peshawur, *ib.* 7037.

Decided approval, on political grounds, of the line from Lahore to Peshawur, *Laing* 7540–7547. 7558, 7559. 7563——Satisfactory income on the line between Lahore and Delhi, the cost, however, being excessive, *Strachey* 7846–7850——Facility of breaking up the railway bridges on a line from Lahore to Peshawur, in the event of war, *Sir A. T. Cotton* 8541–8543——The Peshawur line may be justifiable on military grounds; small return estimated by the projectors of the line, *Right Hon. W. N. Massey* 8869. 8873.

Official papers relative to the Punjab Northern (State) Railway, the probable traffic in salt, and the route to be traversed by the line, *App.* 565–569.

RAILWAYS—continued.

II. *State Railways:*

1 Generally as to the proposed Extension of State Railways.
2. Intended Administration of the State Railways by Government.
3. Question of Cost, and Financial Results.
4. Question of Gauge.
5. Exception taken to the large Outlay proposed.

I. *Guaranteed Railways:*

1. Origination of the System of Railways by Lord Dalhousie:

Statement as to Lord Dalhousie having laid down the system of railways throughout India, *Danvers* 1987. 2019, 2020 ——Strong views of Lord Dalhousie, as expressed in a Minute, in April 1853, as to the advantages of construction by companies under guarantee and subject to supervision, *ib.* 2059–2062.

Comment upon, and dissent from, the opinions expressed by Lord Dalhousie (as quoted by Mr. Danvers) in favour of the guarantee system, *Thornton,* 2946, 2947.

Good ground doubtless some twenty years ago, for the conclusions of Lord Dalhousie in favour of the system of guarantees, *Strachey* 6882. 6967, 6968——Origination of the railways very much for military and political purposes, *ib.* 7849.

2. Official Explanation and Defence of the Contracts between Government and the Companies:

Similar terms of the contracts with the different guaranteed railway companies, save in the case of the Oude and Rohilcund and the Carnatic Companies, where the periods are shorter in which Government can take possession of the lines, the mode of repayment being also different, *Danvers* 1680, 1681. 1712——Guarantee of interest upon the amount of capital paid by the companies into the Government Treasury, any deficiency in working the lines being borne by the companies, *ib.* 1682–1692.——Doubt as to Government having really the power to make deduction from the guaranteed interest, *ib.* 1711.

Information relative to the dates at which Government has now the power to acquire possession of the different lines; enlarged terms granted in consideration of Government being given a right in perpetuity to half the surplus profits beyond the annual amount of guaranteed interest, *Danvers* 1713–1725——Explanation and defence of the arrangement by which Government is to receive in perpetuity half the surplus profits of the guaranteed railways, in consideration of extension of the original terms of contract, *ib.* 1723. 1725–1727.

Lengthened negotiations between the railway companies and the East India Company as to the terms of the contracts and of the guarantee, the arrangement finally taking the shape of a compromise, and thus involving some inconsistencies, *Danvers* 2751——Explanation as regards the grant of a lease to the companies for ninety-nine years, that power was taken to purchase at the end of twenty-five years or of fifty years, so that the lease was practically terminable at those periods, *ib.*

Degree of advantage to Government under the contracts as to the option to purchase the lines on certain terms, and to do so by annuity or by a lump sum, *Danvers* 2862–2873——Power of Government to take possession of the lines if not satisfactorily managed, consequent interest of the companies to administer the railways efficiently, *ib.* 3071–3074.

3. Evidence in strong Condemnation of the Terms of the Contracts:

Strong condemnation of the terms of the contracts, as being very contradictory, and as not practically giving any protection to Government, *Thornton* 1855–1860——The contracts are in fact a perfect disgrace to those who drew them, *ib.* 1856.

Illustration of the contradictory terms of the contracts, it being provided that at the end of ninety-nine years the railways shall revert to Government for nothing, whilst it is also provided that the companies may at any time before the ninety-nine years demand the full value of the railways, *Thornton* 1896–1900——Obligation upon Government in taking over any line to repay all the capital whatsoever sanctioned to be expended, even though such expenditure may have been rendered necessary by mismanagement and extravagance on the part of the companies, *ib.* 1901–1904.

Conclusion as to the responsibility of the law officers who drew the contracts; examination hereon upon the statement that the contracts are a perfect disgrace to those who drew them, *Thornton* 1905, 1906. 1911–1921. 1933–1937——Degree of responsibility respectively of the railway committee of the East India Company, and of the railway Committee of the Indian Council, *ib.* 1907–1910——Probability of the contracts having been prepared by Mr. James Wilson when Secretary to the Board of Control; blame attaching nevertheless to the law officers employed, *ib.* 1915–1919. 1934–1937.

Grounds for objecting to the provisions in the contracts relative to the mode of determining the interest to be used in calculating the annuity to be paid to any company whose

RAILWAYS—I. *Guaranteed Railways*—continued.

3. Evidence in strong Condemnation of the Terms of the Contracts—*continued*.

whose line is taken over by Government; great ambiguity involved, if the purchase be by annuity instead of by a lump sum, *Thornton* 1921–1937.

Further evidence in strong condemnation of the terms entered into by the East India Company with the railway companies, *Thornton* 2973–3017. 3038–3070——Exception further taken to the ambiguous character of the Annuity Commutation Clause, *ib.* 2973–2975. 3060–3062.

Very reprehensible conduct of the Government authorities in acceding to terms so favourable to the companies and so excessively unfavourable to the taxpayers of India; comment more especially upon the guarantee of five per cent. for ninety-nine years, and upon the provision as to purchase of the railways at the end of that period, *Thornton* 2973–3017. 3038–3070.

4. Evidence as to the Evils of the Guarantee System:

Opinion that the cost of the railways has been greatly enhanced by the system of guarantee, *Thornton* 1781, 1782——Conclusions as to the evils of the guarantee system; opinion that it has not served any purpose which might not have been better served without it, *ib.* 1853, 1854. 1862. 1864——Prejudicial effect of the guarantee system, as expounded by the contracts, rather than of the contracts themselves, *ib.* 1876——Witness does not concur in the evidence generally of Mr. Danvers, as to the merits of the guarantee system, *ib.* 2115.

Opinion that but for the guarantee system (and this was its only merit) the scheme of railways in India would never have been carried out at the time, *Chesney* 2620, 2621. 2639, 2640. 2643–2646——Conclusion that there should be no further guarantees, the disadvantages being greater than the advantages, *ib.* 2641–2644.

Explanation that witness's dissent from certain evidence of Mr. Danvers refers not to matters of fact, but to opinions generally of the latter in favour of the guarantee system, *Thornton* 2802, 2803——Belief that capital would have been forthcoming without the guarantee, but that it was rendered impossible subsequently to the guarantee having been granted, *ib.* 2972. 3029–3031.

Decided objection to the system of guaranteeing companies a fixed rate of interest upon a large amount of capital, *Strachey* 6845.

5. Official Defence of the System of Guarantee:

Dissent from Mr. Thornton's views in strong condemnation of the guarantee system, doubt whether any other system could at the time have equally well secured the construction of railway in India, *Danvers* 1861–1863. 1881–1891——Conclusion as regards the guarantee system, that whilst it is open to many objections, it was a suitable and proper system to adopt under the peculiar circumstances of India twenty-five years ago, and that several advantages have appertained to the system, *ib.* 2048–2065. 2108–2114.

Value of the system in having secured a regular supply of funds as required, facility of supply even during the mutiny, *Danvers* 2049. 2108–2114——Advantage of the guarantee system as opening a new channel for attracting English capital to India, *ib.* 2049.

Dissent from certain views expressed in a despatch from the Government of India, dated 22nd March 1869, as to the guaranteed companies having little, if any, interest in keeping down the capital expenditure, or the working expenses, so long as these are covered by the receipts, *Danvers* 2752–2767. 2816–2823.——Result of witness's experience at the railway boards, that the guarantee does not destroy proper incentive to economy, *ib.* 2753–2755.

Evidence at variance with a statement by Mr. Laing, that the company system is opposed to lump contracts, and that directors are individually interested in keeping the expenditure in their own hands, *Danvers* 2778–2787——Concurrence with Mr. Laing as to the advantage of the facilities of the companies for providing capital for the works by means of calls upon the shares, *ib.* 2788, 2789——Opportunities of witness for forming an opinion as to the inaccuracy of certain statements by Mr. Laing, though these referred to a time anterior to witness's official position at the boards, *ib.* 2808–2814.

Further statement as to the greater facility with which the required capital was raised through the guarantee system, than, if the Government of twenty-five years ago had sought to raise the whole sum directly, *Danvers* 2859–2861. 2874, 2875——Interest of the boards in practising economy, although there may not, for the time being, be any prospect of earnings in excess of the guarantee, *ib.* 2878, 2879.

6. Intended Discontinuance of Guarantees in future:

Limit put by Government to the guarantee system, save as regards existing companies, *Danvers* 1862. 1868. 1981, 1982——Disapproval of a continuance of the system, save as regards extensions of existing lines, *ib.* 2056–2058.

RAILWAYS—I. *Guaranteed Railways*—continued.

7. Views of Mr. Laing in approval of the Guarantee System:

Immense importance attached to the railways carried out under the guarantee system; wisdom of the large expenditure on this score, though the returns hitherto involve a considerable loss to Government, *Laing* 7526, 7527. 7556, 7557——Important advantages of the guarantee system, witness being disposed to prefer the system to the plan of construction by the State, *ib.* 7528, 7529.

8. Action of the Secretary of State in Council as regards Guarantees:

Statement that many financial arrangements relative to the guaranteed railways have been settled by the Secretary of State in Council, without the cognisance of the Government of India; necessary consent of the majority of the Council, *Strachey* 6780-6782. 6785-6787.

9. Functions and Action of the Government Director at the Boards:

Outline of witness's duties as Government Director of the Indian Railway Companies, *Danvers* 1675-1679——Control exercised by him over such matters of expenditure as come within his province, *ib.* 1676——Circumstance of witness having on only one occasion felt compelled to exercise his powers of veto at the boards, *ib.* 2797-2801. 2824, 2825——Official utterance given by witness to his view that the guarantee system had been of great service, but that the time had come for altering it, *ib.* 2815.

Statement as to witness having no voice at the boards upon the question of the adoption of extension or branch lines; ample data before the Secretary of State in coming to a decision upon such question, *Danvers* 2824-2834——Doubt as to witness having ever represented to the Secretary of State that any branch or extension line should not be carried out; recent instance of his having recommended an extension line, *ib.* 2833-2835.

Explanation that, as regards the question of injudicious interference by the Home authorities relative to the railways, witness does not in the slightest degree refer personally to the Government Director of Railways, *Strachey* 7073

10. Failure of Attempts to substitute a Subsidy for a Guarantee:

Attempt made by Lord Dalhousie to subsidise railways, instead of guaranteeing them, but without success, *Danvers* 1865——Explanation relative to the failure of a more recent attempt by Government to substitute a subsidy for a guarantee of interest; obstacle through the extensive powers of control claimed over the companies, *Thornton* 1870-1880.

11. Constitution and working of the Railway Boards:

Advantage of the guarantee system in having secured the continuous and almost undivided attention of a competent body of men in this country to each undertaking, *Danvers* 2049——Explanation (in reply to charges by Mr. Laing, in 1861) relative to the practice at the railway boards in obtaining and accepting tenders for stores for India; presence of witness, as official director, on these occasions, *ib.* 2769-2777.

Extract from a report by witness, and from a Paper prepared by the chairman of the East Indian Company, showing the constitution and working of the boards, and the detailed mode of transacting business, *Danvers* 2792.

Personal interest taken by the individual directors in the transaction of business; amount of their remuneration adverted to hereon, *Danvers* 2793-2796——Work performed by the directors further adverted to in connection with their remuneration, *ib.* 2880-2883.

Exception taken to a statement by Mr. Danvers, that a prominent advantage of the guarantee system was, that it secured the continuous and almost undivided attention of a competent body of men to each undertaking, *Thornton* 2954. 2962-2966.

Explanation in modification of former statement, that the directors of the companies gave their "almost undivided" attention to the business of the railways, *Danvers* 2955-2962.

12. Constitution of the Committee at the India Office:

Conclusion as to the Railway Committee at the India Office being well qualified to consider the railway questions; constitution of the committee adverted to, *Danvers* 2940-2945.

Decided unfitnes of a committee of the Indian Council for conducting the business of the railways, *Thornton* 2967-2971.

13. Terms upon which guaranteed Capital has been raised:

Examination on the subject of a guarantee of five per cent. having been given on a large amount of railway capital, whilst public loans have been raised at four per cent.; causes of the different value of India stock and of railway stock in the market, *Seccombe* 1525-1561.

RAILWAYS—I. *Guaranteed Railways*—continued.

13. Terms upon which guaranteed Capital has been raised—*continued.*

Varying rates of interest at which the capital has been raised; explanations as to the higher rates paid than are paid for Government loans, although the former has the Government guarantee, *Danvers* 1728. 1746——Considerable amount received as premiums upon the issue of new capital; saving of interest upon this portion of the capital, *ib.* 1731–1739——Lower rate at which the required capital might have been raised by Government, *ib* 1887, 1888.

Necessity of the offer of good terms to capitalists, or the large capital required would not have been forthcoming, *Danvers* 2874, 2875——Arrangement as to the premium at which stock is now issued, the amount thus derived being applied to capital without carrying interest, *ib.* 3018–3024.

14. Cost of Construction:

Opinion that the cost of the railways has not been enhanced by the Government control, and will bear favourable comparison with the cost of the public works carried out by Government officers, *Danvers* 1750–1753. 1758——Admission, however, that the railways were constructed at an undue cost, owing chiefly to the want of experience in the officers charged with the control and supervision, rather than to the guarantee system, *ib.* 1776–1780. 1783–1789——Impression that the original cost was under-estimated by Lord Dalhousie, *ib.* 1800——Very much less cost at which it is expected that all future lines will be made, *ib.* 1977–1980.

Enhanced cost of construction by reason of the guarantee system, *Thornton* 1781, 1782——Varying cost of the broad gauge, from 9,000 *l.* to 23,000 *l.* a mile, *ib.* 1957.

Several respects in which the guarantee system was much more costly and wasteful than if the construction had been undertaken by Government, *Chesney* 2622–2625.

Denial that the companies were not interested in keeping down the cost of construction, *Danvers* 2752–2767. 2816–2823. 2878, 2879——Opinion that there was no ground for a statement by one of the Government engineers in India that there is a direct inducement to expend as much as possible on their works, *ib.* 2768.

Explanation that in referring to the public works officers as unexperienced at first in the construction of railways, witness does not mean to imply that they are or were ignorant of their professional duties, *Danvers* 2908, 2909——Tendency of the divided responsibility under the guarantee system to produce delay generally, *ib.* 2933——Doubt as to works and estimates being the more rapidly assented to because there are two parties in the matter, *ib.* 2934–2939.

Lavish expenditure in connection with the guaranteed railways and their construction, *Right Hon. W. N. Massey* 8866, 8867.

15. Extensive Failure of Works:

Information relative to the extensive failure of bridges, &c., owing to inexperience of defect of construction; reference more especially to the numerous and costly failures on the Great Indian Peninsular line, and the charge imposed thereby on the revenues of India for the further capital guaranteed, *Danvers* 1790, 1791. 1793–1804.

16. Management and Working of the Lines:

Imperfect management of the railways, *Strachey* 7933, 7934——Opinion that third-class trains should be increased, *ib* 7934——Excessive number of fast trains, *ib.* 7935.

Statement showing that the traffic arrangements require careful re-consideration, *Strachey* 7935, 7936——Advantage of reducing the number of trains, and of adopting the system of mixed traffic, *ib.* 7936.

17. Traffic:

Inaccuracy of a statement as to the decreased traffic receipts of the railways being owing to the bad treatment of the natives by the European employés on the lines, *Strachey* 6504——Examination relative to the returns of railway traffic from passengers and goods respectively, in 1869–70, and the deficiency formerly of the accounts in not showing in a satisfactory form the results of working in each case, *ib.* 7809–7822——Statement that on several lines the passenger traffic has much more than paid its expenses, *ib.* 7809. 7812, 7813.

Admission that the goods sent over the railways in 1870–71 cost about 2 *d.* per ton per mile to the public, the deficiency in respect of guaranteed interest paid by Government representing another 2 *d.* per ton, *Strachey* 7823–7834——Circumstance of the traffic of the railways including the conveyance of the materials used in construction, *ib.* 7856–7858——Statement showing that the traffic is not falling off, *ib.* 7859——Belief that the charge per ton for agricultural traffic is much less than 2 *d.* per mile, *ib.* 7860–7862——Main proportion of the passenger traffic which is third-class, *ib.* 7933.

RAILWAYS—I. *Guaranteed Railways*—continued.

18. Gauge:

Use of the five-feet six-inches gauge on the guaranteed railways, *Danvers* 1953, 1954 ——Very much larger extension of railways throughout India if the money expended on broad gauge lines had been all applied to the narrow gauge, *ib.* 1959–1961.

19. Doubling of Lines:

Careful inquiry before lines are doubled; belief as to the necessity of such doubling in all cases hitherto sanctioned, *Danvers* 1805–1808——Limited extent to which the lines are doubled; average of about 2,000 *l.* a mile as the cost of doubling a broad gauge line, *ib.* 1962–1967.

Impression that there has been premature action in most cases where lines have been doubled; different views of the companies and of Government on this question, *Thornton* 1809, 1810.

20. Fencing:

Saving by not fencing the lines, *Danvers* 1983, 1984.

21. Branch Lines and Extensions:

Consultation generally of the companies' officers and the Public Works officers before the sanction of new lines, *Danvers* 1851, 1852——Check through the consulting engineers of Government before plans or surveys by the companies' officers for new or branch lines are approved, *Thornton* 1852——Willingness generally of the companies to undertake extensions suggested by Government, *Danvers* 2876–2877.

22. Control and Supervision of Expenditure:

Large control of the Government over the proceedings of the companies, no expenditure being disbursed without previous sanction, *Danvers* 1682, 1685–1687——Occasional instances of money having been spent without the sanction of Government, *Thornton* 1902——Charge for Government superintendence adverted to as not being very costly, *Danvers* 1968–1970——Rule as to the sanction of Government being given for all the capital expenditure, *ib.* 2791. 2846–2854.

Statement of the rules laid down for regulating and controlling the expenditure in India, by means of the Consulting Engineer of Government, *Danvers* 2792.

Almost total absence of control over the railway engineers in the first instance, the supervision generally having been very lax, *Chesney* 2623–2625.

Extremely inefficient system upon which expenditure on the guaranteed railways took place, the Government of India having been powerless to exercise a real and effective control; data for this conclusion, *Strachey* 6334–6340. 6513–6518——Up to the present time there has not been what witness considers a satisfactory control maintained over the expenditure or working operations of any one of the guranteed companies, *ib.* 6837.

Limited responsibility attaching to the Public Works Department, in respect of the excessive expenditure on certain railways, *Strachey* 7948–7952——Charge of 44,000 *l.* for Government supervision of the guaranteed railways; this includes the subject of accounts, *ib.* 7958, 7959.

23. Capital Expenditure still being incurred:

Circumstance of the capital account of any railway not being closed; despatch in March 1864, laying down the principles upon which expenditure was to be charged to capital and to revenue respectively, *Danvers* 1759–1770. 1869——Non-approval by the Secretary of State of a proposal from India that all expenditure under 500 *l.* should be charged to Revenue, *ib.* 1771, 1772.

Capital expenditure still going on in respect of unfinished portions of nearly all the lines; difficulty in allocating the increase of capital outlay yearly to the different portions of any line, *Danvers* 1821–1833—— Extension of guarantees accordingly as further capital is spent by the guaranteed companies, *ib.* 1869.

Unfinished state of several of the lines, and of the stations, so that the capital guaranteed has necessarily gone on increasing; difficulty in calculating the total increase on this score, *Chesney* 2634–2638.

Remarks upon the circumstance of the capital accounts of the companies being still open, *Thornton* 3025–3027.

24. Total guaranteed Expenditure of about 100,000,000 *l.*:

Estimate of about 10,000,000 *l.* as the sum required to finish lines and works on which guarantees have been promised, the guaranteed expenditure hitherto amounting to about 90,000,000 *l.*, *Danvers* 3028.

25. Annual

RAILWAYS—I. *Guaranteed Railways*—continued.

25. Annual Public Charge for guaranteed Interest:

Total charge of about a million and three quarters per annum for guaranteed railways, &c., over and above the increase of debt since 1857–58, *Seccombe* 1508–1514.

Net payment of 1,562,000 *l.* for guranteed interest in 1870–71, after deducting the net revenue receipts of the companies, *Danvers* 1740. 1747–1749——Increase hitherto in the annual charge for guaranteed interest, *ib.* 1813, 1814——Large diminution expected in the charge when the lines have been properly developed, sufficient time not having yet elapsed for this purpose, *ib.* 1815–1817. 1892–1894.

Increase of charge for guaranteed interest adverted to as arising from extension of works, and not from falling off in the receipts, *Thornton* 1818–1820.

Failure, financially, of the guaranteed railways, with one or two exceptions, *Strachey* 6776——General accuracy of a statement purporting to show a gross loss of about 3,000,000 *l.* a year on the guaranted railways, set-off against this loss in the indirect value of the railway, on political and other grounds, *ib.* 6867 6882–6884——Net annual deficit of about a million and a half, in respect of the guarantees, *ib.* 6996.

Additional expenditure of about 30,000,000 *l* on railways between 1862 and 1870, whereas the charge for guaranteed interest had increased only by 300,000 *l.*, *Laing* 7453——Belief that within twenty years the charge or loss for guaranteed interest will entirely disappear; data for this conclusion, *ib* 7453. 7455. 7551–7556. 7567–7569. 7582. 7584.

Incomplete state of many of the railways, so that the income is much less than it will be, *Strachey* 7842——Expenditure of about 55,000,000 *l* on railways since 1861–62, whereas the charge has, on the whole, been reduced by about 400,000 *l.* a year, *ib.* 7842. 7852.

Explanation by Sir R. Temple, relative to the charge of 1,800,000 *l.*, under the head of Guaranteed Railway Interest in 1872–73, *App.* 497.

26. Loss or Gain by Exchange:

Explanation in connection with the gain to Government on the exchange, by allowing only 1*s.* 10*d.* for every rupee of revenue receipts remitted to England, *Danvers* 1754–1757——Loss of about 3,000,000 *l.* entailed upon Government in the cost of construction, by adopting 1 *s.* 10 *d.* as the price of the rupee in their contracts with the guaranteed companies, origin of the adoption of this rate, *ib.* 2889–2902.

Further explanation as to the large loss experienced by Government in adopting 1 *s.* 10 *d.* as the rate of exchange for the rupee, in respect of capital receipts; material gain, on the other hand, on the exchange, in respect of the revenue receipts, *Danvers* 3076–3088.

Consideration of the loss by exchange in the payment of guaranteed interest at the rate of 2 *d.* for the rupee, *Harrison* 5862–5896. 5938, 5939.

Absolute profit of Government to the amount of nearly 2 *d* out of every rupee earned by the companies, the exchange being taken at 1 *s.* 10 *d.*; loss by Goverment, on the other hand, of 2 *d* in each rupee on the cost of construction, *Strachey* 7836–7841——Statement that there is in reality a gain of nearly 400,000 *l.* in 1872–73, as compared with 1861–62, in the total charge on account of railways, that is, including the loss or gain by exchange, *ib.* 7841, 7842. 7852.

Statement by Sir Richard Temple, on the subject of the gain and the loss by exchange; estimated gain of 262,900 *l* in 1872–73, as against a loss of 33,800 *l.*, *App.* 496.

Statement showing the loss or gain to India in each year by adopting in their transactions with the guaranteed companies the exchange of 1 *s.* 10 *d.* the rupee, *App.* 628——Gain by exchange in adopting the rate of 2 *d.* the rupee with the Oude and Rohilcund, and with the Carnatic railway companies, *ib.*

27. Accounts and Audit:

Very imperfect system of audit of the railway accounts, *Chesney* 2623——Amended system now in force whereby all railway expenditure must have previous sanction, and is submitted to a searching audit, *ib.* 2633.

Tendency of the companies generally to place charges to capital instead of to revenue, in doubtful cases, *Danvers* 2760–2764.

Illustration of the deficient powers and regulations as to uniform and improved accounts being required of the companies, *Strachey* 6904–6907——Passing of the railway accounts by the authorities in India, objectionable interference by the Home Government, *ib.* 7074–7080.

Important improvement at length introduced into the railway accounts; satisfactory and reliable data now available as to the comparative cost of different lines, *ib.* 7810–7822.

28. Mileage:

Small additional mileage in 1871–72, the total extent of accommodation being about 5,200 miles, *Danvers* 1971, 1972——The companies have about 850 miles to complete, *ib.* 1975.

RAILWAYS—I. *Guaranteed Railways*—continued.

29. Native States:

Doubt as to any system having been arranged for inter-working with the railways being made in Native States, *Danvers* 2884–2888 —— Rules laid down for the protection of the interests of Native States as regards railways therein, *ib.* 2888 —— Probable arrangement in due time as to the mode of working native railways which are in connection with the companies' railways, *ib.*

30. Capital held in India:

Total of about a million of railway capital held in India; doubt as to the proportion held by natives, *Danvers* 1985, 1986.

31. Great Value of the Railways:

Defence of the promotion of railways in the past (by Lord Dalhousie) as well as in the present, even though not directly remunerative in a financial sense; great value for military and political purposes, *Strachey* 6882. 6967, 6968. 7849.——Enormous advantage of the railways on various grounds; illustration in the case of the East Indian Railway, *ib.* 6996–6999——Enormous benefit conferred on India by the railways, *ib.* 7849——Necessity of borrowing money for their construction, *ib.* 7851.

32. Opinion that the Lines should in the first instance have been made by Government:

Conclusion that it would have been better for the Indian Government to have made the railways itself, and to have borrowed the required money; facility with which the money might have been raised, *Thornton* 3032 *et seq.*

33. Question of Government Purchase of the Lines:

Opinion that the best policy of the Government would be to buy up the railways as soon as they can, *Chesney* 2645. 2647——Concurrence in the view that the best plan would be for Government to purchase the railways on the first opportunity, *Strachey* 6909, 6910.

Doubt as to the expediency of the purchase of the guaranteed railways by Government, or of greatly reduced rates, *Laing* 7585.

34. Suggestions for improved Administration and Control on the part of the Government of India:

Grounds for the conclusion that as regards the guaranteed railways, and their accounts and expenditure, a concentration of authority in a single person in the Council of India is much needed, *Strachey* 6836–6839. 6902–6904——Want of power in the Government of India to give their officers a real and complete insight into the detailed working of the guaranteed railways, *ib* 6902–6904——Views of witness as to the administration of the Indian railways adverted to in connection with the recent creation of the office now filled by him, *ib.* 6938–6944.

35. Views of Lord Mayo and Lord Lawrence as to the Administration by the Companies:

Opinion of Lord Mayo as to the value of the work performed by the companies, though he was adverse to a maintenance of the system down to the present time, *Danvers* 2063–2065.

Statement showing that Lord Mayo and his Council concurred in the views of Sir John Lawrence, as to the bad and extravagant management by the guaranteed companies, *Thornton* 2947–2951 ——Views of Sir John Lawrence as to the bad and extravagant management on the part of the companies, *ib.* 2947. 2950.

36. Strong Condemnation of the Railway System by Sir Arthur Cotton:

Facility in obtaining immense sums for railways which do not pay, whilst profitable irrigation works are starved, *Sir A. T. Cotton* 8311——Total failure of the railways in every essential particular whilst water carriage has been a complete success, *ib.* 8383, 8384. 8405——Entire failure of the railways further adverted to; they cannot carry at the price required, and are a great tax upon the revenue, *ib.* 8560.

37. Views of Sir Richard Temple as to the Gravity of the Question of Railway Finance:

Statement by Sir Richard Temple, in introducing the Indian Budget for 1872–73, that on the whole the conditions of the guaranteed railways in 1871–72 have added one more to the many anxieties of Indian finance, *App.* 497——Vast proportions being required by the interests which the Government has at stake in the railways, whilst the result is not yet so favourable as might be expected, *ib.* 497, 498——Conclusion that no part of the State finance requires more firmness and vigilance than that which relates to the guaranteed railways, *ib.* 498.

RAILWAYS—continued.

II. *State Railways*:

1. Generally as to the proposed Extension of State Railways.

Very limited extent of direct construction hitherto by Government, *Danvers* 1866, 1867——Total of about 2,200 miles still to be constructed, the greater portion being State lines, *ib.* 1975, 1976——Determination of the Government not to make any more railways that will not pay, unless they are required for political reasons, *Thornton* 2035.

Various considerations involved in the question of railway extension in India, in addition to the financial consideration, *Strachey* 6378——Approval of the State lines from Agra to Ajmere, from Lahore towards Peshawur, and of the Indore line, *ib.* 6379.

Initiative of the Government in respect of the State lines from Lahore to Peshawur, and from Moultan to Kotri; promotion of these lines mainly on military and political grounds, *Strachey* 6794, 6795. 6868–6874——Explanations with reference to the amount of expenditure authorised on the State lines, and more especially on the line towards Peshawur, the latter line having been sanctioned only as far as Rawul Pindee, *ib.* 6794. 7081–7084.

Concurrence in the view that great caution is necessary as regards railway extension, although witness contends that the revenues generally are now in a prosperous and increasing state, *Strachey* 6882–6898——Expediency of the gradual extension of State railways, so far as the finances will admit of such extension, *ib.* 6995, 6996.

Conclusion that great caution should be exercised before the construction of any new lines of railway, or of public works generally, *Right Hon. W. N. Massey* 8869–8875. 8894, 8895.

2. Intended Administration of the State Railways by Government:

Intention that the State railways throughout India shall be entirely controlled by the Government of India, *Strachey* 6306, 6307. 6312——Conclusion as to the expediency of construction and management by the State instead of by companies, *ib.* 6340. 6380, 6381.

3. Question of Cost and Financial Results:

Great difficulty of accurately estimating the traffic and the profits from any projected railway; nature of the basis of the estimates in the case of the State railways, *Strachey* 6341–6345. 6357–6359. 6558——Grounds for the conclusion that the expense of railway supervision is greater when carried out by companies than by Government; cost of pensions in the latter case adverted to as an important item, *ib.* 6382–6386.

Explanation of the basis upon which estimates are formed of the cost, traffic, and net revenue of new lines, *Strachey* 6558–6562——Limited extent to which the lines constructed for military purposes can be reproductive works, *ib.* 6797–6800——Dissent from the conclusions drawn from an official paper recently furnished from the India Office relative to the cost of the State railways and the returns therefrom, *ib.* 7127–7133.

Examination in approval of the principle of raising loans for State railways, although in some instances these may be useful chiefly for military or political purposes, and may cause a charge upon the revenue, *Laing* 7540–7559. 7563, 7564.

Approval of the further construction of railways provided the cost be not more than 6,000 *l.* a mile, *Strachey* 7848——Decided objection to lines costing 16,000 *l.* or 17,000 *l.* per mile, *ib.* 7848–7850——Conclusion that unproductive railways should not be made out of borrowed money, *ib.* 7855.

4. Question of Gauge:

Adoption of the French metre gauge (three feet three-eighths inches) for the State lines, *Danvers* 1953–1956——Very full data before the Government of India in adopting the metre gauge, *Thornton* 2023–2025——Lower standard of durability for the bridges, &c. on the narrow gauge than on the broad gauge; due care taken that the durability shall be sufficient, *ib.* 2027, 2028.

Investigations by a Commission which led the Government to adopt the metre as the gauge to be adopted in lieu of the broad gauge, *Danvers* 2021–2023——Much lighter description of permanent way under the narrow gauge system, *ib.* 2026.

Entirely different circumstances of England and India as affecting the question of railway gauge; immense economy of narrow gauge lines in India, *Strachey* 6911–6917.

5. Exception taken to the large Outlay proposed:

Decided objection to the proposed expenditure of nearly 30,000,000 *l.* on State railways; heavy loss expected on the lines through Rajpootana and the Indus Valley, *Dacosta* 8075–

Report, 1872—*continued.*

RAILWAYS—II. *State Railways*—continued.

5. Exception taken to the large Outlay proposed—*continued.*

8075-8078. 8104. 8114-8118. 8144-8156——Expediency of rendering the guaranteed railways self-paying before constructing new lines, *Dacosta* 8104.

See also *Bombay, Baroda, and Central India Railway. Calcutta and South Eastern Railway. Carnatic Railway. Coal. East Indian Railway. Great Indian Peninsular Railway. Holkar* (*State*) *Railway. Indus Valley Railway. Jubbulpore Railway. Kattywar Railway. Khamgaon and Oomraottee Branch Railways. Moorshedabad Branch Railway. Nerbudda Bridge. Patent Fuel. Public Works. Punjaub Northern Railway. Rajpootana* (*State Railway*). *Scinde, Punjab, and Delhi Railway. Soane Railway Bridge. Wurdah Valley* (*State*) *Railway.*

Rajpootana (*State*) *Railway.* Great saving by making the Rajpootana Railway on the narrow gauge, the total cost being 5,000 *l.* a mile, *Thornton* 1957. 2029-2031——Information relative to the cause and extent of the lines through Rajpootana, &c.; expectation that the line to the Salt Lakes will pay, as costing not more than 5,000 *l.* a mile, *ib.* 2029-2041.

Object of the State line from Agra to the Sambhur Lake and Ajmere to facilitate the conveyance of salt; estimate of 5,000 *l.* a mile as sufficient for the construction of this line and for rolling stock, *Strachey* 6795, 6796. 6801-6806——A contract has been let for the portion between Agra and Sambhur, *ib.* 6796——Expectation that the Rajpootana line will be remunerative, *ib.* 6806.

Statement with further reference to the cost of the Rajpootana Railway, as not likely to exceed 5,000 *l.* per mile, *Strachey* 7124. 7141.

Examination as to witness's data for the conclusion that the Rajpootana line will not pay, *Dacosta* 8147-8156.

Official papers and despatches relative to the Rajpootana (State) Railway, and the question of railway extention to Rewaree, Bhowani, &c., *App.* 555-564.

Conclusions arrived at by the Government of India in November, 1871, relative to the route of the line from Agra to Jeypoor and the Sambhur Salt Lake, *App.* 564.

Raneekhet Sanitorium. Large expenditure being incurred for a new sanitorium at Raneekhet; great doubt whether the place will answer, *Hutton* 8567.

Ransome's Concrete Stone. Doubt as to the Government of Bombay or the India Office having originated the charge for sending out a superintendent in charge of the manufacture of Ransome's concrete stone, *Seccombe* 1429, 1430. 1435.

Re-appointment of Committee. Recommendation that the Committee be re-appointed in the next Session, in order that their labours may be brought to a satisfactory close, *Rep.* iv.

Recruits. See *Army*, 1.

Red Sea and India Telegraph. Information in connection with an item of 18,027 *l.* being a moiety of annuity payable till 1908 in respect of the Red Sea and India Telegraph, which proved a failure, management and control of this undertaking adverted to, *Seccombe* 1386-1402.

Refunds, &c. Total of 356,431 *l.* as the amount of refunds, drawbacks &c. in India in the year 1870-71; several heads of revenue under which these refunds arise, *Gay* 3489. 3493-3498——Practice formally of showing the receipts net, so that in 1856-57 there was no account of refunds, &c., *ib.* 3490-3492.

Aggregate of 96,000 *l.* as the miscellaneous refunds, *Harrison* 3510——The account of refunds and allowances applies to the whole of British India, *ib.* 3517.

Registration Department. Recent creation of the Registration Department under an Act of 1864, the charge being 106,000 *l.* (in 1870-71), *Harrison* 4749, 4750. 5062-5065——Receipts on the other hand of 148,000 *l.* for fees for registration of documents, *ib.* 5065.

Religious Purposes. Payments made by Government under treaty engagements for native religious purposes, *Harrison* 5605, 5606. 5627——Large alienation of land for native religious purposes; exemption from assessment in these cases, *ib.* 5607-5611. 5615, 5616. 5621.

Rent-free Lands. Explanation relative to a nominal item of 230,000 *l.* in respect of alienations of land for hereditary village officers, chiefly in Bombay; doubt as to services being rendered to the State in respect of these lands, *Harrison* 3719-3731——Voluntary character of the settlement with the holders of alienated lands; practice in dealing with the money received in composition of services, *Gay* 3732-3739.

Distinct rules and regulations respective inams; diminishing charge in respect of free grants generally, *Sir J. W. Kaye* 7354. 7365 7369.

Repairs

Repairs (Public Works). Very objectionable operation of the system of executing all petty repairs to works in Mysore through the Public Works Department, *Elliot* 3147–3149.

Representative Institutions. Great evil through there being no recognised channel of communication between the Government and the people: suggestion hereon for the formation of such channel, and for its development in the direction of representative institutions, *Elliot* 3450–3455.

Reproductive Works. See *Irrigation.* *Public Works.* *Railways.*

Responsibility. Growing tendency to concentration of responsibility in the Government of India, *Strachey* 6825——Effect of the increased facilities of communication in divesting the Governors and the Governor General of responsibity, and in concentrating responsibility in the Secretary of State for India, *Right Hon. W. N. Massey* 8593——Importance of the personal responsibility of the governors of provinces and of the Governor General being duly maintained as regards finance: full recognition of this responsibility by Lord Lawrence, *ib.* 8594–8601.

Retiring Allowances. See *Pensions.*

REVENUE:

Frequent issue of loans to make good annual deficiencies in the revenue, *Seccombe* 1480–1482. 1490–1507. 1523, 1524——Statement to the effect that in 1869–70 the revenue exceeded the expenditure, *ib.* 1588–1590.

Total of 51,143,000 *l.* as the gross revenue of the Government of India according to the accounts for 1870–71, *Harrison* 6083–6086——Actual excess of income over expenditure to the amount of 315,000 *l.* in 1870–71, *ib.* 6150–6152.

Exceptions taken to the conclusions drawn from a certain Paper professing to show a surplus revenue of 4,986,000 *l.* and a deficiency of 10,997,000 *l.*, for the ten years 1861–70; absence of any real surplus to be set-off against the deficiency, *Strachey* 6448–6458.

Gloomy state of the finances of India when witness went out in 1860; deficit of 5,250,000 *l.* in the year 1860–61, *Laing* 7443–7445. 7448——Hopeful view entertained by witness of Indian Finance, judging from the results during the last ten or twelve years; examination in detail hereon, *ib.* 7443. 7450 *et seq.*——Dissent from a statment by the present Finance Minister, that the State income fails to evince elasticity, *ib.* 7561, 7562.

Explanation in connection with a statement by Sir Richard Temple, that the revenue does not show any elasticity, *Strachey* 7853——Gradual growth of the revenue generally at the rate of about 500,000 *l.* a year for the last ten years, *ib.*

Absence of any room for increase of revenue under the heads of customs, salt, stamps, &c., *Dacosta* 8205–8208.

Opinion that it is not necessary nor desirable to have a large surplus revenue; numerous claims which would at once be made upon it, *Right Honourable W. N. Massey*, 8611——The existing revenues are ample for all purposes of Government, *ib.* 8792. 8824.

Financial statement by Sir Richard Temple in presenting the budget of British India for the year 1872–73, *App.* 489–505——Estimated surplus of 2,700,000 *l.* in 1871–72, comparing the ordinary income and expenditure, *ib.* 490. 493. 504——Consideration by Sir R. Temple of the Estimate for 1871–72, and the decrease or increase of revenue under different heads, *ib.* 490–493——Aggregate of 48,771,000 *l.* as the estimated revenue in 1872–73, *ib.* 496.

Conclusion of Sir R. Temple that on the whole the State income, though not otherwise than fluctuating, fails to evince that elasticity and that tendency to rapid growth, which is desirable, and which should be looked for if the requirements of progress in the expenditure are to be met, *App.* 496.

Statement by Sir R. Temple that whilst the Budget Estimate for 1870–71 showed a surplus of less than 200,000 *l.* there was an actual surplus of nearly 1,500,000 *l.*, *App.* 490——Total income of 51,413,685 *l.* in 1870–71, showing an increase of 997,100 *l.*, or 485,890 *l.* more than was expected, *ib.*

Estimated surplus of 237,000 *l.* in 1872–73, comparing the ordinary income with the ordinary expenditure, *App.* 498——Conclusion of Sir R. Temple that the ordinary finance is in a condition of surplus, *ib.* 505.

Estimates in detail showing the revenue under various heads in 1872–73, *App.* 506–514.

Comparative statement of the revenues and expenditure in the departments in India, exclusive of public works and army expenditure, in the years 1856 57 and 1870–71; increase of revenue from 31,920,920 *l.* to 49,376,225 *l.*; *App.* 518.

Statement showing the total income and expenditure of India in each year from 1861–62 to 1870–71, and the annual surplus or deficit, *App.* 551–553.

See also *the Headings generally throughout the Index.*

Revenue Establishments. Information relative to the causes of increase or decrease since 1856–57 in the different Presidencies, &c., on account of the Board of Revenue Establishment and the Revenue Commissioners; considerable increase in the aggregate, *Harrison* 4505–4549——Total of 209,600 *l.* as the charge in 1870–71, against 165,900 *l.* in 1856, in respect of Revenue Commissioners; particulars hereon, *ib.* 4512–4549——Large increase in the charge for Revenue Commissioners in Bengal; explanation of the relative charge in Bengal, and in Madras and Bombay, *ib.* 4528–4536——Economy by the substitution of Revenue Commissioners for Revenue Boards, *ib.* 4643–4647.

See also *Madras Revenue Board.*

Richardson, Rowley W. C. (Analysis of his Evidence.)—Is Superintendent of the India Branch of the Admiralty which manages the Indian troop service, 469——Employment of five troop ships, which, since the opening of the canal run direct between Portsmouth and Bombay; previously two worked between Portsmouth and Alexandria, and three between Suez and Bombay, 469–473——Each vessel is 4,173 tonnage, the maximum speed being about fourteen knots, and the actual average speed about nine knots, 474–476——Large number of officers and men conveyed in each vessel, and large number of the crew, 477–479.

Explanation that the crews are part of the navy, and that there are not now special pay or pensions for the service, 480–487——Repayment of the pay and expenses to the Admiralty by the India Office, 480. 488, 489——Absence of repayment as regards pensions, whilst on the other hand India does not get the benefit of the saving on the half-pay of the officers employed on the service; question considered as to the extent of such benefit, 490–500.

With reference to a certain account or statement showing the working of the Indian troop service for 1868–69, all the items of expenditure are included therein, except expenses in Bombay to the amount of about 10,000 *l.*; 501–504. 551——Explanation of the data upon which the charge for insurance of the ships for the year was fixed at three per cent., 505–507——Important saving of expenditure in various items, such as repairs, provisions, coal, &c., under the new system of through voyages from Portsmouth to Bombay, 508–514——Careful examination to which the ships are subjected, there being hitherto no symptoms of deterioration, 515–517.

Incomplete state of the account of the troop service for 1869–70, through certain returns not having been furnished from India; this is in fact a statement, and not an exact account, 518. 521. 551. 566–569. 571–574——Total of 16,596 adults conveyed in 1868–69, being an average of 1,106 for each voyage, 523, 524——Net cost of 304,275 *l.* to India for the service in 1868–69, plus the charges at Bombay, 525. 623.

Contribution of 14,372 *l.* from the Imperial Government towards depreciation and insurance of the two ships employed in Europe, these being under the management of the Admiralty, 525, 526——New arrangement under consideration whereby all the ships will be at the disposal of the Secretary of State for India, and will be entirely paid for by India, 527–536. 583–585. 614, 615——Payment hitherto by India of three-fifths of the wages, repairs, &c., of the two ships employed in Europe, and of the entire cost of the three ships on the other side of the Isthmus; examination upon the question as to the fairness of this arrangement, 529–533. 624–634.

Expectation that the continued employment of five ships will be necessary in the present year; four ships running through will, however, be equal to five under the former plan, 540–545——Performance of two complete voyages by each ship, the service being from October to April, 543. 579, 580——Much less speed at which the vessels run than they are capable of attaining; economy of fuel thereby, 554–557. 657——Construction of the engines some five years ago, so that they do not admit of the economised consumption of coal rendered feasible by improvements in construction since that date, 558–561. 639–645.

Imperial expense at which reliefs between Malta and England would be conveyed in the ships, 562–565——Arrangement as to the coaling of the vessels, 575. 577——Varying consumption of coal by the different vessels, this matter being closely investigated, 575–577. 639–645. 666–669——Intention that one or more of the vessels shall call at the Mauritius and Cape for invalids for England, 581, 582.

Explanation relative to the audit by the Admiralty of a portion only of the expenditure, whilst the great bulk of the expenditure being paid for direct out of Indian revenue will be audited by the India Office, 587, 588. 592–596——Total of 1,173,752 *l.* as the capital cost of the five ships to India, 616–619——Charge of 5 per cent. for interest in calculating the cost of the service, 620, 621——Charge of 4 per cent. for replacement of capital, 622——Contribution by England towards replacement of capital of the two ships employed in Europe, irrespectively of the contribution for wear and tear, wages, &c., 624–634——Circumstance of there being as yet no published account showing the actual cost or contribution incurred by the Imperial Government, 635–637.

Charges paid by the vessels for passing through the Suez Canal, 647–649——Estimate of twenty-five days as the time in which the voyage between London and Bombay might

be

Richardson, Rowley W. C. (Analysis of his Evidence)—*continued.* be performed in the event of emergency, 655, 656——Doubt as to the average time required annually for repairs, out of the five months when the vessels are not employed, 658–660——Very little difference in the length of the voyage overland and through the canal, 670, 671——Absence of any practical difficulty in going through the canal, 672.

Explanation that the contribution by England towards the two ships employed in Europe is not shown in any account yet prepared, it being deducted from the gross charges payable by India, and the latter appearing as a net sum, 673–681——Extent of employment of the two ships in question for Imperial purposes, 688, 689——Means of comparing the cost in the troop ships and in hired vessels, 692. 694——Retention of the bulk of the crew during the five months the vessels are not running to and from India, 693.

Richardson, Mr. Memorandum submitted by Mr. Rowley Richardson showing that the voyage from Portsmouth to Bombay, through the canal, might be performed by the troop ships in about twenty-eight days, *App.* 530.

Further memorandum showing that the cost of sending troops by the "Tagus," chartered in 1870, *viâ* the canal, was at the rate of 24 *l.* 2 *s.* 3 *d.* per adult, *App.* 530.

Rivers' Pollution. Considerable attention paid of late years to the subject of pollution of the rivers by dead bodies, *Harrison* 5685. 5688–5691.

Road Cess. Feeling among officials that the road cess would practically fall entirely on the ryots, *Dacosta* 8017, 8018——Strong complaint against the road cess in Bengal, *Hutton* 8569–8572——Grievance in the road cess falling entirely upon the rural population, the municipalities being exempt, *ib.*

Robinson, Colonel Daniel George, R.E. (Analysis of his Evidence.)—Is Director General of Telegraphs in India, 4167, 4168——Submits explanations relative to the several heads of expenditure in India on account of the telegraphs in 1870–71, the total being 380,000 *l.*; 4169 *et seq.*——In 1856–57 the expenditure was only 97,546 *l.*, but the department and its operations have been immensely increased since that year, 4170, 4171. 4241–4254.

Item of 195,307 *l* in 1870–71 on account of "Superintendence"; explanation hereon as to the large increase made in the salaries generally, 4174–4182——Considerable outlay in the construction of new lines, 4183–4185——Outlay of 25,482 *l* for stores and workshops; explanation hereon as to the practice in obtaining stores from England, and as to their quality, 4186–4199——Recent abolition of the training school for signallers, 4,200——Separate administration of the Indo-European line from Kurrachee to Fao; practice as to the re-transmission of messages at Kurrachee, 4201–4206. 4225–4228. 4234–4238——Loss of about 3,000 *l.* a year in working the Ceylon telegraph, 4207–4209.

Information relative to the railway telegraph system, and the relations between Government and the companies: amendment required, there being unsatisfactory competition between the two systems, and unnecessary expense involved, 4210–4215. 4293–4318——Very little facility derived from the Post Office in administering the telegraph system, 4217–4221——Explanation as to the selection of the line to Europe by which messages are forwarded on their reaching the termini of the Government, 4222–4229.

Statement of the tariff on the Government lines in India, and of the frequent change made in the charge for messages in order to bring increased income: obstacles *to* a larger charge than the present, namely, a rupee for six words all over India, 4230, 4231. 4255–4261. 4272–4289——Very large increase of messages and of revenue since 1856–57, loss nevertheless of 80,000 *l.* in 1870–71, 4233–4254. 4268–4271——Very little prospect of the Telegraph Department paying its expenses, 4256, 4257. 4290–4292.

Explanation of the practice as to transmission of messages in English, and as to their translation into Hindoostanee, if required; double charge in the latter case, 4319–4322. 4328–4345——Direct responsibility of witness to the Viceroy, for the administration of the Telegraph Department, 4323–4327——Very long distances for which messages are sent through, without repetition, 4346–4351.

Roorkee College. Information relative to Roorkee College, the inducements given to natives to enter the college, and the relative prospects and stipends of natives who enter the Public Works Department from the college, and of Europeans who enter from Cooper's Hill, *Chesney* 2450. 2463. 2477. 2551 *et seq.*

S.

Salaries. Charge of 134,000 *l.* for salaries, &c. of the establishment in England in 1870–71; comparative charge in previous years, *Seccombe* 837–845.

Increased salaries of the native officials under the Post Office in India, *Harrison* 4162–4166——Total charge of 96,000 *l.* in 1870–71 for the salaries of the Governor General, the governors, lieutenant governors, and chief commissioners; distribution of this charge among the several Presidencies, *ib.* 4352–4360.

Salaries—continued.

Statement that there has been no comprehensive inquiry in recent years into the salaries in the Land Revenue Department, *Harrison* 4543, 4544——Important decrease in the salaries in the account and audit branch in India, *ib.* 4565——The maximum salary is now fixed at 2,400 *l.*, save for the office of Comptroller General, *ib.*

Evidence relative to the salaries of the various classes of judges in India, *Harrison* 4751–4758. 4802–4875——Explanation relative to the large increase of the charge for salaries of the judges of the High Courts, *ib.* 4751–4769——Important reduction in the scale of salaries of the principal officers of the High Court at Calcutta, *ib.* 4763——Important increase of salaries of the native judicial officers in Bengal, *ib.* 4795, 4796. 4802——Information relative to the increased charge for salaries in the criminal courts in 1870–71 as compared with 1856–57, *ib.* 4905–4936.

Return showing the salaries of each class of officers employed in the land revenue administration in the different provinces in 1870–71, *App.* 642–650.

Return showing the salaries of the Secretary of State, under secretaries, members of Council, clerks, &c., for the year 1870–71, *App.* 705–708.

SALT:-

1. *Amount and Incidence of the Salt Tax.*
2. *Refund of Duty.*
3. *Cost of Collection, and of the Preventive Line.*
4. *Compensation Payment to the French Government.*
5. *Cost of Manufacture in Bengal.*
6. *Burmah.*
7. *Oude.*
8. *Estimates for* 1872–73.

1. *Amount and Incidence of the Salt Tax:*

Very small amount of the salt tax per head, there not being much discontent, *Ashburner* 2357, 2358——Duty of about 400 per cent. represented by the revenue from salt, the consumption being very general over all India, *Harrison* 3885–3893——Large increase of taxation under the head of salt; saving on the other hand by the consumers in the cheaper cost of carriage, *Strachey* 7420. 7423–7428.

The duty is too high, and should be lowered so as to stimulate consumption, *Dacosta* 8206——Decided objection to any increase of the salt duties; decrease of consumption by an increase of the duties, whilst any further increase would fall oppressively on the poorest of the community, *Right Honourable W. N. Massey* 8789–8791. 8877–8886.

2. *Refund of Duty:*

Refund of 31,000 *l.* in India in 1870–71 in respect of salt duty, of which 29,500 *l.* is in Calcutta; short delivery of imported salt to which this refund refers, *Harrison* 3505–3507.

3. *Cost of Collection, and of the Preventive Line:*

Explanation relative to the cost of collection and the revenue, in 1856–57 and in 1870–71, on account of salt, customs, and opium in Bombay, causes of the large increase in the cost of collection, *Harrison* 3792–3807. 3813–3819. 3835–3838——Increase of the salt duty adverted to as owing largely to the prevention of contraband dealing, *ib.* 3831.

Total expenditure of 389,964 *l.* in India for collecting the salt revenue; several heads under which this charge is divided, *Harrison* 3839, 3840——Charge of 127,000 *l.* in the North Western Provinces, a large portion of which is for a preventive staff along the frontier line between British and native territory, *ib.* 3843——Charge in the Central Provinces for the preventive line on the frontier, *ib.* 3845–3847.

Particulars relative to the comparative expenditure in collection of the salt duty in the several Presidencies and Provinces in 1856–57 and in 1870–71; the revenue now exceeds 6,000,000 *l.*, the expenditure being under 400,000 *l.*, *Harrison* 3848–3882——Increase of charge in the Punjab from 53,000 *l.* in 1856–57 to 67,500 *l.* in 1870–71; the revenue has more than doubled in the same period, *ib.*——Large increase of charge in the North Western Provinces, owing chiefly to the arrangements for manufacture at the Sambhur Lake, *ib.* 3849.

Increase from 31,000 *l.* in 1856–57 to 93,000 *l.* in 1870–71 for the permanent puchase of salt in Madras; large increase in the rate paid to the producer, *Harrison* 3851–3856. 3865–3868——Small charge for collecting the salt duty in Bengal, this referring almost entirely to imported salt; belief that there is no smuggling, *ib.* 3857–3863. 3878–3880——Difficulty in apportioning the salt revenue, and the cost, according to the consumption in the several Provinces, *ib.* 3876.

Conclusion

SALT—continued.

3. *Cost of Collection, and of the Preventive Line*—continued.

Conclusion that the salt line may be re-adjusted on a much more convenient and economical basis; it is very doubtful whether the maintenance of the line is worth the great cost involved, *Right Hon. W. N. Massey* 8787, 8788.

4. *Compensation Payment to the French Government:*

Payments made as compensation for the use of duty-paid salt in the French settlement, and in Cochin China and Travancore, *Harrison* 3896-3904——Permanent charge of 44,600 *l.* as compensation, payable under convention with the French Government in lieu of salt formerly supplied to them; object of this payment to dispense with salt manufacture in the French territories, *Sir J. W. Kaye* 7336, 7337.

5. *Cost of Manufacture in Bengal:*

Large cost formerly of Government manufacture in Bengal, *Harrison* 3858——Cause of the much greater cost of manufacture in Bengal than in Madras, *Gay* 3866.

6. *Burmah:*

Small amount of salt duty and small charge in British Burmah, *Harrison* 3871-3875——Use of duty-paid salt in Upper Burmah without any drawback being allowed, *Gay* 3894, 3895.

7. *Oude:*

Explanation of a charge of 9,600 *l.* for saltpetre establishments in Oude, *Harrison* 3844——Duty paid out of Oude upon the salt consumed in Oude, *ib.* 3869, 3870. 3881——Belief that there are no salt works licensed in Oude, *Gay* 3863, 3884——Failure of a manufactory started by Government in Oude, *ib.* 3883.

8. *Estimates for* 1872-73:

Estimated increase of 106,800 *l.* in the revenue from salt in 1872-73, *App.* 495——Estimate of 26,700 *l.* as the increase of expenditure, *ib.*

See also *Rajpootana* (*State*) *Railway.*

Sambhur Lake. See *Rajpootana* (*State*) *Railway. Salt.*

Sandhurst, Lord. Views of Lord Sandhurst as to the economy feasible in the military administration, and as to the expediency of concentration under one commander in chief, *Dacosta* 8033-8035.

Sanitary Commission. Charge of 26,233 *l.* in 1870-71 for the Sanitary Commission; duties of this branch, which is new, *Harrison* 5631-5634. 5682-5691.

Sankey, Lieutenant Colonel R. H., R. E. Observations by Colonel Sankey, Chief Engineer and Secretary to the Government of Mysore and Coorg, upon the evidence of Mr. Elliot relative to the operation of the Public Works Department in Mysore; denial of the accuracy of certain statements and conclusions in this evidence, *App.* 635-638.

Savings Banks. Statement by Sir R. Temple relative to the Government savings banks, and the increasing operation thereof, *App.* 503, 505.

Sayer Compensations. Belief as to the permanent character of payments in Bengal and other parts of India for Sayer compensations, *Sir J. W. Kaye* 7338, 7339. 7342. 7348. 7370.

Schools. See *Education.*

Scinde, Commissioner of. Cause of the increasee expenditure in 1870-71, as compared with 1856-57 in respect of the Commissioner of Scinde, *Harrison* 4380, 4381.

Scinde (*Ex-Ameers*). Terminable and diminishing character of the charge in respect of the ex-Ameers of Scinde, *Sir J. W. Kaye* 7374.

Scinde (*Financial Administration*) Non-objection to a separate financial administration of Scinde, *Right Honourable W. N. Massey* 8708, 8709.

Scinde, Punjaub, and Delhi Railway Marked failure, financially, in the case of the Scinde, Punjaub, and Delhi line, *Strachey* 6776——Very large capital expenditure on the Scinde lines hitherto, and very small returns, *ib.* 6877-6881.

Further consideration of the cost of different parts of the Scinde, Punjaub, and Delhi Railway, and of the probable traffic, admission that the commercial profit is not likely to be satisfactory, the cost of construction being high, *Strachey* 7143-7852. 7874——The railway consists of three parts, the line from Kurrachee to Kotri, from Moultan to Lahore, and from Lahore to Delhi, *ib.* 7844.

The Scinde line has been proverbially a bad-paying one ever since it was opened, *Right Honourable W. N. Massey* 8874.

Seccombe, Thomas Lawrence, C.B. (Analysis of his Evidence.)—Practice of resorting to open tender when any considerable quantity of marine stores is required for India; careful check in the India Office before requisitions are complied with, 31. 50–53.

Explanations in connection with the charge for patients in the India Lunatic Asylum at Ealing, charge of from 7,000 *l.* to 9,000 *l.* a year when these patients were in the private asylum at Hackney, 69–75. 96–99——Decreasing number of lunatic patients, 74, 75——Reduction of the charge for each patient by the pay or pension to which he is entitled, 96. 110.

Information relative to several classes of civil and miscellaneous pensions and retired allowances, which make up a total of 215,264 *l.*; data for the conclusion that the greater portion of this expenditure will not recur, the charge being on the whole a decreasing one, 116 *et seq.*——Expected decrease in the Home Service pensions, the scale of salaries having been reduced, 125–135——Item of 27,770 *l.* as the charge for pensions to the uncovenanted service of India, this being an increasing charge, 139——Explanations as to the foregoing pensions being made in England though granted in India, 139 152–160——Distinct rules by which persons are regulated as regards the Home service, 145–148.

Authority and discretion of the Secretary of State with respect to the grant of compassionate allowances, 146. 149–151——Explanation relative to the item of Poplar Fund Pensions; reversion of the capital of the fund to Government, 165. 201–214——Particulars relative to the charge for gratuities, and for gratuities in lieu of pensions to members of the uncovenanted service, 170–175. 184, 185.

Several military and medical funds in respect of which there was a charge of 554,541 *l.* for pensions to subscribers, the funds and subscriptions having been made over to Government, 176–183——Gradual absorption of the capital of the military and medical funds towards payment of the pensions; large increase of charge out of revenue when the capital accumulated is entirely paid away, 181. 215–229——Very small payment in England in 1870–71 for relief of distressed natives of India, 186.

Total charge of 175,000 *l.* for allowance to officers of the covenanted service and the uncovenanted service, when absent on leave in England, 230–234——Obstacles to a satisfactory estimate of the payment for British troops in India; delay in fixing the rate for artillery, 249–252. 284–288.

Different rates charged by the War Office against the India Office for recruits sent to India and for men sent with their regiments, 253, 254——Several items comprised in the former capitation rate, 258.

Causes of the greatly increased charge per head for recruits as compared with the cost when the East India Company provided the recruiting establishment and the men; conclusion that the India Government is paying an unduly large sum at the present time, 300, 301——Difficulty in spreading the expense of training recruits over the whole time of service instead of paying the full amount with reference to service in India; return of the amount, in account, when men are sent home again, 354–363——Important effect of the re-organisation of the British Army upon the question as to the payments by India for recruits, 425, 426.

[Second Examination.] Item of 264,926 *l.* as the whole sum paid in England in 1870–71 in respect of the Indian troop-ship service; various heads of charge comprised in this amount, 440, 441. 546–550. 552, 553——Explanation as to there being no complete account relating to this service; delay or misapprehension on the part of the Bombay Government in supplying returns required at the Admiralty for the purposes of the account, 442–444. 519, 520. 522. 552, 553. 569, 570.

Very similar expense of the former system of sending troops by the Cape, and of the system of sending them by the Suez Canal; advantage of the saving of time by the latter route, 452–460——Defect in regard to there being a separate audit of the Admiralty expenditure for the troop service, and of the expenditure direct out of Indian Revenues, 589–591——Due credit given to India for stores returned to England for disposal, 612, 613.

Admission that, through the delay in obtaining returns from Bombay the Admiralty has not yet rendered a complete account showing that the Imperial Government has contributed its proper share to the expenses of the two troop-ships employed in Europe, 682–687.

Explanation relative to a payment of 216,000 *l.* during 1870–71 as the proportion chargeable to India of the capitalised value of retired pay, pensions, &c. granted during the year in respect of the Queen's troops in India; the real charge for the year will be 428,000 *l.*, but this large increase will not continue, 708–710. 716–723. 732–743——Inability of India to control the foregoing charge so far as it may be affected by a too liberal grant of pensions by the War Office, 724–726. 728–730.

Item of 132,000 *l.* in the Accounts for 1870–71 as India's share of the loss to be borne under the postal arrangement with the Treasury; the actual loss will, however, be reduced to about 70,000 *l.*; 792–795. 801, 802——Explanation of the principle upon

which

Seccombe, Thomas Lawrence, C.B. (Analysis of his Evidence.)—*continued.*
which the contribution of India to the loss under the postal arrangement was settled; circumstance of India not having been consulted upon the contract with the Peninsular and Oriental Company under which this loss accrued, 794, 795, 806–823.

Particulars relative to a payment of 4,800 *l.* as subsidy to the Euphrates and Tigris Steam Navigation Company for mail services between Bussorah and Bagdad, 796–800. 803–805——Statement as to the India Office being very much in the hands of the Post Office in the matter of the accounts under the postal arrangement, 801, 802. 816——Improved terms of the existing contract with the Peninsular and Oriental Company, made in 1870; 821, 822.

Loss of about 25,000 *l.* in 1870–71 upon the working of the Indo-European Telegraph, upon which there was a capital outlay of a million, prospect of the receipts covering the expenses in 1871–72; 826–834——Explanation in connection with the payment of 19,335 *l.* to the Maharajah Duleep Sing; advances made to him in 1856 and 1863, the interest on which is deducted from the original allowance of 25,000 *l.* a year, 835, 836——Decreasing character of the foregoing charge in course of time, 836.

Item of 134,000 *l.* as the charge in 1870–71 for salaries &c. of the establishment under the Secretary of State in England; comparative charge in previous years, 837–845——Very heavy work in the India Office in proportion to the staff employed, 841. 845——Circumstance of the home administration accounts not including any charge for interest on the money spent in building the India Office, 846–848.

Office hours of attendance from 10 to 4, there being an annual holiday of 48 working days, 849. 854, 855. 876–878——Information relative to the attendance of the members of the Council; this is discretionary, and no account is kept of the attendances, 850–875——Meeting of the Council once a week; frequent meeting also of the Committees, 850–852. 865–872——Charge of 3,000 *l.* for the auditor's establishment at the India Office, 879, 880.

Charge of 7,137 *l.* for the solicitor's establishment, including a salary of 2,000 *l.* to the solicitor, the latter being allowed to engage in private practice, 881–893——Salary of 500 *l.* a year to a standing counsel, who is also paid by fees for work done; recent change in this arrangement, 882, 883. 888, 889. 894–898——Large item in connection with appeals to the Privy Council, 894–896.

Payment of 15,266 *l* to the Bank of England and Bank of Ireland for management of the debt, at the rate of 340 *l.* per million, 899–902——Explanation in connection with a charge of, 8,673 *l.* for postage of despatches to and from India, 903–911——Heavier charge than usual (7,097 *l*) for stationery, printing, and bookbinding, 912, 913.

Old arrangement, since 1835, under which a payment of 12,000 *l.* a year is made in respect of the Persian Mission, 914–917——Charge of 4,544 *l.* for a special mission of Major General Goldsmith in order to settle the boundary between Persia, Affghanistan, and part of British India, 918, 919——Item of 44,962 *l* as one-third share of the consular establishments in China, the Imperial Government paying two-thirds; opinion that the payment by India is *not* excessive, considering the immense trade between India and China, 920–940.

[Third Examination.] Explanation of a payment of 800 *l.* in 1870–71 for the East India Company's expenses in connection with the distribution of dividends on their capital stock; this charge has been reduced from 1,200 *l.* and will expire in 1874; 1324–1330——Statement of the charges, respectively, for examination, and for allowances of candidates for the Civil Service; total of 17,159 *l*; 1331–1333——Expenditure incurred in connection with successful candidates for the Forestry Department, 1334–1337——Small charge in respect of the examination of candidates for the civil engineer establishment in India, 1338, 1339.

Information relative to a charge of 4,368 *l.* in respect of successful candidates for the Telegraph Department, and of scientific instructors, &c., 1340——Explanation of a charge of 800 *l.* for outfit of each puisne judge appointed from England, 1341–1346——Sinking fund being accumulated on the debt to the East India Company, the amount in 1874 will be about seven and a half millions, 1347, 1348——Circumstance of there being no supervision over the Civil Service candidates during the interval in England before their final examination; allowance of 300 *l.* to each of these, 1349–1355.

Charge of 2,915 *l.* for expenses of officers acquiring scientific knowledge; reference more especially to the payments to Colonel Maxwell whilst thus employed in England, 1356–1362——Examination relative to a charge of 1,600 *l.*, discontinued since 1870–71, for enabling natives to come to England and compete for the Civil Service; power now possessed by the Government of India to appoint natives direct to the covenanted service, though such power has not yet been exercised, 1363–1384.

Information in connection with an item of 18,027 *l.*, being a moiety of annuity payable till 1908 in respect of the Red Sea and Indian Telegraph, which proved a failure; management and control of this undertaking adverted to, 1386–1402——Explanations relative to sundry other charges, chiefly of small amount, in the accounts for 1870–71; 1403–

Seccombe, Thomas Lawrence, C.B. (Analysis of his Evidence)—*continued.*

1403–1411——Allowance of 1,600 *l.* a year to Mr. D. Fitzpatrick, of the Bengal Civil Service, whilst in England upon the Dyce Sombre case, 1412–1415.

Examination upon a payment for travelling expenses and allowances of two officers in attendance on the Duke of Edinburgh whilst in India; witness disclaims responsibility in this matter, the arrangement having been made in the Political Department, 1416–1424. 1436–1439——Charge of 10,088 *l.* in the Home Accounts of 1869–70 in respect of the Duke's visit to India, the charge in 1870–71 having been 1,555 *l.*; many of the presents bought with this money have not been distributed, 1419.

Increased detail in which the Indian Home Accounts are now furnished to Parliament, 1425–1427——Total of 11,513 *l.* as the cost of the Sultan's ball at the India Office, 1428——Doubt as to the Government of Bombay or the India Office having originated the charge for sending out a superintendent in charge of the manufacture of Ransome's concrete stone, 1429, 1430. 1435——Charge of 478 *l.* in respect of cinchona plants obtained from Peru and sent to India, 1432–1434.

[Fourth Examination.]—Explanation as regards the Indian troopships, and the evidence of Mr. Richardson thereon, that there is a charge of 13,000 *l.* debited to the Admiralty for wear and tear, 1441–1445.

Temporary character of many of the pensions included in an item of 215,364 *l.*; particulars promised to be supplied relative to this charge, 1446–1451. 1471–1473——Circumstance of Sir Erskine Perry continuing to receive his pension for service in India in addition to his salary as member of the Council at the India Office, 1452. 1456, 1457. 1469, 1470——Instance of double pension received by the same person; details promised to be furnished on this point, 1458, 1459——Different practice in India and in England in regard to the cessation of pensions when the holders are employed again in the service, 1460–1470——Special Act passed in order to enable Lord Lawrence to continue in the possession of a special pension when appointed Governor General, 1467, 1468.

Enumeration of the amounts now outstanding under the different loans contracted in England, and the rate of interest in each case, 1474–1478——Balance of about three millions unissued under the last Act; large cash balances also available for State railways and irrigation works, 1479. 1484–1488——Frequent issue of loans to make good deficiencies in the revenue, 1480–1482——Large increase of debt in the year after the Mutiny, 1480. 1492. 1523.

Statement of the amount of loans raised in each year since 1857–58, there having been only two years without borrowing; increase of 32,000,000 *l.* in the Home debt of India during the 13 years since the Mutiny, 1490–1507. 1523, 1524——Annual charge of about a million and three-quarters for guaranteed railways, &c., over and above the increase of the debt, 1508–1514——Comparative amount of the debt when the East India Company was abolished and at the present time; increase of the permanent debt from about 70,000,000 *l.* to about 106,000,000 *l.*, 1515–1522.

Examination on the subject of a guarantee of 5 per cent. having been given on a large amount of railway capital, whilst loans have been raised at 4 per cent.; causes of the different value of India stock and of railway stock in the market, 1524–1561——Large conversion of debt and reduction of interest effected in 1871; 1541——Necessity of very large cash balances, the present balances in England being about 2,500,000 *l.*, and the interest received being 2 per cent., 1542–1545. 1562——Constant effort made to keep down the debt, 1558——Power of paying off the Transfer Loan in a few years; conditions as to repayment, 1563–1567.

Much larger expenditure in reproductive works since the administration of India by the East India Company; surplus instead of deficiency in the years 1861–70 if all expenditure on public works had been excluded, 1568–1570. 1580–1601——Explanation relative to a statement, made about two years ago, estimating the proportion of the registered debt of India held by natives and by Europeans respectively, 1571–1574——Calculated annual saving of about 450,000 *l.* in 1874 on the redemption of the East India 10½ per cent. stock, 1575–1579——Statement to the effect that in 1869–70 the revenue exceeded the expenditure, 1588–1590.

Consideration of the distinction between ordinary public works and extraordinary or reproductive works, the expenditure on the former going against the revenue of the year, 1580, 1581. 1599–1605——Statement on the subject of the appropriation of certain military and medical funds as revenue, thus involving an increased charge for pensions in future years; question hereon whether the East India Company were not equally ready to avail themselves of "windfalls" of this description, 1589–1596. 1624–1637——Much stricter system of account at present than in the time of the East India Company, 1596. 1624.

Obstacles to an account showing the returns from irrigation works, in relation to the total cost; value of such works in raising the land revenue, and preventing famines, irrespectively of the direct receipts from water-rents, 1606–1623——Reference to a certain classification of the annual expenditure in the years 1860–69, on public improvements, and

Seccombe, Thomas Lawrence, C.B. (Analysis of his Evidence)—*continued.*
and on military works and civil buildings, respectively; deficit of 10,347,000 *l.* on these ten years, after including all expenditure on public works, 1638–1651——Difficulty in raising loans in India; very small and diminishing portion of the debt of India which is held by natives, 1652–1654.

Witness submits further explanations in connection with different items in the Home Accounts for 1870–71; reference more especially to a charge under the head of Family Remittances, and to certain Miscellaneous Payments, 1655–1674.

Secretariats (India). Total of 221,500 *l.* as the charge for secretariats in 1870–71 as compared with 173,500 *l.* in 1856–57; explanations of the causes and items of increase, *Harrison* 4450–4462. 4498, 4499——Charge of 22,790 *l.* in Madras, and of 36,224 *l.* in Bombay; increase in the latter case as compared with the charge in 1856–57, *ib.* 4452–4456——Charge of 72,500 *l.* for the secretariat of the Governor General, *ib.* 4457, 4458——Statement of the salaries of the principal secretaries in Calcutta and in Madras and Bombay respectively, *ib.* 4459–4461. 4498, 4499.

Causes of the increase from 39,800 *l.* in 1856–57 to 50,400 *l.* in 1870–71 in the cost of the military secretariats, *Harrison* 4463, 4464——Cost of 31,900 *l.* for the Public Works Secretariat in 1870–71, as against 14,300 *l.* in 1856–57, great extension of duties in the interval in respect of railways and irrigation works, *ib.* 4465.

Secretary of State for India. See *Council of India. Expenditure.*

Service of Processes. New charge of nearly 50,000 *l.* for the service of judicial processes in Bengal, *Harrison* 4797–4802.

Sheep. Failure of an attempt to introduce Merino sheep into Mysore, *Elliot* 3283–3285.

Silver Coinage. Decrease of silver coinage by the Mints from 10,000,000 *l* in 1856–57 to 1,000,000 *l.* in 1870–71; obstacles and objections to any large or rapid reduction of the establishments in consequence of the increased work required, *Harrison* 3980–3993——Explanation relative to the charge of 2 per cent. made for the conversion of silver bullion at the Mints; doubt as to this being the cause of the decreased import of bullion, *ib.* 3993–3996. 4011, 4012. 4016–4024.

Circumstance of the rupee being worth a little more than the English two-shilling piece; doubt as to the advantage of making them precisely equivalent, *Harrison* 4064–4066. 4070, 4071——Preference given at Aden and Suez to florins over rupees, as the former can be exchanged for sovereigns without loss, but not the latter, *Gay* 7072, 7073.

Total of 6,645,452 *l.* as the reserve in silver coin on 31 March 1871, *App.* 640.

Simla. Exceptions taken to the expense (about 40,000 *l*) of the Governor General's migration to Simla; grounds for the conclusion that the Government of the country suffers thereby, and that it is not necessary for him or his council to go there on the score of health, *Dacosta* 8046–8054. 8176–8194. 8265–8269——Evil on the score of the Governor General in Council being removed from the influence of public opinion; grounds for this conclusion considered, *ib.* 8046. 8050–8053. 8176–8194.

Witness complains strongly of the annual migration of the Government of India to Simla; great expense involved, whilst the legislation of the country is much prejudiced, *Hutton* 8564, 8565——Intended abandonment of Simla, as being unhealthy, *ib.* 8567.

See also European British Subjects Bill. Land Improvement Act.

Small Arms. Supply of small arms chiefly from Enfield, the prices being left to the War Office authorities, *Hon. G. C. Talbot* 1177, 1178——Practice as to the regiments for India taking their arms with them, and as to the check applied on the part of the India Office relative to the pattern, &c., *Bedford* 1266–1272.

Small Cause Courts. Statement of the salaries of the Judges of the Small Cause Courts in Bengal, one out of six judges being a native, *Harrison* 4872–4875——There are five judges in the local court in Calcutta, and one in the Mofussil, *ib.* 4872——Large extension of Small Cause Courts in India, increased cost in respect thereof in Madras, Bombay, &c., *ib.* 4888–4895.

Soane (Railway) Bridge. Doubt as to its having been feared in the case of the Soane Bridge that the river would leave its course and form a new channel, *Danvers* 2903, 2904.

Solicitor's Establishment (India Office). Charge of 7,137 *l.* in 1870–71 for the solicitor's establishment, including a salary of 2,000 *l.* to the solicitor, the latter being allowed to engage in private practice, *Seccombe* 881–893.

Sovereigns, Circulation of. Very limited circulation of sovereigns in India; statement hereon as to the sovereign being worth more than ten and a quarter rupees, as given for it at the Government treasuries, *Harrison* 4062, 4063. 4074–4084.

Spirits and Drugs (Excise). Charge of 95,753 *l.* in 1870–71 for the collection of the excise revenue on spirits and drugs, there being also a charge of 197,723 *l.* for the cost price of opium, *Harrison* 3757–3762——Complete change since 1856–57 as regards the excise administration, and considerable increase and expense, owing to the adoption of the Sudder Distillery system, *ib.* 3764–3766.

Return showing the income for 1870–71 of each local Government under the head of Excise (Spirits and Drugs), *App.* 641.

Staff and Household (Governor General and Governors). Charge of 58,000 *l.* in 1870–71 for the staff and household of the Governor General and the Governors; explanation as to the large increase under this head in the case of Bombay since 1856–57, and as to the material increase also in Madras, *Harrison* 4361–4379.

Complaints by natives relative to the large cost of the staff and household of the Governor General, *Hutton* 8572.

See also *Governor General and Local Governors.*

Stamps and Stamp Duties. Charge of 23,123 *l* in 1870 in respect of stamps sent to India, these being supplied by Messrs. De la Rue under running contract, *Honourable G. C. Talbot,* 944–947——Excellence of the supply of postage stamps and general stamps procured by contract from Messrs. De la Rue, *ib.* 954.

Total of 35,000 *l.* as the refund for stamps in 1870–71, including the allowance for spoiled stamps; discontinuance in future of a large portion of this refund, *Harrison* 3508, 3509——Increase from 32,123 *l.* in 1856–57 to 101,610 *l.* in 1870–71 in the charges in connection with the stamp duties; chief cause of this difference in the increase from 15,000 *l.* to 80,000 *l.* for discounts on sale of stamps, *ib.* 3958–3974——Increase of stamp duty from 637,900 *l.* in 1856–57, to 2,310,000 *l.* in 1870–71, *ib.* 3962.

Explanations by Sir R. Temple in connection with the estimate of 2,500,000 *l.* as the stamp duties in 1872–73, *App.* 495, 496.

State Railways. See *Railways,* II.

Stationery, &c. Heavier charge in 1870–71 (7,097 *l.*) than usual for stationery, printing, and bookbinding at the India Office, *Seccombe* 912, 913.

Explanations in connection with the expenditure of 157,885 *l.* for stationery and printing in 1870–71, all the stationery sent to India being procured through the Stationery Office; defence of this arrangement on the score both of quality and price, *Honourable G. C. Talbot,* 980–990. 1048–1053——How far any check is applied to the prices charged by the Stationery Office, *Bedford* 991–996. 1024–1038——Charge of 2½ per cent. by the Stationery Office beyond the contract price, for examination, receipt, delivery, &c.; conclusion as to the moderate character of this charge, *Honourable G. C. Talbot and Mr. Bedford,* 997–1003. 1019–1023. 1048–1053. 1116–1122.

Slight variation in the annual supply of stationery, *Bedford* 1019, 1020——The indents for stationery are generally annual, *Honourable G. C. Talbot* 1098.

Charge of 233,675 *l.* for stationery and printing in India in 1870–71 as against 90,541 *l.* in 1856–57; this is exclusive of the charge in England, *Harrison* 5692–5694——Slight increase of cost of the Stationery Offices in Calcutta, Bombay, and Madras, *ib.* 5695, 5696——Statement as to portion of the expense under the head of stationery having formerly been included under other heads, *ib.* 5704. 5722–5725.

Paper submitted by Mr. Talbot showing the expenditure in England for stationery for the years 1866–67 to 1870–71, *App.* 739.

9. *Suggested Reorganisation of the Department.*

1. *Explanations generally as to the Working of the Department:*

Efficient examination in detail of the stores generally before they leave this country for India, there being a competent examiner for each branch, *Hon. G. C. Talbot* 964–969——Non-inquiry by the examiners into question of price, *ib.* 970, 971——Situation of the store premises in the Belvedere-road, they having been built by the Imperial Government, *ib.* 974–976——Great variety of stores supplied, it not being feasible to procure them advantageously in India, *ib.* 977–979.

STORES AND STORE DEPARTMENT—continued.

1. *Explanations generally, &c.*—continued.

Belief that no remonstrances have been made by the Government of India relative to the prices paid in England for stores sent out, *Hon. G. C. Talbot* 1006–1018——Complaint in a certain petition from Calcutta, that the stores were unduly dear as regards first cost; copy of the reply to the charges in this petition, *ib.* 1009–1011. 1040, 1041. 1043–1047——Practice of obtaining stores either by open competition or by limited competition, *ib.* 1083, 1084——Very rare complaints from India as to the character of the stores, *ib.* 1320.

Papers supplied by the Director General of Stores in elucidation of the working of the department, and in explanation of the cost of various stores, *App.* 739–741.

2. *Cost of the Department in relation to the Value of the Stores sent to India:*

Item of 21,000 *l.* for salaries, wages, rent, &c., and for contingent expenses in connection with the receiving and shipping of the stores, *Bedford* 972, 973——Examination upon a statement that the agency charge on stores amounted to only 1⅔ per cent.; omission of certain extra and contingent charges, which bring the total up to about 3 per cent., *Bedford and Hon. G. C. Talbot* 1054–1082——Statement on the subject of the department not directly performing the duties of agents as regards army clothing, ordnance stores, and stationery, which represent a large total, *Bedford* 1213–1231.

Careful calculation made to the effect that the cost of the stores' department is about 2 *l.* 17 *s.* per cent. on the total value of the stores exported in 1870–71, *Bedford* 2749. 2751.

Paper showing the cost of the department with relation to the expenditure on stores, *App.* 741.

3. *Cost of Freights:*

Explanation on the subject of freights; denial that the rates are unduly high, *Hon. G. C. Talbot* 1099–1110. 1114——Very inappreciable loss in the transit of the stores, *ib.* 1111–1113. 1115——Dissent from a statement that the rates of freight are much higher than are paid by merchants, *Hon. G. C. Talbot and Bedford* 1114.

Official reply by witness to complaints by the Committee on the Calcutta Port Fund, that excessive expenditure had taken place in the shipping and freight of screw moorings and other stores; evidence in further elucidation and defence of the action of the State Department in this matter, *Hon. G. C. Talbot* 1128–1133. 1137, 1138. 1155–1160——Additional explanations on the foregoing subject, to the effect that blame does not attach to the Store Department, *Bedford* 1134–1136. 1139–1143. 1160, 1161.

Statement showing the very small amount of the losses which would be covered by marine insurances; average of 11·6 per cent. over a period of ten years, *Hon. G. C. Talbot* 2745, 2746——Justification of the payment of higher freights for Government stores than for merchants' goods, impression, however, that on the average the former freights are not higher than the latter, *Bedford* 2747.

Instances of delay and waste under the system of indenting for stores through the Secretary of State; unduly large payment for freight, *Dacosta* 8037–8044.

4. *Indents from India:*

Careful check at Calcutta upon the indents from the minor Presidencies for stores, *Pears*, 450——Check in India to which the indents sent home are subjected, *Hon. G. C. Talbot* 978.

Check applied at the India Office when the demands from India for stores are greatly in excess of the usual demands, *Hon. G. C. Talbot* 1004, 1005. 1091–1098——Separate indents from each Presidency; authorities in India responsible for the indents, *ib.* 1085–1090——Frequency of emergent indents from India; obstacle to the prevention of these, *Bedford* 1278, 1279.

5. *Marine and Ordnance Stores:*

Total of 77,000 *l.* as the expenditure in 1870–71 for stores from England for various marine purposes in India; checks upon the quality of these stores, *Pears* 25–30. 47——Practice of resorting to open tender when any considerable quantity of marine stores is required for India; careful check in the India Office before requisitions are complied with, *Seccombe* 31. 50–53.

With respect to an expenditure of 929,000 *l.* for stores for India, these consist chiefly of ordnance stores, *Pears* 447——Supply of some military stores from Government manufactories in India, but not from any other source, *ib.* 448, 449

6. *Public Works Stores:*

Amount of payments in England for stores, &c., for public works, ordinary, in the years 1867–70; separate account of these payments for extraordinary works, *Strachey* 6283–6285——Occasional instances of irregularity and delay in the transmission of stores for public works, *ib.* 6816–6818.

STORES AND STORE DEPARTMENT—continued.

7. *Returned Stores:*

Due credit given to India for stores returned to England for disposal, *Seccombe* 612, 613——Return of various old and obsolete stores from India for disposal by the department; these are sold by auction, *Hon. G. C. Talbot* 1305-1309. 1316-1323——Obstacle to a comparison between the cost of freight of returned stores and the amount realised on sale, *Bedford* 1310-1312.

8. *Expediency of Public Tender:*

It would be an improvement if tenders were invited publicly for the stores supplied from England, *Dacosta* 8045.

9. *Suggested Reorganisation of the Department:*

Strong opinion of witness as to the want of an amended organisation in England in reference to the purchase and shipping of stores for railways, &c., in India; suggestions relative to the amended system desirable, *Strachey* 6791-6793. 6807-6819. 6826-6835——Objectionable character of the present organisation under the Indian Council as regards the shipping of stores for India, *ib.* 6807.

See also *Anchors. Beer. Navy and Marine. Ordnance and Ordnance Stores. Paper. Stationery, &c. Telegraphs.*

Strachey, Major General Richard, R.E. (Analysis of his Evidence.)—Connection of witness with the Secretariat of the Government of India in various capacities since 1856; he left India early in 1871; 6157——Origin of the formation of the Public Works Secretariat Department by Lord Dalhousie in 1854; gradual growth of the department since that period, 6158——Existence of a Public Works Department under each local Government, with full discretion in carrying out works, the Government of India exercising a general control both of policy and finance over the local administrations, 6158-6163. 6201-6203.

Direct control by the Government of India of the railway administration, save in Bombay and Madras, where the control rests with the local governments, 6158——Direct control also of the Government of India over military works in upper India; recent date of this arrangement, *ib.*——Special and separate system of administration of the Telegraph Department, *ib.*——Recent transfer of the administration of the forests to the Agricultural Department, 6158, 6159.

Organisation and staff of the Public Works Department under each local administration; various grades of engineers and subordinates, the head of the department being termed the Public Works Secretary and Chief Engineer, 6164——Large number of Royal Engineer officers employed in the department, who are for the time regarded as being entirely in civil employ; addition to their military pay whilst thus engaged, 6165-6169——Very small proportion of Engineer officers in India who are employed with the troops, 6165, 6166——Practice as to the employment also of sappers on public works, 6170, 6171.

Statement showing that, save in the lower grades, very few natives are employed in the Public Works Department; obstacle to their qualifying for the higher grades, 6172-6176——Rate of pay in different grades; similar pay of natives and Europeans in the same grade, 6177-6184——Special account branch attached to the department; duties and remuneration of the accountants, 6185-6191. 6193.

Explanation relative to the initiation of works in the department, and the conditions as to their sanction, and as to estimates before works are undertaken, 6192. 6194-6199. 6204-6208——System upon which the annual expenditure in each Presidency is estimated; right reserved by the Government of India of limiting the outlay on any particular class of works 6200-6203——Special appropriation for military works and for irrigation works, transfer from one class of work to another not being allowed without special sanction from the central Government, 6201——Necessary sanction of the Financial Department before any increase of salary in the Public Works Department, 6203-6208.

Practice of placing at the disposal of the local governments as nearly similar a sum every year as possible for ordinary works; amount of allocation in each of the four years 1867-70, adverted to hereon, 6209-6214——Limited variation in the annual expenditure from 1867 to 1870 under the head of "Repairs;" indispensable character of this charge 6215-6217. 6222——Important decrease under the head of "Construction," or new works, ordinary, since 1867, in accordance with the demands of the Financial Department, 6218-6220.

Explanatory statement relative to the distinction drawn between ordinary new works and extraordinary new works, as for irrigation; conditions laid down in regard to continued expenditure out of revenue, so that loans should not be too largely resorted to, 6220-6233——Gradual increase of pressure upon the Public Works Department by the Financial Department in the direction of throwing nearly all the expenditure on irrigation works upon borrowed money, 6229-6231. 6260-6262——Objection raised by the Public

Strachey, Major General Richard, R.E. (Analysis of his Evidence)—*continued.*

Public Works Department against advances out of loans for small irrigation works not admitting of a capital and revenue account, 6231–6233.

Circumstance of repairs being excluded from the capital account of extraordinary expenditure on reproductive works; means, however, of showing the return from each work after deducting the cost of repairs, 6234–6263——Insufficient time hitherto for judging of the financial results of irrigation works created with borrowed capital, 6254. 6260–6262——Separate account kept of the Ganges Canal; satisfactory results as regards the revenue therefrom in proportion to the charge, 6254–6257——Defence of the practice of openly borrowing money for carrying out public works, 6259.

Slight variation in the annual charge in the period 1867–70 for repairs of civil buildings 6265–6267——Large decrease in 1870 as compared with 1867 in the charge for new civil buildings; way in which the new buildings are selected out of the extensive demands put forward, 6268–6272——Reduction from 232,000 *l.* in 1867, to 201,000 *l.* in 1870, in the expenditure on repairs of military buildings; expected sufficiency of the latter sum in future, through the completion of new barracks, 6272–6274——Great variation in the annual expenditure on new military buildings, item of 791,000 *l.* in 1870, as compared with 1,507,000 *l.* in 1867; 6274, 6275——Explanation of the practice in the selection of military buildings to be constructed in each year, and in the limitation of construction by the Government of India according to the sum to be assigned, 6276–6281——Origination of the suggestions for new barracks, &c., in the military department, 6277.

Statement relative to various other heads of expenditure of the Public Works Department during each of the years 1867–70; 6282–6284——Amount of payments in England for stores, &c., for public works, ordinary, in the years 1867–70, separate account of these payments for extraordinary works, 6283–6285——Want of a more complete and satisfactory account of the annual loans and expenditure in respect of public works extraordinary; concurrence of Lord Mayo with witness as to the improvement required on this point, the financial department having, however, interposed obstacles to the amendment proposed, 6286–6299.

[Second Examination.]—Tendency of the administration of India in recent years to assign the business of the different departments to individual or special members of the Council, the only exception being that no member has been specially designated to take charge of the Public Works Department; prejudice thereby, 6300–6304——Personal charge of the department by Lord Mayo, 6302——Strong organisation of the department as regards its staff, there being special officers of high position in charge of military buildings, of irrigation works, and of railways, 6305–6307——Intention that the State railways throughout India shall be entirely controlled by the Government of India, 6306, 6307. 6312.

Detailed management of the telegraph business by the Director General of Telegraphs, who is not directly connected with the Public Works Office, 6308——Transfer of the forests to the Agricultural Department, further adverted to, 6309——Management and audit of the accounts of the Public Works Department by the department itself. control also over the accounts of the railways, 6309, 6310——Very similar organisation of the department in the provinces to the central organisation, 6311.

Opinion that the general system of organisation of the Public Works Department is satisfactory, though for certain reasons it is the best abused department in the administration, 6313, 6314——Admission that the operations of the departments have not been free from blame in some respects, 6314, 6315——Belief, however, that on the score of extravagant and inconsiderate expenditure on public works, the Home Government have been more open to censure than the Government of India or the Public Works Department; examination as to the grounds for this conclusion, 6315 *et seq.*

Sundry details relative to the origination, sanction, and working of the Calcutta and South Eastern (or Mutlah) Railway, the ultimate purchase of the undertaking by Government, and the great loss incurred; responsibility attaching to the Secretary of State for India (for the time being) rather than to the authorities in India for the guarantee and construction of this railway, 6319–6338. 6346–6357. 6488–6496. 6509–6513. 6552–6556——Strong objection made by the Government of India to the Mutlah project, but without effect, 6319–6323. 6332. 6354–6357——Failure of the line to pay its working expenses, the deficit, as well as the guarantee, having been made up by Government until the line was transferred, 6327. 6488–6492.

Extremely inefficient system upon which expenditure on the guaranteed railways took place, the Government of India having been powerless to exercise a real and effective control; data for this conclusion, 6334–6340. 6513–6518——Conclusion as to the expediency of construction and management by the State instead of by companies, 6340. 6380, 6381——Great difficulty of accurately estimating the traffic and the profits from any projected railway; nature of the basis of the estimates in the case of the State railways, 6341–6345 6357–6359. 6558.

Examination relative to the Indus Valley line, the traffic returns, and the cost of working; necessary payment of some 20,000 *l.* or 30,000 *l.* by Government in order to make up the

Strachey, Major General Richard, R.E. (Analysis of his Evidence)—*continued.*

the guarantee of 5 per cent., 6360-6378——Excessive first cost of the line from Kotri to Kurrachee whilst the traffic must be small, 6361-6363. 6375. 6497-6503——Circumstance of witness having opposed the construction of the Indus Valley line, 6364. 6377——Expected loss upon the projected extension from Mooltan to Kotri; gain on political grounds, 6366-6369.

Various considerations involved in the question of railway extension in India, in addition to the financial consideration, 6378——Approval of the State lines from Agra to Ajmere, from Lahore towards Peshawur, and of the Indore line, 6379——Grounds for the conclusion that the expense of railway supervision is greater when carried out by companies than by Government; cost of pensions in the latter case adverted to as an important item, 6382-6386.

Further statement as regards the expenditure on public works extraordinary in 1867-70, showing that after allowing for certain special expenditure in 1868 and 1869, the assignments in each year were tolerably regular, 6387——Clear distinction shown in the Budget Estimate between assignments for public works extraordinary out of loan and out of revenue; absence of distinction as regards the work, but only as regards the expenditure, 6388-6394. 6400-6404. 6408——Practice of making special loans to municipal bodies and others for public purposes, such as the water supply of towns; loss incurred on some of these transactions, 6394-6399.

Evidence with further reference to the system upon which money is applied for to, and is allocated by, the financial department to the Public Works Department, as regards extraordinary works, conclusion that the former department in having never yet remonstrated against the amount, has only refrained from doing so because the expenditure has been reasonable, 6404-6427. 6449-6486.

Obstacle to preparing the estimates for works in India in the same form as the English estimates for works, the particular work being estimated for separately, 6404. 6441-6443——Examination upon witness's statement that the Public Works Department has never asked for an unduly large sum in borrowed money for extraordinary works, 6409 *et seq*——Total of 2,615,000 *l.* as the estimate of extraordinary outlay for 1872-73; opinion that this expenditure, out of loans, is not unduly large, 6410. 6421-6427. 6459.

Further reference to the intended keeping of separate accounts of extraordinary works, showing the expenditure continuously, 6428——Due care taken to supervise the detailed expenditure on each work, careful allocation of the charge for supervision, 6429, 6430. 6443, 6444——Careful preparation and revision of the estimates of the department, though in some instances there has been much inaccuracy, 6431, 6432——Execution of works by contract, so far as this is practicable; superior advantage in some respects of the system of department work, which is largely carried out, 6433, 6434.

Considerable delay formerly in the execution of works, much unnecessary expense having been incurred through the want of concentration; remedy of this evil recently, 6435-6440——Question considered whether under the new system of extended local administration, the Government of India will not keep, for Imperial purposes, all increasing sources of revenue, whilst any increased charge for public works will fall upon the local governments, 6445-6448——Exceptions taken to the conclusions drawn from a certain paper professing to show a surplus revenue of 4,986,000 *l*, and a deficiency of 10,997,000 *l.*, for the ten years, 1861-70; absence of any real surplus to be set against the deficiency, 6448-6458.

Prompt measures adopted by Lord Mayo for restricting the chronic excess of expenditure and for increasing the revenue, 6458——Argument as to the great fallacy of the reasoning that but for the public works expenditure there would have been a surplus instead of a deficiency on the ten years from 1860 to 1870; equal claim, on public grounds, to expenditure on irrigation, roads, &c., as on the improved administration of justice, the post office, &c., 6458-6461——Absence of increase of expenditure on ordinary works in 1870 as compared with 1860, the increased expenditure being really in the civil administration, 6461-6464.

Distinct and avowed borrowing for works extraordinary, witness showing that but a very small portion of this expenditure comes out of the revenue of the year, 6464-6477——Great increase in the development of all useful public works since 1856-57; 6487——Costly dispute in the case of the Kotri and Kurrachee line between the Company and the contractor, 6503——Inaccuracy of a statement as to the decreased traffic receipts of the railways being owing to the bad treatment of the natives by the European employés on the lines, 6504——Falling off in the goods traffic of the East Indian Railway attributed to an unwise alteration of the tariff when there was a tendency to stagnation in trade, 6505-6508.

Further statement with regard to the Mutlah project, that a mistake was doubtless made by the Secretary of State, 6509-6512——Consideration of the amount of responsibility or blame attaching to the Public Works Department in respect of the wasteful expenditure on railways, &c.; primary responsibility (in India) of the Government of

India,

Strachey, Major General Richard, R.E. (Analysis of his Evidence)—*continued.*

India, whose instructions the department carry out, without suggesting or originating expenditure, 6513–6536——Bad construction of some barracks adverted to in reference to the measure of blame attaching to the department; strong opinion expressed by Lord Mayo on this matter, 6519–6529.

Great defect in there not being a member of the Council of the Governor General specially responsible for the administration of public works; witness has repeatedly made representations to this effect, although nothing has been done, 6536–6544——Reform contemplated by Lord Mayo to the foregoing effect, 6541——Large present expenditure on public works, whilst the prospective or suggested works involve an immense cost, 6545–6551——Expediency of great caution before the Secretary of State prescribes to the Government of India expenditure on a work in opposition to the representations of the latter, 6555, 6556.

Opinion that irrigation works in India will in most cases give satisfactory returns, 6557——Explanation, as illustrated by the Rajpootana Railway, of the basis upon which estimates are formed of the cost, traffic, and net revenue of new lines, 6558–6562.

Expectation that the expenditure recommended on canals will be remunerative, 6563, 6564——Statement of the income from the Ganges Canal in the three years 1867–68 to 1869–70; 6565——Very large income or profit from the Eastern Jumna Canal in these years, *ib.*——Consideration of a paper (submitted by the Member for Brighton) professing to show that the returns from the Ganges and Eastern Jumna Canals, with reference to accumulated capital, are much less than are assumed by witness, 6566–6578——Error of a statement that the Eastern Jumna Canal was constructed antecedent to British rule, 6568–6570——Argument that so far as the incidence of taxation goes, it is not correct to add to the capital cost of canals the surplus charges for interest, &c., which are met out of the annual revenue of the country, 6571–6578.

[Third Examination.]—Further explanation and defence of the system of treating as capital in the account of any canal, &c., only the outlay on construction, exclusive of interest on such outlay, 6579–6586——Investigation of the accounts of the Ganges Canal, with reference more especially to the cost of the canal to the people of India before returns were derived, 6583–6594. 6620–6625——Denial that in commercial transactions it is the practice to charge capital with interest up to the time of profits accruing, 6586.

Statement relative to the large indirect return from the Ganges and other irrigation canals in the shape of increased land revenue: credit to be taken for this under a different and improved form of accounts, 6594 *et seq.*——Further evidence relative to the several improvements long desired by witness in the accounts of irrigation works, the representations made by him on the subject, and the reasons for the non adoption hitherto of the required reform, 6594–6597. 6626–6639. 6689–6701——Details as to the system upon which cultivators are charged with water from irrigation works; provision in certain Bills that a water rate might be demanded from the occupiers even though the canals were not utilised, 6597–6619. 6635 *et seq.*

Examination upon witness's suggestion that in the separate yearly revenue accounts of irrigation works, the income should be held to include all increase of land revenue actually obtained on irrigated land, 6635 *et seq.*——Admission as to witness having suggested an expenditure of 30,000,000 *l.* or 40,000,000 *l.* upon future irrigation works, 6676–6681——Explanation relative to the comparatively inexpensive character of the Eastern Jumna Canal; natural facilities of construction, 6681–6688——Great physical and engineering difficulties to be overcome on the Ganges Canal, so that the work was costly, 6687. 6688.

Explanation and defence of witness's proposal, that the increase of land revenue should be ascertained by deducting from the actual revenue in the irrigated lands the former revenue received before the irrigation began, 6689–6699. 6702–6705——Suggestion made by witness when in India, that the general annual accounts of the revenues should show together the whole of the revenue from irrigation, 6700, 6701——Much greater value of irrigation in some parts of India than in others, where there is a good rainfall; in Scinde cultivation is impossible without irrigation, 6702–6705.

[Fourth Examination.]—Question considered whether under the Punjab Municipal Act of 1867, the local authorities have not full power to levy taxes irrespectively of the Governor General, 6706–6711——Exception taken to certain statements as to excessively large amounts having been levied by way of local taxation in the North Western Provinces, Bombay, &c., that is, in proportion to the land revenue, 6712–6719——Disapproval of any unlimited powers of taxation in the local authorities, 6719——Very objectionable character of much of the local taxation, *ib.*

Statement as regards the large expenditure suggested by witness on reproductive works, that the cost would be borne by loan and would not necessarily increase local taxation, 6720–6726——Best security against unnecessary taxation for public works in the

Strachey, Major General Richard, R.E. (Analysis of his Evidence)—*continued*.

the responsibility of Government, and in the appointment of efficient and honest governors, 6723-6726——Very limited influence of public opinion in India, 6726. 6849-6852——Advantage if concurrently with provincial financial administration there were local consultative bodies by whom schemes should be investigated; natives should be included in these bodies, 6726, 6727.

Admission that in the case of some irrigation works, it has not been found practicable to levy such high rates as were at first proposed, 6730——Explanation as regards the Orissa works, that these were devised by the East India Irrigation and Canal Company, and that the estimates were discredited by Government, 6731——Pressure in connection with the question of famine, which decided Government to take over the Orrissa works, and to pay for them far more than their market value, in order to bring them into operation; incomplete state of these works, it being estimated however that the returns will eventually prove remunerative, 6731, 6732. 6740. 6752-6760.

Further reference to the Mutlah project as having involved objectionable and unnecessary expenditure, 6733, 6734——Information relative to the object of the Godavery Navigation Works, and the expense involved; unremunerative character of this scheme, 6735-6739. 6741. 6750, 6751——Action respectively of the Secretary of State and of the Government of India relative to the Godavery works, and their sanction in the first instance; disapproval of the scheme by the latter, 6741-6749.

Guarantee of 1,000,000 *l.* by Government in the case of the Madras Irrigation and Canal Company, there having been a subsequent loan of 600,000 *l.* to the Company; incomplete state of the works, 6761-6767——Complicated arrangements entered into between Government and the Orissa Company previously to the transfer of the works, 6768-6770——Opinion that the large expenditure on Kurrachee Harbour is at least premature, and that the money might have been better spent elsewhere, 6771-6773.

Origination doubtless of misdirected expenditure in India as well as in England; opinion that the worst specimens have arisen from interference from England, 6773-6775——Failure financially of the guaranteed railways with one or two exceptions, 6776——Marked failure in the case of the Scinde, Punjab, and Delhi line, *ib.*——Recent guarantee to the Carnatic Railway; impression that the Government of India was not consulted in the matter, 6777-6780——Necessity of the guarantee to the Oude and Rohilcund Railway; probable approval by the Government of India in this case, 6778 6783, 6784.

Statement that many financial arrangements relative to the guaranteed railways have been settled by the Secretary of State in Council, without the cognizance of the Government of India; necessary consent of the majority of the Council, 6780-6782. 6785-6787——Exception taken to certain predictions of Sir Charles Trevelyan in 1864, as to the waste of money sure to result from an extension of public works under the organisation then in force, admission, however, that there have been instances of waste and irregularity, 6788-6790.

Strong opinion of witness as to the want of an amended organisation in England, in reference to the purchase and shipping of stores for railways, &c, in India; suggestions relative to the amended system desirable, 6791-6793. 6807-6819. 6826-6835.

Initiative of the Government of India in respect of the State lines from Lahore to Peshawur, and from Moultan to Kotri; promotion of these lines mainly on military and political grounds, 6794, 6795. 6868-6874——Inaccuracy of certain figures in an official report relative to the cost of the Punjab Northern line, 6794. 6873, 6874——Expected loss of 30,000 *l.* or 40,000 *l.* a year on the Moultan and Kotri line, 6795. 6876——Object of the State line from Agra to the Sambhur Lake and Ajmere, to facilitate the conveyance of salt; estimate of 5,000 *l.* a mile as sufficient for the construction of this line, and for rolling stock, 6795, 6796. 6801-6806——Limited extent to which the lines constructed for military purposes can be regarded as reproductive works, 6797-6800——Expectation that the Rajpootana line will be remunerative, 6806.

Grounds for the conclusion that as regards supplies of stores from England, and executive duties generally in England, there should be an executive head who should have a specific responsibility; want of concentration in this respect, under the present system and working of the Indian Council, 6807-6819. 6826-6835——Contemplated continuance of the system of consultation of the members of the Council upon questions of policy and finance, 6807-6814——Occasional instances of irregularity and delay in the transmission of stores for public works, 6816-6818.

Different persons who may be responsible for excess of expenditure beyond estimates for public works, 6820——Absence of any laxity in the Government of India in its supervision of the Public Works Department, 6821-6824——Continued improvement being made in the administration within the department, 6823——Correction of some misconception which exists as to the constitution and functions of the department, and its relations to the Financial Department and to the Governor General in Council, 6824——Growing

Strachey, Major General Richard, R.E. (Analysis of his Evidence)—*continued.* ——Growing tendency to concentration of responsibility in the Government of India, 6825.

Grounds for the conclusion that as regards the guaranteed railways, and their accounts and expenditure, a concentration of authority in a single person in the Council of India is much needed, 6836–6839. 6902–6904——Repetition of the opinion that there should be a special member of the Council of the Governor General charged with the duty of controlling the public works administration, 6840–6842——Inadequate authority of the Secretary in the Public Works Department, 6841, 6842——Mischief in works originated by witness, (when secretary in the Department), having been carried out under the name of the Governor General in Council, 6842, 6843.

Satisfactory local contracts sometimes made in India in carrying out public works, 6844——Decided objection to the system of guaranteeing companies a fixed rate of interest upon a large amount of capital, 6845——Room for much improvement in the accounts generally relative to the returns derived from the works, 6846.

Further explanation that ordinary public works, such as repairs and new works not carried out with borrowed money, are paid for out of revenue, 6853. 6854——Statement that barracks now fall under the head of ordinary works, though for a short period they were dealt with as extraordinary works provided out of loans, 6855-6859——Intention of the Government that extraordinary public works, constructed out of loans, shall as a rule be reproductive; action of the Government to this effect, 6860–6866.

General accuracy of a statement purporting to show a gross loss of about 3,000,000 *l.* a year on the guaranteed railways; set-off against this loss in the indirect value of the railways on political and other grounds, 6867. 6882–6884——Statement as to the whole line from Lahore to Peshawur not being yet sanctioned, 6874——Calculation that the line from Moultan to Kotri will cost, not 5,000,000 *l.*, but 3,000,000 *l.*, 6875——Very large capital expenditure on the Scinde lines hitherto, and very small returns, 6877–6881.

Defence of the promotion of railways in the past (by Lord Dalhousie), as well as in the present, even though not directly remunerative in a financial sense, 6882–6892——Concurrence in the view that great caution is necessary as regards railway extension, although witness contends that the revenues generally, are now in a prosperous and increasing state, 6882–6898——Means of obviating the fluctuations in the opium revenue, 6889, 6890——Question raised as to the income-tax having caused great dissatisfaction, or as to its having been wisely reduced, 6893–6896.

Credit due to Lord Mayo for having put the finances in a very improved condition, 6897, 6898——Equal powers of the local Governments as to local taxation before the decentralisation system, 6899–6901——Want of power in the Government of India to give their officers a real and complete insight into the detailed working of the guaranteed railways, 6902–6904——Illustration of the deficient powers and regulations as to uniform and improved accounts being required of the companies, 6904–6907——Opinion that the best plan would be for Government to purchase the railways on the first opportunity, 6909, 6910——Entirely different circumstances of England and of India, as affecting the question of railway gauge; immense economy of narrow gauge lines in India, 6911–6917.

[Fifth Examination.]—Very short term of witness's official position at the India Office as compared with his official experience in India, 6934–6937——Views of witness as to the administration of the Indian railways adverted to in connection with the recent creation of the office now filled by him, 6938–6944——Prevalence of two extreme and opposing views upon the question of expenditure on public works, the Government pursuing a mid-course between the two, 6945–6948.

Very much smaller proportion of debt to revenue in the case of India (including the railway debt) than in the case of England, 6949–6952——Satisfactory position of the debt of India, as an investment, both in England and in India; large amount held by natives, 6953, 6954——Incomparably better position of India since the existence of the debt than in the period before British rule, 6955——Wonderful increase of prosperity concurrently with the development of public works since 1854; 6956–6959. 7004–7006.

Admission that the operations of the Public Works Department have not been free from mistakes; value of past experience in this respect, 6960–6964——Several authorities responsible for different mistakes or failures; limited responsibility attaching to the Secretary of State, 6965, 6966——Good ground doubtless some twenty years ago for the conclusions of Lord Dalhousie in favour of the system of guarantees, 6967, 6968——Misapplication of moneys by persons connected with the Public Works Department, the department as a whole not being open to much censure on this point, 6969, 6970.

Power doubtless of Lord Mayo to have removed the difficulties offered by the Finance Department to the improved accounts recommended by witness, 6971–6975——Despatches from the Secretary of State in August 1869, and subsequently, adverted to as showing that he took steps to obtain accurate information relative to expenditure on irrigation works, 6976–6980——Further statement as to extravagant expenditure having

Strachey, Major General Richard, R.E. (Analysis of his Evidence)—*continued.*
been caused rather by interference from England than by the Government of India; full admission on the other hand that the influence of the Secretary of State has been most valuable on various occasions of projected expenditure, 6981–6986——Great caution desirable on the part of the Secretary of State before proposing expenditure on works, 6984——Good grounds for the conclusion that the natives of India have not any special fitness for engineering works, 6987–6989.

Considerable responsibility assumed by witness as one of the chief advisers of Government in respect of public works, 6990——Argument in further defence of the system of constructing irrigation works out of borrowed money, a primary consideration being the prevention of famines, 6990. 6999——Belief that ultimately the irrigation works will largely develope agriculture, to the great benefit of the revenue, 6990——Great progressive increase of net revenue from the Ganges Canal, *ib.*——Also from the Eastern Jumna Canal, *ib.*——Also from the Western Jumna Canal; *ib.*——Defence on several grounds of the compulsory rating of land for irrigation, 6992. 6994.

Expediency of the gradual extension of State railways in India, so far as the finances will admit of such extension, 6995, 6996——Net annual deficit of about a million and a-half in respect of the guaranteed railways, 6996——Enormous advantage of the railways on various grounds; illustration in the case of the East Indian Railway, 6996–6999——Great value of railways and irrigation and works in the prevention of famines in the North Western Provinces, as in 1869; 6999.

Further reference to the income-tax as a tax of which witness does not disapprove, 7000, 7001——Calculation to the effect that between 1861–62 and 1872–73 there has been a virtual increase of not more than 1,000,000 *l.* of debt, whilst the expenditure on railways, irrigation works, barracks, &c., will have amounted to 19,000,000 *l.*, 7002–7005——Statistics relative to the enormous increase of imports and exports since 1861–62, as showing conclusively the excellent administration of the country, on the whole, and the valuable effect of the expenditure on railways and irrigation works, 7005, 7006.

[Sixth Examination.]—Approval of the initiative being taken by the Secretary of State in Council in reference to public works, provided very great care be exercised, 7007–7012. 7014——Great importance attached to the employment of English capital in the execution of works of improvement in India, 7013, 7014.

Closing of the Port of Mutlah adverted to, although in April 1864 the Secretary to the Government of Bengal stated that the success of the port was of vital importance to the commerce of Bengal, 7015——Denial of the accuracy of a statement by the promoters of the Mutlah Railway that nothing had been done by Government towards draining or improving the locality of the port, 7016——Several grounds for the conclusion that in any case the port could not have succeeded; relative character of the navigation of the Mutlah and of the Hoogly adverted to hereon, 7017–7021——Unfavourable elevation of the land at Mutlah for the formation of a port; difficulty also as to water supply at Port Canning, these objections having probably been raised by the Government of India, 7022–7033.

Important advantages, doubtless, by the completion of the works at Kurrachee Harbour, witness submitting, however, that the money might have been better spent elsewhere, 7034–7036——Approval of the line from Lahore to Peshawur, 7037——Doubt whether the time has come for the line from Mooltan to Kotri, *ib.*——Very problematic success of the Godavery works, 7038, 7039——Particulars relative to the rates of freight to and from Kurrachee, as compared with Calcutta and Bombay; disadvantage of the former port, 7039–7046——Probable increase of expense of the Kurrachee and Godavery works by reason of delay in the supply of money by Government, 7047.

Decided dissent from a statement by Mr. Geddes that the famine in Orissa was chiefly owing to the weight of Government taxation in that province, 7048–7050——Approval of the cost of the Orissa irrigation works falling upon the province; good prospect of their being eventually profitable, 7051——Total dissent from the statement by Mr. Geddes that famines had been on the increase under British rule, 7052, 7053.

Importance of the Public Works accounts being in charge of officers of high position and of thorough efficiency, 7054. 7061, 7062——Little room for friction between the Public Works Department and the General Accounts Department, 7055——Explanation and approval of the practice as to audit of the Public Works Accounts within the department, 7056–7062——Inability of witness to suggest off-hand any improvement in the organisation of the department; constant change going on in the direction of improvement, 7063, 7064——Objection to any fixed limit of time as to service in the accounts branch, 7065–7069——Further reference to the suggested appointment of a Minister of Public Works in India, and to the improvements contemplated in the department in this country, 7070–7072.

Explanation that as regards the question of injudicious interference by the home authorities relative to the railways, witness does not in the slightest degree refer personally to the Government Director of Railways, 7073——Passing of the railway accounts by the authorities in India; objectionable interference by the home Government, *Strachey, Major General Richard, R.E.* (Analysis of his Evidence)—*continued.*

ment, 7074–7080——Further reference to the amount of expenditure authorised on the State lines, and more especially on the line towards Peshawur, the latter line having been sanctioned only as far as Rawul Pindee; witness does not mean to imply that Mr. Danvers' figures are erroneous in any objectionable way, 7081–7084——Statement in further explanation of witness's views on the subject of not adding the charge for interest to the capital cost of construction, 7085–7088.

Examination in detail relative to the part taken respectively by the Government of India, and by the Secretary of State in Council, relative to the initiation and prosecution of the Godavery works, sundry despatches cited in order to show that no pressure was exercised in the matter by the Secretary of State, 7089–7118——Approval of the decision in 1867, not to stop the works, 7119, 7120——Final decision of the present Secretary of State to prosecute the works on a limited scale; concurrence in such decision, 7120–7123.

Statement with further reference to the cost of the Rajpootana Railway as not likely to exceed 5,000 *l.* per mile, 7124. 7141——Very difficult country traversed by the line from Kundwah to Indore; much greater cost than of the Rajpootana line, 7124, 7125. 7134–7141——Dissent from the conclusions drawn from an official paper recently furnished from the India Office relative to the cost of the State railways, and the returns therefrom, 7127–7133——Further examination relative to the Eastern Jumna Canal, and its comparatively useless state previously to Government expenditure upon it, 7142–7149.

Evidence in further explanation of the object and operation of the decentralisation scheme: clear intention that the assignment from Imperial revenues to the local Governments should not be increased, and that the latter must rely upon local resources to meet increased expenditure, 7150–7159——Remission of about a million and a half of Imperial taxation by the reduction of the income-tax, so that there was a set-off against increase of local taxation, 7150–7155.

Particulars in connection with an expenditure of 156,000 *l.* for a residence for the Governor of Bombay, near Poonah; strong and frequent remonstrance by the Governor General in Council whilst this expenditure was being incurred, although it was not positively stopped, 7160–7169. 7238–7249——Receipt of 30,000 *l.* derived from the sale of the former Government House, near Poonah, 7163, 7164. 7167——Probability of the foregoing expenditure being exclusive of the cost of roads to the house; it is exclusive of the cost of furniture, 7167–7171——Limitation (to 20,000 *l.*) of the cost of a new Government House in the North Western Provinces, at Allahabad, 7169.

Explanations relative to the special fund at Bombay, the Government contributions thereto, and the receipts; excess of expenditure of 1,668,000 *l.*, when the fund was brought to a close, 7172–7180——Assets still to be realised from the Special Fund, there being a great deal of land to be sold, 7176, 7177——Expenditure of about 770,000 *l.* on reclamations at Bombay out of the total expenditure in respect of the Special Fund; outlay also on public offices, 7177–7180.

Information in connection with the Port Trust at Bombay, as intended to be constituted in order to take over the property bought by Government from the Elphinstone Company, 7177. 7181–7186——Statement of the circumstances under which Government bought the property of the Elphinstone Company, and of the price paid; question hereon, whether an unduly high sum was not paid, 7181–7202.

Examination with further reference to the Acts, or rather the Act, relative to the compulsory payment of irrigation rates in the Punjaub, &c.; provisions also in this Act on the subject of compulsory labour, 7203–7227——Statement to the effect that the accounts hitherto do not show separately the amount of capital contributed to any public work out of borrowed money, and the amount out of revenue; obstacle, through this defect, to ascertaining accurately the financial results of the policy of loans for public works, 7228–7237——Responsibility of the Financial Department, and not of the Public Works Account Department, for the imperfections still requiring correction in the accounts generally, 7234–7237.

Further investigation of the actual charge entailed upon the revenues of India by the expenditure on public works, witness contending that the charge is more than repaid by the direct increase of the practical productiveness of the country, 7250–7255——Data for the conclusion that the real cause of the difficulty in making the income cover the expenditure has arisen, not from public works, but from the increase of civil charges; statistics hereon, showing an increase of such charges to the amount of 6,110,000 *l.* between 1861–62 and 1870–71; 7255–7259.

Opinion that the only efficient safeguard against continued increase of expenditure is by providing absolutely that the expenditure must not be increased until the necessary funds are forthcoming by an increase of revenue. 7260. 7265–7267——Increased activity of Government in its various branches, owing to which the large increase of civil charges has arisen; valuable results generally from this increase of charge, 7261, 7262——Unfairness of a suggestion that the civil servants are constantly proposing schemes involving increased expenditure in order to bring themselves into notice, 7262–7264.

Strachey, Major General Richard, R.E. (Analysis of his Evidence)—*continued.*

Limited extent to which increased public expenditure is necessarily due to increase of prices consequent upon depreciation in the value of money, 7268–7271——Extensive hoarding in India, so that a large balance of specie may be poured into the country yearly without sensibly affecting prices; poverty of the community adverted to on this point, 7269–7274.

[Seventh Examination.]—Doubt as to the income-tax having caused discontent, save amongst the comparatively few who have to pay it, 7388, 7389——Existence, doubtless, of much abuse in the collection of the tax, 7390–7392.

Dissent from the view that much discontent has been produced by the taxation of India generally, although danger might arise if it were attempted to force an increase of income by new taxation beyond a certain point; denial also that there has been a large increase in fhe number of small taxes, 7393–7403——Views of Lord Mayo as to the difficulty of raising revenue by new taxes, 7395, 7396——Inaccuracy of the assumption that there has been a great increase of taxation in late years, 7397. 7403.

Statistics cited in support of the conclusion that whilst between 1861–62 and 1870–71 there has been an increose of 7,366,000*l.* in the income of India, the increase of actual taxation has not been more than 2,000,000*l.*, 7404–7422——Admission that witness's evidenee is liable to some modification by reason of the different mode of keeping the public accounts in 1861–62; 7404–7410——Particular sources of increased income, such as land revenue, public works, pilotage, forests, &c., which should be eliminated from the head of taxation, 7412–7422.

Defence of the increased income or taxation under the head of Excise, Stamps, &c., 7419–7422——Large increase of taxation under the head of Salt; saving on the other hand by the consumers in the cheaper cost of the carriage, 7420. 7423–7428——Portion only of the increased income from opium which can be regarded as taxation, 7420, 7421.

Explanation that in taking the year 1861–62 for comparison with the year 1870–71 witness argues from a public works point of view, and considers that he has shown the Government to have been justified in its increased expenditure upon new works within that period, 7429–7431.

[Eighth Examination.]—Further reference to the Godavery Works to the effect that on a representation by Lord Mayo, the Secretary of State directed that the whole of the works should be stopped, 7786——Evidence in further explanation of the mode of keeping the accounts of expenditure on public works, the deficiencies of the system, and the amendments required, 7787, 7788. 7793–7799——Practice since 1865 or 1866 to limit the expenditure on barracks to such sums as can be provided from the revenue of the year, 7789, 7790.

Conclusion further expressed as to the propriety and wisdom of the policy of raising loans for extraordinary works of a reproductive character, 7791, 7792——Circumstance of the Government of India having frequently insisted upon the necessity of improved accounts in the provinces, but without success up to the time that witness left India, 7795–7799——Extent to which increase of cost may have resulted from delay in the prosecution of works, or from too many works being on hand at the same time, 7798–7808.

Examination relative to the returns of railway traffic from passengers and goods respectively in 1899–70, and the deficiency formerly of the accounts in not showing in a satisfactory form the results of working in each case, 7809–7822——Statement that on several lines the passenger traffic has much more than paid its expenses, 7809. 7812, 7813——Important improvement at length introduced into the railway accounts; satisfactory and reliable data now available as to the comparative cost of the working of different lines, 7810–7822.

Admission that the goods sent over the railways in 1870–71 cost about 2 *d.* per ton per mile to the public, the deficiency in respect of guaranteed interest paid by Government representing another 2 *d.* per ton, 7823–7834——Imperfect management of the railways, 7833, 7834——Remunerative character of the East Indian Railway, 7835, 7836. 7935, 7936——Absolute profit of Government to the amount of nearly 2 *d.* out of every rupee earned by the companies, the exchange being taken at 1 *s.* 10 *d.*; loss by Government on the other hand of 2 *d.* in each rupee on the cost of construction, 7836–7841——Statement showing that there is in reality a gain of nearly 400,000 *l.* in 1872–73 as compared with 1861–62 in the total charge on account of railways; that is, including the loss or gain by exchange, 7841, 7842. 7852.

Incomplete state of many of the railways, so that the income is much less than it will be, 7842——Further consideration of the cost of different parts of the Scinde, Punjab, and Delhi Railway, and of the probable traffic; admission that the commercial profit is not likely to be satisfactory, the cost of construction being very high, 7843–7852. 7874——Expected loss of about 40,000 *l.* a year on the line between Moultan and Kotri; political objects of this line, 7845, 7846. 7852. 7874——Satisfactory income on the line between Lahore and Delhi, the cost, however, being excessive, 7846–7850.

Approval

Strachey, Major General Richard, R.E. (Analysis of his Evidence)—*continued.*

Approval of the further construction of railways, provided the cost be not more than 6,000 *l.* a mile, 7848——Decided objection to lines costing 16,000 *l.* or 17,000 *l.* per mile, 7848–7850——Origination of the railways very much for military and political purposes, 7849——Enormous benefit conferred on India by the railways, *ib.*——Necessity of borrowing money for their construction, 7851——Expenditure of about 55,000,000 *l.* on railways since 1861–62, whereas the charge has on the whole been reduced by about 400,000 *l.* a year, 7852.

Explanation in connection with a statement by Sir Richard Temple, that the revenue does not show any elasticity, 7853——Reference made by Sir Richard Temple to the uncertainty of the opium revenue; steady increase, however, in the revenue from opium for the last fifteen or twenty years, 7853, 7854——Gradual growth of the revenue generally at the rate of about 500,000 *l.* a year for the last ten years, 7853——Opinion that by proper arrangements the opium revenue may be maintained at 8,000,000 *l.* or 9,000,000 *l.*, 7854.

Conclusion that unproductive railways should not be made out of borrowed money, 7855——Circumstance of the traffic of the railways including the conveyance of the materials used in construction, 7856–7858——Statement showing that the traffic is not falling off, 7859——Belief that the charge per ton for agricultural traffic is much less than 2 *d.* per mile, 7860–7862——Importance of cotton being conveyed as cheaply as possible; competition with American cotton adverted to hereon, 7863–7870.

Examination upon the question of opening out the Godavery River at an additional expenditure of a quarter of a million, so as to facilitate the traffic in cotton and other produce from Berar, Nagpore, and other districts; grounds for the conclusion that this would not be a wise expenditure, 7866–7931——Pressure from Manchester relative to the Godavery Navigation; justification of non-compliance therewith, 7870 *et seq.*, 7927, 7928——Expenditure already of 750,000 *l.* on the Godavery works; decision of Government to stop the works rather than spend 250,000 *l.* more, in order to render them partly operative, 7872, 7873. 7929–7931——Very little traffic to be expected on the Godavery; there are hardly 50,000 *l.* acres of cultivated land on the navigable part of the river, 7873–7893.

Commercial pressure sometimes brought, in England, upon the Secretary of State, with reference to works in India, 7932——Main proportion of the passenger traffic, which is third class, 7933——Opinion that third-class trains should be increased, and fares reduced, 7934——Excessive number of fast trains, 7935——Statement showing that the traffic arrangements require careful reconsideration, 7935, 7936——Advantage of reducing the number of trains, and of adopting the system of mixed traffic, 7936——Explanation on the subject of the Madras Railway passing at a distance of seven or eight miles from the towns of Vellore and Arcot; authorities responsible, 7937–7947——Limited responsibility attaching to the Public Works Department in respect of the excessive expenditure on certain railways, 7948–7952——Exception taken to the view that the establishment charges in the case of public works are altogether excessive, 7953–7957——Charge of 44,000 *l.* for Government supervision of the guaranteed railways; this includes the subject of accounts, 7958, 7959.

Statistics in support of the conclusion that the increase in the quantities of exports and imports between 1861–62 and 1868–69 is quite as substantial as the increase in values, 7960, 7961——Large import of metals which should be considered as being consumed by the people, 7962–7964——Increase of about eleven millions in value as the increased consumption of the people between 1861–62 and 1868–69; total of about 13½ millions as the entire increase of values, 7964.

Value of the imports and of the exports of merchandise and of treasure in different years, from 1861–62 to 1871–72; large increase, and inference therefrom, as to the great advance in the prosperity and general productive power of the country, 7964.

Sugar. Large and profitable cultivation of sugar in Khandeish and other districts, *Ashburner* 2187–2189——Proposal for levying an excise duty upon sugar, *ib.* 2287. 2295–2299.

Suez Canal. Great saving of time in sending troops by the Suez route, the expenses, however, being about the same as by the Cape, *Pears* 650–654——Absence of any practical difficulty in the way of the Indian troop ships going through the canal, *Richardson* 672.

Sultan's Ball. Total of 11,513 *l.* as the cost of the Sultan's ball at the India Office, *Seccombe* 1428.

Much comment caused in India by the ball given to the Sultan at the new India Office at the expense of India, *Laing* 7520——Strong objection to India being charged with the cost of the Sultan's ball at the India House, *Hutton* 8572.

Supplies to and from London. Statement of the chief items under the head of Supplies from London; items on the other side of this account under the head of Supplies to London, *Harrison* 6144, 6145.

Supreme Council. Total of 64,720 *l.* as the charge in 1870–71 for salaries of the Supreme Council, *Harrison* 4433–4437. 4486–4489.

Surat. Terminable character of a charge of 10,000 *l.* for pensions to the family and dependents of the late Nawab of Surat, *Sir J. W. Kaye* 7356, 7357.

Surplus Revenue. See *Revenue.*

Survey Department. Expenditure of 8,500 *l.* in 1870–71 for scientific instruments, &c., for the Survey Department in India; how these are procured, *Bedford* 1182–1185.

Explanation relative to an increase of 15,000 *l.* since 1856 in the charge for the Surveyor General's Department, *Harrison* 4686–4690.

T.

Talbot, The Hon. Gerald Chetwynd, and Henry C. G. Bedford. (Analysis of their Evidence.)—(*Mr. Talbot.*) Is Director General of Stores in the India Office, 941——(*Mr. Bedford.*) Is Chief Clerk of the Store Department, 942.

(*Mr. Talbot.*) Charge of 23,123 *l.* in 1870–1871 in respect of stamps sent to India, these being supplied by Messrs. De la Rue under running contract, 944–947——Item of 6,700 *l.* for machinery, &c. for the mints in India, 948–950——(*Mr. Bedford.*) Stores are no longer supplied to the Madras Mint, 951——Item of 4,315 *l.* in 1870–71 for pillar-boxes, postage stamps, &c., for the Post Office in India, 952, 953——(*Mr. Talbot.*) Excellence of the supply of postage stamps and general stamps procured by contract from Messrs. De la Rue, 954.

Explanations relative to the stores comprised in a charge of 75,237 *l.* on account of telegraph lines in India; careful examination of each article before it is sent out, 955–969——Efficient examination in detail of the stores generally before they leave this country for India, there being a competent examiner for each branch, 964–969——Non-inquiry by the examiners into the question of price, 970, 971.

(*Mr. Bedford.*) Item of 21,000 *l.* for salaries, wages, rent, &c., and for contingent expenses in connection with the receiving and shipping of the stores, 972, 973——(*Mr. Talbot.*) Situation of the store premises in the Belvedere-road, they having been built by the Imperial Government, 974–976——Great variety of stores supplied, it not being feasible to procure them advantageously in India, 977–979——Check in India to which the indents sent home are subjected, 978.

Explanations in connection with an expenditure of 157,885 *l.* for stationery and printing, all the stationery sent to India being procured through the Stationery Office; defence of this arrangement on the score both of quality and price, 980–990. 1048–1053——(*Mr. Bedford.*) How far any check is applied to the prices charged by the Stationery Office, 991–996. 1024–1038——(*Mr. Bedford and Mr. Talbot.*) Charge of 2½ per cent. by the Stationery Office beyond the contract price, for examination, receipt, delivery, &c.; conclusion as to the fairness of this charge, 997–1003. 1019–1023. 1048–1053. 1116–1122.

(*Mr. Talbot.*) Check applied at the India Office when the demands from India for stores are greatly in excess of the usual demands, 1004, 1005. 1091–1098——Belief that no remonstrances have been made by the Government of India relative to the prices paid in England for stores sent out, 1006–1018——Complaint in a certain petition from Calcutta that the stores were unduly dear as regards first cost; copy of the reply to the charges in this petition, 1009–1011. 1040, 1041. 1043–1047.

(*Mr. Bedford.*) Slight variation in the annual supply of stationery, 1019, 1020——Absence of complaints from India against the paper sent out, as not being worth the price; there are, however, frequent complaints about the quality, 1039——(*Mr. Bedford and Mr. Talbot.*) Examination upon a statement that the agency charge on stores amounted to only 1⅝ per cent.; omission of certain extra and contingent charges which bring the total up to about 3 per cent. 1054–1082.

(*Mr. Talbot.*) Practice of obtaining stores either by open competition or by limited competition, 1083, 1084——Separate indents from each Presidency; authorities in India responsible for the indents, 1085–1090——Explanation on the subject of freights; denial that the rates are unduly high, 1099–1110. 1114——Very inappreciable loss in the transit of the stores, 1111–1113. 1115——(*Mr. Talbot and Mr. Bedford.*) Dissent from a statement that the rates of freight are much higher than are paid by merchants, 1114.

(*Mr. Talbot.*) Great variety of supplies included in an item of 77,000 *l.* for stores for the marine in India; these are all obtained by competition, 1124–1126——Explanation as to witness having made no reply to a statement in a report on the Calcutta Port Fund that unduly high prices had been paid for anchors sent out in 1868–69; 1127. 1144–1154——Official reply by witness to complaints by the Committee on the Calcutta Port Fund,

Report, 1872—*continued.*

Talbot, The Hon. G. C., &c. (Analysis of their Evidence)—*continued.*

Fund, that excessive expenditure had taken place in the shipping and freight of screw moorings and other stores; evidence in further elucidation and defence of the action of the Store Department in this matter, 1128-1133. 1137, 1138. 1155-1160——*Mr. Bedford.*) Additional explanations on the foregoing subject, to the effect that blame does not attach to the department, 1134-1136. 1139-1143. 1160, 1161.

(*Mr. Talbot.*) Charge of 16,554 *l.* for miscellaneous civil stores; a large proportion of these consists of currency notes sent out for circulation, 1163-1165——Total of 929,000 *l.* as the expenditure on ordnance supplies, army clothing, &c., 1166——Making up of the clothing in India, the materials being sent out; how these are procured and examined, 1167-1170——Supply of the ordnance mainly from Woolwich, the price being left to the authorities there, 1171-1175——(*Mr. Bedford.*) Priced vocabulary of the War Office according to which the charges for ordnance are regulated, 1175, 1176——(*Mr. Talbot.*) Supply of small arms chiefly from Enfield, the prices being left to the War Office authorities, 1177, 1178.

(*Mr. Bedford.*) Subdivision of the item of 929,000 *l.* for ordnance stores, clothing, malt liquor, &c., 1179-1182——Charge of 160,000 *l.* in 1870-71 for clothing for European troops in India, and of 25,000 *l.* for native troops, 1179. 1210-1212——Item of 364,400 *l* for ordnance stores, including small arms, 1179, 1180——Charge of 59,000 *l.* for medical stores sent to India, including instruments as well as drugs, 1180-1182——Expenditure of 8,500 *l.* for scientific instruments, &c., for the Survey Department in India; how these are procured, 1182-1185.

Item of 311,000 *l,* in the store accounts for 1870-71, the bulk of which is for malt liquor; sundry details relative to the system of procuring the required supply of beer, the test as to quality, the price paid, the wastage, &c , 1186-1209. 1258-1261. 1273-1280. 1290-1298——System, previously to 1867, of delivery in India by the brewers at their own risk; great saving under the system of delivery by the Store Department, 1193-1207. 1258-1261——Doubt as to beer made in India being supplied to the army in any quantity, 1208. 1264, 1265.

Statement on the subject of the department not directly performing the duties of agents as regards army clothing, ordnance stores, and stationery, which represent a large total, 1213-1221——Examination on the circumstance of the Department not investigating the accounts or prices in the case of ordnance supplied by the English Government, instructions under which the department act in purchasing from Government, 1222-1251——Per-centage or agency charge in addition to the published prices paid to Government for ordnance or clothing, 1252-1257. 1281.

Practice as to the regiments for India taking their arms with them, and as to the check applied on the part of the India Office relative to the pattern, &c., 1266-1272——Frequency of emergent indents from India; obstacle to the prevention of these, 1278, 1279——Manufacture of all muzzle-loading ammunition in India, the muzzle-loaders and other small arms being supplied from England; steps being taken to manufacture Snider ammunition locally, 1282-1284——Steps being taken also to develope the Cossipore Gun Foundry, 1284——Limited extent to which it can be said that England is supplied before India with newly-invented or improved arms, 1285-1289.

(*Mr. Talbot.*) Various descriptions of public works stores represented by an item of 134,000 *l.*, these being procured by open competition, and being carefully examined, 1299-1303——There is no account in the Store Department of the disposal of the stores in India, 1304——Return of various old and obsolete stores from India for disposal by the department; these are sold by auction, 1305-1309. 1316-1323——(*Mr. Bedford.*) Obstacle to a comparison between the cost of freight of returned stores and the amount realised on sale, 1310-1312——(*Mr. Talbot.*) Large official experience of witness in connection with India, 1313, 1314——Very rare complaints from India as to the character of the stores, 1320.

[Second Examination.]—(*Mr. Talbot.*) Statement showing the very small amount of the losses which would be covered by marine insurances; average of 11 *s.* 6 *d.* per cent. over a period of ten years, 2745, 2746.

(*Mr. Bedford.*) Justification of the payment of higher freights for Government stores than for merchants' goods; impression, however, that on the average the former freights are not higher than the latter, 2747——Careful calculation made to the effect that the cost of the Stores Department is about 2 *l.* 17 *s.* per cent. on the total value of the stores exported in 1870-71, 2749-2751.

Talbot, Hon. G. C. Papers handed in by Mr. Talbot in elucidation of his evidence, on various points, and of the cost and working of the Store Department, *App.* 739-741.

Tanjore. Explanation relative to a charge of 31,397 *l.* in 1870-71 in respect of the family of the late Rajah of Tanjore; rapid diminution of this charge, *Sir J. W. Kaye* 7350, 7351.

TAXATION:

Best security against unnecessary taxation for public works in the responsibility of Government, and in the appointment of efficient and honest governors, *Strachey* 6723-6726——Dissent from the view that much discontent has been produced by the taxation of India generally, although danger might arise if it were attempted to force an increase by new taxation beyond a certain point; denial also that there has been a large increase in the number of small taxes, *ib.* 7393-7403——Inaccuracy of the assumption that there has been a great increase of taxation in late years, *ib.* 7397-7403.

Statistics cited in support of the conclusion that, whilst between 1861-62 and 1870-71 there has been an increase of 7,366,000 *l.* in the income of India, the increase of actual taxation has not been more than two millions, *Strachey* 7404-7422——Admission that witness's evidence is liable to some modification by reason of the different mode of keeping the public accounts in 1870-71 as compared with 1861-62, *ib.* 7404-7410——Particular sources of increased income, such as land revenue, public works, pilotage, forests, &c., which should be eliminated from the head of taxation, *ib.* 7412-7422——Defence of the increased income or taxation under the head of Excise, Stamps, &c., *ib.* 7419-7422.

Objections to any form of direct taxation in India, *Laing* 7467. 7473, 7474. 7482. 7603, 7604——Decided disapproval by Lord Canning of direct taxation, *ib.* 7474——Belief that but for pressure from the Secretary of State in Council some of the more unpopular taxes would not have been imposed, *ib.* 7508. 7517——Objection generally to any changes, without a very clear advantage, *ib.* 7592——Unpopularity of any new tax, *ib.* 7606.

Conclusion that increase of local taxation is far preferable to an income tax, the latter causing infinitely greater discontent than the former, *Laing* 7697-7710——Concurrence in the view that the natives of India are very impatient of taxation, so that the greater tact and discretion are required in the imposition of taxes, *ib.* 7702, 7703. 7710. 7724, 7725——Further objection to any new tax, such as a succession tax, in the present state of the finances, *ib.* 7750.

Grounds for the conclusion that the great number of new local taxes, and the mode of assessing such taxes as the chokeedaree tax, have led to much discontent and irritation in the native mind, *Dacosta* 8000-8025. 8199-8202——Extortion and irritation in connection with proposals or rumours of new taxes, though not really imposed, *ib.* 8009-8012——Great increase of taxation generally, it being essential to effect means of retrenchment, *ib.* 8030-8032——Increase of about twenty millions of taxation since the last year of the East India Company, *ib.* 8031.

Very narrow field to which witness, as Finance Minister, was limited in casting about for increased taxation, new sources of taxation being impracticable, *Rt. Hon. W. N. Massey* 8581. 8583——Strong disapproval of ingenious devices for imposing fresh burdens on the people of India, new taxation being most repugnant to the native mind, and being in fact uncalled for, *ib.* 8792. 8824. 8882——Witness cannot suggest any new source of taxation, *ib.* 8583——The more stringent the taxation the less productive does it become, *ib.* 8790.

TELEGRAPHS:

Explanations relative to the stores comprised in a charge of 75,237 *l.* in 1870-71, on account of telegraph lines in India; careful examination of each article before it is sent out, *Hon. G. C. Talbot* 955-959.

Information relative to a charge of 4,368 *l.* in 1870-71, in respect of successful candidates for the Telegraph Department, and of scientific instructions, &c., *Seccombe* 1340.

Explanations relative to the several heads of expenditure in India on account of the telegraphs in 1870-71, the total being 380,000 *l.*, *Robinson* 4169 *et seq.*——In 1856-57 the expenditure was only 97,546 *l.*, but the department and its operations have been immensely increased since that year, *ib.* 4170, 4171. 4241-4254——Item of 195,307 *l.* in 1870-71, on account of "superintendence"; explanation hereon as to the large increase made in the salaries generally, *ib.* 4174-4182——Considerable outlay in the construction of new lines, *ib.* 4183-4185.

Outlay of 25,482 *l.* in 1870-71, for stores and workshops; explanation hereon as to the practice in obtaining stores from England, and as to their quality, *Robinson* 4186-4199——Recent abolition of the training school for signallers, *ib.* 4200.

Information relative to the railway telegraph system, and the relations between Government and the companies; amendment required, there being unsatisfactory competition between the two systems, and much unnecessary expense involved, *Robinson* 4210-

TELEGRAPHS—continued.

4210–4215. 4293–4318——Very little facility derived from the Post Office in administering the telegraph system, *Robinson* 4217–4221.

Explanation as to the selection of the line to Europe by which messages are forwarded on their reaching the termini of the Government, *Robinson* 4222–4229——Statement of the tariff on the Government lines in India, and of the frequent change made in the charge for messages in order to bring increased income, obstacles to a larger charge than the present, namely a rupee for six words all over India, *ib.* 4230, 4231. 4255–4261. 4272–4289——Very large increase of messages and of revenue since 1856–57; loss nevertheless of 80,000 *l.* in 1870–71, *ib.* 4233–4254. 4268–4271——Very little prospect of the telegraph department paying its expenses, *ib.* 4256, 4257. 4290–4292.

Explanation of the practice as to transmission of messages in English, and as to their translation into Hindoostanee, if required; double charge in the latter case, *Robinson* 4319–4322. 4328–4345——Direct responsibility of witness to the Viceroy, for the administration of the telegraph-department, *ib.* 4323–4327——Very long distances for which messages are sent through, without repetition, *ib.* 4346–4351.

Special and separate system of administration of the telegraph department, *Strachey* 6158——Detailed management of the telegraph business by the Director General of Telegraphs, who is not directly connected with the Public Works Office, *ib.* 6308.

Explanation by Sir R. Temple in connection with an estimated increase of 13,400 *l.* in the Electric Telegraph receipts in 1872–73; *App.* 496.

Paper submitted by Mr. Talbot explaining the charge in respect of telegraph stores, *App.* 739.

See also *Ceylon Telegraph.* *Indo-European Telegraph.* *Red Sea and Indian Telegraph.*

Temple, Sir Richard, K.C.S.I. Financial statement by Sir Richard Temple in presenting the Budget of British India for the year 1872–73, *App.* 489–505——Conclusion expressed that the ordinary finance is in a condition of surplus, and that the present principles of Indian finance should be persevered in, *ib.* 505.——*See* also *Railways* I. 37. *Revenue.*

Thornton, William Thomas. (Analysis of his Evidence)—Explanation and defence of the arrangement by which Government is to receive in perpetuity half the surplus profits of the guaranteed railways, in consideration of extension of the original terms of contract, 1723. 1725–1727——Opinion that the cost of the railways has been greatly enhanced by the system of guarantee, 1781, 1782——Total of 2,000 railway masonry works described by the Government of India as having shown signs of failure on one railway, 1792.

Impression that there has been premature action in most cases where lines have been doubled; different views of the companies and of Government on this question, 1809, 1810——Increase of charge for guaranteed interest adverted to as arising from extension of works, and not from falling off in the receipts, 1818–1820——Check through the consulting engineer of Government before plans or surveys by the companies' officers for new or branch lines are approved, 1852.

Conclusion as to the evils of the guarantee system; opinion that it has not served any purpose which might not have been better served without it, 1853, 1854. 1862. 1864——Strong condemnation of the terms of the contracts, as being very contradictory, and as not practically giving any protection to Government, 1855–1860——The contracts are in fact a perfect disgrace to whoever drew them up, 1856——Explanation relative to the failure of an attempt by Government to substitute a subsidy for a guarantee of interest; obstacle through the extensive powers of control claimed over the companies, 1870–1880.

[Second Examination.]—Further statement as to 2,000 structures of all kinds, including bridges and viaducts, having required to be repaired on the Great Indian Peninsular line, 1895——Prejudicial effect of the guarantee system, as expounded by the contracts, rather than of the contracts themselves, 1896——Illustration of the contradictory terms of the contracts, it being provided that at the end of ninety-nine years the railways shall revert to Government for nothing, whilst it is also provided that the companies may, at any time before the ninety-nine years, demand the full value of the railways, 1896–1900.

Obligation upon Government in taking over any line to repay all the capital whatsoever sanctioned to be expended, even though much of such expenditure may have been rendered necessary by mismanagement and extravagance on the part of the companies, 1901–1904——Conclusion as to the responsibility of the law officers who drew the contracts; examination hereon upon the statement that the contracts are a perfect disgrace to those who drew them, 1905, 1906. 1911–1921. 1933–1937——Degree of responsibility respectively of the railway committee of the East India Company and of the railway committee of the Indian Council, 1907–1910.

Probability of the heads of the contracts having been prepared by Mr. James Wilson when secretary to the Board of Control; blame attaching nevertheless to the law officers

Thornton, William Thomas. (Analysis of his Evidence)—*continued.*
employed, 1915–1919. 1934–1937——Grounds for objecting to the provision in the contracts relative to the mode of determining the rate of interest to be used in calculating the annuity to be paid to any company whose line is taken over by Government; great ambiguity involved, that is, that if the purchase be by annuity instead of by a lump sum, 1921–1937.

Great saving by making the Rajpootana railway on the narrow gauge, the total cost being under 5,000 *l.* a mile, 1957. 2029–2031——Varying cost of the broad gauge, from 9,000 *l.* to 23,000 *l.* a mile, 1957——Very full data before the Government of India in adopting the metre gauge, 2023–2025——Lower standard of durability for the bridges, &c., on the narrow gauge than on the broad gauge; due care taken that the durability shall be sufficient, 2027, 2028——Information relative to the course and extent of the lines through Rajpootana, &c.; expectation that the line to the Salt lakes will pay, as costing not more than 5,000 *l.* a mile, 2029–2041.

Determination of the Government not to make any more railways that will not pay, unless they are required for political reasons, 2035——Military object of the Peshawur line, which is not expected to pay, 2037——Nor is the Indus Valley line expected to pay, *ib.*

Witness does not concur in the evidence of Mr. Danvers as to the merits of the guarantee system, 2115.

[Third Examination.]—Guarantee upon 1,000,000 *l.* of capital by Government in the case of the Madras Irrigation and Canal Company, this amount having proved entirely insufficient, and a loan of 600,000 *l.* having been subsequently made on certain conditions, 2648–2651——Important differences between the terms of this contract and the terms of the railway contracts; better position of the Irrigation Company than of the railway companies, 2652, 2653. 2713–2718——Local agency and staff in Madras for carrying out the works, there being also a consulting and superintending engineer appointed by Government; impracticability of any really valid check by the latter, 2654–2661.

Partial completion of the works, the expenditure hitherto being about 1,600,000 *l.*; 2662–2667——Nominal earnings in 1870–71; expected receipt of about 6,000 *l.* in the current year (1871–72) from irrigation, 2665–2668——Obstacles to any reliable estimate of the income and expenditure; small returns expected by the Government officers as compared with the large expectations of the Company, more especially until recently, 2669–2679. 2707–2712——Charge of six rupees per acre for irrigation, 2672. 2704–2706——Improbability of the canal not paying its working expenses, 2676. 2740–2743.

Origin of the guarantee to the Madras Company; object more especially to promote similar undertaking by means of private enterprise without guarantee, 2677, 2678. 2696–2703. 2707–2711——Doubt expressed by the Government engineer whether the canal would be effectual to hold the water, 2679. 2712. 2741——Want of extensive supply tanks or reservoirs in connection with the canal; large additional expense on this score, 2679–2681——Degree of responsibility of the Madras Government and its consulting engineer in reference to the canal, 2682–2684——Power of Government to purchase the canal at the end of every period of twenty-five years, 2685——Arrangement that the water rate is to be levied and collected by Government officers, 2686–2689.

Desire of the Madras Company to carry out additional or extension works, under guarantee; invariable refusal of a guarantee by Government, 2692–2695——Uselessness of the canal for purposes of navigation, 2693. 2711——Promotion of the Orissa and Behar Irrigation Company as a consequence of the Madras Company, but without a guarantee; purchase of the former concern by Government at a price very largely in excess of its market value, 2696–2703. 2734–2737.

Aggregate of 511,852 *l.* paid in interest to the Madras Company up to a recent period, 2719–2723——Conditions of the loan of 600,000 *l.* further adverted to; responsibilty of Lord de Grey for this transaction, 2724–2729——List of the directors of the company when the loan of 600,000 *l.* was advanced, 2730–2733——Power of the company to compel Government to relieve them of the concern if it should fail to pay its working expenses, 2738–2743.

[Fourth Examination.]—Explanation that witness's dissent from certain evidence of Mr. Danvers refers not to matters of fact, but to the opinions generally of the latter in favour of the guarantee system, 2802, 2803.

Rules laid down for the protection of the interests of Native states as regards railways therein, 2888——Probable arrangement in due time as to the mode of working native railways which are in connection with the companies' railways, *ib.*

Comment upon, and dissent from, the opinions expressed by Lord Dalhousie (as quoted by Mr. Danvers) in favour of the guarantee system, 2946, 2947——Statement showing that Lord Mayo and his council concurred in the views of Sir John Lawrence, as to the bad and extravagant management by the guaranteed companies, 2947–2951——Very excessive cost of the East Indian Railway, without including the heavy increase of cost said to have been incurred through the Mutiny, 2951. 2953, 2954.

Exception,

Thornton, William Thomas. (Analysis of his Evidence)—*continued.*

Exception taken to a statement by Mr. Danvers that a prominent advantage of the guarantee system was that it secured the continuous and almost undivided attention of a competent body of men to each undertaking, 2954. 2962–2966——Decided unfitness of a committee of the Indian Council for conducting the business of the railways, 2967–2971——Opinion that capital might have been equally attracted to India, without the guarantee system, 2972.

Further evidence in strong condemnation of the terms of the contracts entered into by the East India Company with the railway companies, 2973–3017. 3038–3070——Exception further taken to the ambiguous character of the annuity commutation clause, 2973–2975. 3060–3062——Very reprehensible conduct of the Government authorities in acceding to terms so excessively favourable to the companies and so excessively unfavourable to the taxpayers of India; comment more especially upon the guarantee of 5 per cent. for ninety-nine years, and upon the provision as to purchase of the railways at the end of that period, 2973–3017. 3038–3070.

Circumstance of the capital accounts of the companies being still open, 3025–3027——Belief that capital would have been forthcoming without the guarantee, but that this was rendered impossible subsequently to the guarantee having once been granted, 3029–3031. 3041. 3052——Conclusion that it would have been better for the Indian Government to have made the railways itself, and to have borrowed the required money; facility with which the money might have been raised, 3032 *et seq.*

Tobacco. Attempts made to develope the cultivation of tobacco in Western India, but without success; causes of failure, *Ashburner* 2162, 2163——The climate is perfectly suitable, *ib.* 2163——Suggestions for the levying of an excise duty upon tobacco; consideration of objections thereto, *ib.* 2287–2294. 2319–2321. 2360–2365.

Statement to the effect that instead of resorting to the income tax after the Mutiny, a tobacco tax would have been preferable; way in which such tax might be introduced and assessed if it became a necessity, *Laing* 7473. 7495–7497. 7509, 7510.

Unpopular and oppressive nature of a tobacco tax, *Dacosta* 8173–8175——The tax would press heavily on labourers and boatmen, *ib.* 8175.

Reason for the decision against a tobacco tax when witness was Finance Minister, *Right Honourable W. N. Massey* 8882.

Tour Expenses. Information in detail relative to the expenditure of 46,772 *l.* in 1870–71, on account of the Viceroy's tour expenses; careful scrutiny of this expenditure by the Viceroy personally, *Harrison* 4382–4419. 4495——Particulars also relative to the tour expenses in Bombay, Madras, and the North Western Provinces respectively; large increase in the former and latter case as compared with 1856–57; *ib.* 4420–4432.

Trade. Statistics in support of the conclusion that the immense increase in the quantities of exports and imports between 1861–62 and 1868–69 is quite as substantial as the increase in values, *Strachey* 7005, 7006. 7960, 7961——Value of the exports of merchandise and of treasure in different years from 1861–62 to 1871–72; large increase, and inference therefrom as to the great advance in the prosperity and general productive power of the country, *ib.* 7964.

Tramways. Belief that no tramways have yet been established in India, *Danvers* 1973, 1974——Probability of tram-railways proving remunerative in India, if judiciously applied, *Dacosta* 8119–8121.

Transit Duties. Very unsatisfactory system of transit duties upon British goods going through native states; obstacle to any remedy for this evil save by equitable treaties and by compensation, *Right Honourable W. N. Massey* 8754–8764——Non-imposition of any transit duties in British territory, *ib.* 8758. 8786.

Transport of Troops. See *Troop Service.*

Trevelyan, Sir Charles. Exception taken to certain predictions of Sir Charles Trevelyan in 1864 as to the waste of money sure to result from an extension of public works under the organization then in force; admission however that there have been instances of waste and irregularity, *Strachey* 6788–6790.

Necessary postponement by the Committee of the evidence of Sir Charles Trevelyan, *Rep.* iii.

Tribute (Native States). Permanent character of a receipt of 719,421 *l.* under the head of Tributes and Contributions from Native States, *Sir J. W. Kaye* 7380——Explanation that in addition to the money tributes paid by Native States large assignments of land have been made to Government, which add considerably to the land revenue, *ib.* 7380–7386.

Trigonometrical Survey. Information relative to the operations of this department, the charge for which has increased from 23,757 *l.* in 1856–57 to 61,860 *l.* in 1870–71, *Harrison* 4692–4695. 4721–4723.

TROOP SERVICE:

1. *Employment of Five Troop Ships, which now run direct between Portsmouth and Bombay, viâ the Suez Canal.*
2. *Cost of the Service; comparison with the Cost in Hired Transports.*
3. *Accounts and Audit; Deficiencies hereon.*
4. *Financial Arrangement between the Imperial and Indian Governments; Question considered as to the fairness of the charge upon the Revenues of India.*
5. *Payment by India of the Officers and Crews of the Troop Ships.*
6. *Practice as to employment of the Vessels for Imperial Purposes.*
7. *Repairs.*
8. *Length of the Voyage viâ Suez.*
9. *Details generally relative to the Vessels employed, and the performance of the Service.*
10. *Charge in 1870–71 for Transport in Hired Vessels.*
11. *Complaint from India as to the excessive Cost of the Service.*
12. *Papers and Statistics by Sir George Jameson.*

1. *Employment of Five Troops Ships, which now run direct between Portsmouth and Bombay, viâ the Suez Canal:*

Re-arrangement whereby the five troop ships have all worked from England, since the opening of the Canal, *Pears* 463, 464.

Employment of five troop ships, which since the opening of the Canal run direct between Portsmouth and Bombay; previously two worked between Portsmouth and Alexandria, and three between Suez and Bombay, *Richardson* 469–473——Expectation that the continued employment of five ships will be necessary in the present year; four ships running through will however be equal to five under the former plan, *ib.* 540–545.

2. *Cost of the Service; comparison with the Cost in Hired Transports:*

Belief that an item of 264,926 *l.* in 1870–71, for "Indian troop service" is exclusive of certain expenditure in India, *Pears* 439. 468——Greater expense in bringing men home than in sending them out, *ib.* 467——Advantages of the system of Government transport *viâ* the Canal as compared with the system of hired transports, *ib.* 690, 691——Information relative to the comparative expense for each officer and each man conveyed in the Government troop ships, and in hired transports, respectively, *ib.* 695–703.

Item of 264,926 *l.* as the whole sum paid in England in 1870–71 in respect of the Indian troop ship service; various heads of charge comprised in this amount, *Secombe* 440, 441. 546–550. 552, 553.

Explanation of the data upon which the charge for insurance of the ships for the year was fixed at 3 per cent., *Richardson* 505–507——Important saving of expenditure in various items, such as repairs, provisions, coals, &c., under the new system of through voyages from Portsmouth to Bombay, *ib.* 508–514——Net cost of 304,275 *l.* to India for the service in 1868–69, plus the charges at Bombay, *ib.* 525. 623——Charge of 5 per cent. for interest, in calculating the cost of the service, *ib.* 620, 621——Means of comparing the cost in the troop ships and in hired vessels, *ib.* 692. 694.

Average of 24 *l.* 2 *s.* 3 *d.* as the rate per adult, in sending troops by the "Tagus," chartered in 1870, *viâ* the Canal, *App.* 530.

Statements showing the freights paid in respect of the "Warrior" and "City of Brussels," chartered in 1870 from Woolwich to Calcutta, of the "Atlanta" from Woolwich to Madras, and of the "Tagus" from Gravesend to Bombay, *viâ* the Suez Canal, *App.* 532, 533——Summary of the foregoing rates, as compared with the cost of the Indian troop service; reduced rates if all the troops were conveyed by merchant steamers, *ib.* 534.

Detailed statement of payments and advances during the year 1870–71, composing a total of 264,926 *l.* in the Home Accounts, respecting the Indian troop service, *App.* 535–540.

3. *Accounts and Audit; Deficiencies hereon:*

With reference to a certain account or statement showing the working of the Indian troop service for 1868–69, all the items of expenditure are included therein, except expenses in Bombay to the amount of about 10,000 *l.*, *Richardson* 501–504. 551——Incomplete state of the account of the troop service for 1869–70, through certain returns not having been furnished from India; this is in fact a statement, and not an exact account, *ib.* 518. 521. 551. 566–569. 571–574.

Explanation relative to the audit by the Admiralty of a portion only of the expenditure, whilst the great bulk of the expenditure being paid direct out of Indian revenue will be audited by the India Office, *Richardson* 587, 588. 592–596——Circumstance of there being as yet no published account showing the actual cost or contribution incurred by the Imperial Government, *ib.* 635–637.

Explanation

TROOP SERVICE—continued.

3. *Accounts and Audit; Deficiencies hereon*—continued.

Explanation as to there being no complete account relative to this service; delay, or misapprehension, on the part of the Bombay Government in supplying returns required at the Admiralty for the purposes of the account, *Seccombe* 442–444. 519. 520. 522. 552, 553. 569, 570——Defect in regard to there being a separate audit of the Admiralty expenditure for the troop service, and of the expenditure direct out of Indian revenues, *ib.* 589–591.

Admission that through the delay in obtaining returns from Bombay, the Admiralty has not yet rendered a complete account showing that the Imperial Government has contributed its proper share to the expenses of the two ships employed in Europe, *Seccombe* 682–687.

4. *Financial Arrangement between the Imperial and Indian Governments; Question considered as to the fairness of the charge upon the Revenues of India:*

Contribution of 14,372 *l.* from the Imperial Government towards depreciation and assurance of the two ships employed in Europe, these being under the management of the Admiralty, *Richardson* 525, 526——New arrangement under consideration whereby all the ships will be at the disposal of the Secretary of State for India, and will be entirely paid for by India, *ib.* 527–536. 583–585. 614, 615.

Payment hitherto by India of three-fifths of the wages, repairs, &c., of the two ships employed in Europe, and of the entire cost of the three ships the other side of the Isthmus; examination upon the question as to the fairness of this arrangement, *Richardson* 529–533. 624–634——Charge of 4 per cent. for replacement of capital, *ib.* 622.

Property of India in all five ships, though two of them have not hitherto been entirely under the control of India; re-arrangement in contemplation, *Pears* 615.

Total of 1,173,752 *l.* as the capital cost of the five ships to India, *Richardson* 616–619 ——Contribution by England towards replacement of capital of the two ships employed in Europe, irrespectively of the contribution for wear and tear, wages, &c., *ib.* 624–634.

Explanation that the contribution by England towards the two ships employed in Europe is not shown in any account yet prepared, being deducted from the gross charges payable in India, the latter appearing as a net sum, *Richardson* 673–681.

Explanation as regards the Indian troop ships, and the evidence of Mr. Richardson thereon, that there is a charge of 13,000 *l.* debited to the Admiralty for wear and tear, *Seccombe* 1441–1445.

Statement of amount payable by the Indian Government for wear and tear, less depreciation and insurance, of the "Serapis" and "Crocodile," on account of the years 1867–68 to 1869–70; *App.* 541.

5. *Payment by India of the Officers and Crews of the Troop Ships:*

Explanation that the crews are part of the navy, and that there are not now special pay or pensions for the troop service, *Richardson* 480–487——Repayment of the pay and expenses to the Admiralty by the India Office, *Richardson* 480. 488, 489; *Pears* 602–606——Absence of repayment as regards pensions, whilst on the other hand India does not get the benefit of the saving on the half-pay of the officers employed on the service; question considered as to the extent of such benefit, *Richardson* 490–500.

6. *Practice as to employment of the Vessels for Imperial Purposes:*

Imperial expense at which reliefs between Malta and England would be conveyed in the ships, *Richardson* 562–565——Intention that one or more of the vessels shall call at the Mauritius and Cape for invalids for England, *ib.* 581, 582——Extent of employment hitherto of the two ships this side of Suez for Imperial purposes, *ib.* 688, 689.

Expectation that under the new arrangement as to the troop ships the Imperial Government will occasionally employ the vessels as transports, and will pay India for the services rendered, *Pears* 537–539. 662.

Statement of the employment of the "Serapis" and "Crocodile" on Imperial service since July 1867; *App.* 529.

7. *Repairs:*

Doubt as to the average time required annually for repairs, out of the five months when the vessels are not employed, *Richardson* 658–660——Probable repair of the vessels in the Royal dockyards, *Pears* 599–601.

Return showing the periods actually occupied in repairing the troop ships "Crocodile" and "Serapis" in each year since the commencement of the service, *App.* 528.

TROOP SERVICE—continued.

8. *Length of the Voyage viâ Suez:*

Advantage of the saving of time by the Suez route, the expense being about the same as by the Cape, *Seccombe* 452–460——Respects in which advantage accrues from the shorter time in sending troops to India by the Suez Canal than by the Cape, *Pears* 460–462.

Estimate of twenty-five days as the time in which the voyage between London and Bombay might be performed in the event of emergency, *Richardson* 655, 656——Very little difference in the length of the voyage overland and through the Canal, *ib.* 670, 671.

Estimate of twenty-eight days as the period in which the service might be performed between Portsmouth and Bombay, *App.* 530.

9. *Details generally relative to the Vessels employed, and the performance of the Service:*

Each vessel is 4,173 tonnage, the maximum speed being about fourteen knots, and the actual average speed about nine knots, *Richardson* 474–476——Large number of officers and men conveyed in each vessel, and large number of the crew, *ib.* 477–479——Careful examination to which the ships are subjected, there being hitherto no symptoms of deterioration, *ib.* 515–517——Total of 16,596 adults conveyed in 1868–69, being an average of 1,106 for each voyage, *ib.* 523, 524——Performance of two complete voyages by each ship, the service being from October to April, *ib.* 543. 579, 580.

Much less speed at which the vessels run than they are capable of attaining; economy of fuel thereby, *Richardson* 554–557. 657——Construction of the engines some five years ago, so that they do not admit of the economised consumption of coal rendered feasible by improvements in construction since that date, *ib.* 558–561. 639–645——Arrangement as to the coaling of the vessels, *ib.* 575, 577——Varying consumption of coal by the different vessels, this matter being closely investigated, *ib.* 575–577. 639–645. 666–669——Some of the ships are consuming from thirty-three to forty tons a day; this consumption is not excessive, *ib.* 576. 640–645.

Management of the troop ships not by the Admiralty, but by an Admiralty officer placed at the disposal of the Secretary of State for India, *Pears* 586. 597, 598——Objection to the service being entirely under the Admiralty, and being paid for by India, without the latter having the entire disposal of the ships, *ib.* 607–609——Obstacles to utilising the vessels on the other side of Suez throughout the year, *ib.* 661, 662——Belief that the vessels could carry light guns, *ib.* 663, 664.

Charges paid by the vessels for passing through the Suez Canal, *Richardson* 647–649——Retention of the bulk of the crew during the five months the vessels are not running to and from India, *ib.* 693.

10. *Charge in* 1870–71 *for Transport in Hired Vessels:*

Information relative to a charge of nearly 50,000 *l.* in 1870–71 for passage of officers and troops, the troop ship not having been adequate to the whole business of transport; there is no such charge in 1871–72, *Pears* 414–419.

Explanation on the part of the Admiralty of an item of 49,849 *l.* 17 *s.* 3 *d.* in the Home Accounts for passages of officers and troops in the year 1870–71; various payments of which composed, *App.* 531, 532.

11. *Complaint from India as to the excessive Cost of the Service:*

Room for economy in the item of transport of troops; expediency of investigation on this subject, *Dacosta* 8033. 8036. 8222–8226——Feeling in Calcutta that the transport system is most extravagant, *ib.* 8222–8224.

12. *Papers and Statistics by Sir George Jameson:*

Reference to a report by Sir George Jameson as showing the financial result of the working of the troop-ship service for the nine years from 1861–62 to 1869–70; *Pears* 451, 452. 466. 646.

Statement by General Jameson, dated 12th May 1871, of the approximate expense of the passage of officers and troops between Great Britain and India during the years 1861–62 to 1869–70; papers in illustration and explanation of this Estimate, *App.* 519–524——Estimate by General Jameson of the cost of the India-Overland troop service, *ib.* 523.

Statement of the average rates paid for troop transport, *viâ* the Cape, for the six years from 1861–62 to 1866–67, *App.* 524.

Supplementary statement by General Jameson dated 4th March 1872, showing the cost of the Indian troop service for the four years 1867–68 to 1870–71; *App.* 525.

Paper, dated India Audit Office, 4th March 1872, relative to the cost of the service from 1865–66 to 1870–71, inclusive, *App.* 526.

U.

Universities. Charge of 10,715 *l.* in 1870–71 for Universities at Calcutta, Madras, and Bombay; receipts on the other hand from examination fees, *Harrison* 5443–5446.

V.

Vaccination. Expenditure of 42,000 *l.* for the vaccine establishment in 1870–71, as against 14,000 *l.* in 1856–57, *Harrison* 5650——Information relative to the operations of this department, *ib.* 5651–5658.

W.

Wages. See *Condition of the People.*

Water Communication. See *Canals. Godavery Navigation Works.*

Wells (Irrigation.) See *Irrigation.*

Western India. Very low rate of the land revenue in Western India; great increase yearly in the area under cultivation, *Ashburner* 2144–2148.

Western Jumna Canal. Progressive increase of revenue from the Western Jumna Canal, *Strachey* 6990——Good returns from the Western Jumna Canal, which was constructed before British rule, *Dacosta* 8067. 8126.

Wild Animals. Explanation relative to the charge in 1870–71 for rewards for the destruction of wild animals, *Harrison* 5925–5931.

Wurdah Valley (State) Railway. Decision to make a railway between the Chanda coal district and the Great Indian Peninsula Railway; advantage thereof over water communication by the Godavery, *Strachey* 7915–7919.

Official papers and statistics relative to this railway, and the traffic to and from the Chanda district, in coal, iron, cotton, &c., *App.* 614–627——Statement showing a very large saving to the Great Indian Peninsula Railway by the use of Chanda coal, *ib.* 623.

Information submitted in Despatch from the Government of India, dated 6th December 1871, relative to the course of the line, the traffic to be derived, and the cost of a narrow gauge and broad gauge line, respectively, *App.* 624–627.

Extract of Despatch from the Secretary of State, dated 15th February 1872, with reference to the route and terminus of the proposed line; reason for not sanctioning a line all the way to Hinganghât, *App.* 627.

Y.

Yachts. Explanation as to the maintenance of a yacht for the Viceroy, and of another for the Lieutenant Governor of Bengal; amount of charge in each case, *Harrison* 5141–5145——Maintenance also of a yacht at the disposal of the Governor of Bombay, *ib.* 5233–5238.

Z.

Zemindars. Opinion that under the permanent settlement of Bengal the zemindars may fairly be taxed for local improvements, such as roads and schools, but not for Imperial purposes, *Right Honourable W. N. Massey* 8640–8642. 8827–8833.
